36. It was then thought that the British Army and the European portion of the Indian Army might be amalgamated into one, Cavalry and Infantry with Cavalry and Infantry, Artillery with Artillery, Engineers with Engineers, with the same rules and scale and chances of promotion. Royal Warrants were issued for this purpose. The Officers of the Indian Army, however, complained in many respects of what was done in the way of reorganization and amalgamation, as being in violation of the Parliamentary Guarantee contained in the 56th Section of the Indian Government Act, and those complaints were referred to a Commission, which is commonly known as Lord Cranworth's Commission. That Commission held some of the most important of the complaints of the Indian Army to be well-founded, and they came to the conclusion that the arrangement then made for the amalgamation of the Colonels and General Officers of the two Services in one List for promotion would, if carried out, be a violation of the Guarantee.

Lord Cranworth.
Earl of Ellenborough.
Lord Hotham.
The Right Hon. J. W. Henley.
Sir Charles Yorke.
Major-General Clarke.
Sir Peter M. Melvill.

37. The decision of Lord Cranworth's Commission, and the acquiescence of the Government in that decision, rendered it necessary to recast almost altogether the plans for the reorganization of the Indian Army, and for the amalgamation of the two services; and the result has been a system of singular complication.

38. We think it right to state somewhat in detail what was done.

39. In the year 1862 three Regiments of Cavalry and nine of Infantry were transferred from the Indian to the British Army, and 12 General Officers were taken from the Indian and added to the British Establishment. The Establishment of General Officers for the two Armies became then: British, 272; Indian, 208.

40. On the reorganization of the Indian Army after the Mutiny, it was decided that there hould, as in the British Army, be a distinct Establishment of General Officers for the Ordnance Corps; the Establishment for the Artillery was fixed at 26, and that for the Engineers at 12; total 38. Promotions, however, of the Colonels of those Corps were to be made on the General Indian List of General Officers till all who had obtained the rank of Colonel previous to the 18th February, 1861, had become General Officers. Then the whole of the General Officers of Artillery and Engineers were to be removed from the Indian List of the three Presidencies, and three distinct Establishments were to be formed, the Indian List of General Officers being then reduced by 35, that being the number stated in the Royal Warrant of 15th June, 1864, to have been borne upon it on account of the Ordnance Corps. This arrangement was completed in the year 1868, and the Establishment of General Officers for the Indian Army is accordingly now 173.

41. In carrying out this arrangement, however, it appears that at the time of the transfer there were 34 General Officers of the Artillery removed from the Indian List of General Officers and 10 of the Engineers; two were therefore required to complete the Establishment of the latter Corps, and two Engineer Colonels were accordingly promoted, and thereupon removed from the General Indian List. In consequence therefore of these transfers 46 General Officers have been removed from the General Indian List, while in conformity with the Warrant it has only been reduced in number by 35. The arrangement thus caused 11 vacancies on the List,—viz., two by the promotion of two Colonels of Engineers to complete the Establishment of General Officers of that Corps, and nine more by the removal of the excess of Artillery Officers. These vacancies have been filled by the promotion of that number of Colonels of the Indian Staff Corps and of the Indian Cavalry and Infantry, being, in fact, extra promotions, and one more than the total number of Colonels promoted on the British List for eleven months of the present year.

42. It may here be observed that in the Royal Warrant of the 1st January, 1862, it was provided, that on the transfer of the General Officers of Artillery and Engineers of the Indian Army to distinct Establishments, an addition of three General Officers should be made to the Unattached List of the British Army, the number of 12 that were transferred with the 12 European Regiments of Cavalry and Infantry being less than the proportion (15) of General Officers due to the number of Combatant Officers belonging to the transferred Regiments. This proviso was not otherwise noticed in the subsequent Warrant of 15th June, 1864, than by excepting the Clauses 9 and 10 of the former Warrant,—the first of which provided for the addition of the three General Officers to the British Army,—from the clauses which were cancelled by the Royal Warrant of 15th June, 1864. We presume, therefore, that there will be no objection to this addition to the Establishment of the British Army, though it has not yet been made. The Establishments of Generals of the two Armies will then be, exclusive of the Ordnance Corps of each,—British, 275; Indian, 173.

43. The Regulations under which promotions up to the rank of Colonel are now made in the Indian Army are as follows:—

44. On its reorganization after the Mutiny, a Staff Corps was formed, and Regulations for the promotion of the Officers in the several ranks of the Corps were established, which were

complained of by the Officers of the other Branches of the Army as causing a most extensive supersession of them by their juniors in the Staff Corps.

45. These complaints having been considered to be well-founded, by Lord Cranworth's Commission, it was determined, with a view to remove all grounds of complaint on this head, to establish a System of promotion conferring Brevet rank by length of service on all Officers of the several Staff Corps of the three Presidencies, and of the Indian Army generally. In the first place, therefore, in order to restore all Officers of the Indian Army who had been superseded to their relative position as regards the Staff Corps Officers, it was determined
Appendix O. that all Officers whose Commissions bore date on or prior to the 18th February, 1849, were to be promoted to the rank of Captain by Brevet.

46. Officers whose first Commissions bore date on or prior to 18th February, 1841, to be promoted to the rank of Major by Brevet.

47. Officers whose first Commissions bore date on or prior to the 18th February, 1835, to be promoted to the rank of Lieutenant-Colonel by Brevet.

48. All such promotions to bear date 18th February, 1861.

49. After the 18th February, 1861. Officers of the several Staff Corps and of Her Majesty's Indian Army generally, were granted Brevet rank under the following Regulations :—

50. Officers after 12 years' standing in the Army from date of first Commission, to be Captains ; after 20 years, Majors ; after 26 years, Lieutenant-Colonels.

51. On and after the 18th February, 1866, all Officers who have served 31 years in all, five of which shall have been in the grade of Lieutenant-Colonel, to be promoted to the rank of Colonel by Brevet.

52. The above system of promotion to Brevet rank is to cease in its application to the several grades of the Army on the extinction of those grades among the Officers of the Indian Army. Thus, when the whole of the Lieutenants of the Indian Army shall have been promoted to the rank of Captain, the promotion of Officers in the Staff Corps to the Brevet rank of Captain under the above rule will be discontinued.

53. In consequence of the above rules, similar *local* rank has been conferred in India upon the Officers of the British Army serving there, after the same periods of service and under the same rules.

54. With reference to the bearing of these Regulations on the British Army, it must be observed that it has been ruled that the promotion of Officers of the Indian Army is to be considered Army rank, entitling the Officer receiving it to share in the advantages of promotion under the former system of Brevet promotion, and to promotion in succession to casualties amongst General Officers.

55. This makes a great difference between the Officers of the Indian Service and those of the British. It makes their Brevet rank *effective*, while that given to the British Officer is only *local*, and confined to India. Moreover in the Indian Army the rank of Colonel is obtainable by mere length of service, although the Officer may never have served at all in any of the appointments, an actual service in which, for certain periods, was required— by the 8th Clause of the former Promotion Warrant for the Indian Army, dated January 1859,—to qualify a Lieutenant-Colonel for the rank of Colonel.

56. A Lieutenant-Colonel of the British Army cannot be promoted to the rank of Colonel except after an actual service of five or eight years in one of the situations therein specified, and if before he has completed the period thus required he should be placed on half-pay, either by Regimental reduction or by his appointment on the Staff being discontinued, he is not allowed to reckon the time thus passed on half-pay ; and the time required to complete his period of qualifying service is only computed from the date when the Commander-in-Chief may be enabled to place him in another qualifying appointment.

Royal Warrant, 1st Jan., 1862. 57. The arrangements that in the first instance were made on the reorganization of the Indian Army, for the amalgamation of the General and Field Officers of that Service with the General and Field Officers of the Regular Army, were as follow :—

58. The existing General Officers of either Army were to be continued on separate Lists.

59. All Colonels of either Army who attained that rank on or prior to 17th February, 1861, were to be continued on separate Lists, and to succeed on separate Lists to the rank of General Officer ; but if all on one of those Lists should have become Major-Generals, while some on the other were unpromoted, these Colonels should have the benefit of vacancies occurring in the List of Generals of either Army. Colonels so promoted were to be placed on an amalgamated List of Major-Generals, from which promotions were to be made by seniority in succession to all vacancies in the higher grades, whether of the British or Indian Service.

60. Colonels in either Army who had attained that rank after the 17th February, 1861, were to be placed according to the dates of their Commission as Colonels, on one general List, from which, so soon as the separate Lists of Colonels were exhausted, promotion was to be made

in succession to all vacancies in the Establishment of General Officers on the amalgamated List above-mentioned.

61. This Warrant was cancelled on the Report of Lord Cranworth's Commission, and the Royal Warrant of 15th June, 1864, was issued by which promotions to the rank of General in both Services are now governed.

62. The Regulations as respect the promotions in the Ordnance Corps having been already explained, it is only necessary to state those which affect the Officers of Cavalry and Infantry, which are as follow:—

63. The Officers of Cavalry and Infantry of Her Majesty's Indian Army are to remain on the Indian General List, and to rise on that List to the rank of General Officer.

64. Officers of the several Indian Staff Corps who had attained the rank of *Lieutenant-Colonel* prior to 18th February, 1861, are to be promoted under Indian Regulations to the rank of Major-General on the Indian List. Those who had not attained the rank of Lieutenant-Colonel previous to the 18th February, 1861, as they respectively attain the rank of Colonel, are to be placed according to the dates of their Commissions on the general List of Colonels of the British Army, and to rise on that List according to seniority to the rank of General Officer. It is then provided that whenever a Colonel of the Staff Corps, whose name is borne on this amalgamated List, would, if he had remained on the List of Colonels of the Indian Army, have attained the rank of Major-General, an addition of one shall be made to the British Establishment of General Officers by the promotion of the Senior Colonel on the amalgamated List, whether he be a British Officer or one brought in from the Staff Corps. This is to be continued until the number of General Officers added to the British Establishment, including the first transfer, be one for every 28 Combatant Officers of the three Staff Corps. Appendix P.

65. When the first addition is thus made to the British Establishment, all the General Officers of the Staff Corps on the Indian General List are to be transferred to the British Establishment, which will thus be increased by that number, and the Indian Establishment diminished. Promotion to the General Indian List will then be limited to Officers of Cavalry and Infantry of that Army who shall not have joined the Staff Corps.

66. It has already been stated that whatever might be the inequality of promotion in either Service up to the rank of Lieutenant-Colonel, it was, before the abolition of periodical Brevets in 1854, the object of every Regulation on the subject of promotion, for both Armies, that after attaining that rank, the advance to the rank of Colonel and then to Major-General should proceed *pari passu*, and that no Lieutenant-Colonel or Colonel should be superseded by another, whether of his own or the other Service. All were to advance to the higher rank by Seniority according to the dates of their Commissions. When in the year 1854 an alteration was made in respect to the rise of a Lieutenant-Colonel to the rank of Colonel, and a certain qualifying period of service, either in command of a Regiment or on the Staff, was required to entitle a Lieutenant-Colonel, of either Army, to the promotion of Colonel, the latter rank became of course the starting point from which all subsequent promotion in the several Branches of both Armies should proceed by Seniority.

67. It could not of course be expected, with whatever care the Establishments of General Officers for each Army were fixed, that under the new System some cases would not occur of the Colonels of one Army becoming Major-Generals before their Seniors in the other Army; but it was doubtless anticipated that the instances would be few, and that the occurrence of casualties from time to time would re-adjust such cases.

68. But the promotion of the Colonels of the Indian Army was so greatly accelerated by the promotion of so large a number to complete the fixed Establishment in 1854, and has since been so far more rapid than in the British Army, that it has at length arrived at such a point, that the last Colonel of the Indian Army promoted to be a Major-General was junior to 194 Colonels of the Cavalry and Infantry of the British Army, all of whom are eligible for promotion in their turns, and several of whom were distinguished at the head of Her Majesty's Regiments in the Russian War and in the Indian Mutiny. The special Retirements granted in the year 1861, of which 134 Lieutenant-Colonels availed themselves, have also now brought so many Colonels of short service in that rank to the head of the List, that the future promotions to the rank of Major-General will be even more marked in their supersessions of Senior Colonels of the British Army than has hitherto been the case.

69. It is to be noted, however, that Supersessions have occurred on the other side. The following are the Supersessions of Lieutenant-Generals of the Indian Army who have been superseded by junior Lieutenant-Generals of the British Army, and of Major-Generals of the Indian Army who have been superseded by junior Major-Generals of the British Army, since 28th November, 1854:—

1 British General superseded 3 Indian Lieutenant-Generals; 9 superseded 4; 3, 5; 3, 6; 1, 7; 1, 8; 2, 9; 1, 11; 1, 12; 1, 14; and 2, 19.

2 British Lieutenant-Generals superseded 6 Indian Major-Generals; 1 superseded 7; 1, 9; 1, 12; 1, 14; 1, 23; 1, 24; 5, 26; 4, 27; 3, 28; 7, 29; 8, 30; 5, 31; 7, 33; 1, 34; 3, 36; 2, 38; 4, 39; 4, 40; 1, 41; 5, 42; 7, 43; 6, 45; 4, 46; 2, 47; 5, 48; 3, 49; 2, 50; 1, 52; 1, 53; 1, 55; 1, 58; 1, 59; 2, 62; 1, 65; 1, 70; 1, 75; 1, 79; 1, 82; 1, 87; 1, 97.

On the other hand, 1 Indian General superseded 2 British Lieutenant-Generals, and 1 superseded 1.

Appendix M. In the Appendix will be found a List of the Officers thus superseded.

Appendix K. 70. It is stated in Major-General Pears' Memorandum of 9th July, 1869, that not above one-fourth of the British Colonels superseded are Officers of the Line on Full-pay, and that only a portion of these will be found in India.

It has been pressed upon us that there are no Unattached or Half-pay Officers in the Indian Army; inasmuch as when the Indian Officers retire they are out of the Service altogether. But we are unable to make any distinction in this respect between the British Officers on Half-pay and the Officers of the Indian Army who are engaged on Civil Services in India, and are now out of active employment by reason of the reduction of the Native Forces.

71. It may be remarked that the Supersession after the rank of Colonel, is a very different matter from some Officers in the junior grades obtaining promotion more rapidly than others. These last can rarely find themselves in situations where important questions of command can arise, but Colonels are placed in such positions. The Supersession is therefore very severely felt by such an officer, when several far junior to himself as Colonels are promoted over him, not in consequence of any distinguished service,—a case which would never be complained of,—but in consequence of the greater rapidity of promotion in the superior ranks of the Army to which those who have passed over him belong.

72. The result of such an inequality, as now exists, in the promotion of the Colonels of the two Armies serving together, and the feeling it cannot but excite, may in some degree be appreciated by the fact that there are some General Officers of the Indian Service, who were actually serving under the command of Colonels of the British Army during the Mutiny, over whom they have since been promoted.

73. There are now seven distinct Bodies, having seven distinct Lines of promotion, and seven distinct Lists of Generals, the advancements to the rank of General in each List being assigned to the Senior Colonel in that List, viz.:—

The Guards, and Cavalry and Infantry of the Line	275	General Officers.
The Royal Artillery	32	,,
The Royal Engineers	16	,,
The Royal Artillery (late Indian)	26	,,
The Royal Engineers (late Indian)	12	,,
The Royal Marines	13	,,
The Indian Army	173	,,
Total	547	,,

74. There being thus seven distinct Lines, it cannot but happen that to some extent inequality of promotion should result, and such inequality must have been foreseen.

75. The Officers of the British Army, however, complain that this inequality has become so great and so glaring, as between English Colonels and those of the Indian Corps, that they are superseded in so wholesale a manner by men much their juniors (juniors, that is to say militarily speaking) as to constitute a great and substantial grievance. The fact is unquestionable that promotion from Colonel to General has been for some time past, and is now, and, at all events for some years to come, is likely to be, much more rapid in the Indian Army than in the British.

76. It has been contended before us with great ability that this is in itself, on the mere statement of the fact, a proof of injustice done to the British Army which could not have occurred under the former System of periodical Brevets.

Vide Evidence of Sir Percy Herbert. Appendix A. 77. For that System, therefore, preference was expressed in the Evidence before us, but in truth that matter must be considered as conclusively settled by the Reports of the Commissions of 1854 and 1858, and by what was done in those years.

We certainly are not disposed to recommend anything which would open the questions then settled; and we entirely concur in the emphatic approbation of the principle of the measure of 1854 expressed by the Commissioners of 1858, and quoted in Paragraph 27 of this Report.

78. As between the British and Indian Armies, moreover, it would be impossible to act on the theory that abstract justice between them requires the point of Lieutenant-Colonel to be taken as the point of comparison; not only by reason of the one being in all its grades strictly

a Seniority Service, but also from the fact that the grade of Lieutenant-Colonel itself in India was not obtained as a regimental promotion, but out of a large general List.

79. The theory pressed on us as to the essential difference between the rise to Lieutenant-Colonel and the subsequent rise, overlooks the fact that all Brevet promotion was essentially an Army and not a Regimental promotion; that a Captain of a Regiment of the Line or Ordnance Corps, or a Lieutenant and Captain in the Guards, might be a Brevet Lieutenant-Colonel, while his Senior in the Regiment was not.

80. There is, however, we think, much more force in another view of the case which has been presented to us, viz.—that irrespectively of any question of vested right or of faith pledged towards any particular part of the Service, there is a broad sense of equality and justice which requires that all Arms and all portions of the Army should have substantially their equal share of the promotions, the honours and emoluments of the profession; and that there is a military susceptibility which is naturally and justly wounded, when a Senior is put under the command of a Junior who has been under him.

81. It is material to bear in mind what is the true meaning of the word Supersession, which has been so much dwelt on. A Captain cannot be said to be superseded when, by the different chances of promotion, he remains a Captain, while a Captain of another regiment, junior to him, becomes a Major. Nor can an English Lieutenant-Colonel in the Line be properly said to be superseded by a Junior Lieutenant-Colonel in the Artillery becoming a Colonel before him. A British Colonel cannot be said to be superseded because an Indian Colonel, his junior, obtains by the rules and chances of his service a vacant Major-Generalship on the Indian Establishment, which could never by any chance have fallen to the former. It may be a piece of great good luck, like anything else which may occur to a man in the chances and vicissitudes of military life; and all that could reasonably be required of a Government is, that it should, as far as may be, with due regard to vested interests, take care that its general Regulations should substantially, and on the whole, equalize the chances of obtaining such pieces of luck between all Branches of the Service.

82. But the fact that the two Armies do serve and must serve together in very large numbers (the European Forces in India being now in round numbers 60,000 men), and the fact that there is the Official Memorandum of 1855 giving equal precedence and rank, and consequent right to command, to the Officers of the two Armies, do make the unequal promotion in the two Armies amount to what military men do really and naturally regard as supersession. The extent to which, and the circumstances under which this has taken place, are therefore the matters which we have to inquire into, to determine whether they are of such a nature as to call for a change in the existing Regulations, and whether there is any vested interest which precludes the making of such a change.

83. It will be well to dispose of the last point first. The vested interest, so far as any exists, arises from the conjoint operation of the Guarantee in the 56th section of the Act of Parliament, and of the Official Memorandum giving equality of rank.

84. Now, we are of opinion that there is nothing in the Parliamentary Guarantee which in any way extends to the Right of equal precedence and rank conferred by the Memorandum of 1855. The Guarantee is expressly confined to those Rights which would have belonged to the Indian Army, if the Company had still continued to exist, and if the Officers had still continued in the Military Service of that Company. If the Company were now existing, there would be nothing whatever to prevent the Crown from recalling or modifying that Order. If (the two armies continuing separate) the Crown had found that the working of the Indian System of promotion was substantially different from what was anticipated, and especially if it had become so from administrative measures not in contemplation at the time, and so that the rank of Colonel or Major-General in the Indian Army represented something, in length of service, very different from the same grades in the English Army, there was nothing in the Guarantee to prevent the Crown from dealing, prospectively, according to what it should think fair and right in respect of the relative position of the same nominal grades in the two Armies. It might have restored the "Fane Brevets," or it might have doubled the amount and accelerated the pace of promotion in the British Army, without giving the slightest ground to the Indian Army to complain that the Parliamentary Guarantee had been violated. And if it were now to do the same thing, or anything substantially the same, the Indian Army, whatever other ground of complaint they might have, could not complain that the Parliamentary Guarantee had been violated. All that they can reasonably ask is, that the Crown, having succeeded to the East India Company as their master, and so to the immediate command of both Armies, should, as between the two, hold an equal hand, and, so far as regards relative rank and precedence, deal with them on exactly the same principles as it would deal under like circumstances with the Branches of the Royal Army.

85. It is of course essential to the well being and good feeling of an Army that such

an Order as the Order of 1855, should not be interfered with lightly, nor without very grave and substantial reasons. We have therefore to consider whether there are in this case such grave and substantial reasons.

Appendix Q. 86. We have had before us a good deal of Evidence, and several Returns, showing the practical working of the Systems of Promotion in the two Armies, as affected by what has been done since 1855.

87. It will be sufficient to state the following results, taken from batches of twelve Major-Generals in each Army, at the different epochs of the important changes which have been made in the two Armies.

88. After the Order of 1855 was issued, the first 12 Major-Generals promoted to the fixed Establishment, exclusive of Officers of the Marines, and Officers retired on full-pay, held Commissions of the following dates :—

British Army.

	First Commission.	Lieut.-Colonel's Commission.	Colonel's Commission.
Cavalry	1809	1837	1851
Infantry	1805	,,	,,
,, ...	1808	,,	,,
Guards	1821	,,	,,
Unattached	1821	,,	,,
Infantry	1806	,,	,,
,, ...	1812	,,	,,

1820	1850	1854	1823	1851	1854
1819	,,	,,	1820	,,	,,
1820	,,	,,	1819	,,	,,
,,	,,	,,	1814	,,	,,
1821	,,	,,	1819	,,	,,
1818	,,	,,	1821	,,	,,

The average length of service from the date of the first Commission being for the British Officers 34 years, and for the Indian Officers 42½ years.

91. In 1868–9, in the case of the last 12 Major-Generals promoted in each Army up to 8th May, 1869, the dates of their Commissions stood thus:—

BRITISH ARMY.

	First Commission.	Lieut.-Colonel's Commission.	Colonel's Commission.
Infantry	1834	1854	1854
Cavalry	1838	,,	,,
Unattached	1822	,,	1855
Infantry	1834	,,	,,
,, ...	1837	,,	,,
Guards	1841	,,	,,
Cavalry	1831	,,	1857
Infantry	1829	,,	,,
Unattached	1833	,,	,,
Infantry	1829	,,	,,
Guards	1838	,,	,,
Infantry	1822	,,	,,

INDIAN ARMY.

First Commission.	Lieut.-Colonel's Commission.	Colonel's Commission.	First Commission.	Lieut.-Colonel's Commission.	Colonel's Commission
1826	1859	1862	1835	1858	1863
1825	,,	1863	1838	1860	,,
1834	1858	,,	1840	1858	,,
1836	1859	,,	1844	1860	,,
1840	,,	,,	1841	1858	,,
1836	1860	,,	1828	,,	,,

The average length of service from the date of the first Commission being for the British Officers 36 years, and for the Indian Officers 33 years.

So that the Colonels in the British Army are now being superseded by their juniors in the Indian Army, not only without there being any counterbalancing length of service in the lower grades of the Indian Army, but with the additional disadvantage that the total length of service is now substantially greater in the British Army.

92. It has been urged that the extensive and rapid Supersession of the British Colonels will receive a great check when the first transfer of General Officers of the Staff Corps is made to the British List, under the 12th Clause of the Royal Warrant of 15th June, 1864, as at that time about 45 or 50 General Officers will be at once added to the British Establishment; and that this may be expected to take place in about $2\frac{1}{2}$ years; but this addition will be very slow in materially accelerating the promotions of the Colonels, probably by not more than 2 or 3 in each year, and it must be remembered that for these $2\frac{1}{2}$ years the supersession will be going on certainly in no decreasing ratio. The subsequent addition will be made from time to time in the order in which the Indian Staff Corps Colonels would have been promoted, had they remained on the Indian Establishment instead of having been placed on the Amalgamated List of Colonels of the British Army. It is believed that when this last addition shall have been completed, the British List will be further increased by about
Appendix E. 45 or 50 Staff Corps Generals, making a total of 90 or 100 above the present Establishment; but the operation will be very slow, and it has been calculated that it will probably not be completed in less than about 11 years from the present time.

93. The number of Colonels of Cavalry and Infantry in the British Army promoted to be Major-Generals in the years 1867–68, and the first ten months of the present year, appear by the Army List to be as follows:—

Appendix R.

In 1867	8
1868	26
11 months, 1869	11
Total	45

and it is to be observed that the promotions in 1868 were 7 in excess of any year since 1860.

94. It may therefore be calculated that not more than 45 Colonels of Cavalry and Infantry on the British List will have been promoted in the next $2\frac{1}{2}$ years, and that number will not include all the Colonels of 1858. If at that time the Colonel on the Indian List (Colonel Shakespeare), after whose promotion the first transfer of the Staff Corps Generals to the Amalgamated List is to take place, shall have been promoted, there will be eleven Major-Generals of the Indian Service who were only Colonels of February 1866, while, as before stated, several Colonels of the British Service of the year 1858 will still be in that rank.

95. The promotion of the Colonels on the Indian List will still be going on, starting with an advantage of more than 7 years over those of the British Service, and each one consequently passing over some hundreds on the Amalgamated List.

Appendix D. 96. The case as respects the Senior Colonels of the Staff Corps is correctly stated in the 28th, 29th, and 30th Articles of the Report of Colonel Egerton's Committee, and which we accordingly transcribe:—

"28. It is not only in respect to the Senior Colonels of the British List that the operation of "the Royal Warrant of 15th June, 1864, has had an injurious effect; but the position and prospects "of those Colonels of the Indian Staff Corps who head the Amalgamated List, and will have to rise on "that List, have, if possible, been more grievously and detrimentally affected, and their case equally "demands a remedy.

"29. At the present average rate of promotion to the rank of Major-General on the British List, "it will take 15 *years* to promote the Colonel next before Colonel Salmon, a Staff Corps Officer, who "heads the Amalgamated List.

"30. At the present average rate of promotion to the rank of Major-General on the Indian List, "it will take three years to promote the Colonel next before Colonel Salmon on that List. Hence, "under existing arrangements, there will be a difference of 12 years in the date of rank as Major-"General between Colonel Salmon and the next senior to him on the Indian List (Colonel "Shakespear), although their commissions *as Colonel* date on the same day, and the former entered "the service 14 *years before* the latter."

97. It is impossible to estimate in what degree this disadvantage may be lessened to the junior Colonels of the British Service and those of the Staff Corps after the long period of 10 or 11 years, but it may be confidently predicted that the Indian Colonels of Cavalry and Infantry, who will remain to be promoted even on the reduced list of 80 or 90 General Officers of the Indian Army, will be even then so very far junior to the Colonels on the Amalgamated List of the British Army, that any tolerable equality in the rise from Colonel to Major-General in the two Armies will not be reached under the present Regulations at any period which it would at this time be possible to estimate.

98. We cannot consider that the injury thus sustained by the Colonels of the British Army is one only of a light or temporary nature. The extent to which they are passed over by those of the Indian Service is most keenly felt by them, and if, as has always hitherto been held, it is important that in the two Armies, serving the same Sovereign and acting together in all situations, equality of promotion in the ranks qualifying for Commands should be maintained, it seems to us highly necessary that some steps should at once be taken to check the progress of, if it may not be possible entirely to remedy, the inequality which now in so great a degree exists. With this view we feel justified in suggesting some measures which under a state of things less pressing we should hesitate to recommend.

99. It has been proposed in the Correspondence, with which we have been furnished, between the Military Departments and the India Office, that each Colonel on the British Establishment when promoted to the rank of Major-General should be restored to his relative place and take his position on the Generals' List of the two Armies according to his seniority as Colonel; and that the same course should be adopted by means of antedates in the case of the present General Officers, whose Commissions as Colonels bear date on or after the 28th November, 1854; the alteration of dates in no case to carry back pay or to give a claim to any Brevet promotion in the lower ranks. Appendix B.

100. We have carefully considered this suggestion, and the majority of the Committee are of opinion that some such measure ought to be adopted so far as regards the prospective promotions of British and Indian Generals.

101. But with respect to antedating the Commissions so as to affect the relative position of the present Major-Generals, a great difference of opinion has existed among us; and the majority of the Committee are of opinion that no sufficient case of injustice or hardship has been made out, to warrant us in recommending the adoption of any retrospective measure.

102. Every Officer who has obtained his grade in the Indian List, and his consequent relative position in the whole Army, has obtained it by the operation of general Rules which were carefully considered, and were deliberately framed with the knowledge that there would be distinct and unequal promotions from the rank of Lieutenant-Colonel; and that was done in some degree to counterbalance the distinct and unequal promotions up to that grade in different portions of the Army.

103. The fact that subsequent events have made the working of the System far more unequal in the general result than was intended, may be a good ground for a prospective alteration in the System itself; but ought not to affect any individual in the position which he has legitimately attained.

104. If once the existing Lists were to be revised, with a view to correcting the past, we do not know any sound principle on which we could stop, short of revising the entire List of General Officers of both Armies.

105. As regards the Service in India, the majority of the Committee are of opinion that the system of the Local, or so called "Fane," Brevets should be again introduced and made applicable prospectively to both Armies in that Country; so that whenever any Colonel of either Army shall become a Major-General—except for distinguished service—all Colonels in India senior to him would be promoted to the Local rank of Major-General, so as to preserve their previous seniority.

106. There remains, however, the main and very difficult question of remedying in any degree the case of the great mass of Colonels of the British Army, who have been passed over by their Juniors in that rank in the Indian Service.

107. It has been suggested that all these officers should at once be promoted to be Major-Generals with the necessary antedates of their Commissions, but without receiving the Unattached Pay of the rank, and be allowed to hold appointments and commands open to them now as Colonels; and that the Generals and Colonels of both Armies should then be placed on an Appendix E.

Amalgamated List from which all promotions to the higher rank, according to seniority, should be made.

108. It is obvious that this course would at once restore each Officer to the relative position as a General that he held as Colonel, but it is liable to the grave objection that for a Major-General to remain simply the Commanding Officer of a Regiment, or the holder of a subordinate Staff appointment would be a lowering of the rank which is much to be deprecated, and this unprecedented state of things would not stop with the first batch that would be promoted, but the future promotions must be continued in the same manner, and with the same result. We consider that the question of the immediate formation of the Amalgamated List must be dependent upon the adoption of the above Scheme, which, for the reasons stated, we cannot recommend, as, unless it were adopted, the Amalgamation of the Lists of Colonels of the two Armies at present would prevent the promotion of any Colonel of the Indian Army probably for some years, and this we consider an infringement of the Parliamentary Guarantee to the Indian Officers.

109. We consider it right to observe that the existing Regulations do not merely affect the promotion of Colonels to the rank of Major-General, but also their subsequent promotion to the higher grades, arising from the fact, as already stated, that, while in the British Army the numbers of Generals and Lieutenant-Generals united are equal to the number of Major-Generals, in the Indian Army the numbers of Generals and Lieutenant-Generals are only one-half of the number of Major-Generals. We therefore recommend that, in altering the Regulations prospectively, care should be taken to prevent Supersession in the promotions to the higher grades of Lieutenant-Generals and Generals.

* Excepting the paragraphs detailed in my dissent annexed.

DISSENT.

We have signed this Report as we concur in all the preliminary portions of it, but we feel it necessary to state that we altogether dissent from the recommendations of the majority of the Committee, that the remedies suggested, inadequate as we consider them to be for an adjustment of the great inequality of Promotion in the two Armies from the rank of Colonel to that of Major-General, should be only prospective, thus leaving without any mitigation whatever the case of the great number of Major-Generals and Colonels of the British Army who have already been passed over by those who were their juniors in the Indian Army.

We desire therefore to express our opinion :—

1st. That each Colonel on the British Establishment, when promoted to be a Major-General, should be restored to his relative place, and take his position on the Generals' List of the two Armies according to his Seniority as Colonel, and that the same course should be adopted by means of antedates in the case of the present General Officers whose Commissions as Colonels bear date at the earliest period subsequent to the 28th November, 1854, that may be consistent with the convenience of the Service. In no case, however, should the alteration of dates carry back pay, nor give a claim to Brevet Promotion in the lower ranks.

2nd. That the system of the Local or so-called "Fane Brevets," as explained in the 105th paragraph of the Report, be introduced, and made applicable retrospectively as well as prospectively to both Armies. Difficult as it will doubtless be for the Indian Authorities, by reason of the extensive supersessions which have taken place, to make any arrangement that would prevent in some case a Colonel of the British Army from being compelled to serve under an Officer of the Indian Service who had but recently been his Junior, or to lead an idle life on leave in India or in this country; still, as it may relieve some Officers from this mortifying alternative, and as the Colonels who have been already superseded are certainly as much entitled to this relief as those who may in future be passed over, we consider that the advantage which these Brevets are intended to confer should not be withheld from them.

3rd. The Committee have stated their opinion that there is nothing in the Parliamentary Guarantee which would prevent a modification of the General Order of 1855, granting rank and precedence to the Officers of the Indian Army in all parts of the world, if the circumstances should become such as to show that some modification of it was required.

We conceive that the extraordinary inequality of promotion from the rank of Colonel in the two Armies which has for some time existed, and will certainly be continued, is a case that does call for a modification of that Order, and we therefore desire to submit our opinion that the rank of General Officer on the Indian List should be confined, as formerly, to the East of the Cape of Good Hope, until the Colonel of next senior date on the British List may become a Major-General.

We must, however, state our opinion that these measures, if carried out, will be a very inadequate remedy for the injury of which the British Army, as our Report shows, have good reason to complain. We are aware that no measure would entirely remove within any reasonable time the great inequality of promotion which now exists in the higher ranks of the two Armies, but the amalgamation on one List of the Colonels and General Officers of both Services. It might be gradually lessened either by an immediate and considerable addition to the Establishment of General Officers of the British Army, or by a reduction of that of the Indian Army, or by giving the British Army the advantage of two vacancies in every three on the Indian List of General Officers until the existing inequality be reduced.

These are the only measures by which we consider that this inequality can be either removed or sensibly diminished, and as such we offer them for consideration, although we are precluded from recommending any of them by the restrictions placed upon the Committee by their Instructions.

C. YORKE, *General.*

D. A. CAMERON, *Lieut.-General*

DISSENT.

Para. 6.—The contingent furnished to India by the British Army was liable to be withdrawn as the necessities of the Home Government required. In 1854, consequent on the War with Russia, the Home Government withdrew a portion of the Contingent Force in India.

Paras. 7, 8, 9.—These paragraphs are erroneous. It was not "from the first a point of "jealous military honour on the part of both Armies, that no Officer of the higher ranks of "either should be superseded by, so as to be placed under the command of a junior Officer "obtaining promotion by the rules of his own Army." On the contrary, the late Duke of Appendix D. Wellington, in the year 1827, and Lord Hill, in the years 1828 and 1834, protected the Lieutenant-Colonels, Colonels, and Major-Generals of the British Army from being superseded by junior Officers of the Indian Army. It was not till the years 1835 and 1836 that Lord Hill protected the Lieutenant-Colonels, Colonels, and Major-Generals of the Indian Army from being superseded by junior Officers of the British Army, as will be seen by Mr. Cochrane's Appendix I. Memorandum of the 11th April, 1866, pages 3, 4, 5, 6.

The regulations are not "correctly stated in the Report of the Committee of which "Colonel Egerton was the President in January last." As the 1796 Rules for regulating the Appendix D. rise of Indian Officers in regimental rank are not mentioned, the changes in the rules between 1829 and 1837 are not fully explained.

Paras. 16, 17, 18, 20, 21.—These regulations were ordered by Her Majesty's Warrant of the 31st January, 1859, to take effect from the 14th October, 1858. The Generals given to the Indian Army were not "based on substantially the same principles" as the British Army, as the same number of Generals and Lieutenant-Generals were not given to the Indian Army as ordered by Her Majesty's Warrant.

Appendix N. Para. 35.—This paragraph is erroneous. The number of Officers who retired from the Indian Army on the 31st December, 1861, as furnished by Major-General T. T. Pears, C.B., Secretary for Military Correspondence at the India Office, was 126 Lieutenant-Colonels, 93 Majors, and 76 Captains. Only 66 Majors were promoted to Lieutenant-Colonels, 93 Captains to Majors, and 76 Lieutenants to Captains.

Para. 55.—Not "Indian Army," but "Indian Staff Corps."

Paras. 57, 58, 59, 60.—These paragraphs of the Royal Warrant of the 1st January 1862, were cancelled by Her Majesty's Warrant of the 15th June, 1864, and with what object they are inserted in the General Report I cannot conceive.

Para. 67.—As separate lists of British and Indian Officers were ordered, by Her Majesty's Warrants, and promotions were directed to be made up to the rank of General on casualties occurring in either List, of course it was well known to the authorities in England that Lieutenant-Generals, Major-Generals, and Colonels must, of necessity, be superseded, as the supersessions in both Armies will show.

Appendix N. Para. 68.—The Officers of the Indian Army were equally distinguished in the Indian Mutiny as the British Officers. There were only 126 Lieutenant-Colonels of the Indian Army who retired on the 31st December, 1861, and only 66 Majors were promoted to Lieutenant-Colonels upon those retirements.

Appendix S. Para. 70.—There are 1,382 Officers of the British Army on half-pay and unattached pay, as returned from the War Office; and to place these numbers against Officers of the Indian Army on Civil services, or out of active employment, is evidently erroneous.

Appendix M. Paras. 71, 75, 76.—The supersessions of Lieutenant-Generals, and Major-Generals of the Indian Army are equal to those of the Colonels of the British Army who are Officers of the Line on Full-pay.

Para. 80.—This paragraph is erroneous. "That all portions of the Army should have "substantially their equal share of the promotions, the honours and emoluments of the "profession" is perfectly impossible. The purchase system and other causes in the British Army put Officers constantly above their seniors in their own and other regiments. The Officers of the India Staff Corps are promoted by length of service, and the Indian List by seniority of the Officers of each Regiment.

Para. 81.—The last sentence of this paragraph is likewise impossible, under the Rules which obtain in the British and Indian Armies.

Para. 84.—The Indian List is guaranteed by Parliament by the Acts of 1858 and 1860; also by Her Majesty's Warrant of the 15th June, 1864. The British Officers may supersede those on the Indian List, or those on the Indian List may supersede British Officers; but nothing can justify Sir William James's opinion "that the Crown can hold an equal hand, and

" so far as regards relative rank and precedence, deal with them on exactly the same principles " as it would deal under like circumstances, with the Branches of the Royal Army." The War Office, in its instructions to the Committee (Para. 2) has ordered it to have "regard to " the Parliamentary Guarantee given to Officers of the Indian Establishment by the Acts of " 1858 and 1860"; but Sir W. M. James has not regarded these Instructions, and recorded an opinion that the Crown may alter the Parliamentary Guarantee. But Her Majesty will certainly do no injustice to the Indian Army, and will assuredly maintain the Parliamentary Guarantee of 1858 and 1860 in its integrity.

Para. 90.—The Indian Army is not alone in the retirements granted of the 31st December, 1861. The British Army has had large retirements also, as stated in Major-General G. Balfour's evidence before the Committee. Appendix A.

Para. 91.—As regards the last sentence of this paragraph, the Officers of the Indian Army have been superseded far more than the Officers of the British Army on Full-pay.

Para. 94.—There are fourteen Colonels of the Indian Army of 1864 and 1865 not yet promoted. The six above them of 1863 and 1864 are about to be promoted by the deaths of six General Officers.

Para. 96.—Colonel Salmon joined the Staff Corps as Major on the 2nd January, 1861, and was promoted to Lieutenant-Colonel on the 18th February, 1861. Colonel Salmon will probably be promoted to Major-General in about two or two and a quarter years, and 90 Generals, more or less, will then be added to the British Army.

Para. 97.—The Indian List, being guaranteed by Parliament, by the Acts of 1858 and 1860, and also by Her Majesty's Warrant of the 15th June, 1864, cannot be interfered with.

Para. 98.—The supersession of British Colonels, as well as of Indian Lieutenant-Generals, and Major-Generals, must be maintained, in accordance with Her Majesty's Warrants from the 6th October, 1854, to the 15th June, 1864.

Paras. 99, 100, 105.—Nothing could be more unjust than what has been proposed in para. 99.

I dissent too from the proposal of the majority of the Committee to give protective promotions to British and Indian Generals, according to the dates of their Colonel's Commissions; for the British and Indian Lieutenant-Generals and Major-Generals have just as much right to be protected from supersession as the Colonels have. This proposal too appears to include the "Indian List," which is guaranteed by the Acts of Parliament of 1858 and 1860. It also sets aside the regulations with respect to the Indian Staff Corps, as contained in Her Majesty's Warrant of the 15th June, 1864. When the Indian Staff Corps are amalgamated with the British Army there will be no objection to this arrangement, but till then the promotion of British Officers and Staff Corps Officers ought to continue under existing rules.

The instructions from the War Office are, that "if the Committee should be of opinion " that those regulations operate unjustly or unequally in the interest of Officers of either " establishment, they will report what alterations should be made in them, having regard to " the Parliamentary Guarantee given to Officers of the Indian Establishment by the Acts of " 1858 and 1860." But these regulations do not appear to act unjustly or unequally on Officers of either establishment. Page iii.

I dissent also from the renewal of the "Fane Brevets" in India. His Royal Highness the Field-Marshal Commanding-in-Chief in England, and the late Secretary of State for War (Sir John Pakington) objected to "reverting to the old system of the 'Fane Brevets,' and of having " recourse to that of General Brevets made applicable to all branches of Her Majesty's Armies " wherever serving, based on the provisions of the Staff Corps Warrant; as it would prove so " extremely inconvenient, and produce so much embarrassment and confusion." Appendix B.

Para. 106.—The Indian Officers have just as much right to be protected from supersession as the British Officers.

Para. 109.—If the opinion of the majority of the Committee be acted on to give Major-Generals prospectively the dates of their rank as Colonels, care should be taken to prevent supersessions in the higher grades of Major-Generals, Lieutenant-Generals, and Generals, in both the British and Indian Armies.

H. HANCOCK,
Lieutenant-General.

15th December, 1869.

Memorandum regarding the wording of the above Dissent.

With reference to the paragraph of Lieutenant-General Hancock's Dissent, in which para. 84 is stated to be "Sir William James's opinion," the majority of the Committee claim

their individual and joint responsibility for this, as for every other portion of the Report which they have signed.

C. YORKE, *General.*

D. A. CAMERON, *Lieut.-General.*

R. ALEXANDER, *Lieut.-General.*

TO THE RIGHT HONOURABLE, THE SECRETARY OF STATE FOR WAR.

I HAVE fully considered all the Warrants issued by Her Majesty from the 6th October, 1854, to the 15th June, 1864; also all the papers furnished to the Committee as noted in the Appendix, and the Evidence given before the Committee.

By Her Majesty's Warrant of the 6th October, 1854, it was ruled: "That general "periodical brevets be, for the future, abolished." A new system of promotion was inaugurated by Her Majesty's Warrants. An establishment of General Officers, based on the fair requirements of the British and Indian Armies, was set apart for each service. As by Her Majesty's Warrants separate lists of officers of the British and Indian Armies were ordered, and as these Warrants directed that casualties occurring in either List should be filled up by promotion to the rank of General, it was well known to the authorities in England and India that supersessions of British and Indian Lieutenant-Generals, Major-Generals, and Colonels must of necessity occur. In consequence of the new system of promotion above mentioned, Lord Hardinge, who was Commander-in-Chief in England in 1854, by Her Majesty's command ordered that the "Fane promotion" hitherto prevailing in India should no longer be permitted to exist. The following extract from the "London Gazette," of the 1st May, 1855, was published:—

"*Horse Guards, 25th April,* 1855.

"Memorandum.

"In order to remove any doubt which may exist as to the rank and precedence of the officers of "the Honourable East India Company's Service, it is Her Majesty's pleasure that officers of the "Honourable East India Company's Service, whose commissions shall be signed by authorities duly "deputed to do so by Her Majesty, shall have rank and precedence with officers of Her Majesty's "Regular Army, according to the dates of their commissions, in all parts of Her Majesty's dominions "or elsewhere."

The above Memorandum was issued in the interests of the Home Government, and not for the benefit of the Indian Officers. They were employed in the War with Russia in 1855; and it was in prospect of a similar contingency that they are to serve "in all parts of Her "Majesty's dominions, or elsewhere."

Appendix C. The copy of correspondence from Officers of the British Army, the copy of correspondence (No. 1 to 46 inclusive), the Report of the War Office Committee, and Major-General Sir Percy E. Herbert's first Memorandum, all set forth the supersession of British Colonels by junior Colonels of the Indian Army; but no mention is made in any of these papers of the supersessions of Major-Generals of the Indian Army by junior Major-Generals of the British Army. These latter Supersessions should have been stated and communicated to the House of Commons, as the House of Commons has been left under an erroneous impression that only Colonels of the British Army have been superseded by junior Colonels of the Indian Army.

" B.

" D.

" E.

Appendix M. The supersessions of Lieutenant-Generals and Major-Generals of the Indian Army are taken from Hart's Army List of the 1st January, 1869, and from the War Office Army List of the 1st January, 1869, as regards Major-Generals of the Indian Army.

The Retired Full-Pay Officers of the British Army are not included in the above Supersessions.

The Supersessions above mentioned have been examined by the Committee, and will be found in the Appendix.

The above supersessions of Lieutenant-Generals, Major-Generals, and Colonels of the British and Indian Armies being in accordance with Her Majesty's Warrants from the 6th October, 1854, to the 15th June, 1864, are fair and just inobedience to Her Majesty's commands.

The Officers of the British Army and the Officers of the Indian Army must of course be considered on an equal footing as regards "distinguished services in the field."

Appendix K. It appears from Major-General T. T. Pears's Memorandum of the 9th July, 1869, that

" not above one-fourth of the Officers temporarily superseded are Officers of the Line on Full-
" pay, and that a portion of these only will be found in India;" the remainder being Colonels of the British Army, Ordnance Corps, or Royal Marines, who have retired on "unattached, " Half-pay, or Full-pay." There are 1,382 Officers of the British Army on Half-pay, as returned by the War Office; and with the exception of about 40 Half-pay Lieutenant-Colonels and Brevet-Colonels on Staff employ, the rest do no duty, and many have retired for many years. There are no "Unattached, Half-pay, or Full-pay" Officers in the Indian Army, as when they retire they are out of the Service altogether. But Indian Officers are obliged to serve in India all their lives, except when on furlough. Officers on Full-pay in the British and Indian Armies are all Combatant Officers and may fairly be put together on an equality. Appendix .

The following is an extract from Major-General G. Balfour's Memorandum, showing the proportion of Generals ordered by Her Majesty's Warrants from the 6th October, 1854, for the British and Indian Armies :— Appendix G.

" V. It appears, judging from incidental remarks in the Reports on Promotion of the Commissions
" of 1854 and 1858, that the number of Generals assigned to the several branches of the Army had
" some relation to the number of Combatant Officers.

" The number of officers in the Artillery was 692, and for these 32 Generals were allowed, being
" a proportion of 1 to 21 officers.

" The Royal Engineer Officers were 336 in number, and for these 16 Generals were allowed,
" giving also 1 General to 21 officers.

" The number of officers in the Cavalry and Infantry was 4,833, for whom 234 Generals were
" allowed, giving nearly the same proportion of 1 to 21 officers.

" For the Indian Army, however, comprising 5,400 officers, only 220 Generals were allowed,
" being in the proportion of 1 General to 24 officers.

" Moreover, the distribution of this number of Generals into the three grades was unfavourable to
" the Indian Army.

" In the Marines one half of the number of Generals allowed were full Generals and Lieutenant-
" Generals, and the other half Major-Generals.

" The same proportion was observed in the Artillery and Engineers, and a little more favourable
" in the Cavalry and Infantry of the Line.

" In the Indian Army however the number of the two superior grades of Generals was only about
" half that of the Major-Generals, as will be seen by the following Table :—

	Artillery.	Engineers.	Cavalry and Infantry.	Total.	Marines.	Indian Army.
Generals	6	3	50	59	2	25
Lieutenant-Generals ..	10	5	70	85	3	50
Total	16	8	120	144	5	75
Major-Generals	16	8	114	138	5	145
Total	32	16	234	282	10	220

" The operation of the more favourable scale on which the grades of the Generals' rank is fixed
" for the British Army, will be clearly seen by contrasting the position now occupied by a few officers
" formerly in the Indian Army, with that which they would have held, if they had not been transferred
" from the Indian to the British Army.

" I find that four Officers of the late Indian Army—Carmichael, Grant, Vivian, and Wyllie—have
" for seven years past held the rank of Lieutenant-General; whereas had they continued on the Indian
" List, they would only have attained that rank some time later.

" Again, Major-General Hale, who was, about a year ago, promoted to the rank of
" Lieutenant-General would, if still on the Indian List, have stood low down on the list of Major-
" Generals, and would have had no chance of advancement to the grade of Lieutenant-General within
" the next few years."

By Her Majesty's Warrant of the 15th June, 1864, it was ordered: " As the number of
" General Officers on the British List increases, and the number on the Indian List diminishes,
" the establishment of Generals, Lieutenant-Generals, and Major-Generals on each list shall be,
" from time to time, so adjusted as to maintain, as nearly as may be, the proportion now
" existing in the British Service; but any reductions that may be requisite shall be made only
" by gradual absorption of every third vacancy amongst supernumeraries in the high grades."

The proportion of Generals, Lieutenant-Generals, and Major-Generals now existing in the British Army, has not been carried out in the Indian Army, as ordered by Her Majesty's Warrant of the 15th June, 1864.

On the 30th September, 1862, three European Cavalry regiments and nine European

Infantry regiments were transferred from the Indian to the British Army, adding to the British Army seven Lieutenant-Generals and five Major-Generals; total, 12.

By Her Majesty's Warrant, of the 1st January, 1862, par. 9, it was ordered that three General Officers "should be added to the 12 General Officers above-mentioned"; but this addition has not yet been made.

On the 14th May, 1867, the Engineer Corps were transferred from the Indian to the British Army, adding to the British Army two Generals, four Lieutenant-Generals, and six Major-Generals; total, 12.

On the 29th September, 1868, the Artillery Corps were transferred from the Indian to the British Army, adding to the British Army six Generals, eight Lieutenant-Generals, and 20 Major-Generals; total, 34; but as there is only an establishment of 26 Generals allowed for the Artillery, eight have to be absorbed.

The Generals of the Indian Army are now reduced to 20 Generals, 40 Lieutenant-Generals, and 113 Major-Generals; total, 173.

In about two years, when Colonel Salmon, the Senior Colonel on the British Amalgamated List, would, had he remained on the Indian List, be promoted to Major-General, about 90 Generals, more or less, will be added to the British Army, the Indian List of Generals being concurrently reduced.

Appendix A. The following extract is taken from the evidence given before the Committee by Major-General G. Balfour, C.B.:—

"128. There was a very strong point mentioned both by Sir Percy Herbert and Colonel Adye in "their evidence, and it was with reference to the inducement which had been held out to the Indian "Army for officers to retire, as being of an exceptional nature. No doubt the applicability of that "word depends upon the extent to which it is carried as to its being correct, but I think that "inducements in the English Army have also at various times been held out in various ways, both to "induce English Officers to retire, as well as to give them promotion. In fact, the English Army "between the peace of 1815 and 1854 could never have kept pace with the age if they had not done "so; as a means of promotion in the Queen's Army a very important measure was carried out, and "which partly is being carried on to this day. In 1823, it began either with the Marines or the "Artillery, I forget which; but seeing the stagnation of promotion in those two Seniority Corps, the "Government of that day came to the determination to permit officers of Infantry and Cavalry to "purchase rank of the officers of Artillery, Engineers, and Marines who were disposed to sell out: "that is to say, a Lieutenant-Colonel of Marines who was anxious to leave the Army was allowed "to receive a certain sum from a Major of Infantry in the British Army; who thereby became a "Lieutenant-Colonel in what they called the Unattached List, so that a very large augmentation, "which has continued to this day,—and officers benefit by it,—was made to the British Army inde-"pendently of the regimental one, I believe, of 225 Lieutenant-Colonels alone; but the information "upon that point is very incomplete, and therefore difficult to get at.

"By the Commission over which the Duke of Wellington presided in 1840, that question was "very thoroughly gone into, and the large expense to which the nation had been put by the sale of "the Commissions in the Seniority Corps of Marines, Artillery, and Engineers was fully pointed out. "That was one opening that was given as an inducement to officers to obtain promotion, which "was much of the same character as the Indian retirements. In addition to that, in the year 1840 "there was a considerable increase made to the amount which was paid by the nation for the full-pay "retirements of the Infantry and Cavalry, Artillery, and Engineers. Again, in the year 1854, "an increase in the full-pay retirements took place by the recommendation of the Commission "which sat at that time. I think that for the Ordnance Corps the amount was then increased to "48,000*l.*

"129. I may remind you that all that is given very minutely in the Report of 1854?—That is "so. But another increase has taken place; two years ago a sum of 12,000*l.* was given to the "Ordnance Corps to induce officers to retire."

"130. (*Sir C. Yorke.*) When was that?—That was about two years ago that was a fresh "addition. It is now a sum of 60,000*l.* for the two Ordnance Corps, as an inducement to officers "to retire."

At the recommendation of a Commission appointed in 1858, 115 Lieutenant-Colonels of the British Army were promoted to Colonels, to place them over 206 Colonels, their juniors, promoted under the Regulations of 1854.

Appendix N. On the 31st December, 1861, the Secretary of State for India induced 126 Lieutenant-Colonels (of whom four were Major-Generals and 80 Brevet-Colonels), 93 Majors (of whom seven were Brevet-Colonels and 19 Brevet Lieutenant-Colonels), and 76 Captains (of whom three were Brevet Lieutenant-Colonels and 21 Brevet Majors), to retire from the Indian Army, by offering them "extra annuities" in addition to their pensions. Consequent on these retirements 66 Majors were promoted to Lieutenant-Colonels, 93 Captains to Majors, and 76 Lieutenants to Captains. Of the promotions thus made five officers, Colonels P. Harris (deceased), J. Travers, R. N. Faunce (deceased), E. L. Russell, and M. Galway, were promoted to Major-Generals. The advantages held out to officers of the British Army to retire, and give promotion to junior officers, as shown in the evidence given by Major-

General G. Balfour before the Committee, may be regarded as equivalent to the retirement of Indian officers in December 1861.

The European and Native force now serving in India, as obtained from the War Office and India Office (not counting officers) is as follows:—

British Army (Europeans).

	Bengal.	Madras.	Bombay.	Total.	General Total.
Cavalry	3,167	906	708	4,781	
Infantry	26,151	6,985	8,003	41,137	
Engineers	55	13	13	81	
Artillery	6,038	2,908	2,471	11,417	
					57,416

Indian Army (Natives).

Cavalry	8,702	1,401	3,639	13,742	
Infantry	34,976	28,330	21,581	84,887	
					98,629

The late Duke of Wellington, in his Memorandum dated 18th September, 1827, laid down this principle with reference to officers of the East India Company's Army in India: "An officer who has distinguished himself at the head of one of His Majesty's regiments, and "who may thereby have rendered essential service at an important moment, must not be "liable to be superseded by one junior to himself in the rank of Lieutenant-Colonel, either as "Colonel or subsequently as a Major-General." Appendix D.

The following is an extract from Mr. G. Cochrane's Memorandum, dated 11th April, 1866:— Appendix I.

"The Duke of Wellington having left the Horse Guards before the discussion terminated, the "decision devolved upon Lord Hill.

"The result was communicated to the Government of India by the Court of Directors, in a "despatch dated 3rd December, 1828:—

"We have taken into early and most attentive consideration your Military Letter of the 9th "February, 1828, and having communicated with His Majesty's Ministers and the General Com- "manding-in-Chief, on the important topics therein brought to our notice, we have the satisfaction to "announce to you the following arrangements:—

"An arrangement has been made in communication with the high Authorities above adverted to, "for granting the rank of Colonel, regimentally, to every Lieutenant-Colonel Commandant of a "Regiment of Cavalry or Infantry, or of a Battalion of Engineers, or of Artillery in one service.

"You are to observe, however, that with a view to prevent the supersession of His Majesty's "officers by the indulgence now accorded to the Company's Officers, the Commander-in-Chief in India "will be empowered to grant the temporary and local rank of Colonel, by Brevet, to any Lieutenant- "Colonel of His Majesty's Service who might without such grant, be superseded by a Company's "Officer rising to the rank of Colonel regimentally.

"It is moreover understood that if one of His Majesty's Lieutenant-Colonels so promoted at one "Presidency, shall be removed to another Presidency, such promotion will be cancelled; but another "Brevet Commission will be granted to him, if necessary, to put him on a par, in respect to rank, with "the Officers of the Establishment, to which his services shall have been transferred."

But no provision was made for protecting the Lieutenant-Colonels of the Indian Army from supersession. The effect of this was, according to paras. 14 and 16 of Mr. G. Cochrane's Memorandum, that during two years 97 Lieutenant-Colonels of the Indian Army were superseded by junior Lieutenant-Colonels of the British Army. The Court of Directors pressed the subject on the attention of the President of the Commissioners for the Affairs of India, and the decision of the Home Government was communicated by the Court of Directors to the Government of India in a despatch dated 28th January, 1835:—

"The Commander-in-Chief in England, Lord Hill, with His Majesty's approbation, sanctioned "that both King's and Company's Officers shall bear the same relative rank to each other as Colonels, "as they previously held in the rank of Lieutenant-Colonel, with this understanding, however, that "when the number of Field Officers may be too small in camp or quarters, Colonels not commanding "Brigades, will be placed on the Field Officers' Roster."

It was not till the 25th March, 1834, Lord Hill, the Commander-in-Chief in England, extended to the Officers of the Indian Army that they "should be allowed to participate in "the advantages enjoyed by the King's Officers for 'distinguished services in the field;'"

and in the same letter Lord Hill ordered "that under no possible circumstances can it be "permitted that a Lieutenant-Colonel in the King's Service should be superseded by one "junior to himself in the rank of Lieutenant-Colonel, or Colonel, or subsequently as Major-"General."

Appendix B. On the 15th and 31st August, 1865, the Commander-in-Chief in India, Sir William Mansfield, addressed two letters to the Military Secretary, Horse Guards, London, bringing to notice that six Colonels of the British Army had been superseded by junior Colonels of the Indian Army promoted to Major-Generals. Sir William Mansfield recommended the renewal of the "Fane Brevets in India, and to have recourse to a system of brevet promotions which "shall be good all over the world for fixed terms of service, according to the rules which have "been laid down for the Staff Corps."

Appendix B. In a letter addressed by Lieutenant-General W. F. Forster, K.H., to the Under Secretary of State for War, dated 19th March, 1867, His Royal Highness the Field-Marshal Commanding-in-Chief stated that "the remedy proposed by his Excellency, viz., that of revert-"ing to the old system of 'Fane Brevets,' and of having recourse to that of General Brevets "made applicable to all branches of Her Majesty's Armies wheresoever serving, based on the "provisions of the Staff Corps Warrant, would prove so extremely inconvenient, and produce "so much embarrassment and confusion that His Royal Highness considers it would be "most inexpedient to attempt to re-adjust the inequalities brought to notice by the adoption "of such remedial measures." Other objections were stated in the same letter, and it was added that, "If the Secretary of State concurs in these views, His Royal Highness proposes to "forward a copy of this letter to India for Sir William Mansfield's information." The Secretary of State for War, Sir J. Pakington, in a letter from Lieutenant-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards, dated 3rd April, 1867, stated that he "concurs in the views expressed by His Royal Highness on this question, and in the pro-"posed communication to Sir William Mansfield."

Appendix B. The following remarks were made by His Royal Highness the Field-Marshal Commanding-in-Chief in England, in a letter from Lieutenant-General W. F. Forster, K.H., to the Under Secretary of State for War, dated 9th July, 1868 :—

"The only absolute remedy would be to make the rank of all Generals on the Indian List local, "until such time as they would fall in at their proper date on the British List, that is, when the "Colonel of next senior date on the British List became a Major-General, the local rank held by the "Indian Officers should become Army rank; and that Major-Generals and Colonels of Her Majesty's "British Army appointed to commands in India should have local rank in that country, placing them "in their proper relative positions with the Generals of the Indian Army.

"This, however, would be a retrograde measure, and one so much in disaccordance with what has "been already established by Royal Warrant, that His Royal Highness conceives it would be objec-"tionable to entertain it."

Appendix B. On the 24th March, and 9th April, 1869, Lieutenant-General Sir E. Lugard, G.C.B., addressed letters to the Military Secretary, India Office, stating that, "It appears to "Mr. Cardwell that it would mitigate, though not remove, the cause of grievance to which "this supersession gives rise, if each Colonel on the British Establishment, when promoted to "the rank of Major-General, were restored to his relative place, and took his position on the "General List, according to his seniority as Colonel, the same course being adopted by means "of ante dates in the case of the present General Officers, whose commission as Colonels "bear date on or after the 28th November, 1854. The arrangement proposed in my letter "of the 24th March is to apply to all officers whose Colonelcies bear date on or after "the 28th November, 1854." In a letter from Major-General T. T. Pears, C.B., to the Under Secretary of State for War, dated 16th April, 1869, he states, "that the Duke of "Argyle has no objection to offer to the measure which Mr. Cardwell proposes at once to "adopt with a view of mitigating the grievance."

But this arrangement was setting aside Her Majesty's Warrants from the 6th October, 1854, to the 15th June, 1864, and the effect would be the supersession of the whole of the Major-Generals of the Indian Army. The first 38 Lieutenant-Generals of the Indian Army in the War Office Army List of 1st January, 1869, had their Major-Generals' Commissions dated on the 28th November, 1854.

Appendix B. But in a letter from Lieutenant-General W. F. Forster, K.H., to the Under Secretary of State for War, dated 19th June, 1869, His Royal Highness the Field-Marshal Commanding-in-Chief objected to this arrangement, and proposed, "That the rectification of dates of commission "should apply only to such officers as have been, or may be, promoted to be Major-Generals on "or after the 6th March, 1868, the date on which the 6th Clause of the Warrant of June 1864 "came into effect. Thus all those Major-Generals of the British Army who have been promoted "since that date would be ante-dated to the 6th March, 1868, and all Colonels of the British

"List who may hereafter be promoted until the period contemplated in the 10th Clause of the "Warrant arrives, would receive such dates to their commissions as Major-Generals as will "place them in their proper position relatively with the Indian officers, according to their "dates as Colonels."

But this proposal would supersede all the Major-Generals of the Indian Army promoted since 1854, in opposition to Her Majesty's Warrants issued from the 6th October, 1854, to the 15th June, 1864.

Since the 15th May, 1869, two Generals, one Lieutenant-General, and three Major-Generals of the Indian Army have died. Her Majesty's Warrants since the 6th October, 1854, ordered that any casualties, either on the British or Indian Lists of Officers should be filled up by promotion to the rank of General. Although promotions on the British Lists have been regularly made up to this time, Her Majesty's Warrants have been set aside at the India Office, as well as the Parliamentary Guarantee of 1858 and 1860. The following remark was made by the Field-Marshal Commanding-in-Chief in England in His Royal Highness's letter to the Secretary of State for War, dated 10th April, 1869:—"I should be inclined to suggest "the suspension of any further promotion of Colonels of the Indian Army until the question "with regard to those of the British Service had been decided on, were it not that I should "be adverse from proposing any step tending to deprive officers of the Indian Army of that "which they have been guaranteed by Royal Warrant." I am of opinion therefore that the promotions at the India Office ought not to have been stopped, in opposition to Her Majesty's Warrants, and that these promotions ought to be made without any further delay. Appendix B.

The instructions from the War Office (para. 2) require the Committee to have "regard "to the Parliamentary Guarantee given to the Officers of the Indian Establishment by the "Acts of 1858 and 1860." By the Act of 1858 it was enacted in the 56th Section:— Page iii.

"LVI. The Military and Naval Forces of the East India Company shall be deemed to be the "India Military and Naval Forces of Her Majesty, and shall be under the same obligations to serve "Her Majesty as they would have been under to serve the said Company, and shall be liable to serve "within the same territorial limits only, for the same terms only, and be entitled to like pay, pensions, "allowances, and privileges, and the like advantages as regards promotion and otherwise, as if they had "continued in the service of the said Company."

The Officers on the Indian List are guaranteed all the above advantages; and Her Majesty's Warrants since the 6th October, 1854, also confirm to them the same advantages. The British Officers may supersede those on the Indian List, or those on the Indian List may supersede British Officers, but the Parliamentary Guarantee cannot, under any circumstances, be set aside.

Her Majesty's Warrant of 15th June, 1864 orders, "I. The whole of the officers of "Cavalry and Infantry of Her Majesty's Indian Army shall remain on the Indian General "List, as before the Warrant of the 1st January, 1862, and shall rise on that List to the rank "of General Officer, the establishment of General Officers of the Indian Army being, from time to time, reduced in the manner hereinafter provided."

The promotion of British Officers to the rank of Colonel, through the purchase system and other causes, is much more rapid than that of the Indian Officers. A reference to the British Army List will show that many Officers have obtained their Colonelcies in comparatively short periods from the dates of their first commissions. But the Officers of the Indian Army generally have had to serve for much longer periods to obtain their Colonelcies. The Officers of the Indian Staff Corps cannot attain a Brevet Colonelcy under 31 years, and have to serve 38 years for a Colonel's allowance.

The following Return will show the total years of service of Colonels and Lieutenant-Colonels of the Indian Army on the 17th February, 1861, as recorded by Major-General G. Balfour, C.B. Appendix A.

(Signed) G. BALFOUR,
Major-General.

f

The fact is, that we have to do at present with two Services and two systems o promotion. The representatives of the British Army wish to retain their advantages on the one part, and to compel the Officers of the Indian Army to accept their disadvantageous system on the other, thus ensuring to the latter, in the long run, a career of promotion far inferior to their own.

But the regulations established by Her Majesty's Warrants, from the 6th October, 1854, to the 15th June, 1864, must be carried out in their entirety ; and the supersessions of both British and Indian Officers must be maintained in obedience to Her Majesty's Commands.

I see no cause therefore to suggest alterations in Her Majesty's Warrant of the 15th June, 1864.

H. HANCOCK,
Lieut.-General.

WAR OFFICE,
16*th December*, 1869.

MINUTES OF EVIDENCE AND APPENDIX.

APPENDIX A.

Minutes of Evidence taken before the Committee appointed to enquire into the Supersession of British Officers by Officers of the Indian Army.

War Office, Saturday, 25th September, 1869.

Present:

Sir William M. James, *President.*

Sir Charles Yorke.	General Alexander.
Sir Duncan Cameron.	General Hancock.

Major-General Sir Percy E. Herbert, M.P., examined.

1. (*President.*) The Committee have before them your Memorandum. Is there anything further that you wish to add?—Yes; I wish to make a statement; but first of all I wish to say that it is only because I happen to occupy a seat in the House of Commons that I venture to put myself forward before the Committee in this matter. I am not authorized in any way to speak in the names of the Officers of the Army, but I felt it my duty, as an Officer of the Army and acquainted with the subject, to give my attention to it as a grievance complained of, having, as I said before, the advantage of a seat in the House of Commons. It is not with any hostile spirit to the Officers of the Indian Army that I have done so. The connection of my family with the East India Company and its Army precludes me from taking up anything in that spirit; and I have more than once been in communication with Indian Officers upon their personal grievances, and have endeavoured to ascertain whether the alleged grievances were well-founded by going to the authorities to make enquiries which I felt bound to do when applied to, so long as I thought that there was any justice in their complaints. As a member of the House of Commons I felt bound to do so.

2. The Committee are well aware that you have taken up this subject merely as a matter of public duty, as effecting the public service?—I will now, if you please, proceed with my statement. I believe that each of the Members of the Committee is in possession of a copy of the Memorandum which I prepared in the course of last summer upon the subject of the Supersession of Officers in the Queen's Army, and I wish to draw the attention of the Committee to the act, that the supersession which is complained of as a grievance, affects the three branches of the Queen's Service—that is to say, the Royal Engineers the Royal Artillery, and the Infantry and Cavalry. The Committee are aware that since the year 1854, in the British Army, the Officers belonging to those three branches of the Service have risen to the rank of Major-General on separate lists. Previously to that time there was a system of promotion by General Brevets, and under that system of General Brevets, no Officer who had attained the rank of Colonel could be superseded by an Officer who was junior to himself, in attaining the rank of Major-General. The Officers of the Honourable East India Company's Army rose from the rank of Colonel to that of Major-General in a like manner at the time of those General Brevets. The amalgamation of the Indian and English Armies was discussed in the House of Commons when I was a member of the House, and in that discussion I took a small part in supporting the proposal that was made on the part of the Government to amalgamate them. The Committee may be aware, if they recollect, or have referred to what took place at the time, that the question brought before the House for discussion was the amalgamation of only the European portion of the Indian Army with the English Army—that it was not thought absolutely necessary to bring it before the House, but it was thought desirable to give the Houses of Parliament an opportunity of expressing an opinion upon the competency and power of the Crown to do it; all that was discussed there was the union of the European branches of the Indian Army with the Royal Army.

3. (*General Alexander.*) You are alluding, I presume, to the Act of Parliament of the 20th of August, 1860?—Yes; it was in the year 1860 that the discussion took place. The amalgamation of the whole of the Officers of the Sepoy Regiments with the British Army, and the formation of a Staff Corps, were in no way involved in that amalgamation, or mentioned in the Act of 1860; the amalgamation might have been confined to the European forces, leaving the other Officers on a purely local footing.

4. (*President.*) Was not the first Act for the transfer of the Government of India to the Crown passed in 1858?—Yes; and it was during the passage of the Act of 1858 through the House of Commons, a clause was inserted, commonly called the "Guarantee" clause.

5. You refer, I think, to Mr. Henley's clause?—Yes; and I believe the truth of the story is that it was drawn with a pencil and a bit of paper by Sir Hugh Cairns, on the crown of his hat, and that it was inserted in the Bill.

6. (*General Alexander.*) It was on the 2nd of August, 1858?—Yes. In reply to the gallant officer's question as to my view of the meaning of the clause, it would be a bold matter for me to attempt to put a meaning upon that clause before Sir William James.

7. (*President.*) On the contrary; I should like very much to have any suggestion that may occur to you, or which may have been made to you upon it?—Then my impression is, and indeed it is a very firm conviction, that the House of Commons thought that it was likely, in consequence of this transfer of the Army and Government of India to the Crown, that wholesale reductions might be made in the Army, that the Officers would be treated shabbily, and have no one to represent them, and the House was therefore anxious that they should be in as good a position as if the transfer had not been made. I am aware that it has been urged in some quarters that in consequence of that Guarantee clause it was not competent to the Imperial Government to make any reduction in the Army that they found in existence in India. But it appears to me to be contrary to common sense and contrary to public policy to suppose that any Government could ever be held bound to maintain a larger

Army in the country than the necessities of the Government required. The argument, I believe, was put forward in such a shape as to lead Lord Cranworth to put paragraph 80 into the Report of his Commission. It is clear that the Crown is competent at any time to put Officers on half-pay or to reduce them, which may entirely deprive them of any opportunity of rising in their profession.

8. Does putting them on half-pay deprive them of the opportunity of rising?—Yes, in some instances, entirely. If a regiment, for example, is disbanded, the Ensigns, Lieutenants, and Captains are liable to be placed on half-pay; they could never rise beyond that rank, unless again brought back on full-pay. There are now on the Half-pay List subalterns who were put on half-pay at the end of the great European War, after the battle of Waterloo—Captains, Lieutenants, and Ensigns. The subject was also referred to by Sir Charles Wood, when he asserted the competency of the East India Company, or of the Crown, to reduce the Army. The passage may be found at page 94, in the third Series of Hansard, in the Debates of 1864. I believe the Committee are also in possession of the Report of the Committee that sat last year, and which was presided over by Colonel Egerton. In that Report documents are quoted which show that prior to the change in the Government of India great objections had been raised to any Officers of the East India Company, by any special rule peculiar to the East India Company's Army, being promoted over the heads of Officers in the Queen's Army who had attained the rank of Lieutenant-Colonel. The rise from Lieutenant-Colonel to Major-General in the British Army was by seniority. It was required that the Indian Officers should rise in like manner. It was only in a very few isolated instances that it occurred, but at the same time it always formed the subject of communication, either from the Duke of Wellington or Lord Hill, or the Duke of York, as far back as the year 1807, with the President of the Board of Control; and remedies of one sort or another were at that time provided. Either the system of promotion complained of then was altered, or in a later case there were what were called "Fane" Major-Generals, which gave the rank of Major-General to a certain number of British Officers who had been superseded by Junior Indian Officers in the rank of Major-General.

9. (*General Alexander.*) There was no permanent rank given; it was merely local and temporary?—Yes; but at that time the rank of the Indian Officers did not run westward of the Cape of Good Hope, and they were actually, I believe, in the eye of the Law, civilians in this country. Therefore, although it was an awkward arrangement, and one which met, in some degree, an individual grievance, at any rate the principle that I am urging upon the Committee was admitted,—that is to say, that two Armies cannot serve with advantage or fairly together, in the same country, and be on an equal footing, unless their rules of promotion are fair and just one with another, so that Officers who have actually served under the orders of an Officer who has commanded a Brigade, shall not supersede him, and that he shall not be liable to find an Officer who has served under him in his Brigade, put over his head, and commanding him in a Division. Now that is a case which I think every military man, and probably every civilian will see, must strike at the root of all contentment and discipline in the Army, and must, therefore, be prejudicial to the public service. I think I may infer from the correspondence, and from the documents which are referred to in the Report of Colonel Egerton's Committee, that, if the East India Company had continued, the grievance of which I am now complaining would not have arisen; and, if so, that some means would have been found to remedy it. I think that if English Officers, in consequence of some extraordinary promotion, had been passing very rapidly from the rank of Colonel to that of Major-General out in India, the Officers of the East India Company would have applied to the East India Company to remedy the grievance and improve their position, and very fairly they would have done so. There can be no doubt that their complaints would have been attended to. Therefore I say, that to prevent that supersession now will be no breach of the guarantee, as it would not have been permitted if the East India Company had continued to govern India. I say that it is no breach of the guarantee to ask that this supersession should be prevented now. The extent of the evil I have already put before the Committee, and therefore I will only briefly allude to it, because the lists to which no doubt they have turned their attention will show the extent of the evil; but I will just refer to one case especially, which will be found set out at page 5 of my Memorandum. I will take first the case of Major-General Sir David Wood, of the Royal Artillery; he was in command, as Senior Officer of Artillery, either Royal or Indian, during the short episode of the Campaign, as it may be called, the final attack upon and capture of Lucknow. He commanded the whole of the Field Artillery, nine batteries, with the rank of Brigadier, and under his orders there were two Officers who, at the time of his arrival in India, were Brevet-Majors and Captains, commanding Troops of Horse Artillery in the East India Company's Service. I allude to Captain and Brevet Lieutenant-Colonel Tombs, of the Indian Artillery, and Captain and Lieutenant-Colonel Turner. Colonel Turner was promoted to be Brevet Lieutenant-Colonel, I think, in January of that very year 1858, and when Colonel Wood arrived in India, they were both Captains and Brevet Majors. At the time of the formation of this Artillery force under Colonel Wood's orders, one was a Lieutenant-Colonel, the other, I think, was not; but they were both promoted to be Brevet Lieutenant-Colonels in the year 1858, and they commanded batteries of Horse Artillery under Colonel Wood's orders, as their Brigadier, he being a full Colonel of the year 1855, and both of those Officers attaining to the rank of Brevet Lieutenant-Colonel in the year 1858. As I have said, they commanded Troops of Horse Artillery under his orders, and by the arrangement since made—not for any service, because of course I draw a distinction between promotion for distinguished service and promotion in the ordinary course; but by the rules and the operation of the Warrant which is complained of—those two Officers have arrived at the rank of Major-General in the so-called amalgamated force of Royal Artillery, over the head of Sir David Wood, under whose orders they served at the siege of Lucknow. That, I think, puts in a very clear way the grievance I complain of. I will not trouble the Committee with more than that one illustration, because I have put some others into print. I submit, for the consideration of the Committee, that, if the East India Company had retained the government of India, this grievance would not have been allowed to attain the magnitude it has. Therefore it appears to me that it would be no breach of the guarantee to remedy the grievance now, and prevent its future recurrence. I will put the matter before the Committee in another point of view. In 1854, the system of General Brevets was abolished.

10. (*President.*) The Crown did not pledge itself to make Brevets at any time or times; there was that distinction that the General Brevets were the mere spontaneous acts of the Royal Bounty at the moment. There was no pledge given that compelled the Crown to make any Brevet at any time, or to extend it in any degree; but when the Crown substituted for that a system by which, in a certain number of cases, the rank of General Officer was given to one and to another, then there was a pledge of the faith of the Crown, so far as it gave rights to individuals?—What I wish to urge upon the Committee is this, that under the system of General Brevets which had prevailed for a long time up to 1854, no Officer could supersede another after attaining the rank of Colonel.

11. Do you mean that no Officer was allowed to supersede another?—Yes; the practice was—except in the case of an exceptional exercise of the prerogative

of the Crown, which nobody I presume disputes—that no Officer in the rank of Colonel passed over the head of another Officer who was senior to himself. What I desire to impress upon the Committee is this,—that under the system of General Brevets, that which is now complained of never could have arisen, because no Officer was ever promoted to the rank of Major-General except in the order in which he stood as a Colonel. That it is competent to the Crown to revise the Warrant which gives succession by individual vacancies instead of succession by General Brevets I think will not be disputed. No doubt it was intended to give a fair distribution of promotion to the three branches of the Service—the Royal Engineers, the Royal Artillery, and the Line; and if it was found that either of those branches gained an undue advantage, it would be competent, as I maintain, for the Crown to revert to the system of General Brevets now. Under that system the grievance complained of never could have arisen. It was about that time that the right to hold military rank in Europe was given to the East India Company's Officers.

12. One way in 1854, and the other in 1855?—Yes. The system of giving Local Rank I had almost forgotten to refer to; but as it has been referred to by a Member of the Committee I will do so. It was during the Peninsular War, the object being to prevent Officers who had gained experience in the field from being superseded by Officers who were senior to them, but who had just come out from England. It is practised now in the case of Colonial appointments; but that is quite a special matter. Individuals are selected by the Crown to exercise a particular command; such as Commander-in-Chief in a colony or in India, or one of the Presidencies. It is usual to give them a step of local rank. A Major-General is given local rank of Lieutenant-General in South Africa or in the East Indies. That is a case of selection by the Government for a particular post, and bears no analogy to the supersession I complain of. The Duke of Wellington had local rank conferred upon him; and several other Officers in Spain also held local rank. That right has been exercised very commonly in the Colonies—in the Crimea largely; but that is an entirely different case. What I wish to impress upon the Committee is that the system of giving local rank in that way—selecting Officers and giving them that local rank—is in no way the same thing as laying down a rule, or issuing a Warrant which shall give to one class of Officers, perfectly irrespective of their individual merits, or of their supposed merits, an advantage over other Officers, contrary to the rules of the Service under which they both entered. I wish to put before the Committee, on a very broad ground, that it is the greatest possible injustice to amalgamate two Armies and put them on an unequal footing. When it was proposed that the two Armies should be amalgamated there were two simple ways of proceeding, which would have been equally fair; one was, not to amalgamate them at all, and the other was to amalgamate them absolutely as they stood. If you were to amalgamate Lieutenant-Colonels with Lieutenant-Colonels according to the dates of their commissions, and Colonels with Colonels according to the dates of their commissions, in one list, that would be perfectly fair. There was an alternative between doing that and leaving things altogether as they were, as long as the existing Officers were living and serving; but what was done was neither the one nor the other of the two courses I have mentioned. Up to a certain point Officers are amalgamated upon equal terms, and higher up in the list of Colonels the amalgamation was postponed to a future date, so as to enable them to pass over,—I will not say with that object, but practically with that result,—to pass over the heads of men who were senior to them in the rank of Colonel by several years. Now, whatever Parliament intended—and I have no doubt that they did intend that very considerate treatment should be given to the Indian Officers—I am sure they never intended that great injustice should be done to the English Officers. It never occurred to them to think that the effect of the amalgamation would be that the English Officers would be unjustly treated, and therefore they did not consider it necessary to put a clause into the Act to secure for them fair treatment. They thought that the Indian Officers would be the weaker party, and that they would suffer, so they put in a clause to guarantee for them fair treatment. I maintain that the faith of Parliament is pledged to the English Army without any Act of Parliament, and without any clause, just as much as it is pledged to the Indian Army with that clause in the Act of 1858, that they should receive fair treatment and promotion, according to well known rules which existed when they entered the Service, which rules should not be altered to the disadvantage of any particular class, except when any departure from them is absolutely necessary for the public service. I speak of it as a right which the Officers of the Army may fairly expect. Whether the Government gives fast or slow promotion to the Army is not the question that I am now considering; that is not a matter for us to discuss. The Government must consider that question, and decide according to public policy; but what I contend is, that the fair rules under which Officers entered the Service shall not be recklessly altered, or unfairly departed from, to the disadvantage of one class of Officers in favour of another; and to that I maintain that the Officers of the English Army have a perfect right. I repeat again, that I do not refer in any way to selection by Her Majesty's Government of Officers for special service, or to promotion for distinguished services, that of course is quite a separate question. As it has been urged that this is only a social question, and not a professional question, I wish to say a few words upon that point. The social question, as I understand the matter, can only come into play in the case of Officers who have retired from the service, and are not in a position to exercise any military command. For instance, when the new practice was commenced by Her Majesty's Government of giving a step of rank to Officers on retirement from the Service. I do not know whether the President is aware of the fact, but it has been of late years the custom to give to Officers who retire in the rank of Lieutenant-Colonel, after a certain number of years' service, the honorary rank of Colonel, as, in the same way, Colonels retiring under certain rules receive the honorary rank of Major-General. By granting this step of honorary rank, it is supposed that Officers will retire with so much less pay, and therefore the country gains an advantage by bestowing the rank. I suppose that in abstract justice, Officers of the Army might complain that it was an injustice to give Junior Officers the social precedence attached to the rank of Major-General over their heads, because those Officers would have precedence of them in society; but I have never heard any complaint made. If it was complained of, that is what I should call a social grievance.

13. (*General Hancock.*) They do not take rank over you?—Not professionally; they excercise no command. They have retired from the Service. If any Officer who remained serving in the rank of Colonel did complain of a Junior Colonel to him being placed on the Retired List as a Major-General, because he took precedence of him in society as such, that would be what I should consider a social grievance; but no complaint has ever been made that I am aware of on that score. My complaint is that Officers actually supersede others while serving in the Colonies or in India, or in this country, and they are liable at any moment to supersede them; for example, if a force was sent abroad for a campaign they would be liable to find other Officers appointed to the Staff with the dates of their Major-Generals' commissions prior to their own, and yet those Officers might have been actually serving under their orders in the same Brigade with them, in junior ranks in India. Therefore this is no social or sentimental grievance, but a grievance which entails professional injury, of which I complain. I do not come here with the idea of asking the Committee to recommend any quicker or slower promotion in the Army generally; but I make this demand upon the Government, that supersession shall cease, and that no Officer

shall pass over the head of his Senior Officer after having attained the rank of Colonel, except for distinguished services, or by selection, in which case the authorities who appoint him will have to defend the course they have taken upon public grounds. Also, that steps be taken to rectify, so far as it is possible to do so, the injury that has already been done.

14. (*General Alexander.*) You seem to have gone very deeply into the subject, and you have told us that certain inferences may be drawn as to the intentions of Parliament in passing the Act of 1858, in which is to be found the guarantee which has been referred to, in Section 56. Will you take the Act into your hand and point out, either in the Preamble or in any Section of it, from what we are to infer any intention of Parliament beyond what is literally expressed in the 56th Section?—The passage to which I would refer is this: —"And shall be entitled to the like pay, pensions, "allowances, and privileges, and the like advantages as "regards promotion and otherwise, as if they had con- "tinued in the service of the said Company." The whole of my argument has been addressed to those words.

15. Then we require to draw no inference; we need not assume any intention of Parliament beyond what is expressed in the Preamble?—I do not know that I am prepared to answer that question, for I do not quite understand it.

16. But with regard to this Section 56 in the Act 21 and 22 Vict., and after that the Warrants and Regulations that were passed, can you point out anything in them that infringed upon former military practice or precedent which in any way affected the promotions which have been made?—I think that the course of promotion up to the present time, until it was suspended, shows that the Warrant had been drawn in such a way as entirely to upset all former precedents.

17. Will you point out in what way?—Inasmuch as Officers have been passing over the heads of Colonels senior to themselves; Officers who are 8 and 10 years junior to other Colonels have been passing over their heads, and attaining the rank of Major-General, which never occurred before in either Army.

18. There may have been extraordinary rapidity of promotion, but it has not been done upon any new or distinct principle, or differing from any former practice? —Yes; I think it was different from all former practice before 1854.

19. Was it contrary to former precedent?—Yes, I consider so; entirely contrary to all precedent before 1854.

20. As I understand the matter, promotion has been caused by the Crown holding out a particular inducement to certain Officers to retire, of which they have availed themselves; but I do not see that that interferes with former practice or precedent, or in any way with what is guaranteed in the section referred to, or the Warrants and Regulations which have since been issued?—I maintain that it is not competent to the Imperial Government, regarding the Indian Government and the English Government as one, in good faith to do what has been done. Of course it is competent to the Imperial Government, as a mere matter of power, to give greater promotion to one branch of the Service than to the other; but I say that it is a breach of faith to all those who have taken service under the Crown, if one set of Officers is exceptionally promoted according to some new rules laid down subsequently to their entering into the Service.

21. If this rapid promotion had taken place by any other means, however impropable, do you consider that it would also have been a grievance: for example, supposing there had been an extraordinary number of deaths?—Yes, certainly, or anything else. I think that the Government are bound to protect us from having the rules of the Service departed from, as in the supersession of Officers of which I have given examples, who have attained the rank of Colonel. But just let me explain myself. I think that so far as regards the operation of the Warrant of 1854, to a slight degree we might say that there was a breach of faith on the part of the Government in instituting that system instead of General Brevets, as the Officers of the Royal Artillery and Royal Engineers, being on separate Lists, might gain an advantage at one time over Officers in the Infantry and Cavalry who had obtained the rank of Colonel. The object was to give fair promotion to all, and a few individual cases of supersession would never be felt to be any great grievance so long as in a general way fairness was maintained. But if there had been any great supersession of the Line by the Artillery and Engineers, or any great permanent supersession of the Artillery and Engineers by the Line, those cases would have come before the Government for readjustment, and that is what I claim in this case. Although a mistake may have been made in perfect good faith, still the fact remains, as I have stated before, that junior Officers are superseding their seniors in a way that is prejudicial to the public service.

22. (*President.*) You mean to a considerable extent? —Yes.

23. You would not complain of a few individual instances?—No; the very fact of having separate Lists must involve now and then the fact of one Officer getting ahead of another.

24. (*General Alexander.*) But it is not caused by any dereliction of military principle; there has been a larger promotion than could have been anticipated?—I think there has been a dereliction of military principle, and a very grievous one, and it has been carried out to such an extent that you find a junior Officer promoted over the head of another, his senior by many years, under whose orders he had served, and that I consider is a great grievance, and injurious to the public service.

25. (*President.*) The dereliction of principle is in having separate Lists, is it not?—Yes; that is a dereliction of principle; but allowing a Colonel to pass over 150 Colonels senior to him is a worse one.

26. (*General Alexander.*) Does that arise out of the Warrant of 1854?—It arose first in the Warrant of 1854. Nothing of the kind, of course, could have happened if the system of General Brevets had been maintained. It was the making of separate Lists, and departing from the system of General Brevets. No complaint probably ever would have been made if it had only led practically to the grievance of some few individuals, slightly different in rank, passing over one another's heads; but when it is seen to operate in the way that I have pointed out, and everyone is likely to be affected, and it is evident that it must continue for many years, then of course one is driven back to first principles, and one is obliged to say that the arrangement made was not made on a sound principle.

27. There was no dereliction of principle upon the first amalgamation of Officers, was there?—Certainly there was. The amalgamation of the Lists has been unfairly made. It was arranged that a certain number of Colonels of the East Indian Army should not be amalgamated as Colonels, but be amalgamated with the English Army after they had attained the rank of Major-General over their seniors.

28. (*President.*) You refer to the practice of Brevet as if it had established some normal principle of promotion. Can you give me any reason why it is more wrong for a young Lieutenant-Colonel to be made a Major-General over the head of a senior Lieutenant-Colonel than it is for a junior Captain to be made a Lieutenant-Colonel when a senior Captain still remains in that rank?—Yes; I think I can. The principle upon which the English Army has been worked ever since it existed, upon which every other Army is worked,—the Army of Bombay, the Madras Army, and the Bengal Army, and indeed every foreign Army,—is that promotion is regimental up to a certain point. It is not until Officers have attained a certain rank that they may be said to come upon one general List. There is a very obvious reason for this. The efficiency of a Regiment depends upon officers being known to one another and to their men, and if every officer changed his Regiment every time he was promoted, the regimental feeling necessary to efficiency would be destroyed. After attaining the rank of Lieutenant-

Colonel an officer often commands other troops in addition to his own Regiment. Having done so (until now), the practice of the British Army protected him from supersession in the rank of Major-General by any Officer who had served under him. Prior to the Warrant of 1854, in the English Army, Lieutenant-Colonels rose by seniority to the rank of Colonel, with the single exception of Officers who were promoted for distinguished service by being made Queen's Aides-de-Camp and attaining the rank of Colonel, that was the sole exception. But in 1854 an alteration was made, and it was thought desirable, for the good of the public service, that Officers of the rank of Lieutenant-Colonel who were actually serving in Command of Regiments or on Staff appointments, and having that amount of responsibility, should have an advantage given to them over those Officers who, in the junior grades, had attained the Brevet rank of Lieutenant-Colonel. The term that was fixed first was three years' service as Regimental Lieutenant-Colonel; but this was considered so great an injustice by the Officers who had then attained the rank of Lieutenant-Colonel, that they memorialized the authorities, and through the efforts that were made by General Lindsay they succeeded in getting the Warrant of 1854 withdrawn, and a new one was issued.

29. (*Sir Charles Yorke*) The question was referred to a Royal Commission?—Yes; and a new Warrant was issued. In the first place every existing Lieutenant-Colonel at the date when the rule was introduced was promoted by antedating his appointment and giving him the rank of full Colonel, and for the future the term was changed with regard to the rank of Lieutenant-Colonel in those qualifying posts, and was increased from three to five years. Then it was considered that Officers who had not yet attained the rank of Lieutenant-Colonel could not have any complaint to make against this new practice as being an injustice. I may mention that I was a sufferer myself under that change with a number of other Officers. I was one of several Officers who were promoted for service in the field during the Crimean War, and the result of the change was that I found that the promotion given me in 1855 was cancelled in 1858. It took place in 1858, while I was serving in India, and I found all of a sudden a number of Officers over whom I had been promoted put over my head again, so that I found myself in the same position in the Army, and as far from the rank of Major-General, as if I had been in bed ever since the day on which the Army went to the Crimea.

30. In the English Army, promotion up to the rank of Lieutenant-Colonel is Regimental?—Yes.

31. What violation of military principle is there in saying that you should not only have that unit, but that each distinct branch of the Army should constitute a unit for promotion above the rank of Colonel—that is to say, that in the Cavalry, Officers should rise to the rank of General under one system, and that in the Infantry or Artillery they should rise to the rank of General under another system?—I think there would be no reason why you should not do that with Officers who might now enter the Service, but after Officers have served for a considerable time in the Service, I think it is an injustice to lay down a rule that shall operate in favour of one particular class as against another.

32. But any Officer who has entered the Army since the year 1854, has entered the Service under the new system?—Yes; my remark does not apply to them.

33. With regard to Officers who remained in the Army after 1854, when the system of giving a certain number of appointments to the rank of General to different branches was adopted, every Officer took his chance, and it was supposed then that abstract justice was being done, was it not?—That that was the object I have no reason to doubt.

34. It was supposed to be doing abstract justice, but if in the working that system out afterwards the chances turned out in favour of one set of Officers more than of another, is that a ground for altering a whole system which was established as far back as 1854?—I think there is ground for reconsidering it, and, if it operates unjustly, to alter it, or to modify it.

35. Fifteen years are a long time to go back, when a system has been once established in the Army?—I think that in such a case when it is found to cause great injustice, there are very fair grounds for altering the system instead of continuing it.

36. Except in the case in which two Officers meet together on the field or in command, what is the practical evil, except a social one, which arises?—In the first place I must say that I think it is a mistake to use the word "social"; I think it is entirely a professional evil.

37. Except in cases where two Officer meet together on the field or in command is there any harm done at all?—Yes; the Indian Major-General would claim a command when one fell vacant, and he would think that he was unjustly treated if he did not get it, while the other Officer, originally his senior, would be told, when he applied for the same Command, that he was not qualified by the rank he held, being still only a Colonel. What I object to is this, that an Officer should be put in that position without the Crown exercising its power of selection, and that it should be done by rule. If any Officer, a Junior Colonel for example, was selected for a command, and made a Major-General because of his distinguished services, not the least complaint would be made: nor of the selection of Officers for every Division of an Army that goes abroad, or any other Command, as the selection would be made by the Crown on the advice of Her Majesty's Government. In such cases it is not the Commander-in-Chief who nominates, it is the responsible advisers of the Crown—the Cabinet. The Commander-in-Chief only recommends. All these selections are submitted to the Cabinet, and there is not the slightest objection made to them.

38. You say that one Officer might claim to be employed by reason of his rank, and that another Officer might lose a Command by reason of his not having sufficient rank; but suppose that an Officer of the English Army has suffered no injustice, but has attained the same rank and the same position which he would have attained if the amalgamation had not taken place, his position in that respect would not be altered; he would still be a Major-General, and the only injury that he would sustain, as I understand you, would be that some Officer from the other Army might be a Lieutenant-General when he was only a Major-General, and that some Officer might apply for a Command who might have a better chance of obtaining it than himself?—It is more than that. If the old system of Officers belonging to the East India Company having rank only Eastward of the Cape of Good Hope continued, no doubt the grievance would be diminished except in the case of Officers serving in India, or seeking for employment there; but now that the rank holds good all over the world, those Officers are, every one of them, liable to have a Command in England, or in Europe, in the event of our sending an Army over to the Continent, and they would take rank according to the dates of their commissions, those Officers being Junior Officers to the Queen's Officers who might be employed there. That I think would be a very grievous professional injury.

39. Practically the injury would be, as I understand you, the loss of a Command, or the being put under the command of an Officer who had been commanded by the same individual?—Yes; that is the practical injury; either that he would not be employed at all, or that he would be employed in an inferior position, while his Junior Officer was employed in a superior one, and that I look upon as the greatest possible grievance.

40. To what extent do you think that that is likely to take place during the next 20 years?—You will find that there are now a number of Officers in the List of Indian Officers who have been promoted to the rank of General Officers, and who have gained in that way from 10 to 12 years upon men of their own standing, and they would become, if no alteration is made, Lieutenant-Generals before those Colonels over whom they

have been unfairly promoted attain the rank of Major-General, and it would be followed naturally by the same practical injury, from the fact that those Officers would be employed in all the Commands as Major-Generals.

41. (*General Hancock.*) Are you not aware that many Lieutenant-Generals in the Queen's Service have superseded Major-Generals in the Indian Service over and over again?—No. I am not aware of that except when they have been selected by the Crown. If it is so, in my opinion it is very wrong, and ought to be and can be remedied. You referred just now to the practice formerly in vogue of appointing British Generals to the Chief Command of a Presidency, to the detriment or supersession of Indian Generals senior to him. That was done, probably, from public policy, in the same way as the appointment of Governor or Governor-General. The Home Government and Parliament did not allow the Court of Directors to nominate either the Governor or Commander-in-Chief.

42. (*General Alexander.*) I understand you to say that the supersession which now takes place, and which is complained of, is caused by a rule that has been laid down?—Yes.

43. What rule do you refer to?—It is by the rule of making separate Lists. It arises from having made separate Lists of promotion. There are now five or six different Lists of promotion under which officers rise, and it arises also from having carried out the amalgamation in an unfair way; from not having amalgamated the Officers all at once into one List with the Royal Army, when the so-called amalgamation was carried out.

44. Again it appears to me that your impression is that there was a dereliction of military principle in the Warrant of 1854; but the same incident might have happened in either List of Officers as happened in the Indian List, one was as liable to it as the other; therefore that would appear to me to operate against any dereliction of military principle. But the incident having occurred, I am not aware that any rule was made which necessarily involved supersession; it is merely an incident that occurred from an inducement being held out to Officers to retire. That inducement no longer exists, and of course the cause of complaint ceases with it?—I will endeavour to reply to one point contained in what you have stated, for it is not exactly a question. I think it is not competent, having regard to justice, for the Crown to offer retirements to one Branch of the Service, so as to bring an unfair amount of promotion to that Branch of the Service to the prejudice of others, and I think that that meets the whole of the question. It is not possible, without departing from justice, for the Crown to offer advantages to one Branch of the Service so as to bring about an unequal amount of promotion between it and other Branches of the Army.

45. (*President.*) Supposing that similar advantages as to retirement from the Service had been offered in the English Army, and you had accepted them while others had not, would that have altered the question as to the justice or injustice of what was done?—That is putting a hypothetical case which I think is not very likely to arise, but I suppose that a similar offer would produce similar results, at any rate no such offer has been made.

46. (*General Alexander.*) Can you give the Committee any idea how many Non-combatant Officers are affected, and how many Combatant Officers?—I have never gone into any calculation, nor considered the question of Non-combatant Officers, and when I say Non-combatant, I mean Officers who have permanently retired from the Service.

47. But all Non-combatant Officers are affected?—Half-pay Officers are not Non-combatant. I do not complain about Officers who have retired from the Service. I should regard those as Colonels in the English Army who had received the rank of Major-General as an honorary thing on retirement, and therefore Officers in the Indian Army who had retired and could not be employed again with the rank they had, would be quite immaterial to my case. I think it is competent for the Government to rectify the Warrant.

48. (*President.*) A statement has been furnished to the Committee by General Balfour. Have you any observations to make upon it?—It has only been this moment placed in my hands. I will read it, and make my reply in writing to such parts of it as require notice.

49. At the time when the new system of continuous promotion was established in 1854, was any complaint made in the Army of that being an injustice as compared with the former practice?—I do not think that any complaint was made. I think the tendency of Officers in the Royal Army has always been to be very long-suffering, they have never combined, or agitated upon these questions, whatever feeling there might be that it might tend to their disadvantage.

50. Was it not considered rather a boon to the Army to put them on a regular system of established right?—I think not.

51. Was it not putting them under a system of established right instead of being subject to mere casual Brevets?—No; it was known that the object and the effect of it was to reduce the number of General Officers. The casual Brevets were quite certain to come out every three or four years, and the aggregate promotion was better than now. I cannot imagine any one looking upon it as a boon to the Army.

(The Witness withdrew.)

Adjourned to Monday next, at 11 o'clock.

Monday, 27th September, 1869.

PRESENT

Sir WILLIAM M. JAMES, *President.*

Sir CHARLES YORKE.
Sir DUNCAN CAMERON.
General ALEXANDER.
General HANCOCK.

Colonel JOHN ADYE, R.A., examined.

52. (*President.*) Major-General Herbert having referred to you as an officer able to give the Committee much information upon the subject referred to them, if you have any observations to make, will you now be good enough to make them?—Yes; I wish to make a short statement to the Committee of the facts which have led to the present state of affairs as connected with the supersession of Colonels in the Royal Army. In former days, that is before 1854, all Colonels of Royal and Indian Lists were made Generals by periodical Brevets; the Colonels of both of a certain date being promoted in the same Gazette. Therefore there was no supersession, all being dealt with alike. There was an occasional exception to the above in favour of Colonels of the Indian Armies who in some instances received promotion by local rules; but this was met by giving Colonels of the Royal Army serving in India local rank; and as the system no longer exists, it does not now require consideration. In 1854 a great change was made, periodical Brevets being abolished, and a fixed establishment of Generals created at home for the Colonels in the Royal Infantry and Cavalry, a second for the Royal Artillery, and a third for the Royal Engineers. A fixed establishment was also created at the same time for all arms of the three Indian Armies in one; so that at home the promotion of Colonels to be

Generals began to run in three streams, whilst the Indian List was an entirely distinct one. I think it will at once be self evident that however carefully those separate establishments were adjusted at the outset, any accidental causes might quicken or retard promotion in one List as compared with the others; and therefore supersessions, to a slight extent, would be likely at all events to occur. It so happens that the Colonels in India obtained a great advantage in starting; when their fixed establishment was settled in 1854, they had not a sufficient number of Generals to complete it, consequently no less than 95 of their Colonels were promoted at once. This had the additional advantage of reducing the proportion of Colonels to Generals. On the other hand, the Royal List suffered from the opposite cause; that is, they had a redundancy of Generals, and therefore had to check promotion to absorb them. A very few years afterwards a second piece of good fortune befel the Colonels in India. After the Mutiny, in reorganizing the Armies, a number of old Colonels received enhanced pensions and retired, and this again reduced the numbers in that rank as compared with the fixed establishment of Generals. This diminution in the number of Colonels on the Indian List as compared with their establishment of Generals, appears to me to be the real key to the supersessions under which the Royal Colonels are now, and have been for some few years, suffering, and unless altered, the evil will continue for some years. Once a Colonel in India, the run through that rank is now very rapid, being only six years, whereas in the Royal Lists Colonels of 12 years standing are still unpromoted. In 1861 a new element of promotion was introduced in India; namely, promotion by length of service, and all officers of the Armies of India now rise to be Colonels in 31 years. This of itself is a matter requiring careful consideration, because if it is quicker than the average rate in the Royal Army, the Colonels in the latter will find themselves superseded on arriving at the rank of Colonel as well as in their after promotion to General; there being two phases in an officer's life—I mean his Regimental rise and his Army rise. In 1862 a Royal Warrant was issued laying down that all Colonels of the Royal and Indian Cavalry and Infantry promoted to that rank after the 17th of February, 1861, should be placed on one list, and should be promoted to the rank of General according to vacancies in the amalgamated List. Had that rule been adhered to—and to me it seems a just one—all supersession of Colonels in either Service would have been at an end; at all events from that date. Then with regard to the Royal Artillery and the Engineers, the old Royal Artillery and Engineers had had fixed establishments of Generals of their own since 1854, and by the Warrant of 1862 similar establishments were created for the corps of Indian Artillery and Indian Engineers respectively; and it was further directed that after a certain date the Indian Artillery List should become one with the Royal, the Colonels of all four Artillery Corps to form one List, and to be promoted in succession. It was also directed that the Engineers should be dealt with in a similar manner. In 1864 the whole of the above arrangements were cancelled in consequence of Lord Cranworth's Commission; and the following were substituted:—first of all, Royal Colonels of Cavalry and Infantry were to be promoted according to vacancies in a fixed establishment of their own of General Officers; secondly, the old Royal Artillery Colonels were to be promoted in their List; thirdly, the old Royal Engineers were to be promoted in their List; fourthly, the Indian Colonels of Infantry and Cavalry were to be promoted in their List; fifthly, the three regiments of Indian Artillery were to be promoted in their List; and sixthly, the three regiments of Indian Engineers were to be promoted in their List. It is self evident that under any circumstances promotion in those six Lists must run unequally. The three Indian Lists I may say were ordered to run as one until March 1868, and owing to the before-mentioned paucity of Colonels as compared with the establishment of Generals in India, the promotion of all their Colonels was exceedingly rapid, and they superseded in large numbers the Colonels of the three Royal Lists. Then in March 1868 the Indian Artillery and the Engineers, that is, Nos. 5 and 6, were separated, as ordered in 1864. From that date, therefore, these latter, that is, the Indian Artillery and Engineers, have ceased to enjoy the enhanced promotions, and having a superabundance of Generals at the time of the separation, their promotion is for the present retarded, and they are absorbing their excess. However, they are still far in front of those at home. The Colonels of the Indian Infantry and Cavalry (which I call List No. 4), left all to themselves, are now enjoying the full benefits hitherto shared by their comrades of the Indian Artillery and Engineers, and consequently they are rapidly superseding the Colonels of every other List, and of every other branch in the Service. At the present time the case stands as follows, or rather it did about two months ago; it is probable that it may have altered in a trifling degree since; but the case stands roughly as follows:—the first Colonel of List No. 1, that is, of Royal Cavalry and Infantry, is a Colonel of September 1857; the first Colonel of the second List, that is, of the old Royal Artillery, is a Colonel of November 1857; the first of the third List, that is, the old Royal Engineers, is a Colonel of December 1857; the first Colonel of the Indian List of Infantry and Cavalry (No. 4), is a Colonel of June 1863; the first Colonel of the Indian Artillery (No. 5) is a Colonel of February 1861; the first Colonel of the Indian Royal Engineers (No. 6), is a Colonel of March 1861. It will, I think, be seen that accidental causes, combined with one-sided and partial legislation, have tended of late years to give the Colonels of the Indian Armies great advantages over those in the Royal Service. Even were those advantages merely local and confined to India, they would be serious enough, but as the rank of Officers of the Indian Armies is now valid all over the world, the supersessions have a very prejudicial result on the Colonels in the Royal Service.

I would ask, before I go on, whether the Committee wish me to make any suggestions as to how this state of things can, in my opinion, be remedied?

53. (*President.*) The Committee will be very happy to receive any suggestions from you?—When a measure of this kind has been going on for some time, so that a large number of Officers have been injuriously affected, and others are about to be so, it is difficult to provide an absolute remedy, desirable as such a remedy may be, because there are so many interests involved, and because radical changes are apt to lead to further complications. It is of course possible to put an end to the present difficulty, either by cancelling the promotions of the Officers on the Indian Lists, or by promoting at once all the superseded Colonels of the Royal Army; but both of those alternatives present grave objections of various kinds. It does not, however, appear to me very difficult to draw up certain Rules which, without causing expense, adding to establishments, or inflicting injury on any one, would restore the Royal Generals to their proper positions on the List, would gradually do away with the supersessions of the Colonels, and would prevent such supersessions in future. The measures I would propose are as follows:—First, restore all Major-Generals of the Royal Army, who have been superseded, to their proper position by ante-dating them according to the dates of their Colonelcies; second, stop all promotion of Indian Colonels for the present, and whenever a vacancy occurs, either in the Royal or Indian Establishment of Generals, promote the senior Colonel of either Army, and then give him his correct date as a Major-General.

54. (*Sir Charles Yorke.*) But what would you consider to be the correct date?—The date of his Colonelcy; back-date him to where he would have been as a Colonel. Third, amalgamate the Royal and Indian Lists of Infantry and Cavalry Colonels, as arranged in 1862, and form one establishment, and also their Generals; fourth, amalgamate the Artillery Lists and the Engineers' Lists respectively, as arranged in 1862.

There is one short additional remark that I wish to make as to the Guarantee clause. I believe that it

guarantees that the Officers of the Indian Armies shall have all the rights and privileges as to promotion which they had in the days of the East India Company.

55. (*President.*) That is the substance of it, as if they had continued to serve the East India Company?—With regard to the intention of that clause or the sense of that clause, I would say in the first place, that I believe it will not be contested that either the Crown or the East India Company could augment or reduce their Army as they thought proper. Again, with regard to changes in Rules and Regulations as to the promotion of Officers, I would observe that such changes were made in the days of the East India Company, and therefore they can be made now. I would observe, for instance, that the system of doing away with periodical Brevets and establishing a fixed List of General Officers was done in those days. Therefore I presume that such changes can be made after the Crown has assumed the government as were made in the days of the East India Company. As to changes made since the Crown has assumed charge of the government, I may state that several have been made. The first was made in 1862, in which the Lists of Colonels and Generals were ordered to be amalgamated with the Royal; secondly, there was a transfer of certain Generals from the Indian Lists to the Royal Lists when the Indian European Regiments were transferred to the Queen's Army—that was another change; thirdly, the cancelling of the order of 1862 and re-establishing a separation of the Royal and Indian Colonels was another change. Then there has been another very vital change made as regards the establishment of Generals and Colonels in India—a final one—and that was the separation of the Indian Artillery and Engineer Colonels from the Indian Cavalry and Infantry Colonels. This last has been a very serious matter, and has been the final cause of the rapid promotion of the Indian Cavalry and Infantry Colonels; in fact, that is the final cause which has made one list run very fast and all the others very slow. I adduce these facts to show that before the East India Company were abolished, changes were made in the Rules regulating the promotion of Officers, and they have been made since.

56. No doubt in point of Royal Prerogative, and in point of power, the East India Company and the Crown had power to reduce their Officers as they liked. The East India Company had the same power to do it as the Crown; but what do you consider was guaranteed by the guarantee which has been referred to, if changes might be made by either party afterwards?—I will answer that question if you will allow me to see for a moment Lord Cranworth's Report [the Report was handed to Witness]. This is the paragraph in the Report of Lord Cranworth's Commission which I think will answer the question of the President. "The "question is, 'What on that assumption is the proper "'interpretation to be put on the language of the Act?' "It could not have been intended to prevent the "Crown if, in the interests of India and of the Empire "at large, it should deem it necessary, from reducing "the numbers of the Indian Army, or altering its or- "ganization; it would have been in the power of the "Company to make such reductions and changes, and "a similar power was transferred to the Crown. All "we can understand Parliament to have guaranteed to "the Officers is that, in making any such reductions, "their interests should as little as possible be interfered "with, and that in any change of organization, the Crown "should, as no doubt the Company would have done, "preserve all the rules as to pay, pensions, allowances, "and privileges, and the like advantages as regards "promotion and otherwise which existed at the time "the Act was passed; or if in any case that should be "impossible, then that some counterbalancing benefit "should be given to compensate any advantage which "it might be impossible to retain."

There is one additional observation, if you will allow me, that I should like to add. It is sometimes argued that promotion of Officers of both Armies to the rank of General should be regulated, not by the dates of their Colonel's Commissions respectively, but by those of their original Commissions. But I would say that if this is to hold good for the two Armies, it is equally cogent as regards the Colonels of either Army amongst themselves; and, therefore, before any promotions could take place, the Colonels of both Armies would have to be entirely readjusted; that is, those who had risen to be Colonels quickly, either for gallant services, from quick regimental promotion, or other causes, would have to be at once deposed and placed far down on the lists. It would also follow, I think, that if Colonels and Generals are to be equalized and made uniform in this way, Officers of other ranks would equally demand the same rule, and the result would be that all Officers of every rank would have to be placed on long lists for promotion, which would be then uniform in every respect. It is hardly necessary to point out that this is practically impossible, that it would be another cause of confusion, and would put an end to all ambition and all hope of rising quickly in the Army. The real fact seems to be, that the promotion of Officers has two distinct epochs,—the first Regimental from the first entry into the Service to the command of a Regiment; the second, Army Rank, from being made a Field Officer to being made a General. The Regimental arrangements of each Corps should be so far uniform that the average promotion should be fairly equal; but even then wars, sickly seasons, augmentations, reductions, or other unforeseen and exceptional causes will render promotion in one Corps quicker than in another. This result must always take place more or less, nor indeed does it seem desirable that it should be otherwise. But in any case any inequality in Regimental arrangements should be rectified by alteration in that branch of promotion, and cannot properly, in my opinion, be adjusted by altering the system of promotion from the rank of Colonel to the rank of General.

57. (*General Alexander.*) You stated, I think, that after the Mutiny in India the quicker promotion of Colonels by retirements in the Indian Army was the key to the grievance you are now laying before the Committee. I presume you alluded to the quicker promotion caused by the retirement of Colonels who took superior pensions, and retired with the given rank of Major-Generals?—Yes.

58. If an unusual promotion by deaths had taken place, or supersession in consequence of deaths in an extraordinary degree had taken place, would you have considered that a grievance?—No. If you please, I can give you one or two facts to show you the great and sudden diminution of Colonels as compared with Generals in the two instances I have spoken of. I stated that after a fixed establishment of General Officers was created for the Indian Army in 1854, a very sudden reduction took place in the number of Colonels, and a great augmentation in the number of Generals; for instance, just before the establishment of a fixed number of General Officers for the Indian Army the numbers were as follows:—In July 1854, after the great Brevet, there were 132 Generals and 160 Colonels; in May, 1855, after the establishment of the General Officers, there were 223 Generals and only 59 Colonels. I said that there was a second instance; that was when a large number of old Colonels retired on enhanced pensions, and then the numbers again dropped suddenly. I will therefore now take the numbers just before those pensions were granted, and just afterwards. In January 1861 the number of Generals was 218, and the number of Colonels 214—even that is a very small number of Colonels; but in July 1862 the number of Generals was 220, and the number of Colonels was only 119. I think that will show the sudden way in which, twice running, the number of Colonels of the Indian Army dwindled down; and, if you will allow me, I will point out the last thing which happened in March 1868, when the Indian Infantry and Cavalry Colonels were separated from the Artillery. January 1869, Infantry and Cavalry, 173 Generals, 81 Colonels; Indian Artillery, 32 Generals, 66 Colonels; Indian Engineers, 12 Generals, 29

Colonels, and 85 Colonels of the Staff Corps, which I have not gone into; they had not yet begun to be made Generals.

59. (*President.*) There are 85 Indian Colonels who have been removed from a present chance of promotion by being transferred to the Staff Corps, and the whole number of Colonels has been diminished?—Yes. Those will come in for promotion in the final Amalgamated List hereafter.

60. (*General Alexander.*) Have you considered that those retired Colonels who obtained rapid promotion by taking increased pensions are *hors de service* entirely, and never can come into competition with or supersede any of the Officers whom you are now representing?—No; those Officers who retired are not the Officers I am arguing about. It is a fact that they retired, and they left those who remained in a very advantageous position.

61. (*President.*) You mean, do you not, that the advantage has gone for the benefit of only one branch of the Indian Army?—Yes; and practically I think that it amounts to a very serious grievance, because it was such a large retirement of one rank, which was not contemplated when the fixed establishment of General Officers was laid down for the two Armies respectively, and no such clearing out or diminution of the List of Colonels of the Royal Army has taken place.

62. Supposing a Colonel were minded to go out of the Service altogether, might he not retire with the honorary rank of Major-General?—The inducements to retire in the Cavalry and Infantry are so slight that I do not think many Officers take them. In the Artillery they are rather greater, and we do take them in larger numbers; it is our only hope of keeping up with the Cavalry and Infantry.

63. There is the same principle, only it is not carried to the same extent?—Yes; but an exceptional and abnormal state of affairs arose after the Mutiny in India, and found a great number of old Colonels whose regiments had left them. In reorganizing the Army, it was not considered advisable to revert to former arrangements, and Regiments of Infantry and Cavalry were organized with young Officers, about six per Regiment. Therefore the old Colonels were, to speak respectfully of them, rather in the way, and they were offered enhanced pensions to induce them to go; and very just it was, no doubt, at the time, but its effect on the Royal Army has been very unfortunate.

64. It has not deprived the Royal Army of a single step of advancement, but has only put them in a position of relative inferiority?—Quite so.

65. It is merely relative, not positive?—Yes; but when those two Warrants were issued in 1854, laying down fixed establishments for the Royal and Indian Army, it was on the understanding that the two were fixed relatively to each other in what was considered a fair and equitable proportion, and if you destroy the proportion of one you injure the interests of the other.

66. (*General Alexander.*) Do you consider the Warrant of 1854 an equitable one?—I have not been able to ascertain precisely on what conditions that establishment was laid down, but I rather think, if it is investigated, it will be found that the Royal establishment of Generals was fixed on too low a scale; that is to say, I think it probable that the large number of Officers on half-pay then were not considered, in calculating the establishment; because I think if they had been, the proportion of General Officers for the Royal Army would have been a larger one. There were about 2,699 Officers on half-pay in 1854, and those Officers, according to the Rules of the Royal Army, had, many of them, a right to rise to the rank of General Officers.

67. (*Sir Charles Yorke.*) If they should be employed again, or if they have completed the qualifying period of service?—Yes. Before the Warrant of 1854, I believe, a great body of them practically did rise to be General Officers.

68. (*President.*) The general mode in which a half-pay Officer came again into active service was by exchanging with another Officer, or by purchase, was it not?—Not always. No Field Officer, I believe, of the Royal Army now is allowed to hold a Staff appointment unless he is on half-pay, and service in his Staff appointment qualifies him for the rank of General.

69. When the establishment of General Officers was made in 1854, there were not merely differences between the two Armies, but differences between the arms of the same Service; and a certain number of Generals was allotted to the Artillery and Engineers?—Yes, in England.

70. In order that they might not be put into the common stream of promotion with the Officers of other Corps; and was not the reason why that was done this,—that the men in the non-purchase Corps would in all probability have to serve a greater number of years on the average than the men in the purchase Corps, or is there any reason why there was a fixed establishment of Generals given to the non-purchase Corps, except for the purpose of making some equalization?—It was no doubt done with a view to give the Royal Artillery and Engineers more certainty as to their promotion to the rank of General. For many years during the long peace, the promotion of Officers in the Royal Artillery and Engineers was very slow, and they were so long in attaining the rank of Colonel, that they were very old men before they became Generals. No doubt to a certain extent it was also the case among the Cavalry and Infantry during the long peace, but not to the same extent.

71. Was not that the reason why there were three distinct lines of promotion laid down from the rank of Colonel upwards?—Yes. I may mention that in 1854, I believe, the junior Colonel of the Royal Artillery was 65 years old. In page 21, paragraph 97, of the Report of the Royal Commission of 1854, there is this passage: "There is not now in the Royal Artillery "one Full-pay Colonel under 65, and very few Lieu- "tenant-Colonels under 55, while in the rest of the "Army, during the period intervening between 1838 "and 1854, the age of the Field Officers is but slightly "increased. In the Ordnance Corps, taking the 10 "senior Colonels in each year, the increase is not less "than seven years in the Artillery, and six in the "Engineers." And in paragraph 98 "Again in the "Brevet of 1841, no Colonel in the Royal Artillery "promoted to be a Major-General was above 70 years "old; in the Brevet of 1851, there was no Colonel "promoted who was under 70."

72. (*General Alexander.*) You have stated, I think, that at present in the Artillery Corps there is a system by which you can obtain by your own internal arrangements more rapid promotion?—Not internal arrangements; by Government arrangements.

73. If very rapid and unexpected promotion were to take place in your Corps, should you consider that a reason for re-adjusting the arrangements now in force, so as to bring up the Line to an equality with you?—I am quite sure that the Colonels of the Cavalry and Infantry would very soon say that that was a reason for re-adjusting the balance, and I think that they would be very right in saying so; but our promotions of the kind I have alluded to have been favourable to us to a certain degree, but only to a limited degree; otherwise no doubt complaints would have arisen. I may say that promotion has so far been favourable, owing to retiring allowances being given to us, and owing to our establishment of Generals being in a fair and just proportion, that our promotion from Colonel to General since we have had a separate List, has been rather better than theirs, we had rather beaten them until now; the balance now is going the other way. You will find that the last Colonel promoted in the Royal List of Infantry and Cavalry, is junior to our senior Colonel, but only a little; the balance is just turning.

74. You say that if extraordinary promotion took place in your corps, the Officers of the Line would say that there ought to be a re-adjustment?—Yes.

75. Speaking from your experience as an Officer, if these adjustments are likely to become necessary, will

they not keep the Officers of the Army in a continually unsettled state as to the promotion of the senior Officers?—Yes, no doubt of it.

76. You have now had an exceptional run of promotion, and it has come to an end, but does that differ in principle from the run that there has been in the Indian Army?—We have had a run in the Royal Army, in the Artillery, as well as in the Infantry and Cavalry, in consequence of the augmentations caused by the Crimean War, and a very fair cause for rapid promotion it was; by the casualties of the Crimean War, and by the fact that when the Crimean War broke out, the Officers in the upper ranks of the Army had become very old, and therefore there was a great move in the Army just before the Crimean War, or about that time.

77. (*President.*) That was before 1854?—It was beginning then.

78. All the effect of the Crimean War such as it was tended to the benefit of the Royal Army, and not at all for the benefit of the Indian Army?—Yes.

79. Promotion was given by reason of service in the field?—Yes, and augmentations and casualties.

80. The well-earned rewards of merit in the field?—Yes.

81. Have you considered this point, that the Indian Army is officered by men always on active service?—No, they are not always on active service.

82. They have always to serve in India, and spend their lives there on foreign service?—Yes.

83. And foreign service in a very bad climate, in a state of exile?—Yes.

84. Whereas the English Army is officered by men who take their turn in foreign service and home service; they are sometimes at home, sometimes in a Colony, and sometimes in India, serving in different parts of the world?—I think you will find that the Royal Army have now not quite five years at home, to ten years abroad. They have to go to many worse climates than that of India, and where they get much worse pay. But at the same time I m quite prepared to admit that the Indian Army, upon the re-organization, which took place after the Mutiny, deserved the very fairest treatment that could be given to them, and I do not think that the Officers of the Royal Army would ever grudge them that; but an accidental cause has given one set of Officers a tremendous run over all the other Lists.

85. As I understand you, your view is that, even assuming the Warrant of 1854 to have been a good one, the intention being to apportion things fairly, it did not contemplate such an exceptional discrepancy as that which was produced by the sudden retirement of so many Officers from one Army?—That was one chief cause, but also the Warrant did not contemplate that in 1868 the Infantry and Cavalry Colonels in India should be separated from the Indian Artillery and Engineers, giving the Infantry and Cavalry an enormous advantage over the Indian Artillery and Engineers, who are now suffering severely in consequence.

86. That was a wrong done to the Indian Artillery and Engineers, and not to the Royal Army?—It was a wrong done absolutely to the Indian Artillery and Engineers, but it was incidentally a wrong done to the Royal Army, because it gave one branch, that is, the Colonels of the Indian Infantry and Cavalry, an enormous run of promotion over the heads of every other branch of both Armies.

[The following paper was handed in.]

RETURN showing the Number of General Officers and of Colonels of the Indian Armies at various periods since 1854.

Period.	Generals.	Lieutenant-Generals.	Major-Generals.	Total Generals.	Colonels.	Remarks.
Jan., 1854	1	83	..	84	153	Before the Brevet of June 1854.
July, „	25	57	50	132	160	After the Brevet of June 1854.
May, 1855	25	52	146	223	59	After the fixed Establishment had been created.
1859	25	51	145	221	201	After the Warrant of November 1854, creating Colonels in 3 years, had come into operation.
Jan., 1861	26	50	142	218	211	
July, 1862	25	50	145	220	119	Periods during which Colonels had been permitted to retire on enhanced pensions.

(The witness withdrew.)

Major-General GEORGE BALFOUR, examined.

87. (*President.*) You have been good enough to make some notes of what I may call the case of Sir Percy Herbert, and you have drawn up a paper which is now before the Committee?—Yes; but there is one thing that I would ask of the Committee, and that is, that I may have an opportunity to go very carefully over it again, because it was hastily put together, and if there should be anything in it of an objectionable character, I should like very much to take it out; not to alter the facts.

88. Is there anything that you would like to add, and which you think it might be useful for the Com-

mittee to know?—I have just spoken to Colonel Adye, and he has permitted me to say, that if you will allow him to co-operate with me in such a manner as to bring out the facts more correctly, I shall be only too happy, because it is information of an accurate nature that you require. If we differ, the Committee will see where the difference arises, but I should like to have time to consider the subject. I may just mention one slight thing to show how important accuracy is. Among the remarks that Colonel Adye made, he said that the number of Colonels in the Indian Army, after the fixed establishment of General Officers was given in 1854, was greatly diminished in a subsequent year. That is true in fact, as appears upon reference to the Army List, which Colonel Adye must have consulted, but it arose from a blunder made in Calcutta, and which the members of this Committee will at once comprehend. They there forgot that for every Colonel promoted, of the 95 Generals, to complete the establishment of 220 Generals there was a Lieutenant-Colonel, a Major, and a Captain, also to be promoted each a step in rank; but there was a misapprehension in Calcutta in carrying out the new Regulations, and the consequence was that for nearly two years the number of Colonels of the Indian Army fell far below the real number which they were entitled to have. The Army Lists show the deficiency as Colonel Adye rightly states.

89. Will you be good enough to state whether the Reports of 1854 and 1858, or either of them, show how the calculations as to the number of Officers were arrived at?—I will read the 76th paragraph of the Report of 1854.—"The Royal Artillery consists of 692 Officers "on full-pay; the Royal Engineers of 336 full-pay "Officers: the two Corps therefore are in the proportion "of about one to five or one to six of the whole Army." That is the Report of 1854. I will also now refer to the 52nd paragraph of the Report of 1858, wherein it is shown that there were 5,585 Officers of the Infantry and Cavalry, including the Guards, when the 234 Generals were fixed. These comprised a number of Officers on full-pay, exclusive of Colonels of Regiments. By the proportions named in the Report of 1854, as there were 1,028 Officers of the Artillery and Engineers, for whom 48 Generals were allotted, and as the Infantry and Cavalry then bore to that number the proportion of five to one, according, therefore, to the Report of 1854, there were 5,140 Officers of Infantry and Cavalry for whom the 234 Generals were allotted. There was therefore a difference between the two calculations in the Reports of 1854 and 1858 of 445 Officers. On looking over the Returns of the Army, I could not make out more than 4,833. However, the Commissioners of 1858, in consequence of the claim of the Artillery to receive a greater number of Generals than the 32 allotted to that corps, refused to recommend an increase, but advised the Crown to increase the Generals of the Infantry and Cavalry from 234 to 260; that was placing them on the same footing as the Artillery in 1854, and that equality came as nearly as possible to one General Officer to 21 Officers.

90. Twenty-one combatant Officers?—Yes.

91. On full-pay?—Yes; I may mention this as Colonel Adye did also mention it. The number of half-pay Retired Officers of the Royal Army in 1854 is shown at page 6 of the Report of 1854 to have been 2,699 half-pay and retired full-pay. It is exceedingly difficult, as the Members of this Committee perfectly well know, ever to ascertain what number of those Officers on half-pay are not entitled to be advanced to the grade of General, in consequence, as has been previously observed, of want of service as Field Officers. I have never seen any separation as to the number of those under this category who stood in the way of their brother Officers for a rise to the rank of General Officer.

92. Could any Officer on half-pay come into active service so as to compete for promotion, without some other Officer going out on half-pay?—Yes; in many instances.

93. Generally speaking, does not an Officer on half-pay come upon full-pay, by some other Officer on full-pay going out, with whom he exchanges?—No; I may explain, in order to show you the complications in the Service, which are almost beyond belief. There is a sort of Regiment existing in the Home Army, which is called the Unattached List, and that comprises a very large number indeed of Field Officers. The last time that I looked at the List, I am sure that there were upwards of 200 Lieutenant-Colonels, and that List is entirely independent and separate from the Regimental Lists. Those Officers are, strictly speaking, although on half-pay, in many respects a Regiment in themselves, and those Officers rise to the rank of General as a matter of course, in regular succession.

94. (*Sir Charles Yorke.*) That is, if they have completed their qualifying service?—Yes; whatever the qualifying period may be for the time being.

95. (*General Alexander.*) Must they not come from half-pay into active service in order to complete their periods of service?—Yes; if they have not already completed them before going to half-pay.

96. (*President.*) Still, to some extent, when an Officer upon half pay comes into a Regiment, there must be an Officer on full-pay who goes away from the Regiment? Certainly; on certain occasions, however, Officers are brought in from half-pay to fill up vacancies, and it is done in this wise. Of late, on Regiments coming home from India and the Colonies, Officers have been placed on half-pay by reason of a reduction in the establishments of the Regiments. Then those Officers have by degrees been brought in from half-pay to fill vacancies in the establishments of other Regiments going out to India or the Colonies, in consequence of the augmentation which takes place when Regiments are so ordered.

97. Then a Regiment going out has a greater number of Officers than a Regiment at home?—Yes.

98. (*General Hancock.*) What was the number of Indian Officers in 1854, and what was the proportion of Generals allowed to those Indian Officers in 1854?—The number, as far as I have been able to calculate it, will be found in the Report which General Jamieson and myself made in 1860 on the proposed organization of the Indian Army, which was laid before the Government of India; you will find stated there the exact number of Officers in the various branches of the Service, and the total number was as nearly as possible between 5,300 and 5,400.

99. (*President.*) Does there appear in the two Reports before you any reference to those numbers?—The Reports of the Commissioners of 1854 and 1858 made no mention whatever, either directly or indirectly, of the Indian Army.

100 Can you tell the Committee how the number of General Officers that was fixed for the Indian Army was arrived at?—It is a remarkable fact that there is less information given than in any published records or correspondence that I have ever seen, in connection with the establishment of Generals fixed for the Indian Army in 1854. The bare letter that came out to India, your two Indian Colleagues will tell you, positively contained no details, it merely conveyed the announcement that 220 General Officers had been granted to the Indian Army, but no communication was made as to what data were used in arriving at that number.

101. (*General Alexander.*) Can you give the Committee the relative proportions between the Officers in the two Armies?—The proportion of the Generals to combatant Officers in the old Royal Artillery and old Royal Engineers was exactly one General to 21 combatant Officers

102. (*President.*) I presume you use the word "combatant" to exclude the half-pay Officers?—Yes; to exclude the half-pay Officers, and to exclude the Medical Officers as well. I may remark here that the half-pay Officers of the Royal Artillery do not stand in the way of promotion, in any shape or form, of the Officers on full pay. Whatever interruption might exist in the Infantry and Cavalry as to their promotion, occasioned by the half-pay Officers, there was no such interruption in the rise of the Engineers and Artillery Officers: that proportion of one combatant Officer to 21 Officers stands fast. In the Indian Army you will find, as

nearly as possible, that there was one General Officer given to about 24 combatant Officers.

103. (*General Alexander.*) Do you mean in the Engineers and Artillery?—No; in the whole Indian Army. There was an establishment given for the entire Indian Army; not for any branches in particular, but for all Officers and all branches, to rise to the rank of General in succession by seniority.

104. Can you give us any similar calculation as regards the Royal Army?—In 1858, when the Promotion Commissioners recommended an increase of General Officers to the Infantry and Cavalry of the British Army, by giving 260 General Officers, they took as the total number 5 585 Officers, that is as nearly as possible one General to 21 Officers.

105. Am I right in supposing that you have stated that in the Royal Artillery and Engineers the proportion was one General to 21 Officers?—Yes.

106. And in the whole Indian Army the proportion was one General to 24 Officers?—Yes.

107. What was the proportion in the whole British Army of Generals to Officers; you have only given it in the Ordnance Departments?—I have also given it you in respect to the Infantry and Cavalry; one to 21, would, I think, be the average in the whole English Army, according to the figures I have given.

108. Throughout the whole Army, including Infantry and Cavalry, Artillery, and Engineers?—Yes; that is, not including, as to the Line, the Half-pay Officers and Retired Full-pay Officers.

109. (*President.*) Is there any mode of approximately ascertaining what the proportion would have been in the Army—it is in fact 21—if a proper allowance had been made for the Officers on half-pay at that time?—I have stated before that 2,699 Officers were the number on half and retired full-pay, but those comprise Officers of all grades. Many of them never could attain the rank of Lieutenant-Colonel, and therefore never could be promoted; and of course those numbers must be diminished very largely to bring them within the scale of the rank of Lieutenant-Colonel and Colonel to impede the rise of their brother Officers.

110. (*General Hancock.*) Do you include men who have sold their commissions?—No; those are out of the question; it is merely the half-pay and the retired full-pay Officers.

111. (*President.*) Taking the practical effect of the Half-pay List, it would not have a very material effect upon the proportion?—I think not.

112. You have stated that the Half-pay Officers of the Artillery did not apply to the case?—Not at all; they are advanced, but they are advanced only in rank, the Junior Officers to them also rising in succession; but they do not impede the rise of the others.

113. Therefore they stood upon the same footing as the Indian Army generally?—Yes. If the Committee desire to know something about the retirements of the Indian Army, I think I shall be able to furnish them with some information.

114. By adding the number of the Half-pay Officers to the British Cavalry and Infantry, can you tell us the proportions then?—There are two calculations as to the numbers which you can obtain from the Reports of 1854 and 1858. I mean the Reports on Promotion of those years. According to the calculation in the Report of 1854, the Infantry and Cavalry being five times more numerous than the Ordnance Corps, there were 5,140 Officers on full-pay, and 390 Field Officers on half-pay who might have taken their share of promotions, the total being 5,530. Dividing that number by 234, the General Officers allowed in 1854, the average is as nearly as possible one General Officer to 23 Officers and a half; but in 1858, as the General Officers for the Infantry and Cavalry were increased to 260, then the proportion is, as nearly as possible, one General to 21 combatant Officers.

115. (*Sir Charles Yorke.*) In 1858 there was a very large increase made to the extent of 28 battalions; have you taken that into your consideration?—I will answer that in this way. The question that was before the Commission of 1858, was an appeal from the Ordnance Corps to the Government, in consequence of the very large increase of Officers made to the Artillery and Engineers since 1854; to the extent of nearly 50 per cent. They therefore asked that the 48 General Officers allowed for the 1,028 Officers in 1854 should be considerably augmented, and the Commission of 1858 reported against that alteration. But in consequence of this question being mooted by the Officers of the Ordnance Corps, the Commissioners of 1858 seem to have revised the calculations made in 1854, and then for the first time gave the total number of Officers for which General Officers ought to have been given, and they then advised an increase in the number of General Officers for the Infantry and Cavalry, having reference to the establishment in 1854, though only given in 1858.

116. (*President.*) Does that include the Officers of the extra battalions?—No; because they refused to give to the Artillery the additional General Officers they had asked for, to meet the increase of Officers to that branch subsequent to 1854. The Artillery had likewise, in common with the Infantry and Cavalry of the Army, been very largely increased. I may also explain that between 1854 and 1859, when the Government of India was transferred to the Crown, there was an increase of upwards of 500 Officers to the Indian Army: so that at the date when the Queen took over the government of India, there were 5,968 Officers of the Indian Army as against 5,400 in 1854, so that the increases had taken place throughout the whole branches of the public service in different parts of the world. But as far as I can understand from those two Reports, the calculations of General Officers to combatant Officers were all made with reference to the establishments as they stood in the beginning of 1854.

117. That was taken as the basis?—Yes.

118. Does not the Report of 1858 give the number of the Line Officers on which the calculation is made of that year, as 5,585?—It is of great importance that you should read carefully and compare the calculations, and compare the reasoning of the Commissioners of 1858 with the Report of 1854. The argument of the Commissioners of 1858 was all based upon the appeal of the Artillery for an additional number of Officers, and therefore the bias, if I may be excused for using the word, in this Report of 1858 is evidently at variance with the claim of the Artillery, and from the whole their reasoning it is quite clear that they were hostile to the claim made by the Ordnance Corps. Therefore in taking 5.585 officers, according to the showing of the 1858 Commissioners, and dividing them by 260 General Officers which they then gave, that gives, as nearly as possible, one General Officer to 21½ combatant Officers.

119. Will you add the Half-pay Officers to that?—Yes; adding, however, the 390 Half-pay Officers to the 5,585 Full-pay Officers, that gives, as nearly as possible, one General Officer to 23 combatant Officers. But I again submit that we have no proof that the 390 Field Officers were all qualified for promotion. Next there is a distinct statement in the Report of 1854 that the Infantry and Cavalry were five times more numerous than the Ordnance Corps, which would give a strength of 5,140 Officers, and seeing the great difference between the calculations of 1854 and 1858, I am inclined to rely more upon the numbers in the Report of 1854 than I am upon the numbers in the Report of 1858. Moreover, I would also say, so far as the documents at my disposal could give it me in former years, that I never could find out even 5.000 Officers as the number of combatant Officers on full-pay belonging to the Infantry and Cavalry of the British Army.

(The Witness withdrew).

Adjourned till Monday next at 11 o'clock.

Monday, 4th October, 1869.

PRESENT:

Sir WILLIAM M. JAMES, *President.*
Sir CHARLES YORKE. | General ALEXANDER.
Sir DUNCAN CAMERON. | General HANCOCK.

Major-General GEORGE BALFOUR, further examined.

120. (*President.*) You were kind enough to say on the last occasion that you would look over the papers which had been put in, and see whether there was anything further that you thought it advisable to communicate to the Committee?—Yes; I said that it would give me great pleasure, in conjunction with Colonel Adye, to go over the papers and the evidence; and since the last meeting of the Committee we have consulted together. But in consequence of my absence at Aldershot, on Saturday last, and the printing not being finished, I have not been able to avail myself of Colonel Adye's advice and assistance to the extent that I could have wished, and I still hope that the Committee will allow us to confer together, as Colonel Adye will hear my evidence to-day, and see it afterwards in print. It is very desirable that where we differ on points of fact, he should have an opportunity of setting me right; and if the Committee will permit some machinery to be employed for that purpose, I think that we shall be able to agree upon the different points—matters of opinion will remain as they are.

121. (*President.*) Colonel Adye can hand in to the Committee a memorandum of anything that he thinks requires correction in print?—I will now proceed to make a few observations. I have had the advantage of reading over the evidence given by Sir Percy Herbert, as well as the very clear evidence that was given by Colonel Adye. The points to which I would invite the attention of the Committee are these:—I see that a very important and grave issue has been raised by Sir Percy Herbert, in his evidence, as to the abolition of General Brevets, and the introduction of a system of fixed establishments of General Officers. I can only say that I can give my evidence in favour of a fixed establishment of General Officers as one which reduced a system of irregularity, and I may say (in order to express fully my meaning), an arbitrary issuing of orders to make promotions on an extensive scale at irregular intervals, so as to be infinitely less advantageous to the Service to which I belonged, than the system of fixed establishments has proved to be. I am very glad to find that in that respect Colonel Adye has borne very strong testimony indeed in favour of a fixed establishment of General Officers of Artillery. I may also beg the attention of the Committee particularly to a fact, and a very useful fact, which Colonel Adye has brought out in his evidence, that in consequence of having no fixed establishment of General Officers of Artillery in 1854, there was not a single Major-General in the Indian Army. General Alexander and General Hancock will be quite alive to the inconvenience caused to the Indian Military Service from this deficiency of Major-Generals. I do not believe that when General Alexander was Adjutant-General of the Madras Army, we had a single Major-General of the Indian Army in command of a Division,—I believe they were all Lieutenant-Colonels, commanding divisions, with the local rank of Brigadier-Generals. I find, on referring to Colonel Adye's Table, that for the Indian Army the number of Generals was 84, the number of Colonels 153; the Generals and the Colonels being nearly all Colonels of Regiments,—indeed, we had, in India, in that year, only a few Officers above the grade of Lieutenant-Colonel who were not Colonels of Regiments.

122. (*President.*) Do you mean acting Colonels?—No; full Colonels of Regiments, receiving the regimental allowance; and they were thereby necessarily excluded from commanding regiments, and only available generally for superior commands. The consequence was that, I believe, the Divisions in the Indian Army mainly were commanded by Lieutenant-Colonels, at all events a considerable number were, as we had no Major-Generals in the Indian Army at the beginning of 1854; thus, officers of subordinate rank were employed to perform the duties of Generals, and that was in consequence of the Indian Army being without a fixed establishment of General Officers.

123. (*Sir Charles Yorke.*) I suppose they had died off before?—I would answer that question by explaining that the condition which Major-General Sir Percy Herbert maintains should regulate the rise to the rank of General Officer is the date of rank of Colonel, that in consequence of the General Brevet system we had few Colonels in India who, by the dates of their Commissions, were entitled, say, at the Brevet of 1851, to be promoted to be Major-Generals. I do not mean to say that no Colonels of the Indian Army were made Major-Generals in 1851, but there must have been very few, as in 1854, three years afterwards, we had no Major-Generals in the Army in India, with a strength of 250,000 men. Therefore, the system of General Brevets, to which Sir Percy Herbert attaches so much importance, failed entirely in respect to supplying the Indian Army with Major-Generals. The Committee have now before them the evidence of Colonel Adye, to show that the fixed establishment of Generals has proved very advantageous to the Royal Artillery.

124. (*President.*) You mean the abolition of it?—Yes; the abolition of the system of General Brevets, and the establishment of a system of continuous promotion. This point also gives rise to a very important phase, to which I beg to call the attention of the Committee. Sir Percy Herbert very properly says that two armies cannot serve with advantage together in the same country, and be upon an equal footing, unless the rules of promotion are substantially the same. Colonel Adye also insists very strongly in his evidence, that it is essentially necessary that the gradations of rank for rising in the Army, should be so made as to give a fair average promotion to the Officers serving in it. There is also this peculiarity, that whilst Sir Percy Herbert's statement goes against the Indian Army in respect to rising by the rules of promotion, to which they were entitled, he makes no mention whatever of the seniority services of this country, but seems to make the Infantry and Cavalry of the British Army, as it were, the standard by which to measure all other promotions of all other branches. Now, it is in this wise the Indian Army should be compared, for it was formed upon the same principle as the seniority services of England,—that is to say, in 1796 the system was changed which the great Lord Clive established, of one general rule for all officers rising by seniority; they were divided into Regiments in 1796, the under officers were entitled to rise in regiments to the rank of Regimental Colonel in the same manner as the Artillery, and Engineers, and the Marines of England, now rise Sir Percy Herbert shows clearly that from 1807 down to the latest date, 1834, it had been the habit to interfere in England to prevent the rise of Indian Officers to the rank of Colonel, regimentally, and that in 1807 the first order to that effect was issued, which was really a continuance, as I have said in my notes, of the Duke of Wellington's Memorandum of 1804. That was the first interference. In 1829 it was changed. The rise to the rank of Regimental Colonel was then restored, as fixed in 1796. Lord Hill interfered in 1834, it was again changed in 1837, so that, in consequence of those changes, so detrimental was the interference, that in

1854 we had no Major-Generals in the Army, because we had no Colonels of the same standing and rank as the Colonels of the Queen's Service, whose promotion to the rank of General was regulated by the General Brevets.

I would also draw the attention of the Committee to an important argument, if it were thoroughly well based, which Colonel Adye very properly advances against the supersession which has lately taken place in India; that by the Warrant of 1854, when the 220 Generals were given, it was considered that there should be fixed proportions of ranks relatively to each other, so that when a derangement took place in 1861, those proportions should have existed in 1861 as they were in 1854. But I have already shown that we had no such proportions of ranks; for the number of General Officers and the number of Colonels were, in 1854, singularly few. In that respect I would beg your attention to this point, that in 1861, after all the advantages which had been given to the Indian Army of a fixed establishment of General Officers, and of Lieut.-Colonels qualifying to attain the rank of Colonel by certain periods of service, still the Indian Army was far below the number, and had far fewer Colonels and Lieutenant-Colonels than the English Army had; it is in respect to the diminished numbers in those ranks that, I think, the Committee will find supersession mainly has to do. Speaking off-hand, I think 1,000 Colonels existed in the English Army on the 17th of February, 1861; whereas on that date, which was the day before the change took place, or what is known as the Indian Army amalgamation, there were only 208 Colonels in the Indian Army, and 202 Lieutenant-Colonels, the total being 410. Whereas I have no doubt, if the numbers were counted at that time, there were probably four times that number in the English Army. But on the 17th of February, 1861, before any change took place, with regard to the Staff Corps, of those 208 Colonels, there were 48 Colonels of from 42 years' service to 52 years' service. I need not say that those officers were entirely useless for the Army, for active service. There were 95 Colonels, nearly one-half of the whole number, of from 37 to 41 years' service, there were 47 Colonels of from 30 years' to 36 years' service; five Colonels only of from 25 to 29 years' service; 13 Colonels of from 20 to 24 years' service, and none under 20 years' service. I may say that we had many Colonels in 1861, of the British Army, who had only from 20 to 30 years' service. If we had a Table of that kind prepared, we should then have a comparison in the same way as to the Lieutenant-Colonels of the Home Army; but there were no fewer than 26 officers out of the 202 Lieutenant-Colonels of the Indian Army, who were of from 37 to 41 years' service in the rank of Lieutenant-Colonel.

Now this length of service is important, in connection with the subsequent proceedings of the Government n India, and which have led to these late promotions. The Calcutta Amalgamation Commission, of which I was a member, in 1861, being desired by the Government to see in what manner we could get rid of these old Colonels and officers, prepared a system for the retirement of the older officers of the Indian Army. It was prepared by a very able officer, who was thoroughly acquainted with the business of an actuary, and, in fact, recognised as an authority amongst actuaries. He prepared a scheme for our Commission, and it was submitted to, and approved of, by the Governor-General of India. It was sent home to England, but unfortunately changes were made which, I think, were detrimental to the principle upon which we acted, and it was this:—We tried to diminish the number of the officers of all grades in the Indian Army, by inducing all those who had had very long service, and we had some Captains who had been in the Service from 40 to 44 years, to retire. A scale of retirement was prepared with a view to induce that class of officers to leave the Service,—a class of men who never could rise to the rank of General Officers, or who would be thoroughly useless to the Service if they did so. But still, in spite of alteration that was made at home in the Calcutta plan, a very considerable number of old officers retired who would not, I believe, or a great proportion of them, have remained in the Service, even if that retirement had not been offered. But it was real economy on the part of the Government to induce those men to leave India on about half of the pay they would have received if they had remained in India. In consequence of these retirements Colonel Adye has very properly brought forward, and has shown distinctly, that the rise of the Colonels in the Indian Cavalry and Infantry has of late been very considerably accelerated by that means.

Colonel Adye also mentioned, and very cle aly too, another act of the Government here, which was entirely independent of the amalgamation, and need never have formed part of the scheme, that promotion has been accelerated to the Staff Corps by the removal of the Colonels of Artillery from the General Gradation List of the Indian Army, manyof whom were old and entitled to promotion from length of Service, as well as by the dates of their Commissions. The removal of Colonels of Artillery and Engineers from the Indian List, has brought to the top of the List, the Colonels of Infantry and Cavalry. Now that was a proceeding which was entirely independent of the amalgamation of the armies, and need never have been carried out unless the Government thought fit to do it, as they did think fit in this country. I may mention that I gave evidence against this measure before Sir John Aitcheson's Commission; I then expressed myself strongly to the effect that the separation of the Colonels of Artillery and the Colonels of Engineers should not be made from that List, then foreseeing that in a few years' time this very supersession would give rise to an outcry, and a very reasonable one, on the part of the British Army. But I may also mention, although it is the case, that an impetus has thus been given to the promotion of those now at the top of the List of Colonels in the Indian Army, enabling them to attain the rank of Major-General in a fewer number of years than Colonels in the British Army can do; but at the same time this is not likely to last. I believe that the retirements to which I have alluded would all have taken place, and I think an examination of the list of Indian retirements will show that a very considerably diminished number of retirements have taken place since 1861, as compared with the retirements of former years.

125. I presume you mean that there were a number of anticipatory retirements; that there were a great many in one year, which would otherwise have been spread over subsequent years?—Yes; the retirements on superior pensions all date from the 31st December, 1861; deaths have since taken place, but if a list is made out of Indian Officers who have retired on or since that date, I think it will be shown that the retirements of 1861 were merely anticipatory. It is also of importance to notice, and Colonel Adye has called attention to the fact, that a new element has been introduced into the Indian Army, that of rising to the rank of Colonel by length of service at the end of 31 years. My own opinion has nothing to do with the matter, but I have never been able to see the advisability of such a system of promotion. It is novel in its nature, and certainly does not, so far as I know, present either to the public service, or in any other way, advantages commensurate with the inconveniences which attend it.

126. (*Sir Duncan Cameron.*) Was not that done in order to put the Line Officers on a par with the Staff Corps, who get their promotion after a certain period of service?—No; it was a plan entirely prepared in England, as the papers show, between Sir Charles Wood and Major Norman, who was then at home on leave. No official paper of any kind has ever fallen under my notice which shows that they had any desire whatever to regulate the rise of the Staff Corps Officers in reference to the regimental officers of the Indian Cavalry and Infantry.

127. (*President.*) When was that plan introduced?—

The Staff Corps system commenced on the 18th of February, 1861.

128. Did not the regimental officers complain?—Yes, they did, after the lapse of several years, or after the lapse of three or four years. Orders were then issued for all the officers of the Native Infantry and Cavalry who had not joined the Staff Corps to receive brevet rank or local rank in India, in order to keep them on an equal footing with the Staff Officers; that is to say, supposing that Major Norman had not joined the Staff Corps, he at the present moment would have been a regimental officer, standing as fourth Captain in his regiment; his name still appears on what is called the cadre of his regiment; but he would at the present moment have been a Major-General, but not by means of the Staff Corps rank, but by his date of rank as Colonel from being made Aide-de-Camp to the Queen, advancing him to the grade of Major-General. I may explain that the Commander-in-Chief assented to the officers of British Infantry and Cavalry serving in India being placed upon an equality by means of what they called local rank, and it was for that reason that I used the word "local" rank for both services.

There was a very strong point mentioned both by Sir Percy Herbert and Colonel Adye in their evidence, and it was with reference to the inducement which had been held out to the Indian Army for officers to retire as being of an exceptional nature. No doubt the applicability of that word depends upon the extent to which it is carried, as to its being correct, but I think that inducements in the English Army have also at various times been held out in various ways, both to induce English officers to retire as well as to give them promotion. In fact, the English Army between the Peace of 1815 and 1854 could never have kept pace with the age if they had not done so; as a means of promotion in the Queen's Army a very important measure was carried out, and which partly is being carried on to this day. In 1823, it began either with the Marines or the Artillery, I forget which; but seeing the stagnation of promotion in those two seniority Corps, the Government of that day came to the determination to permit officers of Infantry and Cavalry to purchase rank of the officers of Artillery, Engineers, and Marines who were disposed to sell out; that is to say, a Lieutenant-Colonel of Marines, who was anxious to leave the Army, was allowed to receive a certain sum from a Major of Infantry in the British Army; who thereby became a Lieutenant-Colonel in what they called the Unattached List, so that a very large augmentation, which has continued to this day,—and officers benefit by it,—was made to the British Army independently of the regimental one, I believe, of 225 Lieutenant-Colonels alone; but the information upon that point is very incomplete, and therefore difficult to get at. By the Commission over which the Duke of Wellington presided in 1840, that question was very thoroughly gone into, and the large expense to which the nation had been put by the sale of the Commissions in the Seniority Corps of Marines, Artillery, and Engineers was fully pointed out. That was one opening that was given as an inducement to officers to obtain promotion, which was much of the same character as the Indian retirements. In addition to that, in the year 1840, there was a considerable increase made to the amount which was paid by the nation for the full-pay retirements of the Infantry and Cavalry, Artillery, and Engineers. Again, in the year 1854, an increase in the full-pay retirements took place by the recommendation of the Commission which sat at that time. I think that for the Ordnance Corps the amount was then increased to 48,000*l.*

129. I may remind you that all that is given very minutely in the Report of 1854?—That is so. But another increase has taken place; two years ago a sum of 12,000*l.* was given to the Ordnance Corps to induce officers to retire.

130. (*Sir Charles Yorke.*) When was that?—That was about two years ago; that was a fresh addition. It is now a sum of 60,000*l.* for the two Ordnance Corps, as an inducement to officers to retire.

131. (*President.*) Instead of 48,000*l.*?—Yes; I think I ought to mention to the Committee that although the officers now at the top of the Colonels' List are close on promotion to the rank of Major-General in India have risen up very rapidly so as to obtain their promotion in less than six years after being full Colonel, yet judging from the number of casualties which will take place amongst the 173 General Officers of the Indian Army, I doubt very much indeed whether the junior Colonel of that list will obtain his promotion before the expiration of 12 years after being made a Colonel; and supposing him to have been 31 years in the Service on being made Colonel, he will have to serve 43 years altogether in the Service. I think that that is a service, and he will be at an age quite old enough for any one to become Major-General.

132. (*Sir Duncan Cameron.*) How do you arrive at that; how do you calculate that the junior Colonel will be 12 years in obtaining the rank of Major General?—I believe that the number of casualties will be very few amongst the 173 General Officers. As far as I can make out there will not be more than from 8 to 9 casualties amongst the General Officers, and taking the rise to be to the extent of 10 promotions every year, which will be a very considerable number, that will as nearly as possible bring the time up to 12 years at least, before the junior Colonel obtains his promotion; and of course, having regard to a number of young officers who have been fortunate enough to rise to the rank of Major-Generals, their lives will be very good, and thereby diminish even the number of casualties amongst the General Officers.

I may next point out, with regard to the relative chances of rising which formerly existed in the Indian Army, including Artillery, Engineers, Cavalry, and Infantry, that under the former system, taking the Royal Artillery as the standard, the gradations were exceedingly unfavourable to the rise of the Indian officers; for instance, when General Alexander and General Hancock commenced their careers, as well as myself, I being several years younger than they are, our proportions were 16 officers above the rank of subaltern to 30 subalterns. The Royal Artillery had 24 officers above the rank of subaltern to 124 subalterns. I need not say that a gradation like that, so exceedingly favourable for the Royal Seniority Service at home, shows to great advantage as compared with the chances of rising in the Indian Seniority Army; and yet with that favourable chance of promotion, we know very well that the Royal Artillery, up to 1854, were exceedingly backward in their promotion; and, as Colonel Adye has justly shown, the Colonels were in that year of an age that they were practically speaking not fit for service. No doubt the same evil results followed in the Indian Seniority Service, for there officers of rank reached great ages whilst still in command. I know of nothing that was more detrimental to the efficiency of the Indian Army than the fact of having so many old officers as we had.

133. (*President.*) With regard to the retirements on full-pay in the English Army, and which have been constantly going on, was there anything analogous to that in the Indian Service?—Yes; to a large extent.

134. There was a continuous mode of retirement provided for the senior officers?—Yes; ever since 1796.

135. Was that irrespective of the Clive Military Fund?—Lord Clive established that fund in order to provide for officers who then had no means of returning to England, and up to 1796 that was one of the most noble funds that could be desired. In 1796, for the first time, pensions were given according to rank; for example, a pension of 365*l.* a-year was assigned to the rank of Lieutenant-Colonel, calculating then that that rank would be attained in 22 years. Subsequently, finding that promotion was very stagnant, the Court of Directors on three different occasions changed the retirements by granting more liberal terms, and allowing not only the retirements granted in 1796 to remain in force, but they also granted retirements for actual length of service, so that several Captains have retired upon the pensions of full Colonels.

136. How was it that the officers remained of such a full age in India so as to fill up the ranks?—The fact was, although we speak of the liberal pensions of India, and no doubt they were very liberal, very few men saved money, and the consequence was that they came home to England with 450*l.* a-year, which was the highest pension, and which of course placed an officer who had been all his life living in some degree of affluence, in a position of comparative want; the pension, although very liberal, was very much below the amount of pension required, having regard to previous habits of life in India.

137. Will you be good enough to explain how it is, if for the future we are to suppose that a Colonel is to remain 10 or 12 years in that rank before he attains the rank of Major-General, promotion has been so much more rapid in the last few promotions that have taken place?—I think that Colonel Adye has brought that out very well indeed. He has shown that by the separation of the Colonels of Artillery and Engineers from the Colonels of Infantry and Cavalry in the Indian Army it has brought the younger Colonels of the Staff Corps, and of the Cavalry and Infantry, to the top of the list, and by that means has unusually expedited their advancement to the rank of Major-General. There is no doubt that some of the retirements which took place in 1861 have also facilitated the rise of those officers.

138. Of course if your theory is a correct one, that anticipatory retirements were caused by what took place, they would have produced that effect in the first instance?—Yes.

139. When the Colonels of Artillery were taken from the Indian List and put on the General List, was there no compensation given with respect to the General Officers on the General List?—These changes were in this wise. The first change that was made in the Indian List of Generals was practically speaking in 1861, although it did not take effect until 1862, in consequence of official delays. But in 1861, the European Infantry and Cavalry of the Indian Army, comprising 12 regiments, were then transferred to the British Army, and 12 General Officers were struck of the strength of the Indian List, reducing the number from 220 to 208 Generals, that is to say, there were 12 officers with the rank of General, Sir Robert Vivian, General Hall, General Wylie, and others, who were all brought away from the Indian Army, and put into the General List of the English Army amongst Infantry and Cavalry Generals. So in like manner at a subsequent date the Indian Engineers, then comprising 11 battalions, were transferred; and on being transferred over from the Indian List, 11 Generals were struck off the strength of the Indian List of Generals, and were formed into a separate list, in which the three regiments of Indian Engineers now rise. So in like manner with regard to the Artillery; the Artillery being struck off the Indian Army only last year, there were then 24 General Officers taken away from the Indian Army and formed into a separate list here for the three regiments of Indian Artillery, thereby reducing by these changes the whole number of Indian Generals from 220 to 173.

140. Notwithstanding that the Generals were taken away from the Indian List, how was it that the transfer of the Indian Artillery and Engineers to the consolidated corps benefitted the regiments of the Line in India?—I think Colonel Adye has shown that the Indian Artillery by removal from the Indian List have suffered in their chances of rising to the rank of Major-General they have not only been greatly injured, but on examining the gradation list of the Indian Army, you will find that as the senior Colonels of the Indian Army were chiefly Engineer and Artillery Colonels, their removal has benefited the Staff Corps; for instance, I find Colonel Stewart now a General Officer, Colonel Norman now a General Officer, Colonel Green now a General Officer, all had a number of Artillery Colonels senior to them; consequently last year, on the Indian Artillery Colonels being taken away, Colonel Norman and Colonel Stewart actually gained about two years promotion by the removal of the Indian Artillery Colonels and the Indian Engineer Colonels.

Colonel JOHN ADYE, further examined.

141. (*President.*) Have you any observations to make upon the evidence you have just heard from General Balfour?—General Balfour, in his opening statement has discussed the slow regimental promotion of former days in the Indian Army, and I am quite ready to admit that his statements are founded entirely on the facts of the case. But what I wish to observe is, that that is not the question now under consideration of the Committee; it is the second period of an officer's life,—that is to say, his promotion from the rank of Colonel to that of General, which is being discussed, and therefore General Balfour's argument as to slow regimental promotion does not bear upon the present case. The second point in General Balfour's evidence to which I wish to refer is this,—he says, and the Committee appear to attach great importance to the fact, that the retirements of 1861 were merely in anticipation of those which might have been expected in the few following years. Supposing that they were so, they were not to my mind the less injurious, which is proved by the fact that we are now suffering severely from those accumulated retirements which gave this rapid promotion (or were partly the cause of it), of the Indian Colonels. The Colonels in the Royal Army have had no such advantage conferred upon them; and with regard to the fact that the Colonels of the Indian Army do not retire much now, I would say that they have little inducement to do so. At the time, about 1861, when those enhanced retirements were given, the whole system of promotion in the Indian Army was altered, and it was made very advantageous, Colonels now rising to that rank in 31 years; and they get their off reckonings, that is Colonels' allowances are guaranteed to them a few years after that. Therefore, naturally the present officers do not feel any inclination to retire; there is a great desire now to buy a large number of them out again, because there are more of them than are wanted; but they will not go, because their prospects are so excellent by remaining in the service. Then General Balfour, with regard to the Royal Artillery, has mentioned that some years ago the old officers of Royal Artillery were allowed to sell unattached commissions, and thus to give promotion to their corps. That is also perfectly correct, but the reason was that after the Peace of 1815 a very large body of officers in the Royal Artillery were placed on half-pay summarily, and promotion was stopped until they could be brought in one after the other. The regiment was perfectly paralysed for years, and therefore with a view in some degree to saving, and the quickening of promotion, these means of retirement were given to a certain number of Officers. I think I am right in saying that after the Peace of 1815, there were upwards of 200 officers of one small regiment, as it was then, on half-pay, who had to be brought in one after the other.

142. (*President.*) General Balfour did not state that as a grievance or a wrong, but merely as an illustration that something of the same kind had, on public grounds, been introduced into the Royal Army, as, upon public grounds, had been introduced into the Indian Army in the year 1861?—Yes; but I would say that the circumstances were not the same. In our case they were given to try to bring us back to something like serviceable condition, whereas in the case of the Indian Army they were not given from any cause of the kind. The enhanced retirements in the Indian Army were given to get rid of a certain number of officers, but not to quicken promotion. It was a financial consideration entirely, and it was carried out without reference

to the injury it must do to the Royal Army. Then General Balfour stated, in another part of his evidence, that a large and fresh addition of retirements has been given in the last two or three years to the old Royal Artillery; but I would observe that the additional sum of money now granted annually by Parliament for the Royal Artillery is simply in confirmation of the old system, and is given in consequence of the large augmentation made to the regiment—several brigades—about the time of the Crimean War and the Indian mutiny. Therefore the augmentation referred to by General Balfour was only in proportion to what was given before, that is the amount only increased in proportion to our numbers. General Balfour also compared the respective proportions of the superior officers in the old Royal Artillery as compared with their juniors, to the proportions in the Indian Artillery; he pointed out that the officers in the Indian Artillery had very defective regimental promotion; that they had a large number of junior officers as compared with the senior officers, and he referred to that as showing that the Indian Artillery did not formerly enjoy quite the same advantages as the old Royal Artillery. It is perfectly true, but this was rectified as soon as the Indian Artillery were amalgamated with the Royal Artillery, and they had considerable promotion in consequence. There is only one small point further to which I would refer, that is with regard to the rapid promotion which the Colonels of the Indian Infantry and Cavalry have enjoyed since the Indian Artillery and Engineers were separated from them in 1868. The Committee will find by referring to the Army List of January 1869, which was just a short time after the separation had been accomplished, that the Indian Cavalry and Infantry had 173 Generals to 81 Colonels, that the Indian Artillery had 32 Generals to 66 Colonels, and the Indian Engineers 12 Generals to 29 Colonels; Consequently the promotion of the Colonels in the Indian Infantry and Cavalry must be very rapid, because they have so few Colonels as compared with the General Officers.

Major-General BALFOUR, further examined.

143. I am anxious not to be misunderstood by the Committee; I beg to say that I should rejoice most heartily in seeing anything done that could advance my brother officers of the Artillery, and I do not mention anything in the way of comparison with a view to deprive them of any advantage they possess. I am sure that they require and deserve everything that can be given to them, and I cordially join in the desire to see Mr. Childers' scheme of retirement carried out with a view to advanced promotion. There is, however, one thing which I wish to say. It is quite true, as Colonel Adye stated, that the Indian Artillery have been assimilated with the Royal Artillery. I may mention that Colonel Adye has been aiding in effecting that object, and in doing right good service in India, and I am grateful to him for the good service he has rendered, but the Indian Artillery did not get that assimilation in time. The senior Colonel in the Indian Army, according to the Army List before me, is Colonel Simpson, of the Artillery; he is an older officer than I am, and 14 years senior to Colonel Adye; he belongs to the same regiment as I do, but I had the advantage of getting brevet rank, and have gone up above him. If the assimilation of the Indian Artillery had been effected in proper time, this officer would have been long ago a Major-General, but he did not get back rank when the assimilation took place. If he had got his Lieutenant-Colonelcy immediately after being promoted from the rank of Captain, he would now have been high up in the list of General Officers, and very probably would have stood above me. So that whilst I admit that that assimilation was completed in 1861, as far as the gradations of rank were concerned, the advantages of previous promotion have been denied them, and so far therefore it is a loss to the Indian Artillery Service. General Simpson, the senior Colonel of the Indian Army, has been passed over by junior Colonels of that Army.

The last replies of Colonel Adye induce me to ask permission to explain the serious retardation of promotion occasioned to the officers of the Indian Artillery, by the delay in assimilating the grades of the Indian Artillery Corps with those of the Royal Artillery.

This explanation will, I hope, be useful to the Committee, in this way: no doubt the removal of the Colonels of Artillery and Engineers from the Indian List, and placing them on a separate List for rising to the grade of General Officer, has accelerated the rise of the Staff Corps Officers of India from Colonel to Major-General by at least two years, if not more.

The re-transfer of the Colonels of Indian Artillery and Engineers to the Indian List, would at once correct in a degree the undue promotion of the Staff Corps Colonels, and those promoted to Major-General would have their date of rank altered.

There is a precedent for this. In 1858, I, being then a Major of Artillery, had that Majority converted into a Lieutenant-Colonelcy, in assimilation with the gradation of the Royal Artillery.

The Indian Infantry Officers complained of the date of this rank being assigned as that of the Majority, and under orders from England my date of rank was altered to the date of the order.

The change did not affect me, for I was a Colonel in the Army; but many Artillery Officers in the same position suffered by being deprived of the rank of Lieutenant-Colonel, not being that of the Majority. I may here mention that the re-transfer of the Artillery and Engineer Generals and Colonels to the Indian List, will not benefit me in the slightest degree. Indeed, I believe that I have a better chance of succeeding to my Lieutenant-General's grade by being kept on the separate List as at present. I made the like suggestion to Sir J. Aitcheson's Commission, but it was reported against on grounds which have proved to be ill-founded.

The re-transfer will however benefit the Artillery Service, and they have some claims for consideration, seeing that Colonel Adye freely admits, that though the Indian Artillery is now in possession of the same grades as the Royal Artillery, yet that the past advantages for that favourable gradation has not been given. This enables me to illustrate the advantages that the Seniority Service of the Home Army had over the Seniority Service of India, by the gradations of ranks and numbers in the grades of the Home Services being on a far more favourable scale than existed in the Indian Army, and I cannot use any words more suitable to express my own view, than those recorded on the evidence as given by Colonel Adye in reply to question 56.

The inequality in regimental arrangements, to which Colonel Adye objects, will be seen to have been great between the Indian Service and Royal Artillery, as the following comparison will show:—

In 1827, the grade of Major of Royal Artillery was abolished by all the Majors being made Lieutenant-Colonels. In 1837, the grade of Major in the Royal Marines was also converted into that of Lieutenant-Colonel. The grade of Major of Royal Engineers was abolished on 1st January, 1783. In the three seniority services of England, the Captain was promoted to be Lieutenant-Colonel instead of first being made Major.

This change no doubt greatly accelerated the rise of officers of Artillery; by attaining this rank they had the advantage of rising to be Colonel by the General Brevets, as well as of attaining that rank regimentally. But above all they could not be superseded by junior Lieutenant-Colonels of Infantry and Cavalry. The rank of Major was however still kept up in India, and continues to this day.

On the abolition of the rank of Major of Artillery in 1827, the Royal Artillery had a strength of 469 officers, besides unattached Generals. In that same year the Indian Artillery had 460 officers, formed into grades and in proportions on the standard of the

Infantry, it being the policy of the East India Company to maintain uniformity as far as possible between the Infantry, Cavalry, Engineers, and Artillery.

The two Artilleries, Royal and Indian, were composed as follows:—

	Royal Artillery.		Indian Artillery.	
Colonels Commandant.	10		20	
Second Colonels ..	20			
Lieutenant-Colonels ..	42		20	
Majors	..		20	
		72		60
Captains	81		100	
Second Captains ..	84		..	
		165		100
1st Lieutenants ..	171		200	
2nd „	61		100	
		232		300
Total	..	469	..	460

In addition to the above the Royal Artillery had seventeen General Officers unattached, that is Colonels made Generals, and these vacating their regimental position and so giving promotion to the officers of the corps. The Indian Artillery had no such promotion given them, for only two or three officers were ever promoted so rapidly as to be obliged to leave the corps.

The Captain of Royal Artillery had the chance of casualties amongst 72 superior officers, whereas the Indian Captain had only the chance of 1 in 60. The Royal Artillery Captain at once became a Lieutenant-Colonel, but the Indian Captain was made a Major, all the average service in that grade was upwards of five years.

This contrast between the two Services may be extended. With a view to provide for the employment of Royal Artillery Officers on staff duty, away from regimental duty, the Government authorized the places of the absent officers to be filled up, by promotions being given to the juniors.

In India officers were withdrawn for Staff duty, but not replaced. The promotion given to the Royal Artillery was thus withheld from the Indian Artillery, and that it was extensive may be seen from the following statement of officers who were withdrawn from the Royal Artillery, and seconded, as it was termed:—

Colonels	4
Lieutenant-Colonels ..	5
Captains	14
Second Captains	4
First Lieutenants . ..	1
Total . ..	28

These withdrawals greatly accelerated the rise of Royal Artillery Officers, and connecting the various openings for promotion which in a long course of years can be shown to have been granted to the Royal Artillery. I am confident that the advantages derived by that corps would exceed those granted to the Indian Artillery and Indian Army.

I cannot conceal from this Commission, that if the Seniority Service of India had enjoyed the favourable gradations allowed to the Seniority Service at Home, that the promotion of officers in the Indian Army from one grade to another, would have been far more rapid than that enjoyed by the Home Services.

I may add that the seconding system of the Royal Artillery was extended to the Indian Artillery in 1861; and in fact continues to this day. Now, about two years since, the Royal Artillery being anxious to obtain an increase to the retirement, proposed that the seconding of the officers of the grade of Colonel should cease. On this inducement the increase was granted. But the Indian Artillery suffered severely by a change which benefited the old Royal Artillery.

144. (*President.*) Colonel Adye has stated that there are very few Colonels as compared with Generals now upon the Line List. Can you account for that?—We have never had the advantage in the Indian Army of the large promotions which were given after the Crimean War, in various ways, for distinguished services. A considerable number of those officers were promoted in the English Army, and for some time the number of qualifying appointments from the rank of Lieutenant-Colonel was very considerable in the English Army as compared with the Indian Army.

145. Does the rule as to qualifying appointments extend to the Indian Army?—Yes.

146. When was it applied to the Indian Army?—In 1854.

147. I suppose it was done in imitation of what had been done in the Royal Army?—Yes; the Court of Directors' Letter, giving the fixed establishment of 220 Generals, that was issued in 1854 was in conformity with the English Warrant, it followed the English system.

148. The Indian Government followed the example set in the English Army?—Yes; by a letter from the Court of Directors, which was promulgated in General Orders.

149. (*Sir Percy Herbert, through the Chair.*) I believe that the rule of promotion up to the rank of Lieutenant-Colonel in the three Indian Armies was regimental?—No; I have seen that you made that statement, and I have taken a note of it. It was this,—in 1796 the regimental rise was ordered to be in agreement with the home system, because the regiments were formed upon the principle of two battalions in India being equal to one battalion at home, and the officers were then made to rise to the rank of Lieut.-Colonel regimentally, that was the rule in 1796. In 1798, so inconvenient was this rule found that the Government altered it within two years, which was a very rapid thing in those days, so as to make them rise to the regimental rank of Major; for instance, supposing General Alexander, Major of a regiment of which I was Senior Captain, succeeded to the rank of Lieutenant-Colonel in the general gradation list of the Infantry Lieutenant-Colonels; on his promotion taking place to the rank of Lieutenant-Colonel I then became a Major, and was then on the General List of Majors of Infantry.

150. Is it correct to say that the promotion up to the rank of Major was regimental?—Yes.

151. And that promotion from the rank of Major to the rank of Lieutenant-Colonel was from the Presidency?—Yes; and by branches of the Army. The Infantry Majors were in one list, and the Cavalry Majors were in a separate list. The Artillery were in one Corps from top to bottom, and the Engineers were in one Corps from top to bottom.

152. And the rise frem the rank of Lieutenant-Colonel in the Cavalry and Infantry was upon one general list of the Indian Army, was it not?—Not quite so.

153. Will you just explain how that was?—It was in this way,—subsequently to the last interruption of the regimental rise to the full rank of Regimental Colonel, which was restored to the Indian Army in 829, Lord Hill's letter of 1834 was issued. It had the effect of changing the 1829 rise. Three years then elapsed, during which there was great disorder in the promotions of the Indian Army, partly in consequence of the inequality of rise, and partly from what has been called the Fane Major-General system. But in 1837 a change was ordered, in this wise—the Infantry of the Bengal Army, comprising in all say, 78 Colonels and 78 Lieutenant-Colonels, being the larger body of any one of the 12 branches of the Indian Army, was fixed on to regulate the promotion of Lieutenant-Colonels to the rank of Colonel throughout India. On the senior Lieutenant-Colonel of the Bengal Infantry being entitled to become a full Regimental Colonel by a casualty amongst the Colonels, that officer obtained his promotion at once, and all the Lieutenant Colonels, throughout all India, all senior to him, were then made (both Queen's and Company's) Brevet Colonels in India. From that date to 1854 no change took place.

154. The Queen's Officers receiving local rank?—Yes; receiving it in that sense.

155. With regard to the rise from the rank of Lieut.-Colonel to that of Colonel, did the officers or not rise upon one general list including the three Armies in India?—I fully admit that the rank of Lieutenant-Colonel was in India, as it was in the British Army, the standard by which officers rose to the rank of a General Officer; in the Indian Army they made the Lieutenant-Colonelcy, which they did not do in the seniority Corps of England, the starting point from which to rise to the rank of a General Officer. Consequently, when once you became a Lieutenant-Colonel in India, you did, practically speaking, rise in one general list, the advancement being regulated, however, by the rise in the largest branch of the Indian Army above explained. The rank of Colonel was thereby attained but slowly, as the Bengal Infantry was slow in promotion. Hence it was, that in 1854 we had no Major-Generals of the Indian Army, because our Colonels had been so backward in promotion that they were not on an equality with the Colonels of the English Army, and not entitled by General Brevet to the rank of Major-General.

156. Am I right in saying that a Lieutenant-Colonel having once attained that rank, in either of the three armies, rose to the rank of Colonel according to the date of his commission?—Quite so.

157. (*President.*) Was not the grade of Major the starting point in India, and was not the rise from that rank to a Lieutenant-Colonelcy a Presidency rise, and not a regimental rise?—Partially so: inasmuch as there were four Infantry Lines of Majors, four Artillery Lines of Majors, four Engineer Lines of Majors, and four Cavalry Lines of Majors; and in any one of those Lines a Major might become a Lieutenant-Colonel, although he was junior to other Majors in reality. Therefore, although strictly speaking, when you once became a Field Officer you were in the main body entitled to rise in the Army, still, as a matter of fact, the real starting point and the one over which no supersession did take place was, as Sir Percy Herbert has stated, the rank of Lieutenant-Colonel.

158. (*Sir Percy Herbert, through the Chair.*) Then I was right in saying that the promotion was strictly regimental up to the rank of Major?—Yes; that is to say, in the Infantry and Cavalry, not in the Artillery and Engineers where they rose up regimentally to the rank of Lieutenant-Colonel Commandant.

159. The rise from Major to Lieutenant-Colonel was according to the Presidencies?—Yes; according to the Presidencies, in each particular branch, that is to say the Bombay Presidency had one list of Infantry Majors and one list of Cavalry Majors. In Madras they had two lists, and so in Bengal they had two lists.

160. Then the rise from the rank of Lieutenant-Colonel to that of Colonel, was by seniority throughout the three Armies of India for the Cavalry and the Infantry?—Yes; that rank being regulated by the rise of the Bengal Infantry Lieutenant-Colonels to the rank of Colonel. I would also add that it was a violation of the Regulation of 1796.

161. Whatever was the regulating cause of the rise, the rise was by seniority from the rank of Lieutenant-Colonel to that of Colonel, was it not?—Yes; that is quite correct in that sense, that the Lieutenant-Colonel having once attained this rank, was then certain of the rank of Colonel.

162. You could not be superseded in the rank of Colonel?—No.

163. The promotion to the rank of Major was entirely by lottery between the different regiments, according to the fortune of war?—It was.

164. Therefore in attaining the rank of a Major, the date of a man's first commission had no influence whatever upon his attaining that rank, it did not affect his claim to the rank?—I think I can safely say that it did not affect his rank.

165. Did it affect his claim to rise to the rank of Major in any kind of way, or was it not strictly regimental?—Yes; I would say distinctly that an officer from the rank of Ensign, Lieutenant, Captain, and Major, took his chance of promotion in his particular regiment.

166. And therefore if A and B entered into different regiments on the same day, and A attained the rank of Major 10 years before B, that would give B no cause of grievance whatever, according to the rules of the Indian Army?—Quite so; but there is a qualification here necessary. In the event of any augmentations being made, the standing of the officers in the Service would be materially affected by the mode in which the augmentations were made, by taking the seniors of the different grades to be transferred to the new corps. Therefore, in some degree, the relative dates at which officers entered the Service would have some effect upon the promotion of those officers, still it would be in a minor degree.

167. That is to say, when augmentations were made and new battalions were raised, the senior officers of their ranks would be naturally the ones selected for promotion?—Yes.

168. Supposing two officers to be in different battalions, the dates of their commissions would in no way affect their claim to rise to the rank of Major; is that so?—Yes. No doubt the Court of Directors, like all governing bodies, tried to prevent the rise of any one branch in an extraordinary manner, and in that wise they made the Artillery organization exactly the same as the Infantry organization, and they avowedly gave certain branches of the Service additional Captains with the view of equalizing the rise in those particular branches. That is a wise administrative duty, which of course all governors should give their attention to in regard to the promotion of their servants.

169. Let me put the case of A and B again, and I will suppose that A enters the Service one year later than B, A attains the rank of Major 10 years before B by regimental promotion, but when B attains the rank of Major, would he have, according to the Rules of the Indian Army, any claim to be promoted to the rank of Lieutenant-Colonel before A, who was 10 years senior to him?—None whatever.

170. When A had attained the rank of Lieutenant-Colonel, several years before B, would B, when he became Lieutenant-Colonel, have any right to attain the rank of Colonel before A?—Certainly not.

171. When A had attained the rank of full Colonel, and B attained the same rank several years afterwards, would B have any claim to attain the rank of Major-General by virtue of his services before A?—Certainly not; but it must be remembered that all these questions require to have an explanation attached to them. You are speaking now of Infantry with Infantry, Cavalry with Cavalry, and so forth; but having regard to the interference with the regimental rise to the rank of Colonel, whenever you come to compare officers in different branches, then the interference in 1834 with the regimental rise to the rank of Colonel, did seriously affect relatively the different branches; for instance, a Captain of Cavalry might be superseded by a Captain of Infantry, although the Captain of Cavalry was ten years senior to the other. But the Captain of Cavalry might, if he had been left alone, have attained the rank of Colonel before the Infantry officer who had superseded him in the rank of Major; but by reason of the interference in 1834, it was prevented by making the Bengal Infantry the regulating standard for rising to the rank of Colonel in India.

172. I believe when the Indian Government transferred the Indian Artillery to the Royal Artillery, the Indian Artillery received very great regimental promotion by the amalgamation?—Very considerable.

173. And that was complained of by the officers of the Indian Infantry and Cavalry as a breach of faith with them?—The date referred to by you is that of 1858, and in that year, which was the year before the Indian Army was transferred to the Crown, the Indian Artillery had two advantages given to them, the object being to place them somewhat on an equality with the Royal Artillery who had then come out to India; the rank of Major was abolished in the Indian Artillery,

and the rank of Second Captain was also created. The Government gave the officers who were Majors the rank of Lieutenant-Colonel, with the date of their rank as Lieutenant-Colonel, antedating the date when they became Majors. The Infantry and Cavalry Officers of the Indian Army then presented petitions and memorials, and those petitions and memorials being sent home to England, it resulted in the date of the rank being altered to the 27th of August, 1858, the day on which the change took place.

174. Then there was the promotion in 1858?—Yes.

175. The officers of the Infantry and Cavalry, complained that their interests had been neglected in those arrangements?—Quite so.

176. In consequence of those complaints other arrangements were afterwards made, and a very large amount of retirements was given to the officers of the Infantry and Cavalry of the Indian Armies?—Not in consequence of those complaints. The large retirements of 1861 originated with the Commission of which I was a member.

177. Was there not a vast number of complaints made to the Government at home, and were not petitions presented through Members of Parliament?—That was afterwards; the main retirements took place in 1861.

178. That is what I am alluding to. After 1858 the Officers of the Infantry and Cavalry made great complaints of the disadvantages under which they were labouring, and that faith had been broken with them by the promotion, contrary to the rules under which they had entered the Service, of Artillery and Engineer Officers?—I do not remember that any particular complaints were made after the Lieutenant-Colonels' rank of the Artillery was altered back to the date of the rank; it was in 1861 that the retirements took place on the 31st of December. It was an entirely financial matter, and the object mainly administrative on the part of the Government of India.

179. Had it nothing to do with complaints that had been made that the Officers of the Cavalry and Infantry had not received their bonuses?—I say distinctly not; our Commission originated the thing quite independently of that. We found about 2,000 surplus officers belonging to the establishment, which Sir Charles Wood, the then Secretary of State for India, proposed, and by order of the Government of India we devised, a measure by which a reduction could be effected in the number of supernumeraries. Subsequently to that various petitions and memorials were presented to Parliament, and Commissions of Inquiry were appointed—Lord Cranworth's Commission and Sir John Aitcheson's Commission—in order to investigate the various claims which the officers of the Infantry and Cavalry had put forward. There have been continual changes since 1861.

180. Did not the Artillery and Engineer Officers get increased pensions in 1861?—In 1864 they gave a few retirements of 700*l.* each to a certain number of officers of each regiment of Artillery.

181. But less in proportion were they not, than to the rest of the Army?—Very considerably less.

182. Then the Imperial Government, or the Indian branch of it, in order to get rid of a large number of officers whom they considered in excess of their requirements, and in order to lessen the complaints of the officers that they were not enjoying the same advantages as they would have done if they had remained under the East India Company, gave a large number of retirements in 1861, and subsequently?—Not subsequently. The main body of the retirements took place in 1861. I do not wish that any misapprehension should exist, and it is very proper that Sir Percy Herbert should call attention to the acts of the Imperial Government, those being the acts of the Cabinet entirely independent of the India Office, but I must explain to the Committee that the retirements of 1861 had their origin in India, and I do not remember in any letter that came from the India Office, and there were several, that made any suggestion with regard to effecting the retirements of the surplus Officers of the Indian Army.

183. (*General Alexander.*) Will you be so good as to state, as concisely as you can, whether those retirements were given with the view of adjusting the rank, or compensating for quicker promotion, or was it simply a financial measure with a view to get rid of the old officers?—It was mainly to get rid of the surplus officers above the establishment, and the Secretary of State for India directed the Government of India to have a measure devised for the purpose of getting rid of the surplus officers.

184. Could that be possibly done, supposing that promotion in the Indian Army and the Queen's Army were regulated fairly? could such retirements possibly have been carried out with a view to financial objects, without putting the other Army to great disadvantage?—Of course, I most distinctly admit that no changes of that organic nature could possibly have been made without affecting, more or less, the officers of the British Army; but at the same time I must also ask to have it recorded, that if this had been a solitary instance, solely due to the Indian Army, then it is very just and right to say that one officer shall not pass over the head of another officer by unnecessary acts on the part of the Government of the day. But at the same time I maintain distinctly, for good objects I admit, that the British Government have at various times brought about similar results in the Home Army of England.

185. (*Sir Percy Herbert.*) I submit for the consideration of the Committee, that the admission made by General Balfour, goes pretty nearly to the whole of my case, that arrangements have been made by the Indian Branch of the Imperial Government for their own convenience, and that they have been carried out, no doubt, with great advantage to India; but incidentally a great injury has been done to the Queen's Army in so doing. In no way am I complaining of any amount of liberality that has been shown to the Indian Officers who were not required for the Service; but, in so treating them, the Imperial Government ought to have considered that an injury was not also done, having regard to the relative position of the English Officers. I wish to put two more questions to General Balfour. If the question of first Commissions is to regulate the rule of a man's promotion, will you have the goodness to explain the case of Colonel Ready and Colonel Salmon, who are on one Staff,—Colonel Ready is a Colonel on the Bengal List, and he will be promoted 12 years before Colonel Salmon, Colonel Salmon having entered the Service 12 years before him?—The explanation is very simple. By the decision at home, Colonel Salmon having joined the Staff Corps, the Imperial Government had a right to regulate the rise of those officers in any shape or form they pleased, but Colonel Ready still remaining on the Bengal Infantry List, and not having joined the Staff Corps, retains all the rights which he had under the Indian Government to rise to the rank of Colonel and General, irrespectively of Colonel Salmon, although Colonel Salmon stands above him in the list.

186. You have admitted already that the promotion alluded to is caused by regulations that were made subsequently to the amalgamation?—That is as far as regards Colonel Salmon and the Staff Corps Officers; but the regulations under which Colonel Ready would have risen under the Company still remain in force.

187. (*General Alexander, to Colonel Adye.*) You stated, when commenting upon what General Balfour had said, that in former years there was a very small proportion of superior officers as compared with Captains and subalterns in the Indian Artillery, and you said that that was rectified or adjusted at the time of the amalgamation. Will you be kind enough to show how that irregularity was rectified when the two corps were amalgamated?—I do not pretend to say that it adjusted the former inferiority of the Indian Artillery as to their promotion, but it adjusted it for the future.

188. It appears that there was formerly a relative disadvantage between the two corps, but you went on to say, as I understood you, that when the armies were amalgamated that disadvantage or inequality was rectified?—I did not pretend to say that as to the past it could be rectified. I only said that when the Indian Artillery were amalgamated with the Royal Artillery and were brought into contact with it, any inferiority under which they had suffered as to promotion was immediately rectified.

[The following paper was handed in by Major-General Balfour.]

APPENDIX B.

SUPERSESSION OF BRITISH BY INDIAN OFFICERS.

Copy of Correspondence relating to the Supersession of British Colonels by Officers of the late Indian Army.

No. 1.

Lieut.-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
21st October, 1865.

Sir,

15 Aug., 1865.
31 Aug., 1865.

I am directed by the Field-Marshal Commanding-in-Chief to transmit to you copies of letters, as per margin, and enclosures received from the Commander-in-Chief in India, which as affecting the position of Officers of the British Army in that country very materially, are of so important a nature, that His Royal Highness considers it right they should be submitted for the information and consideration of the Secretary of State for War without delay.

I have, &c.,
(Signed) W. F. Forster.

[Enclosure 1 in No. 1.]

No. 1776.

Head-Quarters, Simla,
15th August, 1865.

Sir,

I have the honour, with much deference, to solicit the attention of His Royal Highness the Field-Marshal Commanding-in-Chief, to some very important considerations affecting the position of the superior officers of Her Majesty's British Forces. Thus, under the operation of the rules of promotion in the several services, the following full Colonels of the British Army now serving in India, viz.:—Colonel T. Williams,* C.B., 4th Foot; Colonel D. Rainier, 98th Foot; Colonel E. A. Holdich, C.B., 20th Foot; Colonel A. C. Errington, 51st Foot; Colonel S. T. Christie, C.B., 80th Foot; Colonel E. Haythorne, 1st Foot, have been superseded in India by the promotion to the rank of General Officer of Colonels in the local service.†

2. It is seen that all the Colonels on the Local Lists in India, of the year 1856, are now promoted to the effective rank of Major-General.

3. According to the averages of promotion in the British Army, the Colonels of 1854 will probably not have been absorbed in the rank of Major-General till the year 1868.

4. The supersession of the Colonels belonging to Her Majesty's British Forces by the Indian local Colonels cannot fail to go on at an accelerated ratio for the following reasons, viz., that the number of Colonels on the British Lists is immeasurably greater than that in the local Indian Lists, in proportion to the number of General Officers respectively borne on the two establishments. Thus the number of Generals of the different degrees is 272, in the British Service; the number of Colonels, by June Army List, is 394; the number of Generals on the Local List is 208; the number of Colonels, by the last Bengal Army List, is 123.

5. It has always been believed that the inequality to which attention has been invited, was in former times forbidden, under the orders of His late Majesty King William IV.

6. For some years the practice obtained of promoting all Officers to the local rank of Major-General in India, who were immediately senior to Officers of the Indian Service, who had been promoted by the Queen's Brevet.

* Appointed Major-General with temporary rank, February 1865.

† Colonel T. Williams has been superseded by all Major-Generals on the Indian List between Sir W. Coghlan and Major-General J. E. Landers,—viz., 13, including Major-Generals Showers, C.B., McLeod, and Troup, C.B., Commanding Divisions.

Colonel Rainier, 98th, by all below Major-General Lang,—viz., 17, including the above-mentioned Officers Commanding Divisions.

Colonel Holdich, 20th, by all below Major-General Showers,—viz., 16, including Major-Generals McLeo and Troup, Commanding Divisions.

Colonel Errington, 51st, by all below Major-General Welchman,—viz., 12.

Colonel Christie, 80th, by all below Major-General Welchman,—viz., 12.

Colonel E. Haythorne, Adjutant-General, by all below Major-General Landers,—viz., 6.

7. In 1854 a new system of promotion was established, the old General Brevet being abolished, After some correspondence, it was ruled by the late Lord Hardinge, when Commanding-in-Chief in England, that, as a consequence of the new system of promotion, the practice above alluded to known under the name of Fane promotion of Major-Generals, should no longer be permitted to exist.

8. Appeals against supersession have from time to time been made by Colonels of the British Service serving in India, which have been set aside under the ruling above quoted.

9. The question might therefore be allowed to rest, but for the fact that lately the Right Honourable the Secretary of State for India has, with regard to all other ranks, declared the very principle on the assertion of which the quondam promotion of Fane Major-Generals rested; and, secondly, the frequent supersession of British Colonels which is now proceeding.

10. Thus it is now seen (*vide* Secretary of State's despatch, D/ 17th June, 1864) that Lieutenant-Colonels, Majors, Captains, and Lieutenants, are promoted in the local Gazettes in India, to put them on a par in India with Officers who obtained rank under the Staff Corps Warrant.

11. This having thus been practically asserted, with Officers of inferior degree, the inquiry is now made by the old Colonels serving in India, whether the like principle should not also be applied in the case of Line Colonels who have been superseded by Major-Generals of the Indian Service.

12. The argument against this is, that the Indian Service is not the only one which presents a separate list of promotion, entailing such effects. Thus it is maintained that the Royal Artillery and Royal Marines being on separate Lists, occasional supersession of the Infantry and Cavalry Colonels takes place with regard to those branches of the Service, and *vice versâ*.

13. It is then argued that, if it be not objected to in those cases, there can be no reason for making an attempt to set aside the inequality in the case of the Indian Officers.

14. In the first place, it may be observed, in answer to this argument, that it was always understood in the Army at large that it had been distinctly stipulated, when the rank of General was granted to the Indian Officers, that the concession should not in any manner prejudice the condition of Officers of like standing belonging to the Royal Army.

15. But, secondly, there is a further reason; the analogy suggested by the Royal Artillery and Royal Marine Services does not stand the test of examination. The Officers of those branches of the Service do not generally come into contact with Cavalry and Infantry Officers.

16. Out of India, the ordinary divisional and brigade commands do not fall to them, whether in war or in time of peace.

17. In India, on the other hand, the Indian Major-Generals, who are now superseding the Colonels of the British Army in considerable numbers, will most assuredly take command of the latter as Generals of Divisions in the several Indian Presidencies, the very result being thus produced, against which, as we know, it was deemed formerly necessary to guard.

18. With respect, then, to the principle adopted for other ranks, I would venture to intimate, for the general consideration of His Royal Highness, that no good reason can be assigned for making exception with regard to the particular rank of Major-General.

19. It has appeared to me, therefore, the subject would seem to be one which may be, with propriety, referred for the consideration of His Royal Highness and of the Right Honourable the Secretaries of State for India and War, with a view to the application of the old rule, by which the local rank of Major-General is given to Officers having the rank of Colonel, who are superseded by the promotion of Officers of the local Armies of Bengal, Madras, and Bombay.

20. Supposing the old rule to be re-established, as above suggested, it would appear necessary, with regard to the Indian Service, on the other hand, that, if that were to occur, which is apparently impossible from the constitution of the lists of the several armies—viz., the case of a Line Colonel being promoted in the ordinary course to the rank of Major-General, who might be junior to an Indian Colonel, the latter should be promoted locally in India to the rank of Major-General, in order to preserve perfect uniformity and equality between the two Services.

21. It is to be remarked that the rank of Major-General being conferred on Indian Officers, not only for India, but for all the world, by the late changes, the state of things to which notice has been attracted is even more serious for the Officers of the British Army than was originally contemplated when the remedy above alluded to was applied.

22. It may perhaps be assumed that, in practice generally, the two sets of Officers would not come into contact, except in India.

23. The experience of the war of 1855-56 does, however, lead us to believe that in any development of the military resources of Great Britain for European war, this contingency would in all probability take place.

24. The argument contained in this letter would be hardly complete were I to omit to draw the attention of His Royal Highness to another general result of the constitution of the lists of Indian Field Officers.

25. Thus, owing to the number of Colonels, Lieutenant-Colonels, and Majors being proportionately less to the General Officers as compared with the like ranks in the British Army List, an Officer in the former, having been promoted to the rank of Field Officer, runs through the several ranks more rapidly than an Officer in the British Service till the rank of General is reached.

26. Officers who became Brevet-Majors in 1858 are now Lieutenant-Colonels in ordinary succession in the Indian Lists.

27. According to the last Royal Annual Army List, it is apparent that there are great numbers of Majors of 1855.

I have, &c.,

(Signed) W. R. Mansfield, General,
Commander-in-Chief in India.

P.S.—I would more especially invite your attention to the very important correspondence which took place on the matter of this letter during the command-in-chief of the late Lord Hill. The letter which more particularly lays down principles and rules is that from his Lordship to the President of the Board of Control, dated March 25th, 1834, in which the relative position of the King's Officers and those of the late Honourable East India Company is discussed in the most masterly manner; subsequent to the writing of that letter took place the correspondence between the late Sir Henry Fane and the Government of India, which resulted in the conferring of the local rank of Major-General on such Officers of the King's Service as had been superseded by those of the Honourable Company. I gather that copies of that correspondence must be in existence in your office, and I therefore abstain from sending copies, unless you should wish me to do so.

(Signed) W. R. Mansfield.

The Military Secretary,
Horse Guards, London, S.W.

[Enclosure 2 in No. 1.]

No. 1985.

Head-Quarters, Simla,
31st August, 1865.

Sir,

I have the honour to forward, for the most respectful submission, to His Royal Highness the Field-Marshal Commanding-in-Chief, letters as per margin, addressed under my orders to the Government of India.

502 & 503 Nos. E D12 July, 1865 From Adjutant-Gen.

The object of these communications is to represent the prejudicial manner in which the interests of the Officers of Her Majesty's British Army have been affected by the changes recently introduced at the instance of the Right Hon. the Secretary of State for India for the benefit of the Officers of the several Staff Corps and of the local Armies.

I believe that I can add but little to what has been set forth at length in the enclosed letters.

But I would submit, with the greatest deference, that the matter concerned is of the utmost importance, generally, to all classes of Her Majesty's British Officers who thus unexpectedly find themselves superseded in the several ranks.

The urgency of the consideration is the more apparent when we reflect on the fact that no considerable operations are likely to occur hereafter without the presence of Indian Officers, as was shown in the Crimea in 1854, 55, and 56, by the Persian War of 1856, by the operations and occupation of China and Japan from 1858 till this very year.

I do not venture to suggest a remedy which would probably have to be determined after the question shall have been thoroughly sifted by such means and enquiry as may commend themselves to His Royal Highness and the Right Honourable the Secretary of State for War; but as the Secretary of State for India clearly cannot go back from what has been done, it would seem that it may be necessary to have recourse to a system of Brevet promotion which shall be good all over the world for fixed terms of service, according to the rules which have been laid down for the Staff Corps. Such a change would not interfere with the system of purchase promotion, while, on the other hand, it would not fail to be most grateful to officers of considerable service, whose means may not admit of purchase, and would put the Officers of the British Service on a reasonable equality with those belonging to India.

I have, &c.

(Signed) W. R. Mansfield, General,
Commander-in-Chief in India.

The Military Secretary,
Horse Guards, London, S.W.

[Enclosure 3 in No. 1.]

From the Adjutant-General to the Secretary to the Government of India, Military Department.

Promotions. No. $\frac{502}{E}$

Head-Quarters, Simla,
12th July, 1865.

Sir,

I have the honour to acknowledge the receipt of your communication, dated the 19th ultimo, No. 211, giving cover to a despatch from the Right Honourable the Secretary of State for India, No. 157, of the 16th May last, which has been duly submitted to the Commander-in-Chief.

In this despatch the Right Honourable the Secretary of State has been pleased to declare, that the promotion of Officers of the Indian Service made under the provisions of par. 69 of his letter, dated 17th June, 1864, No. 194, is to be considered "Army rank," entitling "the Officer "receiving it to share in the advantages of promotion under the former system of general Brevet "promotion, and the system of promotion in succession to casualties amongst General Officers "established in November 1854, and it would follow that the promotions now made carry Army "rank with them, and entitle the Officers promoted to the advantages of further progressive promo-"tion by the Line step."

Sir William Mansfield instructs me to observe that the scope of the rule laid down in the quotation just given, seems to have escaped the notice of the Authorities by whom it was framed and approved. Thus the decision therein contained does, in truth, appear to set aside the provisions of Her Majesty's Royal Warrant of 31st January, 1859. By that Warrant the promotion of the Officers of the Indian Service,—saving those of the Staff Corps (for whom there is a distinct Royal Warrant)—has been hitherto regulated. In this manner the equality of position of the Officers of the British Army, whose promotion continues to be regulated by the Royal Warrant of 14th October, 1858, was preserved with that of the Indian Services. Now, however, owing to the ruling above quoted, the Officers of the British Army will be superseded, to a great and injurious extent, by those of the Indian Services. His Excellency believes it impossible to escape from this practical conclusion, but will be glad to be corrected if he be in error. In illustration of the supersession that will occur, His Excellency will take the case of Officers of the Indian Service promoted to grade of Lieutenant-Colonel under the late order. These Officers, according to the ruling of the Right Honourable the Secretary of State, are, *de facto*, in the position of Brevet-Lieutenant-Colonels, who, except under certain conditions, do not, according to the Royal Warrant, succeed to the rank of Brevet-Colonel; consequently a Brevet Lieutenant-Colonel in a like position in one of Her Majesty's British Regiments remains stationary, while the Indian Lieutenant-Colonel, promoted according to par. 69 of the Secretary of State's Despatch, is to receive such promotion without the necessity of performing the qualifying service, without which no further advancement in the British Army can take place, except as reward of distinguished Field Service. Dated 17th June, 1864.

It is clear, therefore, that in the comparative progress towards the rank of General Officer, the British Brevet Lieutenant-Colonel is at a great disadvantage with the Indian *de facto* Brevet Lieutenant-Colonel.

It is true that the Regulations of the Royal Warrant of 15th June, 1864, provide as follows:—

"The whole of the Officers of Cavalry and Infantry of Her Majesty's Indian Army shall "remain on the Indian General List as before the Warrant of 1st January, 1862, and shall rise on "that List to the rank of General Officer, the establishment of General Officers of the Indian Army "being from time to time reduced in the manner hereafter provided."

But the Commander-in-Chief would desire to point out that the General Officers of the Ordnance and different Staff Corps, are ultimately to be brought on the strength of the British Army.

But further, a most important point has now to be considered. In former times the rank, precedence, and power of command of Indian Officers, were confined to India. They could not supersede Officers of the British Army out of India. Consequently, the gift of local rank to the British Officers in India, to put them on a par with India Officers, was sufficient to secure them in their rights and privileges so far as was required by the necessity of the case.

This, however, seems to be no longer so, and we have what looks anomalous,* viz., that the British Officers are, to a certain extent, secured against supersession in India, but they are not so secured out of India, while, as before mentioned, the Indian Officer is secured all over the world.

This will become more important as times moves on. The Indian Officer who will have been promoted to be a Colonel in India by a Brevet which is good all over the world, will, if cast on service in China, Australia, Europe, or America, with a British Officer, find the latter of a rank inferior to that which he holds, because the British Officer will have enjoyed only local rank in India to put him on a par with Indian Officers in that country, the consequence being that he has not advanced in brevet rank because of the local character of the rank he held in India.

I am to observe, that if it be said in reply, that the two classes of Officers cannot come into collision out of India, a recent experience proves the negative of such a proposition. Thus, it was seen in the Crimea and in Turkey in 1854, 55, 56, that Indian Officers were largely used for the public service; this took place when there was apparently an absolute official bar between the Honourable East India Company's service and that of Her Majesty's. If this was so under the circumstances of those days, what, His Excellency enquires, will take place should England be again engaged in a serious struggle, now that the amalgamation of the Indian and British Armies has become a fact? There cannot be a doubt, His Excellency conceives, that, if demanded by the Service of the country, the Indian Officers would be used freely in high and low situations, and would therefore come into immediate contact with the British Officers, and command, and be commanded by them. It is impossible to conceive any other result from the present arrangements. It is, however, unnecessary to travel beyond the late war in China, and the Indian regiments now returning from the China station, for illustration of what has been suggested.

The point, therefore, to which his Excellency has invited attention is not an imaginary one of Army Lists, but one which affects the Officers of the Army in every rank.

The train of reasoning which has been followed, opens out, in Sir W. Mansfield's opinion, a further large question deserving consideration.

The argument has hitherto been directed to the matter of Lieutenant-Colonels, as affected by a recent ruling of the Right Honourable the Secretary of State, which, it is believed, is not in accordance with the Royal Warrant above alluded to. But we have now, Sir W. Mansfield would observe, to discuss the result apparent from the general working of the regulations affecting Staff Corps promotion, and that of the local Indian Officers, when compared with what has been done for

* *Vide* Despatch of 17th June, 1864, par. 70. The question was lately put by Lieut.-Colonel Martin, Her Majesty's 4th Foot, as to whether the local rank secured to him by par. 70 would count towards the attainment of the rank of Brevet-Colonel. The answer was obvious that the rank being local could carry no such consequence with it. Lieut.-Colonel Martin's question is however an apt illustration of what is advanced in the text, and shows what must be the feeling of the Field Officers of the British Army when they come to understand the bearing of the Indian Regulation on their own relative positions and interests.

the Officers of the British Line Regiments, for the purpose of placing them on a par, as it is supposed, with the former. Thus, the promotion of the Staff Corps and the local Indian Officers is effective, and carries precedence with it, and therefore power of command wherever the holders of it are thrown on service. This is so, whether the gentlemen concerned are Lieutenant-Colonels, Majors, or Captains, and is absolutely demonstrated to be so by the Secretary of State's ruling, which has given rise to this letter, and quoted in paragraph 2.

It is hardly necessary to repeat that the Line Officers who receive their local rank in India, while, as before said, guarded in India, will be superseded in the rest of the world, and this not nominally, but effectually with regard to what has been said above, as illustrated by the case of the Crimea.

Sir W. Mansfield would further point out that the conclusion thus arrived at affects the entire body of Her Majesty's Regular Army.*

His Excellency would therefore most respectfully and deferentially submit for the consideration of the Government of India and of Her Majesty's Government, that the measures recently directed in the reorganization of the Indian Forces have unexpectedly come to interfere with the relative position of the Officers of the British Army at large, a supersession having been involved, to guard against which has ever, His Excellency believes, been the object of the most anxious care of the supreme authorities in England.

As shown before, the device of local rank, which sufficed for former days, seems to fail entirely in the circumstances of the present time, when the privileges appertaining formerly to the Indian Officer in India alone have been guaranteed to him by Her Majesty's Commission and Brevet in the four quarters of the globe.

If, then, the case has been made out, that a supersession of the Officers of the British Army has unexpectedly taken place, and that this is so is shown by the late local Brevet conferred on 148 British Officers in India, there would seem, Sir W. Mansfield ventures to observe, but one remedy. That remedy, his Excellency believes, can only be found in causing the regulations which have been adopted for the benefit of the Indian Service in being made applicable to all branches of Her Majesty's Armies wherever serving, viz.: by Brevet promotion according to provisions of the Staff Warrant, the same being made retrospective to date of institution of Staff Corps.

The Commander-in-Chief further desires me take this opportunity of suggesting that Her Majesty's Government may be moved to embody the resolution which may be ultimately arrived at on this important subject in the form of a Royal Warrant.

Some such measure would seem to his Excellency to be necessary, as it is doubtful whether arrangements which are apparently at variance with existing Royal Promotion Warrants can be legally executed. However this may be, it is obvious that a revision of the Warrants in conjunction with the rules for Staff Corps and other promotion, and the recent despatches of the Right Honourable the Secretary of State, has become a necessity. Sir W. Mansfield would venture to hope that, whenever such revision of the Warrants may take place, their provisions as regards promotion may, as in the Warrants of 14th October, 1858, and 31st January, 1859, be framed upon a principle of uniformity.

I have, &c.,

(Signed) E. Haythorne, Colonel,
Adjutant-General.

[Enclosure 4 in No. 1.]

Examples.

Lieut.-Colonel A. Turner, Staff Corps.—This Officer is a Major in the cadre of his regiment, a Lieut.-Colonel in the Staff Corps, and on the 18th February, 1866, he will become a Colonel, although he has not held a qualifying appointment in the rank of Lieut.-Colonel for one day. This Officer will supersede all Lieut.-Colonels of the British Army of a date prior to 18th February, 1861.

Lieut.-Colonel G. Verner, Staff Corps.—Ditto, ditto, ditto.

Lieut.-Colonel Waterman, a Captain in the cadre of the 13th Native Infantry, and Brevet Lieut.-Colonel of 11th June, 1864. This Officer has superseded many Captains, all the Majors of the British Army, and all Lieut.-Colonels of a date subsequent to 11th June, 1864.

Lieut.-Colonel W. G. Hicks, a Captain in the cadre of the 22nd Native Infantry, Brevet Lieut.-Colonel of 1st September, 1864. This Officer supersedes many Captains, all the Majors, and a number of Lieut.-Colonels of the British Army.

Lieut.-Colonel Duvaal, Major in the cadre of the 34th Native Infantry, and Brevet Lieut.-Colonel of 13th June, 1863, has superseded many Captains, all the Majors and Lieut.-Colonels of a date subsequent to 1st September, 1863.

Brevet-Major F. Duffin, Second Lieutenant in the cadre of the 22nd Native Infantry, has superseded all the Captains in the British Army, and the Majors of a date subsequent to 29th December, 1864.

* Sir Wm. Mansfield is assured, by a reference to Hart's last Annual Army List, that under the operations of the rules referred to, about this time next year, the supersession of Officers of the British Army will involve not less than 82 Lieut.-Colonels, 50 Majors, 223 Captains, which supersession will take effect in the Field when the Officers of both services are serving together out of India. It is further observed, that unless the British Army be augmented, the supersession will gradually increase every year, more particularly in the Ordnance Corps and non-purchase Regiments of the Line.

An Appendix, conveying illustration of the statement made in this note, is annexed.—See Enclosure 4.

Lieut.-Colonel W. Q. Pogson is a Captain in the cadre of the 43rd Native Infantry, has superseded many Captains, all the Majors and Lieut.-Colonels of a date subsequent to 12th December, 1864, in the British Army.

Lieut.-Colonel W. C. Watson is a Captain in the cadre of the 47th Native Infantry, has superseded many Captains, all the Majors and Lieut.-Colonels of a date subsequent to 24th February, 1865, in the British Army.

[Enclosure 5 in No. 1.]

From the Adjutant-General to the Secretary to the Government of India, Military Department.

Promotions. No. $\frac{503}{E}$

Head-Quarters, Simla,
12th July, 1865.

Sir,

In returning the enclosures of your docket, No. 54, dated the 24th ultimo, I am directed by the Commander-in-Chief to state, for the information of Government, that the question raised by the Madras Government seems to have been clearly settled by the decision of the Right Honourable the Secretary of State for India, in his despatch, No. 157, of 11th May last, to the address of the Governor-General.

2. Sir William Mansfield, however, concurs with the late Commander-in-Chief of the Madras Army in thinking that if the mere rank of Lieutenant-Colonel for five years is sufficient to qualify an Officer of the Indian Service for promotion to Colonel, the latter rank will be attainable upon a principle differing greatly from the rules which regulate promotion to that grade in the British Service.

His Excellency's further opinions on this subject are contained in a letter, dated 12th instant, No. $\frac{502}{E}$, which I have been directed to submit for the consideration of the Government.

I have, &c.,
(Signed) E. Haythorne, Colonel,
Adjutant-General.

No. 2.

The Marquis of Hartington to the Military Secretary, India Office.

7641/209.

War Office,
13th December, 1865.

Sir,

I am directed by Earl de Grey and Ripon to transmit to you, for the consideration of the Secretary of State for India in Council, the enclosed correspondence, received from the Field-Marshal Commanding-in-Chief, representing the manner in which the position of the Officers of the Regular Army has been injuriously affected by the system of promotion which has been introduced in the several Staff Corps and local Indian Armies, and to request you will move Sir Charles Wood to favour Lord de Grey with his views thereon.

See No. 1 and 5 Enclosures.

I have, &c.,
(Signed) Hartington.

No. 3.

Lieut.-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
22nd January, 1867.

Sir,

I am directed by the Field-Marshal Commanding-in-Chief to forward you a copy of letter, of the 6th October last, from the Commander-in-Chief in India, submitting a duplicate of his despatch dated 15th August, 1865, on the subject of the supersession of Officers of Her Majesty's British Forces by those of the Indian Armies.

The papers referred to, together with a copy of his Excellency's subsequent despatch of the 31st of the same month, were forwarded to you, for submission to the Secretary of State for War, with my letter dated 21st October, 1865; and as Sir William Mansfield has again brought the subject forward, I am to request you will be so good as to move General Peel to favour His Royal Highness with his opinion on the same.

I have, &c.,
(Signed) W. F. Forster.

[Enclosure in No. 3.]

No. 6451.

Head-Quarters, Simla,
6th October, 1866.

Sir,

Fearing that my letter of the 15th August, 1865, on the subject of the supersession which the senior Officers of Her Majesty's British Forces are suffering by the more rapid promotion of the Officers of the Indian Armies, may have miscarried, I now do myself the honor to forward a duplicate thereof, and to request you to have the goodness to submit the same for the gracious consideration of His Royal Highness the Field-Marshal Commanding-in-Chief, as the evil alluded to in that letter is at present on the increase.

No. 1776. See Enclosure 1 in No. 1.

The Colonels of 1857, of the Local Army of India, have now been very nearly absorbed by promotion to the rank of Major-General.

I have, &c.,
(Signed) W. R. Mansfield, General,
Commander-in-Chief in India.

The Military Secretary,
Horse Guards, London, S.W.

No. 4.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

7641/222.

War Office,
25th January, 1867.

Sir,

With reference to your letter of the 22nd instant, on the subject of the promotions in the several Staff Corps and Local Indian Armies, and the effect thereof on the position of officers of the Regular Army serving in India; I am directed by Secretary Lieutenant-General Peel to request you will state to the Field-Marshal Commanding-in-Chief, that the former correspondence on this subject was duly sent to the India Office, for the opinion of the Secretary of State for India in Council, to which, however, no answer has yet been received. A reminder has therefore been sent to that Department this day, with a view to an early reply, and which, when received, together with Lieutenant-General Peel's opinion thereon, will be immediately sent to you.

I have, &c.,
(Signed) Edward Lugard.

No. 5.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, India Office.

7641/222.

War Office,
25th January, 1867.

Sir,

I am directed by Secretary Lieutenant-General Peel to call your attention to the letter from this Department dated 13th December, 1865, covering a correspondence relative to the promotion of Officers of the several Staff Corps and Local Indian Armies, and to the effect of such promotion on the position of Officers of the Regular Army serving in India, to which no answer has yet been received; and as the same subject has now been again brought to the notice of the Secretary of State for War, by His Royal Highness the Field-Marshal Commanding-in-Chief, I am to request you will move Lord Cranborne to favour General Peel with his opinion thereon as early as convenient, with a view to a reply being given to His Royal Highness for notification to the Commander-in-Chief in India.

I have, &c.,
(Signed) Edward Lugard.

No. 6.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 320 $\frac{66}{W}$

India Office, S.W.,
26th January, 1867.

Sir,

Lord Hartington's letter of the 13th December, 1865, No. 7641/209, having been recently under the consideration of the Secretary of State in Council, I have been instructed

to request you will inform Lieutenant-General Peel, that the question raised in the correspondence forwarded therewith, appears to be one for the consideration of the authorities at the War Office and the Horse Guards.

I have &c.,

(Signed) T. T. Pears, Major-General
Military Secretary.

No. 7.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

7641/228.

War Office,
28th February, 1867.

Sir,

With further reference to your letter of the 22nd ultimo, and previous correspondence, on the subject of the supersession of Officers of the Regular Army by Officers of the late Indian Army; I am directed by Secretary Lieutenant-General Peel to return herewith the enclosures to your letter of the 21st October, 1865, and to request you will move His Royal Highness the Field-Marshal Commanding-in-Chief to favour the Lieutenant-General with an expression of his opinion on each of the several points adverted to therein, with a view to assist him in deciding on the best means of remedying the injustice complained of.

I have, &c.,

(Signed) Edward Lugard.

No. 8.

Lieut.-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
19th March, 1867.

Sir,

The Field-Marshal Commanding-in-Chief has directed me to acknowledge the receipt of your letter of the 28th ultimo, requesting to be furnished, for the Secretary of State's information, with an expression of His Royal Highness's opinion on the subject of the supersession of Officers of the Regular Army by those of the Indian Service, which has been brought to notice by the Commander-in-Chief in India.

In reply, I am desired to state that the question is one of extreme difficulty, and though it is the case, as represented by Sir William Mansfield, that the Colonels of the British Army are experiencing supersession by the promotion of Indian Colonels junior to them as such, the remedy proposed by his Excellency, viz., that of reverting to the old system of Fane Brevets, and of having recourse to that of General Brevets made applicable to all branches of Her Majesty's Armies wherever serving, based on the provisions of the Staff Corps Warrant, would prove so extremely inconvenient and produce so much embarrassment and confusion that His Royal Highness considers it would be most inexpedient to attempt to readjust the inequalities brought to notice by the adoption of such remedial measures.

It must be remembered, His Royal Highness observes, that the present state of promotion in the Indian Army is quite exceptional and abnormal, brought about by various causes, chiefly, however, by the retirement of a large number of senior officers under exceptional circumstances, and by the formation of the Staff Corps on the reorganization of the Indian Armies. By those retirements, which affected the grade of Colonel more than the Generals, the number of the former rank was much reduced, and their proportion to the establishment of General Officers became considerably less than that which previously obtained and which exists in the British Army.

But, as has been remarked, this decrease of Colonels was quite exceptional, and will not go on; on the contrary, since Sir W. Mansfield wrote on the subject, their numbers have largely increased, and every day the due proportion of Colonels and other grades of Field Officers in relation to the Indian Establishment of Generals is more nearly approximating, and will, before very long, be completely re-established.

His Royal Highness would further draw attention to the fact, that though the promotion of the Indian Colonels to be Major-Generals, has been of late more rapid than in the British

Army, no practical hardship is entailed thereby on the latter, for whatever may be the difference of the rate of promotion in the two Services, no interference in the relative number of Divisional and Brigade Commands is permitted, the same proportion being reserved for each Service under all circumstances in time of peace, and in time of war selection is made of the most eligible and competent Officers.

In this view, and considering also that in the British Army supersession among the Officers is constantly occurring and cannot be avoided, His Royal Highness is unable to recommend the adoption of any scheme for the readjustment of the relative rank of the two Services, which His Royal Highness believes will soon rectify itself, and without any exceptional interference, which he objects to as unnecessary in his opinion, and extremely inconvenient and embarrassing.

If the Secretary of State concurs in these views, His Royal Highness proposes to forward a copy of this letter to India, for Sir William Mansfield's information.

I have, &c.,
(Signed) W. F. Forster.

No. 9.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 1161 $\frac{190}{W}$.

India Office, S.W.,
30th March, 1867.

Sir,

I am directed by the Secretary of State for India in Council, with reference to the second and four following clauses of the Royal Warrant of the 15th June, 1864 (Cir. No. 867), to request you will bring to the notice of the Secretary of State for War that the promotion of Colonel Sir H. M. Durand, K.C.S.I., of the Royal (late Bengal) Engineers, to the rank of Major-General was notified in the London Gazette of 29th instant.

2. As Sir H. M. Durand is the last of the Officers of the late Indian Engineers who had attained the rank of Colonel previously to the 18th of February, 1861, the time has arrived for making the arrangements provided for in the clauses of the Warrant above referred to.

3. The establishment of Officers allotted, according to the Royal Warrant, to the Indian Engineers, will be as follows:—

Generals	2
Lieutenant-Generals	4
Major-Generals	6
Total	12

4. The Officers of Engineers of the three Presidencies at present holding the above grades, are as follows:—

General.

Sir John Cheape, G.C.B.	Bengal ..	6th December, 1866.

Lieutenant-General.

Edward Garstin	Bengal ..	21st December, 1865.

Major-General.

Henry Goodwyn	Bengal ..	26th June, 1860.
Sir Robert Napier, K.C.B.	Bengal ..	15th Feb. 1861.
Walter Scott	Bombay ..	5th Sept. „
Sir Arthur Cotton, K.C.S.I.	Madras ..	14th April, 1862.
William Barclay Goodfellow	Bombay ..	6th „ 1863.
William Erskine Baker..	Bengal ..	2nd Aug. 1865.
Henry Blois Turner	Bombay ..	21st March, 1867.
Sir Henry Marion Durand, C.B., K.C.S.I.	Bengal ..	11th „ „

5. The two Officers of the rank of Colonel first for promotion to the rank of General Officer, are—

Edward Lawford	Madras ..	18th February, 1861.
Charles William Tremenhere, C.B. ..	Bombay ..	18th „ „

6. I am to request that the necessary steps may be taken for making the promotions to complete the establishment of General Officers in the several grades, and for placing the whole of the Officers of Indian Engineers, including General Officers, on the General List of the British Army as provided for in clause 5 of the above Warrant.

7. I am directed to add that the Government of India will be instructed to carry out the provisions of the Warrant as regards the removal of the names of these Officers from the General List of the Indian Army, and the reduction of the number of General Officers on that list to the number laid down in clause 6 of the above Warrant.

I have, &c.
(Signed) T. T. Pears, Major-General,
Military Secretary.

No. 10.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

7641/232.

War Office,
Sir, 3rd April, 1867.

With reference to your letter of the 19th ultimo, on the subject of the supersession of Officers of the Regular Army by Officers of the Indian Army, I am directed by Secretary Sir John Pakington to request you will state to the Field-Marshal Commanding-in-Chief that he concurs in the views expressed by His Royal Highness in this question, and in the proposed communication to Sir William Mansfield.

I have, &c.,
(Signed) Edward Lugard.

No. 11.

Lieutenant-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

7641/233.

War Office,
Sir, 15th April, 1867.

I am directed by Sir John Pakington to transmit to you, for submission to the Field-Marshal Commanding-in-Chief, the enclosed letter from Major-General Pears, on the subject of certain promotions required to complete the Establishment of General Officers of Engineers, and for placing the whole of the Officers of Indian Engineers (including General Officers) on the General List of the British Army, as provided by the Royal Warrant of 15th June, 1864; and to request you will move His Royal Highness to favour Sir J Pakington with any observations he may be pleased to offer thereon. Dated 30th March, 186 See No. 9.

I am at the same time to suggest that the proposed promotions, if correct, may be carried out in the usual manner.

I have, &c.
(Signed) Edward Lugard.

No. 12.

Lieut.-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
Sir, 30th April, 1867.

I am directed by the Field-Marshal Commanding-in-Chief to acknowledge the receipt of your letter of the 15th instant, forwarding a copy of a communication, of the 30th ultimo, from the India Office, on the subject of completing the establishment of General Officers of Engineers, and of placing the whole of the Officers of Indian Engineers (including General Officers) on the general list of the British Army, as provided by the Royal Warrant of 15th June, 1864.

In reply I am desired by His Royal Highness to state, for Sir John Pakington's information, that the course suggested by the Secretary of State for India is in accordance with the

terms and conditions of the Warrant referred to, and that the proposed promotions will be at once carried into effect.

I have &c.,
(Signed) W. F. Forster.

No. 13.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, India Office.

7611/234.

War Office,
Sir, 23rd May, 1867.

With reference to your letter of the 30th March, 1867, on the subject of completing the establishment of General Officers of Engineers, and of placing the whole of the Officers of Indian Engineers (including General Officers) on the general list of the British Army, as provided by the Royal Warrant of 15th June, 1864. I am directed by Secretary Sir John Pakington, to request you will state to the Secretary of State for India in Council, that the Commander-in-Chief has signified that the course suggested in your letter has been carried out.

I have, &c.,
(Signed) Edward Lugard.

No. 14.

Major-General T. T. Pears, C.B., to the Under-Secretary of State for War.

No. 2582 $\frac{390}{W}$.

India Office, S.W.,
Sir, 24th April, 1868.

I am directed by the Secretary of State for India in Council to request that you will bring to the notice of the Secretary of State for War that the promotion of Colonel J. K. Whistler, of the Royal (Madras) Artillery, to the rank of Major-General, appeared in the London Gazette of the 17th instant.

2. As Major-General Whistler is the last of the Officers of the late Indian Artillery, who had attained the rank of Colonel previous to 18th February, 1861, it will be necessary to make the arrangements provided for in the Regulations attached to the Royal Warrant of 15th June, 1864.

3. The establishment of General Officers, allotted by the Warrant to the Indian Artillery, is as follows:—

Generals	5
Lieut.-Generals	8
Major-Generals	13
	26

4. The Officers of Artillery of the three Presidencies, at present holding the above grades are:—

Generals, 6.

E. M. G. Showers	Madras ..	4th March, 1858.
G. Swiney	Bengal ..	15th May, 1859.
Sir G. Pollock, G.C.B., G.C.S.I. ..	Bengal ..	17th „ „
Sir A. Lindsay, K.C.B.	Bengal ..	11th Sept. „
J. G. Griffith	Bombay ..	17th „ 1866.
Sir P. Montgomerie, K.C.B. ..	Madras ..	1st March, 1867.

Lieut.-Generals, 4.

F. Schuter	Bombay ..	17th Sept. 1860.
G. Conran..	Madras ..	24th Jan. 1865.
Sir G. Brooke, K.C.B.	Bengal ..	19th June, 1866.
F. F. Whinyates	Madras ..	14th July, 1867.

Major-Generals, 24.

J. Alexander, C.B.	.. Bengal	.. 18th May,	1856.
J. J. Lane, C.B.	.. Bengal	.. 8th June	„
E. Huthwaite, C.B. ..	.. Bengal	.. 14th May,	1857.

J. W. Croggan	.. Madras	.. 12th June,	„
J. Abbott	.. Bengal	.. 19th „	„
F. Turner, C.B.	.. Bengal	.. 18th Jan.	1867.
Sir H. Tombs, K.C.B., V.C.	.. Bengal	.. 11th March,	„
H. W. Trevelyan, C.B. ..	.. Bombay	.. 25th „	„
J. Brind, C.B.	.. Bengal	.. 1st June,	„
R. R. Kinleside	.. Bengal	.. 14th July,	„
A. Huyshe	.. Bengal	.. 31st Oct.	„
J. K. Whistler	.. Madras	.. 6th March,	1868.

5. The total number of these Officers (34) being in excess of the Establishment laid down in the Regulations, it will be necessary, as vacancies occur, to effect the necessary reduction, in the manner provided for in clause 3, but the number in the particular grade of Lieut.-General being less by four than the number allowed, the four senior Major-Generals will be at once promoted to that grade.

6. I am directed to request that the necessary measures may be taken for making the promotions above-named, and for placing the whole of the Officers of the Indian Artillery on the general List of the British Army, as provided for in Clause 5 of the Regulations.

7. Agreeably to Clause 6 of the Regulations, the present establishment of General Officers for the Indian Armies (197) will be reduced by 24, and it will remain at the number of 173 until the contingency provided for in Clause 10 shall occur.

8. It appears desirable that the present opportunity should be taken to revise the relative number of the different grades of General Officers of the Indian Establishment. The former Establishment of the Indian Army (220), as fixed by the Warrant of 31st January, 1859, was divided into—

25 Generals,
50 Lieut.-Generals,
145 Major-Generals.

Taking these numbers as a basis, Sir Stafford Northcote proposes to divide the present Establishment of 173 into—

20 Generals,
40 Lieut.-Generals,
113 Major-Generals.

9. Should Sir John Pakington see no objection to this arrangement, the necessary promotions amongst the Indian Officers will be made in the usual way, so soon as the removal of the Artillery Officers from the List has been notified.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

No. 15.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

20, Gen. No., 755.

War Office,
30th May, 1868.

Sir,

I AM directed by Secretary Sir J. Pakington, to transmit to you, for submission to the Field-Marshal Commanding-in-Chief, the accompanying letter from the Military Secretary to the Secretary of State for India in Council, setting forth the arrangements which have now become necessary for carrying out certain provisions of the Indian Amalgamation Warrant of 15th June, 1864, Cir. No. 867, and to request you will move His Royal Highness to favour Sir J. Pakington with any observations he may be pleased to offer thereon.

Dated 24th April, 1868. See No. 14.

I am at the same time to suggest that the proposed promotion,* *if correct*, may be carried out in the usual manner.

*4 Maj.-Generals to be Lieut.Generals.

I have, &c.,
(Signed) EDWARD LUGARD.

No. 16.

Lieut.-General W. H. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
19th June, 1868.

Sir,

HAVING laid before the Field-Marshal Commanding-in-Chief your letter of the 30th ultimo, I am directed to acquaint you that the arrangements proposed in the India Office letter of the 24th April, for the transfer from the Indian General List to a separate list of the Officers of the late Indian Artilleries, and the completion of the list of Indian Generals consequent on the promotion of Colonel Whistler, Royal (late Madras) Artillery, to be Major-General, appear to be in accordance with the provisions of the Royal Warrant of the 15th of June, 1864, and His Royal Highness concurs in them accordingly.

His Royal Highness further desires me to express his concurrence in Sir Stafford Northcote's proposal to divide the Indian Establishment of General Officers as follows, viz. :—

20 Generals,
40 Lieutenant-Generals,
113 Major-Generals.

Whilst concurring in these arrangements, the Duke of Cambridge desires me, however, to suggest that in view to a consideration of the question as affecting the British Army, the promotions and transfers may be deferred for a short time longer.

On looking into the effect of these arrangements in their relation to the British Army, His Royal Highness has not failed to be struck with the great advantage the Officers of the Indian Army have derived from them in comparison with the British, for on comparing the dates of Commission of the two Services respectively, His Royal Highness finds that the Commission as Colonel, of the junior Officer of the Indian Army about to be promoted to the rank of Major-General, bears date 10th June, 1862, whilst in the British Army there are still Colonels of 1854 yet unpromoted. No less than 230 Colonels of the British Army will thus be superseded, and for some time to come, this supersession will continue to the great injury of the Officers of the British Service.

His Royal Highness is aware that the promotion now accruing to the Indian List is the result of the measures which were deliberately determined on and provided for in the Royal Warrant of the 15th June, 1864 ; he cannot at the same time but reflect however that the immediate effects of those measures are very detrimental to the interests of the Officers of the British Service.

After giving much consideration to the subject, His Royal Highness has arrived at the opinion that it would be very desirable to adopt some measure which would, at the same time, give an impetus to the promotion of the British Officers, and lessen the disadvantages at which they stand with reference to those of the Indian Service ; and if Sir John Pakington should concur with him in this opinion, His Royal Highness would gladly discuss the subject with him before the promotions about to take place on the Indian List are Gazetted.

I have &c.,
(Signed) W. F. FORSTER.

No. 17.

Lieutenant-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
Sir, 9th July, 1868.

In continuation of my letter of the 19th ultimo, and with reference to the discussion on the subject at the War Office Meeting of the 30th idem, I am now directed by the Field-Marshal Commanding-in-Chief to offer the following remarks on the supersession which the Colonels of the British Army are suffering by the very rapid promotion to Major-General of Officers of the Indian Service.

The question that presents itself is what measures can be adopted to mitigate or alleviate the evil.

The only absolute remedy would be to make the rank of all Generals on the Indian List local until such time as they would fall in at their proper date on the British List, that is, when the Colonel of next senior date on the British List, became a Major-General the local rank held by the Indian Officer should become Army rank; and that Major-Generals or Colonels of Her Majesty's British Army appointed to commands in India should have local rank in that country, placing them in their proper relative positions with the Generals of the Indian Army.

This, however, would be a retrograde measure, and one so much in disaccordance with what has already been established by Royal Warrant, that His Royal Highness conceives it would be objectionable to entertain it.

To meet a great question of this nature it does not appear possible, whilst maintaining the interests and rights conferred on the Officers of the Indian Army by Royal Warrant, to ensure those of the British Army without at the same time introducing changes involving considerable expenditure.

It will be remembered that eventually the British Establishment of General Officers will be augmented by about 90 more or less, the Indian List being concurrently reduced.

This augmentation of the British Establishment will commence in about three or three and a-half years time, *i.e.*, when Colonel Salmon, the senior Colonel on the British Amalgamated List would, had he remained on the Indian List, be promoted to Major-General, and will go on, as each Indian Officer on the Amalgamated List would in like manner be promoted on the Indian List.

It is suggested whether that period might not be anticipated, and the British establishment of Generals at once be augmented to its future complement by the immediate promotion of 90 British Colonels to be Major-Generals.

This would involve an immediate annual expenditure of about 40,000*l.* If this be considered too large an immediate expenditure, the proposed promotions might be made to extend over a certain number of years, say, by adding 12 additional Generals to the British Establishment annually, until the whole number (90) are promoted.

Should either of these schemes be entertained, the interests of the Officers of the Royal Artillery and Royal Engineers might be maintained, as far as possible, by placing each Officer of those lists on his promotion to Major-General in the exact place among the Major-Generals of the Line which he held relatively with them as Colonel, *i.e.*, by antedating his Commission.

It is not pretended that these measures would obviate supersession. This could only be effected by at once promoting the whole of the 221 Colonels referred to in my letter of 19th ultimo, but it would at the least alleviate it and give an impetus to the British List which would compensate in some measure for the unequal rate at which the Indian Officers have been advanced.

I have, &c.,
(Signed) W. F. Forster.

No. 18.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, India Office.

20, Gen. No., 756.

War Office,
Sir, 16th July, 1868.

With reference to your letter of the 24th April last, on the subject of the arrangments for the promotion of certain General Officers, and for placing the whole of the Officers of the

late Indian Artillery on the General List of the British Army, as provided for in Clause 5 of the Regulations of 15th June, 1864 ; I am directed by Secretary Sir John Pakington to request you will state to the Secretary of State for India, in Council, that this question having been discussed at a War Office meeting, at which the Field-Marshal Commanding-in-Chief was present, and attention having been drawn to the supersession of Colonels of the British Army by the promotion of Colonels of the Indian Army to the rank of Major-General, it was decided that this subject should be considered by a Committee consisting of one Officer from the Horse Guards, one from this Department, and one from the India Office ; and I am to request you will move Sir Stafford Northcote to acquaint me with the name of the Officer whom he may select to serve on this Committee.

Major Marvin has been nominated as the member for this Department. The name of the Officer from the Horse Guards has not yet been notified.

I have, &c.,

No. 19.

Lieut.-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

20, Gen. No., 756.

War Office,
Sir, 16th July, 1868.

WITH reference to the discussion at the War Office meeting, held on the 30th ult., relative to the supersession of Colonels of the British Army by Colonels late of the Indian Army, and the decision "that the question should be considered by a Committee to be "appointed from the offices concerned": I am directed by Secretary Sir John Pakington to request you will move the Field-Marshal Commanding-in-Chief to acquaint me with the name of the Officer whom he may be pleased to select to represent the Horse Guards.

The Secretary of State for India, in Council, has been requested to name a member from his Department ; and Major Marvin has been nominated as the member from this Office.

I have, &c.,
(Signed) EDWARD LUGARD.

No. 20.

Lieutenant-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,
Sir, 17th July, 1868.

I AM directed by His Royal Highness the Field-Marshal Commanding-in-Chief to acknowledge the receipt of your letter of the 16th instant, relative to the appointment of a Committee to consider the question of the supersession of Colonels of the British Army by Colonels late of the Indian Army, and to request you will inform the Secretary of State for War that His Royal Highness has selected Colonel C. R. Egerton, Deputy Adjutant-General, to represent this Department as a Member of the Committee in question.

I have, &c.
(Signed) W. F. FORSTER.

No. 21.

Lieutenant-General Sir E. Lugard, G.C.B., to the Military Secretary, India Office.

20, Gen. No., 758.

War Office,
Sir, 1st August, 1868.

WITH reference to my letter of the 16th ultimo, I am directed by Secretary Sir John Pakington, to request you will move the Secretary of State for India in Council, to favour him, as early as convenient, with the name of the Officer who is to represent the India Office on the Committee which is to consider the question of the Supersession of Colonels of the British Army by Officers of the late Indian Army.

Colonel C. R. Egerton, Deputy Adjutant-General, has been nominated by the Horse Guards to represent that Department.

I have, &c.
(Signed) Edward Lugard.

No. 22.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 4406 $\frac{707}{W}$.

India Office, S.W.,
Sir, 7th August, 1868.

I am directed by the Secretary of State for India in Council to acknowledge the receipt of your letters of the 16th ultimo and 1st instant, respecting the measures to be adopted for the purpose of carrying out the provisions of the Royal Warrant of the 15th of June, 1864, with reference to the transfer of the whole of the Royal (late Indian) Artillery Officers to the General List of the British Army.

2. In regard to the proposition that a Committee should be appointed to consider the general question of the supersession of Colonels of the British Army, by the promotion of Colonels of the Indian Army to the rank of Major-General, I am desired to state that Sir Stafford Northcote has no objection to such a course being adopted, and that he has appointed Mr. G. E. Cochrane, late Assistant Military Secretary in this office, to represent the India Office on that Committee.

3. I am, however, directed to add that, in Sir Stafford Northcote's opinion, it is very undesirable that a different mode of procedure should be followed with reference to the officers of Royal Artillery, from that which was taken last year, in the case of the Royal Engineers, on the occurrence of a similar contingency, and under the same clauses of the Royal Warrant. I am, therefore, desired to urge that the course suggested in the letter from this office, dated the 24th of April last, should be followed, without waiting for the report of the Committee which is about to be appointed.

I have, &c.,
(Signed) J. Pattison Thom, Assistant,
Military Department.

No. 23.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Military Secretary, India Office.

20, Gen. No., 759.

War Office,
Sir, 10th August, 1868.

With reference to your letter of 7th instant, I am directed by Sir John Pakington to acquaint you, for the information of Sir S. Northcote, that the first meeting of the Committee on the general question of the Supersession of Colonels of the British Army by Colonels of the late Indian Army, will take place at this Office, on Wednesday the 12th instant, at 12 o'clock, when Mr. Cochrane's attendance will be required.

I am to add that the question raised in the 3rd paragraph of your letter relating to the Artillery Officers, has been referred for the consideration of His Royal Highness the Field-Marshal Commanding-in-Chief.

I have, &c.
(Signed) H. K. Storks.

No. 24.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Military Secretary, Horse Guards.

20, Gen. No., 759.

War Office,
10th August, 1868.

Sir,

With reference to your letter of 17th ultimo, I am directed by Secretary Sir John Pakington to request you will state to the Field-Marshal Commanding-in-Chief, that Mr. Cochrane, late Assistant Military Secretary, has been nominated to represent the India Office on the Committee, which is to consider and report on the general question of the supersession of Colonels of the British Army by Colonels of the late Indian Army.

The Committee will meet at this Office on Wednesday next the 12th instant at 12 o'clock, when Colonel Egerton's attendance is requested.

Dated 7th Aug., 1868. See No. 22

I am at the same time to call your attention to the proposition in the 3rd paragraph of the enclosed letter from the India Office, and to request you will move His Royal Highness to favour Sir John Pakington with his opinion thereon.

I have, &c.,
(Signed) H. K. Storks.

P.S.—It is requested that the enclosure may be returned.

No. 25.

Colonel C. R. Egerton, Deputy Adjutant-General, Horse Guards, to the Under Secretary of State for War.

War Office,
5th January, 1869.

Sir,

I have the honour to forward for submission to the Secretary of State for War the Report of the Committee appointed by Sir John Pakington, to consider the question of the supersession of the Colonels of Her Majesty's Army by the Colonels of the late Indian Forces.

I have, &c.,
(Signed) C. R. Egerton, D.A.G.,
President.

[Enclosure in No. 25.]

Report of the Committee apointed to enquire into the question of the Supersession of British Colonels by Colonels of Her Majesty's Indian Army, dated War Office, 5th January, 1869.—[See Parliamentary Paper No. 283, Session 1869, for copy of this report.]

No. 26.

His Royal Highness the Field-Marshal Commanding-in-Chief to the Right Hon. the Secretary of State for War.

Horse Guards,
5th March, 1869.

Sir,

I herewith forward for your information three letters from the officers named in the margin,* representing the supersession to which they are being subjected by the promotion of Colonels of the Indian Army to be Major-Generals who are very considerably their juniors.

As this supersession has now been going on for a long period, and will be of constant future occurrence, it appears to me to be a question of the greatest importance as affecting the

* Colonel de Salis, C.B., 28th January, 1869; Colonel Sir E. H. Greathed, K.C.B., 3rd March 1869; Colonel H. J. Warre, C.B., Half-Pay 57th Foot, 3rd March, 1869. [See Parliamentary Paper No. 202, of Session 1869, for copies of these letters.]

interests of the whole body of officers of the British Army, and I consider it one which merits your attentive consideration.

You are aware that a Committee was assembled some months since for the purpose of considering this subject, and that their Report on the same was submitted at the beginning of January.

I am, Sir,
Yours,
(Signed) GEORGE.

No. 27.

Lieutenant-General Sir E. Lugard, G.C.B., to the Military Secretary, India Office.

20, Gen. No., 808.

War Office,
24th March, 1869.

I AM directed by Mr. Secretary Cardwell to request you will state to the Secretary of State for India in Council that great complaints have been, and are continually, made of the supersession of officers in the British Establishment by the more rapid promotion given to officers on the Indian List under the provisions of the Warrant of 15th January, 1864; and that it appears to Mr. Cardwell that it would mitigate, though not remove, the cause of grievance to which this supersession gives rise, if each Colonel on the British Establishment, when promoted to the rank of Major-General, were restored to his relative place, and took his position on the General List according to his seniority as Colonel, the same course being adopted by means of ante-dates in the case of the present General Officers whose Commissions as Colonels bear date on, or after, the 28th November, 1854.

Mr. Cardwell trusts that the Duke of Argyll will agree with him that this partial measure of justice ought to be conceded to the officers on the List of the British Establishment.

I have, &c.,
(Signed) EDWARD LUGARD.

No. 28.

The Military Secretary, India Office, to the Under Secretary of State for War.

India Office, S.W.
Sir, 27th March, 1869.

I AM directed by the Secretary of State for India in Council, to request, with reference to your letter of the 24th instant, that I may be informed of the date from which it is proposed to give effect to the arrangement therein submitted, in view to mitigate the grievance to Officers of the British Establishment, caused by their supersession by Officers of the Indian List, consequent upon the more rapid promotion of the latter under the provisions of the Warrant of 15th June, 1864.

I have, &c.,
(Signed) J. PATTISON THOM,
For the Military Secretary.

No. 29.

Lieutenant-General Sir Edward Lugard, G.C.B., to the Military Secretary, India Office.

20, Gen. No., 814.

War Office,
Sir, 9th April, 1869.

I AM directed by the Secretary of State for War to acknowledge the receipt of your letter of the 27th ultimo, and to state in reply that the arrangement proposed in my letter of the 24th March is to apply to all Officers whose Colonelcies bear date on or after the 28th November, 1854.

I am at the same time to request, with further reference to my letter of the 24th March, that you will state to the Secretary of State for India in Council that, as regards the Officers who have attained the rank of Major-General, Mr. Cardwell recognizes the proposed concession as an act of complete justice to the Officers on the British Establishment; but that, as regards the time during which a superseded Officer continues in the rank of Colonel, the grievance still remains unredressed, and this is the more important portion of the case.

Mr. Cardwell feels that it will be of little use for him to apply to the Lords Commissioners of Her Majesty's Treasury, to sanction any expense for the relief of the Colonels, and, indeed, he does not feel disposed to do so, since the grievance has arisen entirely from changes in the Indian Establishment, over which the Treasury had no control, and in respect to which that Department was not consulted; but he feels that he may appeal with confidence to the Secretary of State for India and his Council to assist in adopting such arrangements as may remove from the Colonels the sense of injustice under which they at present labour. With this view Mr. Cardwell would propose for their consideration, and he trusts for their concurrence, that the provisions of the Royal Warrant of 15th June, 1864, may be reconsidered unless any other way occurs to the Duke of Argyll for remedying the grievance complained of.

I have, &c.,
(Signed) EDWARD LUGARD.

No. 30.

His Royal Highness the Field-Marshal Commanding-in-Chief to the Secretary of State for War.

Horse Guards,
Sir, 10th April, 1869.

REFERRING to my letter of the 5th ult., I think it my duty again to bring to your notice the extensive supersession of Officers of the British Service by those of the Indian Army which is taking place, and which is daily becoming a more serious and grievous question.

My attention has been more immediately drawn to the subject by the promotion of Colonel H. W. Norman, C.B., a very distinguished Officer of the Indian Army, whose advancement to the rank of Major-General is now being submitted to Her Majesty, with a view to its appearance in an early Gazette.

This Officer, a Colonel of 1863, was in the year 1857 a subaltern, and actually serving as such with and under Officers of the British Army, who were at that time Lieut.-Colonels of many years standing, and who are yet far from the rank of Major-General.

I may instance among others the case of Colonel Sir Edward Greathed, K.C.B. In 1857, this Officer, a Lieut.-Colonel of 1854, and a Colonel of 1858, was Commanding a Brigade in the Field, to which Colonel Norman, a subaltern at that time, was attached.

I should be inclined to suggest the suspension of any further promotion of Colonels of the Indian Army, until the question in regard to those of the British Service had been decided on, were it not that I should be adverse from proposing any step tending to deprive Officers of the Indian Army of that which they have been guaranteed by Royal Warrant.

Still the injurious effects of this supersession cannot in my opinion be over-estimated, and I desire to express my earnest hope that the recommendations of the Committee presided over by Colonel Egerton, as compensating in some degree for the supersession to which the Colonels of the British Army are being subjected, may be sanctioned and carried into effect.

I am, Sir,
Yours,
(Signed) GEORGE.

No. 31.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 2019 $\frac{366}{W}$.

India Office, S.W.,
Sir, 16th April, 1869.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 24th ultimo, stating that great complaints have been, and are continually,

made of the supersession of Officers on the British Establishment by the more rapid promotion given to Officers on the Indian List under the provisions of the Warrant of 15th June, 1864, and that Mr. Cardwell proposes, with a view to mitigate the grievance to which the supersession gives rise, that each Colonel on the British Establishment, when promoted to the rank of Major-General, should be restored to his relative place, and take his position on the General List according to his seniority as Colonel, the same course being adopted, by means of an ante-date, in the case of the present General Officers whose Commissions as Colonel bear date on or after the 28th November, 1854.

2. In reply, I am desired to request you will bring to the notice of the Secretary of State for War that, in compliance with a suggestion contained in your letter of the 16th July last, a gentleman was nominated by the Secretary of State for India in Council as a member of a Committee assembled to consider the question of supersession complained of, and I am to request that His Grace may be informed of the result of that enquiry, and favoured with a copy of the report, if such shall have been yet submitted. At the same time I am to state that the Duke of Argyll has no objection to offer to the measure which Mr. Cardwell proposes at once to adop with a view to mitigating the grievance.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

No. 32.

The Secretary of State for War to His Royal Highness the Field-Marshal Commanding-in-Chief.

20, Gen. No., 821.

War Office,
17th April, 1869.

Sir,

I have the honour to acknowledge the receipt of your Royal Highness's letter of the 10th instant, on the subject of the supersession of Officers of the British Establishment by Officers of the Indian Establishment, and to state in reply that I am in communication with the Secretary of State for India in Council, with a view to the relief of the British Officers so far as may be possible, from the injury of which they complain.

I have, &c.,
(Signed) Edward Cardwell.

No. 33.

Lieutenant-General Sir E. Lugard, G.C.B., to the Military Secretary, India Office.

Gen. No., 824.

War Office,
20th April, 1869.

Sir,

I am directed by Mr. Secretary Cardwell to acknowledge the receipt of your letter of the 16th instant, on the subject of the supersession of Colonels of the British Establishment by Colonels on the Indian List; and to transmit to you, for submission to the Secretary of State for India in Council, a copy of the Report of the Committee appointed in July last to consider the question of the supersession complained of.*

I have, &c.,
(Signed) Edward Lugard.

No. 34.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 2575 $\frac{492}{W}$.

India Office, S.W.,
18th May, 1869.

Sir,

1. I am directed by the Secretary of State for India in Council to acknowledge the

* See Parliamentary Paper No. 283, of Session 1869.

receipt of your letters of the 9th and 20th ultimo, upon the question of the supersession of British Colonels by those of the Indian Army, and forwarding a copy of the Report of the Committee appointed to enquire into the subject.

2. It appears that the Secretary of State for War recognizes, as regards the Officers who have attained the rank of Major-General, the concession proposed by him, and concurred in by the Duke of Argyll, in my communication of the 16th ultimo, as an act of complete justice to the Officers of the British Establishment, but that as regards the time during which a superseded Officer continues in the rank of Colonel, the grievance still remains unredressed, and that this is the more important portion of the case; and further, with reference, it is assumed, to the recommendation of the Committee upon the question, that an immediate addition of 45 be made to the number of Major-Generals on the British Establishment, as a partial amelioration of the present condition of the Colonels of that Service, that Mr. Cardwell feels it will be of little use to apply to the Lords of Her Majesty's Treasury to sanction any expense for the relief of those Colonels; but appeals to the Secretary of State for India in Council to assist in adopting such arrangements as may remove from the Colonels the sense of injustice under which they at present labor, and that with this view he would propose for their consideration and concurrence that the provisions of the Royal Warrant of 15th June, 1864, may be reconsidered, unless any other way occurs to the Duke of Argyll of remedying the grievance complained of.

Par. 39 of the Report.

3. In reply, I am instructed to observe, with reference to the assumption that the supersession in question is due to the operation of the provisions of the Warrant of June 1864, that such is the case only in a very partial degree, as it appears from the Report of the before-named Committee that the promotion of the Indian Colonels has been accelerated mainly by the operation of the Royal Warrant of 1854, and by the Amalgamation of the Forces in 1860-61; particularly by the special annuities offered in the latter year by the Secretary of State for India, of which many of the Senior Officers of the Indian Armies availed themselves, while the comprehensive system of retiring full-pay pensions in force in the Indian Service, which has yearly relieved the Indian List of many of the Senior Officers, and thus cleared the way for the succession of their juniors to the rank of General Officer further tends to give that Service an advantage in this respect.

Pars. 12 & 14.

4. Moreover, as likewise pointed out by the Committee, the disadvantage at which the Colonels of the British Service are placed would appear to be due, in a great degree, to the establishment of General Officers for that force having to provide for the Officers upon the half-pay list, as well as those upon full pay.

Par. 51.

5. Under these circumstances I am instructed to state that the Duke of Argyll can perceive no sufficient reason for altering the Warrant of June 1864, or for any interference with the system which has ben deliberately established for regulating the promotion of the Officers of the Indian Army.

6. I am to observe, however, that the supersession by Indian of British Colonels, now complained of, is an evil of a temporary character, and one particularly bearing upon those Officers only of Her Majesty's British Army who are serving in India, it having been already agreed, as stated in paragraph 70 of the despatch of the Secretary of State to the Government of India, No. 194, dated 17th June, 1864, and which despatch forwarded the Warrant in question, that special measures would be adopted, when necessary, for meeting any similar inconvenience during service out of India.

7. With respect to the Officers serving in India, therefore, the only remedy that occurs to the Duke of Argyll will be found in the adoption of a course similar in principle to that which was, with the same object, introduced in India in 1837, and continued in force for some years in that country, viz., the promotion to the local rank of Major-General of those Colonels of Her Majesty's British Army serving in India, who are senior as such to Colonels of Her Majesty's Indian Army who may from time to time be promoted to the rank of Major-General.

8. In accordance with the practice observed under similar circumstances in 1837, the British Officers so promoted may be considered eligible to reside in India so long as their Regiments remain upon the Indian Establishment and their names are borne upon the Regimental List; also to hold those brigade commands which they would have held had their Promotion not taken place.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

No. 35.

Lieutenant-General Sir E. Lugard, G.C.B., to the Military Secretary, Horse Guards.

20, Gen. No., 836.

War Office,
1st June, 1869.

Sir,

With reference to Mr. Secretary Cardwell's letter of 17th April, 1869, addressed to the Field-Marshal Commanding-in-Chief, on the subject of the supersession of Officers of the British Service by Officers of the Indian Army, I am directed to transmit to you, for submission to His Royal Highness, the enclosed copy of a letter from the India Office, and to call attention to the last two paragraphs thereof containing the measures proposed by the Duke of Argyll for remedying the grievance complained of as regards the Colonels serving in India. 8 May, 1869. No. 2575 $\frac{49}{W}$.

I have, &c.,
(Signed) Edward Lugard.

No. 36.

Lieutenant-General Sir E. Lugard, G.C.B., to the Under Secretary of State for India.

20, Gen. No., 836.

War Office,
7th June, 1869.

Sir,

Having laid before the Secretary of State for War your letter of the 18th ultimo, 2575 $\frac{492}{W}$, upon the subject of the supersession of British Colonels by those of the Indian Army, I am instructed to acquaint you, for the information of the Secretary of State for India in Council, that after full consideration of the measures proposed by the Duke of Argyll, it does not appear to Mr. Cardwell that they will adequately meet the grievances of which the Colonels on the British establishment now complain, and he trusts therefore that the subject may receive His Grace's reconsideration.

I have, &c.,
(Signed) Edward Lugard.

No. 37.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 2924 $\frac{564}{W}$.

India Office,
9th June, 1869.

Sir,

I am directed by the Secretary of State for India in Council to acknowledge the receipt, of your letter of the 7th instant, in which it is stated, with reference to my letter No. 2575 $\frac{490}{W}$, of the 18th ultimo, that after a full consideration of the measures proposed by the Duke of Argyll, it does not appear to Mr. Cardwell that they will adequately meet the grievances of which the Colonels on the British Establishment now complain, and he trusts therefore that the subject may receive His Grace's reconsideration. Query No. 2575 $\frac{49}{W}$

2. In reply, I am directed to point out that the measures which have been proposed with a view to remedying, as far as possible, the supersession complained of are those suggested by the late Committee in the 42nd and three following paragraphs of their Report, 3rd January last. The third measure proposed by the same Committee, that of making an immediate addition of 45 Major-Generals to the Imperial List has, it is understood, been objected to by Mr. Cardwell on account of the expense. Query 5th Jan., 18

3. The Duke of Argyll can only further suggest, that in the event of the Secretary of State for War sanctioning the course proposed in my letter of the 18th ultimo, that is, reverting to the system in force in India from 1837 to 1854, and extending to the grade of Major-General the principle of conferring local rank in India, now applicable only to the lower grades, the authorities in India might be instructed to adopt such measures, either in the distribution of their divisional commands, or in the relief and disposition of regiments, as should obviate the inconvenience and embarrassment that might arise from local Major-Generals commanding British regiments being placed under Divisional Commanders of the Indian Service junior to them as Colonels.

4. With these additional precautions the Duke of Argyll would hope that the measures already proposed would be sufficient to meet, in a very great degree, that which is after all but a temporary embarrassment, and would satisfy the not unreasonable complaints of the senior Colonels of Her Majesty's British Service.

5. At the same time I am to observe, that so long as separate lists of General Officers exist, inequalities in their several rates of promotion will be, as they ever have been, inevitable and complaints of supersession will assuredly arise from one or the other.

6. The unprecedented extent of the inequality in the present case, due mainly to the number of Colonels who retired from the Indian Army in 1861, has doubtless given occasion for an unusual display of feeling on the subject: but this circumstance does not, unfortunately, render the application of a complete remedy less difficult than it would have been, had the superior run of promotion shown itself in a less marked degree, or on the other side, a consideration of the prospective operation of the Warrant of 15th June, 1864, will show that the present rate of promotion among the Colonels of the Indian Army will receive a great and permanent check in about three years hence, when the four last clauses of that Warrant will come into operation, the first 50 Colonels (39 being Staff Corps Officers), who will then stand at the head of the Indian List for promotion, all ranking as Colonel from one and the same day.

7. In conclusion, I am instructed to request the attention of Mr. Cardwell to the accompanying copy of a letter from Lord Hill to the India Board, dated 7th May, 1840, upon the subject of the practice then in force of conferring the local rank of Major-General on Officers of Her Majesty's British Forces serving in India.

8. The Duke of Argyll would hope that the course which was adopted at that time, with a view to meeting a precisely similar inconvenience to that now complained of, and which continued in operation for several years, will be found equally efficacious in removing the complaints arising from the present inequality in the rate of promotion in the two lists of Colonels.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

[Enclosure in No. 37.]

Horse Guards,
7th May, 1840.

Sir,

Having stated in my letter of the 11th ultimo that, although the printed paper therein transmitted has been received only through a private channel, yet that as no misapprehension may hereafter arise in regard to the subject of it, Lord Hill was desirous that the earliest opportunity should be taken to call the attention of the Court of Directors to the matter. I have now the honour to enclose the copy of a despatch from the Commander-in-Chief in India, containing his official notification of that General Order issued by the Supreme Government of India, by which rules are laid down for the future employment of local Major-Generals of Her Majesty's Army, and for the payment of Officers of that rank, when no eligible command can be found for them, and as there are two principal points in which these Regulations appear to Lord Hill to bear with unusual hardship upon Her Majesty's Officers, and which His Lordship is satisfied the Court of Directors will at once see are wholly at variance with the construction which he had put upon your letter, dated 14th September, I have His Lordship's commands to request that the attention of the Court of Directors may be especially called to them, as it should seem from the enclosed letter of Sir Jasper Nicolls, the authorities in India have taken a different view of the matter under discussion.

In the copy of a despatch from the Court of Directors to the Governor-General, dated 11th September, it is stated: "1st. We forward to you the copy of a letter from Lieutenant-General Lord "Fitzroy Somerset, dated 5th instant, and of its enclosures, bringing to our notice that the arrange- "ments agreed upon and authorized for the promotion and employment of Her Majesty's Lieutenant- "Colonels serving in India, who are senior as such to our Officers promoted to be Colonels and "Major-Generals, have not been correctly understood.

"It will be apparent on referring to our letters of the dates noted in the margin,* that those "Officers of Her Majesty's Service, who have been promoted to be local Major-Generals, are "eligible to be appointed to Brigade Commands in divisions, whether their regiments may be serving "in those divisions or not, provided always that no interference be permitted with the commands on "the General Staff allotted to the Major-Generals, or Brigadier-Generals and Brigadiers of the "Queen's and the Company's Forces respectively."

"2nd. In our letter of the 28th January, 1835, we stated that, if it shall be found impracticable "to make either of the arrangements then suggested for the employment of Officers of Her Majesty's "Service, who might be senior in a division to an Officer appointed to the command of that "division, it would be indispensably necessary that the Officers so situated should be called upon to

* 28th January, 1835, Pars. 1 & 9; 19th December, 1837, Par. 8.

" consider of the course they would have to take, and they must have the option of retiring from " the country, as they would do, if promoted to be Major-Generals on a General Brevet, and not " appointed to serve on the Staff.

" We have now to apprise you that local Major-Generals so situated may continue to reside in " India unemployed, like Major-Generals in our service, receiving the pay and batta of their regimental " rank, but with the understanding that the Brigade Commands, usually allotted to the Queen's " service, shall be given to the Queen's Officers available for them at each Presidency according to " seniority."

The intentions of the Court of Directors are so distinctly expressed in the foregoing paragraphs, especially in the second, wherein the employment of Officers of Her Majesty's service, who might be senior in a division, is alluded to and provided against, that it is to be regretted any deviation has been made from them in India, and the more so as the explanation contained in the letter from Sir Jasper Nicolls does not, in Lord Hill's opinion, contain any sufficient reason for such departure from the strict letter of those instructions.

In any comparison drawn between the condition of the local Major-Generals of the Queen's Army and the Major-Generals of the Company's Army in India, it must not be lost sight of that the former hold their rank only during their temporary service in India, while the rank of the latter is permanent, and that the period of service of the Queen's local Major-Generals in India depends altogether upon the regiments to which they respectively belong remaining in that country, and not in any manner upon themselves, and consequently to limit the duration of their Staff Command in the manner stated in the General Order, must press with undue severity upon the individual Officers so employed.

With a view of showing the precise points of difference more distinctly, the General Order issued in India is here placed in juxtaposition with the observations which Lord Hill is anxious should be brought before the Court of Directors for their attentive consideration.

General Order.	*Remarks of Lord Hill.*
1st. That local Major-Generals of Her Majesty's Service are eligible under the appointment of Government for employment as Brigadiers where Queen's troops are stationed, provided that such appointment will not interfere with the commands on the General Staff allotted to Company's Officers.	1st. This paragraph appears to be in conformity with the despatch of the Court of Directors.
2nd. That the senior local Major-Generals (of the regiments at each Presidency) are in preference to be so employed.	2nd. As also this.
3rd. That the Brigadiers' term of serving shall be limited, as in the case of Major-Generals, to five years, and half the number of years which any Officer may have served prior to the promulgation of this order in command of a brigade, including any temporary command of a division, shall be deducted from that term.	3rd. The remarks upon this will be included in those made upon paragraphs 5 and 6, which contain the main objections now under discussion.
4th. That local Major-Generals of Her Majesty's service who prefer remaining in India, in expectation of succeeding by seniority to Brigade Command, may do so, selecting their residences within the Presidencies in which their regiments are serving, and receiving the pay and full batta of their regimental rank.	4th. This resolves itself also under the paragraph 6, the observations upon which explain the case to which this regulation is applicable.
5th. That local Major-Generals of Her Majesty's service must hereafter be held to be ineligible to retain the command of their respective regiments, and must vacate their Brigade Commands on the departure of their regiments from India, or from one Presidency to another.	5th. This paragraph appears to differ most essentially from the despatch of the Court of Directors, as is fully explained in the remarks upon paragraph 6.
6th. That local Major-Generals of Her Majesty's Service, who have served five years as Brigadiers, are not without special sanction to remain in India in receipt of full batta, although the regiments to which they belong may still continue on the Indian Establishment.	6th. The effect of this paragraph combined with 3, 4, and 5, must be to set aside a Lieutenant-Colonel in the Queen's Army holding the local rank of Major-General, and to preclude him altogether under the circumstances stated from any military employment whatever, and appears to Lord Hill to be wholly at variance with the despatch of the Court of Directors. It is admitted that a local Major-General must quit whatever command he may have in India when his regiment returns to Europe, or is removed from one Presidency to another, as stated in paragraph 5, and also that he can only be appointed to such Brigade Commands as his seniority may permit, according to the full intent and meaning
7th. That these rules shall have effect from the date of this General Order.	

of the Court of Directors' instructions, but it is the opinion of Lord Hill that, when no such separate command shall be entrusted to him, he must in such case, as of necessity, resume his place with his regiment.

The only exception that can justly be admitted to this regulation must arise from the circumstance of his local rank interfering with the rank of a Company's Officer commanding on the Staff of the brigade or division in which his regiment may be serving, in which event it will be at the option of the Queen's Officer to continue to serve with his regiment under such company's Officer, or to select his residence within the Presidency in which his regiment is serving and receiving the full pay and batta of his regimental rank, as distinctly stated in paragraph 4.

That the Court of Directors may have more clearly before them the injurious effects which have already resulted to the interest of the Queen's Officers from this deviation from the obvious meaning of their despatch, it is only necessary to state what, while no Officer of the Queen's Service complains of having been displaced to make room for seniors, who have arrived in the country at different periods subsequently to his appointment to command, it is considered and felt as a very great hardship, that a local Major-General, a Lieutenant-Colonel in the Queen's Army, should be cut off from falling back on his own Regiment, and declared to be ineligible to exercise the command of it when he was actually the junior Major-General, either of the Queen's or Company's Service, so that his returning and doing duty with his Corps could not by any possibility have interfered with any of the Company's Officers, while it operated so injuriously to the individual as the senior Lieutenant-Colonel of a Regiment, as in addition to the extreme mortification of such exclusion, his proper emoluments were reduced to little more than one half.

In every point of view therefore which Lord Hill can take of this matter, it appears to his lordship but a fair measure of justice to all parties interested that the question should be at once put to rest, and that this can best be done by a special direction to the proper authority in India, to adhere to the instructions contained in the despatch from the Court of Directors, and which Lord Hill had considered to be a satisfactory and final adjustment of the differences upon this important subject.

I have, &c.,

W. Clay, Esq., M.P., &c., &c., &c.

No. 38.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Military Secretary, Horse Guards.

20, Gen. No., 839.

War Office,

Sir, 12th June, 1869.

With further reference to the correspondence on the question of the supersession of British Colonels by those of the Indian Army, I am directed by the Secretary of State for War to transmit to you the accompanying copy of a letter from the India Office, with its enclosure, and to request that you will move the Field-Marshal Commanding-in-Chief to favour Mr. Cardwell with an early expression of His Royal Highness's opinion on the probable effect of the proposal contained in these communications.

Dated 9th June, 1869, see No. 37 and enclosure.

I have, &c.,

(Signed) H. K. Storks.

P.S.—The return of the enclosure, dated 7th May, 1840, is requested.

No. 39.

Lieut.-General W. F. Forster, K.H., to the Under Secretary of State for War.

Horse Guards,

Sir, 17th June, 1869.

I am directed by the Field-Marshal Commanding-in-Chief to acknowledge the receipt of

your letters of the 1st and 12th instant respectively, and their enclosures, regarding the question of the supersession of Colonels of the British Army by those of the Indian Service, and in reply, to offer the following remarks for the consideration of the Secretary of State for War.

The Duke of Cambridge understands from the correspondence which has passed on the subject, between Mr. Secretary Cardwell and the Secretary of State for India in Council, that it is proposed, in order to mitigate as far as possible the grievous supersession under which the Officers of the British Army are suffering; first, that the dates of the commissions of all the present Major-Generals of the British Army, whose Colonelcies bear date on or after the 28th November, 1854, should be so altered as to place them in the same relative position with the General Officers of the Indian Army as they held with such Officers in the rank of Colonel, and that a similar rule should be adopted in the case of Colonels of the British Army hereafter promoted to the superior grade. Second, that on the promotion to the rank of Major-General of a Colonel of Her Majesty's Indian Army, who may be junior as Colonel to any Colonel of the British Army actually serving in India, the latter should have the local rank of Major-General, with corresponding date. Such British Officers being considered eligible to serve in India so long as their Regiments remain upon the Indian Establishment, and their names are borne upon the Regimental List.

After a full consideration of the probable effect of these proposals, His Royal Highness is of opinion that they do not adequately meet the supersession complained of, though locally in India the effect of the second proposal would mitigate it to some extent.

His Royal Highness desires me to point out that the circumstances under which, in 1837, the system of the so-called "Fane" Brevets was introduced, differ very materially from those of the present day, and however completely that system adapted itself at that time, it would fail to do so now.

In 1837, and in 1840, when Lord Hill wrote on the subject, the rank of the Officers of the Indian Army held good only in India and east of the Cape of Good Hope, whereas, now such rank is permanent, and extends to every portion of the globe. Consequently, supersession which was formerly only a local and temporary evil, has now become a permanent grievance and injustice. Further, the number of Regiments and Officers of the British Army, serving in India at the present time, is greatly in excess of what it was in former years, and the inconvenience and embarrassments arising out of the system of local Major-Generals would be proportionately greater.

On looking into the number of Regimental Officers of the British Army who would be promoted to be local Major-Generals, it is found that the supersession of Colonels of the British Army has extended in so unprecedented a manner that it would be impossible to make such arrangements as would provide against the majority of them being compelled, either to serve under their juniors of the Indian Service, or to lead idle lives away from their Regiments, on leave in India, or in this country. It would be with the greatest reluctance therefore that the Field-Marshal Commanding-in-Chief would concur in a measure which would involve such anomalous and, in his opinion, highly objectionable consequences.

His Royal Highness is aware that he lately gave his support to the recommendations of the Committe presided over by Colonel Egerton, of which the introduction of the "Fane" system, in a modified degree was one; but His Royal Highness had not then estimated the full extent of the measure, and feels that he could now only concur in it as a last resort.

Further, as regards the first of these proposals, the Duke of Cambridge has ascertained that the complete rectification of the dates of the commissions of all the Major-Generals whose Colonelcies bear date on or after the 28th November, 1854, could not be carried into effect without compromising the interests of the Officers of the Ordnance Corps, the position of several of whom, in relation to each other, and to General Officers of the Line, would be seriously affected.

His Royal Highness would propose, therefore, that the rectification of dates of Commission should apply only to such Officers as have been or may be promoted to be Major-Generals on or after the 6th March, 1868, the date on which the 6th clause of the Warrant of June, 1864, came into effect. Thus all those Major-Generals of the British Army who have been promoted since that date would be antedated to the 6th March, 1868; and all Colonels of the British List who may hereafter be promoted, until the period contemplated in the 10th clause of the Warrant arrives, would receive such dates to their Commissions as Major-Generals as will place them in their proper position relatively with the Indian Officers, according to their dates as Colonels.

The Duke of Cambridge again reverts to the proposal of the Committee that, as a partial amelioration of the present condition of the Colonels of the British Service, an immediate addition of 45 to the number of Major-Generals on the Establishment may be made, and

having regard to all the circumstances which gave rise to the question of supersession, His Royal Highness trusts that the proposal may yet receive favourable consideration.

It has been pointed out by Colonel Egerton's Committee, and admitted by the Secretary of State for India in Council, in the third paragraph of Major-General Pears' letter of the 18th May, that the promotion of the Indian Colonels has been accelerated by several exceptional causes, viz., by the operation of the Royal Warrant of 1854, which, in placing the Indian on the same footing as the British Army, gave the former a very largely increased Establishment of General Officers, by the amalgamation of the Forces in 1860 and 1861, and particularly by the special annuities offered in the latter year by the Secretary of State for India, of which many of the senior Officers of the Indian Armies availed themselves; and further, that the comprehensive system of retiring full-pay pension, in force in the Indian Service, has yearly relieved the Indian List of many of the senior Officers, and thus cleared a way for the succession of their juniors to the rank of General Officer.

Thus it will be seen that, from 1854 to the present day, the Indian Army has benefited by special measures, in the advantages of which the British Army have not participated, and whilst the interests of the former have been maintained by special legislation, that very legislation has had in its results a most material and disadvantageous influence on the prospects and interests of the British Service.

It should not be overlooked that by the cancelment of the Warrant of 1st January, 1862, and the substitution for it of that of 1864, the Officers of the British Army have actually been deprived of the promotion and prospects which the former Warrant held out to them, and that, had it still been in force, no less than 24 Colonels of the British Army would now be Major-Generals, instead of an equal number of Indian Officers who have been promoted to that rank since 6th March, 1868.

Looking to all these circumstances, and to the fact that the measures which it has been considered expedient to adopt in favour of the Indian Army, and which the Field-Marshal Commanding-in-Chief feels cannot now be undone, have necessarily had an inverse and prejudicial effect on the interests of the British Army, His Royal Highness cannot think it unreasonable to ask that the Indian Government be invited to aid in a measure partially restoring the relative position of the two Services, and His Royal Highness earnestly trusts, that recognizing the fact, that the disadvantages under which the Officers of the British Army are labouring, are mainly due to the exceptional advantages which have been conferred on the Indian Army, the Secretary of State for India in Council will feel that the temporary additional expense, which would be caused by the immediate promotion of 45 Colonels to be Major-Generals may justly and legitimately be charged to the revenues of India.

I have, &c.,
(Signed) W. F. Forster.

P. S.—The Horse Guards' letter, dated 7th May, 1840, is herewith returned as requested.

No. 40.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Military Secretary, India Office.

20, Gen. No., 844.

War Office,
5th July, 1869.

Sir,

I am directed by Mr. Secretary Cardwell to transmit to you, for submission to the Secretary of State for India in Council, the enclosed copy of a letter from the Horse Guards, dated 17th ultimo, containing the views of His Royal Highness the Field-Marshal Commanding-in-Chief, on the question of the supersession of Colonels of the British Army by Colonels of the late Indian Army.

I have &c.
(Signed) H. K. Storks.

No. 41.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 3355$\frac{647}{W}$.

India Office, S.W.
6th July, 1869.

Sir,

1. I am directed by the Secretary of State for India in Council, to acknowledge the receipt of Sir H. Storks' letter of the 5th instant, transmitting copy of a letter from the Horse

Guards, dated 17th June, containing the views of His Royal Highness the Field-Marshal Commanding-in-Chief, on the question of the supersession of Colonels of the British Army by Colonels of the late Indian Army.

2. From this letter the Duke of Argyll regrets to learn, that after full consideration of the probable effect of the proposals referred to in my letter of the 9th ultimo, His Royal Highness is of opinion that they do not adequately meet the supersession complained of, though locally in India the effect of the second proposal would mitigate it to some extent.

3. His Royal Highness however observes, with reference to this point, that the circumstances under which, in 1837, the system of the so-called "Fane" Brevets was introduced, differ very materially from those of the present day; that in 1837 and 1840, when Lord Hill wrote on the subject, the rank of the Officers of the Indian Army held good only in India and east of the Cape of Good Hope, whereas, now, such rank is permanent, and extends to every portion of the globe; consequently, supersession which was formerly only a local and temporary evil, has now become a permanent grievance and injustice; that the number of regiments and Officers of the British Army serving in India at the present time, is greatly in excess of what it was in former years, and the inconvenience and embarrassment arising out of the system of local Major-Generals would be proportionably greater. His Royal Highness also expresses great reluctance to the adoption of a measure which would involve, in his opinion, anomalous and highly objectionable consequences.

4. Further, as regards the first of these proposals, His Royal Highness has ascertained, that the complete rectification of the dates of the Commissions of all the Major-Generals, whose Colonelcies bear date on or after the 28th November, 1854, could not be carried into effect without compromising the interests of the Officers of the Ordnance Corps; the position of several of whom, in relation to each other, and to General Officers of the Line, would be seriously affected.

5. His Royal Highness proposes, therefore, that the rectification of dates of Commissions should apply only to such officers as have been, or may be promoted to be Major-Generals, on or after the 6th March, 1868, the date on which the 6th Clause of the Warrant of June 1864, came into effect.

6. Adverting to the report of the Committee lately assembled for the consideration of the question, his Royal Highness urges the immediate addition of 45 to the number of Major-Generals on the Establishment, and suggests, for certain reasons given, that the cost of such addition might without impropriety be charged to Indian Revenues.

7. The Duke of Argyll has instructed me to state with reference to the above, that he has no objection to offer to the substition of the 6th March, 1868, as the date from which the rectification of the date of rank of the Major-Generals in the two services shall be made, in lieu of the 28th November, 1854, as first proposed.

8. With regard to the objection offered by His Royal Highness to the adoption as a temporary arrangement, of the system known as the "Fane" Major-General system, and which was proposed by the Commander-in-Chief in India, and sanctioned by Lord Hill in 1837, with a view to meeting a similar difficulty, I am to observe, that, considered with the first measure proposed on this occasion, *i. e.*, the rectification of dates of rank of the Major-Generals themselves, and the circumstances of the present time, the embarrassment to be apprehended from the adoption of such a system is likely to be of a much more temporary character now than then.

9. Under present circumstances the two independent lines of promotion will to all practical purposes soon cease to exist, and although it is quite true that at present there are a larger number of British regiments serving in India than then, on the other hand, there are fewer active Commands to which the Officers, whose rapid advance to the grade of Major-General is complained of, are eligible for appointment (and to these, Officers of the old Indian, now Royal Artillery and Engineers, are eligible), and less chance therefore of a Colonel of Her Majesty's British Service being brought into a position, subordinate to a Major-General of the Indian Establishment, junior to himself as Colonel.

10. The Duke of Argyll is not at all disposed to under-estimate the importance of the subject to the Officers of Her Majesty's Service more immediately concerned in the question, but he wishes to point out to Mr. Cardwell the peculiar circumstances under which the difficulty has arisen, and its temporary character, with a view of showing the impediments that offer themselves to a complete remedy, and the inexpediency of adopting any grave measure likely to be attended with permanent effects or serious expenditure of public money, in order to meet an embarrassment which will disappear under present regulations in the course of few years.

11. It appears that Her Majesty's Government having determined in 1861 upon the amalgamation of the two services,—the British and Indian,—one of the first measures to be

considered was that of bringing the Officers of the two Services on to one list for general Army promotion.

12. It was solely with this view that the Royal Warrant of the 1st January, 1862, was framed, according to the terms of which all Colonels of either Army, who attained that rank prior to the 17th February, 1861, should be continued on separate lists as before, while all Officers of either Army, who should have attained that rank on or after the 17th February, 1861, were to be placed at once, according to the dates of their Commissions as Colonels, on one general list, from which, so soon as the separate lists of Colonels were exhausted, promotion should be made according to seniority in succession to all vacancies in the establishments of General Officers, whether of the British or the Indian Service. It will be in the recollection of Mr. Cardwell that great objection was raised by the Officers of the Indian Army to this, and to certain other measures connected with the amalgamation, as being opposed to the spirit of the Parliamentary Guarantee contained in the 56th Clause of the Act 21 and 22 Vic., cap. 106, and that in consequence of the action taken by the House of Commons, a Royal Commission was appointed under the presidency of Lord Cranworth to consider and report upon these complaints.

13. The opinion of the Commission upon this particular question will be found in the 76th and four following paragraphs of their Report of the 9th November, 1863, in which they contrast the absolute chance of promotion enjoyed by the Indian Colonels before and after the amalgamation, but with no reference to the relative chances of the two services, and inasmuch as they would have to be losers by the measure, they felt bound to express their opinion that "in this respect the "parliamentary assurance had not been fulfilled."

14. The consequence of this Report was that a revised Warrant was published, dated the 15th June, 1864, being framed on the principle of reserving to all Indian Officers, who had not elected to join the Staff Corps, the privilege of rising to the higher ranks of the Army on the former system, and giving to all Officers of the Staff Corps, who had already, before the amalgamation, attained to the rank of Lieutenant-Colonel (thus rendering their advance to that of Colonel secure in a given time), the privilege of rising on the Indian list, until at a certain prospective date they should be transferred to the amalgamated list.

15. It has already been pointed out that a measure not connected with the amalgamation of the Armies, but arising out of the necessity of reducing the number of effective Officers of the Indian Army, viz., that of offering in 1861 special retiring pensions to a limited number of the Senior Officers, has tended greatly to accelerate the promotion of Indian Officers to the rank of Major-General, and has been the main cause of the supersession now complained of; and Mr. Cardwell will observe that while the revision of the Warrant of January 1862 was inevitable, the adoption of that of 1864 has had very little to do with the rapid promotion among the Indian Colonels, and that the same complaint would have arisen had neither the one Warrant nor the other been published, and the two services remained as before the amalgamation, an important difference being that as matters now stand the evil is temporary, whereas then it would have been long continued.

16. There are thirty-one Colonels of the Indian Service remaining to be promoted on the separate list. The thirty-second on the list has already, with all Staff Corps Colonels below him, been placed on the General List of the British Army, and will be promoted on that list according to the date of his Colonel's Commission.

17. It may be reasonably expected that this event will occur in about three years from the present time, and thenceforward under the 10th Clause of the Warrant of 1864, the list of Indian Major-Generals will be steadily reduced as vacancies occur, and the British List will be augmented, Officers of the British Service, in the first instance, deriving the whole benefit from such augmentation.

18. It would thus appear that the very large number of Officers superseded, composed as it is to a great extent of Officers retired on full or half pay,* and of those of the Ordnance Corps who rise to the higher ranks on separate lists, will ere long begin to decrease and continue to do so until the two services are completely amalgamated, and no such thing as supersession among Colonels will be any longer possible.

19. I am to observe also that the establishment of General Officers on the Indian List has recently been reduced from 220 to 173.

20. Adverting to the proposal already made, it appears to the Duke of Argyll that the

* Artillery 38
Engineers 20
Marines 1
Half-pay unattached, or Retired Full-pay 152
Full-pay 63

Total 274

first would only require to be slightly amended to meet the views now expressed by His Royal Highness the Field-Marshal Commanding-in-Chief, and will stand thus, the second proposal being expressed so as to apply to both services in all parts of the world.

1. That from and after a date to be fixed the commissions of Major-Generals of the British Establishment shall be antedated so that the Major-Generals of the British and Indian services shall stand in the order of the dates of their respective commissions as Colonel.

2. That when British and Indian Officers, the senior being of the rank of Colonel, and the junior in rank as Colonel having become a Major-General, shall serve in India or meet elsewhere upon service, the local rank of Major-General shall be given to the Officer whose commission as Colonel is of the earliest date. But this position shall not prevent the employment in special cases of junior Officers in whatever position may be most advisable for the public service; and further,—

3. That every endeavour will be made by the authorities in India in the distribution of the divisional commands, and in the relief and disposition of regiments, to obviate, as far as possible, the inconvenience that might arise from a local Major-General commanding a British regiment being placed under a Divisional Commander of the Indian Service junior to him as Colonel.

21. The Duke of Argyll cannot but think that the above measure should suffice to meet all reasonable grounds of complaint, and that whatever anomaly, whatever departure from strict military usage their application may involve, the endurance of such evils for a short definite time would be preferable to the adoption, with a view of meeting a temporary embarrassment, of any measure that might revive questions connected with the armies, which have been set at rest with so much difficulty, and the result of re-opening which it is impossible to foresee.

22. I am only further instructed to add that the Duke of Argyll has very carefully considered the suggestion of His Royal Highness the Field-Marshal Commanding-in-Chief that, as a further remedy in the present case, an addition of 45 General Officers should be made to the British List at the expense of the Indian Government, and that his Grace cannot admit to the extent proposed by His Royal Highness the responsibility of the Government of India for measures carried out under the authority of Her Majesty's Government and with the sanction of Parliament, nor can he consider it fair that the people of India should be called upon to bear the expense of rectifying the position of a certain number of Colonels of the British Army in the manner proposed.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

No. 42.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Military Secretary, India Office.

20, Gen. No., 845.

War Office,
Sir, 20th July, 1869.

In acknowledging the receipt of your letter of the 6th instant, No. 3355 $\frac{647}{W.}$, relating to the supersession of Colonels of the British Army by Colonels of the late Indian Army, I am directed by Mr. Secretary Cardwell to request you will state to the Secretary of State for India in Council that, considering all the complicated questions which arise in connection with this subject, and especially the Sections in the Acts of 1858 and 1860, guaranteeing certain rights to the Officers of the Indian Establishment, and the portion of the Report of Lord Cranworth's Commission, bearing upon the Warrant of 1862, it appears to Mr. Cardwell that the most desirable course will be to submit the question of supersession under the Warrant of 1864 to a new Committee, to be composed of one eminent lawyer, and of Officers of the two Services respectively, and of too high rank to be themselves personally interested.

Mr. Cardwell could not consent to refer to this Committee any proposals involving an increased charge upon the Estimates of this Department; but should propose to confine the reference to asking for their opinion upon the proper relative position of the Officers of the two Services.

I have &c.,
(Signed) H. K. Storks.

No. 43.

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

No. 3617 $\frac{692}{W}$.

India Office, S.W.,
21st July, 1869.

Sir,

I am directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 20th instant, in which it is stated, that considering all the complicated questions which arise in connection with the subject of the supersession of Colonels of the British Army by Colonels of the late Indian Army, and especially the sections in the Acts of 1858 and 1860, guaranteeing certain rights to the Officers of the Indian Establishment, and the portion of the report of Lord Cranworth's Commission bearing upon the Warrant of 1862, it appears to Mr. Cardwell that the most desirable course will be to submit the question of supersession under the Warrant of 1864 to a new Committee, to be composed of one eminent lawyer, and of officers of the two services respectively, and of too high rank to be themselves personally interested.

2. In reply, I am to request you will inform Mr. Cardwell that the Duke of Argyll consents to the appointment of a Committee as proposed, upon the understanding that no suggestion can be entertained involving a charge upon Indian revenues.

3. At the same time I am instructed to request that a draft of the instructions, which it is proposed to furnish to the Committee, may be forwarded for His Grace's consideration, and that the attention of the Committee may be called, in those instructions, to the necessity of bearing in mind the Acts of 1858 and 1860, referred to in your letter under acknowledgment.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

No. 44.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Military Secretary, Horse Guards.

20, Gen. No., 848.

War Office,
29th July, 1869.

Sir,

Adverting to previous correspondence relative to the supersession of Indian Officers, I am directed to acquaint you, for the information of His Royal Highness the Field-Marshal Commanding-in-Chief, that, with the concurrence of the Secretary of State for India, Mr. Secretary Cardwell proposes to refer the question to a new Committee composed of Vice-Chancellor Sir William Melbourne James, General Sir Charles Yorke, G.C.B., and an Officer to be nominated by the Duke of Argyll. Enclosed are the suggested Instructions for the Committee, to which Mr. Cardwell has invited the concurrence of the Duke of Argyll, and to which he trusts His Royal Highness will not entertain any objection.

See next page.

I have, &c.,

No. 45.

Major-General the Right Hon. Sir H. K. Storks, G.C.B., G.C.M.G., to the Under Secretary of State for India.

20, Gen. No., 848.

War Office,
29th July, 1869.

Sir,

With reference to your letter of the 21st instant, 3617 $\frac{692}{W}$, expressing the concurrence of the Duke of Argyll, in Mr. Secretary Cardwell's proposal to submit to a new Committee, the question of the supersession of Officers of Her Majesty's British Army by those of Her Majesty's Indian Forces, I am directed to transmit, for the information of His Grace, the accompanying draft instructions which Mr. Cardwell suggests, for the Committee to be assembled.

See next page.

I am to add that Sir William Melbourne James, one of the Vice-Chancellors, and General Sir Charles Yorke, G.C.B., have consented to serve on the proposed Committee; and Mr. Cardwell will be glad if His Grace will nominate an Officer of Her Majesty's Indian Forces, of sufficiently high rank to have no personal interest in the question, to be their colleague.

I have, &c.,

Major-General T. T. Pears, C.B., to the Under Secretary of State for War.

India Office, S.W.,
3rd August, 1869.

Sir,

I am directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 29th ultimo, transmitting, for His Grace's consideration, with reference to my letter of the 21st idem, No. 3617 $\frac{69}{W}$, draft instructions which Mr. Cardwell suggests for the Committee about to be appointed to consider the relative position of the Colonels of the British and Indian services.

2. In reply, I am instructed by the Duke of Argyle to return the draft, with certain proposed amendments noted in red ink in the margin; and I am to observe that the suggested allusion to the Royal Warrant of 15th June, 1864, appears calculated to limit unduly the scope of the Committee's enquiries, and at the same time to give them a wrong direction.

3. The tendency of that Warrant has not been to accelerate the promotion of the Colonels of the Indian Army, although by the operation of one clause removing the names of Artillery and Engineer Officers from the Indian List it has accidentally produced that effect to a definite extent.

4. With this exception, which involves an accomplished fact that cannot now be disturbed, the operation of the Warrant in question upon the Officers whose rapid promotion is complained of has been nil, they having all been promoted under the regulations of the old Indian Service. On the other hand, the Staff Corps Officers whose promotion will be affected by that Warrant, beginning at Colonel W. B. Salmon, will, as is well known, have their promotion greatly retarded under its operation, being placed in the same list for promotion with the British Officers, according to the date of Commission.

5. The Duke of Argyle recommends, therefore, that the words "existing regulations" shall be substituted as shown in red ink in the margin.

6. I am to add, for the information of the Secretary of State for War, that Lieutenant-General Hancock, of the Indian Army, has been appointed by the Secretary of State for India in Council to serve on the proposed Committee, and has been instructed to report himself to you, with a view to being informed of the time and place appointed for the Committee to meet.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

Enclosure in War Office letters, dated 29th July, 1869, Nos. 44 and 45.

Instructions for the Committee appointed to consider the question of the Supersession of Officers of Her Majesty's British Army, by those of Her Majesty's Indian Forces.

1. The Committee will enquire into the effect of the Royal Warrant of the 15th June, 1864, on the present and future relative position of Officers of the two Services.

2. If the Committee should be of opinion that that Warrant operates unjustly towards Officers on the British Establishment they will report what alteration should be made in it, having regard to the Parliamentary guarantee given to Officers of the Indian Establishment by the Acts of 1858 and 1860.

3. The Committee will limit their recommendations to courses which shall not involve increased charges upon either Imperial or Indian Revenues.

Enclosure in India Office letter, dated 3rd August, 1869, No. 46.

Instructions for the Committee appointed to consider the question of the Supersession of Officers of Her Majesty's British Army, by those of Her Majesty's Indian Forces.

1. The Committee will enquire into the effect of the *existing Regulations* on the present and future relative position of *the Colonels* of the two Services.

2. If the Committee should be of opinion that *those Regulations* operate unjustly *or unequally on the interest of Officers of either* Establishment, they will report what alteration should be made in *them*, having regard to the Parliamentary guarantee given to Officers of the Indian Establishment by the Acts of 1858 and 1860.

3. The Committee will limit their recommendations to courses which shall not involve increased charges upon either Imperial or Indian Revenues.

APPENDIX C.

No. 1.

General W. R. Mansfield to the Military Secretary.

Sir, Head-Quarters, Simla, 15th August, 1865.

I HAVE the honour, with much deference, to solicit the attention of His Royal Highness the Field-Marshal Commanding-in-Chief, to some very important considerations affecting the position of the superior officers of Her Majesty's British Forces. Thus, under the operation of the rules of promotion in the several services, the following full Colonels of the British Army now serving in India, viz : Colonel T. Williams,* C.B., 4th Foot ; Colonel D. Rainier, 98th Foot ; Colonel E. A. Holdich, C.B., 20th Foot ; Colonel A. C. Errington, 51st Foot ; Colonel S. T. Christie, C.B., 80th Foot ; Colonel E. Haythorne, 1st Foot, have been superseded in India by the promotion to the rank of General Officer of Colonels in the local service.†

2. It is seen that all the Colonels on the local lists in India of the year 1856 are now promoted to the effective rank of Major-General.

3. According to the averages of promotion in the British Army the Colonels of 1854 will probably not have been absorbed in the rank of Major-General till the year 1868.

4. The supersession of the Colonels belonging to Her Majesty's British Forces by the Indian local Colonels cannot fail to go on at an accelerated ratio for the following reasons, viz., that the number of Colonels on the British lists is immeasurably greater than that in the local Indian lists, in proportion to the number of General Officers respectively borne on the two establishments. Thus the number of Generals of the different degrees is 272, in the British Service ; the number of Colonels, by June Army List, is 394 ; the number of Generals on the local list is 208 ; the number of Colonels, by the last Bengal Army List, is 123.

5. It has always been believed that the inequality to which attention has been invited, was in former times forbidden, under the orders of his late Majesty King William IV.

6. For some years the practice obtained of promoting all officers to the local rank of Major-General in India, who were immediately senior to officers of the Indian Service, who had been promoted by the Queen's brevet.

7. In 1854 a new system of promotion was established, the old general brevet being abolished. After some correspondence it was ruled by the late Lord Hardinge, when Commanding-in-Chief in England, that, as a consequence of the new system of promotion, the practice above alluded to, known under the name of Fane promotion of Major-Generals, should no longer be permitted to exist.

8. Appeals against supersession have from time to time been made by Colonels of the British Service serving in India, which have been set aside under the ruling above quoted.

9. The question might therefore be allowed to rest, but for the fact that lately the Right Honourable the Secretary of State for India has, with regard to all other ranks, declared the very principle on the assertion of which the quondam promotion of Fane Major-Generals rested ; and, secondly, the frequent supersession of British Colonels which is now proceeding.

10. Thus it is now seen (*vide* Secretary of State's Despatch, D/17th June, 1864), that Lieutenant-Colonels, Majors, Captains, and Lieutenants, are promoted in the local gazettes in India, to put them on a par in India with officers who obtained rank under the Staff Corps Warrant.

11. This having thus been practically asserted, with officers of inferior degree, the enquiry is now made by the old Colonels serving in India, whether the like principle should not also be applied in the case of Line Colonels who have been superseded by Major-Generals of the Indian Service.

---

* Appointed Major-General with temporary rank, February 1865.

† Colonel T. Williams has been superseded by all Major-Generals on the Indian list between Sir W. Coghlan and Major-General J. E. Landers, viz. : 13, including Major-Generals Showers, C.B., McLeod and Troup, C.B., commanding divisions.

Colonel Rainier, 98th, by all below Major-General Lang, viz., 17, including the above-mentioned officers commanding divisions.

Colonel Holdich, 20th, by all below Major-General Showers, viz., 16, including Major-Generals McLeod and Troup, commanding divisions.

Colonel Errington, 51st, by all below Major-General Welchman, viz., 12.

Colonel Christie, 80th, by all below Major-General Welchman, viz., 12.

Colonel E. Haythorne, Adjutant-General, by all below Major-General Landers, viz., 6.

12. The argument against this is, that the Indian Service is not the only one which presents a separate list of promotion, entailing such effects. Thus it is maintained that the Royal Artillery and Royal Marines being on separate lists, occasional supersession of the Infantry and Cavalry Colonels takes place with regard to those branches of the Service, and *vice versâ*.

13. It is then argued that, if it be not objected to in those cases, there can be no reason for making an attempt to set aside the inequality in the case of the Indian Officers.

14. In the first place, it may be observed, in answer to this argument, that it was always understood in the army at large that it had been distinctly stipulated, when the rank of General was granted to the Indian Officers, that the concession should not in any manner prejudice the condition of officers of like standing belonging to the Royal Army.

15. But, secondly, there is a further reason; the analogy suggested by the Royal Artillery and Royal Marine services does not stand the test of examination. The officers of those branches of the Service do not generally come into contact with Cavalry and Infantry officers.

16. Out of India, the ordinary divisional and brigade commands do not fall to them, whether in war or in time of peace.

17. In India, on the other hand, the Indian Major-Generals, who are now superseding the Colonels of the British Army in considerable numbers, will most assuredly take command of the latter as Generals of Divisions in the several Indian Presidencies, the very result being thus produced, against which, as we know, it was deemed formerly necessary to guard.

18. With respect, then, to the principal adopted for other ranks, I would venture to intimate, for the general consideration of His Royal Highness, that no good reason can be assigned for making exception with regard to the particular rank of Major-General.

19. It has appeared to me, therefore, the subject would seem to me to be one which may be, with propriety, referred for the consideration of His Royal Highness and of the Right Honourable the Secretaries of State for India and War, with a view to the application of the old rule, by which the local rank of Major-General is given to officers having the rank of Colonel, who are superseded by the promotion of officers of the local armies of Bengal, Madras, and Bombay.

20. Supposing the old rule to be re-established, as above suggested, it would appear necessary, with regard to the Indian Service, on the other hand, that if that were to occur, which is apparently impossible from the constitution of the lists of the several Armies—viz., the case of a Line Colonel being promoted in the ordinary course to the rank of Major-General, who might be junior to an Indian Colonel, the latter should be promoted locally in India to the rank of Major-General, in order to preserve perfect uniformity and equality between the two Services.

21. It is to be remarked that the rank of Major-General being conferred on Indian Officers, not only for India, but for all the world, by the late changes, the state of things to which notice has been attracted, is even more serious for the officers of the British Army than was originally contemplated when the remedy above alluded to was applied.

22. It may perhaps be assumed that, in practice generally, the two sets of officers would not come into contact, except in India.

23. The experience of the war of 1855-6 does, however, lead us to believe that in any development of the military resources of Great Britain for European war, this contingency would in all probability take place.

24. The argument contained in this letter would be hardly complete, were I to omit to draw the attention of His Royal Highness to another general result of the constitution of the lists of Indian Field Officers.

25. Thus, owing to the number of Colonels, Lieutenant-Colonels, and Majors being proportionately less to the General Officers as compared with the like ranks in the British Army List, an officer in the former, having been promoted to the rank of Field Officer, runs through the several ranks more rapidly than an officer in the British Service till the rank of General is reached.

26. Officers who became Brevet-Majors in 1858, are now Lieutenant-Colonels in ordinary succession in the Indian Lists.

27. According to the last Royal Annual Army List, it is apparent that there are great numbers of Majors of 1855.

I have, &c.

(Signed) W. R. Mansfield, General,
Commander-in-Chief in India.

P.S.—I would more especially invite your attention to the very important correspondence

which took place on the matter of this letter during the Command-in-Chief of the late Lord Hill. The letter, which more particularly lays down principles and rules, is that from his Lordship to the President of the Board of Control, dated March 25th, 1834, in which the relative position of the King's officers and those of the late Honourable East India Company is discussed in the most masterly manner; subsequent to the writing of that letter, took place the correspondence between the late Sir Henry Fane and the Government of India, which resulted in the conferring of the local rank of Major-General on such officers of the King's Service as had been superseded by those of the Honourable Company. I gather that copies of that correspondence must be in existence in your office, and I therefore abstain from sending copies, unless you should wish me to do so.

(Signed) W. R. MANSFIELD.

No. 2.

Extract from letter of Colonel R. De Salis, dated London, 28th January, 1869.

(Private.)

Dear General Forster,

YOU asked me to write to you privately on the subject of the supersession of Queen's officers by those of the Royal Indian Army.

1. My personal grievance is, that I served in the mutiny war, and that 38 of the Indian officers who were then junior to me, and some of them actually under my command, are now promoted over me to be Generals. (I give you a list.)

2. The Colonels of 1863, in the Indian Army, are now becoming Generals, but in the Queen's Army, the Colonels of 1855, a difference of *eight years*.

3. The last Indian General promoted is Major-General Galwey, who was a Colonel of 9th May, 1863. In our own service, Colonel Thesiger (30th April, 1863) was his senior, and I find in the monthly Army List, from Colonel Prince Edward of Saxe Weimar down to Colonel Thesiger, there are the names of 264 *Colonels* who, like myself, have been superseded.

4. If we in this country feel the anomaly, it is much more obvious in India, where our officers actually in command of troops have to give way to juniors, and between the Brigadier-Generals of the Royal Indian Army and the Queen's, there is an average difference of about four years' rank as Colonel.

Thus, in the Artillery, a Colonel who had belonged to the Company's Service would receive a brigade some three or four years before another Artillery Colonel, and thus might actually command a senior officer of *his own corps*. Brigadier-General Stock commands at Bombay, and is junior (as Colonel of 1866) to both the Lieutenant-Colonel and Major of 1st Battalion 23rd Regiment, which is stationed at Bombay under his command. Similarly at Mhow, Colonel Raines, 95th, as Colonel, was senior to Major-General Sir G. Malcolm, who commands the Mhow Division.

5. It is difficult to understand the Royal Warrant when it refers to the amalgamation in the Army Lists of 1861, 1862, 1863, and 1864. There appeared a list of *amalgamated Colonels* which suddenly disappeared!!! There is now a *fresh* amalgamated list, commencing in 1866. Perhaps the promotions to the rank of General in the Indian Army might be temporarily suspended until enquiry would be made.

No. 3.

Colonel H. Greathed to the Military Secretary.

Sir, United Service Club, 3 March, 1869.

I HAVE the honour to request that you will be pleased to submit to His Royal Highness the Field-Marshal Commanding-in-Chief, my most respectful appeal on the subject of the supersession of the Colonels on the British List by those on the Indian List of Her Majesty's forces.

The Royal Warrant, 1st January, 1862, provided for the promotion of both British and Indian Colonels in a manner which, looking at results, would have been fairly satisfactory to the Officers of both Services, and, apart from the accidents of service, would have been fairly equal in the distribution of promotion in both Lists.

But, by the adoption of the Royal Warrant of 1864, the promotion of the Colonels on the ndian List to the rank of Major-General, as compared with that of the Colonels on the British List, is so excessive, that nothing but a suspension of the Warrant, as regards these ranks, until further inquiry, can mitigate the damage which has been done, not only to the Colonels, but to every class of *Field Officer, at least,* on the British List. The last Officer on the Indian List promoted to the rank of Major-General, is a Colonel of 1863, who thereby supersedes a Colonel of 1855 on the British List.

The fears that were felt by Officers of the Indian Service of stagnation in promotion, have been so utterly falsified in the event, that I respectfully submit a strong case exists for the re-adjustment of rank, in which the fair equality of promotion intended by the framers of the Warrant of 1862 may be carried out.

As all Officers in Her Majesty's Service are now eligible for employment in all parts of the dominions of the Queen, *all* must have an equal interest in fair and equal promotion, this supersession may at any time become a very practical grievance, full of evil to the public service. It would not become me to do more than indicate this view of the question.

I have, &c.

(Signed) Edwd. H. Greathed.

No. 4.

Colonel H. J. Warre to the Military Secretary.

Sir, 44, Cadogan-place, London, S. W., 3 March, 1869.

As the operations of the Royal Warrant for the amalgamation of the Indian with the Royal Army are acting very prejudicially to Colonels, and, indeed, to all Officers of the Queen's Service, I take the liberty of drawing the attention of His Royal Highness the Field-Marshal Commanding-in-Chief, to the large number of Colonels of the former Indian Army who are now obtaining the rank of Major-General, under the War Office Circular (No. 867) of the 15th June, 1864.

Having served in India in command of the 57th Regiment, as Brigadier in command at Mhow, and as Acting Military Secretary to the General then Commanding-in-Chief (Lord Strathnairn), I had every opportunity of learning the provisions of the Royal Warrant, and was satisfied that it was formed in a spirit of justice to both Armies; but I was not aware that its provisions had been altered, until my attention was recently called to the interpretation put upon the Warrant by the Circular above alluded to.

The Officers of the late Indian Army not only derive all the benefit of their rank in England, and in all Her Majesty's Possessions, instead of, as formerly, *only* in India; but the increased inducements offered to Officers in pensions, &c., on retirement, have reduced the list of Senior Officers so rapidly that it is now 12 months since the separate list of Indian Colonels was exhausted; and Officers of rank far junior to those in the Queen's Service, have been promoted to the rank of Major-General, so that, if I am correctly informed, whereas Colonels of the year 1855 are still unpromoted in the Queen's Army, Colonels of 1863 are now being promoted in the Madras Service.

If such is the case, and I have every reason to believe that it is so, I feel sure that His Royal Highness will endeavour to correct the evil, and will pardon my trespassing upon his valuable time to support my own claims and those of my brother Officers of Her Majesty's Royal Army.

I have, &c.

(Signed) H. J. Warre, Colonel, Half-Pay,
late 57th Regiment.

No. 5.

Colonel R. Wardlaw to the Military Secretary.

Sir, United Service Club, London, 6 March, 1869.

I beg leave respectfully to bring under the notice of His Royal Highness the Field-Marshal Commanding-in-Chief, the great injustice under which the Colonels of Her Majesty's Army are suffering by being superseded by Officers of the old East Indian Establishment, under

the Amalgamation Warrant, and I venture to hope that His Royal Highness will give us his able assistance towards a remedy.

I have, &c.
(Signed) R. Wardlaw, Colonel, Half-Pay.

No. 6.

Major-General H. P. de Bathe to the Military Secretary,

Sir, United Service Club, 8 March, 1869.

I have the honour to request that you will receive this my most respectful remonstrance against the present supersession of Her Majesty's Officers by those of the late India Company's *Officers.**

I understand that by the altered Warrant of 1864, in one year or so the Indian Generals will be placed on the same list as Her Majesty's present General Officers, when I should find numbers of Officers junior to myself at the time of the amalgamation, taking rank and command over me.

I trust, therefore, that His Royal Highness the Commander-in-Chief will be pleased to take such steps as may lead to the restoration of the former Amalgamation Warrant of 1862.

I have, &c.
(Signed) H. P. de Bathe, Major-General,

No. 7.

Colonel C. C. Shute to the Military Secretary.

Sir, Brighton, 11 March, 1869.

I have the honour to state how much I feel the supersession by the Colonels of the Indian Army over those on the English List, consequent on the effect of the Warrant of June 1864.

This has been such a general subject of disappointment of late by the Junior Major-Generals and Senior Colonels of our Army, that it is unnecessary for me to trouble you with details, and I would only respectfully express a hope that His Royal Highness the Field Marshal Commanding-in-Chief will be so kind as to exert his influence to have this grievous wrong remedied.

(Signed) C. C. Shute, Colonel,
Commanding 4th Dragoon Guards.

No. 8.

Colonel Percy Hill to the Military Secretary.

Sir, United Service Club, 24 March, 1869.

Having understood that it is the intention of Her Majesty's Government to inquire into the causes of the supersession of Colonels of the Royal Army by the promotion to Major-General of very Junior Officers of the Indian Service, I venture to place my individual case before His Royal Highness as one which affords a fair criterion of the manner in which those situated like myself are affected.

I am a Colonel of 1857, and towards the end of the year 1866 I found myself passed over in rank for the first time. Since that date a very large number of Indian Service Colonels have obtained promotion, and thereby superseded me in a mode which I believe I am correct in stating was never contemplated by the Amalgamation Warrant.

In last night's "Gazette" a further promotion has appeared, and there is now a vacancy which, if filled, will promote an Officer over the heads of myself and 283 other Colonels of the Royal Army.

Less than two years since, some of those who have superseded me were doing duty under my command.

Under these circumstances, I humbly submit that my petition is not more than is reason-

* *Sic* in orig.

able, in asking that further promotions may be stayed until due inquiry has been made, and that upon my own promotion to Major-General my rank may be antedated to such period as will reinstate me in the same relative position which I should have held had the original provisions of the Amalgamation Warrant been carried out.

I have, &c.
(Signed) Percy Hill, Colonel, Half-Pay,
Rifle Brigade.

No. 9.

Colonel Robert Bruce to the Military Secretary.

Sir, Durdham Down, Bristol, 10 April, 1869.

I have the honour to request you will be so good as to submit to His Royal Highness the Field-Marshal Commanding-in-Chief my appeal against the injustice of being superseded by Colonels of the Indian Army far junior to me.

I have, &c.
(Signed) Robert Bruce, Colonel, Half-Pay,
2nd Foot.

No. 10.

Colonel G. V. Maxwell to the Military Secretary.

Sir, Army and Navy Club, London, 17 April, 1869.

On my return to England within the last few days, after 11½ years' service in India, I have been informed that the constant supersession of Colonels of the Royal by those of the Indian Army, has been brought to the notice of His Royal Highness the Commander-in-Chief.

Although smarting under the new system, and deeply feeling the mortification which every soldier feels at having his junior going over his head, a feeling of submission to orders has hitherto prevented me from venturing to express that mortification; but as the subject has been mooted, I most respectfully beg to represent how I have been situated.

I have just had a five-year Brigade Command, and during that time was often in command of either the Lahore or Peshawur Division.

At the expiration of my command, I was the Senior Brigadier-General in the Bengal Presidency, and on returning to my regiment to prevent my having to serve under an Officer of the Indian Army who was five years my junior as a Colonel, I was obliged to go on leave of absence, although I was in good health, and fit for any active service. Had I remained in India a few weeks more, I should have had an Officer (of the Indian Army) promoted over me as Major-General, who was not a Captain until more than two years after I had obtained my present rank of Colonel.

I have, &c.
(Signed) G. V. Maxwell, Lieut.-Colonel, 88th Foot,
and Colonel.

No. 11.

Colonel J. Ramsay Stuart, to the Military Secretary.

Selby Villas, Anerley,
Sir, 31st May, 1869.

As one of the Senior Colonels who are now being superseded by those of the Indian Service under the provision of the Indian Amalgamation Warrants, may I be allowed to solicit the powerful influence of His Royal Highness the Field-Marshal Commanding, with the view to a removal of so grievous an act of injustice to the Officers of the Royal Army.

I have, &c.
(Signed) J. Ramsay Stuart, Colonel, Half-Pay,
21st Fusiliers.

No. 12.

Brevet-Colonel J. Conolly to the Military Secretary.

United Service Club,
Sir, 1st June, 1869.

HAVING been informed that an enquiry is about to take place into the late supersession of Colonels of the Royal Army by Officers (their juniors) in the Indian Service, I venture respectfully to express a hope that we, the sufferers by this system, may have the countenance of His Royal Highness the Field-Marshal Commanding-in-Chief in our endeavours to obtain a redressal of this injustice. I have, &c.
(Signed) JAMES CONOLLY,
Brevet-Colonel, Unattached.

No. 13.

Colonel C. Foster to the Military Secretary.

Arthur's,
Sir, 13th June, 1869.

I HAVE the honour to request you will take a favourable opportunity of bringing to the notice of His Royal Highness the Commander-in-Chief the grievance that I (in common with so many other Colonels) suffer from the promotion of Colonels of Her Majesty's Indian Army, junior to us, to the rank of Major-General.

It is rumoured that the Indian Government propose a "Local rank" in India as a solution to the question, but I am sure you will see that this would not remove the grievance complained of.

When the Duke of Wellington and Lord Hill considered a local rank in India sufficient to satisfy the just susceptibility of the British Army, the Officers of the Indian Army had no rank whatever west of the Cape of Good Hope, but now in the words of the Horse Guards Memo. they have "rank and precedence according to their Commissions," in England and everywhere else in Her Majesty's dominions.

The supersession therefore is no longer confined to India, but is universal.

In 1871, or 72, the present Warrant of 1864 will affect the Staff Corps as it does us. They will in their turn be superseded by the Local Army in their promotion from Colonel to Major-General by a period, it is calculated, at 9 to 12 years, and it is very probable that the Indian Government will then be as anxious to have the Warrant revised as we are now.

I have, &c.
(Signed) CHARLES FOSTER,
Colonel.

APPENDIX D.

REPORT of the Committee appointed to inquire into the Question of the Supersession of British Colonels by Colonels of Her Majesty's Indian Army.

Colonel C. R. EGERTON	.. .. ..	*President.*
Major W. MARVIN G. E. COCHRANE, Esq.	.. .. ..	*Members.*

1. Before the introduction of the promotion arrangements of 1854, the Lieutenant-Colonels and Colonels of the Royal and East India Company's Services rose together to the rank of Colonel and Major-General, by the operation of the General Brevets granted by the Crown, from time to time, at irregular intervals.

2. Irrespective of the General Brevets, the Lieutenant-Colonels of the East India Company's Armies, under the different constitution of their Service, were occasionally promoted to the rank of Colonel by regimental line step, before they became entitled to that rank by the Royal Brevets. The Lieutenant-Colonels of the Royal Service (those of the Royal Artillery and Royal Engineers excepted) were dependent solely on the Brevets for their rise to the rank of Colonel.

3. Complaints being made of the supersession to which the Royal Lieutenant-Colonels were subjected from this cause, Her Majesty's Government, at the instance of the Duke of York, interfered, and the rise of the Company's Lieutenant-Colonels to the rank of Colonel by regimental advancement was stopped (1806). This rank was subsequently (1829) restored, but only on the condition that a rule was to be established to protect the senior Lieutenant-Colonels of the Royal Army serving in India from supersession by a junior Lieutenant-Colonel of the Company's Army.

4. In the course of the discussion which took place, the Duke of Wellington laid down this principle :—*

"An Officer who has distinguished himself at the head of one of His Majesty's Regiments, "and who may thereby have rendered essential service at an important moment, must not be "liable to be superseded by one junior to himself in the rank of Lieutenant-Colonel, either as "Colonel, or, subsequently, as Major-General."

5. This principle was repeated by Lord Hill, in his letter of the 25th March, 1834 (see Appendix A).

6. In consequence of the understanding come to on this occasion, it was arranged that, on the promotion of a Company's Lieutenant-Colonel by the regimental line step, the local rank of Colonel from the same date should be conferred on all the Lieutenant-Colonels of His Majesty's Army serving in India who might be seniors as such to the Company's Officer so promoted, in order that they might hold the same position with him as Colonel which they had previously held as Lieutenant-Colonels.

7. Another difficulty subsequently arose. The rank of the Company's Colonel, attained by the regimental line step, was permanent, and qualified its possessor to rise to Major-General by the General Brevets ; but the local rank granted to the Royal Lieutenant-Colonels under the above arrangement, being temporary only,† did not qualify for promotion by the Brevets.

With the view, therefore, still further to maintain the principle insisted upon by the Duke of Wellington and Lord Hill, it was ruled, that when the Company's Colonel, promoted to that rank by the regimental line step, obtained promotion to Major-General, by Royal Brevet, the local rank of Major-General should be conferred on the local Colonels of His Majesty's Service in India, who were senior as such to the Company's Colonel so promoted.

8. This local rank ceased on the officers quitting India, and did not involve the loss of Staff Appointments, or of Command of Corps, which permanent possession would have carried with it, under the ordinary practice of the Service.

9. No steps were taken to protect the Royal Officers from supersession elsewhere than in India, simply, it is presumed, because at that time the East India Company's Officers held no rank except within the limits of their Charter, where the "Fane" Brevets also held good.

10. The Royal Warrant of 6th October, 1854, inaugurated a new system of promotion. An establishment of General Officers, based on the supposed fair requirements of the respective armies, was set apart for each Service ; and the performance of a certain amount of regimental or other duty—not standing in the list, as before—was henceforth to be the qualification for the rank of Colonel. No provision was made in this Warrant to secure the British Colonels from supersession by the East India Company's Officers in the rank of Major-General.

11. The last General Brevet granted by Her Majesty (20th June, 1854) had been issued just before the Royal Warrant of 6th October, 1854, appeared. It promoted to Major-General the Colonels of both Services of date on or before the year 1846.

12. At the date of the Warrant, the British and Indian Colonels started apparently on equal terms for the rank of General Officer. In proceeding, however, to carry out its provisions, a very great piece of good fortune fell to the Colonels of the Indian Service. In the British Service the fixed establishment of Generals was *less* than the numbers then existing, and the supernumeraries were ordered to be gradually absorbed. In the Indian Service the new establishment was *much larger* than the numbers then existing, and promotions were necessary to complete it. In making these no less than 95 Colonels of the Indian Service were raised, on the same day, to the rank of General Officer, some of them of ten months'

* See Memorandum dated 18th September, 1827, Appendix F.

† "It is perfectly understood, from the nature of the respective Services of the King and Company, that in the former the Brevet must necessarily be temporary, and in the latter, permanent." (*See* letter from Lord Hill, dated 25th March, 1834, Appendix A.)

standing only as Colonels, and the promotions were carried down to 1st February, 1854, or seven years in advance of the Colonels of the British Service.

13. The promotion of the Indian Colonels has also been accelerated by the amalgamation of the forces in 1860-61, particularly by the special annuities on retirement, offered in the latter year by the Secretary of State for India, of which many of the senior officers of the Indian Armies availed themselves.

14. In seeking for the causes of the more rapid rise of the Indian Officers, it must not be overlooked that the comprehensive system of retiring full-pay pensions in force in the Indian Service has yearly relieved the Indian List of many of the senior officers, and thus cleared the way for the succession of their juniors to the rank of General Officer.

15. From the foregoing digest of the rules and regulations that have from time to time governed the promotion of officers to the higher grades in the Services of the Crown and the late Honourable East India Company, it will be seen, that from the arrangements of 1796 to the Royal Warrant of 1854, it was an admitted principle in regard to such promotion that it should proceed *pari passu* in each; and that the Officers of both the British and Indian Armies should be equally considered in a just participation of all advantages of military rank.

16. The frequent alterations and modifications of the rules which took place seem all to have had this end in view, and a reference to the voluminous mass of correspondence that is extant on the subject, between successive Commanders-in-Chief of the Imperial Army and the East Indian Authorities, very forcibly illustrates the jealous care with which the due balance of interests of the officers of either service was watched and protected.

17. The supersession of *one* Colonel of the British Army by a Colonel of the Indian Army in 1833, drew forth a correspondence which culminated in the letter of the late General Lord Hill to the President of the Board of Control, dated 25th March, 1834 (*see* Appendix A), which is referred to by Sir William Mansfield (*see* Appendix B), and is considered by him to be "exhaustive of the whole subject"; and in which his Lordship most peremptorily insists on the imperative necessity of maintaining the principle of equality of advancement to the higher grades.

18. His Lordship reiterates the dictum of the late Duke of Wellington on the subject, and in the course of an elaborate argument in support of the principle it involves, proceeds to remark:—

"The only safe and unerring principle on which the system of promotion can be soundly "and justly regulated as between the King's and the Company's Officers in India, appears to be "that which has been already alluded to; that under no possible circumstances can it be per- "mitted that a Lieutenant-Colonel in the King's Service should be superseded by one junior "to himself in the rank of Lieutenant-Colonel, as Colonel, or subsequently as Major-General."

Again,

"In all that has been said throughout the voluminous discussions which have taken place "upon the subject of Military promotions in India since 1796, the ruling principle has ever "been so to uphold the position of the King's Officers, that they might not suffer in any colli- "sion of interests with the Officers of the Company's Army in their character or military "dignity."

19. It cannot be doubted that this principle of military equality in the higher ranks, so ably vindicated by the Duke of Wellington and Lord Hill, is the only safe and equitable basis upon which the promotion of two Armies, acting in conjunction, both in cantonments and in the field, serving the same Sovereign, and under the orders of one Government, should be regulated.

20. It appears that, at least up to the date of the Royal Warrant of 6th October, 1854, it was as between the British and the Indian Armies, as far as practicable, always so regulated.

21. It remains to the Committee to point out how the case now stands, and how far in the effects of the before-mentioned Royal Warrant, as well as that of 15th June, 1864, this principle has been departed from, and what grounds of complaint exist on the part of either Service.

22. The Committee find that the Generals now in course of promotion on the Indian List were Colonels of the year 1863, and Lieutenant-Colonels of 1858-59.

23. The last Indian General promoted (there are at the present time some vacancies unfilled), passed over and superseded no less than 230 Colonels of the British Service, the seniors of whom date as Colonels of 1854 and 1855, many of whom distinguished themselves at the head of Her Majesty's Regiments in the several actions in the Crimea, at Alma, Inkermann, and Balaklava, and were mentioned in despatches.

24. More marked, and more anomalous still are the cases of the Colonels of the British Army, who commanded brigades, or independent columns, or filled high Staff situations during the Indian Mutiny, and who are now in course of supersession by Officers of the Indian Army (many of whom no doubt took part in the same Field services), who, at that date, held only the rank of Major.

It is only necessary to enumerate the following:

Colonel Haythorne, C.B.
„ Sir E. Wetherall, C.B., K.C.S.I.
„ Sir J. Douglas, K.C.B.
„ Sir E. Greathead, K.C.B.
„ Sir J. Jones, K.C.B.
„ Sir D. Kelly, K.C.B.

25. By the Horse Guards Memorandum of 25th April, 1855, (Appendix G), the rank of Her Majesty's Indian Forces was, by Her Majesty's Command, made general, to give precedence with Officers of the Regular Forces in all parts of Her Majesty's dominions.

26. Supersession previously was only felt in India, but now it follows the Officers of the British Army, and affects them wherever they are associated with Officers of the Indian Service in all parts of Her Majesty's dominions.

27. It is now a more grave and substantial injury than at the time Lord Hill so forcibly condemned it.

28. It is not only in respect to the Senior Colonels of the British List that the operation of the Royal Warrant of 15th June, 1864, has had an injurious effect; but the position and prospects of those Colonels of the Indian Staff Corps who head the Amalgamated List, and will have to rise on that List, have, if possible, been more grievously and detrimentally affected, and their case equally demands a remedy.

29. At the present average rate of promotion to the rank of Major-General on the British List, it will take 15 *years* to promote the Colonel next before Colonel Salmon, a Staff Corps Officer, who heads the Amalgamated List.

30. At the present average rate of promotion to the rank of Major-General on the Indian List, it will take three years to promote the Colonel next before Colonel Salmon on that List. Hence, under existing arrangements, there will be a difference of 12 years in the date of rank as Major-General between Colonel Salmon and the next senior to him on the Indian List (Colonel Shakespear), although their commissions *as Colonel* date on the same day, and the former entered the service 14 *years before* the latter.

31. The Committe beg also to draw attention to the Appendix C, containing the names of Colonels of the British Army *now in India*, who have been superseded in the rank of General Officer by Officers of the Indian Army; and to refer especially to the cases of Colonel Goodwyn, 41st Regiment, and Colonel Maxwell, 88th Regiment, who are Colonels of 19th and 23rd March, 1858, respectively, and are both commanding brigades in Bengal; whereas Major-General J. D. Macpherson, Bengal Infantry, whose Colonelcy bears date 5th April, 1858, attained the rank of Major-General on the 24th January, 1867, and is now serving as Commissary-General in Bengal, where Colonels Goodwyn and Maxwell served with him as his seniors in the rank of Colonel. Goodwyn and Maxwell, who are still in Bengal as Brigadiers, are therefore now liable at any moment to serve as subordinates to Major-General Macpherson.

32. Colonel Longden was in like manner superseded while holding the important appointment of Adjutant-General of the Bengal Presidency.

33. His predecessor, Colonel Haythorne, was similarly superseded.

34. The Committee are of opinion that these supersessions should be remedied by the adoption of a system of local rank in the grade of Major-General, corresponding with that which formerly prevailed in India, but based upon the dates of commission as Colonel instead of that of Lieutenant-Colonel, as proposed in paragraph 42.

35. The circumstances which have occurred to accelerate the promotion of the Officers of Her Majesty's Indian Army, and to subject the Colonels of the British Army to constant supersession, having thus been brought to notice, the Committee now proceed to the consideration of the means of remedying the evil complained of

36. To interfere with the rule laid down by the Royal Warrant of 15th June, 1864, for the succession of the Colonels of the Indian Forces to the rank of Major-General, does not seem possible. That rule was forced on Her Majesty's Government by the remonstrances of the Officers, and the proceedings in Parliament in connection therewith. It cancelled Regulations which but a short time before had been carefully considered, and specifically fixed by Warrant. The members of an expiring service were pronounced on all sides to have the strongest claims to indulgent consideration, and the privilege of continuing to rise, as before the amalgamation, on their own list, has been distinctly promised to the comparatively few Indian Officers remaining in the Service. To now cancel this assurance appears to the Committee to be impracticable.

37. Had it been provided (in April 1855, when the rank of the Indian Officers was declared by Lord Hardinge to be good in all parts of Her Majesty's dominions), that the rank of the Indian Colonel promoted to Major-General should be local only until his senior as

Colonel of the British Service had been likewise promoted, and had the system of local rank to the British Colonels in India been continued, the difficulty now complained of could not have arisen. Any condition tending to this result is now, however, not to be thought of. On the other hand, to augment the British List of General Officers to such an extent as would completely equalize the promotion in the two Services must be held to be impossible, so great would be the expense which such a measure would entail.

38. Eventually there will be between 90 and 100 General Officers added to the British Establishment,* on account of the Indian Staff Corps. Of these, about one-half will be transferred in a batch, as provided by Article 24 of the Warrant of 3rd February, 1866; and, if the provisions of Article 23 of the same Warrant were to be strictly enforced, the remainder (say 45) would be added from time to time in the order in which the Indian Staff Corps Colonels would have been promoted had they remained on the Indian Establishment, instead of being placed on the Amalgamated List of Colonels of the British Army.

The latter addition would probably commence about the end of the year 1871, and terminate in 1877.

39. Although, for the reasons stated in the latter part of paragraph 37, *complete* equalization of promotion in the two Services cannot at present be secured, the Committee beg to recommend, as a partial amelioration of the present condition of the Colonels of the British Army (including the Staff Corps Colonels on the Amalgamated List), that 45 additional Major-Generals be forthwith created, in anticipation of the promotions (about eight annually) which, under the operation of Article 23 of the Warrant of 3rd February, 1866, would become due to the British Establishment in the years from 1871 to 1877, on account of the Indian Staff Corps.

40. The immediate expense of such a measure (as shown in detail in Appendix D.) amounts to about 32*l.* 4*s.* 6*d.* a-day, or 11,762*l.* 2*s.* 6*d.* a-year. This, however, would only be a temporary charge on Imperial funds, as, probably, in the year 1871, the first eight of these additional General Officers at 25*s.* a-day each, amounting in the aggregate to 3,600*l.* a-year, would become chargeable to Indian revenues, so that, in little more than three years, commencing in 1871, it may be expected that the Imperial funds would be entirely relieved of the proposed additional charge.

41. It may be here mentioned that the diminution of this charge in so short a period as three years arises from the circumstances that while the charge to the Imperial Government for each Colonel promoted, under the recommendation in paragraph 39, amounts to an average of 14*s.* 5*d.* a-day only, being the difference between the half-pay of the promoted Colonel, and the established pay of a General Officer, the credit from the Indian Government for each General Officer, as he is brought on the establishment on account of the Staff Corps, will be 25*s.* a-day.

42. That, simultaneous with these promotions, the dates of the Commissions of all the present Major-Generals of the British Army whose Colonelcies bear date on or after the 28th November, 1854, should be so altered as to place them in the same relative position with the General Officers of the India Army as they held with such Officers in the rank of Colonel.

43. That the Commission of the Major-Generals to be promoted under the recommendation in paragraph 39, and of those who may hereafter be promoted, should also be ante-dated, as recommended in paragraph 42.

44. That in no case should the proposed alteration of dates carry back pay or occasion any Brevet promotion in the lower ranks; nor should the creation of 45 additional Major-Generals, as recommended in paragraph 39, cause any such promotion.

45. That on the promotion to the rank of Major-General of a Colonel of Her Majesty's Indian Army who may be junior as Colonel to any Colonel of the British Army actually serving in India, the latter should have the local rank of Major-General, with corresponding date, so as to enable him to maintain his former seniority.

46. No expense will be occasioned to Imperial funds by the adoption of the local rank of Major-General to Officers of the British Army, as recommended in the preceding paragraph.

47. Appendix E shows, in italics, how the Indian Major-Generals intersect the British Major-Generals, and the extent to which the latter have been superseded by the former.

* There is to be one General Officer for every 28 Officers. There are in the Staff Corps of the three Presidencies (Indian Army List, 1868):—

Officers		2,317
Holding Staff Appointments but not in the Staff Corps:—		
Bengal	267	
Madras	121	
Bombay	98	
	—	486
Total		2,803

48. The process of rectification which has special reference to the Cavalry and Infantry of the Line, will equally apply to the Artillery and Engineers, if supersessions have occurred in either Corps; or should any Colonel of Indian Artillery or Engineers, or of Indian Cavalry or Infantry, have been superseded by a British Colonel of any of the corresponding services respectively, such Colonel will also be entitled to rectification of date.

49. The Appendices D and E have been prepared from data obtained from Hart's Annual Army List and the Indian Army List, the dates therein and the estimated cost of the proposed promotions will, therefore, be subject to correction in the promotion branch of the War Office.

50. If, as the Committee have recommended, 45 Colonels on the British List be at once promoted and added to the establishment of Major-Generals, the following result would be obtained:—

1st. That number of the Senior Colonels will be relieved at once from supersession, including those who have been referred to by name as having held high commands and positions in the Crimea, India, and elsewhere.

2nd. The difference of rank between Colonels of the Indian List and those next or near them on the Amalgamated List, on their becoming Major-Generals, will be shortened from 12 to 9 years.

3rd. The promotion will go on with an Establishment increased by 45 Major-Generals; and when the Major-Generals of the Staff Corps come on the British List, in about three years, as before stated, then promotion will proceed at once on a total increased Establishment of 95 Major-Generals.

51. In conclusion, the Committee would desire to call the attention of the Secretary of State for War to a fact, in their opinion of great importance in the consideration of this question. The Establishment of General Officers of the British Forces is called on to provide for the Officers on the Half-pay List as well as for the Officers on Full-pay, whilst the demands on the Establishment of General Officers fixed for the Indian Officers are confined exclusively to the Colonels of the three Presidencies serving on Full-pay. The Establishment of General Officers in each service having been originally fixed on nearly the same proportion of one General to every 28 *Full-pay* Combatant Officers, no provision has been made for the drain on the British List on account of the Colonels on Half-pay. Hence, in a great degree, the disadvantage at which the Colonels of the British Army are placed; and hence, also, a strong argument in favour of the remedial temporary increase of Establishment the Committee have recommended.

(Signed) C. R. Egerton,
Deputy Adjutant-General.
W. Marvin,
War Office.
G. E. Cochrane,
For the India Office.

War Office,
5th January, 1869.

Appendix A.

My dear Mr. Grant, Horse Guards, 25th March, 1834.

I have had the honour to receive your letter of the 31st January, transmitting, in reference to my official letters of the 31st December, 1832, 19th January, 1833, and 10th January, 1834, two series of propositions, suggested with a view to overcome certain evils alleged to exist on the promotion of the higher ranks of the Company's Army—the one series purporting to emanate from the Chairman and Deputy Chairman, and to be an amendment upon the other.

Having given the whole of the matter contained in these several propositions, and in your observations upon them, my most deliberate attention, and having looked into the voluminous mass of correspondence that has taken place on the subject of the relative advantages and disadvantages of the King's and Company's officers since 1796, I now beg leave to lay before you the following as the result of my best consideration:—

The regulations which govern the promotion of officers in both Services in India have been framed, from time to time, under the joint consideration of the Court of Directors and the Commander-in-Chief for the time being; and although it has not been practicable to prevent the occurrence of some cases of individual hardship, yet every such case has been rectified, as it might best be, when duly brought forward, without any material departure from the general principles under which the promotion in both services has hitherto been governed.

There cannot be any doubt, and in every discussion upon the point it has been fully admitted,

that the King's troops employed in India are an auxiliary force; but it is equally true that it is the duty of the officer entrusted with the command of the King's forces to take care that, whatever arrangement may be made for the advancement and advantage of the Company's officers, the fair claims of the officers of the King's Army are equally considered, in a just participation of all matters regarding military rank, pay, and allowances, whether in garrison or in the field.

The difficulties which have always occurred, and which now again present themselves, to any arrangement that shall give unqualified satisfaction to the officers of both Services, are to be found in the difference of principle under which the system of promotion is respectively governed in each.

In the Army of the East India Company the promotion takes place by seniority, and consequently in an army of so large a size, few, if any, officers can attain to the rank of Major-General until after a very protracted period of service in the subordinate ranks, and when they have reached an age which nearly disqualifies them for active employment; while in the King's Army, under a system of promotion wholly different, that rank has hitherto been attained after a service of less duration, and at a time of life considerably less advanced.

It was in the hopes of removing some part of this inconvenience that the whole system of promotion of both Services underwent a full reconsideration in 1828-9; and it was then agreed that every Lieutenant-Colonel of the East India Company's Service, who should at that time be Commandant of a regiment of Cavalry or Infantry, or battalion of Artillery or Engineers, should be allowed the rank of Colonel by brevet in the territorial possessions of the Company, and that every Lieutenant-Colonel who should in future be appointed Commandant of a regiment or battalion, be also promoted at the same time to the rank of Colonel in India; and in order to provide for the interests of the officers of the King's Army in India, and to take care that their fair claims should not be passed over on such particular occasions, that the local rank of Colonel by brevet should be granted to any Lieutenant-Colonel who should be superseded by a junior officer of the Company's Service, on his nomination to the command of a regiment or battalion serving in the same Presidency.

It was also provided that the officers of the Company's Army should be allowed to participate in the advantages enjoyed by the King's officers for distinguished services in the field, and this is the regulation which now obtains with respect to the points of promotion under consideration.

The very slow rate of promotion under the system of seniority, in the Company's Service, is now felt in a nearly if not an equal ratio in the King's Army, although arising from a different cause—the continuance of peace for a period of 20 years—so that the Lieutenant-Colonels date back to the year 1814, and the Majors to the same year; and it must be evident that no change of regulation could be acquiesced in by me which could have the effect either of superseding or of deteriorating the interests of the King's officers under such discouraging circumstances.

The nature of the different Services necessarily occasions a diversity in the rates of promotion of the officers of each Service respectively; and the employment of the King's Army, dispersed as it is over all parts of the world, consisting as it does of individuals of all classes and descriptions, liable as it is to perpetual variation of numbers and establishments, and to the system of promotion by purchase and sale, renders all comparison between the rates of promotion to the rank of Lieutenant-Colonel, of the officers of the King's Army, with the rate of promotion to the same rank of the officers of any other army, quite useless.

The object of every regulation on the subject of promotion, in regard to the officers of the two Armies, ought therefore to be, as it has ever been, to keep each officer in his relative position with his brother officers of both Services from this rank forwards; and it is a principle long admitted in the Military Service, and which should never on any account be departed from, that officers holding commissions of the same denominations, ought to rank according to seniority of date of that commission.

Allowing every commendation to the Army of the East India Company, to the utmost extent to which its most zealous advocates can desire, and to which that Army has upon every occasion proved itself to be justly entitled, it has never been doubted that the safety of the European dominion in India depends essentially upon the gallantry, efficiency, reputation, honour, and spirit of the European officers and troops, and particularly those in His Majesty's Service.

The Company's Army in India being in fact principals, and that of His Majesty being only auxiliaries, the officers of the Company's Army must necessarily possess many important advantages over those of the King; they naturally fill all the efficient appointments of the General Staff of the Army, and, with few exceptions, all the situations of emolument; and however brilliant may be the services of His Majesty's troops, and however necessary and indeed indispensable in every enterprise of importance, any effort to alter this relative position would only tend to establish it the more firmly, it being rooted in the nature of the political Government—in its separation from that of His Majesty, and in the nature of the service, of the language of the country, and of the climate.

But in whatever view this wide and important subject may be regarded, too much care cannot be taken to uphold, by every practicable and just measure, the spirit of the auxiliary Army, and under no possible circumstances can it ever be permitted that an officer who may have distinguished himself at the head of one of His Majesty's regiments at an important moment, should be superseded by one junior to himself in the rank of Lieutenant-Colonel, either as Colonel, or subsequently as Major-General. Such act of supersession would be quite at variance with the settlement of 1796, and wholly inconsistent with every arrangement and regulation which have been subsequently established.

As a reference has not unfrequently been made to the system of promotion by seniority of the officers of the King's Artillery and Engineers, with a view of assimilating it to the system of

seniority of promotion of the officers in the East India Company's Army, by which a Lieutenant-Colonel becomes a Colonel on succeeding to that rank regimentally, it may be useful to observe in this place, that no just comparative inference can be drawn from this consideration, for the following reasons :—

These services in the King's Army are confined exclusively to their own arm. It very rarely happens that a sufficient body of Engineers or of Artillery is employed to give occasion for the active employment of an officer of the rank of Colonel. If the body of Artillery or of Engineers is large, the nature of the service of those arms, the horses and the matériel which must be sent with that body, generally require the employment of a General Officer of those arms, and in all probability the service of such bodies of Artillery and Engineers would be with an Army with which there would be numerous General Officers of all ranks.

The supersession, therefore, by the officers of the Artillery and Engineers of the rank of Lieutenant-Colonel of those of the Army of the Line in His Majesty's Service cannot occasion frequent or even inconvenient collision, as would most undoubtedly be the case if the Lieutenant-Colonels of the King's Army in India were to be superseded by the Lieutenant-Colonels of the Company's regiments of Artillery and Engineers on their respective promotions regimentally to the command of corps.

The only safe and unerring principle on which the system of promotion can be soundly and justly regulated as between the King's and the Company's officers in India, appears to be that which has been already alluded to, that under no possible circumstances can it be permitted that a Lieutenant-Colonel in the King's Service should be superseded by one junior to himself in the rank of Lieutenant-Colonel, or Colonel, or subsequently as Major-General.

It must here be observed, that it was a direct violation of this principle that induced me to call your attention to the supersession of Colonel Thomas, of His Majesty's 20th Regiment, by Colonel Gilbert, of the Company's Service, an officer not only junior to Colonel Thomas in the Army, and superseding him in military rank, but who by such act of supersession was placed in command of the division in which the regiment of Colonel Thomas was actually serving.

As this principle appears to be the only safe rule upon which, as General Commanding-in-Chief, I can rest my conduct in the arrangement of all Regulations regarding the promotion of King's officers in India, I propose to adopt it as the foundation of the detailed discussions upon each of the propositions which you have forwarded.

There is one point in the propositions in each of the projects which must, however, be first adverted to, as it cannot be passed over without a more particular notice, and this is, that in which it is proposed to give a Colonel of the King's Army a pecuniary consideration on his being withdrawn from active duty, to avoid a collision; or, in other words, to pay him for the endurance of a military degradation. In all that has been said throughout the voluminous discussions which have taken place upon the subject of military promotions in India since 1786, the ruling principle has been to uphold the position of the King's officers, that they might not suffer in any collision of interests with the officers of the Company's Army in their character or military dignity, and thus to maintain them in the enjoyment of their full share of just and reasonable professional emoluments and advantages; but it could never be contemplated that the personal, pecuniary, and private interests of any individual should be sustained at the expense of the general and infinitely more important interests of the King's Military Service; and were this proposition to be adopted, that a Colonel of the King's Army could be withdrawn from active duty in favour of a junior Colonel in the Company's Army, and a sum of money paid to him as a compensation, the transaction could bear no other construction, in a professional sense, than that he had by such act consented to compromise the prospects of military honour and reputation for the immediate enjoyment of pecuniary advantage, and instead of tending to uphold the character of the King's officers, it must have a direct tendency to the contrary, and to deteriorate them individually and collectively in the estimation of their profession and of their country.

The proposition that such Colonel so superseded should be allowed to remain in India, until otherwise provided for, is liable also to very great objections in another point of view, inasmuch as the one act of supersession in his individual case, would be the cause of an act of injustice to the officers to whose prejudice he might hereafter be posted to a vacancy, and thus the usual and expected course of promotion, in so far, be impeded.

My object is exactly the same as that avowed by you: "To secure to the officers of each "Service their fair proportion of commands, and in so doing, to remove, in as far as may be "practicable, a fruitful source of jealousy between the two Services;" but this desirable end would not be attained by laying down any precise rule regulating the exact proportion of General Officers to each of the two Services, as such a rule would very soon be found to clash with the military rank of the claimants at each successive promotion or brevet. This end, therefore, can only be secured through the judicious and impartial conduct of the local and higher authorities, and by a close adherence to the principle laid down in the foregoing part of this letter.

With regard to the first proposition, that the General Officers of the Company's Army shall be increased to 90 from a combined list of the senior Colonels of the several Presidencies, and that their commissions shall be of the same validity, and be issued and signed in the same manner as such commissions now are, it must be observed that this measure would be in practice a partial brevet granted to the East India Company's Colonels at the expense of the Colonels of His Majesty's Army; or if it should also be intended to include those Colonels of equal rank in the King's Service, conformably to the principle above laid down, the practical effect must inevitably be, that as there would be a greater number of claimants for the same number of commands, the inconvenience now complained of by the clashing of the interests of the two Services would be increased in a proportionate ratio.

I must likewise remark that this proportion is brought forward at the moment the most unfavourable for its discussion, inasmuch as the Officers of the King's Army appear generally to entertain the apprehension that inattention to the recent recommendation of the Committee of the House of Commons upon Navy and Army Appointments, the system of periodical brevets will no longer be resorted to, and consequently that those who have not yet attained the rank of General Officer have little chance of ever reaching it.

The second proposition depending upon the decision of the first, it is not necessary to enter upon the discussion of it.

The third proposition states, "That the rank of Brigadier-General be continued to be con-"ferrred, as at present, to enable the Indian Government to fill the Division Commands, &c.;" and to this there does not appear to be any objection, provided it be always understood that no supersession of a King's Officer take place, as in the case of Colonel Thomas by Colonel Gilbert, already alluded to, the military principle in all armies being that a Colonel shall not upon the same service be superseded by a junior Colonel.

Upon the fourth proposition there does not appear to be any objection, as far as the King's Officers are concerned, that the rank of Colonel should be given to all Lieutenant-Colonels in India, whenever a junior obtains that rank regimentally, but with this understanding, that when the number of Field Officers may be too small in camp or quarters, Colonels not commanding Brigades will be placed on the Field Officers' roster, adhering of course to the regulation as it now stands, that all King's Lieutenant-Colonels so superseded should receive the brevet of Colonel.

The fifth and sixth propositions, containing the arrangements for the compensation of the Colonels of the King's Service who may happen to be superseded by the effect of any regulation, having been already admitted to, it is unnecessary to say more than that I could not, upon any view of the matter, concur in them.

The seventh proposition, that the number of Brigadier Commands to be held by His Majesty's and the Company's Officers respectively, be in the proportion of one of His Majesty's to four of the Company's, does not appear objectionable, being considered in proportion to the relative strength of the two Armies.

In so far as the King's Officers are concerned, there does not appear to be any objection to the eighth proposition of the Chair:—"That local Colonel's commissions be granted to all Lieu-"tenant-Colonels, whether of the King's or the Company's Service, whose commissions as "Lieutenant-Colonel are of anterior date to the Lieutenant-Colonel's commissions of officers who "have succeeded to regiments under the present system, and that officers of the rank of Colonel, "who have obtained regiments, shall have such an anterior revised date of commission of Colonel "as will place them in the correct relative seniority which they previously held as Lieutenant-"Colonels."

The rank of Colonel granted to a King's Aide-de-camp is permanent Army rank, and entitles him to the advantages belonging to that rank, for all military purposes, wherever he may be employed, according to the date of his commission as Colonel, and the number of Colonels of this description forming so very small a proportion as compared with the whole number of Colonels, that it is not probable that any inconvenience can be found from interference on their part in India.

Having now, I believe, touched upon every material point contained in your letter, and enclosures, I will at once conclude with the expression of my regret, that I have been under the unavoidable necessity of occupying so much of your valuable time and attention.

I have, &c.,

The Right Hon. Charles Grant. (Signed) HILL.

APPENDIX B.

Sir, Head-Quarters, Simla, 13 August, 1865.

I HAVE the honour, with much deference, to solicit the attention of His Royal Highness the Field-Marshal Commanding-in-Chief, to some very important considerations affecting the position of the superior officers of Her Majesty's British forces. Thus, under the operation of the rules of promotion in the several services, the following full Colonels of the British Army now serving in India, viz.:—Colonel T. Williams, C.B.,* 4th Foot; Colonel D. Rainier, 98th Foot; Colonel E. A. Holdich, C.B., 20th Foot; Colonel A. C. Errington, 51st Foot; Colonel S. T. Christie, C.B., 80th Foot; Colonel E. Haythorne, 1st Foot, have been superseded in India by the promotion to the rank of General Officer of Colonels in the local service.†

* Appointed Major-General, with temporary rank, February 1865.

† Colonel T. Williams has been superseded by all Major-Generals on the Indian List between Sir W. Coghlan, and Major-General J. E. Landers, viz., 13, including Major-Generals Showers, C.B., McLeod, and Troup, C.B., Commanding Divisions.

Colonel Rainier, 98th, by all below Major-General Lang, viz., 17, including the above-mentioned Officers Commanding Divisions.

Colonel Holdich, 20th, by all below Major-General Showers, viz., 16, including Major-Generals McLeod and Troup, Commanding Divisions.

Colonel Errington, 51st, by all below Major-General Welchman, viz., 12.

Colonel Christie, 80th, by all below Major General Welchman, viz., 12.

Colonel E. Haythorne, Adjutant-General, by all below Major-General Landers, viz., 6.

2. It is seen that all the Colonels on the Local Lists in India of the year 1856 are now promoted to the effective rank of Major-General.

3. According to the averages of promotion in the British Army, the Colonels of 1854 will probably not have been absorbed in the rank of Major-General till the year 1868.

4. The supersession of the Colonels belonging to Her Majesty's British forces by the Indian local Colonels cannot fail to go on at an accelerated ratio for the following reasons, viz.: that the number of Colonels on the British Lists is immeasurably greater than that in the local Indian Lists, in proportion to the number of General Officers respectively borne on the two establishments. Thus the number of Generals of the different degrees is 272, in the British Service; the number of Colonels, by June Army List, is 394; the number of Generals on the Local List is 208; the number of Colonels, by the last Bengal Army List, is 123.

5. It has always been believed that the inequality to which attention has been invited, was in former times forbidden, under the orders of His late Majesty King William IV.

6. For some years the practice obtained of promoting all officers to the local rank of Major-General in India, who were immediately senior to officers of the Indian Service, who had been promoted by the Queen's Brevet.

7. In 1854, a new system of promotion was established, the old General Brevet being abolished. After some correspondence, it was ruled by the late Lord Hardinge, when Commanding-in-Chief in England, that, as a consequence of the new system of promotion, the practice above alluded to, known under the name of Fane promotion of Major-Generals, should no longer be permitted to exist.

8. Appeals against supersession have from time to time been made by Colonels of the British Service serving in India, which have been set aside under the ruling above quoted.

9. The question might therefore be allowed to rest, but for the fact that lately the Right Honourable the Secretary of State for India has, with regard to all other ranks, declared the very principle on the assertion of which the quondam promotion of Fane Major-Generals rested; and, secondly, the frequent supersession of British Colonels which is now proceeding.

10. Thus it is now seen (*vide* Secretary of State's Despatch, D/ 17th June, 1864) that Lieutenant-Colonels, Majors, Captains, and Lieutenants, are promoted in the local Gazettes in India, to put them on a par in India with officers who obtained rank under the Staff Corps Warrant.

11. This having thus been practically asserted, with officers of inferior degree, the inquiry is now made by the old Colonels serving in India, whether the like principle should not also be applied in the case of Line Colonels who have been superseded by Major-Generals of the Indian Service.

12. The argument against this is, that the Indian Service is not the only one which presents a separate list of promotion, entailing such effects. Thus it is maintained that the Royal Artillery and Royal Marines being on separate Lists, occasional supersession of the Infantry and Cavalry Colonels takes place with regard to those branches of the Service, and *vice versâ*.

13. It is then argued that, if it be not objected to in those cases, there can be no reason for making an attempt to set aside the inequality in the case of the Indian officers.

14. In the first place, it may be observed, in answer to this argument, that it was always understood in the Army at large that it had been distinctly stipulated, when the rank of General was granted to the Indian officers, that the concession should not in any manner prejudice the condition of officers of like standing belonging to the Royal Army.

15. But, secondly, there is a further reason the analogy suggested by the Royal Artillery and Royal Marine Services does not stand the test of examination. The officers of those branches of the Service do not generally come into contact with Cavalry and Infantry officers.

16. Out of India, the ordinary divisional and brigade commands do not fall to them, whether in war or in time of peace.

17. In India, on the other hand, the Indian Major-Generals, who are now superseding the Colonels of the British Army in considerable numbers, will most assuredly take command of the latter as Generals of Divisions in the several Indian Presidencies, the very result being thus produced, against which, as we know, it was deemed formerly necessary to guard.

18. With respect, then, to the principle adopted for other ranks, I would venture to intimate for the general consideration of His Royal Highness, that no good reason can be assigned for making exception with regard to the particular rank of Major-General.

19. It has apeared to me, therefore, the subject would seem to me to be one which may be, with propriety, referred for the consideration of His Royal Highness and of the Right Honourable the Secretaries of State for India and War, with a view to the application of the old rule, by which the local rank of Major-General is given to officers having the rank of Colonel, who are superseded by the promotion of officers of the local armies of Bengal, Madras, and Bombay.

20. Supposing the old rule to be re-established, as above suggested, it would appear necessary, with regard to the Indian Service, on the other hand, that if that were to occur, which is apparently impossible from the constitution of the lists of the several armies, viz., the case of a Line Colonel being promoted in the ordinary course to the rank of Major-General, who might be junior to an Indian Colonel, the latter should be promoted locally in India to the rank of Major-General, in order to preserve perfect uniformity and equality between the two Services.

21. It is to be remarked that the rank of Major-General being conferred on Indian officers, not only for India, but for all the world, by the late changes, the state of things to which notice has been attracted is even more serious for the officers of the British Army than was originally contemplated when the remedy above alluded to was applied.

22. It may perhaps be assumed that, in practice generally, the two sets of officers would not come into contact, except in India.

23. The experience of the war of 1855–56 does, however, lead us to believe that in any development of the military resources of Great Britain for European war, this contingency would in all probability take place.

24. The argument contained in this letter would be hardly complete were I to omit to draw the attention of His Royal Highness to another general result of the constitution of the Lists of Indian Field Officers.

25. Thus, owing to the number of Colonels, Lieutenant-Colonels, and Majors being proportionately less to the General Officers as compared with the like ranks in the British Army List, an officer in the former, having been promoted to the rank of Field Officer, runs through the several ranks more rapidly than an officer in the British Service till the rank of General is reached.

26. Officers who became Brevet Majors in 1858 are now Lieutenant-Colonels in ordinary succession in the India Lists.

27. According to the last Royal Annual Army List, it is apparent that there are great numbers of Majors of 1855.

I have, &c.,
(Signed) W. R. MANSFIELD, General,
Commander-in-Chief in India.

P.S.—I would more especially invite your attention to the very important correspondence which took place on the matter of this letter during the command-in-chief of the late Lord Hill. The letter which more particularly lays down principles and rules is that from his Lordship to the President of the Board of Control, dated 25th March, 1834, in which the relative position of the King's Officers and those of the late Honourable East India Company is discussed in the most masterly manner; subsequent to the writing of that letter, took place the correspondence between the late Sir Henry Fane and the Government of India, which resulted in the conferring of the local rank of Major-General on such officers of the King's Service as had been superseded by those of the Honourable Company. I gather that copies of that correspondence must be in existence in your office, and I therefore abstain from sending copies, unless you should wish me to do so.

(Signed) W. R. MANSFIELD.

The Military Secretary,
Horse Guards, London, S.W.

APPENDIX C.

LIST of Colonels of the British Forces serving in *India*, who have been superseded in the Rank of Major-General by their Juniors of the Indian Forces.

Name.	Corps.	Date of Rank as Colonel.	How Employed.
		1858.	
Goodwyn	41st Foot	19th March	Commanding Brigade, Bengal.

Appendix F.

Memorandum by the Duke of Wellington, dated 18th September, 1827.

It appears that previous to the year 1806, the practice prevailed of promoting Officers of the East India Company's Army of the rank of Lieutenant-Colonel to be Colonel of a regiment, and to grant such Officer His Majesty's commission of Colonel on the day of his promotion to be a Colonel of a regiment, thus superseding all the Lieutenant-Colonels of His Majesty's regiments serving in India, as well as those of the Service of the East India Company, who might be senior to the Lieutenant-Colonel of the East India Company's Service so promoted.

This practice was complained of, if I am not mistaken, first by the Officers in the Service of the East India Company in relation to the promotion of the Lieutenant-Colonels of Cavalry to be Colonels of regiments of Cavalry, over the heads of their seniors of other branches of the Service, and of the promotion of the Lieutenant-Colonels of regiments, generally of one establishment, to be Colonels of regiments on that establishment over the heads of their seniors on other establishments, and not by the Officers of His Majesty's regiments till afterwards, if at all.

Indeed I have reason to doubt that the subject was ever complained of by His Majesty's Officers, and I believe that the Regulation of 1806 was founded exclusively upon the complaints of the Officers of the Service of the East India Company of the operation of the letter of the Regulation of 1796 upon the Service of the East India Company.

It is now discovered, however, that the Regulation of 1806, although strictly in conformity with the spirit of the Regulation of 1796, operated injuriously, not so much to the private interests of Officers but to the Service itself, and an anonymous writer has supplied the arguments by which that Regulation is to be overturned.

I admit the truth of all the reasoning upon which the Regulation of 1796 was founded. By this admission I do not intend to pronounce any unqualified approbation of all the details of that Regulation, but I approve of the principle that men holding commissions of the same denomination should rank with each other according to the dates of their several appointments.

The nature of different services necessarily occasions a diversity in the rates of promotion of the Officers of such service respectively; and the anomalous nature of the service of the King's Army, scattered as it is in all parts of the habitable globe, consisting as it does of persons of all classes and descriptions, liable as it is to perpetual variations of numbers and establishments, and the establishment in it of promotion by purchase, of sale to and purchase from half-pay, render all comparison between the rates of promotion to the rank of Lieutenant-Colonel of the Officers of the King's Army with the rate of promotion to the same rank of the Officers of any other Army quite useless.

I would here observe that the Officers of the East India Company's Armies attain the rank of Lieutenant-Colonel after very different periods of service in each of the three Presidencies, and in the three arms in each Presidency, and after very different periods of service at different times. The inequality in the relative rate of promotion to the rank of Lieutenant-Colonel is not therefore confined to the relation of the East India Company's to the King's Army.

From the rank of Lieutenant-Colonel an Officer of the King's Army advances only by rotation, with very trifling exceptions not worthy of discussion in such a paper as this; and the object of the Regulation ought to be to keep each Officer in his relative position with his brother Officers of both Services from this rank forward.

Having commenced by laying down as a principle, that Officers holding commissions of the same denominations ought to rank according to seniority of date of that Commission, having ever manifested the utmost confidence in the native troops of India and in their Officers, I may venture in a paper of this description to say that the safety of the dominion in India depends essentially upon the gallantry, efficiency, reputation, honour, and spirit of the European Officers and troops, and particularly of those in His Majesty's Service.

The Officers in the service of the East India Company have many advantages. They must fill all the efficient situations on the General Staff of the Army, and with few exceptions all the situations of emolument.

The Company's Army in the East Indies are in fact principals, and that of His Majesty only auxiliary, however brilliant the service of His Majesty's troops, and however necessary in every enterprize of importance, and every effort to alter this relation only tends to establish it more firmly. It is founded in the nature of the Political Government in its separation from that of His Majesty's, and in the nature of the service, of the language of the country, and of the climate. But it will not answer to lower the spirit of this Auxiliary Army. An Officer who has distinguished himself at the head of one of His Majesty's regiments, and who may thereby have rendered essential service at an important moment, must not be liable to be superseded by one junior to himself in the rank of Lieutenant-Colonel, either as Colonel, or subsequently as a Major-General. Such supersession would be quite inconsistent with the spirit of the settlement of 1796, and with the letter of that of 1806, called for as it was by the Officers of the East India Company's Army, and not by that of the King.

The anonymous writer refers to the state of the promotion of the Corps of Royal Artillery and Engineers under the Ordnance; and because the Lieutenant-Colonels of these corps are promoted regimentally to the rank of Colonel as vacancies occur in these corps respectively, without reference to their relative position in the General Army List, he contends that the same measure of promotion ought to be adopted in each of the Armies under the three Presidencies in India.

The anonymous writer, however, is not possibly aware, and at all events has not mentioned that the Officers of the Artillery and Engineers are prevented by custom, if not by positive Regulation from being employed in the General Command of His Majesty's troops.

Their services are confined exclusively to their own arm. It happens but seldom that a sufficient body of Engineers or Artillery is employed to give occasion for the active employment of an Officer of the rank of Colonel. If the body of Artillery or of Engineers is large, the nature of the service of those arms, the horses, and the material which must be sent with such body, generally require the employment of a General Officer of those arms; and in all probability the service of such bodies of Artillery and Engineers would be with an Army with which there would be General Officers of all ranks.

These supersessions then of the Officers of the Artillery and Engineers of the rank of Lieutenant-Colonel, of those of the Army of the Line cannot occasion daily collisions, as must the supersessions of the Lieutenant-Colonels of the King's regiments in India, by the Lieutenant-Colonels of the Company's regiments, of the same arm, promoted to be Colonels of regiments.

The fact stated by the anonymous writer does not apply to the case, and the reasoning founded upon it is fallacious.

The next point to be considered is the proposal of the President of the Board of Control, viz., that a Brevet of Colonel should be granted by His Majesty to every Lieutenant-Colonel, whether of the King's Service in India or of the Company's Service, after 10 years' service as Lieutenant-Colonels.

The effect of this Brevet would be to promote permanently the Lieutenant-Colonel in the Company's Service, that is to say a Lieutenant-Colonel of the year 1817 would be a Colonel in the Service of the East India Company, and of His Majesty in the year 1827, and he would hereafter be made a Major-General in His Majesty's Service, in the same year with the Officers of His Majesty's Service promoted to be Colonels in the year 1827.

The Lieutenant-Colonel of His Majesty's Service of the year 1817, would equally be made a Colonel in the year 1827; but not in His Majesty's Service generally. His Brevet of Colonel would be applicable to India only, and he would be promoted to a Major-General in His Majesty's Service only, when those Officers should be promoted to that rank, whose Commissions of Lieutenant-Colonel would bear the same date as his of Lieutenant-Colonel.

It may be stated that this Officer would probably not be in India when the supersession in the rank of Major-General would take place, and if he were, His Majesty would have it in his power to apply a remedy.

It must be observed that this remedy must be of the nature of a Local Brevet given to a particular individual which it has been the object of all the Regulations to avoid.

This is not all: the Lieutenant-Colonels of the King's Army first for promotion are those of the year 1812. The plan of the President of the Board of Control would give those serving in India an advance over them of from one to five years.

Every regiment sent to India hereafter in the progress of the relief of the Army in that part of the world, must have its Lieutenant-Colonel promoted accordingly; and I need not point out the expense of this arrangement. It has already been stated that the advance of five years in the promotion of the Lieutenant-Colonels of the East India Company's Army will give them an advance of five years in the promotion to be Major-Generals.

They will be made Major-Generals at the same time with Lieutenant-Colonels of the King's Service of the year 1812.

What is to become of the Lieutenant-Colonels of the King's Service promoted henceforward to be Colonels, *now* bearing commissions of Lieutenant-Colonel of a date prior to 1817? Are they to have their commissions of Colonel antedated when sent to service in India?

Are they likewise to be promoted to be Major-General in India only at the same time with the Officers of the East India Company's Service of the same date of rank, and to be re-called from the command of their regiments when still able to exercise that command with advantage to the public? or are they to be employed with their regiments with the Brevet rank of Colonel, their juniors of the East India Company's Service of the rank of Lieutenant-Colonel, from which all ought to start fairly, according to the spirit of the arrangement of the Regulation of 1796, and according to the letter of that of 1806, serving in the same Army as Major-Generals?

I am certain that the President of the Board of Control will see, that whatever may be the necessity for increasing the number of Colonels and Major-Generals in the East India Company's Army, the scheme will not work better than that proposed by the anonymous writer.

(Signed) W.

APPENDIX G.

EXTRACT from the "London Gazette," of 1st May, 1855.

Memorandum.

Horse Guards,
25th April, 1855.

IN order to remove any doubt which may exist as to the rank and precedence of the Officers of the Honourable East India Company's Service, it is Her Majesty's pleasure that Officers of the Honourable East India Company's Service, whose Commissions shall be signed by authorities duly deputed to do so by Her Majesty, shall have rank and precedence with Officers of Her Majesty's Regular Army, according to the dates of their Commissions, in all parts of Her Majesty's dominions or elsewhere.

APPENDIX E.

MEMORANDUM upon the Supersession of British Officers by Officers of the late Honourable East India Company's Army, by Major-General Sir Percy E. Herbert, M.P.

1. THE Officers of the British Army are at the present time being superseded on a very large scale by their juniors of the Indian Army. This is a grievous professional injury to them, and they claim in justice to be protected from it.

2. So far back as 1807 the Duke of York, then Commander-in-Chief, claimed protection to British Officers serving in India from a similar supersession, although on a smaller scale.

3. The Government of the day took steps to remedy the evil.

4. Later the Duke of Wellington expressed the same views in the plainest language, as later still did Lord Hill, when individual cases of supersession occurred.

5. The evil and injury were always admitted and a remedy attempted.

6. This is a brief recapitulation of what took place on the subject at the time when Officers of the East Indian Army had no military rank west of the Cape of Good Hope, and were consequently in the eye of the law civilians in England.

7. In 1854, during the Russian War, with a view to enable Indian Officers to be employed with the Turkish or other contingent forces alongside of British troops, it was decided to give English rank to those employed, as an assault upon one of them by an English soldier would not have rendered him liable to punishment under martial law for striking an Officer, the Officers of the Indian Army being civilians in the eye of the law, except in Asia or East of the Cape of Good Hope.

8. It was granted, however, as a gracious boon from Her Majesty to the whole Indian Army. It was neither grudged nor complained of by the English Army.

9. In 1858, the Act abolishing the East India Company as the Governing Body of India was passed, and contained the following passage referring to the Officers of the Indian Army:

"And shall be entitled to the like pay, pensions, allowances, and privileges, and the like "advantages as regards promotion and otherwise, as if they had continued in the service of the "said Company."

10. Can it be maintained now, that this guarantee was intended to give the Indian Officers a right to supersede hundreds of senior British Officers, when supersession by a few, or even one individual Officer had been formerly guarded against?

11. Can it be supposed that Her Majesty would have been advised in 1854 to give the Indian Officers at large rank and precedence all over the world with British Officers according to their dates of commissions, at a time when the British Army was actually engaged in an arduous war, if the result of Her gracious boon was to be supersession and injury to Her own Army?

12. Can it be supposed that, if the East India Company had continued to exist as before,

Her Majesty might not have been advised to withdraw that boon rather than allow the continuance of the injury now complained of?

13. Unless all these propositions can be maintained, the terms of the guarantee given by Parliament do not bar the redress of the grievance; and if they are maintained then Parliament must be appealed to to authorise the remedy of the unintentional injustice arising out of the Act of 1858.

14. In 1861 the amalgamation was carried out, but in a manner unfair to the English Army.

15. Instead of amalgamating the Officers as they stood at that date—

General Officers with General Officers,
Colonels with Colonels,

and so on, letting all rise from rank to rank in order of seniority, the amalgamation was made prospective in a great measure, so that Junior Officers of the Indian Army were secured promotion over their seniors in the Queen's Army.

16. In other words Officers in the rank of Colonels were not to be amalgamated until they had passed over their seniors to the rank of Major-General.

17. When they had obtained this advantage, and superseded their seniors, amalgamation was to begin.

18. Possibly this was done under the false impression that the Parliamentary Guarantee required it, as the Indian Officers claimed that under their rules they would obtain quicker promotion than under the English rules. At any rate the injury about to be done to the Queen's Officers appears to have been entirely overlooked.

19. On the part of the English Army it is maintained, that the Parliamentary Guarantee was intended to secure the Indian Officers from being cast adrift or harshly dealt with by the new Indian Government under a Secretary of State, to secure them as good promotion as they had hitherto had and could fairly expect; and that it never was, or could have been the intention of Parliament to give them any claim to supersede the British Officers by hundreds, the more especially, when, as at present, by financial and other arrangements, they are receiving promotion far beyond what they ever used to obtain, or could have ever expected to obtain, under the Government of the East India Company.

20. The accompanying Lists are prepared, (I) showing the respective positions that Officers of the two armies held, according to the dates of their Commissions as Colonel, and (II) the number of the Senior British Officers over whom the Indian Officers now in the rank of Major-General have been promoted.

21. It will be seen that the supersession is wholesale, and it will continue so long as any Officer remains upon the Indian List who was an Officer of the East Indian Company's Army.

22. In three years' time the vacancies on the India List of Major-Generals will partially fall to the lot of the English Officers; but the result will be very trifling for many years to come, the principal result being that Officers on the Indian List will pass over the heads of those Indian Officers who were transferred to the Staff Corps as well as the British Officers who are their seniors.

23. 87 have already passed over their seniors since January 1861.

24. During the next three years, 31 more Indian Colonels will pass over the heads of more than 200 British Colonels senior to themselves.

25. Colonels Farquharson, Corfield, and St. John, in January 1861, superseded 47 Colonels senior to themselves.

26. In 1867 Colonel Bayley superseded 80 of his seniors; Colonel Reid, 101 of his seniors; Colonel Wemyss, 103.

27. In 1868, Colonel Durnsford, and 10 other Indian Colonels superseded senior Colonels in numbers varying in each case from 126 to 179.

28. 10 other Indian Officers, in 1868, superseded from 182 to 213 Colonels senior to themselves.

29. Lastly, Colonel Hamilton, of the Indian Army, in 1869, superseded 215 Officers when he was promoted to the rank of Major-General.

30. If the present system is allowed to continue, Colonel Shakespear and several other Officers of the Indian Army, Colonels of 1866, will, in 1872, supersede from 290 to 300 British Colonels, some of them Colonels of 1858—eight years their seniors in the rank of Colonel. It must be borne in mind that these numbers are exclusive of the Artillery and Engineer Officers of whom Colonel Hamilton superseded about 37.

31. After three years, the Indian Staff Corps Officers will not be promoted out of their turns, and the senior of them on the amalgamated list—Colonel Salmon—will have to wait till the 200 British Colonels mentioned in paragraph 24 are promoted.

32. Allowing for the increase of the British Establishment of General Officers by transfer of Staff Corps Generals from the Indian Establishment, and by casualties on the list of Colonels, this will take from twelve to fourteen years from the present time.

The Report of Colonel Egerton's Committee of last year says fifteen years.

33. In the meanwhile, the Colonels on the Indian List (not Staff Corps) will be promoted to vacancies on the Indian List of Generals, beginning with Colonel Reddie, Colonel of 1866, down to Colonel Lukin, Colonel of 1869,—48 in number.

34. The vacancies to which they will be entitled will be those which occur in the Indian List of General Officers (173 in number) which will, on an average, be 11 a year, less those which will fall to the lot of the English Establishment as above named.

35. At 11 a year, in nine years there will be 99 vacancies, of which the Indian Officers will probably get 44, the English Officers 55.

36. Therefore in 12 or 13 years, Colonel Lukin, a Colonel of 1869, will be promoted to Major-General on the Indian List.

37. Meanwhile twelve years will, at the outside, promote of the English Officers :—

In twelve years at 18 a year	216
Add for casualties in List of Colonels	18
And for vacancies in Indian List filled from British List ..	55
Total	289

38. As shown by the above calculation 289 British Colonels, which will come down to Colonel Calthorpe, a Colonel of 1866.

39. The constant supersession will therefore remain in full force all the next twelve years, and afterwards so long as an Indian List remains.

40. Colonel Lukin will supersede in 1881, about 165 Colonels senior to himself, belonging to the British and Staff Corps Lists, as Colonel Hamilton superseded 215 British Colonels in July 1869; and after 1881 the vacancies on the Indian List of Generals will be filled by Indian Officers who have not yet even attained the rank of Colonel, over the heads of the British and Staff Corps Officers who are Colonels of 1866.

41. The following paragraphs of Colonel Egerton's report demand attention :—

" 26. Supersession previously was only felt in India, but now, it follows the Officers of the " British Army, and affects them wherever they are associated with Officers in the Indian " Service in all parts of Her Majesty's dominions.

" 27. It is now a more grave and substantial injury than at the time Lord Hill so forcibly " condemned it.

" 28. It is not only in respect to the Senior Colonels of the British List that the operation " of the Royal Warrant of 15th June, 1864, has had an injurious effect; but the position and " prospects of those Colonels of the Indian Staff Corps who head the Amalgamated List, and " will have to rise on that List, have, if possible, been more grievously and detrimentally " affected, and their case equally demands a remedy.

" 29. At the present average rate of promotion to the rank of Major-General on the " British List, it will take 15 *years* to promote the Colonel next before Colonel Salmon, a Staff " Corps Officer, who heads the Amalgamated List.

" 30. At the present average rate of promotion to the rank of Major-General on the " Indian List, it will take *three years* to promote the Colonel next before Colonel Salmon on " that List. Hence, under existing arrangements, there will be a difference of 12 years in " the date of rank as Major-General between Colonel Salmon and the next Senior to him on " the Indian List—Colonel Shakespear,—although their commissions *as Colonel* date on the " same day, and the former entered the Service 14 *years before* the latter.

" 38. Eventually there will be between 90 and 100 General Officers added to the British " Establishment, on account of the Indian Staff Corps. Of these, about one-half will be trans- " ferred in a batch, as provided by Article 24 of the Warrant of 3rd February, 1866; and, if " the provisions of Article 23 of the same Warrant were to be strictly enforced, the remainder " (say 45) would be added from time to time in the order in which the Indian Staff Corps " Colonels would have been promoted had they remained on the Indian Establishment, instead " of being placed on the Amalgamated List of Colonels of the British Army.

" The latter addition would probably commence about the end of the year 1871, and " terminate in 1877."

42. There being now 173 Generals on the Indian Establishment, it is shown in the extracts above quoted, that in about the year 1877 the English List of Major-Generals will have been increased by about 90 to 100 Generals of the Indian Service being transferred to it, and will have attained its maximum.

43. The list of Colonels of British Army and Staff Corps will get all the vacancies that occur in that List.

44. There will, however, remain between 70 and 80 Generals on the Indian List, the vacancies on which list will be filled by the Indian Officers who are not on the Staff Corps.

45. These, when they became Colonels, would supersede thier seniors in obtaining the rank of Major-General, and would supersede both Staff Corps and the British Officers.

46. Thus the vacancies on the Indian List of 70 or 80 Generals would in 1881 be filled by officers who, at the present time, have not even attained the rank of Colonel, while 150 officers who are now serving in the British Army or in the Staff Corps, would still be unpromoted to the rank of Major-General.

I am aware that it has been proposed to rectify the position of each Officer in the List of Major-Generals, when he attains that rank.

This would be entirely inadequate as a remedy for the injury complained of, although of course a step in the right direction.

Justice demands that the Officers who have been wrongly promoted to the rank of Major-General shall not attain the rank of Lieut.-General until it comes to their turn in the corrected List of Major-Generals.

That all the superseded Officers receive, without delay, the rank of Major-General.

This will cause a large increased charge for their unattached pay, to be borne either by the English or Indian Treasury.

As the grievance has arisen from arrangements made by the Government of India, the expense of rectifying it ought not to fall upon the English Treasury.

If this increased cost is not granted, the newly promoted Major-Generals, and those promoted out of their turn, must be allowed to hold appointments and commands open to them now as Colonels.

Lastly,—It is only bare justice that all further promotions to the rank of Major-General shall be strictly in accordance with each Officer's seniority in the rank of Colonel, and that no more supersession be permitted.

PERCY E. HERBERT,
Major-General.

The following officers, amongst many others who have received honours for distinguished service, have been superseded :—

Major-General Sir R. Walpole, K.C.B.	by	12	officers.
Major-General Sir A. Lawrence, K.C.B.	„	12	„
Major-General David Russell, C.B.	„	17	„
Major-General Sir H. Shirley, K.C.B.	„	19	„
Major-General Sir H. Storks, G.C.B.	„	18	„
Major-General Sir J. Garvock, K.C.B.	„	21	„
Major-General Sir W. Jones, K.C.B.	„	21	„
Major-General Sir A. Horsford, K.C.B.	„	32	„
Major-General McMurdo, C.B.	„	41	„
Major-General Earl of Longford, K.C.B.	„	47	„
Major-General Sir J. Douglas, K.C.B.	„	43	„
Colonel Sir E. Greathed, K.C.B.	„	35	„
Colonel Sir J. Jones, K.C.B.	„	34	„
Colonel Sir R. Kelly, K.C.B.	„	34	„

And in the Royal Engineers—

Sir John Gordon, K.C.B.	has been superseded	by	2	officers of Engineers.
Sir Frederick Chapman, K.C.B.	„	„	5	„
Sir J. L. Simmonds, K.C.B.	„	„	3	„
Sir W. Denison, K.C.B.	„	„	3	„

Case of Major-General Sir David Wood, K.C.B., of the Royal Artillery.

Promoted to the rank of Colonel in 1855, and C.B. for distinguished service in the field.

Served in India in 1857 and 1858, as Brigadier.

Commanded nine batteries (all the Field Artillery) of the Army under Lord Clyde, that captured Lucknow.

Captain and Brevet Lieut.-Colonel Turner, Captain and Brevet Lieut.-Colonel Tombs, of the Indian Artillery, commanded batteries under his immediate orders.

They have both superseded him in the rank of Major-General in the Amalgamated Corps of Royal Artillery.

He has been superseded by 9 Officers junior to himself, several of them only Brevet Majors when he joined the Army in India as a Colonel.

CASES of Sir John Jones, K.C.B., and Sir E. Greathed, K.C.B.

At the siege of Delhi, in 1857, Sir J. Jones, K.C.B., was Lieutenant-Colonel Commanding the 60th Rifles, and Sir E. H. Greathed, K.C.B., was Major and Brevet Lieut.-Colonel in the 8th Regiment.

Both these officers, who distinguished themselves in that campaign, and who are still only Colonels, have been superseded by Major-General Norman, C.B., of the Indian Army, who was at the siege of Delhi only a Lieutenant in the 31st Bengal Native Infantry, and Assistant Adjutant-General.

Major-General Norman, C.B., entered the Army in the year 1844.

Colonel Sir J. Jones, K.C.B., entered the Army in the year 1828.

Colonel Sir E. H. Greathed entered the Army in the year 1832.

Sir John Jones held the rank of Brigadier-General in 1857-58.

Sir E. Greathed was a Brigadier in 1857-58.

ROYAL ARTILLERY.

I.

COMBINED Seniority List of British and Indian Royal Artillery now serving, according to the dates of their Commissions as Colonel.

NOTE.—To find the number by which a British Colonel has been superseded :—

From the Colonel's name on this List, count the names *in italics* down to and including the last name *in italics* on List II. : the *total* is the number required.

APPENDIX F.

War Office,
3rd November, 1869.

Sir,

I HAVE the honour, by direction of Sir Wm. James, to request that you will cause me to be furnished with a Return of the number of Colonels included in No. 1 List of Cavalry and Infantry—annexed to the Memorandum of Major-General the Right Honourable Sir Percy E. Herbert—who will not be entitled to the Unattached Pay of a Major-General. Also of the number of Colonels of the Cavalry and Infantry, entitled, on their promotion, to the Unattached Pay of a Major-General, who were passed over by Major-General Hamilton of the Indian Army, promoted on 8th May, 1869.

I have, &c.,

The Military Secretary, Horse Guards.

J. MILTON, Secretary.

Horse Guards,
Sir, 4th November, 1869.

In compliance with the request contained in your letter of the 3rd instant, I have the honour to transmit, for the use of the Committee on Army Supersession, a Return of the number of Colonels—included in List No. 1 of Cavalry and Infantry, annexed to the Memorandum of Major-General the Right Honourable Sir Percy Herbert—who will not be entitled to the Unattached Pay of Major-General. I have also to state that 194 is the number of Colonels, of Cavalry and Infantry, entitled on their Promotion to the Unattached Pay of Major-General, who were passed over by Major-General Hamilton, of the Indian Army, at his Promotion, on 8th May, 1869.

I have, &c.,
W. F. Forster.

The Secretary to the Committee
on Army Supersession.

Correction of Major-General Sir P. Herbert's Confidential Lists of Colonels and Major-Generals.

No.	Names.	Reason for Omission of Name.
	Cavalry and Infantry.	
39	G. Dixon, Major-General ..	A Retired Full-Pay Officer, Depôt Battalion, with Honorary Rank.
244	C. Hind, Colonel ..	Not entitled to pay of a General Officer on promotion.
246	T. H. Pearson, ,, ..	Ditto.
249	P. Brown, ,, ..	Ditto.
250	R. Beaumont, ,, ..	Ditto.
252	J. Creagh, ,, ..	Ditto.

409	F. Nott, ,, ..	Ditto.
429	C. Green, ,, ..	Ditto.
441	J. Miller ,, ..	Ditto.

Amalgamated List.

No.	Name.	Reason for Omission of Name.
635	W. Birch, Colonel ..	Retired on Pension, 104th Foot with Honorary Rank of Major-General.

Names Omitted which should be included.

After No. 567. Colonel W. F. Eden, Madras Staff Corps, 18th February, 1868.

After No. 714. Colonel F. A. E. Loch, Bombay Staff Corps, 15th August, 1868.

APPENDIX G.

Notes on a Confidential Memorandum circulated by Major-General Sir Percy Herbert, in regard to the Supersession of British Officers by Officers of the late Honourable East India Company's Army, by Major-General Balfour, Royal (Madras) Artillery.

The Preamble, in regard to the supersession of Officers of the British Army by Officers of the late East India Company's Army, is, I submit, calculated to convey an erroneous impression. Such supersession is of recent date, having only been brought about since the rule of the East India Company ceased, as will be seen by the following explanations :—

I.

1. The rules under which the Officers of the East India Company's Army were serving prior to 1858—when by Act of Parliament the Officers of the Indian Army were made British Officers, and the Army was constituted Her Majesty's Indian Army—prevented supersession of British Officers.

2. It is only in consequence of Regulations passed since the termination of the Company's rule, that more extensive promotions have taken place amongst the Officers of Her Majesty's Indian Army than would have been the case if they had remained in their former position.

3. These changes have, it is true, led to a comparative degree of supersession by some grades of the Indian Army.

4. It is, however, stated in the first paragraph of the Memorandum, that British Officers are superseded on "a very large scale" by their juniors of the Indian Army.

5. A list is annexed of the Officers of the British and Indian Armies, as they ought to stand, by seniority, according to Sir Percy Herbert's views. In that list his own name is placed above those of two Indian Officers, Troup and Baillie, who have attained a higher position than himself on the list of Major-Generals.

6. This is an unfortunate selection for illustrating the supersession suffered by British Officers.

7. Turning to the Army List, I find that all three Officers have commissions as Colonels, dated 28th November, 1854 ; but as Troup and Baillie entered the Army in 1819, before Sir Percy Herbert was born, it can hardly be considered that he has much right to complain of his present position.

8. Sir Percy Herbert entered the Army in 1840, became a Major on 27th May, 1853, a Lieutenant-Colonel on the day following, and attained the rank of Colonel on the 28th November, 1854, within fifteen months after leaving the grade of Captain. Such a case requires no comment. Few Indian Officers have ever had such openings for rising in rank, and but few British Officers attain rank in that rapid way.

Replies to Major-General Balfour's Notes, by Major-General Sir Percy Herbert.

The writer of these Notes takes exception to the Preamble or heading of my memorandum. He says "such supersession is of recent date, having only been brought "about since the rule of the East India Company ceased." In these words he appears to me to admit ample grounds for my claim for the British Officers, inasmuch as he admits that such supersession did not take place while the two Armies were separate, and has arisen now from arrangements made since the Act of Parliament was passed which transferred the Indian Army to the Crown.

Consequently, the unjust advantage which I complain has been given to the Indian Officers can in no way be covered by the Parliamentary guarantee in the Act of 1858, inasmuch as it had no existence at the time of the passing that Act, "having only," to use the writer's own words, "been brought about since the rule of the East India Company "ceased."

I.

1. I agree. "It is only in consequence of regulations passed since the termination of "the Company's rule, that more extensive promotions have taken place amongst the "Officers of Her Majesty's Indian Army than would have been the case if they had "remained in their former position."

2. In this paragraph again my case is admitted, viz.,—that Her Majesty's Government have given exceptional advantages to the Indian Officers to the serious professional injury of all British Officers who held Her Majesty's Commission in 1858.

3. The writer here admits supersession, but does not explain what he means by "a compa-"rative degree of supersession."

5. This paragraph contains an inaccurate statement. I annexed two lists to my Memorandum, one a list of Indian and English Officers as they did stand in the rank of Colonel, the other as they do stand in the rank of Major-General. It is not therefore accurate to say that "a list is annexed of the Officers of the British and "Indian Armies, as they ought to stand by seniority, *according to Sir Percy "Herbert's* views." The lists, as the writer cannot fail to know, were prepared from the Army Lists. The remark which seems to imply that I have improperly placed my name above those of Officers senior to myself, is one which I think the writer will, on further consideration, regret.

7. This paragraph omits to state the fact that Colonels Troup and Baillie were Junior Colonels to myself.

The date of entry into the Army is put forward by the writer *ad captandum*, as he must be aware that it has not as yet ever regulated promotion to the rank of General in either the British or the Indian Army.

8. The writer here refers to me personally, and, after making an inaccurate statement of the promotion I received, uses these words, "Such a case requires no comment."

I find it commented on nevertheless in three previous and in five subsequent paragraphs. He says in Section XII. that my promotion "has been by the aid of "money and influence, aristocratic and political." He gives no authority for that statement.

Even if true, it is entirely irrelevant to the claim that I have undertaken to urge, that hundreds of British Officers, and Officers of the Indian Staff Corps, should not be superseded by their juniors on the Indian List.

To remove misapprehension, I may state that I served from 1840 to 1853 in the 43rd Regiment, when I attained my Majority by purchase in the ordinary course of regimental promotion. I received a Brevet Lieutenant-Colonelcy for service

Notes by Major-General Balfour—*continued.*

9. As regards myself, Sir Percy Herbert considers that I ought to stand nineteenth on the list of Artillery Officers who are Major-Generals, instead of twelfth, and that General St. George ought to stand above me—viz., twelfth—instead of below me, as fourteenth.

10. Our respective claims may be judged of from the following statement :—

I entered the Artillery $2\frac{1}{2}$ years before, and became a First Lieutenant of Artillery one year before, General St. George joined the Artillery Corps; I was a Captain in the Army before he attained the rank of Regimental Second Captain, and became a Field Officer ten years before he reached that rank. It was simply owing to the fact of the gradations in the ranks of the Royal Artillery being more favourable to the regimental rise of the Officers of that Corps than the gradation of the Madras Artillery, that General St. George reached the grade of Lieutenant-Colonel before I did, and consequently became a Colonel before myself.

11. It appears to me therefore, that I have the primary right to complain of supersession, and that my subsequent accidental rise as senior in the list of Major-Generals, has been only the recovery of ground which I lost by General St. George having previously superseded me.

II.

1. In reference to the statement contained in the Memorandum, that so far back as 1807 the Duke of York (then Commander-in-Chief) claimed protection for British Officers from supersession, and that the Government of the day took steps to remedy the evil, I may briefly sketch out the relations that the Officers of the British and Indian Armies have borne to each other, from the earliest period of British rule in India.

2. From the first, the British Officers employed in India demanded priority of rank over Indian Officers, just in the same way as in America they claimed to be the superiors of the "Continentals" such as Washington.

3. Indian Officers of long service and experience thus found themselves superseded by young Officers, fresh from England; so that it was currently said, that a campaign in St. James's Street was more profitable than ten campaigns in India; and innumerable duels took place in consequence of this supersession.

4. In 1788 this state of things was terminated by the rule that the Officers of both Services should rank according to date of commission; but as promotion in India was very backward, old Officers served under young ones.

5. In 1796, the Court of Directors, with the concurrence of the Government of the day, and especially of Pitt and Dundas, formed the Indian Army into Regiments of Cavalry, Artillery, Engineers, and Infantry, and provided for the rise of all Officers through all the different ranks, by seniority, and in succession to vacancies in establishments, from the junior grade in each Regiment to the rank of Regimental Lieutenant-Colonel and Colonel, and thereafter to the Army rank of General.

6. In 1804, the Duke of Wellington (then Sir Arthur Wellesley), put forward a memorandum, stating that Lieutenant-Colonels of the Indian Army passed from the rank of Lieutenant-Colonel to that of Colonel in a shorter time than Officers of the British Army.

7. This was the obvious effect of there being a larger number of Lieutenant-Colonels in the British Army, in proportion to other ranks, than in the Indian Army; besides which the Colonels of the Indian Army were so old before attaining that rank that casualties were many.

8. On the other hand, however, the openings for rising to the grade of Lieutenant-Colonel were more favourable to some British Officers than to those of the Indian Army; and thus, on the whole, Indian Officers had a greater length of service than British Officers before attaining the grade of Lieutenant-Colonel.

9. On Sir Arthur Wellesley's return to England from India, he urged on the attention of the Duke of York the subordination of Indian Officers to British Officers; and the result was, that in 1807, the restrictive measures referred to by Sir Percy Herbert were carried out in the following manner.

Replies by Major-General Sir Percy Herbert—*continued.*

in the Kaffir War, on the 28th of May, 1853, together with several other officers recommended for the like distinction.

While serving with the Army in the Crimea, I was again recommended for promotion, and was made Aide-de-Camp to the Queen, with the rank of Colonel in the Army in June 1855.

In 1858, in order to remedy a grievance caused by the Warrant of 1854, all Lieutenant-Colonels before November 1854 were given the rank of Colonel, and their commissions ante-dated 28th November, 1854.

By this arrangement I was put back to the original place I held as a Lieutenant-Colonel, lost the promotion given me when I was made Aide-de-Camp to the Queen in June 1855, and was more than a hundred steps further removed from the rank of Major-General.

I did not therefore "attain the rank of Colonel in November 1854." And the ante-dating of my commission in 1858 to November 1854 was an injury to me instead of an advantage, as implied by the paragraph under reply.

9. I never "considered" in what position General Balfour ought to be. I made every endeavour to state my case in a general way, and to avoid personal remarks and reflections.

11. Quicker promotion in one regiment than another is not "supersession."

General Balfour has "superseded" General St. George, not "by an accidental rise," but by special advantages given to the Officers of the Indian Army.

II

9. Sir Arthur Wellesley, while in India, and upon his return, protested against the supersession of British by Indian Officers.

The writer gives no authority for the statement in the last paragraph of this section, "that he urged on the attention of the Duke of York, the *subordination* of Indian "Officers to British Officers."

Notes by Major-General Balfour—*continued.*

III.

1. The order of 1807 ruled that, on a vacancy occurring in the fixed number of Regimental Colonels of the Indian Army, the senior Lieutenant-Colonel, instead of succeeding to the vacancy as a substantive Colonel, as had hitherto been the case under the guarantee of 1796, should in future succeed to the regimental vacancy, and bear the designation of *Lieutenant*-Colonel Commandant instead of *Colonel*-Commandant; that is to say, his rank should be Colonel in the regiment, but only Lieutenant-Colonel in the Army.

2. There has been no other instance in any military Service, of Officers being treated in this manner. It is true that the brevet rank system, under which Officers of the British Army bear a higher rank in the Army than in their regiment, is not understood by the French Officers; but the practice of keeping Indian Officers in a lower Army grade than their regimental grade, would have excited more wonder.

3. In the course of years, the effect of this order began to be felt. In 1824, so large a number of the Senior Officers were Lieutenant-Colonels Commandant, that the effective Colonels of the Indian Army were but few, and the Generals fewer.

4. In 1829, after repeated representations, the right of rising to the rank of Army Colonel by regimental seniority as established in 1796, was restored to the Indian Army.

5. In 1834, as stated by Sir Percy Herbert, Lord Hill interfered to interrupt the rise of Indian Officers; and during the three following years measures were ordered, with a view as stated, to regulate the rise of King's and Company's Officers, or rather to stop the promotion of the Indian Officer.

6. In 1837 the rivalry between the two Armies was in a degree put an end to by the following simple expedient:—

7. The rise of Lieutenant-Colonels to the rank of Colonel in India was made dependent, both as regards Queen's and Company's Officers, on the succession to the grade of Regimental Colonel of the senior Lieutenant-Colonel of Bengal Infantry.

8. On that Officer becoming entitled to succeed to a vacancy amongst the Regimental Colonels of Infantry, all other Lieutenant-Colonels throughout India—whether of Queen's or Company's Service—who were senior to that Officer as Lieutenant-Colonel,—also became Colonels.

9. By the operation of this rule some Officers of the Queen's Service attained the rank of Colonel in India whilst still young; and not being in receipt of off-reckonings, they were allowed to remain with their regiments, or to hold Brigade or General Commands, after obtaining the rank of Colonel.

10. Only few Indian Officers derived the same benefit; for, practically, the Colonels of the Indian Army were nearly all Colonels of regiments, who being in receipt of off-reckonings, were disqualified by position, as well as by age, from holding either a regimental or General command.

11. So fully was this equalisation of rank carried out, that I have seen an instance of a Major-General being allowed to retain command of a Queen's regiment, after being advanced to that grade in order to keep pace with Indian Officers, who though juniors as Lieutenant-Colonels had superseded the British Colonel by becoming Major-Generals.

IV.

1. In 1854, the promotion difficulties were revived by a change in the Army system of promotion being ordered for the British Army, and extended to the Indian Army.

2. For many years previous it had been the practice for the Sovereign to advance Officers to higher rank in the Army by issuing general Brevets; whereby Officers of the grades from Lieutenant-General to Captain obtained a step in rank, provided they had held rank in the grade for the period of years specified in the order, as qualifying for advancement.

3. The last general Brevet was issued in June 1854, and was purposely framed on a liberal scale, so as to promote Officers of short standing as Lieutenant-Colonels, to the rank of Colonel; and thus numbers of the higher ranks of Officers were created at one date.

4. This was preparatory to the abolition of the system of rising in this general manner.

Replies by Major-General Sir Percy Herbert—*continued.*

III.

5. In this paragraph the writer has misquoted me, and, I venture to think, has mis-stated the action of Lord Hill.

Lord Hill's letters are doubtless open to the inspection of the Committee.

IV.

Notes by Major-General Balfour—*continued.*

5. In November 1854 the new system came into operation, under which rise in Army rank was granted in succession to vacancies occurring amongst a fixed number of General Officers.

6. In that year (1854) the establishment of Generals was fixed as below :—

Cavalry and Infantry of the Line		234
Ordnance Corps { Royal Artillery 32 / „ Engineers 16 }		48
Total		282
Royal Marines		10
Indian Army		220
Grand Total		512

7. Thus, on a casualty occurring amongst the Generals, the Senior Officers entitled to succeed to the grade of Colonel, Lieutenant-Colonel, Major, and Captain, were respectively advanced a step in rank.

8. It was under the operation of the new conditions on which the first promotions were made, that Sir Percy Herbert, although only a Lieutenant-Colonel of May, 1853, became a Colonel on the 28th November, 1854 ; and General St. George, though he had only attained the rank of Lieutenant-Colonel in February, 1854, became a Colonel on the same date, 28th November, 1854.

V.

It appears, judging from incidental remarks in the Reports on Promotion of the Commissioners of 1854 and 1858, that the number of Generals assigned to the several branches of the Army, had some relation to the number of combatant Officers.

The number of Officers in the Artillery was 692, and for these 32 Generals were allowed ; being a proportion of 1 to 21 Officers.

The Royal Engineer Officers were 336 in number, and for these 16 Generals were allowed, giving also 1 General to 21 Officers.

The number of Officers in the Cavalry and Infantry was 4,833, for whom 234 Generals were allowed, giving nearly the same proportion of 1 to 21 Officers.

For the Indian Army, however, comprising 5,400 Officers, only 220 Generals were allowed, being in the proportion of 1 General to 24 Officers.

Moreover, the distribution of this number of Generals into the three grades was unfavourable to the Indian Army.

In the Marines one-half of the number of Generals allowed were Full Generals and Lieutenant-Generals, and the other half Major-Generals.

The same proportion was observed in the Artillery and Engineers, and a little more favourable in the Cavalry and Infantry of the Line.

In the Indian Army, however, the number of the two superior grades of Generals was only about half that of the Major-Generals, as will be seen by the following Table :—

	Artillery.	Engineers.	Cavalry and Infantry.	Total.	Marines.	Indian Army.
Generals	6	3	50	59	2	25
Lieutenant-Generals ..	10	5	70	85	3	50
Total	16	8	120	144	5	75
Major-Generals	16	8	114	138	5	145
Total	32	16	234	282	10	220

The operation of the more favourable scale on which the grades of the General's rank is fixed for the British Army, will be clearly seen by contrasting the position now occupied by a few Officers, formerly in the Indian Army, with that which they would have held, if they had not been transferred from the Indian to the British Army.

8. In the last paragraph the writer implies that the arrangements of 1858 were beneficial to myself. A reference to the Army Lists will show that the anti-dating of my Commission as Colonel to the 28th of November, 1854, retarded my promotion to the rank of Major-General by about four years, and deprived me of the promotion given me for field service in the Crimea.

V.

No Remarks.

Notes by Major-General Balfour—*continued.*

I find that four Officers of the late Indian Army—Carmichael, Grant, Vivian, and Wyllie—have for seven years past held the rank of Lieutenant-General in the English Army; whereas had they continued on the Indian List they would only have attained that rank some time later. Again, Major-General Hale, who was about a year ago promoted to the rank of Lieutenant-General, would, if still on the Indian List, have stood low down on the List of Major-Generals, and would have had no chance of advancement to the grade of Lieutenant-General within the next few years.

VI.

1. I now proceed to examine the accuracy of Sir Percy Herbert's statement, that no supersession was allowed in the Royal Services after an Officer had once attained the rank of Colonel.

2. According to Hart's Army List it appears, that Sir Percy Herbert was senior as Lieutenant-Colonel to all the 10 Generals of Royal Marines except three, and senior as Colonel to all excepting two; so that he has now been superseded by one full General of Marines, four Lieutenant-Generals, and six Major-Generals.

3. If it be said that the Corps of Royal Marines is an exceptional force, I turn to the old Royal Engineers. In that Corps there are two Lieutenant-Generals and six Major-Generals now senior to Sir Percy Herbert in the list of Generals, who are his juniors in the grade of Lieutenant-Colonel. Five of these have the same date of rank as Colonel as Sir Percy Herbert, but, being junior to him as Lieutenant-Colonel, they necessarily stood below him on the gradation list of Colonels. He has now however been superseded by them in the list of Generals.

4. I can also show that Sir Percy Herbert has been superseded by the old Royal Artillery Officers.

5. It will be seen by the Gradation List that there are 10 Generals of the Artillery now senior to Sir Percy Herbert on the list of Generals, all of whom were his juniors in the grade of Lieutenant-Colonel, and only six of whom had the same date of rank as Colonel.

6. The senior of these 10 Generals of Artillery attained the rank of Major-General three years before Sir Percy Herbert.

7. According to Sir Percy Herbert's theory, of standing in the Gradation List of Generals being regulated by the date of rank as Colonel, I may mention that there is an Officer who entered the Army about the time that Sir Percy Herbert was born, who on this view of the case ought still to be only a Colonel in the Army, instead of standing high on the Gradation List of Major-Generals of the British Army.

8. As regards Major-General Sir D. Wood, of the Royal Artillery (whom Sir Percy Herbert represents to have suffered supersession by Officers of the Indian Army), it will be seen by reference to the Army List, that this Officer has himself superseded a number of British Officers of Infantry and Cavalry, who are senior to him in the rank of Colonel.

9. The case of Major-General Sir F. Chapman, of the Royal Engineers, who is also stated to have suffered supersession by Indian Officers, is an instance of the extent to which supersession takes place in the British Service; this Officer having superseded in the rank of Major-General a number of Officers of the Cavalry, Infantry, and Artillery, who are senior to him in the grades of Lieutenant-Colonel and Colonel.

10. In connection with the recent supersessions of Officers of Infantry and Cavalry by Officers of the Seniority Corps (Artillery, Engineers, and Marines), I would call attention to the supersessions that these Officers suffered in former years, by the Officers who obtained promotion by purchase.

VII.

1. There is an inaccuracy in Sir Percy Herbert's statement which requires to be pointed out.

2. In the 2nd, 3rd, 4th, and 5th paragraphs of the Memorandum, Sir Percy Herbert asserts that the measures adopted in 1807 by the Duke of York, as also those advised by the Duke of Wellington and Lord Hill, and subsequently carried out, were all intended to protect British Officers from supersession similar to that of the present day; and in the last paragraph of his Memorandum he claims that seniority be regulated by the rank of Colonel.

Replies by Major-General Sir Percy Herbert—*continued.*

VI.

1. I am at a loss to discover in my Memorandum the passage to which the writer refers. What I can state is, that prior to the abolition of promotion by general Brevets, no supersession of an Officer, after he had attained the rank of Colonel, was permitted. Since then, by the promotion of Officers to the rank of Major-General on three separate Lists, one for the Engineers, one for the Artillery, one for the Marines, Infantry, and Cavalry, some supersession has taken place; the arrangements made having been disadvantageous to the Officers of the Infantry and Cavalry.

I apprehend that Her Majesty may reconsider that arrangement whenever so advised, and that at any rate it cannot be stated in justification of British Engineer Officers being superseded by Indian Engineer Officers, of British Artillery Officers by Indian Artillery Officers, and of British Officers of Infantry and Cavalry by Indian Officers of those arms, in a far more flagrant degree. Neither does it justify the supersession of the Indian Staff Corps Officers by their juniors on the Indian List.

I beg to draw attention here to the scrupulous care with which the writer of these notes has avoided all reference to the supersession of the Staff Corps Officers by those on the Indian List, which is inevitable under present arrangements, as stated in paragraphs 22, 40, 45, and 46, of my Memorandum.

VII.

1. The writer refers to an inaccuracy in my statement. I think I can explain it.

Prior to 1854, promotion from Lieutenant-Colonel to Colonel, and then to Major-General, was by seniority on one general List for all Branches of both Armies, with very trifling exceptions, to which it is not necessary now to refer.

In 1854, promotion from Lieutenant-Colonel to Colonel was given for certain qualifying services, irrespective of seniority. This new rule extended to all Branches of both Armies.

Promotion from Colonel to Major-General remained, as before, by seniority, the only exception from which rule of seniority arose from the division of the general List of Colonels

Notes by Major-General Balfour—*continued.*

3. On referring to the records of previous days, it will however be seen, that the supersession intended to be guarded against, was in the rank of Lieutenant-Colonel.

4. It was formerly maintained that when once an Officer became a Lieutenant-Colonel, he was placed in a gradation list rising by seniority to Colonel and General and thereby became secure from all supersession, except by the appointment of Lieutenant-Colonels to be Aides-de-Camp to the Queen; and these appointments, being few in number and made with consideration, caused but little inconvenience.

5. This seniority principle was however set aside, on the advice of the Commissioners of 1854 and 1858.

6. It was found that the protection afforded to Officers on obtaining the rank of Lieutenant-Colonel, to rise by seniority to the grade of Colonel and Major-General, worked injuriously to the public service; and that their succeeding to those grades virtually by seniority, was objectionable.

7. On the advice of the Promotion Commission the Queen ordered, that seniority advancement from Lieutenant-Colonel to the rank of Colonel should only follow on three years' qualifying service in certain situations.

8. The period was extended to five years, on the advice of the Commission of 1858, on account of the rapid rise of so many Lieutenant-Colonels to the rank of Colonel. So peculiar, however, were the appointments qualifying for promotion to Colonel after five years' service as Lieutenant-Colonel, that the seniority claim of protection against supersession after reaching the rank of Lieutenant-Colonel, was practically set aside, and some Lieutenant-Colonels were then superseded.

9. It was also recommended by the Commissioners of 1854 and 1858, that Officers should be selected from the grade of Colonel to fill certain appointments, in which they should have the rank of Major-General, and that after a certain period of service this rank should be made permanent.

10. Thus, the claim of rise by seniority after attaining the rank of Lieutenant-Colonel was set aside in the British Army in 1854, and a few years later changes of a sweeping character were made in Her Majesty's Army of India by order of the Imperial Government.

VIII.

The above statement also shows that the arrangement made in 1854 in respect to the number of Generals for the East India Company's Army was not favourable to the Indian Officers. It is only in consequence of the changes subsequently made in the constitution of the Indian Army, that the Officers escaped being superseded to a great extent by the Officers of the British Army; but still, on these latter ultimately suffering some supersession, the cry of protection is at once raised.

It may be useful here to examine into the changes which have led to the supersession of British Officers by Indian Army Officers.

In 1854, when the distribution of General Officers was made, the Indian Army was still the East India Company's Forces. In 1858 the Act was passed, placing the Government and Army of India under the direct rule of the Queen, and they were thenceforward constituted Her Majesty's Indian Government and Her Majesty's Indian Military Forces, instead of being called the Government and Army of the East India Company.

The first change made in the organization of the Indian Army, was in respect to the Indian Artillery.

This branch had since 1796 been officered on an equality with the Infantry and Cavalry of India in respect to grades and numbers of Officers, with a view to prevent jealousies between the Officers of the respective branches of that Army.

In 1858, under orders from Her Majesty's Government, with a view as was stated, to assimilate the Indian Artillery to the Royal Artillery, the rank of Major was abolished by being converted into that of Lieutenant-Colonel, and the rank of second Captain was added. The assimilation in respect to the grades and numbers of Colonels and Lieutenant-Colonels was however withheld.

In 1861, orders emanating from the Imperial Government were sent out to India, directing an entire subversion of the organization of the Indian Army.

into separate Lists for promotion. This division of Lists, although not intended to do so, has naturally led to some cases of supersession; but with this explanation the arguments of the Duke of York, the Duke of Wellington, and Lord Hill, against the supersession by their juniors of Officers in the rank of Lieutenant-Colonel and Colonel, apply equally now to their supersession in the rank of Colonel.

The claim therefore to rise by seniority from the rank of Colonel to Major-General was not set aside in the British Army by the Warrant of 1854.

10. The writer proceeds to say in the last paragraph of Section VII, that a few years later than 1854, "changes of a sweeping character were made in Her Majesty's Army of India by "order of the Imperial Government."

In this paragraph the writer again admits that the grievance of which I complain arises out of changes made since the transfer of the Government of India, and therefore is in no way guaranteed by the Act of 1858.

VIII.

No Remarks.

Notes by Major-General Balfour—*continued.*

The changes then made are now commonly known as the Amalgamation Orders for the British and Indian Armies ; but in point of fact, the separation is now more marked than before.

IX.

The origin of these changes was as follows :—

In 1860, Sir Charles Wood, then Secretary of State for India, entered into communication with Major Norman of the Indian Army, who was at home on leave.

Following on this correspondence came the appointment of a Committee to draw up a plan for the reorganization of the Indian Army. The president, General Lord Hotham, and a majority of the Committee amongst whom was General Sir C. Yorke, a member of the present Committee, belonged to the British Army ; and there were only three Officers of the Indian Army, one of whom was Major Norman.

The report of the Committee was approved by all the British Officers, and, although one of the Indian Officers protested against the scheme, it was adopted by Sir Charles Wood ; and, as already stated, at the beginning of the year 1861 Orders were sent to the Governor-General to carry out the proposed changes.

The supersession that has since taken place is attributable to these orders. It should be observed that Major-General Norman and other Officers have derived great benefits therefrom.

As stated by Sir Percy Herbert, this Officer who was only a Lieutenant in 1857, is now a Major-General, senior to Officers who were Lieutenant-Colonels in that year. Major-General Norman's regimental position is still 4th Captain in the Cadre of the 31st Regiment of Bengal Native Infantry. But he is an Officer who can show service in many battles and actions.

It should be observed that Colonel Wetherall, an Officer of nearly the same standing and service as Colonel Greathead, (the Officer mentioned by Sir Percy Herbert as being now superseded by General Norman,) was a member of the Committee who recommended the changes that have led to supersessions.

The operation of the measures proposed by this Committee ought to have been well understood by the Home Government before any action was taken ; for as far as appears from the records that have been produced, the Orders were issued without consulting the Government of India.

I believe, but it is not shown in the published Official Records, that the changes received the approval of the Horse Guards.

If it be urged that it was impossible to forsee the result of the Orders sent out in 1861, I may mention that it was to some extent foreseen. It was stated before the Commission (of which I was a member) assembled by the Government of India in Calcutta to draw out the Rules for giving effect to the Orders received from England, that the changes were of such a character that the game of leap-frog must commence the moment they came into operation, and that few would see the end of the game. This anticipation has proved correct.

X.

Supersession has been increased by the further changes in the Indian Army that were subsequently to 1861 ordered by the Imperial Government.

As already stated, the Establishment of 220 Generals fixed in 1854 for the Indian Army, was intended to meet the claims of the four Branches (Artillery, Engineers, Cavalry, and Infantry), proceeding on the long established rule, of the senior Army Colonel in either of these Branches succeeding to a vacancy in the grade of General.

The constitution of the Indian Army was changed by the Amalgamation Orders of 1861. By the new rules a large body of Officers were enabled to rise to the rank of Colonel after fixed periods of services, instead of rising, as hitherto, only in succession to vacancies in the fixed Establishment. The rule of the succession of the senior Colonel by seniority to one of the vacancies in the Establishment of 220 Generals was, however, still left in force. That is, the

Replies by Major-General Sir Percy Herbert—*continued.*

IX.

No Remarks.

X.

No Remarks.

succession to vacancies in the fixed Establishment of Generals, continued as before, common to all Branches of the Indian Army.

It became apparent that the rise of the Staff Corps Officers to the grade of General, would be delayed by the Colonels of Artillery and Engineers having this right to succeed to the General's grade; the following arrangements having been ordered, openings were thereby afforded for Colonels of the Staff Corps and Indian Army to become Generals.

On the 1st January, 1862, a Royal Warrant was issued whereby the succession to the grade of General was altered. I have enquired into the history of this Warrant, but with the exception of a pencil memorandum by the late Mr. Sidney Herbert (who was at that time Secretary of State for War) nothing has yet been found on record showing why it was issued. The subsequent Warrant of 15th June, 1864, is mainly a republication of the Warrant of 1862, made with a view to correct a mistake.

The number of Generals supposed to be allowed for the 12 regiments of European Cavalry and Infantry transferred to the British from the Indian Army, was directed by these Warrants to be transferred from the Indian List, to the List of Generals for the Cavalry and Infantry of the British Army, with an addition of one fourth.

It was also directed, that the number of Generals considered to be assigned to the Indian Artillery and Engineers, should be placed on separate lists, and withdrawn from the Indian Lists; a small increase being also allowed.

By these changes the Indian List of Generals was reduced from 220 to 173.

XI.

The operation of these changes will at once be seen by referring to the promotions of Colonels to the rank of General, on the Indian List.

The removal of the Generals of the Artillery and Engineers, European Infantry, and European Cavalry of the Indian Army from the Indian Lists to the Home Lists, proved favourable to Officers of the Staff Corps and Indian Army.

The rapidity of rise to the rank of General from Colonel has in consequence been considerable. For instance, Norman, now a Major-General of half a year's standing, only became a Colonel on the 8th September, 1863; that being the date of his appointment as Aide-de-Camp to the Queen.

In order to show the difference between the rise of Staff Corps Officers and those of the Indian Artillery to the grade of Major-General, I subjoin a Table showing the dates of rank in the several grades, of two Officers of the Staff Corps who stood next to each other in the Indian Gradation List of Colonels, and of two Indian Artillery Officers who were then seniors on that List.

The two Staff Corps Officers are Stewart and Norman; and the Artillery Officers are Simpson, of the Royal (Madras) Artillery, and Johnson, of the Royal (Bengal) Artillery.

	Stewart.	Norman.	Simpson.	Johnson.
2nd Lieutenant or Ensign ..	12 Oct. 1840	1 Mar. 1844	17 June, 1824	10 June, 1842
Lieutenant	3 Jan. 1844	25 Dec. 1847	25 „ „	3 July, 1845
Brevet-Captain	.. ..	1 Mar. 1859	17 „ 1839	10 June, 1857
Captain	1 June 1854	2 Dec. 1860	26 Feb. 1840	23 „ „
Brevet-Major	19 Jan. 1858	3 Dec. 1860	11 Nov. 1851	5 July, „
Major	18 Feb. 1861	1 Mar. 1864	14 Aug. 1855	.. ..
Brevet-Lieut.-Colonel.. ..	20 July, 1858	4 Dec. 1860	23 July, 1858	19 Jan. 1858
Lieut.-Colonel..	12 Oct. 1866	.. ..	27 Aug. „	24 Mar. 1865
Brevet-Colonel	20 July, 1863	8 Sept. 1863	.. ..	19 Jan. 1863
Colonel	.. ..	.. ..	18 Feb. 1861	.. ..
Major-General..	24 Dec. 1868	23 Mar. 1869	11 Dec. 1868	.. ..

It will be observed that three out of these four Officers received Brevet rank for service in the field. Major-General Norman rose from Lieutenant to Lieutenant-Colonel in two days; but still he had at the time a longer total service than Sir P. Herbert could show when he became a Lieutenant-Colonel. But General Simpson rose to the rank of Major-General by regular Regimental and Army succession; but the rise to the grade of Major-General was in these cases very unequal.

XI.

No Remarks.

Notes by Major-General Balfour—*continued.*

The removal of the Indian Artillery and Engineer Officers from the General Indian Gradation List opened out the way for the promotion of the Staff Corps and Indian Officers.

The result is, that Major-General Simpson though senior in the Service to Stewart by 16 years, and, to Norman, by 20 years, and two years senior to both as Colonel, has now been superseded in the rank of General by both; whilst Johnson, though senior to both Stewart and Norman in the grades of Lieutenant-Colonel and Colonel, has no prospect of attaining the grade of General for several years to come. If these two Officers had been kept on the Indian List, both would have been promoted in 1868.

Moreover, Major-General Simpson—the senior of those who were thus superseded by Staff Corps Officers—is of longer service than two full Generals and 14 Major-Generals of the old Royal Artillery.

The above is only one instance of the injury sustained by the Indian Artillery.

According to Hart's Army List, no less than 18 Indian Artillery Officers have been superseded in the rank of Major-General by Staff Corps and Indian Army Colonels, although they had prior dates of commissions in the latter rank.

Had these 18 Colonels of Indian Artillery remained on the Indian List, they would all ere this have succeeded to the rank of Major-General; and would then have vacated their Regimental positions; the Regimental vacancies being filled up by promotions in the respective corps.

The pecuniary loss sustained by the Regimental Officers of Indian Artillery, in consequence of being deprived of these promotions to the grade of General, may be calculated at 15,000*l.* per annum; and the loss that must be sustained by the Regimental Officers whose advancement is thus delayed, before these 18 Officers vacate their positions in the Regiment in consequence of promotions to the rank of Major-General, must be very considerable in a long course of years.

XII.

I cannot close this paper without stating that it appears to me that the question really at issue is protection to the Purchase System; the Officers of Infantry and Cavalry of the British Army can obtain advancement to the rank of Lieutenant-Colonel by means of money, and through other influences.

Major-General Sir Percy Herbert is an instance of influence in securing promotion. It is true, he is a distinguished Officer, and has good Field service to show; but it was not by that service alone, but by the aid of money and influence, aristocratic and political, that he attained rank as Lieutenant-Colonel, and then rose to be Colonel in fewer years than I, by seniority, attained the rank of Regimental Captain.

The rank of Lieutenant-Colonel of Infantry and Cavalry can still be attained by purchase, and advancement to the grade of Colonel is then secured by a few years' service. Sir Percy Herbert claims protection for Officers as in former years in the grades of Colonel when placed in a position to rise by seniority to the grade of General where money and influence can no longer operate.

The seniority or non-purchase Services of England were not however protected in prior years against supersession by Officers in the Purchase Branch. In fact, they are not even now protected; as will be seen in the course of a few years, when the Officers of these Corps will be superseded, if purchase is continued.

The Officers of the Indian Army, who in former years obtained advancement by seniority, suffered from supersession by the purchasing Officers of the British Army.

It now happens that the Indian Army has rules for a class of Officers rising in rank, whereby advancement is secured to these Officers by length of service in different grades.

An Indian Staff Corps Officer is certain of promotion through the grades of Captain, Major, Lieutenant-Colonel, up to Colonel by service in the several grades. The latter rank can be attained in 31 years.

No doubt this is a favourable gradation, but even then an Officer must be 26 years in the service before he obtains the grade of Lieutenant-Colonel; that is, double the time that Sir Percy Herbert required to reach that rank, through the aid of money influence, and Service combined.

XII.

The writer finishes his Notes with a little essay against Promotion by Purchase. He is of course at liberty to take his own view of that system, but it appears to me to be irrelevant to the question at issue, and its introduction has the appearance of an endeavour to withdraw attention from the merits of the case under consideration. The writer is well aware that his argument, had it any value, does not apply to the supersession of the Officers of the British Artillery, British Engineers, or the Indian Staff Corps, in which three Corps the system of Purchase does not exist.

The Purchase system is upheld by those in favour of it as a means of obtaining a sufficient flow of promotion for young, and of retirement for old Officers, to secure efficiency in point of age and activity, for the public service.

The Legislature have it in their power to attain the same result, in a degree, by giving a large amount of retiring pensions. They, however, show no disposition to vote the money.

Whether the system is good or bad, so long as it continues, faith ought to be kept with Officers, in accordance with the rules of promotion under which they entered the service. The transfer to the British Army of a large body of Indian Officers, and subsequently giving to the latter extraordinary promotion, whereby they supersede their seniors in the British Army, involves an injustice and breach of faith to the British Officers, that Her Majesty's Government is bound to rectify.

In drawing up my Memorandum, and in replying to these Notes, I have endeavoured to avoid all personal allusions to individual Officers, or any reflection upon the value of their services, or whether their promotion was fairly earned or not.

I have only mentioned the names of Officers when necessary to illustrate an argument.

General Balfour, in his Notes, repeatedly admits what is sufficient for my case, and which a reference to the Army Lists prove, that the Indian Officers are superseding the British Officers; and, further, that such supersession arises from Regulations made since the passing of the Act of 1858, and can therefore be in no way guaranteed by any Clause in that Act.

PERCY E. HERBERT, Major-General.

Notes by Major-General Balfour—*continued.*

Infantry and Cavalry	275
Old Royal Artillery	32
New Royal Artillery	26
Old Royal Engineers	16
New Royal Engineers	12
Marines	13
Indian Army ..	173
Total ..	547

It is difficult to see how supersession in the grade of Major-General can at present be prevented. There are seven lines of Generals, as entered in the margin, and advancement thereto is guaranteed to the Senior Colonel in each line. But five of these lines are Seniority Corps, one line is mixed partly by seniority and partly by fixed periods of service, and the seventh line is by purchase.

I submit that the remedy for the present grievance about promotion to the rank of Major-General, can only be devised after the buying and selling system of the British Infantry and Cavalry is put an end to.

G. Balfour, Major-General,
Royal (Madras) Artillery.

War Office,
21st Sept., 1869.

APPENDIX H.

Sir, India Office, S.W., 1st September, 1869.

I am directed by the Secretary of State for India in Council to forward, for the information of the Secretary of State for War, two letters* (copies) from Mr. Milton, the Secretary of the Committee lately appointed to consider the relative position of the Colonels of the British and Indian Armies.

2. In one of these letters the Committee ask for a Return, shewing the names and services of the Colonels, Major-Generals, and Lieutenant-Generals of Her Majesty's Indian Forces, who have been superseded by any Officers of Her Majesty's British Forces, since 28th November, 1854, with the dates of their first commissions, their promotion to Lieutenant, and to each higher rank.

3. Upon this demand, the Duke of Argyll desires me to observe that the number of Officers superseded, on the one side or the other, can only be ascertained by a careful impartial comparison of lists of all the Officers of each Service who attained to those grades in either Service since the date mentioned; and that such lists can only be obtained in an authentic form from this Office for the Indian Army, from the War Office for the British Army, that, inasmuch as one very important point to be determined by the Committee itself is the supersession that has taken place on either side—its nature, degree, and consequences. His Grace would propose that it be suggested to the Committee to obtain, in most complete detail, from each Department, all necessary information as to the names, length of service, &c., of Officers, and to deduce the nature and amount of supersession from a careful comparison of those statements.

4. The Duke of Argyll will cause complete statements to be prepared with this view, giving the names, dates of first and all subsequent commissions of every Officer of the Indian Army, who attained the rank of Colonel in that Service since November 1854, and I am to suggest that a similar Return be furnished to the Committee by the War Department, in respect to Officers of the British Service.

5. In the second letter, the Committee request to be furnished with copies of all orders and regulations promulgated by the Government of India, relative to the promotion of Officers of the Indian Army, subsequent to the 2nd August, 1858.

6. They also forward a copy of a memorandum which has been furnished by Major-General Sir Percy E. Herbert, K.C.B., on the subject of such supersession, and request that the Committee may be furnished with a statement of such facts as may be advanced on the part of Officers of Her Majesty's Indian Forces on the other side; and that they may be informed whether the list of Indian Officers therein detailed as having superseded British Officers, is accurate and correct.

7. With regard to the first point, I am instructed to forward, for the information of the Committee, copies of papers, noted below,† bearing upon the subject, and also a copy of the second edition of Cochrane's Code, in which, from page 401, will be found the rules and regulations.

8. With regard to Sir Percy Herbert's paper, I am to observe that the names and dates of rank assigned therein to the Officers of the Indian Army are correct. Those of the British Army, and their relative standing towards the Indian Officers, can only be checked by the War Department.

* Dated 26th August, 1869.
† India G.O. No. 632 of 1864, and No. 808 of 1866.

9. I am further to observe that his Grace has no remark to make on Sir Percy Herbert's paper, but has no doubt that it will be carefully considered in all its bearings by the Committee, on which the interests of the Indian Army are specially represented by the two Officers named by this Department.

10. The Duke of Argyll is desirous that the subject should be impartially considered, with a view to justice being done to all, and has no wish to put forward any statement or argument in favour of one side or the other.

11. A short memorandum upon the subject, prepared some time since in the Military Department of this Office, is forwarded for the information of the Secretary of State for War, and for communication to the Committee, should Mr. Cardwell see fit.

12. I am also to forward, for the same purpose, a very useful paper on the general subject of promotion to the higher grades in the two Services, drawn up in this Office in 1866.

I have, &c.,
(Signed) T. T. Pears, Major-General,
Military Secretary.

The Under Secretary of State for War.

Inclosure 1.

War Office,
26th August, 1869.

Sir,

I am directed by Sir William James, President of the Committee on the Supersession of British Army Officers, to request that you will cause me to be furnished, for the use of the Committee, with a return showing the names and services of the Colonels, Major-Generals, and Lieutenant-Generals, of Her Majesty's Indian Forces, who have been superseded by any officers of Her Majesty's British Forces, since 28th November, 1854, with the dates of their first commissions, and of their promotion to Lieutenant, and to each higher rank.

In the case of any of the above officers who have retired upon full or half-pay, the dates of their retirement and the number of years they have served as Regimental or Staff Officers should be stated.

I have, &c.,
(Signed) J. Milton, Secretary.

The Military Secretary,
India Office.

Inclosure 2.

War Office,
26th August, 1869.

Sir,

I am directed by Sir William James, President of the Committee on the Supersession of British Army Officers, to request that you will furnish me, for the use of the Committee, with copies of all Orders and Regulations promulgated by the Government of India relative to the promotion of officers of the Indian Army subsequent to the 2nd August, 1858.

I am further directed to enclose a copy of a memorandum that has been furnished to the Committee by Major-General Sir Percy E. Herbert, K.C.B., on the subject of such supersession, and to request that you will move his Grace the Secretary of State for India, to cause this Committee to be furnished with a statement of such facts as may be advanced on the part of officers of Her Majesty's Indian Forces on the other side; and that you will further inform me, whether the list of Indian Officers therein detailed as having superseded British Officers, is accurate and correct.

I have, &c.,
(Signed) J. Milton, Secretary.

The Military Secretary,
India Office.

Inclosure 3.

Extract from Despatch of Secretary of State, No. 194, of 17th June, 1864.

51. The measure by which it was intended that some reduction of establishment should be combined with accelerated promotion has been attended with unequal effect in the several presidencies, and it appears necessary that the inequality should be rectified.

In 1861 the establishment of Regimental Lieutenant-Colonels at the three presidencies was as follows:—

	Cavalry.	Infantry.
Bengal	10	80
Madras	8	58
Bombay	3	35

52. It appears that the officers of the rank of Lieutenant-Colonels accepted the annuities in 1861 in varying proportions for the several presidencies, and that their present relative numbers, including the names of officers of the Staff Corps and new line regiments, vary accordingly, viz., in—

	Cavalry.	Infantry.
Bengal	7	59
Madras	5	39
Bombay	3	23

exclusive of General Officers, who are supernumeraries. It has been determined to apply to the presidencies of Madras and Bombay the same proportionate reduction of officers of this rank as has been effected in Bengal by the annuities, so that the establishment of Lieutenant-Colonels of cavalry and infantry in the three presidencies shall stand hereafter as follows:—

	Cavalry.	Infantry.
Bengal	7	59
Madras	6	43
Bombay	3	26

such establishment being exclusive of Lieutenant-Colonels having the rank of General Officer.

53. I have now to notice the three subjects of complaint which the Commission have considered to be well founded. These are—

1st. The supersession of regimental officers by the promotion of their brother officers under the Staff Corps rules.

2nd. The retention on the cadres of native regiments of the names of officers transferred to the new line regiments; and,

3rd. The arrangements laid down in the Royal Warrant of 1st January, 1862 (as far as they affect the officers of cavalry and infantry of the Indian Army), for regulating the promotion of Colonels of the Indian Army, of date subsequent to the 17th February, 1861, to the rank of General Officer.

54. The Commission are unanimous upon two, and those the most material, of these three points, and Her Majesty's Government, although their own views may not be changed, are, nevertheless, prepared to accept the opinion of the Commission on these questions, and have given their most careful attention to the various measures that have been suggested for meeting and remedying the grievances which, in the opinion of the Commission, appear to be well founded.

55. With respect to the second of the above three complaints, considered by only a majority of the Commission to be well founded, Her Majesty's Government have determined, in deference to the opinion of the majority, that the names of the officers who joined the new line regiments from native cavalry and infantry, including the cadres of the 4th and 5th Regiments of European cavalry, and of the 4th, 5th, and 6th Regiments of European infantry in Bengal, which were formed from native regiments, shall be removed from the cadres of their former regiments, and that promotions shall be made in their places.

These promotions will date from the 18th of February, 1861.

56. The third of the complaints recognized by the Commission as well founded, is the proposed amalgamation of the list of Colonels of the British and Indian Armies, by which it is considered that the advancement of the Indian Officers to the rank of General Officer would be unduly retarded.

57. The effects of the Royal Warrant of the 1st January, 1862, by which the arrangements of the future amalgamation of the field officers of the British and Indian Armies were laid down, is altogether prospective. No promotions have yet been made under that warrant, and there is no difficulty in altering this arrangement.

58. Her Majesty's Government have, therefore, determined so far to modify the provisions of that warrant as to retain the whole of the officers of the cavalry and infantry of the Indian Army on the general list of that service, as before, for promotion to the rank of General Officer.

59. With regard to the promotion of officers of artillery and engineers to the rank of Major-General, the Commission have declared themselves unable to determine the effect produced by the Royal Warrant of 1st January, 1862, upon the prospects which such of these officers as were not Colonels before the amalgamation would have of becoming General Officer; but they state that the change will ultimately, to a small extent, be beneficial to the Ordnance Corps.

60. It is desirable that the officers of these corps, which have become united to the corps of Royal Artillery and Engineers, should as soon as practicable be withdrawn from the list of the Indian Army and placed on separate lists, as is the case with those of the old Royal Corps, who rise to the rank of Major-General on separate lists. It has been determined, therefore, to give to each branch of the Ordnance Corps in India a separate establishment of General Officers, calculated in the same proportion as that which governs the establishment of General Officers of the old Royal Artillery and Engineers.

61. According to this rule, there will be ultimately 26 General Officers allotted to the Indian Artillery, 12 to the Engineers.

62. All artillery and engineer officers, being Colonels in the Army of date prior to 18th February, 1861, will continues to rise on the general list of the Indian Army.

63. Officers of those corps who attain the rank of Colonel in the Army on or after the 18th February, 1861, will rise on the separate lists above referred to towards the allotted establishment of General Officers of each corps.

64. As regards the field officers of the Staff Corps, it is most desirable that they should be brought hereafter on to the general list of the British Army, and that this should be effected with the least possible disturbance of the present rate of promotion in either Service, and it has been determined therefore, to bring on the list of the British Army all Colonels on the Staff Corps whose dates of commissions as Lieutenant-Colonel are subsequent to the 17th February, 1861, leaving all those who attained the rank of Lieutenant-Colonel prior to the formation of those corps to rise to the rank of General Officer on the Indian list. In these measures His Royal Highness the Field-Marshal Commanding-in-Chief has concurred, and a warrant for carrying them into effect, has been submitted to and approved by Her Majesty. I enclose a copy for your information.

Dated 15th June, 1864.

65. It only remains to consider the first of the above three complaints. In the opinion of the Commission, the extensive promotion made under the Staff Corps rules unnecessarily gave superior rank to many of the Indian officers selected for those corps, and caused extensive supersession to the officers remaining with their regiments.

66. It is evident that a complete remedy for this supersession in army rank must be found either in the withdrawal of the rank given to the Staff Corps officers, or in granting such army rank to the officers of the Indian Army as shall restore them to their relative position, as regards the Staff Corps officers, which they held before the formation of those corps.

67. Her Majesty's Government would have been very reluctant to adopt the first of these two courses, which must have been productive of much embarrassment and disappointment to a very large class of deserving officers, while the replacing of those officers in their regiments would not have been without its disadvantages, even to the complainants themselves.

68. It has been considered, therefore, that the only satisfactory course open to the Government is to confer upon the officers of the Indian Army generally, such army rank as shall entirely remove all ground for complaint upon this head, by restoring to all who had been superseded the relative position, as regards the Staff Corps officers, which they held before the formation of those corps.

69. Her Majesty's Government believe that the object in view can be effectually attained by an extension of a system which has for many years existed in India of giving brevet rank by length of service, heretofore applicable only to the promotion of subalterns, and by granting to the officers of the Indian Service army rank under the following rules, the adoption of which has, with the concurrence of His Royal Highness the Field-Marshal Commanding-in-Chief, been determined upon, viz.:—

That all officers whose commissions bear date on or before the 18th February, 1849, shall be promoted to the rank of Captain by brevet.

All officers whose first commissions bear date on or prior to 18th February, 1841, shall be promoted to the rank of Major by brevet; and

All officers whose first commissions bear date on or prior to 18th February, 1835, shall be promoted to the rank of Lieutenant-Colonel by brevet; all such promotions to bear date 18th February, 1861.

After the 18th February, 1861, officers of the several staff corps, and of Her Majesty's Indian Army generally, shall be granted brevet rank under the following regulations:—

After 12 years' standing in the Army from date of first commission, to be Captains; after 20 years', Majors; after 26 years', Lieutenant-Colonels.

On and after the 18th February, 1866, all officers who have served 31 years on full pay, five of which shall have been in the grade of Lieutenant-Colonel, to be promoted to the rank of Colonel by brevet.

70. His Royal Highness the Field-Marshal Commanding-in-Chief has expressed his intention of recommending to Her Majesty that the officers of the British Army serving in India, including the Ordnance Corps, shall have army local rank in India conferred upon them after precisely the same periods of service and under the same rules, special provision being also made in cases where line and Indian officers may serve together elsewhere.

71. It is to be understood that the system of promotion to brevet rank now introduced, will cease in its application to the several grades of the Army on the extinction of those grades among the officers of the Indian Army. Thus, when the whole of the Lieutenants of the Indian Army shall have been promoted to the rank of Captain, the promotion of officers in the Staff Corps to the brevet rank of Captain under the above rule will be discontinued, and so on with the higher grades.

72. Her Majesty's Government have thus endeavoured fairly to meet the complaints which have been addressed either to Parliament or to the Government, and the measures which they have adopted, although not free from some objection, remove the three cases of grievances which the Commissioners reported to be well founded. Her Majesty's Government, however, being anxious to extend to the officers of the Indian Army every boon which can be given consistently with fairness to other branches of Her Majesty's service, and without imposing any undue charges on the revenues of India, have determined on adopting a further measure which will be attended with considerable benefit to the Indian officers.

73. Your Government will have observed that one of the principal complaints made by the officers of the Indian Army related to the retention on the cadres of regiments of the names of officers who had joined the several Staff Corps.

74. The Commission do not consider that this arrangement, necessary as it was, from the circumstances of the case, was an infringement of the parliamentary guarantee.

75. Irrespective of the very great expense which would have been involved in the opposite course, *i.e.*, that of removing those names, and making promotions in their places, a serious objection presented itself, in the very unequal promotion that would have been given in different regiments.

76. The latter objection does not apply to the removal of the names of officers above the rank of Major from the general regimental list of the Indian Armies, and Her Majesty's Government have resolved that the names of officers of the Staff Corps and new line regiments shall on coming into the position of Regimental Lieutenant-Colonel on those lists, be struck out, and that promotion shall be made in their places.

77. Such promotion will be equably distributed, instead of operating unfairly in different regiments and, although some additional expense will be thus thrown upon the finances of India, the amount will not be very serious.

78. Her Majesty's Government have not overlooked the large increase which this measure will make in the number of officers of the higher ranks serving in India. It is impossible, however, that any measure which accelerates promotion should not have this effect; and Her Majesty's Government are glad to give this additional proof of the estimation in which they hold the services of the officers of the Indian Armies.

79. In carrying out this resolution it will be necessary to remove from the list of Colonels, with Colonel's allowance, the several officers who have been transferred to the new line regiments, making promotion in their room on the principle laid down in my despatch, No. 320, dated 10th August, 1861, pars. 17 and 18, and in like manner to strike out the names of all officers of the Staff Corps and the new line regiments now borne in italics, upon the list of Regimental Lieutenant-

Colonels of cavalry and infantry in the three presidencies, making promotion in their places up to the establishment laid down in a preceding para. (52). In making promotion in future from the list of Majors to that of Lieutenant-Colonel, the name of every Staff Corps officer, on coming on the list of Regimental Lieutenant-Colonels, will be struck out and promotion made in his place.

Para. 52. Para. 55. Para. 69. Para. 79.

80. You will give the necessary orders for making the arrangements for the prescribed establishment of Lieutenant-Colonels for the three presidencies; for the promotions in the cadres of native regiments, from which officers have joined the new line regiments; for the promotions to brevet rank of the officers of the Indian Army and of the several Staff Corps; and for removing from the list of Colonels with Colonel's allowance, the names of the several officers who have been transferred to the new line regiments, as well as those of all officers of the Staff Corps and new line regiments now borne in italics on the list of Regimental Lieutenant-Colonels of the three presidencies, and you will cause the necessary promotions to be made in connection with these arrangements, and submitted to me for Her Majesty's approval.

81. With this measure, the arrangements as regards the officers of the Indian Army will be closed. The advantages which have been conferred upon the majority of those officers have already been pointed out, and it cannot be doubted that, under the system now established, the officers of the Indian Army will, for the most part, attain to the several regimental grades, including that of Colonel with Colonel's allowance, in a shorter period of service than they would have done had the several Staff Corps not been formed, and had no change in the constitution of the Indian Army taken place. Her Majesty's Government trust that the officers who are affected by these changes will feel that, whilst a reduction of the Indian Army was indispensable, and a regard for the finances of the Indian Empire was an imperative duty, neither of these considerations have prevented the Government from showing that regard for their interests which the gallantry and services of the armies of India deserved.

[G.O., August 4, 1864, No. 632.]

Inclosure 4.

Military. No. 159.

General Orders by the Governor in Council.

Fort St. George,
26th September, 1866.

No. 808 of 1866.

His Excellency the Governor-General of India in Council is pleased to direct the publication, for general information, of the following despatches, received from the Right Honourable the Secretary of State for India:—

India Office, London,
Sir, 8th August, 1866.

Para. 1.

With his Despatch, No. 194, of the 17th June, 1864, Sir C. Wood forwarded, for the information of your Excellency's Government, a copy of the report of a Royal Commission, of which Lord Cranworth was president, and which had been appointed for the purpose of enquiring into certain complaints which had been made by officers of the Indian Army, to the effect that the measures recently adopted by Her Majesty's Government in relation to that Army had been in violation of the assurance of Parliament contained in certain clauses of the Acts 21 and 22 Vic., cap. 106, and 23 and 24 Vic., cap. 100.

2. Your Excellency was at the same time informed of the steps which Her Majesty's Government had taken in consequence of the opinion expressed by the Commissioners in their report.

3. The Commission necessarily turned, in the first instance, to a consideration of the nature and extent of the Parliamentary guarantee and upon that subject expressed themselves in the following terms:—

Para. 34.

"In considering this subject, we must begin by assuming that the word 'entitled' cannot be "understood as referring to rights capable of being enforced in a court of justice. If any such rights "exist, no opinion we may express, can or ought to affect them. We propose, therefore, to assume "that the officers had not against the Company, and have not against the Crown, any such rights. "And the question is, what, on that assumption, is the proper interpretation to be put on the language "of the Act. It could not have been intended to prevent the Crown, if in the interests of India and "of the Empire at large it should deem it necessary, from reducing the numbers of the Indian Army, "or altering its organization. It would have been in the power of the Company to make such reduc-"tions and charges, and a similar power was transferred to the Crown. All we can understand Par-"liament to have guaranteed to the officers is, that in making any such reductions, their interests "should as little as possible be interfered with, and that in any change of organization, the Crown "should, as no doubt the Company would have done, preserve all the rules as to pay, pension, "allowances and privileges, and the like advantages as regards promotion and otherwise, which "existed at the time the Act was passed; or if in any case that should be impossible, then that some "counter-balancing benefit should be given to compensate any advantage which it might be impossible "to retain. When once we have come to the conclusion that what Parliament meant to guarantee "was not a strict legal right, capable of being enforced in a court of justice, we are unavoidably, "from the nature of the subject matter, obliged to adopt less definite principles of construction than "those by which Acts of Parliament are generally to be interpreted. We must consider the language "of the Act in connexion with the subject with which it was dealing, and in that spirit we now proceed "to consider the several memorials referred to us by Your Majesty."

4. The several complaints made by the officers of the Indian Army were classed by the Commission under 13 heads, and they reported that—

In eight cases there had been no infringement of the guarantee.

In three there had been, and in two there might hereafter prove to be an infringement of it.

5. The three measures which that Commission reported to have involved infringements guarantee, were—

1st.—The supersession of regimental officers by the promotion of their brother officers under the Staff of the Corps rules;

2nd.—The retention on the cadres of native regiments of the names of officers transferred to the new line regiments; and

3rd.—The arrangements laid down in the Royal Warrant of 1st January, 1862 (as far as they affect officers of Cavalry and Infantry of the Indian Army) for regulating the promotion of Colonels of the Indian Army of date subsequent to the 17th February, 1861, to the rank of General Officer.

6. The two which they considered to be doubtful in their effect were—

1st.—The regulation by which 12 years is made the period of service in the grade of Lieutenant-Colonel; and

2nd.—The reduction of the number of regimental Lieutenant-Colonels by making promotion in succession to one-half only of the officers of that rank who accepted the special annuities offered to them on retirement in 1861.

7. The measures which were adopted with a view of directly remedying the above declared infringements of the guarantee, were as follows:—

1st.—Placing the officers of the several Staff Corps and of the Indian Army, upon a footing of equality in respect of promotion in Army rank by the introduction of a rule of promotion applicable alike to officers of the Indian Army and of the Staff Corps, by which all officers would obtain brevet rank in the several grades upon completion of certain fixed periods of service (from the date of first Commission), such rule to take effect retrospectively from the 18th February, 1861—the date of formation of the Staff Corps;

2nd.—The removal from the cadres of native regiments of the names of those officers who had joined the new line regiments, promotion being made in their places;

3rd.—Extensive modifications in the Warrant of 1st January, 1869, for regulating the promotion of Colonels in the Indian Army.

8. The above measures afforded, in the opinion of Her Majesty's Government, a direct remedy for those complaints of a breach of the Parliamentary guarantee which had been reported by Lord Cranworth's Commission to be well founded, and in addition to these, and with a view to afford compensation to to the officers of the Army for any possible injury that they might sustain in their prospective promotion, a great and permanent impetus was given to regimental promotion in the three Armies (which had been already greatly accelerated by the grant of special annuities to about 300 officers on retirement), by the adoption of a rule that the names of all officers of the Staff Corps should, on attaining the position of Lieutenant-Colonel on the general (regimental) list of the several presidencies, be struck off and promotion made in their places. At the same time, certain additions were made to the revised establishment of regimental Lieutenant-Colonels in Madras and Bombay.

9. The beneficial effects of the removal of Lieutenant-Colonels from the general list, has been already very sensibly felt in the impulse which it has given to promotion among the officers of the Indian Army.

10. Upon these measures, which were duly carried out by your Excellency's Government, your Excellency observed in your Despatch of 8th November, 1864:—

"It is scarcely possible that extensive changes in the Army should ever be made without "unfavourably affecting the position of some individuals relatively, *i.e.*, as compared with that of some "others, and the instance in question is no exception to this rule. But we think there can be "no doubt that, by the measures ordered in your Despatch, substantial hardship in the matter of "promotion is avoided."

11. On the same occasion, his Excellency the Commander-in-Chief in India, Sir Hugh Rose, made the following observations:—

"Under the measures directed by the Right Honourable the Secretary of State, the chief cause "of complaint, as frequently brought to the notice of Government by His Excellency, *viz.*, 'the "supersession of regimental officers by their juniors of the Staff Corps,' has been removed entirely. "It may, at the same time, be observed that whilst some officers will continue to suffer supersession, "the privileges now conferred on the Army generally are specially advantageous to the officers who "have not joined the Staff Corps, and to those who have been unfortunate in their promotion."

12. After showing how, under the new rule, certain Staff Corps officers will be superseded by officers who have remained with their regiments, Sir Hugh Rose remarked—

"These calculations may not be absolutely exact, as they are taken from an Army List dated "1st April, last; but they suffice to illustrate the favourable working of the new arrangements in "regard to officers who have remained with their regiments, and they show to the satisfaction of "the Commander-in-Chief that the local officers gain very important and solid advantages under "the recently sanctioned regulations."

13. Your Excellency will have observed, however, that an address to Her Majesty was moved and carried in the House of Commons on the 2nd May, 1865, praying that Her Majesty would be pleased "to redress all such grievances complained of by the officers of the late Indian Armies, as "were admitted by the Commission on the Memorials of Indian officers to have arisen by a departure "from the assurances given by Parliament by 21 and 22 Vic., cap. 106, and 23 and 24 Vic., cap. 100."

14. Her Majesty was pleased in consequence to appoint a Commission, composed of the officers named in the margin, who were instructed, with reference to the terms of the above address, to enquire into and examine whether the measures above referred to "are effectual and "sufficient for the purpose of removing such causes of complaint "as have been reported in the terms hereinbefore stated by "the said first mentioned Commissioners to have arisen by a "departure from the assurances given by Parliament, or for

General Sir John Aitchison, K.C.B.
Lieutenant-General Sir Robert Napier, K.C.B.
Major-General Sir S. J. Cotton, K.C.B.
Major-General H. Eyre.
Major-General C. A. Browne.
Major-General D. Russell, C.B.
Major-General Sir W. M. Coghlan, K.C.B.

"the purpose of giving a counterbalancing benefit in any cases where any rules as to pay, pension, "allowances, and privileges, and the like advantages as regards promotion and otherwise, which "existed when the Acts above referred to were passed, have not been retained; and in what respects, "and to what extent, if at all, such measures fall short of what may be required for removing the "causes of such complaints, or for giving such counterbalancing benefit in lieu thereof."

15. I now forward, for your Excellency's information, a copy of the report of this Commission, dated the 14th September, 1865.

16. In carrying out their instructions, the Commissioners state that they have arranged the points upon which they have to submit their opinion in the following order:—

1st.—The retention on the cadres of Native regiments of Cavalry and Infantry of the names of officers transferred to the new Line regiments of Her Majesty's Army.

2nd.—Arrangements for regulating the promotion of Colonels of the Indian Army, of date subsequent to the 17th February, 1861, to the rank of General Officer.

3rd.—The filling up of only half the vacancies occasioned by the retirement of Lieutenant-Colonels upon increased pensions from 31st December, 1861, and the retention of the names of the retired Lieutenant-Colonels upon the regimental gradation lists, in order to regulate subsequent promotions to Colonel with Colonel's allowances.

4th.—The rule under which Lieutenant-Colonels are to be promoted to Colonel, with Colonel's allowance, on the completion of 12 years' service in the rank of regimental Lieutenant-Colonel.

5th.—The supersession of regimental officers by officers of the Staff Corps.

1st Point. 17. Upon these several points they report as follows:—

2nd Point. That the measures adopted upon the first point have been effectual and sufficient;

That they consider the measures adopted in relation to the second point effectual and sufficient, so far as the arrangements connected with the Ordnance Service come within the scope of their enquiry.

3rd Point. 18. Upon the 3rd point the Commission state that, from the views which have been expressed by many of the memorialists, they are of opinion that there exists much misapprehension upon this point, which they therefore endeavour to remove.

Para. 16. 19. With reference to the large reductions made in the Indian Army, they state that whatever the number of regiments to be reduced, there must of course have followed a corresponding reduction in the number of colonelcies, and consequently of Colonel's allowances; and on the arrangement by which that reduction was effected at the same time that special inducements were held out to the Lieutenant-Colonels to retire, they justly remark:—

Para. 18. "This was intended as a means of making the retardation of succession to the rank of regimental "Colonel with Colonel's allowance, a gradual process, and so of making it less immediately felt," and they sum up their remarks under this head in the following words:—

Paras. 28 & 29. "Under this point, therefore, we are of opinion that, if promotions* be allowed in continuation of the promotions already made from the 1st January, 1862, to complete the numbers above indicated, no loss will have been sustained, either by regiments or by officers, of anything they could be entitled to claim under this head."

20. The Commission appear to have overlooked the fact, that promotions to an extent even beyond those now recommended by them were actually made under the authority of Sir C. Wood's Despatch, No. 194, of the 17th June, 1864, in continuation of those made on the 1st January, 1862.

21. A reference, however, to that Despatch, paras. 51, 52, and 80, and to General Order by your Government, No. 632 of the 4th August, 1864, will show that with a view of rendering the effect of the reduction in the number of Lieutenant-Colonels equal in the three Presidencies, promotions were made in Madras and Bombay to the following extent:—

	Cavalry.	Infantry.
Madras, Lieutenant-Colonels	1	4
Bombay " "	0	3

22. These promotions were made from the 16th July, 1864—the date of the receipt in India of the despatch authorizing them. I shall not object, however, to their being antedated to the 1st January, 1862, in accordance with the views of Sir John Aitchison's Commission.

4th Point. 23. The Commission discuss the fourth point by endeavouring to ascertain the average period served heretofore in the grade of regimental Lieutenant-Colonel.

24. This, taking the mean of two periods of 15 and 20 years respectively, they show to have been 11·02 years.

25. This being the case, and having already stated in para. 23 of the report that, "supposing a "reduced establishment or regiments to have been determined upon and published in December 1861, "Her Majesty's Government would of course have been distinctly entitled to declare the difference "of number, namely 15 supernumerary, and therefore if thought good, liable to the ordinary process "of absorption, more or less gradual," and shown that the course followed did actually make the inevitable retardation of promotion a gradual process, and so less immediately felt, the Commission have notwithstanding recorded their opinion upon this point in the following words:—

Para. 49. "Taking into consideration, then, that none of the Lieutenant-Colonels promoted prior to 1st "January, 1862, have benefited by any of the measures which have operated to accelerate promotion "among their juniors; that, on the contrary, the changes which have occurred have been to "their detriment, as having lessened their chances of employment in commands, and that their "succession to colonelcies in the ordinary course from the removal of their retired seniors must "henceforth be slower than before, we come to the conclusion that the 12 years' term is about two "years in excess of a fair period."

*Viz.,—

	Cavalry.	Infantry.
Madras, Lieutenant-Colonels	1	4
Bombay, "	0	3

26. The Commission thus fully admit the propriety of reduction, and the inevitable consequence of that reduction, *viz.*, some retardation of promotion; but they conclude not only that such retardation is inadmissible under the guarantee, but that, in this particular case, the advancement of Lieutenant-Colonels to the Colonel's allowance should be expedited by one year, that is service in the grade of Lieutenant-Colonel reduced from 11 years to 10.

27. With regard to the Lieutenant-Colonels promoted on and after the 1st January, 1862, the Commission report, as follows:—

"As regards Lieutenant-Colonels promoted on and after the 1st January, 1862, the 12 years' rule has been made absolute from that date forward. Paras. 50 & 51

"As a general period, looking to the future of the Indian Service, and probably not representing eventually more than 38 years' total service, it may not be in excess."

28. Having thus recorded their opinion upon the 4th point of their enquiry, being one of the two cases in which Lord Cranworth's Commission pronounced a doubtful opinion, the Commission proceed to consider the length of service to which some of the older officers in the Army have attained, notwithstanding, as they observe, with reference to certain Lieutenant-Colonels of the 1st January, 1862, "that some of these officers have had their promotion to Lieutenant-Colonel accelerated by the retirement of officers upon the increased pensions;" and, believing that it might be for the "advantage of the public service to provide a means of relieving the Indian Army from old and worn out officers, such as some may even now be, and as more will hereafter become, they suggest the addition of two higher rates of retiring allowance for 35 and 38 years' service respectively, either in the form of pension or of part pension and part capital, these periods usually representing a total service of seldom less than 40 or 43 years. Para. 55. Para. 57.

29. In further support of this proposal, the Commission observes, as follows:—

"And we may here observe that the periods of service of officers in the grades of Major and Captain are, in numerous instances, much longer than is generally supposed; so that, with all the advantages of accelerated promotion, they will, for the greater part, reach to 40 or more years' service before promotion to regimental Colonel. There are for example, many officers now regimental Captains, who have already completed more than 25 years' service." Para. 54.

And they give examples of some officers who, under the ordinary chances of the service, have been unlucky in their promotion.

30. The cases of these officers, who, it is admitted, have had or will have their promotion accelerated by recent measures, did not properly fall within the limits of the enquiry entrusted to the Commission; but it must be observed, in connection with this subject, that so far as promotion, present and prospective, is concerned, a careful comparison between the Indian Army Lists of 1860 and 1866 will show that, by the several measures introduced during that period, *viz.*, the introduction of new rules of promotion for the officers joining the Staff Corps, the offer of special annuities, inducing above 300 of the senior officers to retire, the removal of the names of all Staff Corps officers when attaining to the position of Lieutenant-Colonel in the list of the Indian Army, and the brevet arrangement of 1864, the promotion of the officers of the Indian Army has been greatly accelerated within that period, and this, too, while the Native Army itself was undergoing reduction to the extent of one-half of its strength in 1857.

31. Upon the 5th point the Commission have reported, as follows:—

"We have given our most anxious and earnest consideration to this very difficult and complicated question, and we consider that we shall not fulfil the duty imposed on us if we fail to submit our opinion that the measure adopted by Your Majesty's Government upon this point has not been effectual and sufficient to remove the grievance originally complained of. The main ground of that grievance we consider to be the regimental connection between the local Line and the Staff Corps, by the retention of the names of Staff Corps officers on the cadres of regiments, and also by the retention on the old European regimental cadres of the names of those officers who have been transferred to the new Line Regiments. Paras 65 & 66 5th Point.

"The measure adopted by Your Majesty's Government, therefore, falls short of what is required, inasmuch as it has not removed the cause of grievance, whilst the grievance itself has been aggravated by the disturbing effect of the general brevet.

"The removal of Staff Corps Officers from regimental cadres might not prevent supersession either of the local Line officers by those of the Staff Corps, or of Staff Corps officers by those of the local Line, but—belonging as they then would do to entirely distinct cadres, each body having its own distinct terms of service—such supersession would constitute no invasion of principle."

32. And they sum up their observations upon this point in the following words:—

"On point V., we consider that the measure adopted by Your Majesty's Government has not been effectual and sufficient, because of—

"1st.—The non-removal from the cadres of regiments of the officers transferred to the Staff Corps and the new Line Regiments, as indicated by the Committee assembled by the Secretary of State, 30th July 1860, of which Lord Hotham was President.

"2nd.—The consequent withholding of promotion.

"3rd. The disturbing effect of the brevet.

"In the settlement of questions of a most complicated character, arising out of extensive and organic changes in a body of such magnitude as the old Indian Army, accompanied with large but unavoidable reductions, we cannot venture to suppose that all objections can be removed, or all conflicting interests reconciled; but it appears to us perfectly practicable to remove all just ground for complaining of the infraction of any real and established right in connection with the particular points referred to us for report."

33. It will be seen that the Commission appointed by Her Majesty on this occasion have not confined themselves strictly to the questions submitted for their consideration.

34. They have suggested in one instance a measure, *viz.*, the introduction of additional rates of retiring pension, which has no reference to the complaints brought under the consideration of Lord Cranworth's Commission; and they have, moreover, recorded their opinion against an important feature in the scheme for the re-organization of the Indian Army, which the former Commission had pronounced to be no breach of the Parliamentary guarantee, and which, therefore, did not come within the scope of their enquiry. I allude to the retention of the names of officers of the Staff Corps on the cadres of their former regiments.

35. Her Majesty's Government consider this question to have been finally settled by the report of Lord Cranworth's Commission, and they decline to re-open it. They are, however, not only ready to apply in all cases a remedy to acknowledged grievances, but they are most desirous to remove every reasonable ground of complaint on the part of the officers of the Army.

36. Although, therefore, Her Majesty's Government are convinced that the substantial interests of the Army at large have been, in many respects, materially advanced by the several measures that have been introduced since 1860, they have, nevertheless, determined to adopt, as far as practicable, those recommendations of Sir John Aitchison's Commission which are not inconsistent with the opinions expressed by the former Commission.

37. In accordance with this determination, I have to communicate to your Excellency the sanction of Her Majesty's Government to the following measures:—

1st. The promotions in the Presidencies of Madras and Bombay, made under paragraphs 52 and 80 of Sir Charles Wood's Despatch of the 17th June, 1864, with those made in succession thereto, are to have retrospective effect given to them from the 1st January, 1862, *viz.*:—

	Cavalry.	Infantry.
Madras, Lieutenant-Colonels	1	4
Bombay „ „	0	3

2nd.—From and after the date of receipt of this Despatch, all officers of Cavalry and Infantry of the Indian Army, who attained the rank of regimental Lieutenant-Colonel prior to the 1st January, 1862, and all officers of the several Staff Corps who had attained to the rank of regimental Lieutenant-Colonel prior to the formation of those corps, *viz.*, 18th February, 1861, shall upon the completion of 10 years in that grade, be placed in receipt of the Colonel's allowance. Lieutenant-Colonels now on the list, who may have been already more than 10 years in that grade, will be granted the Colonel's allowance from the date of receipt of this Despatch.

3rd.—The Military Retiring Regulations of 1837 will be extended by the addition of the two following rates of pension:—

	Per Annum.
After 35 years' service	£600
„ 38 „ „	750

5th Point. 38. Her Majesty's Government have very carefully considered the conclusion at which the Commission has arrived upon the 5th and last point, *viz.*, the sufficiency of the measures adopted with a view of remedying that supersession of regimental officers of the Indian Army by their brother officers in the Staff Corps, respecting which Lord Cranworth's Commission reported that, in their opinion, the Parliamentary assurance had not been adhered to; but they regret that they cannot admit the soundness of that conclusion, which is in one very important particular, at variance with the opinion expressed by Lord Cranworth's Commission, while the measures suggested by them, in connection with this point, are open to most serious objections.

Para. 42. 39. In alluding to the complaint of supersession, Lord Cranworth's Commission stated as follows:—

"What the officers complain on this head is, the immediate and prospective supersession in "rank of regimental officers by those in the Staff Corps, which was the inevitable consequence "of the rules regulating promotion in the Staff Corps, and especially of that which allows previous "Staff service to count towards the period of service qualifying for promotion in the Staff Corps."

Para. 65. 40. The present Commission say—

"The main ground of that grievance we consider to be the regimental connection between the "local Line and the Staff Corps by the retention of the names of Staff Corps officers on the cadres "of regiments, and also by the retention on the old European regimental cadres of the names o. "those officers who have been transferred to the new Line regiments."

Para. 39. 41. Lord Cranworth's Commission recorded a deliberate opinion that, so far as promotion was concerned, the retention upon the cadres of their old regiments of the names of officers transferred to the Staff Corps is not, practically, a departure from the assurance given by Parliament that Indian officers should, on the transfer of the local Army to the Crown, retain all their previous advantages.

Para. 72. 42. The last Commission have expressed an opinion, on the other hand, that the recent measures introduced with a view of remedying the supersession complained of have not been effectual and sufficient, because of the non-removal of these names.

43. Her Majesty's Government feel satisfied that the plan adopted of retaining the names of officers nominated to the Staff Corps on the cadres of their regiments, with a view of regulating promotion, sanctioned as it was in the first instance by the opinion of the Law officers of the Crown, and subsequently confirmed by the judgment of the Commission over which Lord Cranworth presided, was well calculated to secure to the officers under the contemplated changes that uniform system of regimental promotion, in all its integrity, which they had been accustomed to look forward to.

44. The removal from the general regimental list of the Army of the names of Staff Corps officers, and of those who joined the new Line regiments, upon their attaining to the position of Lieu-

tenant-Colonel—a boon to the Army unattended with any of the inconveniences that would attend the removal of the names from the regimental cadres—has been already sanctioned; but Her Majesty's Government do not consider it either just or expedient to attempt any further interference with a system which was adopted upon a careful consideration of the interests involved, and which has received the approval of high legal and other authority.

45. Moreover, any attempt to carry out at the present time the removal of those names, in the manner implied in the concluding paragraph of the Commission's report, would be attended with the greatest embarrassment, and could not possibly be effected without far greater disturbance in the relative position of the officers of the several branches of the Army than has yet arisen from all the changes in its organization that have been effected during the last five years.

46. There remains, therefore, to be considered, as the only direct objection made by the Commission to the system of brevet rank established under Sir C. Wood's Despatch of the 17th June 1864, with a view to remedying the supersession complained of—the "disturbing effect" of that measure.

47. It is well known that the supersession complained of, in the first instance, as an interference with the usage of the Service, was that of officers of the Indian Army by their juniors in the same cadre, on the latter being admitted and promoted to a higher grade in the Staff Corps.

48. This supersession has been rectified by the brevet arrangement referred to, inasmuch as, under the peculiar constitution of the Indian Army, it is now impossible, save in rare and exceptional cases, that an officer can be superseded in Army rank by another officer of his own cadre; upon this subject the opinion of the late Commander-in-Chief in India, already quoted, is clear and decisive.

49. On the other hand, although the introduction of one general rule of Army promotion by length of service, generally fair and just to the whole service, could not fail to be followed, on its first introduction, by changes in the relative position on the general roll of the army of officers of different Corps, the rule has, upon the whole, been attended with benefit to the Service at large, and the result of the several measures carried into effect since 1861 has been to give a general impulse to promotion, both Army and regimental, throughout the Army.

50. Satisfied that, upon the whole, the Officers of the Army have derived, and will continue to derive, great benefit from the system of brevet promotion lately sanctioned by Her Majesty's Government, as laid down in General Order by your Government, No. 634, of the 4th August 1864, Her Majesty's Government do not propose to interfere with its future operation.

51. Your Excellency will, however, have observed that since the introduction of the rule for conferring brevet rank upon the Officers of the Indian Army, there has been a disposition on the part of the officers to complain that the rank thus conferred upon them, with the view of remedying supersession, did not carry pay, and was therefore less favourable to them than that conferred upon Staff Corps Officers.

52. Whatever title the Parliamentary guarantee may have given to the officers to exemption from supersession in rank by any process inconsistent with the established usage of the Service, Her Majesty's Government cannot recognize the claim of the officers, either under the rules and custom of the Service or under that guarantee, to any rate of pay beyond that to which they are entitled by their regimental rank under the established principle of rise by regimental seniority.

53. No officer can at any time claim an amount of pay beyond that due to his regimental rank so regulated, whatever might be the pecuniary advantages which the Government might think proper to give to another.

54. Being, however, desirous of removing all ground of complaint on this point, Her Majesty's Government have resolved upon the adoption of the following modification of the existing rules regarding admission to and promotion in the Staff Corps.

55. From and after the date of receipt of this despatch, the qualifying period of service in the Staff Corps laid down in the second paragraph of the Royal Warrant of the 16th January, 1861, will be dispensed with, so far as concerns Officers now in the Staff Corps and those of the Indian Army who may join any one of those corps under the terms of this despatch.

56. Officers of the cadres of Cavalry and Infantry of the Indian Army will be allowed to enter the Staff Corps of their respective Presidencies from the date of receipt of this despatch, provided their application to that effect be received at the Adjutant-General's Office of their respective Presidencies by the 1st January, 1867, if the officer be in India; by the 31st March, if he be out of India.

57. Such officers will not be subject to any test prior to admission.

58. Inasmuch, however, as many of these officers have gained great promotion as a consequence of measures which conferred no such benefit upon Staff Corps Officers, and that such rise in promotion was even due in some cases to the removal of the names of Staff Corps Officers from the list of the local line service, and that it would be giving to such officers, if admitted to the Staff Corps with rank so obtained, an undue advantage over those already in the Staff Corps, it has been determined that Officers of the Indian Army, availing themselves of the opportunity now offered to them of being transferred to the Staff Corps, can only be allowed to enter that Corps upon these terms, with the substantive rank to which they would have attained under the Staff Corps rule, as modified in paragraph 55 of this despatch, if they had joined the Staff Corps on its formation, *viz.*, 18th February, 1861.

59. Any higher regimental rank they may have attained meanwhile in their respective cadres must, on their electing to join the Staff Corps, be cancelled.

60. I have further to inform you that it has been determined so far to modify the rule regarding succession to Colonel's allowances, laid down in paragraphs 13 and 14 of Sir Charles Wood's Despatch No. 467, dated 3rd December, 1861, as to make the rule of succession to that allowance after the stated period of service in the grade of Lieutenant-Colonel, applicable to all officers now in the several Staff Corps (with the exception of those who fall under the rule laid down in paragraph 37, clause 2, of this despatch), and to all who may join them from the Indian Army, under the terms of this despatch, without reference to any fixed establishment of Colonels with Colonel's allowance; and further, to allow the brevet rank of Lieutenant-Colonel, granted under the rules contained in Sir

Charles Wood's Despatch No. 194, of the 17th June, 1864, to count towards the completion of the 12 years' period of service so laid down.

61. I request that your Excellency will, without delay, cause the above instructions to be carried into effect by notifying to the service at large, that—

1st. The promotions in the Presidencies of Madras and Bombay, made under paragraphs 52 and 80 of Sir Charles Wood's Despatch of the 17th June, 1864, and those in succession to them, are to have retrospective effect from the 1st January, 1862.

	Cavalry.	Infantry.
Madras, to be Lieutenant-Colonel	1	4
Bombay „ „ „	0	3

2nd. All officers of the Cavalry and Infantry of the Indian Army who attained the rank of Regimental Lieutenant-Colonel prior to the 1st January, 1862, and all officers of the several Staff Corps who had attained to the rank of regimental Lieutenant-Colonel prior to the formation of those corps, viz., 18th February, 1861, shall hereafter, upon the completion of 10 years in that grade, be placed in receipt of the Colonel's allowance, in the event of their not having already attained to that allowance in ordinary succession, under the operation of the system laid down in Sir Charles Wood's Despatch, No. 340, dated 10th August, 1861, paragraph 18.

3rd. The Military retiring regulations of 1837 will be extended by the addition of the two following rates of pension:—

	Per Annum.
After 35 years' service	£600
„ 38 „ „	750

4th. From and after the date of receipt of this despatch, the qualifying period of service in the Staff Corps, laid down in the 2nd paragraph of the Royal Warrant of the 16th January, 1861, will be dispensed with, so far as concerns officers now in the Staff Corps and those of the Indian Army who may join any one of those corps under the terms of this despatch. Officers of the Staff Corps who may be entitled to promotion to a higher substantive rank under the modification of the existing rule, will receive such promotion from the date of receipt of this despatch.

All officers of the Cavalry and Infantry of the Indian Army, with the exception of those who upon the new conditions of service and are borne upon a general list, will be allowed to enter the Staff Corps of their respective presidencies upon the conditions above laid down, from the date of receipt of this despatch, without being subjected to previous examination.

5th. All officers now in the several Staff Corps, and all who may join them under the terms of this despatch, will be entitled to the Colonels' allowance after 12 years' service in the grade of substantive Lieutenant-Colonel, without reference to any fixed establishment of Colonels with Colonels' allowance, the brevet rank of Lieutenant Colonel attained to under the regulations published in General Order by your Government, No. 632, dated 4th August, 1864, being however considered a substantive rank for this purpose, and allowed to count towards the above period.

62. All the regulations at present existing relating to admissions to, and promotion in, the Staff Corps, will be still applicable to officers hereafter entering the several Staff Corps, other than those of the Indian Army, who join under the terms laid down in this despatch.

63. Having now disposed of the several complaints made by officers of the Indian Army, and considered by either of the Royal Commissions with reference to the Parliamentary guarantee, I shall address your Excellency in a separate despatch upon the subject of the claim made by many of the officers to compensation for money contributed by them towards the regimental retiring funds. These claims cannot justly be supported by any reference to that guarantee, and therefore they were not entertained by Lord Cranworth's Commission; but Her Majesty's Government are unwilling to leave to the officers generally any ground of complaint which they can, consistently with their duty remove, and therefore they have determined that the representations made by the officers in regard to this matter shall receive further consideration.

I have, &c.,
(Signed) CRANBORNE.

To his Excellency the Right Honourable
The Governor-General of India in Council.

APPENDIX I.

MEMORANDUM explanatory of the System of granting the rank of Local Colonel, and Local Major-General, to King's Officers in India, dated 11th April, 1868. By Mr. G. Cochrane, Assistant Military Secretary, India, Office.

Para. 1. An Indian Office Memorandum, dated 7th March, 1866, suggests the expediency of considering whether the system in force from 1836 to 1854, regarding the grant of local rank of Colonel and Major-General, might not be reverted to under the present exceptional circumstances.

2. The suggestion was made in consequence of a representation by the Commander-in-Chief in India, in July last, on the subject of the supersession of the Colonels and Lieutenant-Colonels of the British service in India by the promotion to the rank of Major-General and Colonel of their juniors in the Indian Army.

3. This representation has been sent by Sir William Mansfield both to the Government of India and the Horse Guards. The Government of India send it to the Secretary of State, but abstain from expressing any opinion on it, as the suggestions relate solely to Her Majesty's British Officers. As affecting the position of those Officers very materially, and as being of a very important nature, the Field-Marshal Commanding-in-Chief considered it right to submit the representation for the information and consideration of the Secretary of State for War. It is sent from the War Office to this office, with the view of obtaining the opinion of the Secretary of State for India on the suggestions made in it.

Military Letter, 31st August, 1865, No. 390.

4. In order rightly to understand Sir William Mansfield's representation, some knowledge is required of a system of promotion which once prevailed in regard to the higher ranks of officers in India. This will, therefore, be briefly explained.

5. Under the often-quoted despatch of the Court of Directors of the 15th January, 1796, the officers of the Indian Army were to be promoted "by "seniority in their respective regiments to the rank of Lieutenant-"Colonel." The rank of Colonel was to accompany the attainment of a regiment by the senior Lieutenant-Colonel in the Line of the respective arms of the service.

Para. 14, Orders of 1796.

6. Both these arrangements were short lived. The first was terminated by the Court of Directors themselves in 1798, and regimental promotion, in future, stopped at the rank of Major. The second ended by the direct interference of His Majesty's Government, in the year 1806, when after a long discussion between the Court of Directors and the Duke of York, in the course of which "every argument was employed in support of the claims of the "Company's Officers to the promotion incidental to their appoint-"ment to the command of regiments under the regulations established 1796," the privilege of rising regimentally to the rank of Colonel was stopped. The decision was communicated to the Indian Army in Orders, as follows:—

See Rules for Officers, p. 460. Change in 1798.

Despatch, 23rd Dec., 1806.

See G. O. C. C., 28th July, 1807. Henley's Code, pp. 121–2.

"In consequence of the inconvenience and difficulties occasioned by the operation of the "rule established by the General Army Regulations of 1796, by "which Lieutenant-Colonels of the Company's service were pro-"moted to the rank of Colonel, and to the command of regiments and battalions, without "reference to their general rank in the Army as Lieutenant-Colonels, the Court of Directors "have been pleased to revise the regulations in this respect, and to signify their pleasure on "the subject in the following extracts of a General Letter, dated 23rd December 1806,—

1806.

"'17. That in future, when a vacancy occurs in the command of a regiment of Infantry, "Battalion of Artillery, Brigade of Cavalry, or the Corps of Engineers, the senior Lieutenant-"Colonel succeeding to such command shall not, in consequence, be promoted to the rank of "Colonel, but shall be called Lieutenant-Colonel Commandant of the regiment, battalion, "&c., until by the general brevet promotion in His Majesty's Army he becomes entitled to be "promoted to the rank of Colonel by the date of his Commission as Lieutenant-Colonel.

"'18. The Lieutenant-Colonel Commanding is, however, to enjoy the same emoluments "in every respect, on obtaining the command of the regiment, &c., as he would be entitled "to if he had been promoted to the rank of Colonel under the Regulations of 1796.

"'19. This regulation will completely remove all cause of complaint in the King's Lieu-"tenant-Colonels, regarding the promotion of Officers of that rank in Our service, and it "appears to Us to be the most effectual mode of doing so. At the same time, it will have "the additional advantage of preventing all supersession among the Lieutenant-Colonels in "Our service by the accidental promotion that has heretofore occasionally taken place of a "junior Lieutenant-Colonel in one Corps, before that of his senior in other Corps.'" (*Arms.*)

7. It will be observed from the concluding remark of the Court of Directors, that the unequal operation of the rule for promotion to the rank of Colonel, by the regimental line step, has been felt by the Company's Lieutenant-Colonel, as well as by the Lieutenant-Colonel of the King's service.

8. The restriction on the rise to Colonel was introduced during a period of general war. While the war lasted no bad effects of the withdrawal of the rank were felt. The general Brevets following each other very rapidly, the Company's Lieutenant-Colonels soon became Colonels, and the Colonels, Major-Generals. But when the war ceased, and general Brevets were issued at very long intervals only, the stagnation of promotion among the Generals and Colonels of the Company's Army began to be seriously felt, until it had produced this result,

that there were no longer any General Officers, and very few Colonels belonging to the Company's Army who had not had a tour on the Staff.

9. The Government of India, in consequence, had felt obliged, in justice to the fair claims of the Indian Officers, to allow Lieutenant-Colonels to serve on the Staff, notwithstanding their inadequate rank. The effect of this was, that such of the King's Colonels or Lieutenant-Colonels as were senior to the Company's Staff Lieutenant-Colonels were removed from their regiments, or the regiments themselves removed from the Company's Staff Lieutenant-Colonel's divisional command.

10. It was shown in an India Office memorandum, dated 2nd February, 1828, that "the Company have now but 69 General Officers and 16 Colonels, to an army of 4,600 "Officers and 300,000 men, with 55 Lieutenant-Colonels of from 10 to 15 years' standing.

11. This evil was too glaring to be allowed to remain without an effort to cure. A discussion again ensued between the Court of Directors and the Horse Guards. In the course of this discussion the Duke of Wellington laid down this principle,—

Memorandum without date (1827).

"The Officers in the service of the East India Company have many advantages. They "must fill all the efficient situations on the General Staff of the Army, and, with few "exceptions, all the situations of emolument. The Company's armies in the East Indies are, "in fact, principals, and that of His Majesty's only auxiliary, however brilliant the service of "His troops, and however necessary in every enterprise of importance; and every effort to "alter this relation only tends to establish it more firmly. It is founded on the nature of the "political government in its separation from that of His Majesty, and in the nature of the "service, of the language of the country, and of the climate. But it will not answer to lower "the spirit of this auxiliary army. An Officer who had distinguished himself at the head of "one of His Majesty's regiments, and who may thereby have rendered essential service, at an "important moment, must not be liable to be superseded by one junior to himself in the rank "of Lieutenant-Colonel, either as Colonel, or, subsequently, as Major-General. Such super-"session would be quite inconsistent with the spirit of the settlement of 1796, and with the "letter of that of 1806, called for, as it was, by the Officers of the East India Company's "army, and not by those of the King."

12. The Duke of Wellington having left the Horse Guards before the discussion terminated, the decision devolved upon Lord Hill. The result was communicated to the Government of India by the Court of Directors, in a Despatch dated 3rd December, 1828,—

"We have taken into early and most attentive consideration your Military Letter of 9th "February, 1828, and, having communicated with His Majesty's Ministers and the General "Commanding-in-Chief, on the important topics therein brought to our notice, we have the "satisfaction to announce to you the following arrangements.

* * * * * *

"An arrangement has been made, in communication with the high authorities before "adverted to, for granting the rank of Colonel regimentally to every Lieutenant-Colonel "Commandant of a regiment of Cavalry or Infantry, or of a battalion of Engineers or of "Artillery, in our service.

"You are to observe, however, that, with a view to prevent the supersession of His "Majesty's Officers by the indulgence now accorded to the Company's Officers, the Com-"mander-in-Chief in India will be empowered to grant the temporary and local rank of "Colonel by brevet to any Lieutenant-Colonel of His Majesty's service who might without "such grant, be superseded by a Company's Officer rising to the rank of Colonel regimentally.

"It is, moreover, understood that if one of His Majesty's Lieutenant-Colonels so "promoted at one Presidency shall be removed to another Presidency, such promotion will be "cancelled; but another brevet commission will be granted to him, if necessary, to put "him on a par in respect to rank with the Officers of the establishment to which his services "shall have been transferred."

13. In conformity with this decision, a General Order was published, announcing the restoration of the rank of Colonel to the Indian Armies, and no less than 148 Lieutenant-Colonels were promoted to the rank of Colonel on the same day,* and took their places accordingly on the list of Colonels, for promotion to the rank of General Officer by His Majesty's brevets.

14. As might naturally have been expected, the grant of brevet rank under this decision to the King's Lieutenant-Colonel gave rise to numerous complaints from the Company's Lieutenant-Colonel, who had been entirely overlooked in the arrangement. When a fortunate Lieutenant-Colonel of either arm of the Company's service obtained his regiment or battalion, all the Lieutenant-Colonels of the King's service in the same Presidency senior to him were also raised to the rank of Colonel, but no such protection was afforded to the senior

Company's Lieutenant-Colonel of the other arms. In August 1831, the Government of India brought to the notice of the Court of Directors, that by the recent promotion of Colonel Macleod, Bengal Engineers, and the consequent promotion, under the above rule, of four King's Lieutenant-Colonels, no less than 55 Lieutenant-Colonels of the Company's service had been superseded; and they earnestly urged the expediency, and even the justice, of rescinding the rule which had led to this result. In a letter which followed shortly afterwards the Government of India transmitted memorials from several of the Lieutenant-Colonels thus superseded, and expressed their opinion that the efficiency of the Company's Army, and the just claim of the Military Officers as members of a seniority service, required an adherence to the system of promotion to the rank of Colonel inclusive, as established in 1796, unencumbered by any conditions similar to those introduced in 1828.

Military Letter, 8th August, 1831, No. 60.

15. The correspondence was sent by the Court of Directors to the President of the India Board, with the following observation,—

Letter to Right Hon. Charles Grant, 23rd June, 1832.

"We beg leave to put the case into your hands, satisfied that the "interest you have invariably manifested for the welfare and honour of the Company's "Officers, and for their just claims to rank and command, proportioned to their length of "service, will lead you so to represent their case to our most gracious Sovereign as to induce "His Majesty to withdraw from the Commander-in-Chief in India, the authority with which "he is now invested of granting the local rank of Colonel to the Lieutenant-Colonels of His "Majesty's army serving in that country, in supersession of the Lieutenant-Colonels of the "Company's establishment."

16. A period of two years having elapsed, and no decision of His Majesty's Government having been passed, the Court of Directors again pressed the subject on the attention of the President of the Commissioners for the affairs of India. They were well aware, they stated, from personal communications held with him, that the subject had engaged his serious attention, and that he had been anxious "to obtain the assent of His Majesty's Government "to an arrangement which should place the rank of the Company's "Officers upon a basis suited to the constitution of the army and "the wants of the service." In the course of the time which had elapsed since the first complaint was made, the evil, as might have been expected had multiplied. "Thus, at Bombay," they observed, "the promotion of a Lieutenant-Colonel of Artillery "occasioned the issue of the local rank of Colonel to three Lieutenants-Colonels of His "Majesty's army, to the supersession of eleven Lieutenant-Colonels of the Company's army, "whilst in Bengal, the promotion of Lieutenant-Colonel Tickell, of the Engineers, to the rank "of Colonel would occasion the promotion of two Lieutenant-Colonels of His Majesty's army, "in supersession of 31 of the Company's army."

Letter to India Board, 12th June, 1834.

17. The decision of the Home Government was communicated by the Court of Directors to the Government of India in January 1835.

Despatch, 28th January, 1835, No. 2.

"After a protracted discussion and much unavoidable delay, "arising partly out of intricacy and delicacy of the subject, and "partly out of the state of public affairs, we have the satisfaction to inform you that the "General Commanding in Chief, Lord Hill, has, with His Majesty's approbation, sanctioned "the following arrangement:—

"The brevet rank of Colonel will be granted to all Lieutenant-Colonels of the Company's "service senior to others of the same Presidency who may attain the "rank of Colonel regimentally, in the same manner as such brevets "are now granted to Officers of the King's service, which rule is to be applied, both retro-"spectively to the supersession occasioned by the promotion of Colonel Macleod and other "Officers, and prospectively, to those which may hereafter occur by the promotion of Com-"pany's Officers to the rank of Colonel regimentally, so that both King's and Company's "Officers shall bear the same relative rank to each other as Colonels as they previously held "in the rank of Lieutenant-Colonel, with this understanding, however, that when the number "of Field Officers may be too small in camp or quarters, Colonels not commanding Brigades "will be placed on the Field Officers' roster."

1834.

18. In giving his "entire assent" to this arrangement, Lord Hill stated his object was "to secure to the Officers of each service their fair proportion of commands, and to take care "that no Officer of His Majesty's service shall be superseded by one junior to himself in the "rank of Lieutenant-Colonel, either as Colonel, or, subsequently, as Major-General."

19. The Court of Directors were of opinion that the arrangement would "effectually "remove the supersession complained of by the Company's Officers," but they were led to apprehend, from some expressions in Lord Hill's letter, that "it is intended to withdraw from the Company's Officers "the privilege now understood to belong to them of rising by general "brevet from the rank of Colonel, obtained regimentally, to that of Major-General."

Letter of Chairs to Right Hon. Chas. Grant, 27th November, 1834.

20. Lord Hill was not aware that any part of his letter could have given cause to the apprehensions which the Chairs felt on this subject. He had no hesitation in stating that no such idea was ever entertained by him. His whole object had been to secure equality in rank and commands; and he added, "It is perfectly understood, from the nature of the respective "services of the King and Company, that in the former the brevet must necessarily be tem- "porary, and in the latter permanent."

Letter to Right Hon. C. Grant, 9th December, 1834.

21. In consequence of the decision then come to, 77 Lieutenant-Colonels of the Indian armies were promoted, at once, to the rank of Colonel.*

22. In May, 1835, the Government of India, in reporting the measures taken by them for carrying out the instructions contained in the Despatch of the Court of Directors of the 28th January, 1835, observed that the remedial brevet, if restricted to one Presidency, would lead to a painful supersession of the Officers of the other Presidencies in the rank of Major-General; and they recommended, therefore, that on every occasion requiring it, the brevet should be made to extend throughout India, by which all supersession of the Officers of one Presidency by those of another, or by His Majesty's Officers, would be avoided.

23. This suggestion was submitted by the Court of Directors to the Horse Guards as necessary to the completion of the arrangement of January, 1835.

Letter to Sir John Hobhouse, 22nd January, 1836.

24. In his reply, Lord Hill reviewed at some length the observations of the Government of India and of the Court of Directors on this and other points bearing on the subject. Having given his best attention to the questions raised, he offered his sentiments on each in succession, prefacing, however, his remarks with his declaration made on previous occasions:—

Letter to Sir John Hobhouse, 11th June, 1836.

"That my whole object is to secure to the Officers of each service their fair proportion of "commands; and to take care that no Officer of His Majesty's service should be superseded "by one junior to himself in the rank of Lieutenant-Colonel, either as Colonel, or, subse- "quently, as Major-General."

"This," Lord Hill now observed, "is the only safe and unerring principle on which the "system of promotion can be soundly and justly regulated as between the King's and Com- "pany's Officers in India. It is the principle acknowledged as the general rule and guide in "every military service, and, provided that no infraction be made in it, there is no suggestion "which I will not most readily support for the concurrence (convenience?) and advantage of "the service of the East India Company, as tending to the mutual co-operation and efficiency "of both."

25. The Government of India having inquired whether the Officers promoted to Colonel in the Company's service in India were eligible to the rank of Major-General by general brevet, Lord Hill fully participated in the surprise expressed by the Chairs at the question. He could only repeat what he had stated in 1834:—"It was perfectly understood, from the "nature of the respective services of the King and Company, that in the former the local rank "must necessarily be temporary, and in the latter permanent." He now added:—"I could "not have imagined that this could bear any other construction than that which it appears was "justly put upon it by the Chairman and Deputy-Chairman, that it must confer on the Com- "pany's Officers so promoted the same claim to be advanced to the rank of Major-General as "was originally conferred, by the Regulation of 1796, upon Officers of the Indian army who "obtained the rank of Colonel regimentally."

26. With regard to the recommendation that the brevet should extend throughout India, Lord Hill stated there could be no objection on his part to a measure which applied so exclusively to the Company's service, although it would occasion the promotion of 29 more Lieutenant-Colonels to the rank of Colonel.

27. On the suggestion of the Government of India, that the Company's Lieutenant-Colonels should be allowed to rise regimentally to the rank of Colonel without any consequent brevet to others, Lord Hill observed that such a system of promotion was not "caused by any "demands for the services of the Officers of higher rank in the Company's and the King's "army, but solely in consequence of a regulation which the Company's army have judged it "advisable to persist in enforcing, that the rise of a Lieutenant-Colonel to the command of a "regiment in certain Corps of their service should, *de facto*, become Colonel."

28. "The simpler mode," Lord Hill stated, "of putting a stop to such extensive, and, "in so far as the military wants of the army are concerned, unnecessary, promotion to the "rank of Colonel, would be to enact that when a Lieutenant-Colonel arrived at the command "of one of those Corps which now confer upon him, *de facto*, the rank of Colonel, he should "be styled Lieutenant-Colonel Commandant of such Corps, retaining all such privileges and

"emoluments as he now derives as Colonel, so that while all the substantial advantages of his "regimental command would be continued and secured to him, his advancement to the regi- "mental command would not clash with the interests either of the Lieutenant-Colonels of the "East India Company's Army or those of the King's."

Lord Hill continued, "The sole object of every regulation on the subject of promotion in "regard to the Officers of the two armies ought, therefore, to be, as it has ever been, to keep "each Officer in his relative position with his brother Officers of both services, from the rank of "Lieutenant-Colonel upwards, and it is a principle long maintained in the Military Service, and "which on no account should be departed from, that Officers holding Commissions of the same "denomination ought to rank according to seniority of date of that Commission."

29. In reply to this communication, the Court of Directors observed,—"As it is now "finally determined that no Lieutenant-Colonel serving in India "shall be superseded by the promotion of his junior in that rank to "the rank of Colonel, the Court cannot but consider that it will be "desirable for the general good of the service to place a limit upon promotion to the rank of "Colonel to supply regimental vacancies, in order that there may hereafter be no necessity "for the promotion by brevet of Lieutenant-Colonels to Colonels, to an extent disproportioned "to the wants of the service."

Letter to President, India Board, 21st July, 1836.

30. The scheme proposed by the Court of Directors with this object, founded on the suggestions of Lord Hill, was approved by the Government, and accordingly communicated to the Government of India. The rule was henceforth to be as follows :—

See Letter as above. Despatch, 27th July, 1836, No. 9, G. O., 14th November, 1836, No. 226.

"The senior Lieutenant-Colonel of the Infantry on the Bengal Establishment shall, "immediately on the occurrence of a vacancy as Colonel of a regi- "ment in that arm of the Service in Bengal, be promoted to the "rank of Colonel, and all Lieutenant-Colonels of the armies of the "three Presidencies who are senior to him as such, shall be promoted in consequence to be "Brevet Colonels.

1836. Bengal Lieutenant-Colonels to rule the promotion.

"A Lieutenant-Colonel of the Infantry on the Madras or Bombay Establishments, or of "the Cavalry, Artillery, or Engineers at any one of the three Presidencies, for whom there may "be a regimental vacancy as Colonel, shall succeed immediately to that rank, provided he is the "senior Lieutenant-Colonel of the three Establishments, but not otherwise.

"Lieutenant-Colonels of Infantry of the Madras and Bombay Armies, and Lieutenant- "Colonels of Cavalry, Artillery, and Engineers of the three Presidencies, not being seniors as "Lieutenant-Colonels in India, who may succeed by seniority to the command of regiments, to "be denominated Lieutenant-Colonels Commandant, their promotion to the rank of Colonel "being suspended until their seniors of the Bengal Infantry shall have been promoted to the "rank of Colonel."

"Such Officers will, nevertheless, succeed to all the advantages and emoluments to which "they would have been entitled if promoted to the rank of Colonel."

31. In another Despatch, of somewhat earlier date, the Government of India had been directed to grant the Commission of Colonel to all Lieutenant-Colonels, of whatever Presidency, who might have been senior as such to any Lieutenant-Colonel attaining the rank of Colonel regimentally, "with such dates of rank as shall maintain their relative "seniority with each other as Lieutenant-Colonels."

6th July, 1836, No. 8. General Order, 14th Nov., 1836, No. 225.

32. The new rule had the effect of checking the inequality of promotion to rank of Colonel by making the promotion, and the consequent brevet, dependent on casualties in the largest arm of the service, instead of as before in all the arms, some of them necessarily incident to considerable fluctuations. It was also presumed that an "adequate, but not super- "fluous, establishment of Officers of the rank of Colonel will be "always kept up, whilst seniority as Lieutenant-Colonel will be "strictly observed, and the title of Officers to succeed to Colonelcies, "in virtue of regimental vacancies, will be maintained whenever it can be exercised with due "regard to the interests of the public service."

Letter to India Board, 21st July, 1836.

33. This rule continued in force until the introduction of the new system of promotion to the rank of Colonel under the Royal Warrant of October 1854.

34. The introduction in India of the rank of local Major-General arose out of the following circumstances :—The General Brevet of 10th January, 1837, raised to the rank of Major-General such of the Colonels of the Indian forces of the year 1829 as were Lieutenant-Colonels of 1819. On the "London Gazette" containing the promotions reaching India, Sir Henry Fane, then Commander-in-Chief in India, immediately promoted to the same rank, locally, the Colonels of the Queen's Service senior to them, who had been omitted from the brevet in this country because their rank of Colonel was local only.

Fane Major-Generals, 1837. G. O., Q.T., 27th June, 1837.

35. This summary act occasioned much astonishment in India and England. The Government of India complained of the issue of such an order without any communication with them, and expressed their opinion that the rank thus held was incompatible with the command of a brigade in India.

36. They observed, "if Sir Henry Fane has taken a correct view of the subject, both with "regard to the promotions which he has made, and the employment "of Major-Generals of Her Majesty's service as Brigadiers, the "inconveniences attending on these arrangements cannot have been "foreseen, and it is, therefore, accordingly desirable that we should be favoured with an early "communication of your Honourable Court's Orders on a question of so much importance."

Military Letter, 8th Sept., 1837, No. 73.

37. The justice of the action of Sir Henry Fane was so apparent, and his proceedings in such strict accord with the principles enunciated by the Duke of Wellington and Lord Hill, that, notwithstanding this opinion of the Government of India, it was felt the promotions could not be disturbed. The decision of the Home Government was simply as follows :—

Despatch of Court of Directors, 19th December, 1837, No. 9.

"We have no objection to the promotion to the local rank of Major-General of the "Colonels of Her Majesty's Army serving in India who were seniors as such to Colonels of our "Army promoted to the rank of Major-General by the brevet of the 10th January, 1837, "although we cannot but regret that promotions, which involved considerations affecting the "general arrangements and regulations of the service, were made without previous communica-"tion with your Government.

"Under the special circumstances in which local Major-Generals are placed, we consent "to their being considered as eligible to continue to reside in India, and to hold those brigade "commands which they would have held had their promotion not taken place, provided always "that no interference be permitted with the commands on the General Staff allotted to the "Major-Generals or Brigadier-Generals of the Queen's and the Company's forces respectively."

38. This system of promotion, known as the "Fane" Major-General system, also continued in force until the general brevets ceased to be issued (1854).

39. To return now to the representation of Sir William Mansfield. The object of this, he states, is to point out "the prejudicial manner in which the interests of the Officers of Her "Majesty's British Army have been affected by the changes recently "introduced at the instance of the Secretary of State for India, "for the benefit of the officers of the several Staff Corps, and of the "local armies."

Letter to Military Secretary, Horse Guards, dated 31st Aug., 1865, enclosed in War Office Letter to this Office, 13th Dec., 1865.

"I do not," he says, "venture to suggest a remedy, which would probably have to be "determined after the question shall have been thoroughly sifted by such means and enquiry "as may commend themselves to His Royal Highness and the Secretary of State for War. "But as the Secretary of State for India clearly cannot go back from what has been done, it "would seem that it may be necessary to have recourse to a system of brevet promotion which "shall be good all over the world for fixed terms of service, according to the rules which have "been laid down for the Staff Corps. Such a change would not interfere with the system of "purchase promotion, while on the other hand it would not fail to be most grateful to officers of "considerable service whose means may not admit of purchase, and would put the officers of the "British Service on a reasonable equality with those belonging to India."

40. In support of this view, Sir William Mansfield dwells much on the fact that the Indian Officer has now rank and precedence everywhere. "In former times," he states, "the "rank, precedence, and power of command of Indian Officers were entirely confined to India. "They could not supersede Officers of the British Army out of India. Consequently the gift "of local rank to the British Officers in India, to put them on a par with Indian Officers, was "sufficient to secure them in their rights and privileges as far as was required by the necessity "of the case.

"This however, seems to be no longer so, and we have what looks anomalous, viz., that "the British Officers are to a certain extent secured against supersession in India, but they are "not so secured out of India, while the Indian Officer is secured all over the world."

41. The difference here referred to is apparent only, not real. By Her Majesty's gracious Act of April 1855, the Company's Officers were to have "rank and precedence with Officers of Her Majesty's Regular Army, "according to the dates of their commissions, in all parts of Her Majesty's dominions or "elsewhere."

Rules for Officers, page 468.

42. This however, merely recognised the rank of the Indian Officer out of India, to which locality it had hitherto been confined. It conferred no right of serving out of India. It is true the Indian Officer has been declared eligible so to serve, and, as Sir William Mansfield says, he has served with British Officers in the Crimea and elsewhere. But he cannot claim to serve out of India If his rank should interfere injuriously with that of the British Officers

employed, his services would be declined, or as was stated in Sir Charles Wood's Despatch of June 1864, "special provision would be made in cases where Line "and Indian Officers may serve together elsewhere" than in India.

Rules for Officers, page 813.

43. In all the discussions that have taken place on such subjects, it has been admitted that the brevet rank of the Indian Officer must necessarily be permanent, entitling the holder to further advancement, while, on the other hand, it was equally admitted, as a consequence of the difference of the service, that the rank given to the Queen's Officer to place him on an equality while serving with the Company's Officers in India must be local and temporary only. This principle is not affected by the decision of Her Majesty, that the rank of the Indian Officer is to hold good everywhere.

44. Sir William Mansfield's suggestions are,—That the rank of local Major-General may be restored, so as to preserve equality between the British and Indian Officers in the attainment of that rank in India. That a system of promotion similar to that of the Staff Corps be established for the British Army.

45. There is no gainsaying the assertion of Sir William Mansfield, that the Indian Colonels are much in advance of the British Colonels in their progress to the rank of Major-General, and their progress is likely to be accelerated for the future rather than retarded. As Sir William Mansfield states, the British Colonels of November 1854 will not, in all probability, be absorbed until the end of the year 1868. The last Colonel of the Indian Forces promoted to the rank of General Officer by the line step was Colonel of 27th June, 1857. Sir William Mansfield gives the names of six Colonels* of the British Forces who have lately been superseded by the Indian Colonels. The case of Colonel Haythorne, the last named, is a striking one. He is Colonel of 28th November, 1854, and lately held the important post of Adjutant-General, Bengal.

* Williams, 4th Foot.
Rainier, 98th Foot.
Holdich, 20th Foot.
Errington, 51st Foot.
Christie, 80th Foot.
Haythorne, 1st Foot.
Colonel Rainier, Sir William Mansfield says, has been superseded by no less than 17 Colonels of the local service.

46. Colonels Harris and Travers, of the Indian Forces, commanding Brigades in Bengal, of date of rank respectively the 8th June and 6th December, 1836, were promoted to the rank of Major-General in June and July 1865, and thus superseded Colonel Haythorne, who was serving with them in the same Presidency. If Colonel Haythorne had preferred a claim to be granted the local rank of Major-General, in order to save him this supersession, it would have been difficult to assign a good reason for not admitting it.

47. No disabilities attend the possession of this local rank, as seems to be supposed at the Horse Guards. It has been already seen in the course of this memorandum that local Major-Generals, when the rank was first established, were to be permitted to command brigades. This privilege was continued to them. In January, 1840, the Government of India published a General Order, apparently founded upon a correspondence between the Horse Guards and the Indian Authorities in this country, which had been transmitted to them, but in reality at variance with the intention of that correspondence. One of the provisions of this General Order was,—

"That local Major-Generals of Her Majesty's Service must hereafter be held to be "ineligible to retain the command of their regiments."

48. On receipt of this General Order at the Horse Guards, Lord Hill communicated with the Court of Directors, pointing out that, if no brigade commands happened to be open to the local Major-Generals, it would seem that of necessity they must keep their place with their regiments. His Lordship observed,—

Letter to India Board, 7th May, 1840.

"The only exception that can justly be admitted to this regulation must arise from the "circumstance of his local rank interfering with the rank of a Company's Officer commanding "on the Staff of the Brigade or division in which his regiment may be serving, in which event "it will be at the option of the Queen's Officer to continue to serve with his regiment under such "Company's Officer, or to select his residence within the Presidency in which his regiment is "serving, and receiving the full pay and batta of his regimental rank.

"That the Court of Directors may have more clearly before them the injurious effects "which have already resulted to the interests of the Queen's Officers from this deviation from "the obvious meaning of their Despatch, it is only necessary to state that, while no Officer of "the Queen's service complains of having been displaced to make room for seniors who have "arrived in the country at different periods subsequently to his appointment to command, "it is considered and felt as a very great hardship that a local Major-General, a Lieutenant-"Colonel in the Queen's army, should be cut off from falling back on his own regiment, and "declared to be ineligible to exercise the command of it when he was actually the junior "Major-General either of the Queen's or Company's service, so that his returning and doing "duty with his Corps could not, by any possibility, have interfered with any of the "Company's Officers, while it operated so injuriously to the individual as the senior

"Lieutenant-Colonel of a regiment, as, in addition to the extreme mortification of such "exclusion, his proper emoluments were reduced to little more than half."

49. The decision of the Home authorities was communicated to the Government of India in a Despatch from the Court of Directors of 2nd June, 1840, of which the following is an extract:—

"When the system of promotion in our service to the rank of Colonel regimentally, as "established in the year 1796, but stopped in 1805, was restored in the year 1828, there "was a distinct understanding between Her Majesty's Government and ourselves, that the "Lieutenant-Colonels of Her Majesty's regiments of Cavalry and Infantry serving in India "should not, either in the rank of Colonel or in that of Major-General, be superseded by "our Lieutenant-Colonels, who were their juniors as such in the Army. Accordingly, it "was then, and on subsequent occasions, arranged that Her Majesty's Lieutenant-Colonels "should receive local rank as Colonel, and also as Major-General, whenever their juniors as "Lieutenant-Colonel in our service were raised to those ranks respectively—to the "Colonelcy by regimental rise, and to the rank of Major-General, in virtue of the Colonelcy "so obtained.

"The rank thus to be conferred on Her Majesty's Lieutenant-Colonels was to be local "and temporary, ceasing whenever they might leave India, giving no claim whatever to "permanent rank by Royal brevet like that received by our Officers, and occasioning no "vacancy amongst the Lieutenant-Colonels of the regiment, although one or both of them "should be promoted to the local rank of Major-General. It was, in consequence, not "intended that this rank should have the effect of removing regimental Lieutenant-Colonels "from the command of their regiments, provided they were able to exercise that command "without interfering with the commands on the General Staff allotted to the Majors or "Brigadiers-General and Brigadiers of the Queen's and Company's forces respectively. If "they could not so exercise their regimental commands, it was arranged that then they "should be removed from those commands, and if possible appointed to Brigade command "in some other division in which they could serve without any such interference. If there "should be no such Brigadier's command open and available for the local Major-General so "circumstanced, it was further arranged that he should then consider of the course he would "have to take, that is he should have the option of waiving his local rank if he preferred "continuing with his Corps, or of retiring from the country, as he would do if promoted to be "a Major-General on a general brevet and not appointed to serve on the Staff, or of "remaining in India as an unemployed General Officer, receiving the pay and full batta of "his regimental rank, like Major-Generals of the Company's service residing in India "unemployed.

"These arrangements effectually secured the due allotment to the Queen's and Company's "Officers of the Divisional and Brigade Commands on the General Staff, according to the "fixed or recognized proportions applicable to each branch respectively, and also prevented "supersession amongst Officers serving together after they attained the rank of Lieu-"tenant-Colonel.

"We are now apprised that limitations have, at the suggestion of the Commander-in-"Chief in India, being placed by your Government upon the employment of the Queen's "local Major-Generals to the following extent, viz.:—

"1st. That under no circumstances shall a local Major-General be allowed to continue in "the command of his regiment.

"2nd. That Queen's Officers holding Brigade Commands shall only continue in them for "five years, at the expiration of which time they are not, without special sanction, "to be allowed to remain in India in receipt of full batta, although the regiments "to which they belong may still continue on the Indian Establishment.

"To these limitations the General Commanding-in-Chief decidedly objects, as being an "infringement on the regulations which have been sanctioned by the Home authorities, and "which Lord Hill has considered to be a satisfacory and final adjustment of the differences "upon this important subject.

"We have now to apprise you that our former orders on this subject are to be acted upon "without alteration or limitation, and you will amend your order of 20th January, 1840, to "this effect accordingly."

APPENDIX K.

Memorandum on Colonel North's proposal to suspend the promotion of Colonels on the Indian List.

With a view to a clear understanding of the present state and future prospects of the supersession question, I have prepared the annexed lists, showing how, as far as can be estimated, the future of the two services is likely to be affected by the rules as they now stand.

The data, actual and assumed, upon which the estimates are based are :—

1st. That the present establishments of General Officers in the two services are,—
British, 272.
Indian, 173.

2nd. That, while the establishments remain as above, the rate of annual casualties will be,—
Among the British, 18.
„ Indian, 11.

3rd. That the number of casualties in each year will increase or decrease proportionately, as the establishment of General Officers in either case is augmented or reduced.

4th. That on the 1st July, 1872, the name of Colonel Salmon will stand first on the Indian List for promotion, and the 10th clause of the Royal Warrant of June 1864, will then begin to operate.

5th. That no officer in the rank of Colonel in the meantime dies or retires, an assumption that can only be admitted to simplify the calculation.

A careful study of the statement will show, I think, that the rules laid down for the ultimate amalgamation of the two services are working in a perfectly satisfactory manner. Such measures are always best carried out gradually, and in the present case it could have been effected in no other manner; any attempt to dovetail the officers of the Indian Army at once into the British list would have been opposed to the resolution of Parliament, and therefore out of the question.

When we see how this is working, and consider that not above one-fourth of the officers temporarily superseded are officers of the Line on full-pay, and that a portion of these only will be found in India, is it reasonable, with the experience of the last ten years in mind, to attempt again any arbitrary measures, with a view to reconciling the present state of things with a purely conventional feeling of the British Colonels as to the point to which they may, and after which they may not, be superseded? Or is it not rather the wiser course to adopt such measures as will mitigate, and, indeed, considered in all essential characteristics, remove the present evil, satisfied that, if left to the ordinary operation of existing rules, that evil will, in the course of a few years, wholly disappear?

It is quite clear that, assuming the dates of commissions as Major-General to be rectified in the manner proposed, the British Army Colonels have nothing to fear from the Staff Corps Officers. The few officers who remain on the local Army List, are looked to as the men to be guarded against by some such extraordinary measure as suspending promotion among the Indian Colonels for several years.

Now, it must be borne in mind that the officers referred to are officers who have not been amalgamated, who have been protected by Parliament in the exercise of their right to refuse amalgamation, with its consequences, and who are, therefore, precisely in the position of Indian Officers before amalgamation was contemplated.

The present question has to be considered, therefore, quite apart from amalgamation, as one which might have arisen had the two armies continued perfectly distinct.

The Warrants of 1854 and 1858 gave to the two services two separate establishments of General Officers, and two separate lists of promotion to that grade.

Was it ever proposed to remedy the inevitable supersession of one or other of these classes of officers, by stopping the promotion of the more fortunate side?

If we put aside the purely military and professional view of the subject, and consider it as a civilian would, we shall, I think, be led to question the abstract justice of the proposal.

The British Officers say, we ought not to be placed in a position to be superseded in army rank by any one of the Indian Army who is junior to us as Colonel.

The reply of an unprejudiced man would be, of course, Why not? Why not in that rank, as well as in that of Lieutenant-Colonel, or Major, or Captain, &c.?

The only answer would be that "It is not the practice in our service under present

regulations." A few years ago, it was the Lieutenant-Colonel who was secured by the existing regulations from future supersesssion; now it is the Colonel. It is clear, therefore, that it is a purely conventional rule, or feeling, for in fact there is no such rule.

Hitherto the Guards and Line, the Artillery, Engineers, Marines, and Indian Officers, have each had their separate and independent lists, and there has been no rule against the Colonels of the one list superseding the Colonels on the other. If there were such a rule, it would be especially hurtful to the public service in its effects on those bodies whose regimental promotion is regulated by seniority, or by length of service as in the Staff Corps.

The effect of the application of the principle in the present instance would be to give to the British Officers all the advantages of rapid promotion under the purchase system to the rank of Lieutenant-Colonel, while the Indian Officers, whether under the seniority system or the Staff Corps rules, cannot generally attain to that rank within 26 years; and then to place them both on their start for the Major-General's rank according to the date of their becoming Colonels.

It is not necessary to look through the whole Army List for an illustration. I have taken one which may be an extreme case for all I know, but it was the one quoted by Colonel North. Colonel Raines, it is said, will be superseded (?) by Colonel Barr.

Colonel Raines entered the service in	1842
„ attained to Regimental Lieutenant-Colonel ..	1857
„ attained to Colonel	1858
	16 years.
Colonel Barr entered the service	1832
„ attained to Lieutenant-Colonel	1858
„ „ Colonel	1864
	32 years.

Would any man, not wedded to the existing British rule of promotion call this supersession hard and unjust?

Major-General Hamilton is now the junior Major-General of the Indian List, and is said to have superseded so many British Colonels,—

Entered the Army in	1828
Attained to Lieutenant-Colonel in	1858
„ Colonel in..	1863
	35 years.

If his promotion had been suspended until the last British officer, his senior as Colonel, was promoted, that would add about 11 years to his service, and he would become a Major-General after 46 years' service, at about the age of 64.

The fact is, the system of promotion in the two services is totally different.

In the Home service, a rapid career is open to an officer who has money and good luck, up to the grade of Colonel; and then the practice of retaining on the Colonels' List a large number of half-pay Officers tends to give a check to his further progress.

In the Indian service, the officers have heretofore been bound by the system of promotion by regimental seniority, and even under the new Staff Corps rules, no one can rise to the rank of Colonel under 31 years' service (except by distinguished service in the field); and a check in the Colonel grade similar to that in the home service will place the Indian Officers under very serious disadvantages, and, it may be feared, prove hereafter, when the amalgamation is complete, detrimental to the interests and efficiency of the service.

It appears that the supersession has attracted more notice of late from the circumstances of certain officers in India having been promoted, while young in years as well as in the Colonel's grade, to the rank of Major-General.

Such are Major-Generals Norman and Green; but it is remarkable that, though these are officers whose promotion has been accelerated by distinguished service, of the two British Colonels whose regiments are in India, and who are superseded, Goodwyn (41st Foot) is of the same season of appointment as Norman (1844), and junior to Green (1841), while Raines (95th Foot) (1842) is only two years senior to Norman, and junior in the service to Green.

July 9th, 1869. T. T. P.

APPENDIX.

PROBABLE STATE of the Major-Generals and Colonels of the British and Indian Armies, during the next Eleven Years, under the operation of the present system.

British Service.								Indian Service.								Difference between Date of Rank as Colonel of the two Junior Major-Generals.	Difference between Date of First Commission of the two Junior Major-Generals.	
Date.	Number of General Officers on the Establishment.	Estimated Number of Annual Casualties.	Name of Junior Major-General.	Date of Rank as Colonel, of Junior Major-General.	Date of First Commission of Junior Major-General.	Number of Officers promoted to Major-General, in supersession of one or more Colonels on the other List.	Number of Officers who have been superseded by Colonels of the other Service.	Date.	Number of General Officers on the Establishment.	Estimated Number of Annual Casualties.	Name of Junior Major-General.	Date of Rank as Colonel, of Junior Major-General.	Date of First Commission of Junior Major-General.	Number of Officers promoted to Major-General in supersession of one or more Colonels on the other List.	Number of Officers who have been superseded by Colonels of the other Service.

The augmented establishment for the amalgamated list will then be complete. The arrangement for fixing the Indian establishment on a reduced scale will have to be made, and for regulating the advancement of the few Indian Officers remaining.

In the preparation of the above Indian Table, the deaths among the Colonels between this time and 1880 have not been considered; but there can be no doubt but that, allowing for these, the promotion to Major-General at that time will have included 30 or 40 of the Staff Corps Officers on the amalgamated list, and that the supersession complained of will be near its end.

APPENDIX L.

Sir, *Horse Guards, 3rd September*, 1869.

With reference to your letter of the 26th ultimo, requesting to be furnished, for the use of the Committee on the Supersession of British Army Officers, with a Return, showing the names and services of the Colonels, Major-Generals, and Lieutenant-Generals of Her Majesty's British Forces, who have been superseded by any Officers of Her Majesty's Indian Forces since the 28th November, 1854, I am directed by the Field-Marshal Commanding-in-Chief to request that you will be good enough to acquaint the President of the Committee that the Return in question cannot be prepared in this Department, as His Royal Highness is not in possession of any records which would show the names of those Officers of the Indian Forces who have been promoted since the date referred to.

I have the honour to be,
Sir,
Your obedient servant,
W. F. Forster.

The Secretary
of the Committee on Supersession
of British Army Officers,
War Office.

APPENDIX M.

List of Lieutenant-Generals and Major-Generals of the Indian Army, superseded by Lieutenant-Generals and Major-Generals of the British Army; and of Lieutenant-Generals of the British Army superseded by Lieutenant-Generals of the Indian Army.

Number of Lieutenant-Colonels retired on annuity in Bengal, 56, in lieu of whom 30 Majors were made Lieutenant-Colonels, and of these seven are in the Staff corps.

Number of Lieutenant-Colonels in Madras were 56, in lieu of whom 32 Majors were made Lieutenant-Colonels, of whom six are in the Staff corps.

Number of Lieutenant-Colonels in Bombay were 22, in lieu of whom 11 Majors were made Lieutenant-Colonels, of whom three are in the Staff corps.

Number of Majors retired on annuity in Bengal, 46, in lieu of whom 46 Captains were made Majors, of whom about twenty are in the Staff corps.

Number of Majors who retired on annuities in Madras were 33, in lieu of whom 33 Captains were made Majors, and of these about twelve are in the Staff corps.

Number of Majors who retired on annuities in Bombay were 14, in lieu of whom 14 Captains were made Majors, and of these about six are in the Staff corps.

Number of Captains who retired on annuities in Bengal were 31, in lieu of whom 31 Lieutenants were made Captains, and of these about fifteen are in the Staff corps.

Number of Captains who retired on annuities in Madras were 42, in lieu of whom 42 Lieutenants were made Captains, and of these about twenty are in the Staff corps.

Number of Captains who retired on annuities in Bombay were 4, in lieu of whom 4 Lieutenants were made Captains, and of these one is in the Staff corps.

(Signed) T. T. Pears,
Major-General, Military Secretary.

India Office,
27th July, 1863.

APPENDIX O.

Extract from Despatch of the Secretary of State for India, 17th June, 1864.

" In the opinion of the Commission, the extensive promotion made under the Staff Corps " Rules unnecessarily gave superior rank to many of the Indian Officers selected for those corps, " and caused extensive supersession to the officers remaining with their regiments.

" 66. It is evident that a complete remedy for this supersession in army rank must be found " either in the withdrawal of the rank given to the Staff Corps Officers, or in granting such " army rank to the officers of the Indian Army as shall restore them to the relative position, as " regards the Staff Corps Officers, which they held before the formation of those corps.

" 67. Her Majesty's Government would have been very reluctant to adopt the first of " these two courses, which must have been productive of much embarrassment and disappoint- " ment to a very large class of deserving officers, while the replacing of those officers in their " regiments would not have been without its disadvantages, even to the complainants " themselves.

" 68. It has been considered, therefore, that the only satisfactory course open to the " Government is to confer upon the officers of the Indian Army generally such army rank as

" shall entirely remove all ground for complaint upon this head, by restoring to all who had " been superseded the relative position, as regards the Staff Corps Officers, which they held " before the formation of those corps.

" 69. Her Majesty's Government believe that the object in view can be effectually " attained, by an extension of a system which has for many years existed in India of giving " brevet rank by length of service, heretofore applicable only to the promotion of subalterns, and " by granting to the officers of the Indian Service army rank under the following rules, the " adoption of which has, with the concurrence of His Royal Highness the Field-Marshal " Commanding-in-Chief, been determined upon, viz. :—

" That all officers whose commissions bear date on or before the 18th February, 1849, " shall be promoted to the rank of Captain by brevet.

" All officers whose first commissions bear date on or prior to 18th February, 1841, shall " be promoted to the rank of Major by brevet ; and

" All officers whose first commissions bear date on or prior to 18th February, 1835, shall " be promoted to the rank of Lieutenant-Colonel by brevet ; all such promotions to bear date " 18th February, 1861.

" After the 18th February, 1861, officers of the several Staff Corps, and of Her Majesty's " Indian Army generally, shall be granted brevet rank under the following regulations :—

After 12 years' standing in the Army from date of first commission, to be ..	Captains.
After 20 years' ditto ditto	Majors.
,, 26 ,, ,, ,, ...	Lieutenant-Colonels.

" On and after the 18th February, 1866, all officers who have served 31 years on full pay, " five of which shall have been in the grade of Lieutenant-Colonel, to be promoted to the rank of " Colonel by brevet.

" 70. His Royal Highness the Field-Marshal Commanding-in-Chief has expressed his " intention of recommending to Her Majesty that the officers of the British Army serving in " India, including the ordnance corps, shall have army local rank in India conferred upon them " after precisely the same periods of service and under the same rules, special provision being " also made in cases where Line and Indian Officers may serve together elsewhere.

" 71. It is to be understood that the system of promotion to brevet rank now introduced, " will cease in its application to the several grades of the army on the extinction of those grades " among the officers of the Indian Army. Thus, when the whole of the Lieutenants of the " Indian Army shall have been promoted to the rank of Captain, the promotion of officers in the " Staff Corps to the brevet rank of Captain under the above rule will be discontinued, and so " on with the higher grades."

APPENDIX P.

Extract from Royal Warrant on Pay and Promotion, dated 3rd February, 1866.

Amalgamation of British and Indian Establishments.

" 19. There shall be a List (A.) of Indian General Officers, to which all Indian Officers " shall be promoted from the present Indian List, until all who were Colonels in the Indian " Royal Artillery or Engineers, or Lieutenants-Colonels in Our Indian Staff Corps, before the " 18th February, 1861, shall have succeeded to the rank of Major-General according to Indian " regulations. Major-Generals shall rise on this list until transferred under Articles 24 or 27.

" 20. There shall also be three other lists as follows :—

" (B.) A list of all Colonels of British Cavalry, Guards and Line, and of those " Colonels of Indian Staff Corps who had not attained the rank of Lieutenant- " Colonel before the 18th February, 1861.

" (C.) A list of Colonels and officers of lower rank of Royal Indian Artillery, " promoted on or after 18th February, 1861.

" (D.) A list of Colonels and officers of lower rank of Royal Indian Engineers " promoted on or after 18th February, 1861.

" 21. From (B.) promotion shall be made direct to the British Establishment.

" From (C.) promotion shall be made intermediately to a List (E.) of General Officers of " Indian Artillery.

" From (D.) promotion shall be made intermediately to a List (F.) of General Officers of " Indian Engineers.

" 22. When the junior officer on Lists (C.) and (D.) respectively shall have been

" promoted to Lists (E.) and (F.), promotion shall thenceforward be made to the British " Establishment, the officers on such lists being incorporated with it.

" 23. When a vacancy shall occur on List (A.), to which a Colonel of the Staff Corps " on List (B.) would have succeeded had promotion to List (A.) been continued, an addition " of one shall be made to the first branch of the British Establishment, by the promotion to it " of the senior qualified Colonel of that branch on List (B.), whether he be a British Officer " or an Officer brought in from the Staff Corps. This shall continue until the number of " General Officers added to the British Establishment, including the first transfer, shall be one " for every twenty-eight Combatant Officers in the three Staff Corps.

" 24. On the first such addition being made under Article 23, the General Officers of the " Staff Corps on List (A.) shall be tranferred to the British Establishment, which shall be " increased by the same number as the Indian Establishment will be diminished by such " transfer.

" 25. Promotion into List (A.) shall, after the transfer provided for in Article 24, be " limited to Officers of Cavalry and Infantry of Our late Indian Army, who shall not have " joined Our Indian Staff Corps.

" 26. As the number of General Officers on the first branch of the British Establishment " increases, under the operation of Article 23, the establishment of Generals, Lieutenant-" Generals, and Major-Generals shall be from time to time so adjusted as to maintain as nearly " as may be the proportions now existing in the British Service ; but any reductions that may " be requisite shall be made only by gradual absorption of every third vacancy amongst super-" numeraries in the higher grades."

APPENDIX Q.

RETURN of the 12 Senior Colonels of the British Army who succeeded to the Fixed Establishment of Line General Officers next after the issue of the Memorandum in the Gazette of 1st May, 1855.

FIRST REPORT.

THE Committee appointed by Minute of the Secretary of State for War, dated February, 1870, "to inquire into the comparative advantages of in-door and out-door ions, for the numbers who can be accommodated at Chelsea and Kilmainham, and rally into the economy of the two Establishments," beg to submit the following ort:— 40111 1

Our inquiry has, in the first instance, been confined to the Royal Hospital at Chelsea.

We have personally inspected the Establishment, and have obtained evidence and mation bearing on the subject of the inquiry intrusted to us.

The Royal Hospital at Chelsea will accommodate 538 in-pensioners, which is the ber of the Establishment fixed by the Royal Warrant of 23rd June, 1862. See Appendix A.

The number of out-pensioners is 64,000, of whom about 7,900 are over the age of 70.

The following are the conditions of admission to the in-pension of the Hospital:— Hutt, 17 to 19; 28 to 32, 33, 34.

A candidate must be in receipt of a permanent out-pension.

He must be of good character, and have given good service, and generally war ce.

He must be incapable of supplementing his pension by labour.

He must have no wife or children dependent on him for support. Hutt, 51; Tench, 714; and see Form Appendix B.

In considering applications for admission, a preference is given to men suffering from ility contracted in and by the service.

No candidate whose pension is less than 9*d.* is admitted without special consideration.

No candidate is admitted under the age of 50 unless suffering from disability racted in and by the service, or to fill some employment in the Hospital. Hutt, 417 to 422, 495, 500 to 504. George, 505 to 551.

It appears, however, that a man, under the age of 50, thus specially admitted to fill e employment, if dismissed therefrom for misconduct, is not necessarily sent away the Hospital, but remains as an ordinary in-pensioner. George, 528, 529, &c

As from the evidence given by Major-General Hutt, it might possibly be supposed in ordinary cases he, as Secretary, practically exercises the power of admission e in-pension, we have called on him for further information on this point, and have rtained that the following is the course pursued in regard to admission. Hutt, 16, 17, 29, 33, 34. See Appendix F F

On receipt of formal applications for admission, the names of candidates are entered a general roll by the Secretary, in succession, strictly according to priority of appli- on.

Towards the end of the month, the whole of the applications, with the necessary ers and explanations in support thereof, are laid before the Board; when the Com- sioners, having regard to the number of vacancies, and the eligibility, according to the ns of the In-Pension Warrant, of the several candidates, sanction the selection of the t meritorious, whose names are entered on the Formal Admission Roll, by a warrant ed by the Commissioners, as a rule in the order in which they appear on the General See Form, Appendix O.

Any departure from this course, in a case of great urgency, is made by the Secretary r consultation with, and under the authority of, the Governor, as one of the Commis- ers, and is subject to the approval, subsequently sought, of the Board.

On admission to the In-Pension Establishment a pensioner surrenders his out-pension, no man is discharged from the Hospital to revert to out-pension without the previous roval of the Commissioners. Hutt, 54, 55.

At the time of this inquiry the number of in-pensioners was 537, being one short of establishment. Hutt, 10.

Of this number 92 were in the Infirmary. See Appendix L.

FIRST REPORT.

THE Committee appointed by Minute of the Secretary of State for War, dated February, 1870, "to inquire into the comparative advantages of in-door and out-door ons, for the numbers who can be accommodated at Chelsea and Kilmainham, and ally into the economy of the two Establishments," beg to submit the following rt:— 40111/1

Our inquiry has, in the first instance, been confined to the Royal Hospital at Chelsea.

We have personally inspected the Establishment, and have obtained evidence and nation bearing on the subject of the inquiry intrusted to us.

The Royal Hospital at Chelsea will accommodate 538 in-pensioners, which is the ber of the Establishment fixed by the Royal Warrant of 23rd June, 1862. See Appendix A.

The number of out-pensioners is 64,000, of whom about 7,900 are over the age of 70.

The following are the conditions of admission to the in-pension of the Hospital:— Hutt, 17 to 19; 28 to 32, 33, 34.

A candidate must be in receipt of a permanent out-pension.

He must be of good character, and have given good service, and generally war ce.

He must be incapable of supplementing his pension by labour.

He must have no wife or children dependent on him for support. Hutt, 51; Tench, 714; and see Form Appendix B.

In considering applications for admission, a preference is given to men suffering from ility contracted in and by the service.

No candidate whose pension is less than 9*d.* is admitted without special consideration.

No candidate is admitted under the age of 50 unless suffering from disability racted in and by the service, or to fill some employment in the Hospital. Hutt, 417 to 422, 495, 500 to 504. George, 505 to 551.

It appears, however, that a man, under the age of 50, thus specially admitted to fill employment, if dismissed therefrom for misconduct, is not necessarily sent away the Hospital, but remains as an ordinary in-pensioner. George, 528, 529, &c

As from the evidence given by Major-General Hutt, it might possibly be supposed in ordinary cases he, as Secretary, practically exercises the power of admission e in-pension, we have called on him for further information on this point, and have tained that the following is the course pursued in regard to admission. Hutt, 16, 17, 29, 33, 34. See Appendix F F

On receipt of formal applications for admission, the names of candidates are entered general roll by the Secretary, in succession, strictly according to priority of appli- n.

Towards the end of the month, the whole of the applications, with the necessary rs and explanations in support thereof, are laid before the Board; when the Com- ioners, having regard to the number of vacancies, and the eligibility, according to the s of the In-Pension Warrant, of the several candidates, sanction the selection of the meritorious, whose names are entered on the Formal Admission Roll, by a warrant ed by the Commissioners, as a rule in the order in which they appear on the General See Form, Appendix O.

Any departure from this course, in a case of great urgency, is made by the Secretary consultation with, and under the authority of, the Governor, as one of the Commis- ers, and is subject to the approval, subsequently sought, of the Board.

On admission to the In-Pension Establishment a pensioner surrenders his out-pension, no man is discharged from the Hospital to revert to out-pension without the previous oval of the Commissioners. Hutt, 54, 55.

At the time of this inquiry the number of in-pensioners was 537, being one short of establishment. Hutt, 10.

Of this number 92 were in the Infirmary. See Appendix L.

Appendix W. The average number in the Hospital on the 1st January, during the last fifteen ye has been 534.

George, 348, 349. The age of the oldest in-pensioner at the present time is 94; and that of the young about 30; and there are—

16 between	30 and 40	17 between	60 and 70
71 „	40 „ 50	169 „ . ..	70 „ 80
98 „	50 „ 60	58 „	80 „ 90

Appendix V. The average age on admission during the last 14 years has been $61\frac{10}{12}$ years.

Appendix C. The average annual number of applications for admission has been 171.

See Return in Appendix C, and do. U. The average annual numbers of admissions and rejections have been 123* and respectively.

Ibid C. The average annual number of applications for readmission from men who had left Hospital has been 13; and the annual average number readmitted has been 7.

Ibid Y. The average annual number of deaths has been 79; and the average age at de $71\frac{2}{12}$ years.

Hutt, 56. The average period of residence in the Hospital is about 4 years.

See Return in Appendix X. The average annual number of in-pensioners who have left the Hospital and reve to out-pension at their own request has been 29.

Ibid X. The average numbers annually dismissed and sent to asylums have been 7 and respectively.

Ibid A A. The rates of out-pension surrendered on admission have ranged between 5*d.* 2*s.* $11\frac{1}{2}d.$

Seventy-seven pensioners were admitted at the former and one at the latter rate du the 14 years ended the 31st December, 1869, and the following shows the most nume rates surrendered during the same period:—

The average rate of out-pension surrendered has been 10*d.*

Army Estimates, 1870—71, p. 120. The Parliamentary grant in the army estimates for the present year on account of Royal Hospital at Chelsea is 29,500*l.* 6*s.* 5*d.*, and in the estimates of the Office of W a further sum of about 8,200*l.* is provided for the maintenance and repair of buildi furniture, fuel, &c.

40111 / 7

See Return in Appendix S. The annual cost to the Public of the Establishment for 13 years up to 1868-69 in sive, has averaged 33,159*l.* 3*s.* 8*d.*

Ibid T. Deducting from this amount—

Hutt, 77, 82. 1. The cost of the Secretary's Department, which is almost exclusively employe business connected with out-pensions;

2. The cost of trusses and surgical appliances;

3. The out-pensions surrendered on admission; the annual cost of the in-pensio for the above period, has averaged 21,537*l.* Whence it would appear that the ave

Hutt, 79; and see Return in Appendix T. cost to the public of an in-pensioner is about 2*s.* 3*d.* a-day, or about 40*l.* a-year.

Hutt, 97. In addition to the Parliamentary Grants, Chelsea Hospital possesses an incom about 3,000*l.* a-year.

This income is derived:—

Hutt, 86, 89, 92; and see Return of Legacies, &c., 1. From legacies.

Appendix F. 2. From a commuted allowance, in lieu of an ancient grant of coals from the Cast Newcastle.

3. From interest on unclaimed prize money, of which there is now in the hands o Commissioners and invested, about 80,000*l.*

Hutt, 86 to 91, 92, 98, 124. This income, with the exception of that arising from the interest on unclaimed p money (which is applied to the general purposes of the Hospital), is devoted ent towards increasing the personal comforts of the in-pensioners.

Hutt, 100; and see Return of Land in Appendix G. The land belonging to the Hospital, consists of about 62 acres.

* Of this number an average of about 7 per annum died before entering the Hospital, or did not join various other causes.

† Mostly Peninsular and Waterloo men, and very old and infirm.

The total sum paid for this land, amounts to 56,837*l.**

The land required for the building itself, and the land subsequently acquired, was leased, and the cost of erecting the building defrayed, from moneys raised by deduc- from the pay and half-pay of officers and soldiers of the army, partly as enforced riptions of a day's pay per annum, but mainly as poundage for prompt issues of pay alf-pay, from gifts and legacies, and from unclaimed prize money. — Hutt, 104 to 111, 115, 116, 118; and see Accounts of Building and Return of Land in Appendix G and Appendix H, P and Q.

No portion was defrayed out of Parliamentary Grants. — Hutt, 112, 117, 123.

The sums thus defrayed for land and building, amounted to—

	£	s.	d.
For land for the building	5,019	15	5
For erection of the building	144,610	1	6¾
For land subsequently acquired	51,817	6	7
Total	£201,447	3	6¾

See Return and Account in Appendix G and H.

No Parliamentary Grant, in connection with Chelsea Hospital, can be traced prior to — Hutt, 112; and see Memo., "Remarks on Poundage Funds," in Appendix Q.

The public have access to the grounds attached to the Hospital; and between 1849 868, these grounds were in charge of the Office of Works, and a large sum of public y was expended on them by that Department. — Hutt, 125.

The interior economy and discipline of the Hospital are under the Governor. — Hutt, 12, 62, 63.

The staff and subordinate employés, with their duties and emoluments, are shown in n-Pension Warrant of 23rd June, 1862, and in the Return furnished by Major-General both of which are included in the Appendix to the Evidence. — Appendix A and E.

From evidence and personal inspection, we have satisfied ourselves that the general gements for the comfort and well-being of the in-pensioners, both in the Hospital, in the infirmary attached to it, are at present admirable; and that the men are nted with their condition. — Hutt, 126. Fiest, 291, 294, 305 to 309, 315, 338. George, 384, 385, 392, 393, 397. Ingram, 446.

No case has occurred of a man leaving the establishment on account of his being isfied. — Hutt, 38. George, 387, 397.

The statements in certain letters to the War Office, reflecting on the arrangements e Hospital, have been shown to be unfounded, and to be the production of an dual who had been refused admission. — Hutt, 66, &c.

One or two points in connection with this part of the subject have been brought to otice.

1. Until quite recently some of the captains of invalids, to whom certain important s are assigned by the Warrant, have been, from physical infirmity, quite incapable rforming those duties. — Hutt, 72. Fiest, 324 to 333.

2. Some alterations in the arrangements for Divine Service are considered by the lain to be desirable. This, however, appears to be a matter which should be brought m under the consideration of the Commissioners. — Ingram, 432 to 443.

The benefits of the in-pension of Chelsea Hospital are shortly stated in a paper ed to the Committee by the Governor, F.M. Sir Alexander Woodford, and included e Appendix. — See Appendix N.

From evidence taken, with a view to ascertain the feelings of the army and of ut-pensioners in regard to the advantages of the Hospital, we have ascertained that the olishment is regarded rather as a refuge for men to fall back upon in case of necessity ng from old age, ill health, &c., than as a place which, unless pressed by such ssity, it would be desirable to enter. — Knight, 140, 141, 167. A Private, 233. Ibid, 201, 202, 209, 213. Tench, 731, 732. Hutt, 126, 128. Out-pensioner Farmer, Appendix E E.

Soldiers look forward to rejoining their friends or relations at the end of their military r, and the severance of home-ties and associations, involved in the present system of nsion, is evidently a drawback to its popularity. — Sergeant, 171, 181, 182, &c. Private, 189, 190 to 210. Ibid, 225 to 232, &c. Whitmore, 570. Tench, 736, 741. Richmond, 599, 600. Harrison, 692, 697.

Soldiers serving under the colours, therefore, appear to look forward more to their pensions than to the prospect of entering Chelsea Hospital; indeed, the latter seems e seldom even alluded to by them. — Sergeant, 174, 179, 183. Private, 195, 196.

* This is the sum shown in the "Return of Land." Major-General Hutt states the cost at 60,342*l.* — Hutt, 102.
apparent discrepancy arises from the fact that Major-General Hutt included a sum of about 4,000*l.* paid by reasury in 1808 to Lord Yarborough, for the surrender by him of an unexpired term of his lease of a portion land belonging to the Commissioners, which had been leased by the Crown to various persons, and finally into Lord Yarborough's possession.

Knight (Leicester), 137, 138. Richmond (Deptford), 597. Tench (Woolwich), 714, 730. Whitmore (London), 559.

It appears from evidence given by three of the Staff Officers of Pensioners examin that very few out-pensioners apply, through them, for admission to the Hospital.

In the case of the fourth officer, it is stated that the applications are more numerou

Whitmore, 565, 566. Richmond, 598.

Applications through the Staff Officers of Pensioners for increased out-pensions stated not to be numerous.

George, 399, 400, 408 to 410. Knight, 141 to 146. Hutt, 126. Whitmore, 568, &c. Richmond, 602, 603. Private, 218, 219, 243, 244. Answers of In-Pensioners, Appendix D D. Ibid, Out-pensioners, Appendix E E. Knight, 155, 167. Tench, 732. Harrison, 701.

Both amongst the in-pensioners of Chelsea Hospital, and the out-pensioners, t steps taken by the Admiralty in regard to the Greenwich pensioners have attrac attention; and although, naturally, a sentiment of pride in such an institution as Chel Hospital exists, yet it is clear from the evidence we have taken, that amongst soldi serving under the colours, as well as with the out-pensioners and in-pensioners, increase of pension, sufficient to enable them to live with their friends or relatio estimated by the majority at about 2*s.* a-day in all, would be decidedly preferred to benefits of the Hospital, accompanied as they are with a certain amount of disciplin restraint, and an entire severance of domestic ties.

Whitmore, 572. Richmond, 603. In-Pensioners, Appendix D D, Myland, Reason, Hayes, White.

Some of the witnesses however differ from this view; but it must be rema that the few in-pensioners who, on being questioned, expressed their preference f residence in the Hospital to an increase of out-pension, were friendless and alone in world.

Richmond, 606, 632, 633.

With reference to this question it has been urged that, though probably in-pensioners generally would, for the sake of change, accept an offer of increased pension (if made) and leave the Hospital, yet that they would soon in such cases be in workhouses or be preyed on by lodging-house keepers.

Whitmore, 584.

Harrison, 692* to 694.

To the latter objection it has been answered that the surveillance of the Staff Offi of Pensioners would prevent such a state of things.

Knight, 150 to 153. Tench, 737 to 740.

The probability of the men being preyed upon by lodging-house keepers is more doubted by some Staff Officers; and the Committee have no reason to suppose that now in receipt of high rates of out-pension are at present thus treated.

George, 398. McMunn, 473 to 483; and see Appendix L. Hutt, 127. McMunn, 488. Appendix D D.

Out of the 537 men now in the Hospital (besides over 90 in the infirmary), there 283 requiring frequent medical attendance; and there is no doubt that in many of t cases no amount of increased pension that it would be practicable to give would en the men to be cared for outside the Hospital as they are cared for at present.

One of the in-pensioners (Morgan) voluntarily admitted as much; but he neverth said he would prefer to take 2*s.* a day and go out.

Having thus stated the leading features of the evidence we have received, we b conclusion to submit the following suggestions:—

1. That the minimum age for admission, except in cases of men admitted to per special duties, or of men wounded or disabled in and by the service, should be raised 50 to 60.

2. That in the event of a man admitted under the age of 60 ceasing to perform special duties, he should be discharged from the Hospital altogether.

3. That the condition of admission requiring that a man shall be incapable of sup menting his pension by labour, should be extended to retention in the Hospital,—th to say, that if a man after a residence in the Hospital becomes capable of supplemen his pension by labour, he should be discharged and revert to out-pension.

4. We consider that it would be possible to make some reduction in the administr staff of the Hospital without impairing its efficiency. The appointments of Governo Lieutenant-Governor have doubtless been considered among the most coveted rewards to officers of the army, and the officers selected for those posts have always been a the most distinguished in the army; but we feel compelled to report our opinion tha far as the duties of the Hospital are concerned, three staff officers are not required fo superintendence of the establishment, but that two would suffice for such duties.

Governor. Lt.-Governor. Major.

This reduction could only be effected either by the Lieutenant-Governor being reta discharging the duties of the Major, or by the Major being retained, giving him, i absence of the Governor, power to act as his Deputy.

5. We consider that the captains of invalids should not be regarded as formi portion of the staff of the Hospital as at present, but that they should be regard inmates of the establishment; and that in selecting officers for these berths a prefe should be given to those suffering from wounds or other disability contracted in a the service.

6. The main result of our inquiry has been to bring prominently before us the large and important question of the retention of the Hospital on its present footing.

This question, although not distinctly included in the Secretary of State's reference, is so intimately connected with the comparative advantages of out-door and in-door pensions, that we would observe that the Hospital is, in fact, an almshouse of the best description for the most infirm and helpless of a body of about 64,000 pensioners, and that, although, like every such Institution, it involves in a great degree the separation of its inmates from their families and friends, it is very certain that no increase of pension that could be given would compensate for the comforts both in lodging, food, and medical attendance afforded by the Hospital to those who are without friends, and are incapacitated by infirmities from taking care of themselves.

The number of applications for admission is an evidence that, although little regarded by men who are able to supplement their pensions by their labour, or who have families or friends able and willing to support them, the value of the Hospital to those who are the proper objects for it, viz., the infirm and helpless, is generally known and fully appreciated.

The monastic character of the institution is no doubt felt as a drawback from its advantages, but if this could be got rid of by any arrangement by which a proportion of married pensioners, strictly of the description referred to, could, with their wives, be accommodated in the Hospital, it would probably remove any such feeling and tend to make it more sought after by married pensioners.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

COMMITTEE ON CHELSEA AND KILMAINHAM HOSPITALS.

War Office, Thursday, 17th February, 1870.

PRESENT:

Captain The Hon. J. C. VIVIAN, M.P., *in the Chair.*

General Sir CHARLES YORKE.
Colonel EGERTON.
Mr. TALBOT.
Mr. MILTON.

Major-General GEORGE HUTT, C.B., examined.

Major-Gen. G. Hutt, C.B.

Feb. 17, 1870.

1. (*Chairman.*) The Secretary of State's reference to this Committee is "To inquire into the comparative advantages of in-door and out-door pensions for the numbers who can be accommodated at Chelsea and Kilmainham; and generally into the economy of the two establishments." The Secretary of State's desire is that we should examine into these two establishments as hospitals, but not in the present inquiry to examine into the question of the Board as a Board of Discharge. Upon the first point I will put some questions to you. Will you be good enough to tell the Committee what is the total number of in-door pensioners who can be accommodated at Chelsea?—The hospital can only just accommodate the number which is laid down in the In-Pension Warrant; which number, I think, is 540, with the exception of a few men who have recently been appointed for special purposes, such as constables, who, properly speaking, do not belong to the Hospital, considered as a receptacle for old soldiers, but they are employed on duties which were formerly conducted under the Office of Works.

2. Are they pensioners?—Yes. The admission into Chelsea Hospital is strictly limited to the number authorized by the In-Pension Warrant, or I believe that it is more correct to say that the In-Pension Warrant is regulated by the means of the Hospital to accommodate them.

3. In fact, Chelsea Hospital can only accommodate 540 pensioners?—I believe that is the number.

4. Can you furnish the Committee with a Return embracing that information?—Certainly. The In-Pension Warrant must be in this office, and it could be referred to in a minute (*vide* Appendix A.) The accommodation of Chelsea Hospital does not admit of receiving more men than are mentioned in that Warrant. The berths are exactly adapted to the number in the Warrant, and no more.

5. There would be no possibility of enlarging the accommodation at Chelsea Hospital without adding to the hospital building?—No.

6. (*Mr. Milton.*) Do you allude to the warrant of 1862?—Yes.

7. (*Chairman.*) The Warrant of 1862 fixes the number of in-pensioners at 6 Colour-Sergeants, 24 Company Sergeants, 24 Corporals, 6 Drummers, 50 Privates of the first class, 50 Privates of the second class, and 378 privates of the third class, making a total of 538?—Yes.

8. And there is no means of enlarging the accommodation at Chelsea Hospital unless you are prepared to increase the hospital building?—None whatever, unless it was in any way considered that men in the Infirmary should not have berths also in the Long Wards.

9. How many pensioners are there now in the Hospital?—We are always full on the first of the month; last Saturday there was one vacancy; one death had occurred in the month. We generally reckon upon ten casualties every month, and the vacancies are filled upon the 1st of the following month.

10. At present there are 537 men in the hospital?—Yes; including everybody.

11. How many of those 537 men are in the Infirmary?—On Saturday there were 87.

12. Can you state the age of the oldest pensioner in the Hospital?—Will the Committee allow me to make one remark with regard to the In-pensioners generally? In my official capacity I have no direct communication with the in-pensioners, but I am in constant communication with the Governor, the Major, and all the officials, and I know the place very well, from taking a great interest in it. I believe that the oldest man is 91 or 94 years of age, and I can give the average. After a man is once admitted within the walls of the Hospital, I have no official connection with him, further than the record of his existence shown by the books of my office.

13. (*Mr. Milton.*) The deaths are officially reported to you, are they not?—Yes; once a-week.

14. Your rolls of admission will show the age of the oldest man?—I could easily ascertain it. The average age this year was rather low, it was only 65.

15. (*Chairman.*) What is the number of applications or admission in each year?—The number of applications last year was 231.

16. Will you be good enough to describe to the Committee what proceedings are taken upon an application being made for admission?—When a man applies to me, it is very often in an irregular manner, and upon a scrap of dirty paper. I send him a form (*vide* Appendix B); and when I get back that form, if it broadly embraces all the conditions upon which a man should be admitted, I at once mark him off to be admitted.

17. What are the conditions of admission?—That he should be a man of good character and of good service, and generally speaking of war service, and, taking his rate of pension as a leading standard of desert, I never take upon myself to admit a man of a lower rate than 9*d.* If there are circumstances connected with him which, despite his low rate, seem to give him a good claim, I lay the matter before the Commissioners for their decision. If, on the other hand, he is a man of bad character, or of indifferent character, or whose length of service does not give him a claim, I at once refuse him.

18. Then do you estimate a man's right, so to speak, to come into Chelsea Hospital by his character, his rate of pension, and his length of service?—Not his rate of pension exclusively. I only mention the rate of pension as a leading guide, for it may be taken as a fair standard of his general merit. The first thing which I take is his character, and then service and disability: these are

Major-Gen. G. Hutt, C.B.

Feb. 17, 1870.

strong points. Many a man comes up of between 40 and 50 years of age, and I then write him off "inadmissible," unless he can produce a medical certificate to show that he is incapable of supplementing his out-pension.

19. That is one of the principles of admission, namely, that a man shall be so infirm that he cannot do anything to help himself out of the hospital?—Yes. No man is admitted within its walls who is capable of supplementing his out-pension by his labour.

20. What is the average number of vacancies in the Hospital?—During the last year the numbers were 36, who were permitted to revert to Out-pension at their own request,—4 were sent to the Lunatic Asylum; 8 were dismissed for misconduct; and 86 died: making a total of 134, in addition to a few vacancies which existed at the opening of the year.

21. Is that an average number of deaths in the year, taking the last 10 years?—No; I have not gone back quite so far as that, because it is only since I have myself been there, that these rolls have been so carefully kept. In the year before there were permitted to revert, 28; sent to the Lunatic Asylum, 2; dismissed for misconduct, 13; and deceased, 81.

22. Out of the 231 who applied to you last year, how many were admitted?—138.

23. The grounds of refusal were based upon the principles which you have described to the Committee?—Exactly so.

24. Of the remainder whom you did not admit, how many did you keep npon your List for admission as vacancies occurred?—I produce two Rolls, one of men regularly admitted by the Board up to the end of the year, the other, of all applicants whatever. On the latter many men are struck off as ineligible on account of *bad character, too young, intemperate, previously dismissed for misconduct,* &c.

25. Do you mean that between the 231 who applied, and the 138 who were admitted, none of the others were only refused because there were no vacancies?—No; the Rolls are always closed about 5 days before the end of the quarter, and there were, on the 1st of January, I think about 12 or 14 men of good antecedents, but whose names were not regularly entered on the books for "admission as vacancies occurred," and there must have been not less than 50 others awaiting reply.

26. (*Mr. Milton.*) Were those men of approved character for whom there was no room?—Yes; because there were no vacancies. There are generally that number. At this moment I believe there are 12 or 14 men waiting for admission.

27. (*Chairman.*) I think that you said that last year there were 38 applying for permission to leave the hospital?—Yes; the bulk of those men were men not of a very advanced age—they came in a wretched state of health—they were men of good character, and of good pension. They generally stayed from six months to two or three years, and they recovered in health and strength. They cast about them for employment, and whenever they got it they went out. I referred to the Medical Officer on that very question, and he confirmed the opinion which I had formed, which is just what I have stated. There are of course a few men who go out to rejoin their friends, and now and then a man goes out to be married. Last year out of the 38 men I ascertained that 3 or 4 went out to be married. About 20 went out for the reasons which I have mentioned, and of the rest there were 6 or 8 whose friends turned up and expressed a wish to receive them, and they went out.

28. You say that one of the estimates of a man's qualification for coming in is his having a good pension?—The pension is almost invariably a very fair standard by which to determine a man's merit, but yet we have several men who have been admitted at as low a rate as 6*d.* They are mostly Peninsular and Waterloo men, and very old and infirm.

29. It does not follow, as a matter of course, that because a man has been discharged upon a small pension he is therefore a man of bad character?—By no means. Some of the men who are in the hospital, under those circumstances, are men of very good character. I only mention it as to the line of conduct which I pursue. I consider that the case of a man with a pension below 9*d.* should be referred for the consideration of the Commissioners.

30. Is it not a fact that one would rather consider a man's having so small a pension that he could not keep himself out of the Poor-house outside the Hospital as an inducement to give him a favourable consideration?—The Board have generally viewed it in this light, that you are to consider a man's deserts as a soldier. If a man has done any good service, if, for instance, he has been exposed in a tropical climate, or if he has been wounded, he would have a higher rate of pension. The only instances recently which have been admitted at the low rate of which I speak are Peninsular and Waterloo men. Some of those men are worn out, and are poor impoverished creatures whom we find in Workhouses, and in other similar situations, and whom we have admitted into the Hospital.

31. But you have a great many pensioners upon your list who have been dismissed from the army on account of ill-health, and from having been diseased in bad climates, but who, from their short length of service, have been put upon a small pension?—That is so. Several men recently have been admitted who were paralysed by sun-stroke in India, and they are only men of 7*d.* or 8*d.*

32. I was only wishing to clear up this point of a man's qualification for admission being estimated by the rate of his pension?—I did not mean to convey that it is estimated exclusively by that. I merely mentioned the pension as the general rule by which to determine a man's merits.

33. (*Mr Milton.*) I think you said that when a man's pension was below 9*d.* you did not take upon yourself the responsibility of deciding on his admission, but referred it to the Commissioners?—Yes.

34. (*Mr. Talbot.*) It is only very doubtful cases which are referred to the Commissioners?—Yes; below 9*d.* the cases are doubtful. The general cases are well defined. Once a month I lay a paper before the Commissioners with a detailed statement of everything, and if a man's claim appears to me to be in any respects doubtful, I put the case aside for the opinion of the Commissioners as to whether he is to be brought on at all or not.

35. That is to say, you act upon such rules as you lay down for your own guidance?—It is what I understand to be the general desire and wish of the Commissioners, and is always finally subject to their approval.

36. (*Chairman.*) Can you put in a return including the number of applications for admission during the last year, the number of refusals, the grounds of those refusals, the number of men who have applied to leave the Hospital, and the number of men who, having once left the Hospital, have applied to return?—Yes (*vide* Appendix C).

37. Do many men, having once left the Hospital, apply to return?—Frequently. I only speak from memory; but I should think that there must be 20 or 30 men who have done so. One man was admitted only a short time ago, for the third time. A man is never admitted a second time unless he is of good character.

38. Do many men apply to leave on account of being dissatisfied with their condition?—I never heard of one case of that sort.

39. Do many men apply for admission who have sufficient money to live outside the Hospital?—I have known one or two such instances, but they are very rare. A man, a few days ago, came before me, who I chanced to know was in good circumstances. I asked him what circumstances he had been in; he said, "I have been earning a decent livelihood, but I am now out of work;" he was a musician; he said, "I cannot do anything; I am very ill; my doctor's bill will be very high, and therefore I apply here." His antecedents were extremely good; he had done, I think, 25 years' service in all parts of the world; and the Commissioners thought that he had a very fair claim; and he

was therefore admitted; and he is in the infirmary at this moment.

40. What is the lowest rate of pension which a man must be drawing to entitle him to admission?—There is no exclusive rule. One man was admitted last year at 5*d.*; he was discharged under the Warrant of 1806; he is consequently a very old man; he is a Peninsular man.

41. (*Mr. Milton.*) Are the applicants mostly London men, or men from the neighbourhood of London?—No; they used to be so, but I should think that of late years not more than one tithe of them have been London men.

42. Have you had many applications from the country?—We have very many from Scotland. With reference to the number of pensioners, there are more from Scotland than from any other part. Glasgow sends us a great many.

43. Do you entertain any applications from Ireland?—No.

44. You refer them to Kilmainham?—Yes, usually. I have known one or two cases from Ireland, and I have said, "You must get a transfer to England."

45. With regard to the applications from the country, do you get them from the Staff Officers of pensioners?—I request the Staff Officers of pensioners to allow applications to come through them as far as possible, and to indorse them.

46. If a man applies to you direct, do you refer his application to the Staff Officer?—By no means in the first instance.

47. It is not necessary to get the opinion of the man who has been paying him for years past?—No; if a man does not give me sufficient data to enable me to trace him, I send the case to the Staff Officer. The Staff Officers are continually referred to, and a man can only be admitted on a form signed by the Staff Officer. Directly a man is admitted on my book I write five letters—one to the Governor, to bring him on to the rolls of the Hospital; one to the Quartermaster, to bring him on the diet rolls; one to the War Office, to strike him off their rolls; one to the man himself; and one to the Staff Officer.

48. Taking Scotland and the Provinces as against London what is the proportion of applications from London. It is very small—speaking from memory I think that it is under 10 per cent.

49. Is anything allowed to the successful candidates for the expenses of coming up to London?—Yes; a sum of 50*l.* a year is allowed, which I am afraid we sometimes exceed. We give them their travelling expenses by a third-class train from the spot from which they start—that was in consequence of a decision of a Committee of the House of Commons.

50. (*Colonel Egerton.*) Of course you give a preference to men who have a disability contracted in, and by, the service?—Yes; disability from wounds or from service.

51. (*Chairman.*) How many pensioners now in Chelsea Hospital have families outside the Hospital?—We have no means of ascertaining that. In the form which they fill in they give a certificate under the signatures of the Minister and the Churchwardens of the place that they have no one dependent upon them, and that is all that we care for.

52. When they leave the Hospital do you make any inquiries as to where they are going, or what becomes of them?—I do not. A man wishes to go out, and the general reason for going out is to take a situation or to seek employment.

53. (*Colonel Egerton.*) You have to notify that to the Staff Officer of Pensioners who has paid him?—Yes, through the War Office, stating the district in which he proposes to reside.

54. (*Mr. Milton.*) Do the men notify to you their wish to go out?—No; they notify their wish to go out to the Adjutant or Sergeant-Major, and then the Major sends me in a roll which I lay before the Commissioners for their approval.

55. A man does not go out until the Commissioners have approved of it?—No; according to the Act of Parliament a man relinquishes all out pension on admission, and nothing but the award of the Commissioners can restore that out-pension.

56. (*Chairman.*) Will you tell the Committee the average period of residence in the Hospital?—About 4 years.

57. How many meals a-day have the Pensioners?—Three meals a-day; namely:—breakfast, dinner and tea (*vide* Appendix D.)

58. Does the clothing come under you?—Yes; because the contracts have to be framed under my care.

59. How are these men clothed?—We make our own contracts. Advertisements are published in several papers, and the tenders are laid before the Board, and the Commissioners decide upon which tender shall be taken.

60. What clothing do these men get a-year?—I cannot state accurately from memory—we go on the old system of half-mounting (*vide* Appendix D.)

61. (*Mr. Milton.*) When a man goes out is his clothing, if not worn out, taken into store, and re-issued?—Yes; under all circumstances the Hospital clothing is returned, and it is re-issued over and over again.

62. (*Chairman.*) Do any complaints which men may have to make in the Hospital come to you?—No, unless sufficiently serious to be placed before the Commissioners; they would go to the Major and the Governor of course; I might hear of them, but I do not see them.

63. (*Mr. Milton.*) Would the Major submit them to the Commissioners?—Nothing would be brought before the Commissioners unless it was something more than an ordinary occurrence: the discipline is strictly under the orders of the Governor.

64. (*Chairman.*) Is there at the present moment an in-pensioner of the name of John Perry?—I do not know.

65. (*Mr. Milton.*) Do not your returns show that?—I have not the Roll Book here.

66. (*Chairman.*) These various charges which have come to us under the names of John Perry, John Black, and J. Ellerdy are all written by one man, who, I believe, was a man of such bad character that he was turned out of the Hospital?—He was never in. He left the Artillery in 1838, and I have ascertained that he made himself notorious by constantly writing to the newspapers, and they were very glad to get rid of him. About five years ago he applied for admission. He is a man with a very small pension—too small to give him a claim. The Board refused him, and since that time he has done everything in his power to stir up discontent amongst the men. Here is a sample of what he is in the habit of doing: he told me that he had written those letters to the War Office; he defied me; he said, "of course I shall continue to do it, and I shall write to the War Office."

67. We will now go to the Staff of Chelsea Hospital. Will you be good enough to tell the Committee the number of superior officers, exclusive of the Board of Commissioners, connected with Chelsea Hospital?—There are the Major and the Adjutant. The Governor and the Lieutenant-Governor are *ex-officio* Commissioners.

68. (*Mr. Milton.*) And there is the Chaplain?—Yes; and there are the Physician or Surgeon, and the Deputy-Surgeon.

69. (*Chairman.*) Will you give us a return of the Staff connected with Chelsea Hospital, that is to say, the Superior Officers and attendants, showing their pay?—I will do so (*vide* Appendix E.)

70. The number of the staff of Superior Officers, exclusive of the Commissioners, is how many?—There are the Major, the Adjutant, the Chaplain, and two Medical Officers.

71. (*Mr. Milton.*) Would you not include the Quarter-Master?—Yes; the Quarter-Master is a Commissioned Officer.

72. And would you include the Captains of Invalids?—One of the Captains of Invalids is stone blind, and there was recently one bed-ridden, and the Governor tells me that it is with great difficulty that he can at

Major-Gen. G. Hutt, C.B.

Feb. 17, 1870.

times get the little duty required of them performed. They have to attend in the kitchen to see that the rations are served out, and so forth.

73. (*Chairman.*) Can you state how many attendants there are now employed in the Hospital?—They are those mentioned in the In-Pension Warrant. Two extra nurses have been put on recently on account of the great quantity of sickness. We have a Chapel Clerk, who has recently been reduced to 6*d.* a-day.

74. (*Sir Charles Yorke.*) The Cemetery is closed, is it not?—Yes. I may here mention that a sum of 1,200*l.* is allowed yearly to cover all the expenses of employing In-pensioners on the various duties to be performed in the Hospital.

75. (*Mr. Milton.*) Is that 1,200*l.* obtained from the Army Estimates?—Yes.

76. (*Chairman.*) Will you kindly furnish us with a paper showing the number of attendants of all classes, with their duties and pay, and other emoluments?—I will do so (included in Appendix E.)

77. Can you tell the Committee what the entire cost of Chelsea Hospital is per annum, classified in the following way: First. Maintenance of In-pensioners; Secondly. Cost of Staff; Thirdly. Salaries of Secretary's Department; and, Fourthly. Maintenance of Buildings and Contingencies?—I can do so. (This information is shown in Appendix S.) My office has little or nothing to do with the Hospital; the whole duty of the Hospital would not occupy one Clerk for more than a few hours a-day at the outside.

78. But all applicants for admission come to you, and all applicants for permission to leave come to you, and all the patronage of the Hospital is vested in you?—Yes; but the whole of that work does not occupy one Clerk.

79. Taking as the basis the total cost of Chelsea Hospital per annum for Pensioners, can you tell the Committee what is the average cost for each In-pensioner?—Last year it was about 2*s.* 3*d.* a-day.

80. What is the average cost of an Out-pensioner on the total number of Out-pensioners?—That I cannot say.

81. (*Mr. Milton.*) I think that it is about 1*s.*?—I think it is about that amount.

82. (*Chairman.*) You have said that not more than one Clerk is employed in the duties of the Hospital; how are the other Clerks employed?—On the Out-pensions, it is the Out-pension work which gives the labour. The House work really devolves upon three Clerks, but it does not take each of them more than one hour a-day. The Clerks are employed almost exclusively on Out-pensions.

83. Are there three clerks in your office who are engaged on Hospital duties?—Not exclusively. The books which I have now before me are kept by one man; and besides these there are what are called Special Board Minutes, and House Accounts, together with the Estimates and Contracts, and the House Letter Book, which are kept by another, under the Head Clerk.

84. Why is it necessary to have all this business done by three clerks instead of by one?—From the organization of the office; they are also employed upon the other work; it is found more convenient to do it in that way.

85. What is the total of the real and personal property of Chelsea Hospital?—That is rather a difficult question to answer in a few words.

86. Will you be kind enough to tell us, in detail, the total value of it, and the sources from whence it is derived, exclusive at present of Parliamentory Votes?—There are three private legacies, namely, from Colonel Drouly, Mr. Stuart, and Lord Ranelagh, of which the total amount in funded property is 18,150*l.* This yields an annual return of about 540*l.*, which sum is devoted to the personal comforts and amusements of the men, it maintains the library, it furnishes them with some little extra clothing in the Infirmary, with slop-clothing for the workmen, and some other things (*vide* Appendix F.)

87. But there are other sources of property besides that?—Yes. We furnish the men with seeds, tools, and so forth for their occupation in the garden. I have been to every record office in London in order to satisfy myself as to everything connected with the origin of the Hospital. The funds, according to the nature of the bequests, are applied exclusively to the comforts of the men. All the disbursements are very strictly guarded; not a penny can be paid except it is recorded on a Minute of the Board, the order being signed by a Commissioner, and the warrant at the end of the quarter is signed by three Commissioners.

88. (*Mr. Talbot.*) Is this fund applied to the supply of supplemental articles? — Yes. If the Committee wish it I will bring the account books. That fund is entirely devoted to the extra personal comforts of the men.

89. That is to say, in addition to what they would be entitled to under the rules of the Institution?—Yes; besides that, there is a very peculiar fund which dates from 1681; it consists of 100 chaldrons of coals from the old castle of Newcastle. That has since been commuted into a money payment of 173*l.* This payment is credited to the Exchequer, refunded to Chelsea Hospital, and is being devoted to warming and lighting the great hall.

90. (*Chairman.*) Do the men use that hall?—Yes; the hall, in winter particularly, is crowded. A great many men are engaged in reading, and some in smoking their pipes, and others in playing dominoes and backgammon, and so forth.

91. Do you provide means of amusement?—Yes; from those funds.

92. Do you send them papers and periodicals?—Yes. There are many sums accumulated from unclaimed prize money. These vary from time to time, but we have now about 80,000*l.* invested, yielding 2,400*l.* a-year. Although there is no rule, or warrant, that I am aware of regarding it, it has always been the practice of the Commissioners not to disburse the proceeds of that money except under the authority of the Treasury, and it has been applied for the general purposes of the Hospital, and not for the individual comforts of the men. For instance, at this moment the disbursements are something of this sort—the parochial rates and taxes are paid by order of the Treasury, and all charges for the disbursement of prize-money and the maintenance of the grounds. The total charges amount to about 1,750*l.* Then some of the buildings are not completed, and the surplus revenue would be applied to that purpose.

93. Can you tell the Committee the sources from whence this accumulated sum of 80,000*l.* has come?—Yes; from unclaimed and forfeited shares and the interest on investments; it may be principally attributed to money having been invested in the early part of this century, when stock was very low, sometimes as low as even 60, and afterwards sold out to meet demands when the price of stock was high. We have in reality disbursed, from this cause, much more than the original prize-money.

94. Does that 80,000*l.* include the sum of money which you got for the site of the Barracks?—We got nothing for the Barracks,—that sum is purely derived from unclaimed prize-money. As far as I can make out, the early accounts of prize-money are not so complete as could have been wished. There is no doubt that very large sums were paid in by the Agents, which were not afterwards claimed. During the late distributions the sums unclaimed have been comparatively of no importance.

95. The new barracks stand upon your ground, do they not?—No. With the permission of the Committee I will go into that question afterwards; it is a very intricate one, namely, the sale and purchase, and exchange of ground. I have not the accounts here as to that part of the matter.

96. Are there any other sources of revenue?—None whatever.

97. Therefore the total revenue, exclusive of the Parliamentary grant for Chelsea Hospital, is about 3,000*l.* a-year?—Yes.

98. Which sum of money is certainly expended, either in adding to the comforts of the men, or in maintaining

the Hospital and the ground?—Absolutely and entirely.

99. (*Colonel Egerton.*) The public have admission to the Hospital premises, have they not?—Yes. Up to within about two years ago, the grounds were under the management of the Office of Works; and the double government frequently led to a great deal of inconvenience; and proposals were made that the Board should take it upon themselves. The Office of Works were in the habit of taking an estimate of about 1,600*l.* for that maintenance, which I reported to the Board was beyond our means. On looking carefully into the matter, I felt convinced that the amount could be greatly reduced; and last year we did the whole work quite as well, if not better than before, and the total charge was 899*l.*, you may call it 900*l.*, we thereby saved 700*l.*

100. Will you be good enough to tell the Committee how many acres of ground belong to Chelsea Hospital?—About 62 acres, I think, altogether. There are 49 acres which are generally considered Crown land, and there are about 12 or 14 more, of which I have the title deeds, and which belong to the Hospital. I can give you the exact amount. There are 62 acres, 1 rood, and 38 perches (*vide* Appendix G.)

101. (*Mr Talbot.*) All at Chelsea?—Yes.

102. (*Colonel Egerton.*) Does that include Burton's Court?—Yes; and also what is commonly called White Stiles; and the total cost has been about 60,342*l.*

103. (*Chairman.*) Have you included in your account of the income of Chelsea Hospital the amount of money which you receive from letting land?—Yes, this is a trifle; I have included everything.

104. As to these 62 acres, of which 49 are Crown land, and the 13 acres of land of which you hold the title deeds, how did they come into the possession of Chelsea Hospital?—The first notice which we have on record is in 1681, when a Warrant was issued for deducting certain sums from the pay of the Army; and afterwards they commenced buying land. The first pieces of land were purchased by the Crown from various individuals.

105. Were those lands purchased by the Crown out of the public purse, or out of monies stopped from the pay of the soldiers?—They were purchased out of monies stopped from the pay of the soldiers beyond all doubt whatsoever.

106. It appears that 12*d.* in the 1*l.* was deducted from the pay of the soldiers, but of that 1*s.* only 4*d.* was applied to Chelsea. Then there was the balance of Secret Service Money, as directed by King Charles the Second, 6,877*l.*, we have 4*d.* still to account for?—I can give it to you in much greater detail. This is a *verbatim et literatim* copy from the Rolls (*vide* Appendix H.)

107. (*Mr. Milton.*) As I understand you, the first purchase of land was in 1681?—The first purchase of land was in 1681.

108. (*Chairman.*) Will you kindly go on with your narrative?—In 1683 the King issued Letters Patent under the Privy Seal appointing Charles Fox, Receiver-General in lieu of Nicholas Johnson, deceased, and he directs that one-third of the deduction from the pay of the forces shall be applied to Chelsea Hospital from the 31st of December, 1680.

109. Can you tell the Committee how this money was spent?—Yes; we know that it was applied for the purchase of land and in the erection of the Hospital.

110. Was Chelsea Hospital itself built out of moneys obtained by stoppage from soldiers?—There is no doubt of it whatever. The land was purchased, and the building erected exclusively with money raised by stoppages from the pay of the Army, and by some private subscriptions.

111. All the 49 acres of land, which you have described as Crown lands, were obtained from similar means?—Undoubtedly.

112. Is there any account of any Parliamentary vote having been taken in the early days for sums of money for Chelsea Hospital?—No. I am now carefully searching the journals of the House of Commons for a trace of that, and as yet I have found none. It is not until after 1700 that there is any trace of any Parliamentary vote whatever, and that is for Out-pensioners.

113. That is only 20 years after the date which you have been speaking of?—It was in Queen Anne's time, in 1704 I think, that sums were voted for out-pensioners.

114. (*Mr. Milton.*) 1703, I think, was the date of the first pension?—No; there have been Out-pensioners from the earliest date.

115. (*Colonel Egerton.*) Was not there a poundage upon the pay of the officers, as well as upon the pay of the men?—Yes; and in addition there was a very heavy deduction made from all appointments—the Governor of Gibraltar and the Governor of Hurst Castle and other places paid a very heavy duty.

116. (*Chairman.*) Was all the 49 acres of Crown land acquired by money obtained from these sources?—Yes; and from the Prize Fund.

117. Is there any trace of any Parliamentary grant of a sum of money to buy this land?—None.

118. With regard to the other 13 acres which you have mentioned—where did they come from?—They were purchased from the Drouly Legacy at a cost of more than 20,000*l.*

119. Therefore, in fact, Chelsea Hospital may be considered as positively private property?—It is.

120. For which the country, as a country, has never itself paid?—Never.

121. And the income of which is absolutely, at this moment, derived from funds obtained from private sources?—Most undoubtedly.

122. The whole of the 62 acres have been thus obtained?—Yes.

123. And none of them have been paid for by any Parliamentary vote whatever?—Certainly not; not one inch; neither the building itself nor the land upon which it stands, nor anything belonging to it, has ever been paid for by Parliamentary votes. Up to the year 1847 it was more than maintained out of the poundage on the pay and pension of the Army—it is only since 1847 that there has been a difference in that respect.

124. That income, so derived, is sufficient now to spend some money in adding to the comfort of the pensioners in the Hospital, and the remainder of the money is spent in lighting and heating the Hospital and keeping up the grounds?—Yes.

125. (*Sir Charles Yorke.*) To which the public have access?—Yes. Previously to 1849 the grounds were private, and the public were scarcely admitted at all, and then some correspondence took place with the Duke of Wellington about the matter, and it was considered for the advantage of the Hospital that the grounds should be thrown open to the public, and the Hospital authorities represented that if it was so they had no means of properly keeping them up, upon which the Office of Works took possession of them and expended a great deal of money upon them and improved them very greatly, and the Governor then gave up some of his remuneration, and there were deductions from the privileges of the principal officers in order that the grounds might be laid out for the public. That state of things went on until the last two years, when, from the inconvenience of the double Government, the whole was resumed by the Commissioners.

126. (*Chairman.*) Speaking generally, from your acquaintance with the old pensioners, from conversing with them, and seeing their bearing, do you think that Chelsea Hospital is considered by them as a very great boon?—Yes; from my personal intercourse with many of the old men, I have often been very much gratified by the way in which they have spoken—not only the in-but the out-pensioners. A man accosted me the other day in the street, and asked me if Chelsea Hospital was to be disestablished (that was his expression); I said, "I hope not." I asked him who he was; he said that he was a discharged Sergeant of the 95th. I remarked to him, "you are an able-bodied man, not likely to be obliged to fall back upon Chelsea Hospital." He said, "Very true, Sir; I have a pension of 1*s.* 6*d.* a-day, and am in good employment, but we all look to Chelsea

Major-Gen. G. Hutt, C.B.

Feb. 17, 1870.

Hospital as a place upon which we shall have to fall back." I have often talked with Staff Officers upon the subject, and I find that the body of out-pensioners look upon Chelsea Hospital as a place upon which they can fall back in case of necessity.

127. If it was attempted to remove the pensioners from Chelsea Hospital, and to give them an equivalent pension outside, I suppose that there would be a large number whom it would be impossible to remove.—Yes; there are now eighty-seven in the Infirmary; no amount of out-pension would keep them in the way in which they are kept in the Hospital; some of them are perfectly paralyzed and otherwise disabled. When men of this class have got pensions they are preyed upon by their relatives. Many a man comes into the Hospital to seek refuge from his relations. A man came to me and begged to be taken into the Hospital. I said to him, "You have a good pension." He said, "Pray take me in, and do not let anything which you hear prevent me from being taken in." I said, "It rests entirely with you." A day or two afterwards I got half a dozen letters about this man, from people calling themselves his relatives, and they said that they were broken-hearted at this poor old man coming to the Hospital, and that it was a freak of the moment—that he had had a quarrel. I sent to him, and he said, "For God's sake, Sir, take me in" And he was accordingly taken in. It is only a few weeks ago that a poor old man of 80 years of age dragged his limbs from Hampshire, and begged to be taken in. His antecedents were very good. I said to him, "Certainly you shall come in. We cannot take you in at this moment, because there are some days to run before your out-pension expires." I gave him a few shillings, and sent him to the workhouse until he could come in; but, two or three days afterwards, some of his relatives came and dragged him back again, and he never came in.

128. Do you find that there are many applications from men with sufficient pension to live outside the Hospital?—Under ordinary circumstances, a man with 1*s.* or 1*s.* 6*d.* a-day, if he has ability in him, should be able to live outside, but the bulk of the applications are of that rate; as the men get older, and fall into ill health, they are very glad to come to us. There are many men considerably above that sum.

129. Therefore, you would say that it is not a fact that the only applicants for admission to the Hospital are men who come to it in preference to going to the workhouse?—Certainly not; there are 144 men at 1*s.*, 18 men at 1*s.* 0½*d.*, 17 men at 1*s.* 1*d.*, 5 men at 1*s.* 1½*d.*, 8 men at 1*s.* 2*d.*, 13 men at 1*s.* 3*d.*, and there are some at 1*s.* 8*d.*, 1*s.* 9*d.*, and 2*s.*

130. (*Mr. Milton.*) Those are the out-pensions which they relinquish on coming into the Hospital?—Yes.

131. (*Colonel Egerton.*) Can you state what number of Peninsular and Waterloo men are now in the Hospital?—On the 1st December there were Peninsular men, 80; Waterloo men, 53; Holland, 5; America, 4; Nepaul, 3; Burmah, 7; Bhurtpoor Campaign, 2; China, 8; Affghanistan Campaign of 1839, 11; the Campaign of 1842, 6; Scinde, 1; the Gwalior Campaign, 15; the Sutledj Campaign, 18; The Punjaub Campaign, 19; Southern Africa, 7; the Crimea, 32; the Indian Mutinies, 19; and New Zealand, 7.

132. (*Mr. Talbot.*) What is the total number of War Service men in the Hospital?—300.

133. (*Mr. Milton.*) Can you state the number of Irish?—They are not considerable.

(The Witness withdrew.)

Adjourned to Thursday next, at 1 o'clock.

War Office, Thursday, 24th February, 1870.

Present:

Captain The Hon. J. C. Vivian, M.P., in the chair.
General Sir Charles Yorke, G.C.B.
Colonel Egerton.
Mr. Talbot.
Mr Milton.

Major Arnold Knight, examined.

Major Arnold Knight.

Feb. 24, 1870.

134 (*Chairman*). You are Staff-Officer of pensioners in the Leicester district?—I am.

135. How many pensioners have you in your district? I have about 700; and during the last quarter a few either under or over.

136. How often do you pay the pensioners?—Once every month, except at three out stations, and I pay them once a quarter, viz.: Oakham, Kettering, and Market Bosworth.

137. When you have been employed in paying the pensioners, have you found that many of them have applied to you with the view of obtaining admission into Chelsea Hospital?—Very few; in the course of the last five years I have had twelve such applications, and of those four of the men have returned.

138. Do you mean after they had been admitted into the Hospital? Yes.—I cannot tell you the reason, but I know that four of them have returned.

139. (*Mr. Milton.*) Can you ascertain from your serjeants the reasons why they returned?—Yes; except in one case in which the man died.

140. (*Mr. Talbot.*) What reasons have generally been assigned by the men for wishing to go into Chelsea Hospital?—They have generally been old men who have had no friends or relations. Occasionally it has been in the case of a very old man whose wife has died, and having no one to take care of him, he has come to me to enquire whether he could not be taken into Chelsea Hospital.

141. (*Chairman.*) Do you think that the feeling generally prevalent among the pensioners is this—that they rather desire to keep out of Chelsea Hospital as long as they can, or that they prefer to go into Chelsea Hospital?—I think the desire is rather to keep out as long as they can, and if there is one thing more than another which has created that feeling, I think it is seeing the old Greenwich Pensioners so much better off. Increased pensions have been given to those over a certain age who have been removed from Greenwich Hospital; the effect of this has been to make those men very comfortable.

142. But the Greenwich Hospital pensioners have been men of a different stamp, have they not, from those who are qualified to go into Chelsea Hospital?—Yes; nevertheless they are all paid by me at the same time,—they all meet together, and they are therefore known to each other.

143. (*Mr. Milton.*) Before the change was made at Greenwich Hospital, those pensioners had smaller pensions, had they not?—Yes; but now their pensions in some instances have been very much augmented.

144. Since the abolition of Greenwich Hospital as an asylum, naval pensions have been increased?—Yes, certainly.

145. Do you find that naval pensioners are, therefore, as a body, more contented?—Yes; inasmuch as they are now more comfortably off; some of them, from having before received very small pensions, are now

comparatively well off; they allow, in some cases, from 7*l.* 12*s.* to 13*l.* 12*s.* a-year to Greenwich pensioners when they are over 60 years of age.

146. (*Chairman.*) Do you think that the abolition of Greenwich Hospital has rather created a feeling of dissatisfaction among the whole of our out-pensioners?—I should be sorry to speak so strongly as that, but I think that those pensioners who see the condition of the old Greenwich men think that they are very well off in being, not only out of Greenwich Hospital, but in benefiting so considerably by the additional pension through the abolition of the Greenwich in-pension.

147. (*Mr. Talbot.*) But that only applies, I suppose, to those pensioners who can obtain some extra employment?—No; I think that the mere addition to the pension makes it worth somebody's while to take care of these old men; whereas, if they have a very small pension, it is not sufficient to make it anybody's interest to do so. If a Greenwich pensioner has something over 1*s.* a-day I think he will be sure to get some one to take care of him.

148. (*Chairman.*) Taking the men who have applied to you to be put on the in-pension at Chelsea Hospital, can you tell the Committee what rate of pension per diem they have received?—In most of the cases that I spoke of it was 1*s.* a-day.

149. Have they been usually old and infirm men?—Yes; they have generally been old and infirm men, whose last relations are dead, and having nobody but themselves left, and being infirm, they have not liked to trust themselves to anybody else.

150. Supposing that Chelsea Hospital was done away with as an infirmary, what do you think would happen to those 12 old men?—I think, in the case of pensioners of a certain age, it would be somebody's interest to take care of them if they received over 1*s.* a-day. If they were given 1*s.* 6*d.* a-day, or anything like that, I think you would generally find people ready to take care of those men.

151. (*Chairman.*) That is to say, you mean that they will take care of them, because they will be able to rob them of their extra pension?—No; I do not think so. I do not think they would be treated in that way.

152. (*Colonel Egerton.*) You mean that they would have an advantage in it, and for that reason they would take care of them?—Yes.

153 (*Chairman.*) Your notion seems to be that a poor feeble old man with a pension of only 1*s.* a-day is not worth looking after; but that if something extra were added to that, it would be worth somebody's while to take care of him?—I do not believe that they would be injured for the purpose of making something out of them, because the pension would stop at a man's death, and the thing would then come to an end.

154. (*Mr. Milton.*) But no one would take a stranger into his house except with the view of making a fair profit upon him?—No; of course they must gain in some way.

155. (*Chairman.*) Is it your opinion that if in place of having Chelsea Hospital to go into when a man becomes so old and infirm that he cannot maintain himself out of the workhouse, he would prefer to receive an increased pension and live out of the Hospital?—Yes; certainly, I think so.

156. (*Sir Charles Yorke.*) That would depend, would it not, upon the amount of the increase?—Yes; I should say, as a minimum, I would not let any of these pensioners have anything under 1*s.*; I should say, at the very least, 1*s.* 6*d.* for every old man, if you wanted him to be looked after and taken care of.

157. What is the lowest rate of pension that you pay to any pensioner?—6*d.* a day.

158. Among those whom you pay, are there any old men who receive that rate of pension?—I certainly have several, but I cannot at this moment tell you how many.

159. Will you be good enough to send in to the Committee a return of their number, specifying their entire service; how much of it has been foreign service; whether they have been in action and have been wounded or otherwise; giving the pensions from 6*d.* a-day upwards?—Yes. (Vide Appendix I.)

160. (*Colonel Egerton.*) Have the naval pensioners been increased in the ratio you have mentioned generally, or merely in the cases of inmates of Greenwich Hospital?—They have been increased to a great many, but it depends upon the age,—the minimum must be 55 years of age,—they have scarcely got to 55 yet, and the men who are now benefiting by the abolition of Greenwich Hospital average about 60 years of age.

161. (*Mr. Talbot.*) What do they receive?—They receive sums varying from 5*d.* a-day to 9*d.* a-day,—that is, beyond their former pensions.

162. (*Chairman.*) They are receiving, I believe, about 36*l.* 10*s.* per annum?—That will, of course, be 2*s.* a-day. The most that they can get is 13*l.* 12*s.* a year increase, and the smallest sum they can get is 7*l.* 12*s.* a-year,—that is, 5*d.* a-day. I know many of these old pensioners who are now comparatively well off. They used to be miserably poor before, and the addition that has been made to their pensions has made a great difference to them. I am speaking now of the Naval out-pensioners.

163. Referring to the pensioners who have been discharged from Greenwich Hospital, what has your observation been of their physicial condition,—are they generally feeble old men?—They do not seem to be very much so, they appear to be very happy. Leicester being a central district in the Midland counties, I have very little to do with seafaring folks; I think five or six would include all that have come to me from Greenwich—that is on leaving the Hospital.

164. Are they men of a younger age than would be admitted into Chelsea Hospital?—I think that the men are tolerably old. I have five of those recently discharged from Greenwich, and I should say that their average age is from 65 to 70.

165. You are probably aware that no man is admitted into Chelsea Hospital, except under exceptional circumstances, who is not over 50 years of age?—Yes; I had an application made last year by an old man, but he was a pensioner of the Company's Service, and that is the only application I have had made for some time. However, he was inadmissible; his wife had died, and it was just one of those cases that I have before mentioned; he was left without any relation, and was, therefore, desirous to go into the Hospital.

166. (*Mr. Milton.*) He would have been admissible if he could have produced a certificate that he was unable from ill-health to support himself with his pension?—He was a tenant of Lord Gainsborough's, and the only answer to his application was, that being a Company's man he was inadmissible.

167. (*Chairman.*) Your evidence seems to come to this, that pensioners do not like to go into Chelsea Hospital as a refuge as long as they can possibly keep out of it, and that they would prefer to receive an increase of pension and remain outside rather than go in?—Certainly.

168. (*Colonel Egerton.*) Does not that depend upon the amount of the increase?—Yes, it does depend very much upon such increase; because, I think that, unless a man can see a prospect of having enough to live upon, it would not be worth people's while to take care of him; that is to say, if he left the Asylum with a very small pension, I think he would be far worse off.

169. (*Mr. Milton.*) You think that if to the pension of every man exceeding 60 an addition was made of 9*d.* a-day there is no doubt that people would be found ready to take care of him?—Yes.

170. And that he would prefer to receive that addition to his pension to going into the Hospital?—Yes.

(The Witness withdrew.)

A Colour-Sergeant examined.

A Colour-Sergeant.

Feb. 24, 1870.

171. (*Chairman.*) You are a Sergeant now serving in the Queen's Army?—Yes.

172. The Committee wish to know from you whether soldiers now serving in the Army look forward to Chelsea Hospital as a place of refuge in their old age—do they talk about it much?—They do not.

173. Do you think that soldiers serving under the colours never look so far forward as Chelsea Hospital?—Yes.

174. Do you never hear any conversation at all about Chelsea Hospital among the soldiers?—Not now. I did when I first joined, 15 years ago, but not now.

175. Do the soldiers, generally speaking, look forward to a pension?—They do.

176. Do you think that a soldier when taking service calculates upon that as one of the advantages that he will derive from becoming a soldier?—I do.

177. Does that operate as an inducement to good conduct in the Army?—Yes.

178. Do they talk much upon this subject in the barrack-room?—Not at their first entry—they might at a future period—they always do in the second period.

179. Do they talk about the out-pensions they will receive that will enable them to return to their homes, or do they refer to Chelsea Hospital?—They never mention Chelsea Hospital; they always speak when they are re-engaged in this way,—looking forward to the advantages that will be derived from the pension to support them in old age.

180. Do you think that a soldier generally looks forward to going back to his home and living with his relations or friends when his period of service is expired?—Some do, and some do not mention it at all—of course they cannot say what the future may turn out to be.

181. Do you think that a soldier from constantly living in a barrack, and leading a barrack life, becomes so wedded to that kind of life that he would prefer to live with his old comrades for the rest of his days rather than in his native village with his relations or friends?—No, I do not think so.

182. Do you think they would sooner go home to their friends?—Yes.

183. Do you never hear Chelsea Hospital mentioned?—Never. I did when I first joined the army, but not now; not since the Limited Engagement Bill came into force.

184. (*Colonel Egerton.*) Does not a single man sometimes look forward to Chelsea Hospital?—I never heard them mention it.

184*a*. (*Mr. Milton.*) Do not the unmarried men expect when they leave the army to obtain some engagement as servant or groom to a gentleman?—In the first period of their service, when they join, they are young and thoughtless, and when they have completed their time they quietly go away, and if they have before learned any trade they pick it up again.

184*b*. In the second period of their service, when they are perhaps past forty years of age, you think that what they would like to depend upon is the Government out-pension?—Yes.

184*c*. Do they not again look further forward and consider that when the period arrives when they can no longer take care of themselves they may obtain admission into the asylum at Chelsea?—I never heard them mention it.

184*d*. Are the men in your battalion second period men?—I think that a great number of them are. I think that more than two-thirds of them are re-engaged men, especially the non-commissioned officers.

184*e*. (*Colonel Egerton.*) Are you a single man?—Yes. I was born and brought up in the army. I have been for 14 years full sergeant, and for 11 years I have been colour-sergeant.

184*f*. (*Mr. Milton.*) What is the total length of your service?—15 years. I joined the army on the 2nd of February, 1855.

184*g*. When were you promoted?—At the height of the Crimean war, upon the augmentation of the depôt.

184*h*. When you were promoted, had your service been not quite one year?—Not quite. I was promoted on the 14th October, 1855.

(The witness withdrew.)

A Private (with four good-conduct stripes) examined.

A Private.

Feb. 24, 1870.

185. (*Chairman.*) How long have you been in the service?—I joined in 1846, and I have been in the service 24 years come next April.

186. What is your age?—43.

187. (*Mr. Milton.*) Where were you born?—At Bradford, in Yorkshire.

188. (*Chairman.*) You have four good-conduct stripes on your arm?—Yes.

189. Do you think that old soldiers like yourself look forward to a pension after their period of service is completed?—Yes, I do myself.

190. What kind of pension do you look forward to—to a pension which would enable you to go home to your friends, or to a pension which would qualify you for Chelsea Hospital, there to live as you have lived for twenty-four years in a barrack with old comrades?—I should sooner go to my friends and have a pension.

191. You do not believe that a soldier gets so attached to barrack life that he does not care to abandon it and return to his home?—Yes; there are some men who like it in that way.

192. Are there many old soldiers in your regiment?—There is one man older than I am.

193. Are many of the men re-engaged men?—Yes; a good few.

194. Do you often talk about the pensions that you expect to receive?—Yes, we do.

195. Do you hear any of the men ever talk about Chelsea Hospital?—No.

196. Do you not believe that Chelsea Hospital is popular among the soldiers?—No.

197. Do you believe that soldiers would prefer a pension out of Chelsea Hospital rather than go into it, if they could?—Yes, if they could do a little work—enough to keep them.

198. But when they become so old that they could not do that, do they never reflect what a comfortable thing it would be to have a nice home to go to, where they would be taken care of?—Yes.

199. And yet you never hear Chelsea Hospital talked of in that light by single men who may have no friends to go to?—No; I never have.

200. It is never mentioned in the army at all?—Very seldom; it is at times; they may speak about it in this way: if a man is going to leave, they may say, "You are going away now, and you will go to Chelsea."

201. Do you look forward to going to Chelsea with pleasure?—Yes, if we are not able to work.

202. (*Colonel Egerton.*) At the time you get your discharge you have not begun to think of Chelsea Hospital; it is not until you become old and unable to work, I suppose, that you think of it?—No.

203. (*Chairman.*) You are entitled to your discharge now, are you not?—I am an unlimited man. I believe they can keep me as long as they like.

204. I suppose you are beginning to think you should like to return home to your friends?—Yes; to what are left of them.

205. (*Mr. Milton.*) Are there any Irishmen in your regiment?—Yes; a good few.

206. Do they talk more of Kilmainham than the English soldiers do of Chelsea Hospital?—Yes.

207. Do they seem to care more about Kilmainham than the English do about Chelsea Hospital?—Yes.

A Private. Feb. 24, 1870.

208. (*Colonel Egerton.*) Were you at Balaklava?—Yes.

209. Do you not think that a good many soldiers who lost arms and legs there would find Chelsea Hospital a comfortable place of refuge?—Yes; it is a very good place for that, when you have lost an arm or a leg, to go to.

210. If a man was capable of doing work, he would prefer to go to his friends?—Yes.

211. (*Mr. Milton.*) What will your pension amount to?—8*d.* and 4*d.*

212. (*Chairman.*) That is to say, you will get 1*s.* a-day?—Yes.

213. When you get too old and feeble to work, 1*s.* a-day will not keep you very comfortably out of the Hospital?—No, it will not.

214. Then would it not be a very good thing for you to have a comfortable home, like Chelsea Hospital, to which you might retire after your good service in the army?—Yes.

215. Have you ever been wounded?—No.

216. (*Mr. Milton.*) Are you a married man?—No.

217. (*Chairman.*) Which should you prefer when you become an old man, to go to Chelsea Hospital to be taken care of there, or to have an increase made to your pension of 1*s.* a day?—I would sooner go to Chelsea Hospital.

218. (*Mr. Milton.*) If your pension was made 1s. 9*d.* or 2*s.* a day, would you then prefer to go to Chelsea Hospital?—No.

219. Would you not rather prefer to go home to your friends with that pension and be taken care of by them?—Yes.

(The Witness withdrew.)

A Private examined.

A Private. Feb. 24, 1870.

220. (*Chairman.*) How many years have you been in the service?—Over 25 years.

221. How many years have you been abroad?—I have been abroad over 16 years.

222. In how many actions have you been?—In two.

223. Have you ever been wounded?—No.

224. Are you a limited service man, or unlimited?—Unlimited.

225. Do you ever talk with your comrades about your pensions when serving?—It is every day talked about, but more lately than it was in my youth.

226. I suppose you think of it more yourself?—I do now, but at first I did not think much of it.

227. What is your feeling with regard to Chelsea Hospital; do you ever talk about Chelsea Hospital with your comrades?—I do not know much about the Hospital; I never speak much of it; I have always been attending to my duty.

228. Do you think that soldiers generally know that there is such a place as Chelsea Hospital, which is no in point of fact a hospital, but rather a refuge for old soldiers who have behaved well, after they retire from the service?—I am aware that there is a place like that, but I do not thoroughly understand it.

229. It is called Chelsea Hospital, but it is not a hospital; it is a refuge for old soldiers after they become too old and feeble to live out of it; and do you think that the soldiers are not aware of it?—Certainly young soldiers do not understand it, to speak the truth.

230. You have said that you do not thoroughly understand it?—I understand that there is a place for old veterans to go to, but they have to give up their pensions—the pension is not able to support them.

231. When you are discharged, which should you prefer, to be taken into a comfortable home where you would be well fed and clothed, and have every comfort that could be provided for you, or would you prefer to receive a pension of 1*s.* a-day, or less,—what should you receive?—I do not know; my service does not all reckon.

232. Which of the two should you prefer to receive, a pension after your length of service, and go back to your native village and live amongst your friends, or be taken into a comfortable home where you would be fed and clothed for the rest of your days?—If you will permit me to speak, I would say this—if I was a person that was feeble, I would prefer as long as I could to do a little work; I should like to go home to my own country and be buried in my father's grave. I come from the County Tyrone, and I should like to go home to that county and be buried in it.

233. If you should reach that period of life when you will be too old and too feeble to work for yourself, and when you will probably be in the receipt of a pension so small as hardly to be enough to provide you with the necessaries of life, will it not be a comfortable thing to know that there is a hospital into which you may be received and be well cared for?—Yes; I think it is a very good thing.

234. (*Colonel Egerton.*) I dare say you know more about Kilmainham than about Chelsea Hospital?—Yes; I have done duty there, and I think it is a very comfortable billet for an old fellow having no one to look after him.

235. Have you ever talked with the men at Kilmainham?—Yes.

236. What do they think about that institution?—The men are very well satisfied, if they are men having no friends or relatives.

337. Do you think that men with no friends or relatives, old and feeble, would not prefer to remain in a comfortable retreat like that rather than have a small increase made to their pension and be turned out upon the world?—Yes; I am sure they would if they were anything like religiously disposed.

238. Rather than have an increase made to their pensions and go out?—Yes; I am certain they would.

239. (*Chairman.*) What is your age?—My age is pretty close to 50.

240. (*Colonel Egerton.*) Were you at Barbadoes with your regiment?—Yes, I was.

241. (*Mr. Milton.*) Have you served in India?—Yes.

242. Are you a married man?—No.

243. Do the Irishmen in your regiment think about Kilmainham, and look forward some day to going there;—No; They do not wish to go into Kilmainham at all, they would like to have their pension and live on it in their own counties. I would myself. I speak honestly and candidly. I have been 25 years now in the service, going on 26 years come next July, and I would not leave the service. I have had every sort of punishment in it, but still I have no dislike to the service. Yet I will have to go away. I have no home, no friends or relatives, except a brother, still I would like to be buried in my own county, and I have often prayed to God that I might be buried in my father's grave.

244. (*Chairman.*) Suppose you return to your native county, Tyrone, among your friends, and in the course of twenty years you become feeble and unable to increase your means of living by any occupation, which should you prefer to do if it were said to you, you are now receiving 10*d.* a day, but I will give you instead of that 1*s.* 6*d.* a-day to remain where you are, or I will take your 10*d.* away from you, put you on a railway, and send you to Kilmainham, there to pass the rest of your days?—I would take the 1*s.* 6*d.*

(The Witness withdrew.)

QUARTERMASTER STEPHEN FIEST, examined.

Quartermaster-Stephen Fiest.

Feb. 24, 1870.

245. (*Chairman.*) You are Quartermaster at Chelsea Hospital?—Yes.

246. How many years have you been there?—Three years next month.

247. Will you be good enough to explain to the Committee the duties of the Quartermaster at Chelsea Hospital?—They are defined in the royal warrant for the government of Chelsea Hospital.

248. I presume you are fully acquainted with the whole history of the life of the in-pensioners of Chelsea Hospital?—Not so much with the whole history of the life of the in-pensioners; my duties relate more to the supplies for the in-pensioners than with the men themselves.

249. Can you give us no information with regard to the men?—Yes; I can give you all the different rates of pay; their allowances of food, clothing, bedding, fuel, &c.

250. In the first place, can you tell us how many pensioners there are in the Hospital at the present moment?—At the present moment we are deficient one to complete the establishment, the established number being 538.

251. What are the rates of pay that those men receive, and how many classes have you in the Hospital?—There are the colour-sergeants, the sergeants and corporals, three classes of privates, and the drummers.

252. Just state what the pay is of those different ranks?—Six colour-sergeants at 1*s.* a-day each, 24 sergeants at 8*d.* a-day, 24 corporals at 4*d.* a-day, 50 privates 1st class, at 2*d.* a-day, 50 privates, 2nd class, at $1\frac{1}{2}d.$ a-day, 378 privates of the 3rd class at a 1*d.* a-day, and 6 drummers at 3*d.* a-day.

253. Is there any extra pay for duties performed by any of the men?—Yes; there are six men employed in the kitchen who receive 1*s.* a-day for every day of the week.

254. Extra pay?—Yes; then we have five men who are employed to carry coals at 1*s.* a day for six days in the week, and one foreman in the coal yard at 1*s.* 3*d.* a day for six days in the week. Then we have two men who are employed as sweepers to sweep round the buildings, and they are employed for six days a week at 1*s.* a day. There is one man employed in the stores to fill beds, and in fact he is the pioneer, he has 1*s.* per day for six days. Then in the chapel there is one man at 6*d.* a-day as clerk; there is one man at 3*s.* 6*d.* a-week in the hall, and one man at 2*s.* 6*d.* a-week in the chapel. Then there are three other orderlies employed in the chapel and hall together at 2*s.* a-week each.

255. Who selects these men for the performance of these different duties?—They are all of them approved by the Major who is the Commandant of the Hospital.

256. By whom are they recommended?—If I wanted anybody for work I should ask the Sergeant-Major if he had anyone on the list, because the pensioners would go to him when they wished for employment, to ask him to note down their names. Then we have two men employed in the library who get 16*s.* 8*d.* a month each, and besides they are allowed 10*s.* a week between them for keeping the library clean—in fact it is altogether 26*l.* a-year. Then there are the baths to attend to, one pensioner and his wife 20*l.* a year, and they have quarters.

257. (*Mr. Milton.*) The allowance for the baths is paid out of the public vote, but the library is paid for out of the private funds of the Hospital?—Yes; the baths are included in the estimates.

258. (*Chairman.*) Are all these different employés that you have mentioned paid out of the public funds or out of the Hospital funds?—Those in the Hospital and Hall I am not sure about, but that is a portion of the business that I have nothing to do with.

259. How do you get the money to pay those men; is it your duty to pay them?—It is not my duty to pay them.

260. Who pays them?—A clerk from the Secretary's office pays them, assisted by one captain of a company and the Sergeant-Major to call over the names: there are several more people employed.

261. You had better put in a return?—I have a paper here, but it contains other memoranda that I have put upon it.

262. Prepare a Return and send it in to the Secretary afterwards. (*This information is embodied in the Return*, Appendix E.) The employés you have named are additional to those mentioned in the Warrant, are they not?—I think not.

263. They are not mentioned in the Warrant?—The cooks and baths are provided for in the Estimates.

264. Is it not part of your duty to see that the contracts are properly performed?—To see that they are properly carried out.

265. Who makes the contracts?—The Commissioners.

266. If you want a contract for a supply of meat for a quarter, how do you make the contract?—The contract is made in this way: they contract for the whole of the provisions for one year.

267. Is that a contract for meat?—It is a contract for all together; the same man supplies the whole of the rations at so much per ration.

268. Bread and meat?—Breat, meat, butter, and everything.

269. Who enters into the contract with him?—The Commissioners.

270. Has the same man made the contract for a number of years?—Yes; for several years.

271. What is the amount of a contract for provisions per ration?—The contract per ration is 1*s.* $3\frac{7}{64}d.$ for this year.

272. What was it for last year?—1*s.* $2\frac{15}{32}d.$

273. What was it for the preceding year?—1*s.* $0\frac{43}{64}d.$, and in the year 1866-67, it was 1*s.* $3\frac{7}{8}d.$, so that it was more than it is this year.

274. What is included in that contract?—This is a copy of the terms of the contract.

275. (*Mr. Talbot.*) Are these contracts supplied under tender?—Yes.

276. They are publicly advertized?—Yes.

277. (*Chairman.*) I see that the diet is different for every day. Five days in the week they have mutton and potatoes and Scotch barley?—Yes.

278. And on Wednesdays they have bacon and no other meat?—Yes; bacon and cabbage.

279. Cabbage or vegetables on Fridays, with no meat, but cheese?—Yes; they have meat on Fridays.

280. Is the cheese in addition?—Yes.

281. Has Mr. Baker been your contractor for some years?—Yes; he was there when I joined, and I believe had been for some time before; he has been ever since.

282. How many meals have the pensioners a-day?—They have their breakfast at eight o'clock, dinner at one, and tea at about four.

283. Do they breakfast, dine, and drink tea together?—They are divided into messes, on an average of twelve in a mess.

284. They do not have their meals in the hall?—No, they have them in their wards; the men are too infirm to go into the hall.

285. What is the Infirmary diet—is that under the same contractor?—No, except in the case of some men who are on the house diet while in the Infirmary.

286. That is to say, there are a certain number of men who, from infirmity, remain in the Infirmary, but who are still on the house diet?—Yes, but the diet for the sick in the Infirmary is arranged by the medical officer I believe. I have nothing whatever to do with the Infirmary diet.

287. Can you tell the Committee how many men there are to day on the house diet?—480.

288. And the remainder are in the Infirmary?—Yes. I should mention that in the 480 are included the nurses and the staff sergeants. There are thirty nurses with half rations, which makes fifteen, and there are six staff sergeants and five servants, including the engineer and three men who are employed as park-keepers, in-

firmary-cook, messenger-sergeant, porter-sergeant, hospital-sergeant, two quartermaster-sergeants, and sergeant-major.

289. Is all the food for the pensioners at their three meals cooked for them?—Yes, it is all cooked for them.

290. Do they go and fetch it as the men do in the army?—In all the lower wards the men are very infirm, and the orderlies are paid, the sum allowed in the estimates, half-a-crown a week, and they attend to the men's rations solely. In the upper wards, where the men are able to attend upon themselves, they take it turn-about to come down into the kitchen in the morning for the bread and butter, and then to fetch the cocoa. At dinner time they come down for the soup and the meat and potatoes. The tea they make in their wards.

291. Have you received any complaints from the men as to the insufficiency of the food?—No.

292. Do you think that they are fully satisfied with what is given to them?—I believe so.

293. (*Mr. Milton.*) Both in quantity and quality?—Yes.

294. (*Chairman.*) You do not hear any complaints ever made?—No.

295. Nor any expression of dissatisfaction as far as that part of the administration goes?—No. There was some little dissatisfaction expressed some time ago; the men thought that a little variety would be better. The matter was enquired into, and that was the origin of their having bacon and cabbage once a week at their own express desire.

296. Now with regard to the clothing; is the clothing also bought by contract?—Yes, by public contract.

297. Has the same person been contractor for the clothing for a number of years?—The present contractor never had it before.

298. Does one contractor contract to supply the whole of the clothing?—Yes.

299. Will you state to the Committee what clothing is served out to every pensioner every year?—I have put it all down upon this paper. (*Included in* Appendix D.)

300. I see that there is 1 scarlet coat to last two years, and 1 pair of trousers. I suppose they are made of cloth?—Yes.

301. One waistcoat with sleeves, 1 cocked hat to last two years, 3 linen shirts, 2 stocks, 2 night-caps, 2 pairs of blucher boots, 2 pairs of worsted stockings, 1 forage cap, in each year; 2 pairs of serge drawers, and 2 flannel shirts to last two years, 2 handkerchiefs, each year; 1 pair of braces to last two years. Then in the second year the man has a waistcoat with sleeves, 1 pair of trousers, 3 linen shirts, 2 stocks, 2 night-caps, 2 pairs of worsted stockings, 2 pairs of blucher boots, 1 forage cap, 2 handkerchiefs, and 1 pair of mits to last two years?—Yes.

302. In addition to that he has a great coat, to last three years?—Yes.

303. The cost of the clothing I see by this paper is 7*l.* 13*s.* 5*d.* for the first year for a Sergeant, and 5*l.* 12*s.* 5*d.* for a Private in the first year. In the second year it is 4*l.* 3*s.* 8*d* for a Sergeant, and 3*l.* 11*s.* 5*d.* for a Private. The great coat costs 1*l.* 15*s.* for a Sergeant, and 1*l.* 10*s.* 3*d.* for a Private. The annual value of the clothing for a Sergeant is 6*l.* 10*s.* 2*d.*, and for a Private 5*l.* 2*s.*?—Yes,

304. The dress of a Chelsea pensioner is somewhat peculiar?—It is.

305. Do you ever find that the pensioners complain of their dress, or any parts of it?—I never heard them complain.

306. Have you never heard them say that they would prefer a comfortable head-dress to the cocked hat that they wear on great occasions?—I have never heard them say that—the principal wear is the forage cap.

307. But at a parade, or to go to church, or if there was any grand inspection, if His Royal Highness the Commander-in-Chief came down, or Her Majesty, they would appear in the three-cornered cocked hats?—Yes.

308. Have you ever heard them say that they would prefer another kind of head-dress to that?—I have never heard any remark made upon the subject.

309. Have you never heard them complain that their clothing was not comfortable, or that they would prefer anything to the long red coat that they wear?—No.

310. Do you think that they are quite satisfied with their dress?—I think so.

311. (*Mr. Milton.*) It is rather of an ancient character, is it not?—It is somewhat, but they are old men.

312. (*Colonel Egerton.*) With regard to the sufficiency of the clothing—are they warmly clad?—Quite so.

313. (*Chairman.*) Are the women employed in various duties at the Hospital the wives of pensioners or of old soldiers?—They are the widows of soldiers.

314. Are they all widows of old soldiers?—I cannot say that every one of them is.

315. Have you ever heard any complaint made by the pensioners of neglect of duty on the part of those women?—I have not. Moreover, I will say that every week the captains of companies are bound to ask their men whether they have any complaints to make of any kind, and they have to send in to the Major a written report as to whether there are any complaints or not.

316. Have you anything to do with the discharge of pensioners from Chelsea Hospital?—Never.

317. Part of your duty is to take charge of the effects of any in-pensioner who dies in the Hospital?—Yes.

318. Do you hand them over to his representatives when they have proved their title?—Yes; they are handed over to whoever is entitled to the effects.

319. (*Mr. Milton.*) When a man is about to be discharged, has he not to give up the clothing he has received in the Hospital?—Yes

320. When you receive notice that a man is about to be discharged, you are responsible for the care of his clothing?—Yes.

321. Supposing it then to be taken into store, under what circumstances is it re-issued?—Perhaps at the end of a month we may have 8, 10, or 12 vacancies, and we may have, perhaps, that number of men coming in, and as I have only the clothing that is requisite for the number on the establishment, I am obliged to be very careful in serving it out, in order to fit the men who come in.

322. Do you use the clothing of those who die as well as of those who are discharged?—Yes,

323. Is any allowance given to a man coming in for taking the clothing which is partly worn out?—No.

324. (*Mr Talbot.*) Did you not state just now that the men if they had any complaint to make would make their complaints to the captains of companies?—Yes.

325. The Warrant in which the duties of these officers are defined states, that they are to attend to the discipline of their companies, to attend in the kitchen to inspect the provisions, to see that the messes are served out properly cooked, to visit the wards and guard-houses, and to see that they are clean and in good order, &c. I understood from General Hutt, that the six captains of invalids are for the most part bed-ridden, or so infirm as to be incapable of doing anything?—In that case the Colour Sergeant would make the report.

326. Is it the fact that those men are bed-ridden and so infirm that they can do nothing?—They have been until now.

327. Are they all efficient at the present time?—No, they are not; there is one of them blind, and one who had been bed-ridden for a long time has just died

328. What is their state just now?—We have five who are efficient.

329. (*Chairman.*) I find from the Warrant that they have rather important duties to attend to; and I understood General Hutt to say that they were bed-ridden and infirm, and could only go occasionally into the kitchen. In answer to a question put to him by a member of the Committee, General Hutt stated that one of the captains of invalids was perfectly bed-ridden, and he, you say, has died within the last few days?—The one who has been bed-ridden died a short time ago.

Quartermaster-Stephen Fiest.

Feb. 24, 1870.

330. Did he die after General Hutt gave his evidence, or before?—He must have died before.

331. Then it appears that another is stone blind?—That is so.

332. That accounts for two out of the six?—Yes.

333. And the Governor states that it is with great difficulty he can get the regular duty required of them performed?—There are four captains efficient, and the one who has just been appointed in the place of the man who was bed-ridden makes five efficient out of the six at present.

334. (*Mr. Milton.*) What is the name of the last who was appointed?—Lieutenant Humphreys.

335. Generally speaking, do they perform the duties that are assigned to them in the Warrant?—Yes; they do.

336. (*Chairman.*) The bedding of the Hospital comes under your charge, does it not?—Yes.

337. What amount of bedding do you serve out in the summer and the winter to a pensioner?—Each man has a straw mattrass and a hair mattrass, a straw bolster and a feather pillow, two pairs of sheets (one pair of them being always in possession of the nurse), two linen pillow-cases, three blankets, and one rug; when an extra blanket is necessary it is allowed.

338. Are there any complaints made as to the bedding among the old men?—I do not hear of any.

339. With regard to coals, what firing do you keep up?—They are allowed five bushels of coals to each fire for the winter six months, and three bushels in the summer six months.

340. How many men are there in a ward?—On an average about 24.

341. Are the rooms warmed in any other way besides the fires?—Yes; the four lower wards are warmed with coke stoves.

342. Does that keep the temperature of the Hospital comfortable?—Yes; the only complaints that are made as to the cold are from the top of the house, and when that is the case I apply to the Governor for permission to give them extra coals.

343 During the inclement weather that we had lately did you do so?—Yes; I have supplied them with a bushel extra for each fire in the week with the Governor's permission.

(The Witness withdrew.)

Sergeant-Major Lemuel George examined.

Serg.-Major LemuelGeorge.

Feb. 24, 1870.

344. (*Chairman.*) You are Sergeant-Major of Chelsea Hospital?—Yes.

345. How many years have you been there?—Fourteen years and a-half.

346. What are your duties as Sergeant-Major?—I assist the Major and the Adjutant in all matters connected with the discipline of the in-pensioners; I do all the writing that is required in the Orderly Room.

347. Will you be good enough to describe to the Committee what you do when a pensioner is admitted into the Hospital and comes under your charge?—I receive the in-pensioner on his admission and tell him off to a ward.

348. What is the age of the oldest pensioner now in the Hospital?—About 94.

349. What is the age of the youngest pensioner now in the Hospital?—I am not sure, but I think he is a little over 30—there are none under 30. Between 30 and 40 years of age, there are 16; between 40 and 50, 71; between 50 and 60, 98; between 60 and 70, 117; between 70 and 80, 169; between 80 and 90, 58; over 90, 2.

350. I suppose that those men who are under the age of 50 are most of them or all of them wounded men?—I cannot say.

351. Can you furnish the Committee with a Return showing how many men there are between the ages of 30 and 40 who have lost arms or legs; how many there are between 40 and 50 who have lost arms or legs, and how many between 50 and 60 who have lost arms or legs?—I cannot do it now, but I can give you the numbers. (Vide Appendix, J.)

352. Be good enough to make out a Return and send it to the Committee?—I can give you the numbers of those who have lost limbs. There are four men who have lost a leg, and three who have lost an arm.

353. (*Mr. Milton.*) Are they young men or old men?—There is one man who has lost an arm, and, speaking from memory, I should think he is about 60. Another would be between 70 and 80, because he lost his arm at Waterloo. Another would be about 60, but he lost his arm from an accident after leaving the Service. There is one man who has lost a leg who is about 80, or, I think, over that; and he lost his leg in America. There is another man who lost a leg who is between 40 and 50; he served in the Crimea, but he lost his leg from an injury when going to India when the Crimean war was over. There is another man over 80, who lost his leg at Waterloo.

354. (*Mr. Milton.*) Are there any who have lost their eyes?—I may mention another man who has lost a leg, and who is considerably over 80; he served in Nepaul. In answer to the last question I may say that there are seven men who are totally blind.

355. What is the general age of the men in the infirmary; are they generally men of extreme age, or are they men suffering from sickness?—There are a great many very aged men and some younger men suffering from sickness.

356. (*Chairman.*) I was under the impression until now that admission to Chelsea Hospital was confined to men of 50 years of age as the youngest; but you say there is a large number of men between the ages of 30 and 40?—Yes; but the Secretary can give the Committee much better information than I can as to that. All the men's military records are in his office, and he knows the particulars of their discharges.

357. How have you obtained the numbers which you have now given to the Committee?—I keep a register of all the in-pensioners.

358. Do you know that there is that number of men in the Hospital between 30 and 40 and the other ages that you have given?—Yes.

359. What is the condition of those men; are they hale and active, or are any of them wounded?—I cannot speak positively as to that.

360. Have they lost any limbs?—No; but many of them are paralyzed, and there are some consumptive men.

361. Can you furnish the Committee with a Return showing how many men between the ages of 30 and 40, how many between 40 and 50, and how many between 56 and 60 are fit for hospital duties?—Yes. (Vide Appendix, K.)

362. What are the duties which the in-pensioners perform in the Hospital?—The duties are the guards.

363. What are the guards' duties?—There are two sentries furnished at present by day.

364. Are they relieved like sentries in the army?—They are; but when they are off sentry they are in their rooms, not in the guard room.

365. Do they stand on sentry for two hours?—Yes.

366. And at night?—No; there are no night sentries; we have watchmen at each gate, but they are paid men.

367. Are they pensioners?—Yes.

368. Hospital pensioners?—Yes.

369 They receive extra pay for performing that duty?—Yes; they are the same men, and it is voluntary.

370. Do those two watchmen stay up all night?—There are three to each gate, and each man takes a third of the night.

371. There are six watchmen for the night duty?—Yes; one at a time.

372. During the day there are two sentries?—Yes.

373. I believe they mount with sticks—no arms?—Nothing but a walking-stick.

374. They keep guard for two hours at a time?—Yes

375. Are they relieved every two hours?—Yes.

376. When they are off sentry do they go to their rooms?—Yes.

377. (*Colonel Egerton*) Do you know whether those six watchmen are admitted at a younger age on purpose for that duty?—No; but I believe this—I only give it as on opinion—that the Commissioners take into their consideration, when admitting men, that there are a certain number of men who are required to be employed in the Hospital.

378. (*Chairman.*) Do you keep a regular roll of the number of men who are fit to mount guard?—Yes.

379. How many are there now fit for guard duty?—Between 110 and 120.

380. You have got as many as 110 or 120 out of the whole 500?—Yes.

381 The others are not upon your roll for guard duty?—No.

382. They are off the roll because they are unfit for guard duty?—Yes; they are either unfit or holding employments in the Hospital.

383. Can you tell the Committee what the average stay in the Hospital is?—No; I cannot.

384. Do you receive many complaints from the old pensioners as to anything connected with the interior arrangements of the Hospital—are they made to you as Sergeant-Major?—Scarcely ever.

385. From your 14 years experience, are you able to say that the men are perfectly satisfied with their treatment?—Yes; they are perfectly satisfied.

386. I suppose that sometimes you have applications made to you by men to leave the Hospital?—Yes.

387. Are those applications made on account of dissatisfaction, or are they made because the friends of the men wish them to leave?—I never remember an instance of a man leaving on account of dissatisfaction. I take particular pains to question the men privately, so that if they have any grievance to complain of in the Hospital, it may be removed if possible, such as if a man was dissatisfied with the mess he was in he might be transferred to another.

388. A rumour is prevalent out of doors that there have been some cases of suicide in the Hospital; is that a fact?—Yes.

389. Will you be good enough to state to the Committee how many suicides, and under what circumstances, have occurred lately?—I believe there have been seven suicides during the 14 years that I have been at Chelsea Hospital.

390. What were the circumstances under which they occurred?—There was one man, an old man, who appeared to be happy in the Hospital, who threw himself over Chelsea bridge, but no one of his comrades could account for his doing that. I keep no record of the causes of these things; I only speak from memory.

391. (*Mr. Milton.*) In 1866, I think, there were some cases of suicide?—Not in 1866, but in 1862 there was the case of a sergeant cutting his throat, and that man seemed a smart, active, man, and perfectly happy, as far as appearances went. There was another man who hung himself, and he was a man, to all appearance, very happy. But he was under arrest, at the time he committed suicide, for some trifling offence.

392. (*Chairman.*) Did any of these men complain to you at all about their treatment in the Hospital, or of anything that occurred in the Hospital?—Never.

393. In short, in your position, you do not hear complaints from the old men as to anything connected with their daily life or habits, food, or clothing?—No, I do not.

394. (*Mr. Milton.*) I believe there have been about seven dismissals a-year?—About six or seven.

395. What are the causes generally of the men being dismissed?—Habitual drunkenness, insubordination, or selling their clothing.

396. What does the insubordination arise from?—From drink.

397. Not from dissatisfaction because they were not well taken care of?—No.

398. (*Colonel Egerton.*) What rate of out-pension do you think would be required to provide these men with the same comforts outside which they receive inside the Hospital?—I really could not say. The old men who are under treatment in the infirmary could not have anything which would compensate them for what they get there.

399. (*Mr. Milton.*) Did you ever hear any of them say that they would like to have a larger pension and leave the Hospital?—No. I do not enter into anything of that description with the men. I have heard some slight rumour since the naval pensioners have been sent away from Greenwich Hospital that these men were likely to have the same treatment.

400. (*Chairman.*) Have you heard that expressed by the men in Chelsea Hospital?—I have heard that it has been expressed. I did not hear it from the men themselves.

401. Do the men know what has happened as to Greenwich Hospital?—Yes.

402. (*Mr. Milton.*) Do the men at all complain of being laughed at because of the old style of their dress?—I have heard of a few instances of their being laughed at about their cocked hats, but not as to any other article of their dress.

403. The boys in the streets would perhaps call after them?—Yes.

404. Do you think that the old men would feel hurt at it?—No.

405. Are they proud of their cocked hat?—No, I do not think they are, but the cocked hat is not comfortable because it does not shade the men's eyes.

406. I suppose they would not object to having it changed for a more comfortable and more modern style of hat?—They would not object at all to having the forage cap instead in constant use. I should mention that there are other duties to perform besides the guards. There are a certain number of men who are employed in assisting those who are infirm, and men who are employed as coal carriers and sweepers.

407. Are the men glad to undertake these light duties for a little extra pay?—Yes, when they are able.

408. (*Chairman.*) Have you heard any conversation among the old pensioners as to what had been lately done in discharging men from Greenwich Hospital?—I have not entered into conversation with the men about that, but I have heard that they have talked very much about it.

409. What have you heard is their feeling about it?—I have heard that they believe that the men were treated very liberally upon leaving Greenwich.

410. Have you heard that they have expressed the wish that they could have the same treatment?—Yes, that some have, while others would not like it upon any account.

411. Do you believe as to a majority of the men between the ages of 30 and 60, that if they had a liberal pension given to them, they would prefer going back to their homes rather than stay in the Asylum?—It would be very difficult to give a correct opinion upon that, because many of these men are very much afflicted.

412. (*Sir Charles Yorke.*) Are there many men who are very much afflicted with paralysis?—Yes; and young men.

413. (*Chairman.*) Is there anything you would desire to say that we have not yet heard from you?—I do not remember anything.

414. (*Colonel Egerton.*) Will you just state what punishments are carried out in the Hospital?—The in-pensioners are divided into six companies, with a captain to each company, and he exercises some little supervision over the men. There is one colour-sergeant, four sergeants, and four corporals to each of the companies. The colour-sergeants have the superintendence of their respective companies; the sergeants and corporals are held responsible for the

Serg.-Major LemuelGeorge. Feb. 24, 1870.

cleanliness and the preservation of good order among the men of their respective wards, and they are instructed to report all offences, such as men being drunk or quarrelsome. The captains of companies settle all minor offences, such as a man being absent for a few hours, or the offence of drunkenness, except when a man commits that offence more than three times in one year. If a man has been drunk more than three times in one year, or committed offences against discipline, non-commissioned officers and men of the first and second class are reported to the Major. The punishments vary, and in the majority of cases the men are admonished. In other cases the punishment is to confine a man to the Hospital for a few days, according to the nature of the case.

415. (*Chairman.*) You confine a man to the Hospital, but you do not put him further under restraint, or in a cell?—No; we have no cells, strictly speaking; we have a guard-room, in which the men, when drunk, are placed.

416. (*Sir Charles Yorke*) You keep them there till they are sober?—Yes. We never keep a man in the guard-room at night unless it is necessary for his protection.

(The Witness withdrew.)

Adjourned to Saturday, 5th March, at one o'clock, at Chelsea Hospital.

Chelsea Hospital, Saturday, 5th March, 1870.

Present:

Captain The Hon. J. C. Vivian, M.P., in the chair.
General Sir Charles Yorke, G.C.B.
Colonel Egerton.
Mr. Talbot.
Mr. Milton.

Major-General George Hutt, C.B., further examined.

Major-Gen. G. Hutt, C.B. March 5, 1870.

417. (*Chairman.*) The Sergeant-Major of the Hospital the other day, in the course of his evidence, told the Committee that there were 16 men in the Hospital of ages ranging between 30 and 40; that there were 71 between 40 and 50; that there were 98 between 50 and 60; and that the rest were over 60 years of age. The Committee were rather struck with the fact that there were so many men in the Hospital under 60 years of age, and they wish to know whether you can shortly tell them the reasons why 16 men, of ages ranging between 30 and 40, should be in this infirmary for old soldiers?—I believe that I may state that, almost without exception, no man is admitted who is under 50 years of age unless he is suffering from paralysis, or mental weakness, or blindness. I will take the first man in this list, "Thomas Manning, 34; paralysis, hemiplegia, aphonia, mental weakness from sunstroke." I will take the next case, "39 years of age, general paralysis, cannot walk or stand, the result of the climate of India." The next man is "32 years of age, chronic ophthalmia." Then there is a man of 47 years of age "paralyzed."

418. Will you keep to the men who have been admitted at between 30 and 40 years of age?—There is a man of 36 years of age "purulent ophthalmia." Then there is one aged 34,—gun-shot wound of the cranium,—musket-ball in the trenches,—suffers from giddiness."

419. (*Mr. Milton.*) What you are now stating is the cause of those men's discharge from the army?—Yes; and their subsequent admission here.

420. (*Mr. Talbot.*) Those are not selected cases?—No; I take them as they come. Then there is a man 31 years of age suffering from "epilepsy from sunstroke, during the mutiny, in the camp before Delhi."

421. (*Chairman.*) In short, without troubling you to go through the whole book, you aver that no man is admitted under 50 years of age except from some exceptional cause, such as a wound or a loss of sight?—Certainly; whenever a man applies who is under 5'0 years of age I write across his name "ineligible" except under a medical certificate toshow that he cannot supplement his pension by his own labour.

422. (*Colonel Egerton.*) That is from disability in and by the service?—Yes; the only exception to that rule is that a few men are admitted for the work of the Hospital, such as you saw in the Infirmary kitchen; a man there was a trained cook, and none but such a man could be admitted for that special work.

423. (*Mr. Milton.*) Was he discharged from the army?—No; I applied to General Gambier, and it appeared that this man, who was within a month of being discharged, was in every way fit for the duty, and therefore the Commissioners admitted him.

424. (*Mr. Talbot.*) He gets extra pay?—Yes.

425. (*Colonel Egerton.*) He was an army trained cook?—Yes; I wish to state that the gardens which the Committee now see are for the special amusement and recreation of the men.

426. (*Chairman.*) Is it a pensioner whom I now see rolling the grass?—Yes; that is a part of our grounds, and it was selected as the best spot.

(The witness withdrew.)

The Rev. R. H. Ingram examined.

The Rev. R. H. Ingram. March 5, 1870.

427. (*Chairman.*) You are Chaplain of this Asylum?—I am; and have been so since the 1st of October, in last year, and since 1862 have frequently taken the duty here during the absence of the late Chaplain.

428. Will you be good enough to tell the Committee the services which you hold?—According to the Warrant there are two full services on the Sunday, prayers and sermon on Christmas Day, Good Friday, and all such other fasts and thanksgiving days as may be ordered by Her Majesty, and prayers on Wednesdays and Fridays and certain services in the Infirmary. The Holy Communion is administered by the Chaplain on the first Sunday in every month, and there are short services in the Infirmary twice a week. Those are the duties specified in the Warrant.

429. What are the duties which you actually perform?—As regards the infirmary we have much more frequent services, and particularly the Holy Communion, which is administered to the bedridden, as necessity may require, and once a month to the less infirm patients.

430. What services do you periodically hold in the infirmary?—On the first four days of the week I and my curate, whom I have had from the beginning of this year, have a short service of about half-an-hour or three-quarters of an hour. He goes to one ward and I go to another. It is generally as nearly as possible from half-past 11 to half-past 12, the services consisting of reading certain prayers from the Book of Common Prayer, and an exposition of Scripture, generally from the lesson of the day, or on any other subject which we may choose to speak about.

431. At what hours do you hold the services in the

Chapel?—At 11 A.M.; and there is a service at 3 o'clock P.M.; this is specified in the Warrant.

432. With regard to the Sunday services, have you any suggestions to make to the Committee?—I think that those services should be shortened. As the service is conducted now, it is much too long for the old men, especially on the Sundays the Holy Communion is celebrated. The average age of the men here is between 60 and 70; and they suffer from particular infirmities, such as those of a urinary description; and sitting so long is a matter of great inconvenience to them; and I think that, practically, it has the effect of keeping a good many men away from the Holy Communion.

433. Is it not within your power to shorten the services?—Not as regards the services in the chapel.

434. Does it require an alteration in the Warrant?—Not in the Warrant, but I believe that it requires the sanction of the Commissioners of Chelsea Hospital, and so far some alteration in the Warrant. I have no doubt that any recommendation of that sort from me would be attended to.

435. (*Mr. Talbot*). Does it not rest with the Bishop?—No.

436. (*Colonel Egerton.*) You have not made any representation of that kind?—No; as pending this inquiry everything is in abeyance. I should suggest an extra Communion Service, say at 9 o'clock, or half-past 9 on Sunday, so that it would not interfere with any of the regulations of the establishment, for the old men, if they choose to avail themselves of it, and also the shortening of the morning service. I tried that on one Sunday by omitting the sermon, but I found that this was rather an unpopular proceeding. I only tried it once. I may say that I am backed in that opinion by the Chaplain-General, whom I know very well, and who has acted very kindly towards me in advising me on some points, and he having been formerly Chaplain here, his advice is worthy of attention. He said, "if you possibly can, make your services not longer than an hour." My own wish would be to have a morning service at 11 minus the Litany, a 3 o'clock service with the Litany and a short sermon, and a 7 o'clock service. Amongst the pensioners every Sunday there are 70 or 80 men who constantly give their attendance at one church or another in the neighbourhood at a 7 o'clock service. In the case of St. Jude's, I have gone there myself upon several occasions to ascertain the attendance, and upon one occasion I have seen from 60 to 70 of our men there. Of course, I am speaking of the period since my official connection with this place.

437. (*Chairman.*) Attendance at the service in the morning is compulsory upon the men?—Yes.

438. They are paraded for that purpose?—Yes.

439. The afternoon service is voluntary?—Yes.

440. Do you find that they attend pretty well?—Tolerably; not to the extent which I sometimes think they might do. I think that the attendance is as fair as you can expect it, but I think that one reason why there is not a larger attendance is that the service comes so soon after the men's dinner that they have a disinclination to attend.

441. It is about sleep and pipe time?—Yes.

442. (*Mr. Talbot.*) Then you would propose the substitution of an evening service for the afternoon service?—No; I would have the Morning Prayer, and a sermon, and the Holy Communion when it was the day for the Holy Communion, and I would have the Litany and a short lecture in the afternoon, and the full evening service at 7 with a sermon.

443. You would still continue the afternoon service?—I think that it is always better to give everybody a chance; some may come in the afternoon and some in the evening.

The Rev. R. H. Ingram.

March 5, 1870.

444. Do you find the men generally attentive and serious?—Yes; they are particularly attentive when you get to know them and their characters, and when you address them upon something almost approaching themselves personally.

445. In the case of the men who are in the Infirmary, do you find them grateful for the consolation which you give to them?—Yes; very much so.

446. (*Colonel Egerton.*) Do you think that the men are happy and contented with their position in the Hospital?—I should say so, as far as my experience goes. There are of course some few discontented spirits. Just now I am not able to speak accurately upon this point, but I do not know that old men are always the best judges of what is best for them; we are not so ourselves; I rather look upon them in the light of so many children not able to take care of themselves, and I should consult their wishes as I should those of children. I have known one or two instances of the most preposterous kind of ideas having been expressed by them, and which are simply ridiculous, nay, foolish—I mean in respect to a subject now occupying their attention.

447. (*Mr. Talbot.*) How many persons who are members of the Church of England have you now under your ministrations?—I should say nearly 400; there are about 40 or 50 Roman Catholics.

448. Who looks after them?—A priest.

449. Is he attached to the Hospital?—He belongs to the chapel in Sloane Street, and he is acknowledged here.

450. (*Chairman.*) Where does he hold his service?—I believe he has no regular service; he merely visits the sick.

451. Does not he perform Mass?—No; I believe never. In case of illness he administers extreme unction, and so forth.

452. How do the Roman Catholics in this Hospital attend service?—When they are able, they attend the Roman Catholic Chapel; they are paraded in the morning; and all the men who wish to go to the Roman Catholic Chapel, or to any place, except the Church of England, go there. There are a good many Baptists.

453. (*Mr. Talbot.*) And are there Presbyterians?—Yes.

454. Is there any Presbyterian minister here?—No; they attend the chapel, because I believe that there is no Presbyterian place of worship in the neighbourhood. The only ministers who were accepted by my predecessor, Mr. Mathias, were a Baptist minister, and a missionary attached to the City Mission, who has been constantly here, and there are two persons who come on the Sunday, I believe, belonging to the Baptist Communion, who simply speak to the men and give them tracts.

455. In the absence of any Presbyterian minister do the men attend at church?—Yes; and they always receive our ministrations when they are sick.

456. (*Chairman.*) But there is no limitation to any religious teaching which these men may wish to have?—No.

457. There is perfect liberty?—Yes; I have always said to them, "If you will tell me to what communion you belong, and if you desire to see a pastor of your special views, it will be a pleasure to me to apprise him that you wish to see him."

(The Witness withdrew.)

Dr. JOHN MCMUNN Examined.

458. (*Chairman.*) You are Surgeon of the Infirmary?—Yes, I am Physician and Surgeon.

459. Will you be good enough to tell the Committee the state of the Infirmary, so far as the number of patients goes, and the condition of the patients at the present moment?—We have 91 patients this morning in the Hospital; out of those 35 are bed-ridden patients; 22 are helpless men from old age; 9 are paralyzed; 6 are phthisical, and there are 19 acute cases.

Dr. John McMunn.

March 5, 1870.

460. (*Mr. Milton.*) There is no fever in your Hospital to-day, is there?—No.

461. (*Chairman.*) What is the accommodation in your Hospital?—We have accommodation for 101 patients.

Dr. John McMunn.

March 5, 1870.

462. Does that include the new ward?—Yes; it includes everything.

463. Have you every convenience attached to the Hospital independent of the main building?—Yes, except laundry.

464. Have you your own kitchen?—Yes.

465. And your own staff?—Yes.

466. Do you make all your own contracts?—Yes, for food and wine, &c.

467. And have you your own diet?—Yes.

468. In short you are, so to say, an adjunct to this Hospital, but you are quite independent in your own operations?—Yes; we are quite independent as far as the diet and that sort of thing goes. The bedding and small stores are supplied by the Quartermaster.

469. How long have you been here?—Nearly 8 years.

470. Have you ever known the call upon you to be larger than your accommodation could meet?—It has been; that was the reason of the addition to the Infirmary of late.

471. (*Mr. Talbot.*) How long has this increased accommodation been required?—Almost ever since I have been here.

472. (*Chairman.*) But the additional accommodation has only been recently furnished?—Yes.

473. Do you attend any men outside the Infirmary?—Yes; I have 56 out-patients at this moment.

474. Those are men who are not sufficiently ill to be taken into the Infirmary?—Yes.

475. What is the nature of their complaints?—Many of them have sore legs, and cough, and cold, and diarrhœa, and constipation, and things of that sort.

476. They have chronic illnesses without any hope of recovery?—Yes.

477. Those are men who, added to the 91, would be incapable of doing anything for themselves outside the Hospital?—Yes; the greater number of those who are outside are infirm old men, and men who really and truly ought to be in the Infirmary if we had room for them; as long as a man is outside, and does not lie down, he is not taken into the Infirmary.

478. So that, to the number of those whom you have now in the Infirmary bed-ridden, and incapable of ever getting out, you would add all these others?—No, not all. I should say that I should take 20 into the Infirmary who always require special care.

479. How many men do you think that there are now in the Hospital, in the Infirmary, and out of the Infirmary, who, for the rest of their natural lives, will require medical care and attention?—I should say, so far as I can make out, 320.

480. (*Mr. Talbot.*) Out of 500?—Yes; they are very infirm old men. Many of these old men are very infirm and weak, and not able to do anything, although they are going about here.

481. (*Chairman.*) Still they are men who are in that condition that if they were outside the Hospital their friends could take care of them?—That is, if they would take care of them; it is very difficult to take care of these old men.

482. How many men are in such a condition of health that they absolutely want, for the purpose of keeping them alive, and for the purpose of not getting worse, medical visitation?—That is a question which I could not answer without looking over the matter.

483. Can you give us such a return?—Certainly. (*Vide* Appendix L.) I will give you an instance of what I have to do. The other night I was called out of bed by a man whose rupture was down, and I was two hours putting it again into its place; it was necessary to put it into its place again, or the result would have been death. Now, where would you get that done in the country? It could not possibly have been done. The other night I was taken out of bed by a man who had a retention of urine, and who had passed no water for 24 hours. Both these men were taken in from the barracks. There was no place outside where those men could have had done for them what was done for them unless they had been in a poor-house.

484. They might have been taken to a hospital?—That is true, if there were one near at hand.

485. One of the cases was a spasmodic seizure, was it not?—A very, very slight spasmodic action was added to the stricture.

486. We know that in this Hospital there are a number of old men who are so feeble that they cannot walk by themselves, and others who are so blind that they cannot walk without assistance, those men do not want medical assistance, but there are others who do want medical assistance, and they must get it from the poor-house, or must get it gratis unless you afford it to them? If you would furnish such a return I should be obliged to you. I wish to have a return of men who are in a state of health which requires incessant medical treatment. An open sore requires daily medical treatment, does it not?—Yes.

487. (*Mr. Milton.*) Do you think that thereare about from 100 to 200 men who, with larger pensions, might be taken care of by their relations out of the Hospital?—As regards the older men I should think not.

488. When you say that there are a large number of men who require medical treatment, do you think that there are now in this Hospital about one half of the men who, if their pensions was augmented, could be fairly taken care of by their relations upon paying their expenses?—Yes, provided that their relations would take care of them.

489. If their relations would not take care of them, could not they not subsist upon a pension of 2s. a day?—No; and certainly not for 5s. a day.

490. (*Chairman.*) Do you think that if every man in this Hospital who could go away, without requiring medical attendance, was got rid of, you could accommodate the residue in your infirmary?—No; I am sure that I could not.

491. That is to say that the residue would be considerably more than 101?—Certainly.

492. Of men who require daily supervision by a medical officer?—Not daily supervision, but very constant supervision.

(The witness withdrew.)

Major-General George Hutt, C.B., further examined.

Major-Gen. G. Hutt, C.B.

March 5, 1870.

493. (*Chairman*) We wish to clear up one point upon which there is a doubt on the minds of the Committee. You were reading from the book of the in-pensioners, and were accounting for the men who were admitted into the Hospital under the age of 50, and you read from a column giving us the reasons?—Yes.

494. But it appears from that book that that column is an entry of the cause of their discharge?—That is very true, but that is from the way in which that book is headed; it is really the cause of their admission; that is the correct form.

495. The last man in this page which I have open is William Fox, a corporal, aged 47. The cause of his discharge was that he had completed service?—There are a few men whom we were obliged to introduce in order to do the work.

496. And that man was one of them?—Yes.

497. Is William Norton another man employed in the service?—I cannot speak from memory.

498. There is William Crews, aged 41?—He must have been a man in whose case there was something peculiar.

499. There is nothing against his name?—Sometimes at the end of the month a man of that sort is admitted, the Serjeant-Major representing that he could not get on without such assistance. They are always men of good service and good character.

500. (*Mr. Talbot.*) The cases to which you referred were cases of physical disability?—All the cases which

Major-Gen. G. Hutt, C.B.

March 5, 1870.

I picked out were under 50 years of age, and they were all cases of physical disability. Whenever a man under 50 has not that marked against him, he must have been admitted for special purposes. Until recently the entries in that book were not so copiously kept as they might have been. Latterly it has been carefully done. A few men have, no doubt, been admitted for disabilities "developed" after they left the service. Disabilities "incurred" after discharge are not recognized as giving any claim; but many "time-expired" men are discharged with constitutions seriously injured by tropical service, though not so recorded in their discharge documents, whose disabilities were afterwards "developed."

501. (*Chairman.*) Here is a man of the name of John Ellington, aged 42, "Completed service," He was taken on the pension list on the 26th of February, 1867, and he became an in-pensioner in 1869. I see written against his character, "A sober man– good character — special case?"—He was a great deal too young to be admitted, but he has been admitted for the special purpose of doing some work.

502. Then, if that is the case, I have been turning over pages with the names of young men who have no special remarks put against their names?—These have either been admitted to do the work of the Hospital, or have incurred some disability which is not entered in that book which is filled in from the discharge documents.

503. (*Colonel Egerton.*) You get a Report from the Staff Officer of Pensioners, do you not?—Yes; no man is admitted except under a certificate from the Staff Officer.

504. (*Mr. Talbot.*) Your statement that no man under 50 years of age is admitted without some physical disability requires a considerable qualification?—The only men under 50 years of age who have been admitted, have been admitted by the Commissioners under special circumstances, or on account of some particular disability incurred in and by the service.

(The Witness withdrew.)

Sergeant-Major LEMUEL GEORGE further examined.

Serg.-Major LemuelGeorge.

March 5, 1870.

505. (*Chairman.*) Do you know a man of the name of William Crews in this Hospital?—There is no man here of that name; he died here.

506. (*Mr. Milton.*) Do you remember him?—Yes.

507. He was a young man, was he not?—He was a young man, and he died of consumption, I think.

508. (*Chairman.*) When did he die?—I do not remember, but he died a few days after his admission.

509. Last year?—Yes; some time last year, to the best of my recollection; but he died the same month that he was admitted.

510. (*Mr. Milton.*) And was he admitted in consequence of his bad health?—Yes.

511. (*Chairman.*) Here is the name of George Jones do you know him?—Yes.

512. Is he now in the hospital?—Yes.

513. What aged man is he: is he 46?—About that.

514. Do you know why he was admitted; is he doing any special service in the Hospital?—Yes; he is a cook in the infirmary.

515. Then there is George Ford: do you know him? I do.

516. What is he doing?—He is a cook in the Hospital kitchen.

517. Do you know John Ellington?—I do.

518. What is he doing?—Nothing.

519. He is a very young man, is he not; he is aged 42?—Yes; he has been in employ, but he is not doing anything at present.

520. Why was he removed from his employment?—For unfitness and misconduct.

521. (*Mr. Milton.*) Then he was taken into the general ward?—Yes.

522. Has he conducted himself properly since?—Yes.

523. (*Colonel Egerton.*) Do you know why he was admitted, being so young a man?—No.

524. (*Chairman.*) There are the words "special case" written against his name; do you know the reason of that?—At that time we were in want of men for employment, and I presume that he was admitted for that purpose.

525. But he is not employed now?—He is not.

526. I see next to his name William Wallace: what is he doing?—He is a Sergeant.

527. He is a young man, is he not?—Yes; but he is in a bad state of health; he served his time in India.

528. (*Mr. Talbot.*) Is a man who is simply admitted under age in order to discharge special duties, and who has forfeited his employment by misconduct, liable to be turned out, with a view to the admission of some man who is better qualified, or who has stronger claims. Supposing that a youngish man gets employment here, and is admitted on the ground of some special service, such as cook, and forfeits that employment by reason of his misconduct, is he liable to be turned out of the Hospital with a view to the admission of some other person with stronger claims?—It is very seldom that a man is put at once into employment on his admission—we have a certain number of men employed here, and it is necessary to have a few active men to fall back upon. A man may forfeit his employment by an act of drunkenness in which he neglects his duty, but he would not be liable to be turned out for it.

529. You cited a case where a man had been specially employed, but was no longer specially employed, and you led us to believe that he was still here—why is he still here. If he has forfeited, by misconduct, the special claim for which he was introduced here, he ought to be turned out, and a much older man ought to be admitted who has stronger claims upon the Institution?—I have nothing to do with the admission of men. I cannot say positively why he was admitted, but he is about the only man we have in the Hospital, at present, to replace any man that may have to leave his work through illness or otherwise.

530. (*Mr. Milton.*) You understand that there are a number of young men admitted to the Hospital for the purpose of labour only, and who upon being admitted go to that labour?—Yes.

531. You are not aware of young men being appointed to the Hospital, unless for the purpose of that labour, and who go to labour upon their admission?—Just so.

532. There is now a cook to the Infirmary who was admitted to this Hospital for the purpose of being made cook, is there not, namely, a man who was in the Artillery?—Yes; but that man is not strictly an in-pensioner —he draws his out-pension.

533. (*Chairman.*) Does Henry Green draw his out-pension?—Yes.

534. Do you know John Wilmot?—Yes.

235. He is a very young man, being aged 41?—Yes.

536. Has he any special duty to perform? Yes; he is employed in the laundry.

537. (*Mr. Milton.*) Was he employed in the laundry at once on coming in?—No.

538. Do you know why he was admitted?—No.

539. Was he out of health when he was admitted: —Yes; he had served in the Crimea, and in China, and in India. John Ellington served in New Zealand, and in other places, up till the time of his discharge.

540. (*Chairman.*) There is nothing against him in this book. He completed his service; he came on the out-pension list on the 22nd of February, 1867; he was received here on the 1st of July, 1869; he was a single man of good character, nd underneath his name there are the words written, "Special case?"—Yes.

541. (*Mr. Milton.*) Do you know Robert Dingwall? —Yes; he was admitted under special circumstances.

542. Does he draw his out-pension?—Yes.

543. (*Chairman.*) Here is a man of the name of William Acheson?—He is dead.

Serg.-Major LemuelGeorge.

March 5, 1870.

544. There is George Graham?—He is here.

545. He is a young man?—Yes.

546. (*Mr. Milton.*) Has he any labour?—Yes; he is cook in the hospital kitchen.

547. *Chairman.*) Was he admitted to be cook?—No; he is in a very bad state of health; he suffers a good deal from rheumatism.

548. (*Mr. Milton.*) Is he better now?—Yes; he has had to leave his employ once, and was under treatment.

549. (*Chairman.*) There is Michael Hayes?—Yes; he is a patient in the infirmary, and he is in a very bad state.

550. He is a very young man?—Yes.

551. Is he paralyzed, or what is his disease?—I do not know whether it is consumption or not; he is wasting away; he has been ill ever since he came here.

(The Witness withdrew.)

Adjourned to Thursday next, at 1 o'clock, at the War Office.

War Office, Thursday, 10th March, 1870.

Present:

Captain the Honourable J. C. W. Vivian, M.P., *in the Chair.*
General Sir Charles Yorke.
Colonel Egerton.
Mr. Talbot.
Mr. Milton.

Colonel Mortimer R. S. Whitmore examined.

Colonel Mortimer R.S.Whitmore.

Mar. 10, 1870.

552. (*Chairman.*) You are Staff Officer of Pensioners in the Chelsea district, I believe?—I am the Staff Officer of Pensioners in the First West London District.

552*. That includes Chelsea, does it not?—Yes.

553. How many pensioners have you in your district?—About 1,100.

554. Are they composed principally of pensioners of the line regiments, or of pensioners of the household troops?—Principally of the household troops.

555. And all of them are, of course, residing within your district?—They are those of the household troops who are residing in the neighbourhood of Chelsea, or thereabouts.

556. How often do you pay them?—Once a month.

557. Do you pay them at Chelsea?—I pay them at Chelsea Hospital.

558. Are there many very old men among those pensioners?—There is a fair average; the greater proportion are comparatively younger men.

559. Do you have many applications from them to go as in-pensioners to Chelsea?—Yes; I have a considerable number of applications from old and infirm men. I have them continually. I could not tell you in what proportion, because I must say that my district is composed, as far as London is concerned (for it extends a good long distance in the country, as far as Abingdon and Wallingford), exclusively of household troops and dragoons, most of whom on discharge obtain situations in London; in fact, so vast is the number thus obtaining situations, that I do not think there is any man who is discharged with a commonly good character who does not at once get employment in London. Consequently, there would not be such a demand, I should conclude, from such a class of men, as from those who are promiscuously discharged from regiments and have nothing to fall back upon but their pensions.

560. Can you tell the Committee which are the lowest rates of pensions you have to pay among your pensioners?—There are some pensioners on 4*d.* a-day.

561. Are there many men on 4*d.* a-day?—No.

562. Are there many men on 6*d.*?—Yes; a good many more; I think there are six on 4*d.*, and I daresay in London there are as many as fifty on 6*d.*

563. (*Colonel Egerton.*) The 4*d.* is a deferred pension?—Yes; it is a deferred pension at the age of 50.

564. (*Chairman.*) Those are amongst the oldest of your pensioners, I suppose?—No, indeed, they are not amongst the oldest. I have a great number of old men too; but I have never actually given the question much attention. I could not say to what extent they are infirm and old.

565. Do you frequently have applications for an increase of pension?—Not frequently; I have occasionally.

566. You have had applications for an increase of pension?—Yes, occasionally. In the 8 years that I have been in London I should not think that I have had more than half-a-dozen.

567. How many years have you been a Staff Officer of Pensioners?—28.

568. Would you feel yourself in a position to give to the Committee your opinion as to which would be most popular amongst the out-pensioners; a small increase of pension (I am talking of course now of men with the low rate of pension) or going to Chelsea Hospital?—Perhaps I might answer the question although I have never thought much upon it, as it is put to me, by saying that I have seen 820 pensioners this month, and have paid them personally. To each I put the question without any proviso, just simply in this sort of way, as I was aware that I was to be examined before this Committee:—"What is your opinion of the existence of Chelsea Hospital; do you approve of it?" and I can safely say that the majority of the answers were to this effect—"I would rather relinquish a small portion of my pension than see that institution done away with; I look upon it as a national testimonial, and one in which we all feel a pride." I cannot tell you the sort of grief that is expressed by my men at such an idea. They are peculiar, as I said before, because, being men of, I may say, a better position than the generality of pensioners, there are not many who would anticipate the possibility of the necessity of deriving relief from the institution. The majority would say something of this kind—"My father and my grandfather were in the Army, and I have three or four sons serving. Thank God, I am in a position comparatively independent, but God knows what may happen to my three boys. They would look to the institution for support in case of need; in fact, they would all, like me, look upon the institution with the greatest possible pride."

569. That is a feeling which we must all respect and admire, and I suppose as old soldiers we all feel it too, but it is a sentimental view of the question. I want to get at the practical view—which would these men prefer—to get an increase of pension which would enable them to live comfortably outside, or to abandon their pension and go inside the walls of Chelsea Hospital?—I candidly believe that they would prefer the existing state of things almost without an exception. I do not think that there would be any exception. I am perfectly convinced that there has not been one who did not concur, though it may appear sentimental in what I have just expressed. In the adjoining district, the Second West London District, Captain Wright, by my request, put the same questions to his pensioners. He has pensioners entirely from the Line, and there was only one amongst them who dissented. He happened to be the Sergeant-Major

Colonel Mortimer R.S.Whitmore.
Mar. 10, 1870.

to the Duke of York's School, and he had an anticipation that his pension would be hereafter increased. I think his pension was 2*s.* 3*d.* a day, and he anticipated the possibility of a very large increase, and he said that he would like that better; that was the only exception.

570. (*Mr. Milton.*) What is the feeling among your country pensioners; how many of them would like to go to Chelsea?—There is only one drawback; Chelsea Hospital has been, for a long time, mixed up with the interest and the feelings of the pensioners, and I think there is only one objection which prevents a very great majority of them from applying for admission there, and that is, that they have an old wife, or they may have a kind, indulgent son or daughter, in whose little cottage in the country they would prefer dying; but were they alone in the world, I think, indeed I am quite sure, that the advantages they imagine to exist at Chelsea, and the opinion they form of the College, are such that the call for admission would be a vast deal more than the place could accommodate.

571. Have you any pensioners in your district who are in workhouses?—Yes. Allow me, as you put that question, to make this remark. I have a Sergeant-Major from the Military Train, who is the master of St. Luke's Workhouse. To each of my pensioners this month I put, as I have just said, the question about their private individual feeling as regards the existence of this hospital. This Sergeant-Major said, "Good God, sir, I know practically from my own experience, that out of the 90 trampers who come to this workhouse to seek for nightly relief, two-thirds (I have put it down, and I can back it) are ten year's men." His opinion being that men of that class become the most improvident after discharge, and become habitual vagabonds.

572. (*Chairman.*) That does not quite hit the point we want to get at. We want to find out whether among the pensioners the most popular policy would be to increase the pension of men who are eligible for Chelsea when they get old, and to let them live out of doors, or to let them go in-doors. We have taken the evidence of the men in Chelsea, and we know what their feeling is upon that point. Now we want, if we can, to get at the feeling of the men out of Chelsea?—I really, candidly, and honestly believe that they would not prefer the increase on those conditions. I do, indeed.

573. You have mentioned just now, one great motive for a man to stay out, namely, that any man who has a wife, or a son, or a family, or an attachment to the place where he was born, prefers living amongst his friends, and dying where he was born—that is a feeling which we have found very strong in the breast of the men who are in Chelsea. What we want now to know is, whether those men, who are not absolutely infirm and without friends, would prefer a small increase of pension to going within the walls of Chelsea Hospital?—I really have a great difficulty in answering the question, because it has not occurred to me as a matter for consideration: but if I am permitted to give an opinion from analogy, I should say, no, because the very few Greenwich Pensioners I have had who receive pension after dismissal and discharge (I have a few in the country) would return if they had the option.

574. When shall you pay your men again?—I shall pay them next month. I shall see every man in my district next month—that is, in April.

575. In what part of the month?—From the 1st to the 10th or 11th of April I shall see 1,100 or 1,200 men, and they will comprise all classes of pensioners.

576. (*Colonel Egerton.*) Does that number comprise many Greenwich pensioners?—A few Greenwich pensioners.

577. (*Chairman.*) When would be the first time for the Committee to come and see your men at Chelsea, when you are paying them?—The 1st and 2nd of April. I mentioned the matter to Colonel Egerton the other day. I should have been very well pleased if that course had been adopted. There are two rooms. Each man could have been seen individually, and questioned without a knowledge by anybody else of what was going on.

578. (*Mr. Milton.*) Are the Infantry Pensioners paid at the same time?—Yes; I have no Greenwich pensioners at Chelsea. The Infantry Pensioners are paid on the same day as the others.

579. (*Mr. Talbot.*) Do you mean to say that the Greenwich pensioners whom you have paid, would like to get back again to Greenwich, and that they have expressed a wish to do so?—I think that, without exception, they would much prefer going back to Greenwich, to living as they are with the increased pension they are now enjoying.

580. Did they give any reason for that preference?—There would be more comforts and not so many of the difficulties of life to contend against.

581. (*Mr. Milton.*) What is their pension generally from Greenwich now—the increased pension?—Altogether about 22*l.* 10*s.*, or from that to 28*l.*, a-year.

582. (*Mr. Talbot.*) Were these men you have referred to labouring under any infirmity?—No; simply the infirmity of age.

583. They were unable to get any employment?—Yes, from their age, I should think they would be quite incapable of that.

584. (*Mr. Milton.*) When I asked if you had any pensioners in workhouses in your district, I did not mean in employment in workhouses, I meant receiving relief in workhouses?—I have not many. Out of my whole batch, I have at this moment only two in workhouses. I did not quite finish what I was saying about Mr. Gibbons, the Master of St. Luke's Workhouse. He said, "For goodness' sake, Sir, I hope there is no chance of discharging these old men, it would be simply a removal from Chelsea Hospital to St. Luke's parish workhouse. He is a very sensible practical man, and has had a great deal of experience in that class of life among the poor.

585. (*Colonel Egerton.*) Do you know what rate of pension the Greenwhich Hospital pensioners are getting?—From 22*l.* 10*s.* to 28*l.* a-year.

586. (*Mr. Milton.*) That is about 1*s.* 6*d.* a-day?—Yes.

(The Witness withdrew.)

Major Henry Thomas Richmond, examined.

Major Henry Thomas Richmond.
Mar. 10, 1870.

587. (*Chairman.*) You are Staff Officer of Pensioners, are you not?—Yes.

588. In what district?—In the Deptford District.

589. How long have you been a Staff Officer of Pensioners?—Ten years, and rather upwards.

590. How many pensioners have you in your district?—At present I have about 600 Chelsea pensioners and 950 Greenwich pensioners.

591. You have 950 of the Admiralty pensioners?—Yes.

592. (*Mr. Milton.*) And how many of the Mercantile Marine?—About 200, I think.

593. (*Chairman.*) I suppose amongst the 600 of Chelsea pensioners there are a certain number of very old men?—Yes; there are a good number of very old men.

594. Are there any old men upon very small rates of pension?—Yes; there are some, not very many, on small rates of pension.

595. What is the lowest rate you have?—4*d.* a-day.

596. That is deferred pension?—Yes.

597. Have you many applications for admission to Chelsea Hospital?—No; I should say that there are, upon the average, about four a-year from my district.

598. Have you many applications for an increase of pension?—No, not from Chelsea pensioners.

599. What do these old men do now who have got

Major Henry Thomas Richmond.

Mar. 10, 1870.

such very small pensions, and are old and feeble; do they not apply to you to go to Chelsea?—They do occasionally, but they cannot be admitted there if they are married, and every pensioner almost is married, for a great many of them marry when they come out of the army. More of them would go to Chelsea, no doubt, if they were not married men, but they cannot be admitted to Chelsea if they are married men, unless their wives can support themselves independently of the pensioners.

600. Then you think that, if that limitation was done away with, a good many more men would like to go to Chelsea?—A great number.

601. (*Colonel Egerton.*) Are you aware of the fact that the deferred pension men are not eligible for Chelsea?—Yes; I am aware of that fact; but I am not speaking of the deferred pension men, but of the other pensioners.

602. (*Chairman.*) Can you form any opinion, from your communications with these pensioners, as to whether they would prefer a small increase of pension or which would make them comfortable in their homes, to give up their pensions and go into Chelsea Hospital?—The great majority of the respectable pensioners would prfer Chelsea Hospital being kept up.

603. That is touching upon what I venture to call the sentimental view; but I want to know which they would prefer, an increase of pension, or to go there themselves after the age of 60?—I have spoken to a great many, and asked them the question, which they would prefer? The majority of the pensioners would prefer the hospital being kept open, so that they could go there in their old age, but great numbers also would prefer an increase of pension; the majority, however, would prefer the maintenance of Chelsea Hospital.

604. (*Colonel Egerton.*) For the chance of having it to go to?—Yes, in case they might wish to go there in their old age.

605. (*Chairman.*) We have got the opinion of the men in the Hospital; we want now to get the opinion of the pensioners out of the Hospital?—I have seen a great deal of the working of the arrangements with respect to Greenwich Hospital, that being in my district, and I can safely say that the closing of Greenwich Hospital has been a sad thing for the pensioners.

606. But the public were given to understand, and I have had it confirmed by authority which is indisputable, that there was rejoicing amongst all the pensioners when they were dismissed from Greenwich?—I think everybody who knows soldiers or sailors will say that if you offer them any change they will accept of it, and regret it afterwards.

607. Do you mean that among the 900 Greenwich pensioners, you have now you hear constant expressions of regret at Greenwich Hospital being closed?—Yes, and two-thirds of them would go back if it were opened under the old regulations to-morrow. When they cleared out in October there were, I think, 300 men who came out, and 130 came to me. Out of that number of 130, twelve have died in five months. I apprehend that in three years they will all be dead.

608. (*Mr. Milton.*) You pay some mercantile marine pensioners under the Board of Trade, do you not?—Qes.

609. Is there any asylum there that these men can look to?—Yes, there is an asylum, but it is not in my district.

610. Where is that asylum?—It is called the Belvedere Asylum.

611. Do the applications to get into that asylum come to you?—No.

612. The sick and infirm were not removed from Greenwich Hospital, were they?—Yes; I think they removed all whom they could possibly put out; there were about twenty, I believe, left in who were not expected to live.

613. But many infirm persons were removed?—Yes, a great many very infirm pensioners were removed.

614. How were they provided for?—Those who had no friends were taken in by lodging-house keepers, who get the money from them. They spend all their pension in the first week and starve for the other three.

615. They spend all the pension they receive each month in the first week?—Yes, and for the other three weeks they starve.

616. (*Mr. Talbot.*) They were taken away from the Hospital with their own consent, I suppose?—Yes, I believe they consented to go. They always will consent to anything you propose to them as a change.

617. (*Chairman.*) Still you speak advisedly and upon your own knowledge when you say that amongst these 900 Greenwich pensioners, of all those who were turned out of the Hospital, two-thirds would gladly go back again?—It is my opinion that they would do so under the old system, when some of them used to get class-money, up to 5*s.* a-week, and they were allowed to take their rations out of the College to their wives.

618. Were those old or young men?—Those who came out in October were principally very old men.

619. And it is of those men that you are now speaking?—Yes; when they came out in 1865 about 400 out of about 1,000 that left the College came to my district.

620. Were they young men?—No; the majority of those men were old men; there were young men amongst them.

621. Had they the same feeling—would they have gladly gone back?—Yes; great numbers of them would under the old system, not under the system which had existed up to October last, since 1865, when the class-money was done away with.

622. And the privilege of taking their rations out?—Yes; I believe so; I do not speak positively as to that.

623. (*Mr. Milton.*) You do not think then that the majority of your Greenwich pensioners would gladly go back to find the hospital as they left it last October?—I think that many of them would even go back to it as they left it last October. They certainly would go back under the old regulations of the Hospital.

624. You have a number of Chelsea pensioners; are the young men among them mainly helping themselves by labour and in situations?—Yes.

625. Adding to their pension by their own labour?—Yes.

626. Up to what age do they generally continue to be able to work for their own support?—Up to 55 or 60 I should say.

627. After that do these men fall back upon their pension only, or how do they support themselves?—We find that some of them get into the Unions, but we do not have so very many old pensioners. Pensioners do not live very long, I think, at least out-pensioners do not.

628. Are the Greenwich pensioners able to supplement their pensions by employment?—Some of them are.

629. Not so many as in the army?—Not in my district; there are a great many more older men, I think, among the Greenwich than among the Chelsea pensioners.

630. Have you many of your men now in the Unions receiving relief?—Very few.

631. (*Colonel Egerton.*) But you think that the lodging-house keepers get a large portion of the pension of these old men?—Yes; I think that the men who, when they came out of the Hospital had no friends and went to live with the lodging-house keepers, and also those men who happened to have drunken wives, which many of them have, are in a very miserable state.

632. (*Chairman.*) In short you think that if the men were turned out of Chelsea Hospital to-morrow with an increase of pension, those who had no friends would instantly become a prey to the harpies who keep lodging-houses?—Yes; I think so, and that the great majority of them would wish themselves back again after they had been out a month.

633. You know that the feeling of a great majority of the men in the Hospital is in favour of getting an increase of pension and coming out?—Yes, I have heard so; but anybody who knows soldiers would say that they would come out immediately if you offered them any change in their pension to come out.

Major Henry Thomas Richmond.

Mar. 10, 1870.

634. (*Mr. Milton.*) What is the average of the pension of the old men at Greenwich who came out?—14*s.* a-week; but many of them tell me when I speak to them that even if they had a guinea a week they could not keep themselves in anything like the comfort they were kept in before.

635. (*Chairman.*) Have you among your men any who have been in-pensioners at Chelsea?—I have one or two; I should not think I have above two in the district who have been in-pensioners of Chelsea and come out again.

636. Have you ever conversed with these men as to whether they would like to go back again?—No; I have not.

637. Were they old men, or of what age?—They were middle-aged men.

638. (*Mr. Milton.*) Do you know why they came out?—No; I should imagine perhaps they were turned out, I should think most probably that was the reason.

639. (*Chairman.*) Do they not bear good characters?—One of those men whom I speak of has only very lately (within the last two months) come to my district, so I know very little about him.

640. (*Mr. Milton.*) What is the character of the other?—The other is a man of good character, as far as I can judge; one does not see very much of one's pensioners, but he appears to be a man of good character when he comes for his pension.

(The Witness withdrew.)

Mr. D. Harrison, examined.

Mr. D. Harrison.

Mar. 10, 1870.

641. (*Chairman.*) I think at the request of Lord Northbrook, you have examined closely into the constitution of Chelsea Hospital?—Yes.

642. And have reported upon it?—Yes.

643. The present Committee are considering the question of Chelsea Hospital, simply with regard to the in-pensioners; they are considering it, in short, as a hospital pure and simple, without any regard to the question of out-pensioners, or how they are administered. In your Report you made some recommendations with regard to the treatment of the in-pensioners, and what should become of them?—Yes.

644. Will you be good enough now to tell the Committee your views upon that subject?—I assumed that the question was settled as to whether the In-Pension Establishment should or should not be discontinued, and then I proceeded to show what would be the result of the abolition of the In-Pension Establishment.

645. Your Report had no reference to the feelings or wishes of the Pensioners?—No.

646. But you started with the assumption that the in-pensioners should be discontinued?—I started with the assumption that it was expedient to abolish the system and then I considered how the funds should be appropriated in the event of its being decided to abolish the In-Pension Establishment.

647. Will you be kind enough to explain to the Committee your views upon that subject as regards the financial effects of the abolition of Chelsea Hospital?—The financial effects, as far as I understood them were, that we could grant an out-pension allowance of 6*d.* per day, or 9*l.* 2*s.* 6*d.* a-year, to about six times the number of men, who are now maintained in the In-Pension Establishment at Chelsea Hospital.

648. How did you arrive at that result?—I first of all took the Parliamentary Grant, minus a certain sum, which I supposed would be thrown as an expense upon this office, in the event of the transference of the duties of granting pensions to the War Office, and I found that the Parliamentary Grant, minus that sum, would furnish a certain number of Out-Pension Allowances. In addition to the Parliamentary Grant, there were also certain small endowments of Chelsea Hospital, which would go in augmentation of these Out-Pension Allowances. And there was, further, the value of Chelsea Hospital, with all the buildings and the ground attached to it, which I assumed would realize a sum of 270,000*l.*

649. How many acres did you put it at?—I put it down, from the information I was then able to obtain, at between 55 and 60 acres.

650. And you valued it at how much per acre?—At 5,000*l.* I took that as the basis of the calculation, because I found that a portion of the Chelsea Barrack land which was obtained from a private individual, was purchased at a cost of 5,700*l.* per acre. And I found, furthermore, that a space in addition to that which was purchased from a private individual, was leased from Chelsea Hospital, at a rent which is ultimately to be 400*l.* The Commissioners were about to lease it to a private individual, who was to have it for a merely nominal sum in the first instance, and was to pay a yearly increase until the rent attained, in the course of some years, the 400*l.* which was the permanent amount payable to Chelsea Hospital, but the War Office took it instead.

651. (*Mr. Milton.*) What was the acreage of that piece?—The War Office has lately taken a lease of a piece of ground less than two acres in size, of which the rent will eventually be 400*l.*

652. It lets for upwards of 200*l.* an acre, then?—Yes.

653. (*Chairman.*) What do you estimate the annual cost of Chelsea Hospital altogether?—The sum voted by Parliament was 27,400*l.* or some such sum—27,400*l.* or 27,600*l.*

654. Then there is also a private endowment?—Yes, there is an endowment which, I think, amounts in the aggregate to 700*l.* a-year, called the Drouly Fund, and there is the Ranelagh estate, and there are also some coals, or a sum of money in lieu of a supply of coals worth, I think, about 140*l.* a-year.

655. (*Colonel Egerton.*) And there are also the Stuart bequests?—Yes, the Stuart bequests; some small bequests.

656. (*Mr. Milton.*) Is there not a balance in the funds?—That I have no information or means of getting information about—I was merely looking at the money as it stands.

657. (*Chairman.*) How did you apply that money in your calculations?—It is specified in single items in the estimate—so much for officers, so much for the in-pension allowance of the men, so much for victuals, and so much for the different office bearers.

658. How much does that make it come to per man?—The cost against the Parliamentary Grant is 51*l.* 12*s.* 4*d.* per man or thereabouts.

659. Does that include the Staff, the Secretary's office, and so on?—That includes the Staff and the whole of the expenses—the pay of the Governor, the Lieutenant-Governor, the Secretary's establishment, and all the expenses.

660. But the Secretary's establishment is employed for out-pension work as well as in-pension work, is it not?—Yes, it is so employed, but that average of 51*l.* 12*s.* 4*d.* embraces the whole cost. The Secretary's establishment alone costs something over 4,000*l.*

661. (*Colonel Egerton.*) Are you aware that the Secretary's establishment has no connection with the in-pensioners except as regards a very small part of its duty, which one clerk can perform?—I am quite aware of that; I think one clerk would be able to perform all the duty pertaining to the in-pension establishment.

662. Does it not seem to give a false impression if you divide the expense of the Secretary's office—which has nothing to do with the in-pension—between the men in the Hospital as part of the expenses entailed by them?—I show it in two forms, the aggregate cost dividing all the expenses at Chelsea, and also the cost of the Institution itself distinct. The number of in-pensioners is 538, and the cost of each man is 51*l.* 12*s.* 4*d.* yearly, if the expense of the Secretary's Department 4,044*l.* be included in the computation, or, if that item be excluded, the cost is 44*l.* 1*s.* 11*d.* for each in-pensioner per annum.

Mr. D. Harrison.

Mar. 10, 1870.

663. (*Chairman.*) Should you not deduct from that what the country saves by a man's not drawing his pension while he is in the Hospital?—It does not show the out-pension which has lapsed—that would be a set-off to the gross amount.

664. (*Colonel Egerton.*) But it includes also, does it not, the amount of the private endowments of Chelsea Hospital?—No, it does not—it excludes them—it only deals with the Parliamentary Vote, and shows it in two forms.

665. (*Mr. Milton.*) But it includes as being pensioners themselves—the Captains of Invalids?—Yes, because they form part of the expenses of management.

666. No, they are themselves on the establishment—the recipients of pension—they should not be included?—But they are supposed to perform certain duties; they are supposed to have certain functions, and certain duties assigned to them for disciplinary purposes.

667. (*Mr. Talbot.*) And certain extra rates of pay?—Yes.

668. (*Mr. Milton.*) But they are as much recipients of charity as the pensioners themselves?—Yes; they are recipients of allowances besides their half-pay as officers, but they are supposed to have certain functions besides.

669. (*Sir Charles Yorke.*) But their half-pay as officers is made up to the full pay of Captain, is it not?—There are three Captains and three Subalterns, and the pay of the Captains is made up to 10*s.*?—Probably it would in effect be so, but that is not part of the arrangement. They receive specific rates for their posts, and they are supposed to perform certain duties connected with the discipline as it is laid down in the Royal Warrant. But then I have also introduced as an element of cost, the value of Chelsea Hospital, and the value of the land attached to it, which are now held in an unproductive state, in consequence of the upholding of the Institution.

670. (*Mr. Milton.*) That is not part of the 44*l.* 1*s.* 11*d.*?—No, it is in addition to the 44*l.* 1*s.* 11*d.*

671. That would raise it to a total of what?—66*l.* per man, but if we eliminate the Secretary's Staff, that will, of course, again reduce the amount per man.

672. By about 7*l.* or 8*l.* per man, I think?—It would be to the extent of 4,000*l.* spread over 538 pensioners. That would be about 7*l.* per man.

673. Therefore, it would be the 51*l.* 12*s.* 4*d.* reduced to 44*l.*; or the 66*l.* to 59*l.* Then the result is that, as we must certainly omit the Secretary's office, which has duties in connection with the out-pensioners, your figures come to this, that about 59*l.* a man is the cost of the in-pensioners, including the maintainance of the buildings and the value of the land upon which those buildings are situated?—Yes, exactly so.

674. (*Colonel Egerton.*) Are you aware that the buildings and the land are not Government property—that they have been purchased by a poundage placed upon the pay of the army, and a stoppage from the pensions?—There was a stoppage made from the pensions, which was called the poundage stoppage, but my experience does not go so far back as to enable me to say that it arose out of the necessity of providing for the cost of the buildings. The history of the buildings, as I understand it, is, that they were founded originally upon a plan sketched out by James the First, with a view of establishing a college.

675. That is quite true?—And that in the reign of Charles the Second the buildings were provided out of funds at the disposal of the Sovereign, and not out of any funds which were derived from the soldier, either from a reduction of his pension, or from any sum of which his pay was mulcted.

676. (*Mr. Milton.*) But the principle of allowing the Army to receive the benefit of the poundage which had been deducted from the pay of the Army would be equally carried out by granting that in the shape of out-pensions increased according to the present proposal as in the shape of in-pensions, would it not?—Undoubtedly so, assuming that the premise is correct, and that the deduction from the pension was made on that ground. I cannot profess to speak with any authority upon that subject; but my impression is, that the poundage was a deduction in consequence of the payment of the pensions in advance. Formerly the pensions were paid either three or six months in advance, and the Government having to provide the money earlier, and running the risk of loss by the death of a man, before the time when his pension had run out, made a per-centage charge which varied, being in some cases 5, and in some $2\frac{1}{2}$ per cent., in order to meet any loss which would be contingent upon the payment of the pension before it was actually due, and not with reference to the support of the buildings, or to pay for any matter connected with Chelsea Hospital itself.

677. (*Sir Charles Yorke.*) There are two Warrants before us—the one of 1683 and the other of 1685—in which it is specified?—What I have stated is my understanding of the matter.

678. (*Mr. Milton.*) But whatever the source from which the Chelsea revenues are derived may be, your plan does not propose to divert them from the use of the Army?—No: the aim of my proposition was, that they should be most sacredly devoted to the benefit of the soldier in their integrity, and without any deduction or abatement whatever.

679. (*Chairman.*) Starting from the premises, which you say you started from, namely, that it was determined to shut up Chelsea Hospital, how would you apply that fund which is now swallowed up by only 538 pensioners?—I propose that a grant of 6*d.* (of course, it would be merely a suggested figure), or 9*d.* a day extra should be given to every aged pensioner who would be, in consequence of wounds or feebleness, or from any other cause, fit and eligible to become an inmate of Chelsea Hospital.

680. In addition to any pension?—In addition to any pension given as a reward for service in the Army.

681. But you are aware that a great many pensioners now in Chelsea have only a pension of 6*d.* a-day?—I am not aware that there are many of that class, for I always understood that the Hospital objected to take men of that class, because it swelled the charges against the country.

682. There are some?—There are some few.

683. Others have 1*s.* a-day?—Others have 1*s.*, and some have more; the average rate is $11\frac{1}{4}d.$ a-day, or something like 17*l.* a year. I refer to the men on the in-pension establishment.

684. Do you propose to add 6*d.* a-day to that?—Yes.

685. (*Mr. Milton.*) Making their pension 26*l.* a-year?—Yes; if we were dealing with the men now in the Hospital, I should propose that they should be dealt with as in the case of the Greenwich pensioners, that they should receive 2*s.* a-day, or 36*l.* 10*s.* a-year.

686. Why?—That would be simply following the Admiralty practice.

686*. But if $11\frac{1}{4}d.$ is enough for the old men of the future, why should the old men of the past have 2*s.* a-day?—Without reasoning it out, I simply followed the Admiralty precedent.

687. Does not the Admiralty precedent go as far as to make it apparent that less than 2*s.* a-day is not enough for these old men. The Admiralty have no wish to give them more than is necessary, and if they have found that 2*s.* is a necessary sum for an old man who is unable to add to his pension by his own labour, how can we hope to satisfy the army pensioners, who are in a similar position of old age by giving them 1*s.* $5\frac{1}{4}d.$?—I cannot say that the Admiralty view is correct, nor that your suggestion is at all an illogical one. At the same time, these men were in possession of certain benefits, and compensation was necessary to them, whereas in the case of the others it would be an act of grace to give them a certain sum.

688. But you are taking something from them also in the way of the reversion to the benefits of the Hospital?—Yes; you take from them the prospective right which they possess.

689. (*Mr. Talbot.*) But the Admiralty had large estates attached to Greenwich Hospital, and the men had an interest in those estates?—Yes; Greenwich

Hospital had a revenue of 150,000*l.* a-year. It is quite impossible that we could ever hope to deal with the army pensioners as the Admiralty have done with theirs; for it is not to be supposed that Parliament would furnish the funds which would be requisite for that purpose. The only advantage which is within our realizable means, retaining the Parliamentary Grant as it now stands is, that we could give to a number (somewhere between 2,700 and 3,300 pensioners) a boon in lieu of in-pension allowances and in-pension benefits, altogether.

690. (*Chairman.*) But to arrive at that we should have to dismiss the men who are now in Chelsea at a lower rate than the men receive who were dismissed from Greenwich, should we not?—I do not think that that is a necessary consequence. I think that we might deal with them just as liberally, and give them 2*s.* a day. As they are old men they will not long enjoy it, and each man's pension of 2*s.* a day, as it lapses on his death, will provide for two new grants at 6*d.* a day, the average rate being something under 1*s.* You would give to each of these men an extra 1*s.*, and on the death of each of the present in-pensioners you would be able to provide allowances for two out-pensioners.

691. And you would apply that to men who would have been eligible for Chelsea had Chelsea still existed?—Yes.

692. (*Colonel Egerton.*) Do you suppose that an increase of 6*d.* a day could supply these men with the comforts, the attendance, the clothing, and the other advantages which they receive at Chelsea?—Perhaps 6*d.* a day would not do that, but 6*d.* a day might, in a great measure, deprive them of the wish to go into the hospital. A man who goes into the hospital severs all his ties; he cuts himself adrift from his friends and connections, and there is a loss to him in that way. The question is, whether a small sum which augmented his comforts, while it allowed him to live amongst his friends, would not be a greater boon than the in-pension advantages, which are considerable, and the comfort of ample food and clothing which he now enjoys, but which, nevertheless, have their drawbacks in the severance of social ties, and alienation from friends. In fact, it puts him in a state of existence which is abnormal, and which is not the natural condition of man.

692*. But when a man has no friends, as a very great number of these men have not, do you not suppose that these old men would be preyed upon very much by interested persons who would obtain their pensions on the plea of keeping them, and benefit largely themselves?—Our arrangements are, when persons are incompetent, either from feebleness of mind or body to take care of themselves, that the officer who pays the pensions shall look after them and see that they are properly cared for, and that they are satisfied with the arrangements which are made for them.

693. (*Chairman.*) That is part of the duty of the Inspecting Officer, is it?—Yes; the present system was introduced ostensibly, and, I think, really for the benefit of the soldier, in order that the soldier should not have the opportunity afforded him of doing what he is so prone to do, squandering his money. Therefore it was arranged that it should be paid to him more frequently and that the District Officer should exercise a friendly and beneficial surveillance over him to see that he did not become chargeable to the parish or a prey to bad and vicious habits.

694. Or become a prey to any interested persons?—Yes; it is the duty of the officers to exercise a kindly care over the pensioners.

695. (*Sir Chares Yorke.*) But the pensioner may be quite helpless, and in that case it must be difficult to protect him?—No doubt that is a difficulty. I find that there are 7,000 pensioners on the list over the age of 70—I think 7,900 is the actual figure—and I find that in Chelsea Hospital, spreading the inquiry over a period of ten years, the number of men above 70 has been about one-third of the entire number, that is to say, about 180. Now, I presume that the main object of Chelsea as an asylum is to give its benefits to the old, worn-out, feeble, and broken-down men, and yet out of 7,000 I find that only the small proportion of 180 have been anxious to avail themselves of the benefits of Chelsea Hospital.

696. (*Mr. Talbot.*) That is the number who actually were in the Hospital?—The proportion of the total number. Out of 538 one-third of the number has, upon the average, been above 70 years of age; and although the source from which this number of old pensioners is drawn amounts to between 7,000 and 8,000, yet it has given a contingent to Chelsea Hospital of only 180.

697. (*Chairman.*) What is your inference from that?—From that I infer that Chelsea is not very popular amongst the men, and that if these old men can provide for themselves out of the Hospital, as a rule they do so; they prefer to remain amongst their friends and to have the narrow range of comforts which small means will afford them rather than to go into the isolation of the hospital away from their friends and connections.

698. Looking at the small number of men over 70 provided for in Chelsea out of the large number of 7,000 who have not been provided for, you consider that it would be a better plan to apply the funds of Chelsea Hospital by dividing them amongst those men than to apply them as at present?—That is an inference which I draw from the figures, and from the figures only. Personally, I have not had an opportunity of ascertaining tho feelings of the pensioners themselves and really everything depends upon what the feeling of the soldier himself is.

698*a*. (*Colonel Egerton.*) The pensioner himself would be an interested party, would he not? If he could make a bargain to receive from 9*d.* to 2*s.* a-day to be put out, there is very little doubt which he would prefer?—We are looking at the matter only in the interest of the pensioners. I do not suppose that the public is seeking to make any gain at all by the change, but what has taken place with reference to Greenwich Hospital naturally calls in question the value of such an Institution as Chelsea. Its value would be determined by the suffrages of the pensioners themselves, and if the figures have any force or weight in them, they would certainly seem to imply that the old pensioners are not particularly solicitous to become in-pensioners.

698*a**. Are you aware that at the present moment there are 229 in-pensioners over the age of 70?—No, certainly not.

698*b*. And 346 at the present moment over the age of 60—117 between 60 and 70, and 229 over 70?—That is more than the average has been for the last ten years.

698*c*. (*Mr. Talbot.*) I think 180 you found to be the average over 70?—185. There are 538 in-pensioners, and in lieu of those in-pensions say 2,748 out-pensions could be given. But this is assuming that the property is worth only 3 per cent. There is no doubt that it might be invested in a manner which would raise 4 or 5 per cent., and then you would have an opportunity of greatly increasing the benefits of the out-pension allowances. The equivalent of these 538 in-pensions would be 2,748 out-pensions assuming the property to be worth only 3 per cent. Two-thirds of the in-pensioners, extending the inquiry over a range of some years, are under 70 years of age, but then that figure conflicts with Colonel Egerton's, I think, and his is derived from the actual facts as they exist now, which, of course, are indisputable.

698*d*. (*Mr. Milton.*) The variation is not worth talking about; according to Colonel Egerton's figures it is 1 in 35, and according to yours it is 1 in 42?—Yes.

698*e*. (*Mr. Talbot.*) What was the last year of the series from which the average was struck?—It goes up to the present.

698*f*. When did it begin, and when did it end?—It speads over twelve or fourteen years up to last December.

698*g*. (*Mr. Milton.*) What is the total number of out-pensioners?—About 64,000.

698*h*. What have you calculated to be the number above 70 years of age?—About 7,900.

698*i*. There are returns in the War Office which give

Mr. D. Harrison.

Mar. 10. 1870.

the ages of the pensioners, are there not?—There used formerly to be a number of good returns in the War Office, but I am sorry to say we have struck them out now, so I have to go back to the returns of 1865 in order to get the proportion of the ages, therefore there may be a difference on that account between my figures and those which you have before you.

698*j*. (*Colonel Egerton.*) I am quite aware that ,in Mr. Moorhead's time, the ages for admission were much younger?—My impression is, that unless a man is struck down by some severe calamity or some wound, and rendered helpless, he ought not to be in the hospital before he is 70. I do not think that any man under that age ought to be in the Hospital under ordinary circumstances; and I think bringing such men in is an alienation of the Hospital from its legitimate uses.

698*k*. (*Chairman.*) You would except, of course, a certain number of pensioners taken in for the purposes of the Hospital itself?—Yes, I would except a certain number of men taken in to perform certain duties in the Hospital—to act as office-bearers, and so forth. I find under this calculation, that there are 7,900 men on the list above 70 years of age, out of which only 180 are willing to accept the in-pension allowance, and yet that is the age of the pensioners who ought really to furnish nineteen-twentieths of the inmates of the Chelsea Hospital.

698*l*. (*Sir Charles Yorke.*) How do you get at that result?—I compare two facts together; first, the fact that there are 7,900 pensioners above 70 years of age; and secondly, that that number has only furnished a contingent to the in-pension establishment of 180.

698*m*. Do you mean that there have been only 184, applications to come in?—Only 184 inmates have been admitted,

698*n*. (*Mr. Milton.*) And probably there would have been still fewer if you had taken the age at the time of admission?—No, 184 is the number at that age at the time of admission to in-pension, but their life is not a very long one, so that would not disturb the calculation very much.

698*o*. (*Chairman.*) Four years is given as the average life at Chelsea Hospital?—I have put down the average duration of life in my report as between four and five years; I have put down the ground as consisting of about fifty acres; the value of property which might be sold I have assumed to be 270,000*l*., irrespective of endowments.

698*p*. (*Mr. Milton.*) Then what is the total annual revenue which you take to be available for these 2,748 men—what I want to arrive at is the annual revenue that you are working upon?—The 270,000*l*. would give an annual income of 8,000*l*., which, added to 25,000*l*., the amount of the Parliamentary grant, would make 33,000*l*.; and it is possible that that amount might be very largely increased if, as in the case of Greenwich Hospital, the funds were more advantageously invested than in the public Stocks.

698*q*. Out of that 33,000*l*. per annum how much would be required to provide the 2*s*. a-day for the present occupants of the Hospital, if they were removed from their position as in-pensioners of the Hospital?—About 19,000*l*. There is a statement in my Report which shows that the saving on the Parliamentary grant would be 6,000*l*., which sum, with the 19,000*l*., would make up the 25,000*l*. which I was speaking of.

698*r*. But supposing Chelsea Hospital were shut up and 2*s*. a-day given to each of the present inmates for life, what would that take out of your annual revenue?—19,000*l*.

698*s*. Then that would only leave you 14,000*l*. for the present for your increased pensions?—Yes; for the present, but I anticipate that out of the 538 there would be about 124 deaths every year, and that would liberate that number of shillings to be divided into sixpences for the grant of out-pension allowances. I have a statement of it in my Report—lapsed compensation allowances, 19,637*l*.; that is the equivalent for the in-pensioners at 2*s*. a-day.

698*t*. (*Mr. Milton.*) At the first development of your plan you provide only this small additional pension for 2,748 men?—Yes.

698*u*. Above what age would these men be?—That has to be fixed.

698*v*. Do you say higher or lower than 70?—I should say not lower than 70.

698*w*. It can only provide for about a-third of the actual pensioners now living over 70 years of age?—Yes.

698*x*. How will you draw a distinction between those whom you provide with extra pensions and those whom you do not?—I should give the preference in awarding the pension to the oldest man, except in cases of very bad health, or severe wounds, or suffering arising from service.

698*y*. But would it be possible to resist the pressure of the 5,000 and odd men not provided for, they being all under the same circumstances, and living at their own homes?—I think it would be perfectly possible, because this may be regarded in the light of a gift to the pensioners, and you may give it to whomsoever you please, acting, of course, upon certain intelligible rules in the distribution of it.

698*z*. (*Chairman.*) Moreover, as in this large number, the deaths in the year would be very numerous, so there would be a number of fresh people enjoying this advantage?—Yes. The great question yet to be determined is, whether Chelsea Hospital shall or shall not exist?

699. (*Mr. Milton.*) You started with the premise that it was abolished?—Yes; then the best mode of applying the funds in granting relief has yet to be considered. I have not gone into that fully, as the question of the continuance or discontinuance of Chelsea Hospital had not been decided.

699*a*. (*Colonel Egerton.*) In your scheme you ignore the interests of officers of the army, who contributed largely to it—have a certain vested interest in it. They are represented by a Governor, a Lieutenant-Governor, a Major, an Adjutant, and six Captains?—Yes; I have left them out of consideration entirely. I looked at the question simply with reference to the in-pensioners, regarding those officers as officers performing certain duties in connection with the In-Pension Establishment. My calculation makes no provision whatever for compensation, even to the present holders of office, though probably, we might very well give compensation to the holders of office, but it would exclude others from succeeding to them. There is no reason at all why compensation should not be given to every holder of office out of the funds, but then the number of grants of out-pensions must be circumscribed until those funds become available.

699*b*. (*Chairman.*) Is there anything else that you wish to say to elucidate the whole of your scheme?—No.

699*c*. Have we got it all before us?—Yes, you have it all before you. I have endeavoured, since the subject has been under consideration, to ascertain the feeling of the officers, and to ascertain what views they may have formed with reference to their knowledge of the feelings of the men upon it.

700. (*Mr. Milton.*) You mean the Staff-Officers of pensioners?—Yes; they come into contact with the pensioners, and are better qualified than anybody else to ascertain the feelings and wishes of the pensioners upon the subject.

701. (*Chairman.*) And they also come into daily contact with you?—I am in communication with them. I see them occasionally, and I have taken the opportunity when I have seen them to ask them these questions. Some seem to think that it would be really a positive injury and a positive wrong to the soldier to abolish the institution; others, on the contrary, think that the out-pensioners' allowance, given to a much larger number than the in-pensioners', would be regarded by the men as a boon, and that it would give universal content; but, although there is a great diversity of opinion upon it, I think the balance of testimony is in favour of the out-pension allowance.

702. (*Mr. Milton.*) Can you name any Staff-Officer of pensioners, who would give evidence before the Com-

mittee to that effect?—Yes; I have put down some names on a paper which I have here. These are officers to whom I have spoken. I spoke to Colonel Tench, who is at Woolwich, and I asked him the question without bias, and without making him acquainted with my motive. I simply wanted to arrive at the truth, for I have no feeling at all to indulge in the matter, nor have I an uncandid feeling or bias upon it; I only wish to arrive at the truth, and to find out what would be most satisfactory to the soldiers. Colonel Tench tells me that he has not many applications from men to go into the Hospital, and that the applications he has are mostly from men with small pensions. At the same time he says that there are some men, who have lost their wives, and who have no families, and no persons whom they care to live with, who would really be glad to go into the Hospital; but his opinion is, decidedly, that the institution has not a very strong hold upon the affections of the pensioners, and that it is not very popular with them. There is an institution near to Woolwich, which has been lately founded, called "The Belvedere." It is an asylum for old mariners, and some few have been drawn there. It is a purely charitable institution, to which the men are admitted without having any claim to it whatever. He said that those men formerly used to come into Woolwich to receive their pensions, but latterly he has made arrangements to pay them at the institution. He says that that has excited a very unpleasant feeling on the part of the men, because they are so opposed to, and so dissatisfied with, the seclusion of their mode of life: that they seem wretched and unhappy men, who are ill at ease, and not at all satisfied with their state. They seem as if they were really in a state of existence for which man was not intended. His impression is, that it is not working well and satisfactorily, nor does it commend itself to the feelings of the men, who are recipients of the charity.

Mr. D. Harrison.
Mar. 10, 1870.

703. (*Chairman.*) You are speaking of Colonel Tench?—Yes; that is the view of Colonel Tench at Woolwich. I have also spoken to Captain Bruce in the North London District, and also to Major McKinnon. Their sentiments are decidedly in favour of the out-pension allowance. I spoke also on the subject to Colonel Nott, a very old staff officer in the South London District. His views are the same. On the other hand, Colonel Whitmore at Chelsea thinks that that the Institution is good, and that it is highly valuable to the soldiers, and that they would feel that the loss of it was a very serious loss, and a withdrawal of the provision made by the country for the old soldier. Major Richmond, at Deptford, also seems to think that there would be great difficulty in dealing with the present in-pensioners; and, I dare say, there is great force in that. He illustrates it by some examples drawn from the Greenwich Hospital pensioners; and one can readily understand that when a man has been in the hospital for a few years, and has broken up his home and social ties, and has lost sight of all his friends, he would be a very helpless, poor creature, if he were thrown again into the world, and that he would feel himself in a very uncomfortable position.

704. (*Chairman.*) That is what must happen to a good many of these men if we shut up Chelsea?—It would happen, no doubt, to a good many of them. There is a question whether we could not make some provision for the men now in the infirmary, and men of that class at Netley or elsewhere, so that they should not be compelled to go friendless into the world.

705. (*Mr. Milton.*) It could be done; but you would find that the 7 years, which is calculated for their deaths, would become 17 in that case?—That would only prove the beneficence of the arrangement.

(The Witness withdrew.)

Adjourned to Thursday, the 17th inst., at 1 o'clock.

Thursday, 17th March, 1870.

Present:

Captain the Hon. J. C. Vivian *in the Chair.*
General Sir Charles Yorke.
Colonel Egerton.
Mr. Talbot.
Mr. Milton.

Lieutenant-Colonel Tench, examined.

706. (*Chairman.*) You are Staff Officer of Pensioners for the Woolwich District?—Yes.

707. How many pensioners are there in your district?—About 2,300.

708. How many of those are Greenwich men?—I cannot exactly say, but a good many of them are so; I suppose about 600.

709. You pay these pensioners once a month?—Yes, except at one out-station; there the money is paid quarterly, but in the other cases it is paid monthly.

709*. I suppose that there are a good many old men among the pensioners?—Yes.

710. And they are old men upon a very small rate of pension?—Yes. The Greenwich men have latterly got very large pensions. Since they have been removed from the Hospital they have had a very large increase of pension, and they are now made very comfortable.

711. What pension do the Greenwich men now get?—It varies from 9*l.* 2*s.* to 48*l* per annum.

712. Have any of them ever spoken to you about the advantages of having been dismissed from Greenwich Hospital, and having got an out-pension?—They all like it.

713. None of them have expressed a wish to return to the Hospital?—No men are allowed to return to Greenwich Hospital except for treatment, or if they are sick.

Lieutenant-Colonel Tench.
Mar. 17, 1870.

714. With regard to the military out-pensioners in your district, are there any who have been in-pensioners at Chelsea?—Yes, but very few; very few apply for it; latterly hardly any have applied. The men with small pensions, to whom it would be an advantage, are not taken in; their pension is not sufficient, or it is said that they are too young. The 2*s.* a-day is of no advantage to a man—he would not go in. And then the men are made to provide for their families before they are taken in.

715. (*Mr. Milton.*) There are not many pensioners of the Army at 2*s.* a-day, are there?—Yes, Sergeants, and a good many men of the Artillery.

716. (*Chairman.*) Have you ever had an application from a man with a fair pension to live in Chelsea Hospital?—Yes, the other day, in the case of a man who had served very well, the authorities took him in, but they at first objected to do so.

717. (*Colonel Egerton.*) I presume that it was because he was able to supplement his pension?—He looked like a healthy man; he was able to work, but he was not able to move about much.

718. (*Chairman.*) Are there many men among your

Lieutenant-Colonel Tench.

Mar. 17, 1870.

pensioners with rates of pension under 1*s.* a-day, who are incapable of work?—Yes.

719. And who would like to get into Chelsea Hospital?—Yes; but their youth is one objection, and their small rate of pension is another.

720. (*Colonel Egerton.*) Is not the rate of pension a test of service?—Yes.

721. Is it not the case that Chelsea Hospital is always full, and that there are plenty of applicants upon the books, and that it is necessary to take those who are most deserving?—I was not aware of it.

722. (*Mr. Milton.*) You have some men at 4*d.* a day have you not?—Yes.

723. Many of the deferred pensioners?—Very few.

724. They are elderly men?—Yes.

725. Have any of them tried to get into Chelsea Hospital?—No; some men have 6*d.* and some 8*d.* Many men have tried to get in, but they have been objected to on account of their age.

726. You have stated that some men have gone into Chelsea Hospital and have come out again?—Yes.

727. Was the occasion of their so coming out their dismissal?—No.

728. If a man goes out, you get a communication from the Secretary, do you not?—Yes.

729. And you have not heard that the men have wished to come back again?—No.

730. (*Chairman.*) The applications for admission to Chelsea Hospital are very few?—Yes.

731. Do you infer from that that it is not popular?—I do not think that men with good pensions think much of it.

732. You think that men would prefer living outside if they had a good pension?—Yes.

733. Have the men who have applied to you to be admitted been men with families?—Yes; sometimes we have been obliged to satisfy the Secretary that the wives shall not be chargeable. Some of their wives are able to maintain themselves by washing, and so forth, so that they do not become chargeable to the parish.

734. Do you think that it is an advantage to have an institution of this kind for old men who have passed the time of work, and who have not sufficient to keep themselves out of the poorhouse without it?—I should think so.

735. (*Mr. Milton.*) Do the wives of the men in the Hospital ever come to you to ask you to try to induce their husbands to join them in their homes?—No.

736. And you do not think that the pensioners who have gone out wish to come back again?—No; they like to go out and to live with their families; they have a son-in-law or a daughter, and they are much more happy out.

737. How are the elderly men, who have no relatives, taken care of; are they taken care of in the common lodging-houses?—Yes,

738. Are they fairly treated?—Yes.

739. Have they come to you for advances?—Yes, they have done so latterly in consequence of the hard times.

740. But they have not complained that they have been preyed upon in the lodging-houses?—No.

741. (*Mr Talbot.*) I understand you to intimate, in effect, that, in your opinion, it is undesirable that Chelsea Hospital should be kept up?—The men consider it a sort of restraint. For instance, at the seamen's place at Belvidere the mercantile marine men feel it to be a sort of little imprisonment. I think that they would much rather be outside.

742. (*Colonel Egerton.*) Are you aware of the fact, that Chelsea Hospital is always full, and that applicants are constantly refused for want of room?—No; very few persons apply in my district.

(The Witness withdrew.)

CHARLES D. LOVELESS, ESQ., and EDWIN N. SWAINSON, ESQ., examined.

Charles D. Loveless, Esq., and Edwin N. Swainson, Esq.

Mar. 17, 1870.

743. (*Chairman to Mr. Loveless.*) You are in charge of the business connected with the Greenwich Hospital Branch of the Admiralty?—Yes.

744. The Committee are engaged in considering the condition of Chelsea Hospital, and as the Admiralty have lately been occupied in the task of making great alterations as respects the Greenwich Hospital, we wish you to give us some information upon some matters connected with Greenwich Hospital. What was the total number of pensioners, including out- and in-pensioners upon the Royal Naval List?—I should think in round numbers about 16,000.

745. What was the accommodation for in-pensioners at Greenwich Hospital; how many did it accommodate?—In 1849 it accommodated 2,710, that was the complement. From that date until 1865 the numbers gradually decreased, until in that year the numbers were about 1,400.

746. The numbers decreased because you had not applications?—Yes. In a great measure also it arose from the diminution in the number of old war men who were discharged during the peace of 1815, and also from the larger amount of pensions which, since that time, has been granted to men who would not care to come to Greenwich Hospital, and give up their pensions.

747. (*Mr. Milton to Mr. Swainson.*) You are in the Secretary's Department of the Admiralty at Whitehall?—Yes

748. (*Chairman.*) What were the qualifications for admission to Greenwich Hospital?—They have been changed from time to time. I have some here of the date of 1852, which are the first that I have. They were changed in 1861, and then they were again changed after the passing of the Greenwich Hospital Act in 1865. In all the Regulations those men who were in receipt of life pensions, or who had been injured in the Service, were eligible for admission, and then there was a third class, comprising men whose claims might be considered special or exceptional.

749. Was there any limitation as to age?—No.

750. You took them at all ages?—Yes.

751. And without regard to the amount of pension which they received?—Yes. After the passing of the Greenwich Hospital Act of 1865, some new regulations were made restricting the admission to men who were infirm, or helpless, or in need of medical treatment.

752. (*Mr. Talbot.*) The large reduction of inmates from 2,700 to 1,400 may be due to that cause?—No; because the reduction took place before the date of these new regulations of 1866.

753. (*Chairman.*) Was that decrease attributable to any alterations in the qualifications for admission?—Certainly not. Perhaps I may be allowed to read an extract from the Report of the Royal Commissioners on Greenwich Hospital in 1860. They say, "The practical effect on the pensioners of these parsimonious restrictions is at once offensive and demoralizing, they induce many pensioners to present themselves before visitors to this great national Asylum in the character of ordinary beggars; they force others to seek, in places of the lowest description about Greenwich, menial and degrading employments, and they tend to exclude the pensioners from social intercourse with all but those of their own monotonous fraternity, thereby aggravating the evils which attend all monastic Institutions."

754. What is the highest rate of pension which you have in the navy?

(*Mr. Swainson*). I think that the highest rate which has been reached is 55*l.*, but that is very exceptional.

755. How much is that per diem?—3*s.*; but we do not exactly give pensions per diem. The basis of the pension is per diem, but then a man is also allowed a certain extra pension for every year that he has served as a petty officer, and the highest rate which has been reached is 55*l.*, but that is most exceptional.

756. What is the average rate of a life pension in the navy?—I should think about 30*l.* for a long service pension; that is to say, in the case of a superior petty

officer who has entered for continuous service and who has served for his full time.

756*. What is the lowest rate of life pension which you have?—6*d.* a-day—9*l.* 4*s.* a-year.

757. (*Mr. Milton.*) What is the period of full time of which you have spoken?—A non-continuous service man must serve for 21 years, and a continuous service man for 20 years.

758. (*Chairman.*) I believe that none but life pensioners were eligible for Greenwich Hospital?—All life pensioners were eligible, and those who were not life pensioners were also eligible under certain regulations; that is to say, that they must have served for ten years, or must have had special claims, and must have been infirm and helpless, or in need of medical treatment. Those were the regulations of 1865.

759. The applications for admission to Greenwich Hospital I suppose came principally from those men who were upon a very low rate of pension outside?—Yes.

760. Those were the men whom you principally took into Greenwich Hospital?—Yes.

761. So that you opened the doors of Greenwich Hospital to men with small pensions who could not live outside, without any regard to age?—Yes.

762. (*Mr. Milton.*) Did you make any provision for their families before they came in?—When the men appeared before the Board for admission to the Hospital they were always asked whether they had wives and families, and how their wives would be provided for; but I do not think that that was very much taken into consideration, because, if a man really needed admission into the Hospital it was considered a great relief to his family that he should be taken away from them. We did not insist upon a provision being made for the wives and families of the men.

763. Had they the privilege of giving rations to their wives?

(*Mr. Loveless.*) Yes, and many of the men availed themselves of taking their provisions outside and giving them to their wives.

764. (*Chairman.*) Was not that put a stop to many years ago?—No; and if a man was of good character he was allowed 1*s.* a day for provision money in lieu of provisions.

765. (*Mr. Milton.*) Were the men allowed to bring their own food into the Hospital?—Yes, into their own cabins; they could not cook in their own cabins.

766. (*Chairman.*) I suppose that a large number of the pensioners in Greenwich Hospital were young men?—Although the Rules supposed them to be infirm and helpless, many of them were not so.

767. And they could supplement their pension out of doors?—Yes, and many of them did so. They were allowed to do work in the town, and the wives of all inmates of the Hospital were allowed 2*s.* a-week out of the Hospital funds.

768. (*Mr. Talbot.*) In addition to what the men got?—Yes. Before 1865 the men were allowed money allowances of 3*s.*, 4*s.*, or 5s., according to their rating, but immediately after 1865 that was stopped, and they were allowed 1*s.* as money allowance, and 2*s.* extra per week if they were married.

769. (*Chairman.*) Out of the 1,400 men, how many bed-ridden men had you?—The number under medical treatment was about 120.

770. How many are there now in the Hospital?—Only nineteen.

771. (*Mr. Talbot.*) What was the effect of the more stringent Rules of 1865 to which which you have referred—what effect had they as regards the numbers admitted?

(*Mr. Swainson.*) The effect of adhering to the rules strictly would have been that the admissions would have been considerably less; but the Superintending Lord of the Department had the power of exercising his discretion—some Lords exercising it more stringently than others did. I do not think that the new regulations had much effect, but they had rather the effect of decreasing the number of admissions than increasing the number.

772. I suppose that they would have had a still larger effect in that direction except for the liberal interpretation which was given to them by the Board?—Yes. A Board was held at Somerset House every month. It was composed of the Superintending Lord of the Pension Department, the head of the Pension Bench, the Medical Director-General of the Navy, and a clerk from the Accountant-General's Office.

773. (*Mr. Milton.*) Then there was only one Naval officer at the Board?—Yes, besides the Medical Director-General.

774. (*Chairman.*) A Commission sat in 1865 upon Greenwich Hospital by the direction of the Duke of Somerset?

(*Mr. Loveless.*) Yes.

775. And that Commission reported in favour of Greenwich Hospital being closed, did it not?—That Commission reported in favour of Greenwich Hospital being used merely for those men who were infirm and helpless, and who had no friends take care of them.

776. And that Commission recommended that the other men should have an increased pension?—Yes.

777. What was that increased pay?—It was 9*d.* a day for men over 70 years of age and who had been for 10 years upon the Pension Rolls; and it was 5*d.* a day for men who were 55 years of age, and who had been for 5 years upon the Pension Rolls, it being determined that the time at Greenwich Hospital should count as time on the Pension Rolls.

778. It was to be optional with the men whether they withdrew or not?—Yes, each pensioner was told the amount which would be awarded to him. Out of 1,400 men 987 availed themselves of the offer.

779. (*Mr. Milton.*) In what year was that?—That was the result of the Act of 1865.

780. Can you state at about what date that option was given to the men?—September 1865.

781. (*Chairman.*) Did the men leave the Hospital?—Yes, and they reverted to their Naval out-pensions, to which were added pensions out of Greenwich Hospital funds, so as to make up, in a majority of cases, a combined pension of 36*l.* 10*s.* a-year.

782. (*Mr. Milton.*) Were there any further admissions?—Yes, under the fresh rules.

783. (*Chairman.*) It was then that the fresh rules came into operation?—Yes.

784. (*Mr. Milton.*) After the 987 went out in 1865, what has been the highest number in the hospital at any one time?—I should say 470.

785. (*Chairman.*) What was the condition of the men, both as to age, and as to their pensions outside; who declined to go upon the terms offered to them in 1865?—They were mostly men of various ages who had short service, and therefore had no naval pension. These men could not have been granted a sufficient amount of money to live with their friends out of Greenwich funds only, under the Act of 1865.

786. But they were all on the permanent pension list were they not?—There were many men in Greenwich Hospital who had no pension to fall back upon, and therefore they must have gone out upon 5*d.* or 9*d.* a-day.

787. They were all men who had not sufficient money to live upon outside the walls of the hospital?—Yes.

788. (*Mr Milton.*) Were there not some men who were eligible to be admitted into Greenwich Hospital who had no pension?

(*Mr. Swainson.*) Yes; a man who had 10 years' service, and who had not had a pension on leaving the Service, and who was helpless, was admissible.

789. (*Mr Talbot.*) Were there many of those men?

(*Mr Loveless.*) Out of the 415 men who elected to remain in Greenwich Hospital in 1865, there were 145 of these men living in 1867.

790. (*Mr Milton.*) 145 were men without pension?—They were either men with no pension, or under 55 years of age, or who had not been five years on the pension rolls.

791. (*Chairman.*) Greenwich Hospital remained in

Charles D. Loveless, Esq., and Edwin N. Swainson, Esq.

Mar. 17, 1870.

that position until 1869, when an Act was brought in by the present First Lord of the Admiralty to close the hospital entirely?—Not necessarily to close the hospital entirely, but to reorganize the Act of 1865 in some points which appeared to require revision, and to carry to another stage the policy of the Duke of Somerset.

792. And to increase the inducements for men to retire?—Yes.

793. How much was then offered to the pensioners who were remaining in the hospital, in order to induce them to go?—Under the fifth clause of the Act of 1869, the Admiralty were empowered to give the men who were then in Greenwich Hospital a maximum pension of 2*s.* a day, which would be made up of the Greenwich pension of 5*d.* or 9*d.* a-day under the Act of 1865, the Naval pension, and a special Greenwich pension under the Act of 1869.

794. Then a Committee was appointed to carry out that Act?—Yes.

795. Did the Greenwich pensioners willingly accept that retirement?—They very gladly did so.

796. (*Mr Swainson.*) There were 435 pensioners in the hospital on the 1st of October, 1869, when the Act came into operation, and out of those 435 persons, 372 elected to leave on pensions averaging from 1*s.* 6*d.* to 2*s.* a day; and of those who remained in the hospital 31 were transferred to naval hospitals, and 31 remained in Greenwich hospital.

797. Those 62 men, I suppose, were very infirm and feeble, and unable to take care of themselves?—Yes.

798. At what do you estimate the cost per annum to have been of each pensioner at Greenwich Hospital?

(*Mr Loveless.*) In the Report of the Royal Commission of 1860, it appears that in 1805 the total cost of an In-pensioner was 37*l.* 15*s.* 7*d.*, and in 1859 it was 59*l.* 6*s.* 11*d.*, of which amounts the cost per man for money allowances, food, clothing, and nursing at the previous date was 28*l.* 14*s.*, and in 1859 it was 30*l.* 7*s.* 6½*d.*

799. (*Mr. Milton.*) What items have raised the amount to 59*l.* 6*s.* 11*d.*?—The increased cost for discipline and administration, which, in 1805, was 9*l.* 1*s.* 3*d.* per man, and in 1859, 28*l.* 18*s.* 4*d.* The total cost of an Invalide at Paris was 31*l.* 16*s.* 2*d.* in 1848, of which sum only 5*l.* 5*s.* was on account of discipline, administration, and expenses of Fabric.

800. What is the reason of the increase?—The greater number of officers, and the reduced number of In-pensioners.

801. (*Chairman.*) What was the reason of the increased cost in 1869?—If you divided the total cost of the Hospital by the number of In-pensioners in that year, it would be almost 100*l.* a man, on account of the large building and staff, which would do for a greater number of persons.

802. (*Mr. Milton.*) What was the number of pensioners in 1865?—1,400.

803. And in 1859 what was it?—1,635. That, of course, is another reason for the increased cost.

804. (*Chairman.*) What is the income of Greenwich Hospital?—It is now about 142,000*l.* a year.

805. All the naval pensioners are paid out of that income, are they not?—No; naval pensioners are paid out of Parliamentary grants.

806. But were not the Out-pensioners in Greenwich Hospital paid out of the income of Greenwich Hospital?—They were originally paid out of the income of Greenwich Hospital until 1821.

807. And then were they paid out of the Parliamentary grants?—Yes.

808. Was the staff of Greenwich Hospital paid out of Parliamentary grants?—Greenwich Hospital was entirely kept up out of its own funds, with the exception of 20,000*l.* a-year, which was granted in 1834, in lieu of the merchant seamen's sixpences.

809. (*Mr. Milton.*) Then are we to understand you that, when a naval pensioner was admitted into Greenwich Hospital, the cost of his pension was removed from the Parliamentary vote to the private revenues of Greenwich Hospital?—His pension was saved to the country, and the cost of the In-pensioner fell upon the revenues of Greenwich Hospital.

810. (*Chairman.*) In dismissing those men from Greenwich Hospital at this increased rate of pension, did it come out of the private funds of Greenwich Hospital, or out of Parliamentary votes?—Out of Greenwich funds.

(*Mr. Swainson.*) All that was given as a supplement to the naval pension was given out of Greenwich funds.

(*Mr. Loveless.*) By the Act of 1865, the Treasury sanction was given only on the understanding that the charge for the pensions on account of the exodus of the men should not be borne by the public, and that Greenwich Hospital should pay 15*l.* per head for all men between the number of men in Greenwich Hospital and 1,400 men: that is to say, supposing the complement in Greenwich Hospital to be 1,400 men, and that Greenwich Hospital was empty, you would have to pay 1,400 times 15*l.*, that being supposed to be the average pension of the men.

811. By what you imposed upon the State, and also out of your own funds, you made an extra provision for the men?—Yes.

812. (*Mr Talbot.*) Does that apply to the future; are you obliged to keep up that payment for all time?—The Act of 1869 repeals the clause of the Act of the 4th and 5th of William IV, cap. 34, which gave 20,000*l.* a-year to Greenwich Hospital in lieu of the merchant seamen's sixpences, and on the other hand, it also repeals a clause in the Act of 1865, by which we paid to the Exchequer 15*l.* a head between the number of men in Greenwich Hospital and 1,400 men, and in lieu Greenwich Hospital now receives 4,000*l.* a-year out of the Consolidated Fund.

813. Does your arrangement with the Treasury contemplate a perpetual payment?—It amounts to a perpetual payment by this adjustment, Instead of paying 16,000*l.* and receiving the Treasury 20,000*l.*, we receive the balance of 4,000*l.*

814. Are you liable to pay at all times an extra amount to 1,400 men?—No; not in the future.

815. (*Chairman.*) For what did you receive the 20,000*l.* from the Treasury?—In lieu of the payment of 6*d.* a month by merchant seamen to the funds of Greenwich Hospital.

816. (*Mr. Milton.*) What was the character of that payment which was made by the seamen?—It was a payment which was instituted at the commencement of Greenwich Hospital, that every seamen should pay sixpence a month to Greenwich Hospital; at one time it applied to both naval and merchant seamen.

817. What advantage was that supposed to bestow upon the seamen of the mercantile marine?—The seamen themselves derived very little advantage from it. If a man was wounded in action from a pirate or an enemy he had a first claim to Greenwich Hospital, but the tax was on the broad score of protection afforded by the Navy to the Merchant Service.

818. (*Chairman.*) Was the 20,000*l.* which you have mentioned put upon the naval estimate?—No, it was placed upon the Consolidated Fund.

819. 4,000*l.* now stands upon the Greenwich Hospital Estimate for pensions to merchant seamen who formerly paid the 6*d.* a month to Greenwich Hospital?—Yes, it happens to be the same amount as Greenwich Hospital receives from the Consolidated Fund; but the pensions will be a decreasing charge, and the other would be an actual charge.

820. (*Mr Milton.*) Do the registered seamen of the Mercantile Marine still pay the sixpence?—No, this was abolished in 1834, and we received the 20,000*l.* in lieu of it.

821. (*Chairman.*) So that the abandonment of Greenwich Hospital enabled you to wind up Greenwich Hospital with this very liberal allowance to the sailor without any cost whatever to the public?—Yes.

822. (*Colonel Egerton.*) Do you limit the number of men to whom you give the supplementary pension to 1,400?—No; in the estimates which have been prepared for 1870-71 we shall take provision for 5,536 pensions out of the revenues of Greenwich Hospital, amounting to 59,000*l.* odd.

823. (*Mr. Milton.*) The supplementary pension

given to all men?—It is given to all men who have been five years on the pension-rolls, and who are 55 years of age, or to men of 70 years of age who have been 10 years on the rolls.

824. Have you had any applications for re-admission on the part of men who have left the Hospital?—Of the 987 men who elected to leave Greenwich Hospital on the 1st of October, 1865, only 31 applied to be permanently re-admitted.

825. What was done in those cases?—(*Mr. Swainson.*) They were all of them re-admitted.

826. Your Out-pensioners are paid by the Staff Officers of Pensioners of the Army, are they not?—Yes.

827. Many of them are in the payment of the Staff Officer of Pensioners at Deptford, and we were informed by that Officer that many of the men in his district would willingly go back to Greenwich Hospital if they could be allowed the money allowances and rations which were in force before 1865. Was it a matter of complaint with the men that the alterations in 1865 were made?—The men who came in after 1865 found that they were not in the same position as those who came in before 1865, and that may have created some jealousy.

828. Were those privileges or abuses?—I can hardly answer that question.

829. Were the regulations of 1865, making these alterations, applied owing to abuses of the privileges, or because it was considered not necessary to continue those privileges?—They were, I think, made because it was not considered any longer to be necessary or desirable to retain these privileges.

830. (*Chairman.*) But you still retain the power of admitting any feeble or infirm old man who may wish to go to Greenwich Hospital?—Yes; we retain the power, but practically we do not exercise it, because we admit them into Naval Hospitals instead of admitting them into Greenwich Hospital. There are about 20 old men now at Greenwich, and they will be handed over to the care of the Seamen's Hospital Society, to whom that part of the building is to be lent.

831. What would you do with an infirm old sailor who came to you and said, "I am tottering to the grave, I have no friends or relations, I am too old for work, and I prefer going into Greenwich Hospital"?—We should, first of all, have the man examined by our medical officers, and if it seemed to be a case for admission into Hospital we should give him the option of receiving an out-pension of 1*s.* 6*d.* a day, or of being admitted into a Naval Hospital.

831*. Would that out-pension come from the private funds of Greenwich Hospital, or from the public funds?—If a man was in receipt of a naval pension below 1*s.* 6*d.* a-day, the difference would be charged to Greenwich Hospital Funds, but if he was in receipt of no pension at all the whole would be charged to Greenwich Hospital Funds.

832. If a man's ordinary pension is supplemented at all, it is done out of the Greenwich Hospital Funds?—Yes.

833. How many men are there who are absolutely paid their pensions out of the private funds of Greenwich Hospital?—(*Mr. Loveless.*) There are 5,536 who are in the receipt of age pensions under the Act of 1865, and we shall take 1,000 special pensions in the next estimates under the Act of 1869. A scale has been framed by a Committee at Whitehall to arrange how these pensions shall be given. The highest is 1*s.* 6*d.* (Vide Appendix M.)

834. (*Sir Charles Yorke.*) What is the lowest amount?—(*Mr. Swainson.*) 3*d.* a-day.

835. (*Mr. Loveless.*) That is, in addition to the man's other pension?—No; 3*d.* by itself.

836. (*Mr. Milton.*) Was there any rectification in the case of the men who had gone out upon those terms?—No; they had the option of going to a Naval Hospital.

837. (*Mr. Talbot.*) Do you continue to recognize the claims of men who have, in strictness, no claim upon the Greenwich Hospital Funds.

(*Mr. Swainson.*) We have divided them into five classes. The first class are infirm and helpless men, or men who can contribute only to a small degree to their own support, and who are life pensioners. The second class comprises men who have served for ten years, and who are infirm or helpless, or able to contribute, in a small degree only, to their own support. Classes three and four embrace men who have less than ten years' service, and who ever since their discharge from the Service have been either infirm or helpless, or only able to contribute to a slight degree to their own support. The fifth class embraces men who do not come under any of the other classes, so that practically every man who has been invalided out of the Service with less than ten years service, or who has been discharged from the service without invaliding with more than ten years' service, is eligible for what we call the benefits of Greenwich Hospital, that is to say, he is eligible for a special pension, or to be admitted into a Naval Hospital if he requires it.

838. (*Mr. Milton.*) If men are admitted into a Naval Hospital for treatment, does the cost fall upon the Greenwich Hospital funds?—Yes. If a man is in receipt of a pension it goes towards the income of Greenwich Hospital.

839. In whose hands are the funds of Greenwich Hospital?

(*Mr. Loveless.*) They are in the hands of the Lords of the Admiralty.

840. One Lord of the Admiralty was formerly always a member of the board for admission into Greenwich Hospital, was he not?—Yes.

841. And he is now a member of the board which grants a pension out of the hospital funds?—Yes.

842. (*Chairman.*) Can you give the Committee any information as to the condition of health of those men who have been dismissed from Greenwich Hospital, whether it has been improved, or, on the contrary, has been worse?—The number of deaths among the 987 men who left in 1865 has been 276 in the four years ending September last, being at the rate of 7 per cent. per annum; whereas, in 1849, when the average number of in-pensioners was 2,670, the number of deaths was 328, or at the rate of 12·3 per cent., and the annual average death rate, until the exodus in 1865, was about the same. Out of the 435 in-pensioners in Greenwich Hospital in September 1869, with one exception, every man who was not absolutely infirm and helpless, or who had no friends, elected to leave, and was delighted to accept the terms which were offered to him.

(*Mr. Swainson.*) In stating what we did with regard to men who require hospital treatment, I said that we always offered them 1*s.* 6*d.* a day, and that they preferred to have it. Out of 650 applications which we have had for the benefits of Greenwich Hospital, only twenty men have elected to go into naval hospitals when offered the 1*s.* 6*d.* a day in lieu of admission. I do not mean that we have offered 1*s.* 6*d.* a day to the whole of the 650 persons, but out of those to whom we have offered 1*s.* 6*d.* a day only twenty have elected to go into an hospital. Since October 1869 we have had 650 applications for admission to the benefits of Greenwich Hospital.

843. (*Mr. Milton.*) And all but twenty men have, in preference, taken the allowance of so much a-year?—Yes.

844. (*Colonel Egerton.*) Do not you suppose that many of these applications were made with a view of getting the 1*s.* 6*d.*?—There is no doubt of it.

845. (*Mr. Milton.*) But the men were first examined by the medical officer?—Yes, and if the medical officer reported that the case was a fit one for hospital treatment we offered the man 1*s.* 6*d.*, and in every case, except twenty, the men took the 1*s.* 6*d.* in preference to going in.

(The Witnesses withdrew.)

Adjourned.

APPENDIX.

(A.)

VICTORIA R.

Our Will and Pleasure is that, from and after the date of this Our Royal Warrant, the following shall be the establishment, duties, salaries and allowances in money and kind, for the Officers, Under-Officers, Clerks, Soldiers, Nurses, Servants, &c., for Our Royal Hospital at Chelsea, viz.:—

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
GOVERNOR	500*l.* per annum.	Unfurnished Apartments each, with the exception of the "State Room" in the Governor's House, which is furnished at the public expense. The Governor has two Coach-houses, Stalls for 8 Horses, and a Coachman's Residence. The Lieutenant Governor Standing for 2 Carriages, Stalls for 5 Horses, and a Coachman's Residence. 31 tons of Coals to the Governor, and 30 to the Lieutenant-Governor, and 100 lbs. of Wax, and 200 lbs. of Tallow Candles, and 45,000 cubic feet of gas each.	Must be General Officers of long standing and Service.
LIEUTENANT-GOVERNOR	400*l.* per annum.		
The Military authority of the Hospital is with the Governor, when present, and in his absence, with the Lieutenant-Governor. To attend the Meetings of the Boards of which they are Commissioners. The direction of the General Affairs of the Hospital, and of the Out-Pensioners thereto belonging, in all matters relating to the grant, increase, or continuation of Pension, is vested by Royal Patent, under the Great Seal, in a Board of Commissioners, of which the Paymaster-General, for the time being, as Treasurer of the Hospital, is Chairman.			
MAJOR	350*l.* per annum, including his Half-Pay, or his Half-Pay with so much salary in addition as will make up 350*l.* a year. He may receive a pension for wounds. 10*l.* per annum in lieu of Clothing, viz., the Windsor Uniform.	Unfurnished Apartments, Coach-house and Stabling for 3 Horses, 12 tons of Coals, 150 lbs. of Candles, and 25,000 cubic feet of Gas.	Should be a Regimental Lieutenant-Colonel from the Full or Half-pay List, or a Lieutenant-Colonel Unattached. During his absence from the Hospital, the next Military Officer in seniority to discharge the duties of Major.
To obey the orders of the Governor or Lieutenant-Governor with respect to the discipline, &c. of the Military Officers and Soldiers, and see that they perform their duties, and severally conform themselves to the Rules of the Establishment. To reside in the Hospital, and not to absent himself from his duty without leave from the Governor, or, in his absence, the Lieutenant-Governor, which must be applied for in writing.			
SECRETARY TO THE COMMISSIONERS AND REGISTRAR OF OUT-PENSIONERS ..	700*l.* per annum. A Gratuity of One Guinea a day and his Travelling Expenses on each occasion of representing, in conjunction with the principal Medical Officer, the Chelsea Board, in the examination of Invalid Soldiers at Chatham, Woolwich, or elsewhere.	Unfurnished Apartments, Coach-house and Stalls for 2 Horses, 12 tons of Coals, 150 lbs. of Candles, and 25,000 cubic feet of Gas.	Should be selected for his experience in the duties of his Office.
To attend the Meetings of the Commissioners, and, under their orders, carry out all matters relating to the grant, increase, or continuation, &c., of Out-pension to the discharged Soldiers from the Army; and all matters relating to the expense, issuing orders to the Pay-office to make payments, and the general management of the Hospital. All matters relating to the adjustment and payment of the claims preferred to unclaimed and forfeited Shares of Army Prize Money deposited in the Hospital, and to the Legacies bequeathed to the Hospital, are likewise transacted in his Office. It is also his duty, in conjunction with the Principal Medical Officer, to represent the Board at Chatham, Woolwich, or elsewhere, and examine the Invalids there, who may be brought before him, touching their Service and claim to Pension. By this arrangement much saving of expense to the public, and trouble and inconvenience to the Invalids themselves, are effected. To reside in the Hospital, and not absent himself from his duties without leave from the Board.			

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
PHYSICIAN AND SURGEON.	500*l.* per annum; not to receive his Half-pay. A Gratuity of One Guinea a day and his Travelling Expenses on each occasion of representing, in conjunction with the Secretary, the Chelsea Board, in the Examination of Invalid Soldiers at Chatham, Woolwich, or elsewhere.	Unfurnished Apartments, Coach-house, and Stalls for 2 Horses, 12 tons of Coals, 150 lbs. of Candles, 25,000 cubic feet of Gas.	Should be an experienced Military Medical Officer, who has been accustomed to the Enlistment into, and Discharge from, the Army, of Soldiers, and with their Ailments; on which point, especially, his opinion will be required by the Board.
To afford Medical and Surgical attendance and Medicines to the Pensioners and Officers—Civil and Military—and their families resident in the Hospital, and exercise, generally, supervision over all matters connected with, and relating to, the health of the inmates of the Establishment. To attend the Sick Pensioners, and order the Matron to supply those in the Infirmary requiring it, with whatever diet he may consider best adapted to their respective cases. To see that the Deputy and Assistant-Surgeon, Dispenser, Matron, Nurses, &c., properly perform their respective duties. To attend the meetings of the Commissioners, and personally report to them the result of his previous Medical Examination of the Invalid Soldiers brought before him for that purpose, either at Chelsea, Chatham, Woolwich, or elsewhere—as explained under the head of the Secretary—and his opinion of their unfitness, or otherwise, for further Service; and perform all other duties prescribed for him in his Instructions from the Commissioners. To reside in the Hospital, and not absent himself from his duties without the authority of the Board or the Governor, which must be applied for in writing.			
CHAPLAIN	300*l.* per annum.	Unfurnished Apartments, Coach-house and Stalls for 2 Horses, 12 tons of Coals, 150 lbs. of Candles, and 25,000 cubic feet of Gas.	Should possess a clear, distinct pronunciation, and preach in language adapted to the understandings of his congregation.
To read Prayers in the Chapel at the hours appointed for that purpose on Wednesday and Friday in each week, and on the 29th day of May, being the Anniversary of the Restoration of King Charles II, the Royal Founder of this Establishment. To preach a Sermon every Sunday morning and afternoon, and also on the mornings of Christmas Day, Good Friday, and all Fast and Thanksgiving days. To administer the Sacrament of the Lord's Supper on the first Sunday in every Month, and also on Easter Day, Whit-Sunday and Christmas Day. To visit the Sick Officers, and Soldiers, and Servants of the Hospital resident therein when required, and the Infirmary at least twice in the week, and administer the Holy Sacrament on occasions when he shall consider it necessary, and perform all the other duties prescribed in his Instructions from the Commissioners. To reside in the Hospital, and not absent himself from his duties without leave from the Board or the Governor, which must be applied for in writing, nor yet without reporting to the Secretary, for the Board's information and approval, what arrangements he proposes to make for the performance of his duty during his absence.			
SIX CAPTAINS OF INVALIDS	These Officers receive their Half-pay, which the 3 Captains have made up to 10*s.* 6*d.*, and the 3 Lieutenants to 8*s.* per diem each. They may likewise receive a Pension for Wounds, and 10*l.* per annum each in	An Unfurnished Apartment; 8 tons of Coals, 100 lbs. of Candles, and 15,000 cubic feet Gas each.	Three to be Captains, and three to be Lieutenants, from the Half-pay List, of long standing in the Army, or who have been disabled; the latter to have the local rank of Captain in the Hospital. The Commissioners are authorized, when there
To attend to the discipline of their respective companies, and in turn, perform the daily or weekly duty of Orderly Captain. To attend, as such, in the kitchen, in the morning, at the time appointed, in order to see that the provisions for the men, of every description, are good, and in conformity to the contract in quantity and quality. If not, and			

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
SIX CAPTAINS OF INVALIDS—(*continued.*)			
the Quarter-master is of the same opinion, the latter Officer will take the necessary steps for having them replaced. If, on the contrary, they do not agree on that point, the matter is to be reported by the Captain to the Major, who will appoint a third officer, and the opinion of the majority of the three is to be acted upon. To attend also at the dinner hour, to see that the Men's Messes are served out, properly cooked, and issued in full quantity. To visit the Wards, Guard Houses, and Smoking Room, and see that they are clean and in good order, and report the result to the Major, for the Governor's information. To attend the weekly payment of the In-Pensioners, amd receive the money of those Men who are absent from the Pay Table, and certify the correctness of the payment made on account of the Pensioners. The Captains to attend the Quarterly Inspection of the Bedding, &c., in their respective divisions, and perform all such other duties as the Governor may order. To reside in the Hospital, and not be absent from their duty without the Governor's leave, which must be applied for in writing, through the Major.	lieu of Clothing—the Windsor Uniform.		is a difficulty in finding eligible Lieutenants, to appoint Captains to vacancies created by Lieutenants. In neither case are they to rise in the Army.
ADJUTANT	200*l.* per annum; not to draw his Half-pay, but he may receive a Pension for wounds, 10*l.* per annum in lieu of Clothing—Windsor Uniform.	Unfurnished Apartments, 8 tons of Coals, 100 lbs. of Candles, and 15,000 cubic feet of Gas.	Must be an eligible Military Officer not above the rank of Captain selected from the Full or Half-pay List.
To perform generally the duty appertaining to an Adjutant. To furnish the Quartermaster, daily, with a Return of the Number of Men to be placed on the House Diet, and of those on the Infirmary Diet, and on Furlough, and of the Vacancies in the House. To enter the same in a Book, which is to be kept for that purpose, and sign an abstract thereof, which the Quartermaster is required to produce Quarterly to the Secretary, as a voucher for the number of Rations to be charged in the Hospital Accounts. To prepare the Weekly Pay Bill, showing the different allowances due to the In-Pensioners, &c., and transmit the same to the Secretary, and furnish the latter with a Return of all Casualties, in order that the men's names may be removed from the Out-Pension Lists. To attend all Inspections of the Wards, &c., Bedding, Clothing, &c., and perform, in addition, all such other duties as he has been accustomed to do, or the Governor may direct. To reside in the Hospital, and not absent himself from his duty without leave from the Governor, or other his Commanding Officer, which must be applied for in writing, through the Major.			
QUARTERMASTER	The rate of Pay authorized for Quartermasters of Infantry of the Line; may receive Pensions for Wounds, and 10*l.* per annum in lieu of clothing—the Windsor Uniform. The present Quartermaster receives the maximum rate, viz., 10*s.* per diem.	Unfurnished Apartments, 8 tons of Coals, 100 lbs. of Candles, and 15,000 cubic feet of Gas.	Must be a Subaltern or Non-Commissioned Officer, selected on account of his fitness for performing the various duties which are required of him.
To perform generally the duties appertaining to a Quartermaster. To personally inspect all Articles of Provisions of every description supplied for the use of the Pensioners, and see that they are strictly in conformity to the terms of the Contracts. To attend daily in the Kitchen, when they are delivered in, and see that they are properly cooked, and the full quantity served out to the Men, as detailed under the head of "Captains of Invalids."			

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
QUARTERMASTER—(*continued*).			
To see that the supplies of Clothing, Bedding, &c., Coals, Candles, &c., which are delivered over to his charge for re-issue, are good, both as respects quantity and quality, and, if not, report the same to the Secretary, for the Board's information. To see that the Whitster properly performs her duty, and the In-Pensioners and Women employed under her Superintendence in the Laundry, and that the Quartermaster Sergeants and In-Pensioners employed in the Kitchen, and elsewhere, the Coal Porters, Sweepers, &c., properly and diligently do their respective duties. To inspect Quarterly, or oftener if necessary, all supplies of Bedding, Furniture, &c., belonging to the Wards, &c., in order to ascertain their state, and prepare Requisitions for replacing or repairing those Articles which may require it. To take charge of the Money, if any, and Effects of In-Pensioners dying in the House, and dispose of them to the proper claimants, where there are any, and where not, pay over the proceeds to the Paymaster-General, as Treasurer of the Hospital, under such orders as he may, from time to time, receive from the Board, through the Secretary. To reside in the Hospital, and not be absent from his duty without leave from the Governor, which must be applied for in writing, through the Major, and acquainting the Secretary therewith, and of the arrangement he proposes to make for the performance of his duty, during his absence, for the information and approval of the Board.			
DEPUTY SURGEON .. .. .. ASSISTANT DO...	These Officers are to receive the full pay of their Army Rank, according to length of Service, and the Dispenser the same pay as Dispensers. The two former to receive 1*s.* a day each in lieu of a Servant.	All three to have Unfurnished Apartments. The Deputy and Assistant-Surgeon to receive 8 tons of Coals and 70 lbs. of Candles each; the former is allowed 15,000, and the latter 12,000 cubic feet of Gas. The Dispenser 4 tons of Coals, 70 lbs. of Candles, and 10,000 cubic of Gas.	The Deputy Surgeon and Assistant-Surgeon to be appointed from the Full or Half-pay List. The Dispenser to be selected on account of his fitness for the office.
DISPENSER .. .. The Deputy and Assistant Surgeon receive instructions from the Commissioners, detailing their respective duties in the Hospital, which require generally that they should be guided in the performance thereof, by the Rules and Regulations of the Medical Department of the Army—obeying, of course, the Physician and Surgeon, as their superior officer. To reside in the Hospital, and not to be absent without leave from the Governor, through the Principal Medical Officer—from whom likewise, the Dispenser takes his orders.			
THE MATRON AND HOUSEKEEPER . .. Her duties generally are to exercise a due supervision over the Nurses, both in the Wards and Infirmary, and see that they keep the same clean, sweet, and in good order, and take care of the Bedding, Linen, Ward Furniture, &c.; mend the Linen belonging to their respective Wards, and collect it for washing, and receive it back again, and duly perform the several duties required of them. The Nurses are not to be absent without the Matron's leave, who is to report neglect of duty, or any act of misconduct, to the Major in the case of the Ward Nurses, and to the Physician and Surgeon in the case of the Infirmary Nurses.	100*l.* per annum, which may be held with Pension.	Unfurnished Apartments, 6 tons of Coals, 70 lbs. of Candles, and 12,000 cubic feet of Gas.	To be selected, with reference to her entire fitness in other respects, from among the widows or daughters of meritorious Officers of the Military or Civil Service.

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
THE MATRON AND HOUSEKEEPER—(*continued.*) To take care that such Diet as is ordered by the Principal Medical Officer for the sick be supplied to them, and keep an account thereof, in writing, and furnish the Secretary quarterly with an abstract thereof, for the Board's information, signed by the Principal Medical Officer. To reside in the Hospital, and not to be absent from her duty without leave from the Governor, which must be applied for in writing, through the Physician and Surgeon, and arranging with the latter for the performance of her duty during her absence.			
WHITSTER	70*l.* per annum, which may be held with Pension.	Unfurnished Apartments, 6 tons of Coals, 70 lbs. of Candles, and 12,000 cubic feet of Gas.	To be selected, with reference to her entire fitness in other respects, from among the widows or daughters of meritorious Officers of the Military or Civil Service.
To superintend the proper washing and drying the Hospital Linen, its collection and re-delivery to the Wards, Infirmary, &c., and keep an account of the expense thereof, under the orders of the Quartermaster. To issue to the Nurses their weekly allowance of Soap. To be assisted in the performance of her duties by as many women (the wives or widows of Pensioners or discharged Soldiers whenever practicable) and In-Pensioners, as the Quartermaster, sanctioned by the Board, may consider necessary. To reside in the Hospital, and not absent herself, without first obtaining leave from the Governor, which must be applied for in writing, through the Qnartermaster, and arranging with him for the performance of her duty during her absence.			
ORGANIST	50*l.* per annum, which may be held with Pension.	Unfurnished Apartments; 4 tons of Coals, 60 lbs. of Candles, and 12,000 cubic feet of Gas.	To be selected from among the widows or daughters of meritorious Officers of the Military or Civil Service; if a fit Candidate can be found among these classes.
To play the Organ on Sundays, Wednesdays, and Fridays, and on all other days on which Divine Service is ordered, and the same required to be performed. To practice in Singing the children belonging to the Female School in the Hospital. To reside in the Hospital, and not absent herself without leave from the Governor, which must be applied for in writing, through the Chaplain, and arranging with the latter for the performance of her duty in her absence.			
Establishment of 4 Staff Sergeants and 6 Companies of In-Pensioners, not to exceed in the whole 538, viz.:—			
STAFF SERGEANTS.			
1 SERGEANT MAJOR	2*s.* 6*d.* to 3*s.* per diem.	Apartments supplied, with certain articles of Furniture. 4 tons of Coals, 60 lbs. of Candles, and 8,000 cubic feet of Gas each, and clothed as Staff Sergeants, and to receive the same rations as the In-Pensioners.	To be Out-Pensioners, selected on account of their fitness. To receive their Out-Pensions, and to be entitled to some increase thereto, when no longer fit for the duty, in the same manner as is the case with other Staff Sergeants under the Pension Regulations, provided their conduct should deserve such indulgence.
2 QUARTERMASTER-SERGEANTS	2*s.* to 2*s.* 6*d.* each do.		
1 SERGEANT PORTER to Infirmary.. ..	1*s.* 6*d.* to 2*s.* per diem. The maximum rate at the expiration of 3 years from their respective appointments.		

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
In-Pensioners.			
6 Colour Sergeants	1*s.* per diem.	To be Victualled, Lodged, and Clothed, according to the established Rules of the House.	In filling up Vacancies among the Sergeants and Corporals, preference should always be given, as far as practicable, with reference to their entire fitness in other respects, to those In-Pensioners who were discharged from the Army in those Ranks; or with that view the Appointments may be made directly from men on the Out-Pension List, who were discharged in those Ranks. As regards the admission of In-Pensioners, the Candidate should not be less than 55 years of age, and have served 21 years in the Infantry, or 24 years in the Cavalry, where the claim to admission is preferred solely on account of age or long service; but in cases of the loss of one or more limbs, or severe bodily wounds, or other injuries or disabilities, the result of Service, disqualifying them from labour, the selection to be governed by the peculiar circumstances of the case. Good Character, both in the Service and since discharge, to be an essential requisite, and preference should, at all times be given to those men who bear the best character, and have served the longest period.
24 Company Do.	8*d.* „		
24 Corporals..	4*d.* „		
6 Drummers..	3*d.* „		
50 Privates, 1st Class	2*d.* „		
50 Do. 2nd do.	1½*d.* „		
378 Do. 3rd do.	1*d.* „		
538			
To perform such light Military duties as may be ordered by the Governor.			An In-Pensioner can leave the house at any time, by permission of the Board, and revert to his Out-Pension, which he ceases to draw while an In-Pensioner, or he may be expelled by the Board for Bad Conduct, and deprived of all, or a portion of, his Out-Pension.
Establishment of Nurses.			
6 First Class Nurses	2*s.* 3*d.* a day each.	A Furnished Room and an allowance of Coals and Light each, a Grey Serge Gown and Petticoat annually, and half the ration of an In-Pensioner.	To be selected, as far as may be practicable, with reference to their entire eligibility in other respects, from among the Widows of deceased Soldiers.
9 Second Do.	1*s.* 9*d.* „		If they Marry they must vacate their situations.
12 Third Do.	1*s.* 6*d.* „		
To keep their respective Wards clean and in good order, and be kind and attentive to the comforts of the In-Pensioners. To take care of the Bedding, Linen, Furni-

ESTABLISHMENT OF NURSES—(*continued.*			
ture, &c., and mend and collect the bed and men's linen for washing, and receive it back again and properly dispose of it. Not to be absent without leave from the Matron.			
ESTABLISHMENT OF CLERKS, &c., IN THE SECRETARY'S OFFICE.			
2 CLERKS, 1st Class	350*l.* to 450*l.* per annum each, at an annual increase of 15*l.*	The 1st Clerk, in consideration of his having to keep the Accounts of the Hospital under the Secretary's direction and supervision, and attending the Weekly Payment of the In-Pensioners and others, and affording the Secretary such assistance as he may require, after Office hours, is allowed, in addition to his Salary, Unfurnished Apartments, and receives 8 tons of Coals, 100 lbs. of Candles, and 15,000 cubic feet of Gas.	The Clerks are appointed subject to the usual preliminary Examination by the Civil Service Commissioners.
4 Do 2nd do.	220*l.* to 320*l.* per annum each, at an annual increase of 10*l.*		
4 Do. 3rd do.	90*l.* to 200*l.* per annum each, at an annual increase of 10*l.*		
OFFICE KEEPER AND 1ST MESSENGER ..	90*l.* to 110, at 5*l.* increase per annum.	To have Apartments.	
TWO MESSENGERS	To be appointed from among Pensioned Sergeants; to have 10*s.* 6*d.* per week, in addition to Pension, with quarters and rations as In-Pensioners, and a Staff Sergeant's suit of clothing annually; such service to give an increase of Pension under the Pension Regulations when no longer fit for duty, if recommended by the Commissioners.		

Establishment and Duties.	Salaries and Allowances in Money Annually.	Allowances in Kind.	Qualification, &c.
To the Commissioners to cover the expense of employing In-Pensioners and others in the performance of the undermentioned duties, a sum of money not exceeding, annually, for the whole number .. .. Viz.:—Chapel Clerk, Engine Keeper and Turncock, Watchman, Porter to Dispensary, Surgery Man, Cooks in the Infirmary, Night Watchers, Bath Keepers, Hall Keeper and Cellarman, Cooks in the Kitchen, Coal Porters and Sweepers, Barbers, Laundry Men and Women, Ward Orderlies, Organ Blower; for care of Board Room, &c.	1,200*l.*	As nearly all these appointments will be held by In-Pensioners, they will, of course, receive their Pay, Rations, and Clothing as such, in addition.	This arrangement will enable the Commissioners to add to, or deduct from, the number of In-Pensioners, and others employed, as well as authorize an increase or diminution in the rate of their remuneration, according to circumstances, and the amount of duty to be performed; but it does not follow that because such a sum is placed at the disposal of the Commissioners, it is therefore wholly to be expended, unless absolutely required for the due performance of the duties connected with the In-Pension Establishment. The In-Pensioners appointed should be selected with reference to their fitness to perform the respective duties, and only be continued to be employed so long as they are able to perform the same in a satisfactory manner.

With the exception of the Governors of Our Royal Hospital, the Captains of Invalids, and the Pensioners, who are resident therein, by way of retirement and reward for their past services, it is Our further Will and Pleasure that all other Officers, Under-Officers, &c., who may hereafter be appointed, be removed from their respective appointments when no longer capable, in the opinion of Our Commissioners, of performing their duties to the advantage and benefit of the Hospital. And it is Our further Will and Pleasure that from this date no charge shall be added hereto, without being first sanctioned by Our High Treasurer or Commissioners of Our Treasury for the time being, upon the recommendation of Our Secretary of State for War.

Given at Our Court at Saint James's, this Twenty-third day of June, 1862, in the Twenty-sixth Year of Our Reign.

By Her Majesty's Command.

G. C. LEWIS.

(B.)

MEMORANDUM.

Royal Hospital, Chelsea.

THERE is reason to believe that the advantages held out to Pensioners of becoming inmates of this Hospital are not generally known or understood, and the Commissioners therefore desire to give publicity to the Regulations respecting admission, which merely require—

1st—That the applicant be on the Permanent Out-Pension List.

2nd—Of good character.

3rd—Having no wife or children dependent on him for support.

This Establishment is especially designed and maintained for the relief of wounded, disabled, or aged Pensioners, for whose comfort, accommodation, and medical treatment every convenience is most liberally afforded, far beyond what is usually within the reach of such men anywhere else.

Travelling expenses for men admitted to In-Pension are paid from their place of residence to the Hospital.

Application to become a candidate for the In-pension must be made through the Staff Officer of Pensioners for the district, or by letter addressed to this Office.

GEORGE HUTT,
Secretary to the Commissioners.

INFORMATION necessary to be furnished by an Out-Pensioner of Chelsea Hospital who wishes to become a Candidate for Admission on the In-Pension.

State your Christian and Surname, and the Regiment from which you were admitted a Pensioner, the rate of your Pension, and the date of your admission on the Pension List .. ..

Mention any other Regiments in which you have served.. .. ..

Have you ever served abroad? If so, state where, and the period of such service .. ..

If you have served in any action, state the name of it .. ..

If you have been wounded, state in what part of your body, and in what action you received the said wound .. ..

If you have a wife or family, state how they will be provided for in the event of your being admitted an In-Pensioner.. .. .. ..

What is your precise address, and in what Staff District do you receive your Out-Pension?..

Do you belong to the Local Company? ..

We hereby certify that the general conduct of since he lived in this parish, has been ; and in the event of his being admitted an In-Pensioner, the parish will have no claim upon his Pension.

_____ { *Minister and Churchwardens of* } *the Parish of*
_____

I certify that is not labouring under any degree of mental derangement, nor infected with any contagious disorder.

_____ *Surgeon.*

The above-mentioned has been paid his pension up to , and his character has been ; and I have no reason to believe, either from inquiries made by me, or from any circumstances which have come to my knowledge, that he has exhibited symptoms of insanity or of weakness of intellect, to such an extent as to incapacitate him from taking care of himself.

Staff Officer of Pensioners,

_____ *District.*

5	Laundrymen	9*s.* ,,	117 0 0	The estimate is as stated; there are, however, actually employed at the present time—1 man at 9*s.* a-week, 4 men at 7*s.* 6*d.* a-week each, and a man at 5*s.* for 4 days a-week, these are in-pensioners.
7	Laundrywomen (wives of In-Pensioners)	12*s.* ,,	218 8 0	
25	Ward Orderlies	2*s.* 6*d.* ,,	162 10 0	In-pensioners.
1	Organ-blower	5*l.* a-year	5 0 0	An in-pensioner.
1	Sergeant in charge of kitchen	6*d.* a-day	9 2 6	This additional allowance was granted by the Board on 29th March, 1865, to the Quartermaster-Sergeant (or Master Cook) in consequence of certain alterations made in the cooking apparatus.
3	Assistant Sergeants ..	4*d.* a-day each	18 5 0	In-pensioners.
1	Man in charge of engine ..	6*d.* a-day	9 2 6	Additional allowance granted to the Engineer in the kitchen.
2	Supernumerary Nurses ..	1*s.* 6*d.* a-day each	54 15 0*	The Board, on 21st September, 1869, directed these women to be entertained as a temporary measure, in consequence of the greatly increased number of sick.
3	Chapel and Hall-men ..	2*s.* a-week each	15 12 0	In-pensioners: 1 employed in Hall, 2 in Chapel.
	Allowance for removing deceased pensioners	5*l.* a-year	5 0 0	Paid to in-pensioners,
	Cleaning pewter ..	4*l.* ,,	4 0 0	Paid to an in-pensioner.

* The charges upon the sum of 1,200*l.* are kept distinct in the accounts of the Hospital; this occasions the pay of the "Supernumerary" Nurses being shown as above.

CHELSEA HOSPITAL LEGACIES.

Drouly.

COLONEL JOHN DROULY, by Will dated 11th July, 1809, of which Probate was granted on 19th November, 1818, left to Chelsea Hospital 1,000*l.*, and also a moiety of the residue of his estate. This legacy was invested in the Three per Cent. Consols, and produced 25,069*l.* 13*s.* 4*d.*

In 1826, Stock to the amount of 11,604*l.* was sold to purchase the Ranelagh Estate.

In 1843, about 12,000*l.* sterling was paid for the purchase of land from the Grand Junction Water Works Company.

The present amount of Stock held on account of this Legacy is 7,460*l.* 18*s.* 7*d.*

Stuart.

John Stuart, Esq., of Prescot, Lancaster, by will dated 18th March, 1845, bequeathed a legacy to Chelsea Hospital, which amounted to 1,867*l.* 14*s.* 4*d.*, less legacy duty. This was invested in the purchase of Three per Cent. Consols in October 1853, the dividends upon which have been reinvested from time to time.

The amount of Stock now held on account of this Legacy is 3,061*l.* 14*s.* 2*d.*

Ranelagh and De la Fontaine.

On 2nd April, 1707, Richard Earl of Ranelagh gave 3,250*l.* to be laid out for the benefit of Chelsea Hospital. This was invested, by his Lordship's desire, in the purchase of an Exchequer Annuity of 200*l.* for 99 years, commencing from 25th March, 1707. In October 1720 this Annuity was subscribed into the South Sea Company; in consequence, a considerable loss occurred, and the Commissioners of Chelsea Hospital put the affair into Chancery. On 22nd December, 1725, the Master of the Rolls issued a decree, in which, after reciting that the said Annuity had been duly applied until Michaelmas 1720, and that 2,000*l.* had been bequeathed by John de la Fontaine on 17th January, 1706, for the benefit of lame and disabled land soldiers, which increased by interest to 2,800*l.*, which sum had been laid out in Bank Annuities, he decreed that any deficiency on account of Lord Ranelagh's gift was to be made good out of Mr. De la Fontaine's Legacy, the residue to be disposed of for the benefit of the Hospital.

On 5th January, 1732-33 (sometimes stated as 1735-36), the Board directed these two Legacies to be joined, and in 1854 and 1858 the South Sea Stock was exchanged into Three per Cent. Consols and Reduced.

The Stock now consists of:—

	£	*s.*	*d.*
Three per Cent. Consols	1,545	17	3
Three per Cent. Reduced	4,581	15	8
	6,127	12	11
To this may be added 1,500 Three per Cent. Consols recently purchased as a "Surplus" Fund	1,500	0	0
	7,627	12	11

(Signed) GEORGE HUTT.

Greenwich Hospital Special Pensions.

Limit of Pensions.	Class I. All Naval and Marine Pensioners who have been granted Naval Pensions for Life.	Class II. All Seamen and Marines who have served with good characters for 10 years continuously, or with short intervals.	Class III. All Seamen and Marines who, having served for less than 10 years, have been within 6 months discharged or invalided on account of disease or wounds contracted or received in or by the Service.	Class IV. All Seamen or Marines who, having served for less than 10 years, were at any date discharged or invalided on account of disease or wounds contracted in or by the Service, and who, from the date of their discharge, have been infirm and helpless, or permanently or temporarily unable to maintain themselves.	Class V. All other Seamen and Marines whose claims may be considered special and exceptional, not coming within the other classes.
1*s.* 6*d.* a-day ..	All who are reported to be fit objects for hospital treatment, but who prefer special pensions, provided they are otherwise eligible.				
	If infirm or helpless, and unable to maintain themselves.	Men who were discharged at peace reductions in 1814-15, and who took part in any great action, and are infirm and helpless, or unable to maintain themselves.			
1*s.* 3*d.* a-day ..	If not infirm or helpless, but unable to maintain themselves.	Men as above, who were injured, but did not take part in any great action; also, men in receipt of temporary naval pensions, who are infirm or helpless, and unable to maintain themselves.	Men in receipt of temporory naval pensions, who are infirm or helpless, and unable to maintain themselves.		
1*s.* to 1*s.* 3*d.* a-day ..	.. .. ..	.. ..	.. ..		Men with less than 10 years' service, who took part in any great action, or were injured on duty, and who are infirm and helpless, or unable to maintain themselves.
1*s.* a-day	.. .. ..	Men in receipt of temporary naval pensions, who are not infirm or helpless, but are unable to maintain themselves; also, men discharged in 1814-15, as above, who neither took part in any great action nor were injured. Statement of Advantages enjoyed by In-Pensioners, Royal Hospital, Chelsea, March 4, 1870.

THE advantages enjoyed by the in-pensioners of the Royal Hospital, Chelsea, may be considered under the different heads—

1. Lodging.
2. Subsistence.
3. Clothing.
4. Medical treatment.
5. General ease and comfort.
6. Religious instruction.

The berths in the wards are furnished with doors, shutters, comfortable bedding and bedsteads.

If the men were exposed in their generally old and helpless state, they would have much discomfort, and be in most instances a cause of disturbance and annoyance to other men near them.

Therefore the old system of the closed and separate berths appears to be the best adapted for such an establishment.

2. The in-pensioners are provided for in the most liberal manner—a daily allowance of cocoa and tea, butter, bread, and cheese of a good description, the best boiled or roast meat, prime joints of beef or mutton, excellent barley or rice soup, potatoes, for six days in the week; bacon and cabbage on one day in the week; porter daily.

3. Very warm well-adapted, good clothing and necessaries, as specified below.*

4. Medical treatment, both in ward and in Infirmary, on the first appearance of sickness.

5. The wards are well warmed by stoves and fireplaces, at which latter places the men have also the means of warming the remains of their meals for their supper.

They have the use of a smoking-room, and in fine weather the privilege of frequenting the gardens; they are permitted to associate in the hall morning and evening; the gas is allowed to burn in the wards till 9 o'clock, and in some places all night.

Their parades are very few, chiefly to show their necessaries and clothing; their duties are very light; they are not subject to punishments beyond confinement to the guard room or to the Royal Hospital, as the case may require; failing these, expulsion is the only alternative.

6. They have the opportunity of religious instruction from the Chaplain, as well in the case of Roman Catholics and Dissenters, from their own clergy.

The men capable of attending chapel can be present at the Sunday and other weekly services. The men unable to attend chapel are read to in the wards and in the Infirmary in the most zealous manner.

The Holy Sacrament is administered on proper occasions.

Lastly. They have the opportunity of attending in the Library, and the privilege of taking out books according to the rules.

They have every reasonable indulgence from their respective officers, and the general regulations for order tend to insure the quiet and convenience of the whole body of in-pensioners.

(Signed) ALEXANDER WOODFORD, F.M., *Governor.*

(O.)

Form of Warrant for Admission of Out-Pensioners to the In-Pension of the Royal Hospital at Chelsea.

By the Right Honourable the Lords and Others Commissioners for managing the Affairs of Her Majesty's Royal Hospital at Chelsea.

No. 1.

Lres Patents under the Greate Seale, 22nd December, 1681.

CHARLES the Second, by the Grace of God, King of England, Scotland, France. and Ireland, Defender of the Faith, etc. To all whom these presents shall come, Greeting, Whereas, We doe intend to erect an Hospital for the relief of such Land Souldiers as are, or shall be, old, lame, or infirm in ye service of the Crowne, and to endow the same with a Revenue suitable thereunto, for which purpose We have at present resolved, that some fit person shall be constituted and appointed Receiver Generall and Treasurer of all such moneys as shall be given or paid for that use or service. Now, know yee, that We, reposing especiall trust and confidence in the ability, care, and fidelitie of our trusty and well-beloved servant, Nicholas Johnson, Esq., the present Paymaster of Our Land Forces, of our especial grace, certain knowledge, and meere moc̃on, have, made, constituted, and appointed, and by these presents do make, constitute and appoint the said Nicholas Johnson, and the Paymaster of our Land Forces for the time being, Receiver Gen^{ll} and Treasurer of all such moneys as shall be from time to time given or paid for, or towards the erecting the said Hospitall, or the support or maintenance thereof during our pleasure. And Wee do also hereby give full power and authoritie to the said Receiver Gen^{ll} and Treasurer for the time being, to make and give acquitances and discharges for all such moneys as shall be by him or them received as aforesaid. Provided, and our will and pleasure is, and we do hereby command, that the said Receiver Gen^{ll} and Treasurer for the time being, shall issue forth and pay all such moneys by him or them, respectively rec̃d, in such manner as the Governors or Trustees of and for the said Hospitall, for the time being, shall direct, and shall once every year, or oftener if so required, make and deliver just and true accounts in writing, of his and their receipts and disbursements, touching the premises, to the Commissioners of our Treãry, or High Treasurer of England, or Chancellor of the Exchequer, for the time being, or to such other person or persons, and in such manner as We, our heirs or successors shall, in that behalf direct or appoint. In Witnesse whereof We have caused these, our Lr̃es Patents, to be made Patents. Witnesse o^{r} selfe at Westminster, the two and twentieth day of December, in the three and thirtieth yeare of our Reigne.

The above, extracted from the original "Accompt of Charles Fox, Esq., Receiver Generall and Trẽar of all moneys paid and appointed for the use of the Royall Hospitall, from the commencement of that worke until the first day of March, Anno Reg. Jacobi scdi 2do 1685." Enrolled in the Declared Accounts of the Audit Office deposited in the Public Record Office.

No. 2.

Lres of Privy Seale, 17th May, 1683.

CHARLES the Second, by the Grace of God, King of England, Scotland, France, and Ireland, Defender of the Faith, &c., To the Commissioners of o^{r} Treasury, Chancellor, Barons, and all other Officers, and Ministers of o^{r} Exchequer now being; and to the Teeãr, or Com^{rs} of the Treãry, Chancellor, Undertreãr, Barons, and all other Officers, and Ministers of Us, o^{r} heirs and successors for the time being, of or belonging to the Exchequer; and to all whom these presents do or may appertaine, Greeting. Whereas by Lr̃s Patents under o^{r} Greate Seale of England, bearing date at Westminster the two and twentieth day of December, in the three and thirtieth yeare of o^{r} Reigne (taking notice of Royall intenc̃on to erect an Hospitall for the reliefe of such Land Forces as were or should be lame, old, or infirme in the service of the Crowne, and to endow the same with a revenue suitable thereunto). Wee were pleased to make and constitute Nicholas Johnson, Esq^{r}., then Paymaster of o^{r} Land Forces, and the Paymaster thereof for the time being to be Receiver Generall and Treãr of all such moneys as should from time to time be given, or paid for, or towards the erecting or the said Hospitall, or the support or maintenance thereof dureing our pleasure; with direc̃con to pay the same in such manner as the Governours and Trustees of, and for the said Hospitall should direct, as by the said Lr̃es Patents may more fully appeare. Since the makeing of which Lr̃es Patents, (the said Nicholas Johnson dying not long after), severall sumes of money have been received by o^{r} Trusty and Wellbeloved servant Charles Fox, Esq^{r}., the present Paymaster of o^{r} Land Forces, for the service of the said Hospitall, that is to say, from the hands of o^{r} Trusty and Wellbeloved servant S^{r} Stephen Fox, Knt., pursuant to o^{r} direc̃con (being the ballance of money which was in his hands for o^{r} secret service), the sume of six thousand seven hundred eighty-seaven pounds foure shillings two pence half peny, for which there is alsoe to be reckoned Interest, which being cast up to the nineteenth of September, one thousand six hundred eighty three, at ten per cent., amounts to Eleaven hundred seaventy-foure pounds three shillings eleaven pence halfe peny. More from the said S^{r} Stephen Fox, (being his voluntary Benevolence) the sume of thirteen hundred pounds. From o^{r} Trusty and wellbeloved servant Tobias Rustat, Esq^{r}., of his voluntary Benevolence, the sume of one thousand pounds, for which sume last menc̃oned Interest is to be reckoned from the third of May, one thousand six hundred eighty-two, at six per cent., which cast up to the end of September, one thousand six hundred eighty-two, amounts to eighty-foure pounds thirteen shillings and a peny. And we haveing formerly given com̃and that the Paymaster of o^{r} Guards and Garrisons should make a deduc̃con of twelve pence out of every

twenty shillings that should be paid by him to o^{r} said forces, and that one third thereof should be apply'd for Exchequer fees, and to beare the charge of his office without acco^{t}; We have alsoe thought fitt that another third of the said deducčon of twelve pence per pound shall be apply'd for the use of the said Hospitall from the one and thirtieth of December, one thousand six hundred and eighty, which third part for the yeare ended the one and thirtieth of December, one thousand six hundred eighty-one, amounted to the sume of three thousand three hundred thirty three pounds six shillings and eight pence, and for the year ended the one and thirtieth of December one thousand six hundred eighty-two to the like sume? all which said sumes hitherto received, or reckoned as aforesaid for the said use do amount to seaventeen thousand and twelve pounds fourteen shillings and seaven pence. And whereas a considerable progresse is made in the building of the said Hospitall, which is att or neare Chelsey, but we have not as yet constituted the said Governors and Trustees, who might direct the issueing forth and payment of the said money by the Paymaster of o^{r} Forces according to the proviso or clause in the said Lr̃es Patents. Now to the end the said Charles Fox may stand charged with the severall sumes of money before menčoned, which were not paid to him at the Rec^{t} of the Exchequer, and therefore cannot be comprehended in any Imprest Certificate to be made out by o^{r} auditor of that receipt; and to the end that the said Charles Fox, and the Paymaster for the time being, may have a sufficient authority (in lack of such Governors and Trustees as aforesaid), to issue the money by him reč̃d for the said use, and to deteine and apply the said third part of the said twelve pence to the same use. Wee have thought it necessary to issue these o^{r} Lr̃es of Privy Seal; hereby commanding, and authorising you or such of you to whom it appertaines in the acco^{t} or acco^{ts}, which the said Paymaster is to render relateing to the said Hospital, to take care that he be fully charg'd with the said severall sumes amounting to seaventeen thousand and twelve pounds fourteene shillings and seven pence; as well as with all other sume or sumes of money which he shall hereafter receive for the use of the said Hospitall, or for Interest thereof. And Wee doe hereby give full power and authority to the said Paym^{r} of o^{r} Forces, and the Paymaster thereof, for the time being, out of such money as is, or shall bee, from time to time, in his hands, for the use of the said Hospitall, to make such payments in relačon thereunto as Wee, by warr^{t} under o^{r} Royall Signe Manuall, or as you, the Com^{rs} of o^{r} Treãry for the time being, or o^{r} High Treãr, or Com^{rs} of o^{r} Treãry, for the time being, shall direct from time to time, so as the Bills, whereupon any such payment shall be made, for or concerning only the building of the said Hospitall, be first signed and allowed by the Surveyor Gen^{ll} of o^{r} Works; hereby further commanding and authorising you, or such of you, to whom it appertaines in the acco^{t} or acc^{ts} of the said Charles Fox, or the Paymaster, for the time being, to make, and give unto him or them, full allowance of all payments made, or to be made, for the Lands purchased for the said Hospitall, or for the building or maintainance thereof, or for contingent charges thereunto belonging, so as the same payments be allowed, or warranted, by Us, under o^{r} Royall Signe Manuall, or by you o^{r} Com^{rs} of o^{r} Treãry, now being, or o^{r} High Treãr or Com^{rs} of the Treãry, for the time being, as fully as if such payments were made by direčcon of Governors and Trustees, as aforesaid, according to the forme of the said Lr̃es Patents. And, Lastly, o^{r} pleasure is, that the said Paymaster, now being, or that hereafter shall be, out of the said twelve pence p pound, which we formerly comãnded to be deducted from o^{r} Souldiers, shall deteine and keep not only one-third part for Exchequer fees, and charge of his office, as aforesaid, but alsoe one other third part for the use of o^{r} Hospitall as aforesaid, during o^{r} pleasure; and that you cause the said third part, for the use of o^{r} Hospitall, to be charged from time to time in his acco^{ts} for the same Hospitall, and the remaineing third part of the said twelve pence p pound to be charged upon him in his acco^{ts} for o^{r} Forces, in addičon to the Imprest charge, from time to time, out of o^{r} Exchequer, and in lessening the Assignement of money for o^{r} Establishment. And these o^{r} Lr̃es shall be yo^{r} sufficient Warr^{t} and discharge in this behalfe. Given under o^{r} Privy Seal at o^{r} Palace of Westminster, the eventeenth day of May, in the five and thirtieth yeare of o^{r} Reigne.

The above, extracted from the original "Accompt of Charles Fox, Esq^{r}, Receiver Generall and Treãr of all moneys paid and appointed for the use of the Royall Hospitall from the commencement of that worke Until the first day of March, Anno Reg. Jacobi scdi 2do 1685." Enrolled in the Declared Accounts of the Audit Office, deposited in the Public Record Office.

(Signed) GEORGE HUTT.

No. 3.

* *Warrant of* 17*th March*, 168$\frac{3}{4}$, *for Deducting* 12*d. in the pound from the Forces.*

Charles R.

WHEREAS, by agreement in August 1662, betwixt the Officers of Our Guards and Garrisons and Sir Stephen Fox, then Paymaster-General of Our Forces, there hath been a deduction of 12*d.* out of every 20*s.*, drawn from the pay of all Our said Forces, to enable the said Paymaster to advance their pay by weekly subsistence, and within a short time after the end of every muster to complete the full pay thereof both to officers and soldiers, which agreement hath proved of great advantage to our Service in the constant payment of Our said Forces, and hath since been humbly resigned up unto Us by the said Sir Stephen Fox, with the deduction thereunto belonging; and We, thinking it absolutely necessary that Our Forces be constantly paid by way of advance as they have hitherto been, and having referred it to the care of the Commissioners of Our Treasury to see it punctually observed, We do hereby direct that the same deduction of 12*d.* out of every 20*s.* shall be, as formerly, drawn out of the pay of Our said Forces, whereof one-third shall be applied for Exchequer fees, and to the Paymaster of Our Forces for the time being, and the other two-thirds shall remain in the said

Paymaster's hands upon account, to be disposed either towards the erecting, building, and maintaining our Royal Hospital at Chelsea for aged, maimed, and infirm land soldiers, or towards the payment of the establishment of Our Forces, as we shall from time to time direct by the Commissioners of Our Treasury, who are hereby appointed to take and examine the accounts of the said building, and of all monies expended towards the said Hospital, and the said Paymaster is hereby authorized and directed to apply out of the said deduction what is necessary for the said Hospital, for three years, to commence from the end of December 1682, and to be accountable for the same to the Commissioners of Our Treasury, so as what shall be undisposed of towards the use of the said Hospital be applied to the lessening the charge upon the Establishment of Our said Forces. Given at Our Court at Newmarket the 17th day of March, 1683-84, in the thirty-sixth year of Our Reign.

By His Majesty's Command.

No. 4.

* *Warrant of 17th June, 1684, deducting one day's pay in each year from every Officer and Soldier in aid of the building of Chelsea Hospital.*

Charles R.

HAVING, out of Our Royal disposition towards the relief of old maimed soldiers, thought fit to erect an Hospital for their support, and being graciously inclined, by all fitting means, to direct a further supply towards the perfecting and maintenance thereof, Our will and pleasure is that one day's pay be drawn and deducted from Our Guards and Garrisons every year, and two days', every leap year, towards the building of Our Royal Hospital, and maintenance of such soldiers as, having served Us by land, shall be provided for therein, and of these our directions the Paymaster and Commissary General of our Forces, and all other persons whom it may concern, are to take notice and to govern themselves accordingly; for which this shall be their sufficient warrant.

Given at Our Court at Windsor, the Seventeenth day of June, Sixteen Hundred and Eighty-four, in the thirty-sixth year of Our reign.

By His Majesty's Command.

[* These two Warrants are extracted from Appendix to Report from the Select Committee on Army and Ordnance Expenditure, 1850, pages 850, 851.]

(Q.)

Remarks on "Poundage Funds" in connection with Chelsea Hospital.

THERE are two distinct funds bearing this name, one which commenced in 1662 as a deduction from the pay of the Forces, and the other a deduction from the pensions of the out-pensioners of Chelsea Hospital, which was instituted in 1754 by Act 28 Geo. II, cap. 1.

The origin of that from the pay of the forces, which eventually became the chief source of the funds of Chelsea Hospital, cannot be better shown than by reciting the earliest Warrant that can be found bearing on the subject, and which is earlier than that inserted in the Military Report of 1850.

"Charles, R.

"Whereas by agreement betwixt *the officers* of our guards and garrisons and Sir Stephen Fox, "Knt., Paymaster-General of our Forces, there hath bin for eighteene yeares past a deduction of "twelve pence out of every twenty shillings drawn from the pay of all our said Forces, to enable "the said Paymaster to advance their pay by weekly subsistence, and *within a short time after the "end of every muster to compleat the full pay thereof* both to officers and soldiers. Which said "payment by way of advance Our Paymaster hath declared unto us he can no longer carry on by "reason of the present difficulties on our Revenue. And We, taking into consideration the absolute "necessitie of the constant and steddy payment of our said Forces, have appointed our Commissioners "of our Treasury to take care thereof.

"Which that they may doe in the same manner and methode which usually hath bin observed "by our said Paymaster, We do direct that the same deduction of twelve pence out of every twenty "shillings shall be drawn out of the pay of our said Forces, whereof one-third shall be applied for "the Exchequer Fees, and the charges of the office of Paymaster, and the other two-thirds shall be "applied to our own use in lessning the Establishment of our Forces. And that our Forces may "have no reason to complaine of delatory payments, Our express Will and Pleasure is that the "Paymaster of our Forces for the time being shall pay weekly subsistance and compleat the payment "of musters in manner following:—

s.	*d.*				
"4	0	a week to a	private souldier		Of our Regiment of Guards under the Command of Colonel Russell and the Earll of Craven.
"5	0	„	drummer or Corporal		
"7	0	„	Serjeant		
"10	6	„	an Ensigne	If desired.	
"14	0	„	Lieutenant		

"£200 a week to each Troope of Guards.
"£30 „ „ the Regiment of Horse.

s.	*d.*			
"3	6	a week to a private souldier	}	Of our other Regiments of Foot, Guarrisons, and Forces.
"4	6	„ Drummer or Corporal		
"6	0	„ Serjeant		
"10	6	„ an Ensigne		
"14	0	„ a Lieutenant		

"And *that all off reckonings and officers pay* according to the Establishment and muster rolls *be "compleatly paid off and cleared before the end of the succeeding muster*, and that all Generall officers, "Reformed Officers, and Pensioners be paid Quarterly, with that care that one Quarter be still paid, "before the second Quarter becomes due.

"For the doing whereof this shall be your Warrant.

"Given at our Court at Whitehall the one and thirtieth day of December, in the 31st yeare of "our Reigne.

"By His Majesties Command,
"SUNDERLAND.

(Signed) { "L. HYDE. "J. ERNLE. "GODOLPHIN."

The first Warrant authorizing the application to Chelsea Hospital of part of this fund is that of 17th May, 1683, which directed among other things that one third was to be devoted to the Hospital to commence from the 31st December, 1680. After this period the Warrant for this and the deduction of the day's pay were inserted at the end of every yearly establishment of the Forces.

This is the fund which ceased generally in 1783, and entirely in 1830.

The other Poundage fund was created by 28 Geo. II, cap. 1, the preamble of which is "An Act for the relief of the Out-Pensioners of the Royal Hospital at Chelsea," and recites the hardship of the then present method of payment of a year's pension only, after the same is become due, and directs the payment in future to be half-yearly in advance, but subject to a deduction of one shilling in the pound—"Which monies so deducted shall be applied as His Majesty, his Heirs, &c., shall direct," in virtue of which authority, upwards of 1,000,000*l.* sterling was taken out of this fund of "Pension Poundage" in the early part of this century and applied in aid of the votes. This fund was abolished by 9 and 10 Vict. cap. 4, 1847.

Votes.—The first money received by vote appears in the account for the year 1710, as follows:—

"Received For the support of the Royal Hospital and Out-Pensioners over and above the "poundage and days pay £15,392 17*s.* 1*d.*, voted 20 March, 1710, by the Honourable the House of Commons.'

Money had, however. been drawn out of the Exchequer prior to this period, viz.:—

Year.	£	*s.*	*d.*			£	*s.*	*d.*
*1703	550	0	0	for what purpose does not appear.				
*1705	3,807	11	0	when the out pension paid was		5,672	1	2
*1706	643	5	1	ditto	ditto	600	18	1
1707	7,000	0	0	ditto	ditto	7,310	4	2
1708	782	19	7	ditto	ditto	7,863	18	11
1709	Nil			ditto	ditto	12,009	11	7
And in 1710	15,392	17	1					
	as above			ditto	ditto	26,289	3	11

At this distant date, however, no details are forthcoming to show how these sums received, (except those in 1707 and 1708 which are noted as being "towards the maintenance of Out-Pensioners") were to be appropriated, though it will be observed that the amount expended on the Out-Pensioners far exceeded the sums received from the Exchequer and the Vote.

In addition to the deduction of 6*d.* per £ from officers on the half pay, which appears to have begun between 1692 and 1699, we find that in 1716, the officers on the *Retired* full pay were subjected to the full deduction of 12*d.* per £, as well as the "Day's pay in a year" from which latter those on the half pay were exempt.

GEORGE HUTT.

---

* Memo.—Perhaps these sums are the result of the Act 2 and 3 Anne, cap. 18, sec. 28.

(R.)

Memorandum showing when and under what circumstances the Deduction of "Poundage" and "Day's Pay" from the Army ceased, extracted from Mr. Croomes' Report to the Secretary at War in 1841. 103930/1.

"IN 1771 the poundage was returned to the *men*, but this was not done by discontinuing the deduction from the gross off-reckonings, but by voting a specific charge under the name of necessary money.

"In pursuance, however, of a Report of a Committee of the House of Commons, the Pay-Office Act of 1783 prescribed that, in future the *net pay only*—that is, the part receivable by the officer and soldier, the exact amount of agency allowed, and the net off-reckonings or exact amount payable to the Colonel for clothing, &c., should be stated upon estimate, and be specially voted by Parliament, and thus, as regarded the Army generally, the Poundage and Hospital Fund ceased; but from this Act the Household Troops were exempted.

"There remained only, therefore, as a Poundage Fund, the deduction from the charge for the Household Troops still voted as gross pay, and the amount of this deduction from the Parliamentary grant for gross pay of the Horse Guards and Foot Guards was annually appropriated in aid of the estimate for Chelsea until 1828, when the same system was adopted for the Household Troops as for the Line, and the Poundage Fund ceased altogether."

The above date, "1828," should, however, be "1831," which year is the first occasion of the deductions ceasing to appear in the settlement of the Regimental Agents; and this is confirmed by a previous report of Mr. Croomes to the Secretary at War on 2nd December, 1830, wherein it is stated that "they ceased entirely in 1830," 1831 being the first year of the new system.

These deductions were actual deductions from the pay of the officers and soldiers until 1783, as regarded the Army generally, and as to the Guards until 1828, from which period to 1831 they appear to have been deducted by the War Office from the estimate.

The result of these measures (as was, no doubt, intended) was to increase by so much the pay of the Army, it obviously being more economical to the country to provide a small grant for Chelsea Hospital than to give the small increase of say 1*d.* a-day to the whole Army.

It may be incidentally mentioned here that, from 1808 to 1835, both inclusive, no less than upwards of one million sterling was taken in aid of the votes, from deductions made from out-pensioners in virtue of the Act 28 Geo. II, cap. 1, and only repealed in 1847.

1868	76,411 16 11	2,250 0 0	78,661 16 11	1868	110,636 7 9	1,212 2 6	3,942 13 2	..	..	115,791 3 5
1869	1,748 15 2	2,538 14 2	4,287 9 4	1869	10,873 17 10	714 6 5	7,001 18 3	..	..	18,590 2 6
Total ..	1,589,308 2 9	265,558 12 8 (*a*)	1,854,866 15 5 (*b*)	Total ..	1,114,828 4 11	66,802 19 9	608,239 19 6 (*c*)	41,144 0 8 (*d*)	40,000 0 0 (*e*)	1,871,015 4 10

(*a*) Instead of retaining in their hands a large cash balance, the Commissioners have, from time to time, made investments in the Public Funds, and afterwards realized the stock when required to meet claims.

(*b*) This total will be found less than the amount of disbursement on the other side of the account. The difference, £16,148 9*s.* 5*d.*, added to £1,552 4*s.* 8*d.* cash, in the hands of Treasurer, on 1st January, 1870, and to £79,247 4*s.* 7*d.* Consols (Stock) then held for the Commissioners, represents the profit made, from time to time, on the sale of Stock, which had been purchased at low rates.

(*c*) The sums under this heading, from 1857 to 1869 inclusive, were almost wholly expended in the purchase and maintenance of lands, in the enlargement of the infirmary, and in constructing new fire-mains. The lands cost in purchase £30,840 0*s.* 11*d.*, and the addition to the Infirmary was made at a cost of more than £6,300. The expenditure in aid of the votes for In- and Out-Pension first began in 1810, with a contribution for that year of £100,000. The whole of the outlay, from time to time, was legalized by Act 52 Geo. III, cap. 132, sec. 3.

(*d*) The Lords of Her Majesty's Treasury, in retaining this sum, being the accumulation of balances paid to the Exchequer, expressed their willingness to refund it, if necessary, hereafter.

(*e*) The sums devoted to this purpose were authorized by special Acts of Parliament.

Royal Hospital, Chelsea, 1*st April*, 1870.

GEORGE HUTT, *Secretary*.

(CC.)

TABULAR STATEMENT showing the constitution of the Commissioners for managing the affairs of the Royal Hospital, Chelsea, from their first appointment to the Year 1870.

By whom appointed.	DATE.	President of Our Council.	First Commissioner of Treasury.	Principal Secretaries of State.	Paymaster-General of Forces.	Paymaster in Low Countries.	All Privy Councillors.	Commander-in-chief.	Captain-General of Forces.	Eldest Lieutenant-Generals.	Chancellor of Exchequer.	Commissioners of Trade and Plantations.	Secretary at War.	Surveyor-General.	Auditors of Imprest.	Comptrollers of Army Accounts.	Commissary-General.	Judge Advocate-General.	Secretary to Treasury.	Governor of Chelsea Hospital.	Lieutenant-Governor of Chelsea Hospital.	Adjutant-General.	Quartermaster-General.	Deputy of Secretary at War.	Secretary for Military Correspondence.	Under Secretaries of State for War.	Deputy Adjutant-General.	Charles Fox, Esq., "late Paymaster in Low Countries."	Lord Farnborough, "late Paymaster-General."	Francis Seymour, Esq., "Chairman of Audit Board."	Sir William Herries, "Commissioner of Audit Board."	Total each period.	Military and Civil Commissioners each period approximately.

NOTES.—1. The appointment of 1691 was by Warrant under Sign Manual; the remainder by Letters Patent.

2. Under the Patent of 1711, the Archbishop of York and the Bishop of London took seats as Privy Councillors.

3. The strictly military element existed only from 1711 to 1727; and recommenced in 1830 by appointment of Adjutant-General, &c. It was during the former period that the Dukes of Ormond and Marlborough were Commissioners as Commander-in-chief or as Captain-General, whose disappearance in future patents avoided the evident inconsistency of having these officers as Commissioners in awarding pensions to soldiers.

Secretary's Office, March 8, 1870.

GEORGE HUTT.

(DD.)

MEMORANDUM of Statements made by certain In-Pensioners at Chelsea Hospital in answer to questions put to them by Captain Vivian on 5th March, 1870.

John Rouse, late Rifle Brigade (was in Forlorn Hope at Badajos).	Was an out-pensioner at 6*d.* a-day; has been fifteen years in the hospital; has a wife and daughters outside. If he had sufficient to keep him (say 2*s.* or 2*s.* 6*d.*), he would rather go out to his wife than stop in the hospital.
N. Taggart, late 7th Fusiliers.	Was an out-pensioner at 1*s.* a-day. If his pension were augmented to 2*s.* he would rather go out.
J. Odgers, late 32nd Foot.	Out-pension, 1*s.* Has been altogether three times admitted into Chelsea Hospital. If his pension were augmented would sooner go out.
John Pomphry, late 83rd Foot.	Out-pension, 1*s.* 3*d.* a day. If pension were augmented, say to 2*s.* a-day, he would sooner go to his friends.
W. Rane, late Sappers and Miners.	Out-pension 1*s.* 1*d.* If he could get 2*s.* would rather go to his friends.
Hugh Hughes, late Grenadier Guards.	Was discharged in 1828 at 6*d.* a-day; has been eight years in hospital; is a native of Wales, where he has friends; is very comfortable in the hospital. (*Did not express a decided opinion as to whether he would prefer to go out with increased pension or remain in the Hospital.*)
John Myland, late 20th Foot.	Out-pension 1*s.* 2½*d.*; has been six months in hospital; was discharged thirty-six years ago; has no friends, and would rather stay in hospital than go out on increased pension.
William Reason, late Coldstream Guards.	Out-pension, 6*d*; native of Warwickshire; has no friends; and has no desire to go out; would rather stop in than go out on increased pension.
John Barlow, late 24th Foot.	Out-pension 6*d.*; is a native of Coventry; was at the Battle af Talavera, and would like to go and "have a look at Peeping Tom again;" "has had two wives and wants to be sent to Coventry to have another one."
W. Hayes, late 4th Dragoons.	Out-pension, 6*d.*; has been three years in hospital and is very comfortable; has no friends outside and would rather stop in the hospital than go out with increased pension.
James Harwood, late 82nd Foot.	Out-pension, 9*d.*; would sooner have an increased pension and go back to his friends in Devonshire than remain in the hospital.
D. Andrews, late Royal Artillery.	Out-pension, 5*d.*; is a native of Suffolk; has friends, and would go out "if he could get enough to live on," say 2*s.* a-day.
G. Smedley, late 13th Light Dragoons.	Out-pension, 6*d.*; was discharged in 1826; has been seven years in the hospital; has friends, and if he were to get an increase of pension, say, 2*s.*, he would rather go to them.
John Morgan, late 10th Foot.	Out-pension, 10*d.* a-day; has been two months in hospital. Came in because "past work," is very comfortable and gets more than he could get for treble his pension; but if he could get 2*s.* would prefer to go out. Is a native of Ireland.
J. Mealy, late 77th Foot.	Out-pension, 10*d.*; was twenty-six years in the service; served in Crimea and India; has a brother; would sooner go out if he could get 2*s.* a-day; has not been talking the subject over with others; has heard of Greenwich Hospital, but does not know what they got there.
T. White, late 40th Foot.	Out-pension, 1*s.*; was discharged in 1868; is nearly blind; has a sister only; is comfortable; if an increase of pension were offered, he would rather stay in the hospital because he has no friends to take care of him.
T. O'Sullivan, late 83rd Foot.	Out-pension, 8*d.*; has been ten months in hospital; was lately a hackney carriage attendant; would rather go out if he could get an increase of pension; native of Limerick.

W. Ransom, late 31st Foot. — Out-pension, 6*d.*; has been twelve months in the hospital; is nearly blind; has a wife and two children outside; if he got sufficient to support him (say 2*s.* or 2*s.* 6*d.*) would go out, but is very comfortable in the Hospital.

(EE.)

Memoranda of Replies given by certain Out-Pensioners in the 1st West London District to Questions addressed to them by the Committee on Saturday, 2nd April, 1870.

J. Rutter, late Coldstream Guards—Out-pension, 1*s.* 0½*d.*; is employed as a scavenger, and earns thus about 18*s.* a week. Hopes to go into the Hospital when he becomes unable to work. Is married. Would rather go into the Hospital than have an increased pension and remain out, unless the increase of pension were 2*s.* 6*d.*

J. Knighting, late Grenadier Guards—Out-pension, 1*s.* 1*d.*; age 64. Is at present an applicant for admission to the Hospital. His wife has recently died. He was a cab-attendant for eight years, but was obliged to give up that employment on account of his health, which is still very bad. Cannot earn more than 2*s.* a week on an average, and insufficiency of means to support him is his reason for wishing to enter the Hospital. If his pension were raised to 1*s.* 6*d.* he would still rather go into the Hospital. But if it were raised to 2*s.* a-day he would rather remain outside.

W. Farmer, late Coldstream Guards—Discharged in 1842; age 70. Out-pension, 1*s.* 1*d.*; has nothing to live on besides his pension, but his wife earns a little by washing. Was 23 years in the service. Hopes he "shan't want to go into the Hospital."

G. Hall, late Coldstream Guards—Out-pension, 1*s.* 1*d.*; age 53; was discharged 7 years ago after 21 years' service. Is married and has 5 children. His wife earns something as a laundress. If he were alone in the world he would rather go into the Hospital; but if his pension were raised to 2*s.* he would prefer to remain outside, because he would thus have more liberty, and be free from military discipline, of which he has had enough.

D. Phillips, late Coldstream Guards—Out-pension, 1*s.*; age 51; service 29½ years. Is married and has six children. Both he and his wife are able to work, but cannot obtain employment. Applied on one occasion for admission to the Hospital but was refused because he was able to work. Has a good conduct annuity. Does not want to go into the Hospital yet.

W. Ransom, late Coldstream Guards—Out-pension, 1*s.*; discharged in 1855, after 21 years' service. If he had not a wife he would endeavour to get into the Hospital. But if his pension were increased would prefer to remain outside.

Wife of N. Smith, late Coldstream Guards—Out-pension, 1*s.* Appeared on behalf of her husband to draw his pension, because he had not got clothes fit to appear in. She had frequently urged her husband to go into the Hospital, because if he were to do so she could get employment in service—but he had refused, because he did not like to leave her.

Sir,

War Office, May 5, 1870.

I AM directed by the Chairman of the Committee on Chelsea and Kilmainham Hospitals, to request that you will be so good as to furnish the Committee with a written reply to the following question in connection with the course pursued in admitting men to the In-pension of the Royal Hospital, Chelsea, viz.:—

Assuming that there are (say) five vacancies on the in-pension establishment, and that there are (say) twenty qualified candidates on the list for admission, do you, as Secretary, submit to the Commissioners the particulars of the cases of the twenty candidates, in order that the Commissioners may, after examination, select five for admission? or,

Do you, after examination, submit to the Commissioners the names of five candidates whom you recommend for admission?

The Chairman considers that your reply to these questions will clear up the doubtful point alluded to in your letter of 13th ultimo, and render it unnecessary further to examine you.

I am, &c.

Major-General Hutt, C.B., &c. &c. &c.

(Signed) J. W. COOPER, *Secretary.*

(Copy.)

Sir,

Royal Hospital, Chelsea, May 7, 1870.

I HAVE the honour to acknowledge the receipt of the letter which on the 5th instant you addressed to me, by direction of the Chairman of the Committee on Chelsea and Kilmainham Hospitals, requesting certain information respecting the course pursued in selecting men for admission from the out-pension into the in-pension of this Hospital.

In reply I have to state that on receipt of formal application for admission the name of every candidate is recorded in succession on a roll kept for the purpose, and towards the end of each month the whole of the applications, with the necessary papers and explanations in support thereof, are laid before the Board, when the Commissioners, having regard to the number of vacancies and the eligibility, according to the terms of the In-pension Warrant, of the several candidates, sanction the selection of the most meritorious, whose names will be found on the formal Admission Roll, with rare exceptions, in the order in which they appear on the General Roll.

Any departure from this course, by the admission of a man in a case of great urgency, prior to the sanction of the Board, is done after consultation with, and under the authority of, the Governor as one of the Commissioners, and is deemed subject to the approval subsequently sought of the Board.

The order of the Commissioners are stringent that no action shall be taken in any matter involving the exercise of their authority in cases of pension—whether in admitting, rejecting, increasing, or reducing—except under their direct sanction. The daily experience of this Office strongly inculcates the importance and necessity of such a rule, and constantly brings to light the respect and confidence which the out-pensioners entertain for the opinions and decisions of a body of military officers with whose names the pensioners are generally familiar, which respect they would not accord to the decisions of secretaries or clerks.

This regulation has always been scrupulously observed, and if I omitted to lay stress upon it in my evidence before the Committee, it must have been because I took for granted that it was already well known to the members, and consequently that, in speaking of my own acts as Secretary to the Board, they would understand me as meaning to refer to duties performed in direct execution of the Board's orders.

Possibly, some misapprehension may have been caused by my not distinguishing clearly the exercise of my own authority in placing names on the list of candidates, and the authority of the Board in removing them therefrom to the list of admissions.

I have, &c.

J. W. Cooper, Esq.,
War Office.

(Signed) GEORGE HUTT, *Secretary.*

(Copy.)

Sir,

War Office, May 9, 1870.

I AM directed by the Chairman of the Committee on Chelsea and Kilmainham Hospitals to acknowledge the receipt of your letter of the 7th instant, and, with reference to the second paragraph thereof, I am to request that you will be so good as to inform him whether the names of candidates are inserted by you in the "General Roll" strictly according to priority of application, or whether in placing them on that roll any selection is exercised by you.

I am, &c.

Major-General Hutt, C.B.,
&c., &c., &c.,
Secretary, Royal Hospital, Chelsea.

(Signed) J. W. COOPER, *Secretary.*

(Copy.)

Sir,

Royal Hospital, Chelsea, May 10, 1870.

IN reply to your inquiry dated 9th instant, referring to the second paragraph of the communication which I addressed to you on the 7th instant, for the information of the Committee on Chelsea and Kilmainham Hospitals, I have to state that the names of all applicants for admission to In-pension are placed on the "General Roll" in succession, strictly according to priority of application.

I am, &c.

J. W. Cooper, Esq.,
War Office.

(Signed) GEORGE HUTT *Secretary.*

ABSTRACT OF REPORTS

ON THE

EXPERIMENTAL MARTINI-HENRY ARMS ISSUED

FOR TRIAL IN 1869,

TOGETHER WITH THE

REMARKS OF A SPECIAL COMMITTEE APPOINTED TO CONSIDER THE SAME.

The Special Committee consists of the following Members:—

Capt. and Lieut.-Col. H. C. Fletcher, *Scots Fus. Guards, President.*

Captain R. W. Haig, *R.A.*

Captain Trevor Chapman, *Inspector of Musketry.*

Captain J. E. F. Aylmer.

Lord Elcho.

E. Ross, Esq.

The forms of Report, which accompanied the Rifles, consisted of a series of questions, the replies to which have been arranged *seriatim.*

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY HARRISON AND SONS.

1870.

[C-198] Price 4*d.*

Answers to Questions which accompanied the experimental Martini-Henry Rifles and Ammunition, issued 1869.

Question 1. What accidents, if any, have occurred?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Rifle No. 154 out of order, and sent to be repaired. Found subsequently to have arisen from faulty metal.	These accidents do not appear to call for any special remark, as they are none of them peculiar to this construction of arm; and it is distinctly stated in two instances that flaws were found in the broken tumblers, one of which also was broken by the use of unjustifiable force when the arm was bolted. The looseness of the two axis pins seems to have been an original defect, and is scarcely to be classified under the head of accidents.

Question 2. What difficulties, if any, have been found in loading?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	None.	It appears from these reports that difficulty in loading has occasionally arisen from the following causes:— 1. Cartridges becoming bent. 2. Cartridges defective from— *a*. Paper rucking up. *b*. Base cups being too large. *c*. Body of cartridge being too large; or 3. Sharp edge of chamber causing the paper to ruck up. With regard to the objections which have reference to the bending of the cartridges, and to the rucking up of the paper, the Committee would observe that a remedy has already been provided by the provisional adoption of the short chamber cartridge, which is stronger and has no external covering of paper. The attention of the Superintendent, Royal Laboratory, will be called to the complaints that some of the base cups were too large. The blank cartridge to be used with the short chamber rifles would be the ordinary service blank as used for the Snider rifles, if experiments should prove that the use of this cartridge is not injurious to the rifling of the arm.
2	,,	2nd Bn. 3rd	13 ,, ..	None.	
3	,,	7th Fusiliers	13 ,, ..	None.	
4	,,	2 Bn. 23rd R. W. F. ..	15 Feb. ..	None.	
5	,,	42nd	23 March	No difficulties have occurred so long as the cartridge is not bent.	
6	,,	4th Bn. Rifle Brigade ..	15 Feb. ..	None.	
7	,,	2nd Bn. 13th	15 March	None.	
8	,,	4th Bn. 60th Rifles ..	22 April .	If not pressed well home with the thumb, the cartridge does not always explode, though the breech is closed.	
9	,,	2nd Bn. Rifle Brigade..	9 Feb. ..	None.	
10	,,	33rd	15 March	None.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	None, with the exception of 5 cartridges, in which, from being bent, when pressure was used, the cases became creased.	
12	,,	1st Bn. Scots Fus. Gds.	5 April .	None, except in cases of bent or defective cartridges.	
13	,,	2nd Bn. 15th	5 Feb. ..	In some cases the cartridges were found to be too large, about half an inch from the rim; on pressure being applied they all entered the barrel with the exception of one.	
14	,,	47th	2 April .	Occasionally a cartridge could not be pressed home in a particular rifle, but it was always got off in one of the others. On the last day of firing, the action of the lock of No. 172 rifle got slightly out of order. The lever had to be depressed three or four times before the spiral spring could be fixed in the firing position.	
15	,,	56th	4 March	None, except from bent or faulty cartridges.	
16	,,	43rd	6 April .	The cartridge when bent would not enter the chamber.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	With No. 26 rifle the paper round the cartridge ruffled up, when putting it into the breech. The paper of cartridge also stripped with No. 137 rifle, and became jammed, preventing the cartridge from entering or being removed from the barrel.	
18	,,	,, ,, ..	13 March	Some difficulty, owing to cartridges having been bent.	
19	,,	,, ,, ..	19 April .	None.	
20	,,	,, ,, ..	16 May ..	None.	
21	Gravesend..	Royal Engineers ..	1 Jan. ..	Several cartridges would not enter. This was apparently caused in a few instances from the base cups being too large; the majority by the paper getting scraped up and jamming the cartridge partly into the chamber, so that the ramrod had to be used.	
22	,,	,, ,, ..	31 ,, ..	The same.	
23	,,	,, ,, ..	1 March	The same.	
24	,,	,, ,, ..	1 April .	None.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	Several; consequent on malformation of cartridges, and on the paper rucking up against the edge of the chamber.	
26	,,	99th	3 Feb. ..	The blank cartridge seems to be too loosely made about the mouth, and there is sometimes a difficulty in placing it in the barrel. With ball, if the cartridge be at all bent, the same difficulty occurs.	
27	,,	R. M. L. I.	28 ,, ..	The cartridges fit too tightly into the chamber, especially the blank. They are also apt to become injured by the sharp edge at the entrance chamber.	
28	,,	101st	4 March	In ten instances the cartridges would not enter the chamber of any of the rifles.	
29	,,	46th	2 May ..	Frequent difficulties owing to the tight fit of the cartridges.	
30	,,	1st Bn. 25th	3 ,, ..	In some few cases, principally owing to the ammunition being injured.	
31	Quebec ..	69th	31 Jan. ..	None.	
32	,,	,, ...	28 Feb. ..	None, except in rifle No. 100.	
33	,,	,, ...	31 March	None, except in rifle No. 100.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	None.	

Question 2—*continued.*

47	Montreal ..	1st Bn. Rifle Brigade ..	30 „ ..	None.	

Question 3. What difficulties, if any, have been found in extracting cartridge cases ?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870		
1	Aldershot ..	67th	5 Jan...	None.	It appears from these reports that although in the majority of cases the extraction has been quite satisfactory, there have been some instances in which the extractor failed to work satisfactorily and uniformly. There is not sufficient information before the Committee to show to what this occasional want of uniformity is to be attributed, but it is probable that it has proceeded from one or more of the following causes: 1. Defective cartridges. 2. Slight variation in the size of the chambers of the rifles and the form of the extractor, due no doubt to the arms having been made by hand and not by machinery. 3. Want of experience on the part of the men using the arms.
2	„ ..	2nd Bn. 3rd	13 „ ..	None.	
3	„ ..	7th Fusiliers	13 „ ..	None.	
4	„ ..	2nd Bn. 23rd R. W. F.	15 Feb...	In rifle No. 96 the extractor would not work. Thinks it was owing to rust. Rifle No. 157 did not extract blank cartridge easily.	
5	„ ..	42nd	23 March	None.	
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb...	None, except on one occasion, when the base of cartridge was extracted, the case remaining in the barrel.	
7	„ ..	2nd Bn. 13th	15 March	None.	
8	„ ..	4th Bn. 60th Rifles ..	22 April	None.	
9	„ ..	2nd Bn. Rifle Brigade..	9 Feb...	None; the lever must be depressed sharply to throw out the cartridge case.	
10	„ ..	33rd	15 March	None, except in rifle No. 68, the extractor apparently weaker than that of other rifles.	
11	Dublin ..	1st Bn. Grenadier Gds.	6 Feb...	None, except one blank cartridge; base cup torn from the case.	
12	„ ..	1st Bn. Scots. Fus. Gds.	5 April	None.	
13	„ ..	2nd Bn. 15th	4 March	The lever must be depressed sharply.	
14	„ ..	47th	2 April	When the cartridges missed fire the ramrod had to be used to get them out. The extractor not getting sufficient bite of the base of the cartridge to move the weight of the unfired cartridge.	
15	„ ..	56th	4 March	None, except in rifle No. 196, the extractor of which was not always certain of its action; in all cases requiring the application of more force to the lever than in the other rifles.	
16	„ ..	43rd	6 April	None, except in rifle No. 14.	
17	Hythe ..	School of Musketry ..	15 Feb...	In extracting one cartridge that had missed fire in rifle No. 137, the base disc came off, leaving cartridge in the barrel.	
18	„ ..	„ „ ..	13 March	None.	
19	„ ..	„ „ ..	19 April	None.	
20	„ ..	„ „ ..	16 May..	None.	
21	Gravesend..	Royal Engineers ..	1 Jan...	None after firing.	
22	„ ..	„ „ ..	31 „ ..	None after firing.	
23	„ ..	„ „ ..	1 March	None.	
24	„ ..	„ „ ..	1 April	None, except when cartridges have jammed.	
25	Portsmouth.	2nd Bn. 2nd	31 Jan...	None.	
26	„	99th	3 Feb...	Very few, and these only when any difficulty has been found in placing the cartridge in the chamber.	
27	„ ..	Royal Marine L. I. ..	28 „ ..	None.	
28	„ ..	101st	4 March	None.	
29	„ ..	46th	2 May..	Very frequently the extractor has failed to eject the case, only moving it slightly.	
30	„ ..	1st Bn. 25th	3 „ ..	Some few cartridges stuck at first but on pushing back the lever a second time they came out.	
31	Quebec ..	69th	31 Jan...	None.	
32	„ ..	„	28 Feb...	None, except in rifle No. 100; extractor had to be worked twice.	
33	„ ..	„	31 March	The same.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan...	None.	
35	„ ..	„ „ ..	28 Feb.	None, except in rifle No. 33; action of extractor bad.	
36	„ ..	„ „ ..	31 March	None.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan...	None.	
38	„ ..	„ „	28 Feb...	None.	
39	„ ..	„ „	31 March	None.	
40	Portsmouth.	H.M.S. Excellent ..	31 Jan...	None.	
41	Devonport..	H.M.S. Cambridge ..	29 „ ..	None.	
42	Curragh ..	1st Bn. 16th	7 May..	None.	
43	„ ..	2nd Bn. 16th	9 „ ..	None.	
44	„ ..	30th	9 „ ..	Twice during blank firing the paper cases stuck inside, the cap having been ejected by the motion of unloading.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April..	None.	
46	Quebec ..	69th	30 „ ..	None, except in rifle No. 100. In most instances the case had to be pulled out with the fingers.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 „ ..	None.	

Question 4. Has the lever in any case been broken, or so bent as to impede the action?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.

Question 5. Has rust been found to accumulate about the breech, so as to affect its working?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	On dismounting rifle No. 154 (referred to in Quest. 1) some rust was found to have accumulated on the sides of the body and on other parts of the breech action.	In a few cases rust and dust have entered the breech action, but the working of the breech action has not been affected except in two instances, when it is reported that the pull off of the trigger was affected by the entry of dust; and in another in which the action of the tumbler was interfered with by the entry of dirt.
2	,, ..	2nd Bn. 3rd	13 Jan. ..	No.	
3	,, ..	7th	13 Jan. ..	No.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	Rust has accumulated, but not sufficient as to affect the working.	
5	,, ..	42nd	23 March	No.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	No.	
7	,, ..	2nd Bn. 13th	15 March	No.	
8	,, ..	4th Bn. 60th Rifles ..	22 April..	No.	
9	,, ..	2nd Bn. Rifle Brigade..	9 Feb...	No. Dust has accumulated and influenced the pull off of the trigger.	
10	,, ..	33rd	15 March	No.	It is suggested that if the rifle was exposed to wet and dirt the breech would clog. This point was carefully tested in the competitive trials which preceded the recommendation of the arm. (*See* Report of the Special Committee on Breech-loading Rifles, p. vii to ix); and the results then obtained have received strong confirmation from the circumstance that in no case during the present trials is the breech action reported to have become affected by exposure. The Committee do not, therefore, attach any importance to the suggestion that the evil might possibly arise.
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	No.	
12	,, ..	1st Bn. Scots Fus. Gds.	5 April..	Yes, rust and sand accumulates in the breech, and causes extra friction.	
13	,, ..	2nd Bn. 15th	4 March	Not apparently. Sand entered No. 66 breech action, but the working was not impeded.	
14	,, ..	47th	2 April..	Rust has accumulated in the breech, but not so as to affect its working. Sand also gets in between the breech block and sides of the lock.	
15	,, ..	56th	4 March	No.	
16	,, ..	43rd	6 April..	No.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Rust has accumulated, but not at present to such an extent to affect the working.	
18	,, ..	,, ..	13 March	Not sufficiently to affect the working of the breech action.	
19	,, ..	,, ..	19 April..	The same.	
20	,, ..	,, ..	15 May ..	No.	
21	Gravesend..	Royal Engineers ..	1 Jan. ..	No, one rifle has not been cleaned, and works perfectly.	
22	,, ..	,, ..	31 Jan. ..	The same.	
23	,, ..	,, ..	1 March	No, the breech block of the rifle which had not been cleaned was removed; there was but little rust, although a considerable quantity of dirt, which did not prevent the arm working perfectly. It has never missed fire.	
24	,, ..	,, ..	1 April..	No.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	No, although the rifles were piled in the open air for eight days without cleaning.	
26	,, ..	99th	3 Feb. ..	No.	
27	,, ..	R. M. L. I.	28 Feb. ..	No.	
28	,, ..	101st	4 March	No.	
29	,, ..	46th	2 May ..	No.	
30	,, ..	1st Bn. 25th	3 May ..	No.	
31	Quebec ..	69th	31 Jan. ..	No.	
32	,, ..	,, ...	28 Feb. ..	No.	
33	,, ..	,, ...	31 March	No.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	No.	
35	,, ..	,, ,, ..	28 Feb. ..	No.	
36	,, ..	,, ,, ..	31 March	No.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	Rust has been found to accumulate about the sides of the body of the block, but not sufficient to impede the action. Some dirt got into the lock bolt of rifle No. 83, which prevented the tumbler from acting.	
38	,, ..	,, ,, ..	28 Feb. ..	No.	
39	,, ..	,, ,, ..	31 March	No.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan. ..	No.	
41	Devonport..	H.M.S. Cambridge ..	29 Jan. ..	No.	
42	Curragh ..	1st Bn. 16th	7 May ..	A little, but not so as to affect its working.	
43	,, ..	2nd Bn. 16th	9 May ..	No.	
44	,, ..	30th	9 May ..	On dismounting one breech action, a small quantity of grit and rust was found.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April..	No.	
46	Quebec ..	69th	30 ,, ..	No.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 ,, ..	No.	

Question 6. Has the coil spring been found to become weak or inefficient?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	No.	The general tendency of these reports appears to be to the effect that many of the springs, which were issued with these arms, were originally too weak, which is corroborated by information which the Committee have received from other sources. This subject is treated in another portion of their report. (*See* p. 30, last par. Remarks of Committee.)
2	,, ..	2nd Bn. 3rd ..	13 Jan. ..	No; unless the missfires arise from this cause.	
3	,,	7th..	13 Jan. ..	No; but thinks that missfires were owing to weakness of coil spring.	
4	,, ..	2nd Bn. 23rd ..	15 Feb. ..	No.	
5	,, ..	42nd	23 Mar. ..	No.	
6	,, ..	4th Bn. Rifle Brig.	15 Feb. ..	No.	
7	,, ..	2nd Bn. 13th ..	15 March	The coil spring in No. 27 rifle is decidedly weaker than it was.	
8	,, ..	4th Bn. 60th Rifles	22 April..	No.	The evidence of these Reports, as far as it goes, tends also to show that by the substitution of stronger springs missfires have been prevented.
9	,, ..	2nd Bn. Rifle Brig.	9 Feb. ..	No.	
10	,, ..	33rd	15 March	Yes, in all the rifles.	
11	Dublin ..	1st Bn. Gren. Gds.	6 Feb. ..	The missfires attributed to weak coil spring.	
12	,, ..	1st Bn. S. Fus. Gds.	5 April..	Since new coil springs have been put in there have been no missfires.	
13	,, ..	2nd Bn. 15th ..	4 March	The springs appear to have been originally too weak.	
14	,, ..	47th	2 April..	The coil springs at first were all rather weak, but since new springs have been put in there have been no missfires.	
15	,, ..	56th	4 March	Yes; missfires were frequent and the cartridges invariably exploded on a second blow.	
16	,, ..	43rd	6 April..	In Nos. 3 and 196 rifles, the springs were evidently too weak, but since new springs were put in (23rd March) no missfires have occurred.	
17	Hythe ..	School of Musketry	15 Feb. ..	No; unless the missfires are attributable to this cause.	
18	,, ..	,,	13 March	No.	
19	,, ..	,,	19 April..	No.	
20	,, ..	,,	16 May ..	No.	
21	Gravesend..	Royal Engineers ..	1 Jan. ..	Missfires from one rifle, supposed to be caused by weakness of spiral spring.	
22	,, ..	,,	31 ,, ..	The same.	
23	,, ..	,,	1 March	Does not think missfires are due to weak coil-springs. Captain Drake has fired several hundreds of rounds himself, and never had a missfire, except with a cartridge that had missed once or twice before.	
24	,, ..	,,	1 April..	The same. The new coil-spring not so good as the old; decreases the rapidity materially, and by making the pull off hard, impairs accuracy.	
25	Portsmouth.	2nd Bn. 2nd ..	31 Jan. ..	Yes; principally in rifles Nos. 7, 8, and 10.	
26	,, ..	99th	3 Feb. ..	No; but the springs seemed to have been originally weak in some of the rifles.	
27	,, ..	R. M. L. I. ..	28 ,, ..	Yes; the springs of some of the rifles were originally too weak, and grew weaker from use.	
28	,, ..	101st	4 March	No.	
29	,, ..	46th	2 May ..	Frequent missfires until the new springs were put in. Since then very few.	
30	,, ..	1st Bn. 25th ..	3 ,, ..	The new spring has been found strong enough.	
31	Quebec ..	69th	31 Jan. ..	No.	
32	,, ..	,, ...	28 Feb. ..	Yes, in rifle No. 12.	
33	,, ..	,, ...	31 March	The same.	
34	Montreal ..	1st Bn. Rifle Brig..	31 Jan. ..	The coil springs are all too weak. The missfires are nearly in every case occasioned by the weakness of springs.	
35	,, ..	,, ,, ..	28 Feb. ..	The same.	
36	,, ..	,, ,, ..	31 March	No.	
37	Ottawa ..	1st Bn. 60th Rifles	31 Jan. ..	No.	
38	,, ..	,, ,,	28 Feb. ..	Missfires attributed to weakness of springs.	
39	,, ..	,, ,,	31 March	It is presumed the coil springs in some of the rifles have become weakened.	

	No. of rounds fired.	No. of missfires.	Per-centage.
No. 21 Rifle, 1st trial	575	5	0·86
,, ,, 2nd ,,	1,663	8	0·47
,, ,, 3rd ,,	2,507	8	0·31
No. 126 Rifle, 1st ,,	590	44	7·4
,, ,, 2nd ,,	1,750	101	5·7
,, ,, 3rd ,,	2,658	145	5·4

And it is worth while to notice that the 5 arms, the springs of which are stated in Report No. 10 to have all become weaker in use, did, as a matter of fact, give a smaller percentage of missfires in the third trial than in the first, as follows:—

	No. of rounds fired.	No of missfires.	Per-centage.
Nos. 9, 68, 102, 112, 180 Rifles (1st trial	2,999	79	2·6
2nd ,,	3,000	90	3·0
3rd ,,	2,810	27	0·96

Question 6—*continued.*

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
40	Portsmouth.	H.M.S. Excellent..	31 Jan. ..	No.	
41	Devonport..	H.M.S. Cambridge.	29 „ ..	No; unless the few missfires are attributable to that cause.	
42	Curragh ..	1st Bn. 16th ..	7 May ..	No.	
43	„ ..	2nd Bn. 16th ..	9 „ ..	No.	
44	„ ..	30th	9 „ ..	No.	
45	Ottawa ..	1st Bn. 60th Rifles.	30 April..	Not since the long coil spring has been introduced.	
46	Quebec ..	69th	30 „ ..	Not since the new springs have been put in.	
47	Montreal ..	1st Bn. Rifle Brig.	30 „ ..	No.	

Question 7. Is the action of the extractor, in throwing out the empty cartridge case, considered too sudden?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870		
1	Aldershot ..	67th	5 Jan. ..	No; but it depends on the sharpness with which the lever is pressed down.	The Committee have no remarks to make on this subject, which has already been treated under the head of Question 3.
2	„	2nd Bn. 3rd	13 „ ..	No.	
3	„	7th	13 „ ..	No.	
4	„	2nd Bn. 23rd	15 Feb...	No.	
5	„	42nd	23 March.	The extractor has been found to work well, and its sudden action appears to be necessary, especially in extracting a tight-fitting cartridge.	
6	„	4th Bn. Rifle Brigade ..	15 Feb. ..	No.	
7	„	2nd Bn. 13th	15 March.	No.	
8	„	4th Bn. 60th Rifles ..	22 April..	No.	
9	„	2nd Bn. Rifle Brigade..	9 Feb...	No; *vide* answer to No. 3 Question.	
10	„	33rd	15 March.	No.	
11	Dublin ..	1st Bn. Grenadier Gds..	6 Feb...	No.	
12	„	1st Bn. Scots Fus. Gds.	5 April .	No.	
13	„	2nd Bn. 15th	4 March	The action of the breech appears to be perfect, and can easily be controlled by opening the breech gradually, which is an advantage in extracting a loaded cartridge.	
14	„	47th	2 April .	No.	
15	„	56th	4 March	No.	
16	„	43rd	6 April .	No.	
17	Hythe ..	School of Musketry ..	15 Feb...	No.

Question 8. The stock being in two parts, has it remained firm and strong?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks. of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Yes.	The whole of the answers are in the affirmative, except in two cases (Rifle 100, report from 69th Regiment, Quebec, and Rifle 5, report from 2nd Battalion 16th Regiment, Curragh) in which the butt ends are reported loose.
2	,, ..	2nd Bn. 3rd	13 ,, ..	Yes.	
3	,, ..	7th	13 ,, ..	Yes.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	Yes.	
5	,, ..	42nd	23 March	Yes.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Yes.	
7	,, ..	2nd Bn. 13th	15 March	Yes.	
8	,, ..	4th Bn. 60th Rifles ..	22 April .	Yes.	
9	,, ..	2nd Bn. Rifle Brigade..	9 Feb. ..	Yes.	
10	,, ..	33rd	15 March	Yes.	
11	Dublin ..	1st Bn. Grenadier Gds.	6 Feb. ..	Yes.	As doubts have been expressed with regard to the strength of divided stocks for military purposes, the Committee think it important to call attention to the fact that the evidence on this point is so far satisfactory, but the test to which the arms have as yet been submitted cannot be considered sufficient fully to determine this point; and the Committee think that some special experiments should be made to test the relative strength of whole and divided stocks.
12	,, ..	1st Bn. S. Fusilier Gds.	5 April .	Yes.	
13	,, ..	2nd Bn. 15th	4 March	Yes.

47	Montreal ..	1st Bn. Rifle Brigade ..	30 „ ..	No.	

Question 10. Is any inconvenience experienced from recoil?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	No; recoil very slight.	The Reports appear to point distinctly to the conclusion that the recoil is not excessive.
2	,,	2nd Bn. 3rd	13 ,, ..	No.	
3	,,	7th	13 ,, ..	No.	
4	,,	2nd Bn. 23rd	15 Feb. ..	No.	
5	,,	42nd	23 March	No. Recoil does not appear greater than present rifle.	
6	,,	4th Bn. Rifle Brigade ..	15 Feb. ..	No.	
7	,,	2nd Bn. 13th	15 March	No.	
8	,,	4th Bn. 60th Rifles ..	22 April .	Yes slightly, with rifle No. 27.	
9	,,	2nd Bn. Rifle Brigade..	9 Feb. ..	No. Recoil insignificant.	
10	,,	33rd	15 March	No.	
11	Dublin ..	1st Bn. Grenadier Gds..	6 Feb. ..	No; considered by four out of the five men less than the Snider.	
12	,,	1st Bn. Scots Fus. Gds.	5 April..	Yes; some men complained of it, but not considered too great.	
13	,,	2nd Bn. 15th	4 March	Not more than that of the Snider. The thumb of the right hand should not be placed across the head of the stock, as a blow is liable to be given to the firer's face.	
14	,,	47th	2 April .	Not more than from the Snider.	
15	,,	56th	4 March	No; not more than from the Snider.	
16	,,	43rd	5 April..	No.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	No.	
18	,,	,, ,, ..	13 March	No.	
19	,,	,, ,, ..	19 April..	No.	
20	,,	,, ,, ..	16 May ..	No.	
21	Gravesend	Royal Engineers ..	1 Jan. ..	No. The recoil is greater than the Snider, and will probably annoy recruits; it is not sufficient to affect accuracy.	
22	,,	,, ,, ..	31 Jan. ..	The same.	
23	,,	,, ,, ..	1 March	No.	
24	,,	,, ,, ..	1 April .	No.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	No.	
26	,,	99th	3 Feb. ..	No.	
27	,,	R. M. L. I.	28 ,, ..	The difference between the recoil of the Martini-Henry and the Snider is scarcely perceptible.	
28	,,	101st	4 March	No.	
29	,,	46th	2 May ..	Men complained of it when much platoon firing took place, or when ball was fired immediately after blank cartridge.	
30	,,	1st Bn. 25th	3 ,, ..	Men who do not hold their rifles well in hollow of shoulder feel the recoil greater after twenty rounds.	
31	Quebec ..	69th	31 Jan. ..	No.	
32	,,	,, ...	28 Feb. ..	No.	
33	,,	,, ...	31 March	No.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	No.	
35	,,	,, ,, ..	28 Feb. ..	No.	
36	,,	,, ,, ..	31 March	No.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	No.	
38	,,	,, ,, ..	28 Feb. ..	No.	
39	,,	,, ,, ..	31 March	No.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan. ..	No; except when the thumb is placed (as per musketry directions) across the head of the stock, in which case some of the men received a smart blow on the nose, causing it to bleed.	
41	Devonport	H.M.S. Cambridge ..	29 ,, ..	No; but greater than the Snider.	
42	Curragh ..	1st Bn. 16th	7 May ..	No.	
43	,,	2nd Bn. 16th	9 ,, ..	No.	
44	,,	30th	9 ,, ..	No.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April..	No.	
46	Quebec ..	69th	30 ,, ..	No.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 ,, ..	No.	

Question 11. Is the weight of the arm a practical objection on service?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks. of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	No, except when the sword is fixed.	In a few instances the additional weight of the sword bayonet is objected to; but it is clear from the opinion of the greater number of the Officers that "there is no practical objection to the weight of the arm on service."
2	,, ..	2nd Bn. 3rd	13 ,, ..	The same.	
3	,, ..	7th	13 ,, ..	No.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	No.	
5	,, ..	42nd	23 March	No.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	No.	
7	,, ..	2nd Bn. 13th	15 March	No.	
8	,, ..	4th Bn. 60th Rifles ,,	22 April .	If the arm could be lightened without interfering with its shooting qualities, it would be better.	
9	,, ..	2nd Bn. Rifle Brigade ..	9 Feb. ..	No.	
10	,, ..	33rd ,, ...	15 March	Certainly, unless soldiers' equipment is otherwise lightened.	
11	Dublin ..	1st Bn. Grenadier Gds.	6 Feb. ..	No, as it is counterbalanced by other advantages.	
12	,, ..	1st Bn. S. Fusilier Gds.	5 April .	No.	
13	,, ..	2nd Bn. 15th ,, ..	4 March	No.	
14	,, ..	47th .. ,, ,,	2 April .	Considered to be rather heavy when the bayonet is fixed.	
15	,, ..	56th ,, ,, ,,	4 March	No, except when sword bayonet is fixed.	
16	,, ..	43rd .. ,, ..	6 April .	No.	
17	Hythe ..	School of Muskotry ..	15 Feb. ..	Cannot give an answer at present.	
18	,, ..	,, ,, ..	13 March	The same.	
19	,, ..	,, ,, ..	19 April .	No.	
20	,, ..	,, ,, ..	16 May ..	No.	
21	Gravesend .	Royal Engineers ..	1 Jan. ..	Yes; it tires the men when firing and marching.	
22	,,	,, ,, ..	31 Jan. ..	Yes; it tires the men when firing and marching.	
23	,,	,, ,, ..	1 March	Thinks it would be too heavy, especially for Engineers.	
24	,,	,, ,, ..	1 April. .	The same.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	It is not objected to by the men.	
26	,,	99th .. .. ,,	3 Feb. ,,	The men did not think there was any material difference in the weight.	
27	,,	R. M. L. I.	28 Feb. ..	No. Considers the increase in weight, which is scarcely perceptible, more than counterbalanced by the handiness of the weapon, owing to its reduced length.	
28	,,	101st	4 March	No.	
29	,,	46th	2 May ..	No.	
30	,,	1st Bn. 25th	3 May ..	No.	
31	Quebec ..	69th	31 Jan. ..	No.	
32	,,	,, ,, ...	28 Feb. ..	No.	
33	,,	,, ,, .. ,,	31 March	No.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	No.	
35	,,	,, ,, ..	28 Feb. ..	No.	
36	,,	,, ,, ..	31 March	No.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	No.	
38	,,	,, ,, ..	28 Feb. ..	No.	
39	,,	,, ,, ..	31 March	No.

42	Curragh ..	1st Bn. 16th	7 May ..	No.	
43	,,	2nd Bn. 16th	9 ,, ..	No.	
44	,,	30th	9 ,, ..	Not for an ordinary man, may be for some of the puny recruits now passed into the service.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April .	No, as far as ascertained.	
46	Quebec ..	69th	30 ,, ..	No.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 ,, ..	No.	

Question 12. Is the position of the back sight approved of?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Yes; but thinks that the V should be deeper.	The Committee think the back sight might be improved; and recommend the adoption of a flat sliding bar with three platinum lines, one long in the centre, and two shorter equally dividing the space on either side. They also recommend the addition of a platinum wire, at the centre of the V, at the end of the flap. The inconvenience in the position of the back sight when the arm is carried at trail has been noted; the place where the rifle is held at the trail depends upon the balance of the arm, and experiments will be made to determine this point.
2	,, ..	2nd Bn. 3rd	13 ,, ..	Yes.	
3	,, ..	7th	13 ,, ..	Yes.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	Inconvenient when trailing arms.	
5	,, ..	42nd	23 March	Slight inconvenience when trailing arms.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Excellent as regards shooting, but very inconvenient when the arms are carried at the trail.	
7	,, ..	2nd Bn. 13th	15 March	Thinks it would be better for aiming, and also more convenient when trailing arms, if it were placed nearer the breech. Recommends a deeper V in the back sight.	
8	,, ..	4th Bn. 60th Rifles ..	22 April..	Yes.	
9	,, ..	2nd Bn. Rifle Brigade..	9 Feb. ..	Excellent as regards aiming, but inconvenient when arms are carried at the trail. Recommends that the sight be moved further forward and the V deepened.	
10	,, ..	33rd	15 March.	No. The V should be deeper.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	Yes; but recommends a thin platinum wire under notch of back sight.	
12	,, ..	1st Bn. Scots Fus. Gds.	5 April..	Yes; but recommeds the V in notch of back sight to be deeper. Undersighted at long ranges.	
13	,, ..	2nd Bn. 15th	4 March	Yes; recommends a platinum wire on back sight, and rifle to be marked for sighting at every 50 yards.	
14	,, ..	47th	2 April .	Yes; but the notch should be deeper, still retaining the platinum wire in the centre. The sighting is incorrect, generally undersighted about 50 yards at the long ranges.	
15	,, ..	56th	4 March	Yes. A platinum wire inserted in the head of the back sight for distance up to 400 yards would be useful. The rifles are undersighted after 700 yards.	
16	,, ..	43rd	6 April .	The position of the back sight very good, but the notch or V not deep enough.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Yes.	
18	,, ..	,, ,, ..	13 March	Yes.	
19	,, ..	,, ,, ..	19 April..	Yes, for aiming; but is inconvenient when carrying the rifle at the trail.	
20	,, ..	,, ,, ..	16 May ..	Yes, for aiming; but is in the way when the arm is carried at the trail.	
21	Gravesend..	Royal Engineers ..	1 Jan. ..	No. It is exactly where the rifle balances at the trail. Thinks the sight might be greatly improved; suggests a finer fore-sight, with a fixed projector so arranged as not to interfere with the sword bayonet, a plain bar for back sight with a square notch and two smaller notches for allowance for wind on either side.	
22	,, ..	,, ,, ..	31 ,, ..	The same.	
23	,, ..	,, ,, ..	1 March	The same.	
24	,, ..	,, ,, ..	1 April..	The same.	
25	Portsmouth.	2nd Bn. 2nd	31 Jan. ..	It is very good for aiming, but interferes with the carriage of the arm at the trail.	
26	,, ..	99th	3 Feb. ..	The same.	
27	,, ..	R. M. L. I.	28 Feb. ..	No. The sighting at all the distances is extremely accurate.	
28	,, ..	101st	4 March	Yes.	
29	,, ..	46th	2 May ..	No; it is too near the fore-sight for aiming, and inconvenient when the rifle is carried at the trail. The V should be deepened.	
30	,, ..	1st Bn. 25th	3 ,, ..	Yes, for aiming, but not when carrying the rifle at the trail.	
31	Quebec ..	69th	31 Jan. ..	Not convenient when carrying the rifle at the trail, otherwise it is approved of.	
32	,, ..	,,	28 Feb. ..	The same.	
33	,, ..	,,	31 March	The same.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	Yes.	
35	,, ..	,, ,, ..	28 Feb. ..	Yes.	
36	,, ..	,, ,, ..	31 March	Yes.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	No. Inconvenient when trailing arms.	
38	,, ..	,, ,, ..	28 Feb. ..	The same.	
39	,, ..	,, ,, ..	31 March.	The same.	
40	Portsmouth.	H.M.S. Excellent ..	31 Jan. ..	Yes; but might be improved by having the line on the sliding bar produced up to the top of the back sight, to guide the eye when the flap is down.	

Question 12—*continued.*

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
41	Devonport..	H.M.S. Cambridge ..	29 Jan. ..	No; it should be placed nearer the breech block.	
42	Curragh ..	1st Bn. 16th	7 May..	Interferes with the hand when the arm is at the trail, might be moved back with advantage. Recommends a platinum line, like that on sliding bar, be placed on that part of back sight used up to 400 yards.	
43	„ ..	2nd Bn. 16th	9 „ ..	No. Interferes with the rifle being carried at the trail, the rifle will not balance unless held with the hand at that part where the back sight is fixed. Recommends a platinum line like that on sliding bar be placed on that part of back sight used for short ranges.	
44	„ ..	30th	9 „ ..	In present position the arm cannot be carried at the trail unless the hand grips the whole of the back sight and barrel. Recommends a platinum line to be placed below the notch of the back sight, as on the sliding bar; flat sight preferred to V shape on the Snider.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April .	No. Inconvenient when the arm is carried at the trail.	
46	Quebec ..	69th	30 „ ..	No. Inconvenient when the arm is carried at the trail.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 „ ..	Yes.	

Question 13. How does the sword bayonet answer as a weapon of attack and defence?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Not so well, on account of weight, as present bayonet. The lever is somewhat in the way in bayonet exercise.	The Committee find that a very large majority of the regiments approve of the sword bayonet as a weapon for attack and defence. Taking into consideration that a weapon of this description already forms part of the regular equipment of all rifle regiments; that in the absence of any objection it is a distinct advantage to have a weapon which can be used in more than one capacity, and that no valid objection has been shown to exist to the sword bayonet, the Committee recommend its adoption. A few of the regiments object to the weight when fixed, as making the rifles top heavy; but the Committee would observe that the sword bayonets would not be fixed until the troops were at close quarters, when extreme accuracy of fire had become unnecessary. (*See* Remarks on Question 14.)
2	,, ..	2nd Bn. 3rd	13 ,, ..	Not so well, on account of making the rifle top heavy.	
3	,, ..	7th	13 ,, ..	Well.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	Well.	
5	,, ..	42nd	23 March	Very well.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Very well.	
7	,, ..	2nd Bn. 13th	15 March	Very well.	
8	,, ..	4th Bn. 60th Rifles ..	22 April	Very well.	
9	,, ..	2nd Bn. Rifle Brigade..	9 Feb. ..	Very well.	
10	,, ..	33rd	15 March	Prefers the ordinary bayonet.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	Question not replied to.	
12	,, ..	1st Bn. Scots Fus. Gds.	5 April	Not tried.	
13	,, ..	2nd Bn. 15th	4 March	Too heavy and unwieldy.	
14	,, ..	47th	2 April	Believed to be a superior weapon; but makes the rifle rather top heavy when fixed.	
15	,, ..	56th	4 March	It appears a most formidable weapon.	
16	,, ..	43rd	6 April	Yes.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Not been tested.	
18	,, ..	,, ,, ..	13 March	Not been tested.	
19	,, ..	,, ,, ..	19 April	Not been tested.	
20	,, ..	,, ,, ..	16 May ..	Not been tested.

22	,, ..	,, ,, ..	31 ,, ..	Not been tested.	
23	,, ..	,, ,, ..	1 March	Not been tested.	
24	,, ..	,, ,, ..	1 April	Not been tested.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	Much approved of.	
26	,, ..	99th	3 Feb. ..	Not been tested.	
27	,, ..	R. M. L. I.	28 ,, ..	Admirably.	
28	,, ..	101st	4 March	Question not replied to.	
29	,, ..	46th	2 May ..	Prefers ordinary bayonet.	
30	,, ..	1st Bn. 25th	3 ,, ..	Very well.	
31	Quebec ..	69th	31 Jan. ..	Very well.	
32	,, ..	,, ...	28 Feb. ..	Very well.	
33	,, ..	,, ...	31 March	Very well.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	Very well.	
35	,, ..	,, ,, ..	28 Feb. ..	Very well.	
36	,, ..	,, ,, ..	31 March	Very well.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	Preferred by men to the ordinary bayonet.	
38	,, ..	,, ,, ..	28 Feb. ..	Very well.	
39	,, ..	,, ,, ..	31 March	Very well.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan. ..	A special report will be sent.	
41	Devonport ..	H.M.S. Cambridge ..	29 ,, ..	Not been tested.	
42	Curragh ..	1st Bn. 16th	7 May ..	Well.	
43	,, ..	2nd Bn. 16th	9 ,, ..	It would probably be very effective.	
44	,, ..	30th	9 ,, ..	Considers it far superior to ordinary bayonet, as it could not be gripped like the latter if the thrust failed.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April .	Very well.	
46	Quebec ..	69th	30 ,, ..	Very well	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 ,, ..	Very well.	

Question 14. Does the sword bayonet answer as an implement, on service, for cutting wood, &c. ?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Yes.	The balance of opinion is decidedly in favour of the saw, a view with which the Committee concur.
2	„ ..	2nd Bn. 3rd	13 „ ..	Possibly; but thinks soldiers would spoil it.	
3	„ ..	7th	13 „ ..	Thinks not.	
4	„ ..	2nd Bn. 23rd	15 Feb. ..	Yes.	Several regiments suggests the addition of more "teeth," to which the Committee see no objection.
5	„ ..	42nd	23 March	No. Length of saw too little, breadth too great.	
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb. ..	The saw should be longer. Considers it would very rarely be useful.	
7	„ ..	2nd Bn. 13th	15 March	Yes.	The Committee recommend the trial of an experimental sword-bayonet, of a construction submitted by Lord Elcho, with the 12 short action rifles now being made for issue to the troops.
8	„ ..	4th Bn. 60th Rifles ..	22 April ..	Yes, very well.	
9	„ ..	2nd Bn. Rifle Brigade ..	9 Feb. ..	Very well; but disapproves of soldiers using their bayonets for cutting wood.	
10	„ ..	33rd	15 March	Yes.	
11	Dublin ..	1st Bn. Grenadier Gds.	6 Feb. ..	Admirably for cutting wood, tolerably well for meat, bones, &c.; recommends a few more teeth for the saw.	
12	„ ..	1st Bn. Scots Fus. Gds.	5 April ..	Not tried.	
13	„ ..	2nd Bn. 15th	5 Feb. ..	Possibly.	
14	„ ..	47th	2 April	It is difficult to cut wood with it.	
15	„ ..	56th	4 March	Yes, very well.	
16	„ ..	43rd	6 April	Yes.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Has not been tested.	
18	„ ..	„ „ ..	13 March	The same.	
19	„ ..	„ „ ..	19 April	The same.	
20	„ ..	„ „ ..	16 May ..	The same.	
21	Gravesend ..	Royal Engineers ..	1 Jan. ..	The same.	
22	„ ..	„ „ ..	31 „ ..	The same.	
23	„ ..	„ „ ..	1 March	Has not been tested.	
24	„ ..	„ „ ..	1 April .	The same.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	Yes.	
26	„ ..	99th	3 Feb. ..	Wood easily sawn through, but the saw is rather short.	
27	„ ..	R. M. L. I.	28 „ ..	Very well.	
28	„ ..	101st	4 March	Yes.	
29	„ ..	46th	2 May ..	Thinks the saw of little practical use, would be improved if the teeth were continued about one inch higher up.	
30	„ ..	1st Bn. 25th	8 „ ..	Yes; it saws branches of trees and bones rapidly.	
31	Quebec ..	69th	31 Jan. ..	Not been tested.	
32	„ ..	„	28 Feb. ..	Does not answer for cutting large pieces of wood. The saw is too short, and handle too short and small. It will cut through small pieces of wood easily.	
33	„ ..	„	31 March	No.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	Yes.	
35	„ ..	„ „ ..	28 Feb. ..	Yes.	
36	„ ..	„ „ ..	31 March	Yes.	
37	Ottawa ..	„ 60th Rifles ..	31 Jan. ..	Not very well.	
38	„ ..	„ „ ..	28 Feb. ..	Not sufficient grasp for the hand.	
39	„ ..	„ „ ..	31 March	The same.	
40	Portsmouth.	H.M.S. Excellent ..	31 Jan. ..	Not answered.	
41	Devonport ..	„ Cambridge ..	29 „ ..	Yes.	
42	Curragh ..	1st Bn. 16th	7 May ..	No.	
43	„ ..	2nd „	9 „ ..	No.	
44	„ ..	30th	9 „ ..	Yes; recommends the saw be lengthened.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April	Indifferently.	
46	Quebec ..	69th	30 „	Thinks not.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 „	Yes.	

Question 15. Are the cleaning implements (the jag and protector) found useful?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks. of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Yes. Suggested that jag should be smaller at base, to admit of a larger piece of cleaning rag. The ramrod head is too small.	It is quite clear from these Reports that the jag and protector are useful, and that they should be retained. The size of the jag should be diminished.
2	,, ..	2nd Bn. 3rd	13 ,, ..	Yes.	
3	,, ..	7th	13 ,, ..	Yes.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	Yes.	
5	,, ..	42nd	23 March	Yes; but considerable difficulty in working the cleaning rod, especially after blank firing.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Jag excellent, but protector too brittle.	
7	,, ..	2nd Bn. 13th	15 March	Yes.	
8	,, ..	4th Bn. 60th Rifles ..	22 April..	Yes, but the jag is too large when the rag is twisted round it.	
9	,, ..	2nd Bn. Rifle Brigade..	9 Feb. ..	Yes.	
10	,, ..	33rd	15 March	Yes.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	Of great use.	
12	,, ..	1st Bn. Scots Fus. Gds.	5 April..	Yes.	
13	,, ..	2nd Bn. 15th	4 March	Jag too large. Protector might be dispensed with, as it is doubtful whether the men would use it.	
14	,, ..	47th	2 April..	Yes, especially the protector.	
15	,, ..	56th	4 March	Yes. The protector becomes brittle in cold weather, and one was broken.	
16	,, ..	43rd	6 April..	Yes, but recommends a piece of sponge tied to a string as preferable to the rag and cleaning rod.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Yes, but the jag is liable to become unscrewed by the grooving, and to be left in the barrel.	
18	,, ..	,, ,, ..	13 March	Yes.	
19	,, ..	,, ,, ..	19 April..	Yes.	
20	,, ..	,, ,, ..	16 May ..	Yes.	
21	Gravesend..	Royal Engineers ..	1 Jan. ..	Yes. Prefers for cleaning to use a wet rag, followed by an oiled rag, in place of pouring water into the barrel, to prevent the liability of water entering the piston-hole.	
22	,, ..	,, ,, ..	31 Jan. ..	The same. Also disapproves of the mode of fixing the ramrod into the stock by means of a screw, as it takes time to draw the ramrod.	
23	,, ..	,, ,, ..	1 March	Recommends a cord or leather thong with a brush attached in place of cleaning rod.	
24	,, ..	,, ,, ..	1 April..	The same.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	Very useful. The men cleaned the rifles with the greatest ease.	
26	,, ..	99th	3 Feb. ..	Yes.	
27	,, ..	R. M. L. I.	28 ,, ..	Very useful, and the protector prevents injury to the bore in cleaning.	
28	,, ..	101st	4 March	Yes.	
29	,, ..	46th	2 May ..	Yes.	
30	,, ..	1st Bn. 25th	3 ,, ..	Yes.	
31	Quebec ..	69th	31 Jan. ..	Yes.	
32	,, ..	,, ...	28 Feb. ..	Very useful.	
33	,, ..	,, ...	31 March	Very useful.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	Yes.	
35	,, ..	,, ,, ..	28 Feb. ..	Yes.	
36	,, ..	,, ,, ..	31 March	Yes.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	Yes.	
38	,, ..	,, ,, ..	28 Feb. ..	Yes.	
39	,, ..	,, ,, ..	31 March	Yes.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan. ..	Yes.	
41	Devonport..	H.M.S. Cambridge ..	29 ,, ..	Yes.	
42	Curragh ..	1st Bn. 16th	7 May ..	Yes.	
43	,, ..	2nd Bn. 16th	9 ,, ..	Yes.	
44	,, ..	30th	9 ,, ..	Yes.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April	Yes.	
46	Quebec ..	69th	30 ,,	Very useful.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 ,,	Yes.	

Question 16. Is the muzzle-stopper found generally useful; and is it considered desirable to introduce it?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Yes.	Nearly the whole of the Reports are in favour of the introduction of a muzzle-stopper of the proposed pattern. Objection is made in one or two instances, that a muzzle-stopper is dangerous in a breech-loader, and that it tends to rust the barrel at the muzzle. The Committee would observe upon these two points—First, that the danger is greatly diminished by the shape and material of the muzzle-stopper, which must attract attention when the rifle is in the firing position. Second, that the felt on the muzzle-stopper having been dipped in a waterproof composition, the rusting of the barrel suggested in this objection can hardly take place.
2	„ ..	2nd Bn. 3rd	13 „ ..	Yes.	
3	„ ..	7th	13 „	Yes.	
4	„ ..	2nd Bn. 23rd	15 Feb.	Yes.	
5	„ ..	42nd	23 March	Yes; but suggests a stopper to go over instead of into the muzzle, to avoid the risk of rust from a damp stopper, and the danger of the stopper becoming broken.	
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Yes.	
7	„ ..	2nd Bn. 13th	15 March	Yes.	
8	„ ..	4th Bn. 60th Rifles ..	22 April	Yes; but stronger metal recommended.	
9	„ ..	2nd Bn. Rifle Brigade ..	9 Feb. ..	Yes, most desirable.	
10	„ ..	33rd	15 March	Yes; but considers it dangerous in a breech loader.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	Yes.	
12	„ ..	1st Bn. Scots Fus. Gds.	5 April	Yes.	
13	„ ..	2nd Bn. 15th	4 March	Yes.	
14	„ ..	47th	2 April	Yes, especially the protector to the foresight.	
15	„ ..	56th	4 March	Yes.	
16	„ ..	43rd	6 April	Yes, and certainly ought to be introduced.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Yes.	
18	„ ..	„ „ ..	13 March	Yes.	
19	„ ..	„ „ ..	19 April	Yes.	
20	„ ..	„ „ ..	16 May ..	Yes.	
21	Gravesend ..	Royal Engineers ..	1 Jan. ..	No; thinks muzzle-stoppers dangerous except when fixed to arm-racks in barrack rooms. The sight protector is difficult to adjust properly, and if put on crooked is likely to injure the sight.	
22	„ ..	„ „ ..	31 Jan. ..	The same.	
23	„ ..	„ „ ..	1 March	The same.	
24	„ ..	„ „ ..	1 April	The same.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	Yes, introduction desirable.	
26	„ ..	99th	3 Feb. ..	Yes.	
27	„ ..	R. M. L. I.	28 „ ..	No, objects to them very strongly. Thinks they tend to rust the barrels, and to render accidents liable.	
28	„ ..	101st	4 March	Not desirable to introduce it.	
29	„ ..	46th	2 May ..	Yes. To prevent accidents recommends it should not be brought to any parades, except those for guard mounting, or for marching. Approves of the sight protector.	
30	„ ..	1st Bn. 25th	3 „ ..	It protects the foresight, and prevents dust entering the barrel. Objectionable as likely to put the soldier to expense, as the stoppers are sure to be lost.	
31	Quebec ..	69th	31 Jan. ..	Very useful and desirable.	
32	„ ..	„	28 Feb. ..	The same.	
33	„ ..	„	31 March	The same.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	Yes.	
35	„ ..	„ „	28 Feb. ..	Yes.	
36	„ ..	„ „	31 March	Yes.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	Yes.	
38	„ ..	„ „ ..	28 Feb. ..	Yes.	
39	„	„ „ ..	31 March	Yes.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan.	Yes.	
41	Devonport ..	H.M.S. Cambridge ..	29 „ ..	Yes.	
42	Curragh ..	1st Bn. 16th	7 May ..	Yes; but recommends stronger metal, and that support (against the barrel) might be given to that part of the stopper which acts as a sight protector.	
43	„ ..	2nd Bn. 16th	9 „	Yes, recommends stronger metal.	
44	„ ..	30th	9 „	Yes. Since the Snider muzzle-stoppers have been discontinued, the men are continually putting pieces of rag in the barrel to prevent damp or rain rusting the grooves.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April	Yes.	
46	Quebec ..	69th	30 „	Very useful.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 „	Yes.	

Question 17. Has the ammunition been found liable to become broken or damaged in transport, or when carried in men's pouches?

Number of Report.	Station.	Regiment.	Date.	Answer.	Remarks of Committee.
			1870		
1	Aldershot ..	67th	5 Jan. ..	No.	Although the majority of the Reports are to the effect that the ammunition has not become broken or damaged, it has become so in a few instances; and considering that the trial has not been such as severely to test the cartridges on this point, the Committee consider that the adoption of the short-chamber cartridge, which is much stronger and less liable to injury, will be attended with advantage.
2	„ ..	2nd Bn. 3rd	13 „ ..	No.	
3	„ ..	7th	13 „ ..	No.	
4	„ ..	2nd Bn. 23rd	15 Feb. ..	No.	
5	„ ..	42nd	23 March	No.	
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb. ..	No.	
7	„ ..	2nd Bn. 13th	15 March	Some have become bent, but were straightened and then used.	
8	„ ..	4th Bn. 60th Rifles ..	22 April ..	No, but it has not been carried in the men's pouches.	
9	„ ..	2nd Bn. Rifle Brigade ..	9 Feb. ..	No.	
10	„ ..	33rd	15 March	No.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	Five rounds were slightly bent.	
12	„ ..	1st Bn. Scots Fus. Gds.	5 April ..	No.	
13	„ ..	2nd Bn. 15th	4 March	No.	
14	„ ..	47th	2 April ..	It stands wear as well as the Snider ammunition.	
15	„ ..	56th	4 March	Not more than the Snider ammunition.	
16	„ ..	43rd	6 April ..	It gets dented and bent, but not broken.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	No, as far as the trials have gone.	
18	„ ..	„ „ ..	13 March	Some of the cartridges have become bent and dented, owing to several of the packages having been badly packed.	
19	„ ..	„ „ ..	19 April ..	Has not been tested by carrying it in the men's pouches.	
20	„ ..	„ „ ..	16 May ..	Not been tested.	
21	Gravesend ..	Royal Engineers ..	1 Jan. ..	A few rounds have become bent, but have been easily straightened.	
22	„ ..	„ „ ..	31 „ ..	The same.	
23	„ ..	„ „ ..	1 March	No.	
24	„ ..	„ „ ..	1 April ..	No.	
25	Portsmouth	2nd Bn. 2nd	31 Jan. ..	No. Fifty rounds were carried loose in the men's pouches on guard for fourteen days, and were found perfectly serviceable.	
26	„ ..	99th	3 Feb. ..	One hundred rounds of ball cartridge were carried in the pouches of the guard for fourteen days without damage. The cartridges appear in some instances to have been injured by packing.	
27	„ ..	R. M. L. I.	28 Feb. ..	No.	
28	„ ..	101st	4 March	Of one hundred rounds carried loose in the pouches for eight days, two were damaged.	
29	„ ..	46th	2 May ..	Two hundred rounds were placed loose in the men's pouches for fourteen days, and were afterwards found serviceable.	
30	„ ..	1st Bn. 25th	3 „ ..	One or two have become bent, probably in the men's pouches. The length renders them liable to injury.	
31	Quebec ..	69th	31 Jan. ..	No.	
32	„ ..	„	28 Feb. ..	No rounds have been broken in the men's pouches.	
33	„ ..	„	31 March	The same.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	No pouches suitable for the ammunition have been issued from the Store Department.	
35	„ ..	„ „ ..	28 Feb. ..	The same.	
36	„ ..	„ „ ..	31 March	The same.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	No.	
38	„ ..	„ „ ..	28 Feb. ..	No.	
39	„ ..	„ „ ..	31 March	No.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan. ..	No.	
41	Devonport ..	H.M.S. Cambridge ..	29 „ ..	Not sufficiently tried, but considers it a weak point.	
42	Curragh ..	1st Bn. 16th	7 May ..	No.	
43	„ ..	2nd Bn. 16th	9 „ ..	No, except one cartridge, which became slightly bent.	
44	„ ..	30th	9 „ ..	No.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April ..	No.	
46	Quebec ..	69th	30 „ ..	No.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 „ ..	Not been tried.	

Question 18. Has any difficulty arisen from this cause, in loading or extracting?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	No.	The Committee would refer to their remarks on Quest. 3, adding thereto, that they recognize in the absence of paper on the short chamber cartridge another distinct advantage of that construction.
2	,, ..	2nd Bn. 3rd	13 ,, ..	No.	
3	,, ..	7th	13 ,, ..	No.	
4	,, ..	2nd Bn. 23rd	15 Feb. ..	No.	
5	,, ..	42nd	23 March	No.	
6	,, ..	4th Bn. Rifle Brigade ..	15 Feb. ..	No.	
7	,, ..	2nd Bn. 13th	15 March	No.	
8	,, ..	4th Bn. 60th Rifles ..	22 April .	No.	
9	,, ..	2nd Bn. Rifle Brigade..	9 Feb. ..	No.	
10	,, ..	33rd	15 March	No.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	With the five rounds before mentioned.	
12	,, ..	1st Bn. Scots Fus. Gds.	5 April .	No.	
13	,, ..	2nd Bn. 15th	4 March	Once.	
14	,, ..	47th	2 April .	*Vide* answer to Question 2.	
15	,, ..	56th	4 March	If bent, the cartridge is difficult to load, but there is no difficulty from this cause in extraction.	
16	,, ..	43rd	5 April .	If dented, or bent, it is impossible to load.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	None, with the exception referred to in Answer 3.	
18	,, ..	,, ,, ..	13 March	Yes. *Vide* Answer to No. 3.	
19	,, ..	,, ,, ..	19 April .	No.	
20	,, ..	,, ,, ..	16 May ..	No.	
21	Gravesend ..	Royal Engineers ..	1 Jan. ..	No.	
22	,, ..	,, ,, ..	31 ,, ..	No.	
23	,, ..	,, ,, ..	31 March	The paper is the weak part of the cartridge, it becomes rucked up and causes the case to jam. The blank cartridge is difficult to load.	
24	,, ..	,, ,, ..	1 April..	The same.	
25	Portsmouth.	2nd Bn. 2nd	31 Jan. ..	Several cartridges damaged in transport would not enter the chamber, others required force to push them in. No difficulty in extracting.	
26	,, ..	99th	3 Feb. ..	No.	
27	,, ..	R. M. L. I.	28 ,, ..	Yes, from ben cartridges; 38 cartridges out of 2,750 would not enter the barrel, and some others were hard to force in.	
28	,, ..	101st	4 March	Only the two mentioned in previous answer.	
29	,, ..	46th	2 May ..	Some few which were injured were difficult to load.	
30	,, ..	1st Bn. 25th	3 ,, ..	There was some slight difficulty owing to cartridges having become bent.	
31	Quebec ..	69th	31 Jan. ..	No.	
32	,, ..	,, ...	28 Feb. ..	No.	
33	,, ..	,, ...	31 March	No.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	In one or two instances the cartridges have become bent and useless.	
35	,, ..	,, ,, ..	28 Feb. ..	No.	
36	,, ..	,, ,, ..	31 March.	The ammunition has not been carried in the pouches.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	Five cartridges could not be placed in the barrel on account of defective shape.	
38	,, ..	,, ,, ..	28 Feb. ..	No.	
39	,, ..	,, ,, ..	31 March.	There were nine cartridges of defective shape.	
40	Portsmouth.	H.M.S. Excellent ..	31 Jan. ..	No.	
41	Devonport..	H.M.S. Cambridge ..	29 Jan. ..	*Vide* Answer to No. 2.	
42	Curragh ..	1st Bn. 16th	7 May ..	No.	
43	,, ..	2nd Bn. 16th	9 ,, ..	No, except one ball cartridge referred to in Answer 17, which after being straightened was forced home with some difficulty, but after firing was easily extracted.	
44	,, ..	30th	9 ,, ..	No.	
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April..	No.	
46	Quebec ..	69th	30 ,, ..	No.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 ,, ..	No.	

Question 19. Is the form of the cartridge found convenient to use?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	Yes.	Here again the evidence points to the advantage of a shorter cartridge, such as the "Short Chamber" cartridge which has been provisionally approved.
2	„ ..	2nd Bn. 3rd	13 „ ..	Yes.	
3	„ ..	7th	13 „ ..	Yes.	
4	„ ..	2nd Bn. 23rd	15 Feb. ..	Yes.	
5	„ ..	42nd	23 March	Too long, liable to become damaged, and entails cumbersome pouches.	
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Yes; but would be better if shorter.

Question 20. Have any of the cartridges cut round the base?

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
1	Aldershot ..	67th	5 Jan. ..	No.	On this point the evidence is very satisfactory, only seven ball cartridges having cut at the base out of a total fired of about 137,308 rounds.
2	„ ..	2nd Bn. 3rd	13 „ ..	No.	
3	„ ..	7th	13 „ ..	No.	
4	„ ..	2nd Bn. 23rd	15 Feb. ..	One (blank).	
5	„ ..	42nd	23 March.	No.	
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb. ..	One.	
7	„ ..	2nd Bn. 13th	15 March.	One (blank).	
8	„ ..	4th Bn. 60th Rifles ..	22 April .	Five rounds (blank).	
9	„ ..	2nd Bn. Rifle Brigade..	9 Feb. ..	No.	
10	„ ..	33rd	15 March.	No.	
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	No actual cutting, but slight escape of gas close to base cup, and where the cap overlaps.	
12	„ ..	1st Bn. Scots Fus. Gds. .	5 April .	No; but slight escape of gas at base, just in front of cup.	
13	„ ..	2nd Bn. 15th	4 March.	No.	
14	„ ..	47th	2 April .	No; there is a slight escape of gas round the base of most of the ball cartridges.	
15	„ ..	56th	4 March.	No; but there is a slight escape of gas round the brass coil close to the inner cup.	
16	„ ..	43rd	6 April .	The same.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	No.	
18	„ ..	„ „ ..	13 March.	No.

General Observations.

Number of Report.	Station.	Regiment.	Date.	Answers.
1	Aldershot ..	67th	1870. 5 Jan. ..	States that in accuracy, flatness of trajectory, and penetration, the Matini-Henry excels the Snider. The miss-fires occurred more when the trigger was pressed gently than when pulled more sharply. Thinks the Snider breech-action preferable, on account of the interior being more easily examined than that of the Martini-Henry. Thinks that there may be some chance of accidents from carelessness in observing the indicator and working the bolt. States that the men prefer the Martini-Henry to the Snider.
2	„ ..	2nd Bn. 3rd	13 „ ..	Prefers the Martini-Henry greatly to the Snider for shooting. Considers it stronger, and better adapted to resist rough usage. Thinks the position of the lever a great assistance in keeping the right elbow in its proper position when shooting. Recommends that the sling of the Rifle should not be permanently fixed.
3	„ ..	7th	13 „ ..	Rifle much liked by the men, and certainly a good arm. Fears accidents from difficulty in knowing if it be loaded. Fears rust clogging the action.
4	„ ..	2nd Bn. 23rd	15 Feb. ..	Thinks miss-fires are attributable to the striker being too short.
5	„ ..	42nd	23 March	Thinks heavier bullet might be used to prevent lateral deviation in wind. Much in favour of the Martini-Henry, both on account of its shooting qualities, and the strength and simplicity of the breech action. Thinks the indicator might be made more prominent. Thinks that the trap in the butt would not stand the wear of ordering arms. Considers that the miss-fires of Rifle No. 157 were owing to a short piston. Pouches very inconvenient. Note.—The springs of these arms have been changed since they were used by the 7th and 23rd Regiments, and with the exception of arm 157, no arms have shown any miss-fires since the change.
6	„ ..	4th Bn. Rifle Brigade ..	15 Feb. ..	Thinks the Martini-Henry very superior to Snider in accuracy, and approves highly of the breech action. Attributes miss-fires to the piston being too sharp, and not striking the cap fairly. Pouches very inconvenient, and larger and heavier than necessary.
7	„ ..	2nd Bn. 13th	15 March	Thinks the Martini-Henry superior the Snider. The accuracy at long ranges much superior, but at short ranges not so good, as the Snider, owing, probably, to the notch in the back sight being very indistinct. Accounts for miss-fires from weakness of spring, but the piston of No. 27 rifle is shorter than those of the others. Nearly all the cartridges exploded when struck a second time, only three rifles, Nos. 27, 154, and 162 tried by this regiment.
8	„ ..	4th Bn. 60th Rifles ..	22 April .	Reports Martini-Henry to be much more accurate than the Snider, but rather undersighted from 500 yards upwards. Indicator does not sufficiently mark when rifle is at full-cock. The springs had been changed, and there were consequently very few miss-fires.
9	„ ..	2nd Bn. Rifle Brigade ..	9 Feb. ..	Thinks that miss-fires are owing to the pistons being too pointed, and that the present piston is too slight. Recommends a covering of leather for the breech action. Thinks the bolt more conducive to danger than to safety. A rifle was exploded accidentally, the serjeant handling it believing it to be bolted.

The Committee find that the several criticisms contained in the General Observations, which have not been dealt with in the answers to the twenty-one questions, may be grouped under the following heads, which will be considered *seriatim* :—

I. Miss-Fires.

These are attributed to various causes in addition to weakness of coil spring, as follows:

a. Trigger being pulled too gently.

In three instances is this suggested as a probable cause (Reports 1, 22, 27). As far as the reports go, it appears that the miss-fires have almost entirely ceased since the stronger springs have been placed in the arms (*see* Committee's Observations on Question 6).

It is not probable that with a spring of suitable and sufficient strength any miss-fires will occur from pulling the trigger gently, an essential to good shooting.

b. Striker being too short.

This is complained of in four reports (Nos. 4, 5, 7, and 21). The objection is applicable to all central fire breech-loading arms. There appears to have been some little want of uniformity in the length of the strikers, due probably to the arms having been "hand-made." There is no reason to anticipate that, when the arms are made by machinery, this defect will occur.

The Superintendent of the Royal Small-Arms Factory is fully alive to the importance of supplying strikers of correct and uniform length.

c. Striker being too sharp.

In one report (No. 6), this is suggested as a possible cause of miss-fires. The Committee are not inclined to agree with this opinion.

d. Position of anvil in cap.

One officer (Report No. 11) suggests this as a cause of miss-fires. It is a fact that occasional miss-fires are caused by the anvil having been accidentally placed on one side; but this is a defect in manufacture which very rarely occurs, and the present position of the anvil has been proved to be satisfactory during the long trials with cartridges fired from the Snider and the Martini-Henry rifles.

e. Indicator screwed too tight.

One officer (Report 12) has expressed his opinion that the working of the

General Observations—*continued.*

Number of Report.	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
10	Aldershot ..	33rd	15 March	Approves of the Martini-Henry. Considers it superior to the Snider in accuracy, especially at the longer ranges. Is easily kept in serviceable order. Thinks the barrel might be shorter. The pull-off is too great.	action may be impeded by the too tight screwing of the indicator. The Committee, after examination of the breech-action, do not understand how the indicator can be screwed too tightly, except by turning the keeper screw the wrong way, but the attention of the Superintendent, Royal Small-Arms Factory, will be called to this remark.
11	Dublin ..	1st Bn. Gren. Gds. ..	6 Feb. ..	Breech action appears perfect. The miss-fires attributed to weakness of main spring; possibly also to imperfection in the cap or position of the anvil. Up to 250 yards the Snider and Martini-Henry are about equal, but beyond it the superiority of the Martini-Henry is very great, and increases with the distance.	
12	„ ..	1st Bn. Scots Fus. Gds.	5 April .	Considers the Martini-Henry a good serviceable rifle. The armourer serjeant when remounting the breech action of rifle No. 74 screwed the indicator too tight, and so caused the rifle to miss-fire four times.	*f. The action of cold weather upon the spring.* Although this remark is made by one regiment quartered in Canada (Report 34), it is directly contradicted by the results of the trials made by another regiment in Canada (Report 38); the thermometer in both instances having been below zero. Both these trials were made with the weak springs, and the Committee cannot accept the evidence of the trials recorded in Report 34 as conclusive of the effect of cold weather upon the springs.
13	„ ..	2nd Bn. 15th	4 March.	Considers the Martini-Henry an excellent arm for a soldier if provided with a stronger mainspring, or with a cartridge with a more sensitive cap. Thinks the breech action should be more protected. Water will enter it whilst cleaning the barrels.	
14	„ ..	47th	2 April .	Considers the principle of the lock much better than that of the Snider if the spiral springs stand. The chief objection lies in the liability of water and sand to enter between the breech block and sides of the lock.	*g. The deterioration of the percussion powder.* This is suggested by one officer (Report 38) as a possible cause of miss-fires; but as the percussion powder in the caps is the same as has been in use for many years, and as the Committee are unaware of any complaints having been made of the deterioration of percussion caps, they are not inclined to assign any importance to this suggestion.
15	„ ..	56th	4 March.	Considers that the chief objection to the Martini-Henry arm lies in the tendency of the spiral springs to become weak, and the impossibility of preventing water from entering the breech action. Thinks the Henry barrel combined with the Snider action would provide the service with a better arm.	
16	Dublin ..	43rd	6 April .	None.	
17	Hythe ..	School of Musketry ..	15 Feb. ..	Some of the caps extracted frem the cartridges were exploded in a hot plate; some went off with a loud report, others merely squibbed off.	
18	„ ..	„ „ ..	13 March.	None.	
19	„ ..	„ „ ..	19 April .	There have been no miss-fires owing to the rifles having been supplied with stronger springs. During the previous trials the whole of the cartridges which missed fire exploded when struck again, either in the same or another rifle.	Having noticed the various suggestions which have been made to account for the great number of miss-fires which have occurred with the arms, and having assigned to each of these suggestions as much importance as it seemed to merit, the Committee think it proper to observe that there can be no doubt that the main cause of these miss-fires was the weakness of the spiral springs as originally issued. The concurrence of opinion on this point appears to be decisive (*see* Answers to Question 6), independently of the information which the Committee have received from other sources. Indeed, it is admitted that the springs were not so strong as those approved by Mr. Martini, who states in his letter 14. 2. 70, that he employs a spring of 40 lbs., but thinks that 33 lbs. will answer. He finds the springs issued in the two arms presented to him from Enfield were only 26 lbs.
20	„ ..	„ „ ..	16 May ..	None.	
21	Gravesend..	Royal Engineers ..	1 Jan. ..	The rifle highly approved of. The breech action admirable; rapidity and simplicity attained in a very high degree. The frequency of miss-fires point to some alteration being required, probably, in the length of the striker. The cartridges invariably exploded on a second blow. The sights not approved of (*vide* Remarks). A solid metal cartridge case preferred to the coil case. Disapproves strongly of the pouch, and suggests improvements. Considers that the packets of cartridges should be made up in papier mâché cases instead of paper wrappers. Remarks that the cleaning rod works loose and drops out during firing.	
22	„ ..	„ „ ..	31 „ ..	States that the miss-fires occur more frequently in rapid than in individual firing, although there have not been so large a percentage as when the rifles were last tried. Less likely to occur if the trigger be pulled with a jerk. Thinks they	

General Observations—*continued*.

Number of Report	Station.	Regiment.	Date.	Answers.	Remarks of Committee.
			1870.		
22 *cont.*	Gravesend..	Royal Engineers ..	31 Jan...	may be owing to some defect in the coil springs or strikers.	
23	„	„ „ ..	1 March.	States that the number of miss-fires is not so great, owing to the men having become used to the arm (*vide* Answers to Question 6). Thinks very highly of the arm, both with regard to the simplicity of the breech action and accuracy of the barrel.	
24	„	„ ..	1 April ..	Placed the rifle in the hands of recruit officers without giving them any previous drill.. They found no difficulty in using it. Some of them felt the recoil. Rifle No. 193 has fired 2,082 rounds of ball, and 1,020 of blank cartridge, without having been cleaned and with only one miss-fire.	
25	Portsmouth.	2nd Bn. 2nd	31 Jan...	Reports that the men who have used the rifles are confident that the Martini-Henry rifle is superior to the Snider. Freer admissions of the cartridges into the chamber is to be desired. The position of the lever is inconvenient in the bayonet exercise. The ball-bag issued with the rifles not approved of, from the difficulty of putting in and taking out the cartridges. Ten rounds of ammunition were kept in water for 17 hours; only two exploded, and in these the loss of the force in the powder had been great. Ten rounds were placed in water for five consecutive days, and were found perfectly serviceable.	
26	„	99th	3 Feb...	Reports that the men were highly pleased with the rifle. Doubts whether the miss-fires were occasioned by weak springs or cartridges not sufficiently sensitive. The rifles were easily cleaned. Ammunition placed in water for 12 hours would not explode. Does not approve of the pouch.	
27	„ ..	R. M. L. I.	28 Feb...	Considers the arm very strong, and calculated to withstand any amount of rough usage, and can be easily cleaned by the most unskilled man. The shooting was excellent, although the weather was most unfavourable. The scores made on an unfavourable day at 900, 1,000, 1,100, and 1,200 yards excelled those usually made with the Snider at 650, 700, 750, and 800 yards. The rapidity of fire has been about twice that of the Snider. The miss-fires are a most serious disadvantage, and if not remedied would counterbalance all the advantages of the arm. They occur most frequently when the trigger is pressed gently. The men consequently stated that they preferred the Snider breech action to the Martini-Henry. The cartridges fit too tightly into the chamber, but do not swell after emersion in water. The ball-bag not approved of. NOTE.—Out of the whole number of miss-fires (308) only four cartridges (all ball) failed to explode on being tried a second time in the same rifle.	
28	„ ..	101st	4 March.	None.	
29	„ ..	46th	2 May ..	Considers the Martini-Henry to be superior to the Snider in accuracy and penetration. Prefers the Snider action to that of the Martini-Henry, as he thinks the latter cannot be taken to pieces by the soldier for the purpose of cleaning, and also because there is no half-cock. Considers the breech action to be deep and clumsy, the men, when firing, are obliged to place their thumbs alongside, instead of on the head of the stock. Thinks the	

It also appears that the springs of the 200 experimental arms were not so strong as those of the arms with which the original experiments were made, on the success of which was based the recommendation that the rifle should be adopted. (*See* W. O. Papers $\frac{7669}{2267}, \frac{7669}{2271}, \frac{7669}{2279}, \frac{7669}{2293}, \frac{7669}{2298}, \frac{7669}{2301}, \frac{7669}{2303}, \frac{7669}{2319}, \frac{7669}{2321}$.

If future springs be made of the strength originally approved by Mr. Martini, the Committee see no reason to doubt that miss-fires will practically cease.

The Committee have made a calculation of the average number of miss-fires when the 86 rifles mentioned in these reports were fired with the weak springs, and when the same rifles were fired with the stronger springs, and find that with weak springs 163,277 rounds of ball and blank ammunition were fired with 3,814 miss-fires, showing a percentage of 2·34. With strong springs 26,463 rounds of ball and blank ammunition have been fired up to the present time with only 9 miss-fires, or a percentage of ·034.

II. BREECH MECHANISM.

The following objections are made to the breech mechanism:—

a. That accidents may occur in spite of the bolt and indicator.

Six Reports (Nos. 1, 3, 5, 8, 9, 29) contain an expression of opinion that the bolt and indicator are insufficient to afford complete security against accidents.

On this point the Committee would make the following observations:—

1. The question of the expediency of having the gun at full cock at the moment when the operation of loading is completed is one which has not been overlooked, and the late Small Arms Committee were of opinion that, in order to obtain the full advantage of a breech-loader in respect of rapidity, it is desirable to avoid the extra motion of cocking a rifle after loading. In this opinion the present Committee concur. The system is not necessarily attended with danger if the soldiers are properly trained.

2. Should it be deemed necessary at any time to carry the arm loaded, the bolt is even more efficient than the "half cock," and the operation of bolting the arm safer, than lowering the hammer.

3. With regard to the indicator not sufficiently distinguishing whether the arm be cocked or not, the Com-

General Observations—*continued.*

Number of Report.	Station.	Regiment.	Date.	Answer.	Remarks of Committee.
29 *cont.*	Portsmouth.	46th	1870. 2 May ..	Henry barrel with the Snider or Henry action, a shorter cartridge, and a diminished pull off, together with the back sight more deeply notched and placed nearer the breech, would be a better weapon than the Martini-Henry.	mittee would point out that it requires a trained eye to distinguish between the full and half cock of an ordinary hammer, while the position of the indicator, with reference to the breech-pin, is readily distinguishable, not only by sight, but by touch, a point of some importance at night.
30	„	1st Bn. 25th	3 „ ..	Considers that the Martini-Henry surpasses the Snider for accuracy of sighting, lower trajectory, and greater penetration, but considers that, owing to the recoil, many men will be afraid of it, and make bad shooting, although a good shot will find it easier to shoot with accuracy.	
31	Quebec ..	69th	31 Jan. ..	None.	
32	.. ..	„	28 Feb. ..	Ten rifles reported upon. Considers the trials, so far as they have been made, very satisfactory, excepting with rifles Nos. 12 and 100 (*vide* Answers to Questions 2 and 6). The sword bayonet does not answer for cutting large pieces of wood. The fault of the saw lies in its being too short, and in the handle being too short and small. It will cut through small pieces of wood easily.	
33	„ ..	„	31 March.	Thinks the accuracy of the arm very satisfactory.	
34	Montreal ..	1st Bn. Rifle Brigade ..	31 Jan. ..	Ten rifles reported upon. There appeared to be more miss-fires during the very cold days than on other days. A small tree was cut down by the saw, and some brush cleared away with the sword.	
35	„ ..	„ „ ..	28 Feb. ..	In most cases the fault of the miss-fires lay with the rifles, not with the cartridges. Suggests that a "ramoneur," such as is used in breech-loading sporting rifles, should be issued for the purpose of cleaning the rifles.	
36	„ ..	„ „ ..	31 March.	None.	
37	Ottawa ..	1st Bn. 60th Rifles ..	31 Jan. ..	Ten rifles reported upon. Many cartridges which have missed fire have exploded on a second trial.	
38	„ ..	„ „ ..	28 Feb. ..	Two loaded Sniders, and two loaded Martini-Henry with ten rounds each, were left exposed at night, termometer ranging from 44° above, to 6° below zero. No ill effects observed in either. Supposed that miss-fires are owing either to springs becoming weak, or percussion powder deteriorating.	
39	„ ..	„ „ ..	31 March.	None.	
40	Portsmouth	H.M.S. Excellent ..	31 Jan. ..	Three rifles tried. For the Navy the rifle would be more convenient if shorter. States the practice has been carried on at great disadvantage, owing to the bad weather, but the Instructor and men express themselves very much satisfied with the rifle. The rifles have been greatly pulled about by the men, but none have become injured.	
41	Devonport..	H.M.S. Cambridge ..	29 „ ..	The trigger is too near the trigger-guard. Three rifles tried.	
42	Curragh ..	1st Bn. 16th	7 May ..	Recommends a water-tight leather covering for the breech. Remarks that the cleaning-rods are very liable to get loose and drop out.	
43	„ ..	2nd Bn. 16th	9 „ ..	Recommends a covering for breech. Remarks that the ramrods become loose after a few rounds have been fired. Fouling, after firing fifty rounds blank ammunition, considerable.	
44	„ ..	30th	9 May ..	Preferred by the men for hardiness and accuracy, and because the painfully tedious position of the "support" would be done away with. Recommends a covering for breech to protect it from weather. Pull off too strong. Thinks that the continuous explosion of powder will ultimately wear away the upper end of the grooving, on account of the space between the end of blank cartridge and the grooving, where	

b. Difficulty of examining interior.

In two reports (Nos. 1 and 29) some exception is taken to the arm on this account. The Committee would point out that the dismounting of the breech-action is equivalent to the dismounting of the breech-action and lock of the Snider rifle; and that the former operation is simpler and requires less mechanical contrivance. The Committee do not contemplate that it will be necessary to strip the breech-action of the Martini-Henry rifle more frequently than it is necessary to dismount the locks of the Snider.

c. Water liable to get into the breech-action in washing out.

In one case (Report 13) this is complained of. It should be noticed that the instructions issued with the arms direct that in washing out the arm is to be "held muzzle downwards, in order to prevent the possibility of water entering the striker hole." This operation, however, does not fulfil its object. The Committee think that the system of cleaning out after blank firing, which is in use in the Royal Laboratory, might be advantageously tried—viz., to leave the cartridge case of the last round in the chamber until the rifle is washed out.

The fouling after ball firing is so slight, that to clean the rifle a damp rag or tow, followed by an oil rag, will answer perfectly.

d. Piston not large enough to stand wear.

In Report 9, an opinion is expressed that the piston is too slight to wear well. This opinion does not appear to be sufficiently supported by facts to warrant the Committee in attaching importance to it. There is no reason to doubt that the piston of the Martini-Henry will wear as well as that of the Snider rifle.

e. Pull-off of trigger too strong.

There is only one instance (Report 10) in which the "pull-off" is complained of as being too strong previous to the substitution of the stronger springs. There is, however, no doubt that the

General Observations—*continued.*

Number of Report.	Station.	Regiment.	Date.	Answer.	Remarks of Committee.
44 *cont.*	Curragh ..	30th	1870, 9 May .	a quantity of fouling accumulates. Recommends a loop being attached to each packet of ammunition, to enable it to be easily pulled out of the pouch.	stronger spring has increased the pull-off to an inconvenient degree. The attention of the Superintendent Royal Small-Arms Factory has been called to this point, and he has stated that there will be no difficulty in making the pull-off the same as that of the Enfield rifle (*vide* W. O. Minute $\frac{7669}{2406}$.)
45	Ottawa ..	1st Bn. 60th Rifles ..	30 April..	None.	
46	Quebec ..	69th	30 „ „	Remarks that since new springs have been put in, only one miss-fire has occurred in 4,000 rounds.	
47	Montreal ..	1st Bn. Rifle Brigade ..	30 „ ..	Since new springs have been put in, no miss-fire has occurred. The new springs have increased pull-off, which is now from 10 to 12 lb.	
48	Dublin ..	Inspector of Musketry..	19 March and 7 April..	States that the men using the Martini-Henry expressed themselves greatly pleased with it. Found no inconvenience from recoil, which was not greater than that of the Snider. Recommends a thin platinum wire in the bar at the top of flap of back sight. Has observed no impediment in the action of the breech, but thinks that rain and dirt entering it will cause injury. Recommends a leather cover to breech action, and that a damp rag should be used for cleaning the rifle after blank firing, instead of pouring water into the barrel. Thinks the accuracy of the rifle decidedly superior to that of the Snider at the longer, but not at the shorter, ranges. Few miss-fires occurred after the substitution of stronger springs.	*f. Breech mechanism so deep that it renders it difficult for men to place their thumbs over the top when at the "Present."* One officer (Report 29) raises this objection. The Committee conceive that with men with very small hands there may be a difficulty in keeping the thumb in the position laid down by the Musketry Regulations, but they do not think the objection is one to which much importance need be attached.
49	Portsmouth.	Inspector of Musketry, S.W. District	8 Feb...	Approves of the reduced length of the arm. The rapidity of the loading of the Martini-Henry is more than double that of the Snider. The accuracy of the shooting of the Martini-Henry is much greater than that of the Snider, and the allowance necessary for wind much less. There seems to be no tendency to foul after continuous firing. The manipulation of the breech action is easy, simple, and safe. The lock does not appear liable to injury from rough usage, wear or weather. The rifles of the 2nd Regiment were piled for a week during the month of January in the open air without cleaning, and were not injuriously affected by the exposure. The cartridges appear strong, and not liable to injury from wet (*vide* experiments made in 2nd and 99th Regiments). The sword bayonet is a great improvement on the old bayonet. The defects of the arm are as follows: The position of the back sight when the rifle is carried at the trail. The sharp edge at the entrance into the chamber. The tight fitting of the cartridge in the chamber. The inconvenience of the expense pouch; and the numerous miss-fires, which appear to be the fault of the arm, not of the ammunition.	*g. Position of lever bad for bayonet exercise.* In Reports 1 and 25 it is stated that the men find it difficult to grasp the rifle at the small of the butt at bayonet exercise. Although only two officers report this, the Committee agree that the lever is in the way at bayonet exercise. *h. Trigger too near trigger-guard.* Report No. 41 suggests a slight alteration in the position of the trigger, but the Committee do not think it advisable to adopt this suggestion. *i. A covering for the breech recommended.* This is recommended in six Reports (Nos. 9, 42, 43, 44, 48, 50). As before observed, the rifle was severely tested in the competitive trials as to its liability to injury by dust and damp (Report of Special Committee on Breech-loading Rifles, p. vii to ix), and the Committee are of opinion that there is no more need of a cover for this rifle than for the Snider or Enfield rifles, and they consider that there are strong objections to the use of a cover for a military arm.
50	Dublin ..	Inspector of Musketry..	11 May ..	Considers the Martini-Henry far superior to the Snider in accuracy. Since new coil springs have been fitted there have been exceedingly few miss-fires. Recommends a leather cover for breech. After blank firing a considerable amount of fouling.	

Remarks of Committee—*continued.*

III. Arm generally objected to as too long.

This objection has been urged in two Reports (Nos. 10 and 40), one of which is from H.M.S. "Excellent." It has been stated in the Report of the Breech-loading Committee (p. 21), of 11th February, 1869, that a barrel of 31 inches, giving a length of arm, with short stock, of 47 inches, will shoot equally well with the present pattern of barrel of 35 inches, and total length of arm of 51 inches. There can be no doubt that for the Naval Service a shorter rifle would be preferable, and the Committee consider that a rifle of the same length as that in use by the Rifle Brigade and 60th Rifles would be more serviceable than a rifle of the present length, for the following reasons, viz.:—The rifle will be lighter, better balanced, and handier; on the other hand it will be shorter as a pike, and not so convenient for firing in two ranks standing, objections which do not seem to have caused the Rifle Regiments to condemn the short rifle, and which the Committee do not think sufficient to weigh against the advantages beforenamed.

General Observations—*continued.*

Remarks of Committee—*continued.*

IV. Ammunition objected to.

1. *Bullet too light.*

This is only stated in one Report (No. 5). The weight and size of the bullet now in use has been decided on by the former Committee after great care and deliberation. The Committee, therefore, see no reason to attach weight to this objection.

2. *Solid metal cartridge preferred.*

No. 21 prefers a solid metal cartridge to the coiled case. The coiled case was decided on by the previous Committee, and this Committee see no reason for giving a preference to the solid metal cartridge over that at present in use.

3. *Excessive fouling of blank.*

This objection, in three Reports (Nos. 43, 44, and 50), can only have reference to cleaning the rifle, and has already been met. There is a suggestion in Report 44, that the continuous explosion of powder will tend to wear away the grooving. The Committee will note this for trial.

V. Objections to pouch and ball bag, and method of packing ammunition.

The pouch and ball bag are objected to in Reports Nos. 5 6, 21, 25, 26, 27, 44, and 49, on the following grounds, viz.:—that it is difficult to place the cartridges in the ball bag, and difficult to extract them therefrom; and in the pouch the packets of ammunition sink too low, rendering it difficult to take them out. This remark is found to apply more especially to the packages of blank cartridges. It is recommended in Report No. 21 that the cartridges should be packed in tens in papier maché cases, and that the ball bag should be soft. In Report No. 44, it is recommended that a loop should be placed on the packages of ammunition to help in taking them from the pouch.

This Committee would remark that the subject connected with pouches was not referred to the previous Breech-loading Committee, and there are no data before them on which to form an opinion. They recommend, therefore, that attention should be directed to these points.

VI. Other Objections.

1. *Trap in heel of butt not standing wear.*

In Report No. 5 it is stated that the trap in the butt is liable to become loose and unserviceable through wear. This remark is only stated in one report. The arms have not been sufficiently long in use for the Committee to give a decided opinion on this point.

1. *Cleaning rods work loose.*

In Reports 21, 42, and 43, it is stated that the cleaning rods work loose. The Committee recommend that the attention of the Superintendent of the Royal Small-Arms Factory at Enfield, should be called to this matter, in order that some better method of securing the cleaning rods be devised.

Instructions to the Committee	iii
Report	iii
Evidence	1
Appendix	77

THE SECRETARY OF STATE'S INSTRUCTIONS TO THE COMMITTEE.

AS a basis the Committee will take the following conditions :—

1. That a fixed annual sum for Retired Full Pay be abolished prospectively ;

2. That Retirement of Regimental Officers (not being General Officers) be compulsory at the age of 60, on 600*l.* a year if the Retirement be absolute.

The points on which I desire that the Committee will report are :—

1. The expediency of adopting, with or without relaxation, compulsory periods, either of Age or Service, for Retirement from ranks below that of Colonel ;

2. The expediency of permitting Optional Retirement from any Rank at periods below that fixed for Compulsory Retirement ;

3. The relative expediency of placing Officers retired compulsorily at 60 on a List of Retired Officers or on a List of Reserved Officers with reversionary rights as regards appointment of Colonel-Commandant ;

4. The Cost of the measure to be adopted ;

5. The bearing of the measure on Supersession as regards other Arms of the Service ;

6. The extent to which the measure should be introduced at once, and prospectively, regard being had to Vested Interests.

(Signed) E. C.

February 14, 1870.

THE Committee appointed by Minute of the Secretary of State for War, dated 14th February, 1870, "to consider certain points in a proposed measure for granting Retirement to Non-Purchase Corps," beg to submit the following Report :— See Copy of Instructions annexed.

1. We have taken evidence from Officers of various ranks in the Royal Artillery and Royal Engineers, and from the Actuaries who have been placed in communication with us ; and before entering on the consideration of the questions directly referred to us, we proceed to state briefly the main points arising out of the Evidence and Returns laid before us which bear on the present condition of the two Corps.

2. The numbers of Officers on the Establishment of the Royal Artillery and Royal Engineers are as follow :—

Rank.	Artillery.				Engineers.			
	Imperial.		Late Indian.		Imperial.		Late Indian.	
	Effective.	Seconded and Supernumerary.	Effective.	Seconded and Supernumerary.	Effective.	Seconded and Supernumerary.	Effective.	Seconded and Supernumerary.
Colonel Commandant	17	..	14	..	8	..	7	..
Major-General	15	..	12	..	8	..	5	..
Colonel	34	..	28	11	16	1	14	..

1865	46	37	,, ..	24	23	,,
1866	48	45	,, ..	16	16	,,
1867	50	50	,, ..	16	15	,,
1868	48	48	,, ..	32	31	,,
1869	42	41	,, ..	40	39	,,
Total ..	1,364	..	..	630	..	

4. The means of Retirement at present existing for Officers of the Royal Artillery and Royal Engineers are—

I. The Annual Vote for Retired Full-Pay, viz., for Royal Artillery, 42,400*l.*; Royal Engineers, 18,285*l.*

II. Half-pay after twenty-five years' Service, under Clause 90 of the Royal Warrant of 3rd February 1866.*

* As the Warrant at present stands, any officer on completing twenty-five years' Service may retire on Half-pay. Before the issue of that Warrant, the following limitation existed of the number thus allowed to retire on Half-Pay:—

	Royal Artillery.	Royal Engineers.
Lieutenant Colonels	2 annually	1 annually
Captains of not less than 24 years' Service	3 annually	1 every 2 years
Lieutenants of not less than 20 years' Service.. ..	1 annually	

This limitation was accidentally omitted from the Warrant of 1866. The Committee recommend that it should not be reinserted (see paragraphs 51 and 57.)

5. The Retired Full-Pay Votes for the two Corps are at present appropriated as follows:—

	Royal Artillery.	Royal Engineers.
	£ s. d.	£ s. d.
Appropriated	42,085 2 6	17,741 4 7
Unappropriated	314 17 6	543 15 5
	42,400 0 0	18,285 0 0

6. The grants made from those Votes since 1859 are as follows:—

	Royal Artillery.	Royal Engineers.
	£ s. d.	£ s. d.
1859	365 0 0	..
1860	1,200 0 0	600 0 0
1861	1,458 0 0	..
1862	1,600 0 0	600 0 0
1863	3,000 0 0	965 0 0
1864	3,000 0 0	2,165 0 0
1865	1,800 0 0	365 0 0
1866	600 0 0	1,200 0 0
1867	5,400 0 0	2,765 0 0
1868	4,800 0 0	2,143 14 2
1869	2,743 14 2	1,365 0 0

7. The average amount appropriated annually during that period was—

	£
Royal Artillery	2,360
Royal Engineers	1,106

8. The following Table shows the Ages of the Officers who received Grants from the Retired Full-Pay Votes during the same period:—

Ages.	No. of Officers retiring in each Year.										
	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	1868.	1869.

42	..	..	..	..	..	*1*	..	..	..	..	..

* The figures in Italic show Artillery; those in Roman, Engineers.

9. The numbers of Officers who have availed themselves of the provisions of Half-Pay under the Warrants of 14th October, 1858, 28th March, 1861, and 3rd February, 1866, in each year since 1859, have been :—

Year.	Number of Officers retiring on Half-Pay.	
	Royal Artillery.	Royal Engineers.
1859	..	..
1860	2	..
1861	3*	2*
1862	2	..
1863	..	1†
1864	2	1†
1865	..	1†
1866	2	..
1867	..	2
1868	..	..
1869	2	..
Total	13	7

10. The Age and Service of the Senior and Junior Officer in each Regimental Rank of the two Corps are at present as follows :—

Rank.	Royal Artillery.		Royal Engineers.	
	Age.	Service.	Age.	Service.
Colonel—	Years.	Years.	Years.	Years.
Senior	$56\frac{8}{12}$	$37\frac{2}{12}$	$66\frac{8}{12}$	$43\frac{5}{12}$
Junior	$46\frac{11}{12}$	$28\frac{9}{12}$	$48\frac{5}{12}$	$32\frac{9}{12}$
Lieutenant-Colonel—				
Senior	$46\frac{4}{12}$	$28\frac{3}{12}$	$49\frac{7}{12}$	$32\frac{3}{12}$
Junior	$41\frac{8}{12}$	$23\frac{6}{12}$	$42\frac{10}{12}$	$23\frac{9}{12}$
Captain—				
Senior	$41\frac{3}{12}$	$23\frac{6}{12}$	$42\frac{11}{12}$	$23\frac{9}{12}$
Junior	$35\frac{2}{12}$	$16\frac{2}{12}$	$31\frac{3}{12}$	15
Second Captain—				
Senior	$34\frac{8}{12}$	$15\frac{10}{12}$	$32\frac{8}{12}$	$14\frac{10}{12}$
Junior	$31\frac{3}{12}$	$12\frac{5}{12}$	$29\frac{3}{12}$	$12\frac{2}{12}$
Lieutenant—				
Senior	$31\frac{7}{12}$	$12\frac{5}{12}$	$30\frac{7}{12}$	$12\frac{2}{12}$
Junior	Recently joined.			

11. The average Service of Infantry Officers is as follows :—

	On attaining the Rank of			
	Lieutenant-Colonel.	Major.	Captain.	Lieutenant.
	Years.	Years.	Years.	Years.
Mean of Purchasing and Non-Purchasing Officers of 1852	24·9	19·9	9·9	3·1
Ditto, ditto, of 1870	23·7	18·1	9·1	2·8
General Average of present Officers	23·3	17·9	8·8	2·8

12. The following are the periods of Service which have been assumed as representing a proper state of Promotion in the Royal Artillery and Royal Engineers, and are generally referred to in our proceedings as the "Standard Periods."

	Years.
On becoming Second Captain	12
,, Captain	18
,, Lieutenant-Colonel	25
,, Colonel	34
,, Major-General	40

* One of these Officers sold out the same day.
† Each of these Officers sold out the same day.

13. From the Table on the foregoing page it will be seen that the present Service of the Officers below the rank of Lieutenant-Colonel differs very little in the two Corps, though their Ages are rather higher in the Artillery than in the Engineers; whilst in and above the rank of Lieutenant-Colonel the Age and Service of the Engineer Officers exceed those of the Officers in the Artillery.

14. From the evidence given, and from a comparison of the actual Service of the Officers in both Corps with the Standard Periods, it does not appear that either Corps can be said to be in an unhealthy state at the present moment. Gambier, 9. Adye, 321. Majendie, 839. Keane, 167. Leahy, 419, 420. Actuaries, 912, 976.

15. It is stated in evidence, however, that both Corps are gradually approaching a state which may seriously affect their efficiency; and this condition as regards the Royal Artillery will be arrived at in about five years, and as regards the Royal Engineers in about one year. Gambier, 14, 36, 37. Adye, 352, 357. Keane, 175.

16. Amongst the Officers in the middle and junior Ranks of both Corps a feeling of despondency in regard to their future prospects of Promotion is stated to be generally prevalent, and it is said that the depressing effect of this state of things may even now be considered as injurious to the efficiency of the Corps, and that it must gradually become more so. Harrison, 730, 779, to 781. Majendie, 839. Collins, 697. Innes, 888. See, also, Actuaries, 917, 918.

17. The present abnormal condition of both Corps, and especially of the Royal Artillery, arises from the existence of large batches of Officers in the Junior Ranks, of about the same Age, who came into the Corps in consequence of the augmentations of late years. Gambier, 19. Adye, 333. Majendie, 835. Collins, 697. Harrison, 762.

For instance (as shown above):—

91	entered the Royal Artillery in		1855
73	„	„	1856
73	„	„	1857
81	„	„	1860
72	„	„	1861
81	„	„	1864

whereas, the average number entering annually during the last thirty years has been 45.

And 38	entered the Royal Engineers in		1855
45	„	„	1857
32	„	„	1859
40	„	„	1862
41	„	„	1864

whereas, the average number entering annually during the last thrty years has been 21.

18. The foregoing is a brief Summary of the Evidence as regards the condition of the officers in the two Corps; and, after very careful consideration of the subject, we have come to the following conclusions:—

19. We are agreed in thinking that the two Corps—the Royal Artillery Regiment and the Corps of Royal Engineers—are so different from each other in the nature of the duties assigned to them, and in the Organization required for the discharge of those duties, and also are in such different positions with reference to their present length of Service, as well as to their prospects of Promotion, that it will be expedient to consider separately the measures that may be best suited to meet the circumstances of each Corps.

20. We, therefore, proceed in the first place, to state our views as regards the case of the Royal Artillery:—

Royal Artillery.

21. By the assumed Standard, Promotion to the several Ranks should be attained after the following periods of Service:—

Major-General, after 40 years.
Colonel, after 34 years.
Lieutenant-Colonel, after 25 years.
Captain, after 18 years.
Second Captain, after 12 years as Lieutenant.

22. The actual periods in the Royal Artillery are as follows:—

Major-General, after 38 years.
Colonel, after 28 years.
Lieutenant-Colonel, after 23 years.
Captain, after 16 years.
Second Captain, after 12 years as Lieutenant.

23. Looking at the above comparison between the Standard Periods after which Officers of the Royal Artillery may reasonably expect their Promotion, and those after which

the actual Promotions are now occurring in the Royal Artillery, we find it impossible to admit that there is at present any stagnation of Promotion in that Regiment, or any thing more than an apprehension of a prospective stagnation at some future period.

24. In our opinion, therefore, any measure for ensuring increased Promotion in the Royal Artillery should, in like manner, be prospective only, although it may be advisable at once to take some steps to facilitate Retirements from the Corps: first, of any Officers who may be inefficient; and secondly, of those who are dissatisfied with their position, and are desirous of quitting the Service.

25. In making the following proposals we have not based them on the principle of encouraging numerous Retirements from the Service, but rather on the principle of retaining Officers in as efficient a state as possible.

26. There can be no doubt that Artillery is destined every year to fill a more and more important place in Army Organization; and it cannot, therefore, be conducive to the interests of the Country, nor consistent with real economy, that measures should be adopted to promote excessive Retirements from that Branch of the Army, or to pension off Officers who, in their education and training, have caused a large expenditure of Public Money, and are now in a position to repay that outlay by many future years of good and efficient Service.

27. We consider it far more consistent, not only with true economy, but also with the best interests of the Corps, to adopt measures that will improve the prospects, and consequently will increase the emoluments of Artillery Officers while serving, than to expend large sums of Public Money in inducing carefully trained and highly educated Officers to cease to serve the Country.

28. Nor have we found it possible to approve the principle of Compulsory Retirement in the lower Ranks.

29. In a Non-Purchase and strictly Seniority Corps it can only be a defective Organization, as regards the proportions of the several Ranks, that could cause such permanent delay of Promotion as would leave Officers so long unpromoted that they would become inefficient for the duties of their respective Ranks.

30. It is, therefore, only necessary so to organize the Corps throughout the several Ranks as to give every Officer a fair expectation of Promotion, and then no System of Compulsory Retirement in the lower Ranks can be needed—a System always attended with great hardship to the individual Officers, and, in the case of the Artillery, specially inconvenient to the Service as applying to large numbers of Officers bearing the same date of first commission.

31. We are of opinion that, for the purposes of our present inquiry, the proportion of Ranks in the Royal Artillery is satisfactory, and calculated in a normal state to secure to every Officer a fair expectation of Promotion within reasonable periods, having regard to the periods at which Promotion is obtained in other Branches of the Service.

32. But the state of the Royal Artillery, through the great additions made to the Regiment during the Crimean War and the Indian Mutiny, being now abnormal, and that to an extent that must cause a great Stagnation of Promotion prospectively, commencing in about five years time, we consider that this exceptional and prospective state of things should be met by an exceptional and prospective Remedy.

33. This Remedy, it appears to us, might consist in the creation, by-and-by, of a temporary Redundant List in the Ranks of Lieutenant-Colonel, Captain, and Second Captain, such Redundant List to be after a time gradually absorbed by filling up only alternate Vacancies in the several Ranks.

33A. This proposal does not affect the total Strength of the Royal Artillery, nor would the Promotions on to the Redundant List affect the Appointment of Cadets to the Regiment.

34. Without insisting on the exact figures, we would propose some such plan as the following:—

At the end of two years from this time, say in April 1873, there should be promoted without vacancies—

12 Captains to be Lieutenant-Colonels on Major's pay;

10 Second Captains to be Captains (twenty-two in all);

8 Lieutenants to be Second Captains (thirty in all);

And in each of the four following years (1874-75 to 1877-78) the same addition should be made.

The corps would then stand thus, on the 31st March, 1878, exclusive of Seconded Officers:—

	British Establishment.	Redundant List.	Total.
Lieutenant-Colonels	66	60	126
Captains	137	50	187
Second Captains	160	40	200
Lieutenants	325	—	175
Total	688	150	688

This Redundant List should be allowed to continue for seven years without reduction and from 1st April, 1885, each alternate Vacancy that occurs in those Ranks should be absorbed until the Corps resumes its present establishment; such absorption not to exceed annually the numbers that were added during the five years of increase.

35. In making this Recommendation we have not lost sight of the fact that it would seem to interfere in some measure with the Regimental Organization of the Royal Artillery. In many cases Batteries would be commanded by Regimental Lieutenant-Colonels; and again a Battery would have attached to it two Captains or two Second Captains.

36. But it appears to us that this point of what may, without offence, be termed merely a question of Military Etiquette, should not be allowed to prevail against the advantages to be obtained by a System that will retain to the Public the Services of trained Officers in comparison with any scheme for paying those Officers to leave the Service.

37. Already, in many cases, a Battery of Artillery is commanded by a Brevet or Army Lieutenant-Colonel; as in the Line many Companies are commanded by Brevet Field Officers. Again in the Line the Senior Major of a Regiment commands the Junior Major; so that a Lieutenant-Colonel commanding a Battery under a Senior Lieutenant-Colonel commanding the two Batteries would not be thereby placed in a derogatory position.

38. The plan for giving Extra Promotions by appointing Supernumeraries in the several Ranks who should continue to perform the duties of their former Ranks until absorbed, has, in our opinion, so many advantages over any other alternative Scheme for relieving the expected stagnation in the Royal Artillery, that we cannot but feel that any minor objection to it should be lost sight of in the object of thus securing the General Interests of the Corps.

38*a*. As regards this proposal (paragraphs 33 to 38) the Committee are not unanimous, and annexed will be found a dissent therefrom by Colonel Egerton.

38*b*. The majority of the Committee, while drawing attention to the fact (as stated in paragraph 15) that the question of Stagnation of Promotion in the Royal Artillery does not press for another five years, venture to suggest that, if this proposal is not adopted, nothing at present should be determined on with regard to Extra Promotion in the Royal Artillery, and that the experience of the next two or three years should be taken advantage of before further considering the subject.

38*c*. Should this course be adopted, the Committee agree in recommending that the sum proposed in paragraph 49 for buying out Officers of Certain Ranks might be increased from 6,000*l*. to 10,000*l*. a year, until some measure for Extra Promotion be either adopted or decided against.

39. As regards Retirement we have carefully considered whether in future the sum allowed for Retirements from the Royal Artillery could be distributed in a manner that would more effectively than at present meet the fair requirements of the Regiment; secondly, whether power should not be given to the Secretary of State to remove inefficient Offiers from the Regiment, granting them some small rate of Temporary Half-Pay; and thirdly, whether Voluntary Retirements in the lower Ranks might not be allowed to a limited number, the Officers receiving a rate of retired pay according to the rank they hold, or else certain fixed sums on resigning their Commissions.

40. As regards the Sum allowed for Retirements from the Royal Artillery (42,400*l*. a year) we are of opinion that any sum devoted to facilitate Retirement might be employed more advantageously than under the present System.

* *Extracts from Royal Warrant of October* 14, 1858.

Art. 30. . . . . No Officer shall be placed on the Retired Full-Pay List who has not served on Full-Pay of a Regiment, or in a Staff situation, for an aggregate period of thirty years, unless under special circumstances arising from ill-health contracted in the Service, or in consequence of wounds received in Action, it shall be deemed expedient by Our Secretary of State for War to reduce such Service to any shorter period than thirty years.

31. The Retirement of Officers of the Royal Artillery and Royal Engineers shall not be confined to the ranks of Lieutenant-Colonel, Captain, and Lieutenant, but may include a proportion of unattached General Officers

41. The present System is as shown below;* and it is found that the Senior Colonels of the Royal Artillery are not willing to avail themselves of this Retirement, so that it is taken only by comparatively Junior Colonels.

42. We recommend that the present Regulations on this subject be at once cancelled, and that, on the Compulsory Retirement of a Colonel of Royal Artillery at the age of 60, he should have the option either of retiring altogether from the Service, on an annuity of 600*l.*, with a step of Honorary Rank, or of being retired on the Full-Pay of his Rank., viz., 1*l.* 6*s.* a day, remaining on the List for Succession to the rank of Major-General, and to the post of Colonel-Commandant.

43. With a view to obviate the objection that the Compulsory Retirement based on age only might in some cases give a preferential advantage to Junior Colonels over their Seniors in the Regiment, if of less age, we recommend that for every year, or portion of a year, wanting to complete forty years' Service, a deduction of 15*l.* should be made from the Annuity of 600*l.*

44. But for the fact that our instructions appear to limit the Annuity to a maximum of 600*l.*, we should have been inclined to have recommended a corresponding increase of 15*l.* for each year's service over forty which may have been completed by any Officer compulsorily retired at 60 years of age.

45. Also that any Colonel of the Royal Artillery who may have completed 35 years' Service should be allowed voluntarily to retire from Regimental duty on 25*s.* a day, Unattached Pay; and that any Lieutenant-Colonel who may have completed 30 years' Service should be similarly allowed to retire on 20*s.* a day; both classes having the right to succeed to the rank of Major-General in their turn.

46. As regards the enforced Retirement of inefficient Officers, we recommend that the power now possessed by the Secretary of State, under the Warrant of 1st June, 1868, to place inefficient Officers of the Departments of the Army on low rates of Temporary Half-Pay, should be extended to cases of inefficiency among Artillery Officers.

47. As regards allowing Voluntary Retirements from the lower Ranks, we think that a limited number of Captains, Second Captains, and Lieutenants with over ten years' service, might be allowed to retire annually on a rate of Pension to be fixed according to their Rank, without reference to length of Service. The retirements from these Ranks should be offered to Captains, Second Captains, and Lieutenants in equal numbers, and to the Seniors of each Rank in succession, so far as the Funds would allow.

48. The number to be thus permitted to retire might be limited by the amount remaining unissued of the Grant for Retirement after providing for the Colonels retiring compulsorily or voluntarily as proposed above; and with this object the grant should be increased from 42,400*l.* to 45,000*l.* a-year.

49. Or, should it be decided no longer to maintain a specified sum for Retiring Pensions, we would recommend that a sum of 5,000*l.* or 6,000*l.* should be taken on the Estimates annually, for the next three or four years, for the purpose of buying out Officers of the Ranks of Captains, Second Captains, and Lieutenants, who might wish to quit the Service, allowing to each Officer such lump sum as might represent the Regulation Price of the Commission of an Officer of corresponding Rank in the Line.

50. In the present year's Estimates it is understood that the sum of 45,000*l.* taken to purchase the difference between the value of an Ensign and Lieutenant's Commission, will not be required for that purpose. We would submit, therefore, whether 6,000*l.* of this sum might not be allotted to purchasing the resignation of their Commission from Captains, Second Captains, and Lieutenants of the Royal Artillery during the present year.

51. We recommend that the right to retire on Half-Pay after twenty-five years'

and Regimental Colonels who, relinquishing the prospect of succeeding to the command of Battalions, shall be permitted to retire on 600*l.* a-year.

32. Lieutenant-Colonels of Royal Artillery and Royal Engineers, with the rank of Colonel, of not less than thirty years' service, will be permitted to retire on 400*l.* a year; and Lieutenant-Colonels, of shorter periods of service, and Officers of inferior rank, of Artillery and Engineers, on their regimental pay, subject to the provisions of Clause 30, as to unfitness from ill-health and wounds received in action.

33. The Retired Pay of Lieutenant-Colonels shall be 20*s.* a day.

34. Each Officer placed on the retired full-pay list shall receive a step of honorary rank, together with the full-pay of the rank from which he retired (or the special rates applicable to Officers of the Royal Artillery and Royal Engineers); but such Officer cannot be further promoted.

35. The Regimental Field Officers of Royal Artillery and Royal Engineers who have been placed on the Retired Full-Pay List, or who may have retired upon half-pay as such, in consequence of wounds or ill-health contracted in the service anterior to Our Warrant of the 3rd November, 1854, shall be promoted in succession up to the rank of Colonel and General Officer, when those who stood next below them on the effective establishment are so promoted. On attaining the rank of General Officer, a number not exceeding eight of the Royal Artillery, and four of the Royal Engineers, shall be allowed to receive 400*l.* a year each, and the two seniors of the Royal Artillery, and the Senior Officer of the Royal Engineers who shall have been promoted, shall each receive 50*l.* a year, in addition to the before-mentioned sum of 400*l.* per annum.

Service, under Clause 90, of the Pay Warrant of 1866, should be continued to *all* Officers of the Royal Artillery, without the limitation as to numbers that formerly existed.

52. We feel satisfied that the measures for increasing Retirements which we have here proposed, will tend, at a very small cost to the Public, immediately to increase the efficiency of the Regiment of Royal Artillery; while the prospective Promotions to be made from 1873, will remove the apprehensions entertained by the Officers of any coming Stagnation in their Promotion, and will secure for many years to come the advancement of the Artillery Officers to the several Ranks within, or closely upon, the several periods which have been assumed as the Standard Periods at or about which Promotion to the several Ranks might reasonably be expected by the Regiment.

Royal Engineers.

53. As regards the case of the Royal Engineers; while we are of opinion that, in respect to Promotion, other measures than those proposed for the Royal Artillery ought to be applied to this Corps, we consider that, in respect to Retirement, all the measures we have proposed for the Royal Artillery should be made applicable to the Royal Engineers, except as regards the grant of Voluntary Retirements from the lower Ranks.

54. Colonels of the Royal Engineers retiring compulsorily after 60 years of Age should be allowed the option of taking a Pension of 600*l.* a-year (with the Modifications referred to in paragraphs 44 and 45), or of being retired on the full-pay of their Rank. viz., 1*l.* 6*s.* a-day, remaining on the List for succession to the Rank of Major-General, and to the post of Colonel Commandant.

55. Colonels of the Royal Engineers who have completed 35 years' Service, and Lieutenant-Colonels who have completed 30 years' Service, should be allowed to retire upon 1*l.* 5*s.* and 20*s.* a-day respectively, with the right of succession to the Rank of Major-General, as proposed in the case of the Royal Artillery, in paragraph 45.

56. Grants out of the present fixed annual sum for Retired Full-Pay should be at once discontinued.

57. Power should be given to place on low rates of Temporary Half-Pay any Officers who may be inefficient; and the right to retire on Half-Pay after twenty-five years' Service should be retained for all Officers of the Royal Engineers, without the limitation as to numbers that formerly existed.

58. In respect to the future Promotion of the Corps, which threatens to arrive at a state of Stagnation earlier than in the case of the Royal Artillery, we consider that the Remedy to be applied should not be a deferred one, as proposed by us for the Royal Artillery, but immediate; that is to say, from the commencement of the ensuing Military Year.

59. The different position as to future Promotion occupied by the Royal Engineers as compared with the Royal Artillery is shown by the comparison of the present state of both Corps with the Standard Periods:—

Rank.	Standard. Periods.	Actual Periods.	
		Royal Artillery.	Royal Engineers.
Major-General	40	38	43
Colonel	34	28	32
Lieutenant-Colonel	25	23	23
Captain	18	16	14
Second Captain	12	12	12

60. We recommend that Promotion throughout the Ranks of the Royal Engineers should proceed independently of Vacancies, and should be given on the completion of certain fixed Periods of Service in the several Ranks; those Periods to be fixed for the several Ranks at somewhat above the average time after which Officers of corresponding Rank in the Line get their Promotion.

61. The Organization of the Royal Engineers offers no difficulty in thus dealing with the several Ranks of the Corps; while the circumstances, under which the Officers of the Royal Engineers are detached to India in large numbers and on Staff duties, would facilitate such an arrangement; and it is obvious that if the several periods are fixed with fairness to the Officers of the Royal Engineers, and equitably as regards the rest of the Army, any present or future Stagnation of Promotion in the Corps will be prevented, and all risk avoided of any Supersession, other than might occasionally happen, over Officers of other Branches where Promotions only occur on Vacancies.

62. It may, indeed, be observed that the high emoluments attending the posts for which Engineer Officers are eligible, justify the requirement that the Service which secures to them substantive Promotion should be fixed somewhat above the general average in other Branches of the Army, and this would have the advantage of rendering improbable, if not impossible, any Supersession by them over other officers, as the result of Promotion after fixed periods.

63. If this Scheme of Promotion is granted forthwith to the Royal Engineers, we consider that it removes any reason for granting to them the right of Voluntary Retirements from the lower Ranks, as proposed for the Royal Artillery. The large demands for Engineer Officers in India are, it is understood, to be followed by extra appointments of Cadets; and in the face of the fact having been conceded that such extra appointments are unavoidable in consequence of the actual requirements of the Service, we find it impossible to recommend that Voluntary Retirements to Pension should be granted to trained Officers of the Corps.

---

64. Of the several points specifically referred to the Committee, we have, in the foregoing Report, stated our opinion as to the "expediency of adopting, with or without relaxation, Compulsory Periods either of Age or Service for Retirement from Ranks below that of Colonel."

65. We not only consider that such Compulsory Retirement is inexpedient in itself, but we are convinced that its adoption is not needed in the case either of the Royal Artillery or of the Royal Engineers.

66. On the second point, as to "the expediency of permitting Optional Retirement from any Rank at periods below that fixed for Compulsory Retirement;"

67. We consider that Optional Retirement on the conditions previously explained should be given in both the Royal Artillery and Royal Engineers to Colonels after 35 years' Service, and to Lieutenant-Colonels after 30 years' Service.

68. On the third point; "the relative expediency of placing Officers retired compulsorily at 60, on a List of Retired Officers, or on a List of Reserved Officers, with Reversionary Rights as regards appointment of Colonel Commandant;"

69. We consider, that on the whole, the general interests of the Corps would be best served by the retirement of the Colonels, who are superannuated at 60 years of age, to a Reserved List, with a right to future Promotion; but as we recommend the immediate abolition of the Retiring Pensions of 600*l.* a-year under the existing System, we are of opinion that the Colonels, on being superannuated, should have the option of taking the 600*l.* a-year Pension on finally retiring, or of going on to the Reserved List.

70. On the fourth point, the "Cost of the measures to be adopted" can only be stated approximately as regards those relating to Retirement. As regards those relating to Promotion the following Statement shows the Cost during the next twenty years of the proposed Temporary Redundant Lists in the Royal Artillery.

	£ s. d.	£ s. d.	£ s. d.
Addition of—			
12 Lieutenant-Colonels 10 Captains 8 Second Captains } Pay	7,479 9 2		
Forage for 12 Field Officers	328 10 0		
Fuel and Light—			
12 Field Officers	£ s. d. 266 9 0		
18 Captains	283 19 0		
	550 8 0		
		8,358 7 2	
Reduction of—			
30 Lieutenants (10 at 7*s.* 10*d.*, 10 at 6*s.* 10*d.*, 10 at 5*s.* 7*d.*).	3,695 12 6		
Fuel and Light for ditto	355 15 0		
		4,051 7 6	
		4,306 19 8	

	£	s.	d.
For 2 years	Nil		
Temporary Redundant List—			
1st year	4,307	0	0
2nd year	8,614	0	0
3rd year	12,921	0	0
4th year	17,228	0	0
5th year	21,535	0	0
Remaining—For 7 years	150,745	0	0
Gradual Reduction by Absorption—			
1st year	19,381	0	0
2nd year	15,074	10	0
3rd year	10,767	10	0
4th year	6,460	10	0
5th year	2,153	10	0
6th year	As at present.		
Total increased Cost in 20 years	269,187	10	0

Or about £13,000 a-year.

71. The following is an Estimate, based on Actuarial calculations, of the Cost during the next twenty years of promoting the Officers of the Royal Engineers, after fixed periods, in lieu of on Vacancies :—

Annual Increased Cost for Pay.

	£		£
1871–72	498	1882–83	12,636
1872–73	957	1883–84	13,281
1873–74	2,174	1884–85	12,833
1874–75	4,193	1885–86	13,169
1875–76	5,550	1886–87	12,705
1876–77	6,163	1887–88	13,082
1877–78	6,602	1888–89	14,091
1878–79	7,690	1889–90	14,788
1879–80	9,476	1890–91	15,796
1880–81	11,002		
1881–82	12,039	Total	188,725

Or Under £10,000 a-year.

To this, however, must be added the consequent increase of Extra Pay, which is about 48 per cent. on the Ordinary Pay of the Royal Engineers.

72. These calculations have been made on the basis of the assumed Standard Periods with the addition of one year in each Rank.

73. The Cost of the measures proposed by us for Retirements, exclusive of Compulsory Retirement at 60, which is already decided on, cannot readily be stated; but we do not consider that they will cause any very large increase on the sums hitherto allowed for Retired Pay of the two Corps, with the exception of the suggested outlay of 5,000*l.* or 6,000*l.* a year, should it be decided to allow to that extent Voluntary Retirements from the lower Ranks in the Royal Artillery.

74. On the fifth point, we have carefully kept in view in the foregoing recommendations "the bearing of the measure on Supersession as regards other Arms of the Service."

75. As regards the Royal Artillery we consider that the very moderate measure we have proposed to prevent *Stagnation* in Promotion is obviously such as could not be the cause of any Supersession by Artillery Officers over Officers of other Branches.

76. As regards the Royal Engineers, we have pointed out the manner in which the proposed System of Promotion after fixed periods might be arranged so as to prevent any probability of its causing Supersession.

77. On the sixth point, as to "the extent to which the measure should be introduced at once and prospectively, regard being had to Vested Interests."

78. We have proposed that the measures for accelerating Promotion in the Royal Artillery should be deferred for two years; but that those for the Royal Engineers should be adopted at once; and that the measures for altering the System of Retirement in both Corps should be put into operation at once.

79. We do not consider that the question of "Vested Interests" ought to be allowed any great weight in this matter, certainly not to the extent of postponing indefinitely, or to a distant date, the adoption of measures which the Government may deem necessary for the interests of the Service, and of the general body of Officers in these Corps.

80. The only Officers, whose cases could, in our opinion, claim any special consideration on the score of "Vested Interests," are those who have already acquired the right of

claiming Retirement under the present Regulations or have nearly acquired such right; but, on the other hand, it must be remembered that these very Officers had all been many years in the Service before the existing System of Retirements was introduced, and that, therefore, the theory of "Vested Interests" in its true application,—namely, the preserving intact the terms on which Officers took Service under the Crown,—does not apply to their cases.

81. We therefore feel justified in recommending that the right to "Vested Interests" in this matter should be considered only in the cases of those Officers who, before the promulgation of the new Rules (should our proposals be approved and carried out by the Government) have actually acquired and are prepared at once to exercise the right of Retirement under one or other of the various Clauses of the present Regulations.

82. The foregoing Recommendations are not intended by us to be applied to the Officers of the late Indian Artillery and Engineers, as the terms on which those Officers are serving, both as to Pay and Rates of Promotion, are wholly distinct and different from those of the British Royal Artillery; as are also the conditions on which they obtain their Pensions on Retirements.

83. In conclusion, we desire to observe that, in our deliberate opinion, the proposals we have made will be equally conducive to the interests of the Service, whether in time of Peace or in time of War. The principle on which we base our recommendations is, as already stated, rather to preserve the strength of both Corps in full efficiency than to meet a temporary disproportion of Ranks by large Retirements; and it is obvious that the maintenance of an efficient force in these important Branches of the Army, capable of the fullest development in case of necessity, is the surest method of retaining during Peace the necessary preparations for the contingency of War.

J. C. VIVIAN.
JOHN MILTON.

I dissent from the Recommendation comprised in paragraphs from 33 to 38 relating to a proposed Redundant List for Officers of the Royal Artillery, as I believe it to be opposed to the well-established Military Principle that a Junior Officer may be called on to perform the duties of a Superior Rank; but that a Senior Officer should not be called on to perform the duties of an Inferior Grade, and that in this respect it would be likely to produce much inconvenience.

With this Reservation, and adopting the alternative Proposal set forth in Paragraph 38*c*, I agree to the Report.

C. R. EGERTON, *Deputy Adjutant-General.*

J. W. Cooper, *Secretary.*

War Office,
August 6, 1870.

Captain Majendie, R.A.	44 to 49
Lieutenant Innes, R.E.	49 to 50

MINUTES OF EVIDENCE

TAKEN BEFORE A

COMMITTEE APPOINTED TO ENQUIRE INTO THE PROMOTION AND RETIREMENT OF THE OFFICERS OF THE ORDNANCE CORPS.

War Office, Tuesday, 15th February, 1870.

PRESENT:

Captain the Honourable J. C. W. VIVIAN, M.P., *in the Chair.*
Colonel EGERTON. | Mr. MILTON.

Major-General GAMBIER, R.A., C.B., examined.

Maj.-Gen. Gambier, R.A., C.B.
15 Feb. 1870.

1. (*Chairman.*) You are Deputy Adjutant-General of the Royal Artillery?—I am.

2. Can you tell the Committee what are the present ages and lengths of service of the senior and junior officers in each rank of the Royal Artillery doing regimental duty?—I can give you their present lengths of service; but without referring to the records I cannot tell their exact ages.

3. (*Mr. Milton.*) You could, by-and-bye, furnish a return, showing both the age and the service?—Yes. (*Vide* Appendix A.)

4. (*Chairman.*) Will you state now their lengths of service?—At present a Colonel of 39 years' service is the senior, and one of 29 years' service the junior; a Lieutenant-Colonel of 29 years' service is the senior, and one of 24 years' service is the junior; a First Captain of 24 years' service is the senior, and one of 17 the junior; a Second Captain of 17 years' service is the senior, and one of 13 the junior; the senior Lieutenant has a service of 12 years and 5 months.

5. (*Mr. Milton.*) The junior Lieutenant has probably only a few days' service?—Yes; of course.

6. (*Chairman.*) Will you be good enough to tell the Committee what you consider should be the service at which the officers in their different ranks should look for promotion?—Yes. I consider that 12 years is a fair service as a Lieutenant, and that an officer ought to arrive at the rank of first Captain in 18 years' service; at the rank of Lieutenant-Colonel in 25 years' service; and at the rank of Colonel in 31 years' service. I think that that would give the amount of flow of promotion that would be required, and that you should endeavour to get a rate of promotion as near to that as possible.

7. You think that that rate of promotion would keep the Corps in a healthy state?—Yes.

8. In fact at the present moment the Royal Artillery is in a fairly healthy condition?—Yes; the junior ranks are in the state in which you would wish them to be as regards promotion, but the rate of promotion that exists will not keep things in that state.

9. That is a different question; we will come to that afterwards, but at the present moment, the senior Lieutenant being an officer of 12 years service, the condition of the Corps is all that you can wish, is it not?—Yes; undoubtedly.

10. When do you think the time will arrive when the condition will be so altered as to materially affect the efficiency of the Corps?—Perhaps I should answer that question best by giving you an instance. I will take the rank of First Captain. The officer who at present stands 55th on the list of First Captains will according to the rate of promotion which exists in the regiment now, take 9 years to become a Lieutenant-Colonel.

11. (*Mr. Milton.*) What is his service now?—I am taking the instance of Captain Roderick Mackenzie; his service is 21 years.

12. Then you calculate that he will be a Lieutenant-Colonel at 30 years' service?—It would take him 9 years according to the promotion we have at present.

13. (*Chairman.*) It would take him 9 years to become a Lieutenant-Colonel?—Yes.

14. What we want to get at for practical purposes is, when the present healthy condition of the corps will become so unhealthy as to be detrimental to the efficiency of the corps; will it be next year or the year after or ten years hence?—Not next year or the year after certainly, but it is becoming so every hour now. The reason why it has got into its present healthy state is on account of the 10,000*l.* a-year which was given recently. That produced a promotion at the moment, which of course does not exist now; and the great additions to the corps must be taken into consideration in connection with that. Therefore you have a large number of officers in the corps, and the money that was added for retirements only produces a certain amount of promotion. You cannot calculate upon anything beyond that. It would be impossible without having recourse to an actuary to say when the regiment will arrive at such a state as you refer to, because all the chances of death must be calculated and taken into account.

15. Can you state what are the average numbers of retirements and vacancies in the corps from one cause or another every year?—A Lieutenant entering a regiment gets 14 steps from deaths and resignations in the year, and he gets 5 from the retirement money which is added—that makes 19 altogether.

16. Therefore the general condition of the corps is that there are 19 vacancies in it every year?—Yes; every year, and I think besides that we ought to bear in mind the prospects in the distant future. The 10,000*l.* which were added for retirements produced promotions at once, but that money is now of course divided into sums of 600*l.* a-year; and therefore until the officers receiving those sums begin to die off no annual promotion will begin to flow from that source. Therefore we may reckon that some 8 or 9 years hence that will give us some 1 or 2 steps a-year which we do not have now. And equally as regards the 32 000*l.* a-year, there are 15,000*l.* a-year locked up out of that

Maj.-Gen. Gambier, R.A., C.B.

15 Feb. 1870.

money in officers to whom it was given before the Warrant of 1854—it is locked up in Lieutenants, Captains, and Lieutenant-Colonels. But as they die, parts of that 32,000*l.* a-year will become available. We have never yet had the full benefit of the 32,000*l.* a-year.

17. I suppose you cannot tell the Committee when that 32,000*l.* a-year will come to you purely and actually unfettered?—No; I cannot. An Actuary might do so by calculating their lives. We could give you lists of those who hold it.

18. Still the prospective advantages coming from that source will be gradually increasing?—It will amount to a little more, but not a great deal.

19. The block which you anticipate, and which will now shortly begin, arises from a large augmentation after the year 1855; does it not?—Yes; from the immense augmentations then, and before 1855 also, as you will see if you go back to the previous years. I will take, for example, the year 1840. Our Colonels then were of 46 and 43 years' service. In the Engineers they were, at the same time, 43 and 39 years' service, so that they had 3 years the best of us. Now we have got 4 years the best of them. Then in 1845 our Colonels had 50 and 47 years' service, and the Engineers had 4 years the best of us again. In 1848 our Colonels had 51 and 45 years' service as compared to their 46 and 42. I am talking of the Colonels throughout.

20. The great block arose from the addition of 80 officers to the corps all in one year, did it not?—There were 90 in one year.

21. Was not 80 the largest number added in any one year?—No; there were 90 added in one year, and that was the year 1855. Of those 27 are gone; they are now in the list of First Captains: 63 of them all stand in one year at the present moment.

22. (*Mr. Milton.*) Have 27 gone out of the 90?—Yes; in the following year, 1856, 72 were added, of whom 23 have gone, and there are 49 remaining. In the next year, 1857, 73 were added, in the following year only 23, and in 1859 there was a larger number, namely, 63. You will observe what enormous numbers those are. It would be impossible to have a compulsory retirement for such large numbers of officers in the same year.

23. Will you give the Committee a Return of the officers entering the Royal Artillery in each year since 1840?—I will. (*Vide* Appendix B.)

24. (*Chairman.*) But with respect to those 72 who entered in 1856, as they worked up to the top of the list, the Second Captains would be broken up into partly First and partly Second Captains?—No; they are all First Captains.

25. When they work up to the top of the list of First Captains, they will be broken up into partly First Captains and partly Lieutenant-Colonels?—Yes; of course if you make a compulsory retirement, it may so happen that the first of those 72, or as he stands there Number 62 on the list, might be the man to go, and then all the rest must go too.

26. (*Colonel Egerton.*)—What is the average age at which officers enter the Royal Artillery?—The average age at which most of those who are now in the ranks of Colonel, Lieutenant-Colonel, and First and Second Captain used to enter, was about 18. Since then it has been from 20 to 22.

27. (*Chairman.*)—If the Report of the Royal Commission on Military Education is acted upon, it will alter the age of entering the Academy, will it not?—Yes, quite; and of coming out also.

28. It will reduce the age?—Yes.

29. If that Report is acted upon, officers will in future get their Commissions at an earlier age than they do at present?—Yes; they will be a little younger than they are now. I may state, as bearing upon a previous question, with reference to the present state of the regiment, that independently of the 42,000*l.* a-year for retirement, officers can retire upon permanent half-pay thus: 2 Lieutenant-Colonels after 25 years' service, 3 Captains after 24 years' service, and 1 Lieutenant after 20 years' service every year if they choose to do so; but we never get one out of them all. I think when you are considering the present condition and the prospects of the corps, this ought to be stated as one of its prospects.

30. Do you include that in the number 19 or 20 which you have given us as the average number of vacancies every year?—Yes; that number includes everything, because we never get any from those that I have just mentioned.

31. Is it included in the first 14 that you mentioned?—No; the 14 are simply the deaths and resignations in the whole corps.

32. Is it included in the 5?—Yes; it may be said to be included, but we never get any from it.

33. What are the annual number of retirements obtained from the 600*l.* a-year which lapse to you?—The annual number that we get is 5, but that includes the next rank, where, as you are aware, we have had one or two taken. This paper shows the way in which we stand at present with the Retired Full-Pay List. (*Vide* Appendix C.)

34. In addition to that, every Officer in the Royal Artillery who has arrived at 25 years' service can claim to retire upon half-pay, can he not?—No; I have just stated that two Lieutenant-Colonels, after 25 years' service, may take permanent half-pay. Only two each year are permitted to retire upon half-pay under the Warrant which I think you allude to. That money comes out of the 42,000*l.* a-year. And then also, in cases of wounds or disability contracted in the Service, upon a medical certificate, they are allowed to retire; and three Captains of 24 years' service, and one Lieutenant of 20 years' service, are also allowed to retire every year on permanent half-pay; but this is separate from the money we have been speaking of.

35. (*Colonel Egerton.*) Is the half-pay in the Artillery the same as the Line half-pay?—No; I think it is a little more. It is calculated in proportion to the pay.

36. (*Mr. Milton.*) Looking at the present rates of retirement, do you consider that in five years the Corps will be in an inefficient state in consequence of the stagnation of promotion?—Not in an inefficient state, but going towards it.

37. Supposing the present rules of retirement to continue for five years, do you consider that the Royal Artillery will have suffered in efficiency, in consequence of the stagnation of promotion?—I should not apply the word "inefficient" to it, certainly.

38. (*Chairman.*) At present there are four distinct and separate lists of Royal Artillery Officers: the English List, the Bengal List, the Bombay List, and the Madras List?—Yes.

39. And these four lists are all running to a common centre which will be reached, not in this century, but in the next?—Yes; in the next century, I think.

40. And until then the scales of retirement are perfectly different, the Indian retirements being quite different from the English?—Yes.

41. They have nothing to do with it?—No.

42. What is the effect of the retirements in India upon the present rate of retirements in the English Artillery?—The present effect is that taking the Indian Artillery in comparison with us they have got the best of us by about a year, but when you consider that there are two or rather four different lists that is very little.

43. Practically you are running together as fairly as possible?—Yes; very fairly indeed.

44. (*Mr. Milton.*) To what step or rank do the Indian Artillery Officers work on your list; down to the beginning of the amalgamated list?—Yes; they have all got their ranks the same as we have—they have not run out their list of Lieutenants yet.

45. Then even the Lieutenants who began their service in the Indian Army prior to the amalgamation have the right to go on in this corps?—Yes; I meant that they cannot come on to ours; they go on to their own.

46. (*Colonel Egerton.*) But the whole of the Lieutenants who entered subsequent to the amalgamation are

on your List—that is to say the old Royal Artillery List? Yes.

47. (*Mr. Milton.*) Then you would not see any difficulty in working a scheme of retirement for the British officers, because the Indian officers are not joined in such a scheme?—Yes; I think it would be most difficult.

48. If the Indian officers do not interfere with the promotion in your corps now, why would it be difficult to work a scheme for the British officers, if they retire upon different schemes?—Because if you produce a much greater rate of promotion, or on the other hand a much less rate of promotion in the Indian Lists than in our own, you will have a supercession of their officers over ours in the one case, or of our officers over theirs in the other; that is to say, if you adopt one of these schemes that gives us a less promotion than we have now, you will produce this state of things. A Second Captain on one of their Lists, will become a First Captain at a time when, if he had been on our List, he would have remained a Second Captain, and he would have come into our List above where he ought to have been.

49. When will he come into your List?—He can exchange into it. Directly all the Lieutenants are run out, every promotion brings a Second Captain of the Indians on to the general List. Now, a Second Captain may, if the rates of promotion are unequal, have got so high up, that he may become a First Captain by his own rate of promotion, whereas a Second Captain on our List serving out in India, where we all do duty together, will still remain a Second Captain.

50. I do not quite understand why a Second Captain of the old Indian Army is to succeed to a vacancy in the British Artillery over the heads of the British Officers?—What I say is, he will be doing duty as a Second Captain now with our Officers in the same garrison, and then he will come in here as a First Captain, and do the same duty with an Officer on our list who is still a Second Captain.

51. No doubt; but the object which this Committee has under its consideration is to obtain some scheme by which the promotion shall be accelerated in the British lists, and the stagnation prevented arising from the great numbers which were added to the British Royal Artillery since or about the time of the Crimean war. The Indian Artillery did not suffer from that added number, and there is no apprehension that there will be any block in the Indian Artillery, is there?—No.

52. If, therefore, a scheme adopted on the recommendation of this Committee removes the block in the British List, it will simply prevent an enormous supercession of British by Indian Officers, without making it likely that the British Officers will supersede the Indian?—Yes; the only thing is you must take care that you do not give the British Officers too much or too little, because if you do, either we shall supersede the Indian Officers or they will supersede us.

53. Then the question which I put to you is, do you see any difficulty arising from the union of the Indian and the British Lists operating against the adoption of a scheme which shall remove or tend to remove the block in the British List, and would not any new plan of that kind prevent any such supercession as is to be apprehended now?—It depends upon what the plan is.

54. The object of the plan would be to cure the present block.—It must give neither too much nor too little promotion to our officers.

55. (*Chairman.*) You mean that if the plan is so large and comprehensive that it will give the British officers a rate of promotion much greater than that which the Indians have, there will be an objection on the part of the Indians; and if, on the other hand, it makes the rate of promotion for the British officers much slower than that of the Indians, there will be an objection on the part of our officers here?—Yes; the word "block" is a wrong word. What is meant by "block" is a great number of officers of the same year in the same rank. General Lefroy called it a "block" because there were a great number—no less than 160—officers of the same age. That does not block the promotion, but it makes a great number of officers of about the same age. The same number of officers will have to be promoted—it is their own fault if they all come in at the same time; so long as it is done you cannot help it.

56. You say that the average number of vacancies from one cause or another in the Royal Artillery is at present about 20 a-year?—Yes.

57. How many vacancies do you think it necessary to create in order to secure a fair flow of promotion?—I should say about 30.

58. Therefore you want some scheme which will give an additional 10 vacancies a-year?—Yes.

59. And with that you think that the Corps may be kept in a healthy state?—Yes.

60. You have spoken just now with regard to a difficulty arising from the danger of supercession either by English officers over the Indian Artillery or by Indian officers over English officers. Do you consider that an additional promotion of 10 a-year would create that difficulty either on the one side or on the other?—I do not think it would.

61. In considering any scheme of retirement over and above the present sum which is granted by Parliament, do you think that it would be better to take age as the basis of such a scheme or length of service?—I think length of service would be the better basis.

62. Why do you prefer length of service to age?—I think that the officers come into the regiment at such different ages that if you take it by age you may have a man who will be at the head of the List who is younger than the man who stands next below him, and then the man below him may be forced off the List though he is not at the head of the List by compulsory retirement, that is constantly the case in our Regiment, and in the Engineers also. I can give you hundreds of instances of a man a year or a year and a-half, or two years younger than a man who is below him. Therefore, I think it would come unjustly upon them when these retirements came into operation.

63. Therefore, on the ground of doing equal justice to all, you would prefer length of service, as the basis, to age?—Yes; I think so.

64. (*Mr. Milton.*) Is not there this difficulty if you take service as the basis for retirement, that the senior on the list will be removed in consequence of his long service and his having grown too old, and not fit for the work; whereas, the man who gets the step by his retirement may be actually half a year older than he, and therefore less efficient?—When you lay down the law that a Captain is to be removed at 48 years of age, he is removed, not because he is inefficient and unable to perform his duties, but because at that age you think he ought not to be there. He is efficient; he is in the prime of life.

65. But he is only removed because he is inefficient for the duties he has to perform?—No; he is perfectly efficient.

65*. Then why is he removed?—Because you lay down the law that that is an age at which he ought not to be in command of a battery; and you must carry out your law in this as in other things.

66. He "ought not to be in command of a battery" because he is not fit for it?—No; he is perfectly efficient for the performance of his duties.

67. (*Colonel Egerton.*) Would not there be this difficulty in taking service as the basis, that an extra clever Cadet would enter Woolwich sooner and would pass out of Woolwich much sooner than another man, and he would be the man whom you would put out as having the most service, though, in point of fact, he would be much younger than the stupid man who had followed him?—Yes; of course that would happen. You would put him out because he had the specified service.

68. (*Chairman.*) It appears to me that that is a strong argument against service, being taken as the basis. A clever man we will say goes out of the Academy and enters the Artillery at 19, while a stupid fellow would only get his Commission at 21?—At 20.

69. Then if you take length of service as your basis,

Maj.-Gen. Gambier, R.A., C.B.

15 Feb. 1870.

the clever fellow is driven out of the corps when he has a certain service, and the step is given to the stupid man who comes after him?—Yes.

70. Does not that strike you as an argument against length of service being taken as the basis for retirement?—No; the officer who was the clever boy has become a First Captain with 28 years' service, but the next man, the stupid fellow, has got 28 years' service too, and so he goes also.

71. But the stupid man may have only 27 years' service?—Yes; but they both go according to this rule in the very same year.

72. But the stupid man may go out of the Academy the next year after the clever one?—No; he is of the same year.

73. (*Mr. Milton.*) He may not be?—It is almost a certainty that he will, because they go in such large batches; between 40 and 50 the same year.

74. Then take a case where that has not happened; take a case in which a stupid man got his commission 6 months later than a clever man, then the clever man, although the younger, will be put aside because he is inefficient, length of service being taken as the basis, and the stupid man, who is the older man, will get the step which falls in, we will say, 3 weeks afterwards?—The stupid man at the Academy might be, after all, the cleverer man of the two.

75. But the supposition is that he is stupid?—It often turns out so; you give the younger man the credit of being clever only because of what he did at the Academy.

76. (*Colonel Egerton.*) If a man, by talent and application, gets a year or 2 years' start in life of another man, it seems rather hard that he should be put out on the score of his length of service, and that the other man should reap an advantage from it?—I do not think it makes any difference; the two go together according to your rule.

77. (*Chairman.*) Your view is, that though hypothetical cases may be put in which there will be difficulty, yet, practically speaking, length of service would be the fairer basis of retirement for the corps?—Yes; I cannot see it in any other light. I have always said so. I said so before Mr. Childers' Committee in the House of Commons.

78. We are given age as the principle in the upper ranks—60 years is to be the age of compulsory retirement for Colonels—would there not be something like incompleteness in the scheme if, while age was taken as the basis in the upper ranks, length of service was taken in the junior ranks, supposing compulsory retirement to be adopted for all ranks?—I think as you take age for the one, you must take age for the other also. I should like to see length of service adopted as the basis certainly, but I think what you adopt for one rank you must adopt for the other.

79. (*Colonel Egerton.*) I suppose you would consider that 40 years' service might be taken in lieu of 60 years of age, as the rule?—Yes.

80. (*Chairman.*)—I think I gather that you admit compulsory retirement in the upper rank at 60 years of age as being a good means of procuring promotion?—No, I never admitted that; you put that as the basis which was given.

81. It is the basis that is given, but I wished to gather your own view regarding it?—I think it an entire impossibility myself, and I will show you the working of it. Fourteen years hence you will add 27 Generals to the Artillery List. I do not believe that the Commander-in-chief of the Army would stand that. Then it will be thrown aside. The country would not stand it either when the time came to add 27 Generals to the List.

82. You mean that 14 years hence there will be 27 men who will be compulsorily retired in one year at the age of 60?—Yes.

83. And that that would be so expensive that you think nobody would stand it?—Yes; that will happen in 1884. Then we shall have 11 General Officers added our List, and the next year we shall have 15, that would be 26.

84. *Mr. Milton.*—How do you arrive at those results?—By taking the calculations from the years of the officers as they are laid down here—it is a long calculation—some of these officers might take the 600*l.* a-year, and go off.

85. Those are officers who entered the service about the year 1844, are they not?—Yes; about that time.

86. (*Chairman.*)—But that number would be very much reduced if compulsory retirement from the lower ranks at certain ages was also adopted?—No; that would not touch them.

87. Are they all Colonels now?—The first is Lieutenant-Colonel Hawkins who entered the service in the year 1842—he has 28 years' service now.

88. (*Mr. Milton.*) How many Lieutenant-Colonels are there, roughly, who entered the service in 1842?—There are now left 16 who entered in 1842.

89. Do you anticipate that in 14 years 11 of those 16 will be still living?—I cannot say whether they will or not, but the chances are that they will be. I am only applying this scheme to them as they stand now—there will be one or two matters of that kind to be taken into consideration.

90. (*Chairman.*) If the principle of compulsory retirement at the age of 54 was adopted in the case of Lieutenant-Colonels it would clear out that list very much, would it not?—No; it would not touch it.

91. Would they all be Colonels before that?—Yes; the first of them is the fourth on the List of Lieutenant-Colonels now.

92. Will the sixteenth be promoted by that time?—Yes; he will be promoted too before 1884—that is 14 years hence.

93. (*Colonel Egerton.*) But would it not cost the country less to pay these officers as Generals 470*l.* a year than to pay them their 600*l.*?—But it is proposed to give them the option of one or the other. You keep them on the General Officers List if you keep them at 474*l.* a-year.

94. You anticipate that there will be a large number of general officers receiving 474*l.* a year, but if that is the case, they will not, in fact, cost the country so much as if they had retired upon their 600*l.* a year each?—Still there they are—my view is that the country will not stand an increase to our Generals List of so large a number, and they will then throw the plan on one side. The same remark applies also to the next ranks of Lieutenant-Colonels and Captains—their retirements would be enormous. I believe the actuaries have already made that out so far as I have heard.

95. But you might retire them as Colonels, the same as the regular half-pay list of Colonels of the Line, upon 470*l.* a-year, until they go up in their own places as Generals?—Then you would not make them General Officers at once?

96. Not until they come up in their own places; you would retire them as Colonels on the same pay?—I am speaking apparently against the interests of the regiment, because, of course, we should be very glad to see 26 General Officers added to our list; but I only say when the time comes for that to be done the authorities at that time will not have it, nor will they have 26 men added to the list on full pay of Colonels doing nothing, and the same applies to the other ranks also.

97. (*Chairman.*) Supposing the age of 60 years is accepted as the age for compulsory retirement from the rank of Colonel, would you recommend that a system of compulsory retirement should be adopted in the junior ranks?—No; certainly not. I say, as a problem, it will produce the promotion you ask for, but practically you cannot apply it.

98. As a problem, you admit that it will produce the requisite amount of promotion?—Yes; as a problem it will produce the promotion you ask for and far more.

99. That must depend upon the ages?—It really does produce the promotion in theory, but, when you ask me whether I recommend it, I must answer that I have already sent in a protest stating that, though theoretically it will produce it, practically you cannot apply it.

100. Your objection to the scheme is that it will be so costly and expensive that eventually it will not be workable?—Yes; it will be thrown aside by whoever is in power—they will not accept it, and then we shall have lost what we have got, and the whole thing will have to be gone over again.

101. But, as you say that setting aside the financial question it would produce a fair stream of promotion, at what ages would you suggest that compulsory retirement should be adopted in the respective ranks?—I think those ages are excellent.

102. That is to say, you would compulsorily retire a Lieutenant-Colonel at 54 years of age?—Yes.

103. And a Captain at 48?—Yes; directly the regiment touches these points you have got the promotion you ask for.

104. Then, a system of compulsory retirement in the various ranks being adopted, would you suggest that a scheme of voluntary retirement should be added to it.—I think that a few would accept the rates that were proposed, and therefore, to that extent, it would lighten your List of those who were to be taken off compulsorily, but if you look into the matter you will see that very few of the voluntary retirements would be taken, because until the regiment touches the compulsory retirement at 48 years of age for Captains, the voluntary retirement would not fully act. When the senior Captain of Artillery arrives at the middle year of the voluntary age, no man of the 2 years below would think of taking the voluntary retirement when he has only to wait a couple of years to get the compulsory retirement. Therefore until you touch 48, which is the compulsory age, the retirement would not come into operation.

105. Or only very slightly?—Yes; there might be one or two retirements, but not many.

106. (*Mr. Milton.*) Do you think that if compulsory retirement was not carried out there might be a large number of optional retirements upon these terms when the men saw that there was a stoppage of promotion?—Yes; I think that they would take them then.

107. (*Colonel Egerton.*) Do you think that you could apply a compulsory retirement to the lower ranks of a Corps where all the officers enter at very much the same age, and where they are all promoted *pari passu*?—I have already said that I do not approve of it, but as a problem I think it cannot be objected to.

108. Do you think you could say to the Cadets who passed out of the Academy at Midsummer, "You shall go out of the Corps and make way for the Cadets who passed out 6 months later"?—I maintain that you cannot do anything of the sort, but I say as a problem it works quite right.

109. Their ages are as near as that, are they not?—Yes; I can give you some idea of the figures in the different ranks as they stand now. Beginning with the Colonels, in 1834 there were 5 officers who entered, in 1835, 2; in 1836, 4; and they run down in numbers like that. Then taking the Lieutenant-Colonels at the present moment on the List, there are 15 standing there who entered in 1842, 19 in 1843, 18 in 1844, and 11 in 1845. Of the First Captains there are 11 who came in in 1846 at the present moment on the List; 31 in the next year, 13 in the next, 22 in the next, 23 in the next, 19 in the next, and then again 19. The Second Captains run thus, there are 16 of the same year, those are the seniors, 36 in the next, 63 in the next, 49 in the next, and again 49 in the next.

110. (*Mr. Milton.*) What is that last year; is it about 13 years ago?—Yes, 1857; there are 49 of them all of the same year; and in the year 1856, there were 49; and in 1855, 63. Those are Second Captains, all standing on the List at the present moment.

111. (*Chairman.*) Could you furnish the Committee with any information as to what would be the effect upon the Corps of any scheme of compulsory retirement ranks at the ages of 60 for Colonel, 54 for Lieutenant-Colonel, and 48 for Captain?—Yes; I have it here somewhat roughly put down in pencil; it will not be quite correct, because it is impossible for anybody but an actuary who could go deeply into the whole question to answer you accurately. I can give you, to the best of my opinion, the numbers that such a rule would apply to; but it must not be taken as being absolutely correct.

112. (*Colonel Egerton.*) You have assumed that these officers would all be living so many years hence?—Some would have gone. I can only take the average of recent years to guide me.

113. (*Chairman.*) We only want to know the working effect of a scheme based upon these ages, 60, 54, and 48, upon the Corps?—Yes; in the old Royal Artillery the number is 838; In the Indian Artillery, 686; so that 1,524 is the total number of officers, including the Indians. In the old Royal Artillery, there are 32 General Officers.

114. (*Mr. Milton.*) Will you furnish us with a Return of the numbers, and the ranks of the different officers?—I will. (*Vide* Appendix D.)

115. (*Chairman.*) I gather that you are of opinion, that supposing a scheme of compulsory retirement were adopted for the different ranks, it would be as well to add to it a system of voluntary retirement, although it would not practically have very much effect?—Yes; I should certainly add that to it, because it could not do any harm by being added, and it might do good. Certainly there would be some who would accept the voluntary retirement, and this would relieve in part the great objection to the compulsory retirement when you remove so many officers at a blow. I am afraid that the ages come too close to them for the men to take the voluntary retirement to any large extent.

116. And I gather that you object to the whole system of compulsory retirement in all ranks, on the ground that at the very time when it would be most required for promotion it would be so expensive that no one would adopt it?—Yes; and because I think it unfair to the present officers in the regiment, although not to those who enter it with their eyes open. However, I have put in a protest upon the subject.

117. Setting aside entirely the question of vested interests, you consider that it would be unfair now to say to an officer who has chosen the Artillery as his profession for life, "You are going to be subjected to certain conditions which you did not know of when you entered the corps; we mean not to keep you for life, but to turn you out upon the world at a certain age if you do not happen to get your promotion by that time?"—Yes.

118. That, you think, would be unfair upon the officers of the corps altogether?—Yes; upon the middle officers, not upon the officers of 60 years of age. I think it would be unfair to an officer, whose friends had been to an enormous expense in educating him, to come into one of these two regiments, and who has arrived at the prime of his life, at 48 years of age, to be turned out of his military profession and sent adrift; he would have a fair salary certainly, but still there is an end of his career—he can enter no other service and no other profession. It is for reasons of this kind that I think it would be very unfair upon those officers.

119. Would not that unfairness be somewhat mitigated if there was a power reserved to the Secretary of State to relax the compulsory retirement if it was thought that the interests of the service required it to be done at any time?—I think it would be almost impossible to exercise that power.

120. In the case of the Military Medical profession there is such a power reserved to the Secretary of State?—Yes.

121. He may either get rid of an inefficient officer on the ground of inefficiency at an earlier age than that at which he is allowed by the warrant to retire, or on the other hand, he may retain his services after the compulsory age of retirement if it is thought that the service would benefit by his so doing?—Yes; and that is a very fair rule to make, but it does not apply to us. Unfortunately the same thing again applies to us here, as I have already alluded to, namely, that we come into the corps in such large batches so that while they only take one man away we should be taking 15 or 20 or 30 off at once,

122. (*Mr. Milton.*) The Medical Officers enter in

Maj.-Gen. Gambier, R.A., C.B.

15 Feb. 1870.

large batches at once after passing through Netley, and their lowest age for retirement is 55 years?—But suppose you wish to keep a man with brilliant service, and the next two or three men are men who are excellent officers but who have not seen any service. How could you distinguish between those men? I can show you an instance here to illustrate that. By applying that rule to the regiment you will have to take 8, 9, or 10 men in a batch, not one of whom is an indifferent officer—they are all excellent officers. I do not see how the Secretary of State for War or the Commander-in-chief could possibly distinguish between these officers, and say that one shall go and another shall not.

123. If the Secretary of State did exert any relaxing power, it would be in the interests of the Service, and not in the interests of the particular man. He would not listen to a man who said, "I do not want to go into private life;" that would be no excuse for his not going if the retirement were compulsory; but he might say, "You are such a good man, I must not let you go."—I should be very sorry to be the person who had the power vested in him to do that.

124. (*Colonel Egerton.*) Would it not be an advantage to be able to say to a man whose physical health would not admit of his going abroad or whose conduct was not quite satisfactory to the corps, "You shall go upon the reduced half-pay?"—Yes; undoubtedly, but that is not what was put to me before. You do away with the advantage of this scheme if you apply it in that way.

125. I was not speaking with reference to that.—Of course it would be a great advantage to do what you say—there is no doubt of that; but if you introduced a clause reserving such a power to the Secretary of State or the Commander-in-Chief, I do not see how they could say to one officer, "You shall not go," and to others, who are also excellent officers, "You must go." I do not see how they could apply it differently to different officers when they are all efficient.

126. (*Mr. Milton.*) Can you give us a rough scheme of the state of the regiment 10 years hence, supposing that compulsory retirement was enjoined for Colonels of 60 years of age, and no others?—I can tell you now in a rough way what would be the effect of it. The compulsory retirement would not come into play until 1884, and then, as I showed you, Lieutenant-Colonel Hawkins, who stands fourth on the list of Lieuaenant-Colonels, would have to go.

127. Do I rightly understand you that during ten years no Colonel would have to retire because he had reached 60 years of age?—Yes.

128. Then I will ask you the state of the Corps in 15 years' time?—I shall go on to that. In 1884 there would be 11 Officers who, as they stand now, could retire down to a man named Pipon, calculating for the promotions they would get up to that time. The next year Colonel Hamley, who would then be the senior Colonel, would be 60 years old, and 15 could retire according to your conditions. That disposes of the Colonels. Then you come to Lieutenant-Colonels: In 1880 Anson would be the senior Lieutenant-Colonel, of 54 years' service, and he would be promoted then by this rule.

129. Then he would hold his promotion for six years?—Yes; he goes away. Anson is put out on this Lieutenant-Colonel's retirement.

130. I only want to calculate the compulsory retirement at 60 years of age?—He takes 8 with him. This is the first operation on the present list, and the next year 8 more would go, and the next year 13 would go, and the year after that 15. Then you come to a curious thing: Turning to the Captains in 1879, Mackenzie would be the first who would come under the operation of the rule, and he would take 12 with him.

131. Supposing the Government confine their scheme to compulsory retirement of Colonels at 60 years of age, will you tell us what would be the state of the regiment in 15 years time?—In 1884 11 officers would be able to retire, and in 1885 15; that completes the numbers of the Colonels.

132. What would be the service of the Senior Colonel? what would be the service of the Senior Lieutenant-Colonel, and what would be the service of the senior Captain then? I want to see whether the retirement from the top would give a flow of promotion through the corps?—I will furnish you with a statement of that. (*Vide* Appendix E.)

133. (*Chairman.*)—It being understood I suppose that the present inducements to retire in the shape of annual grants from Parliament will still be maintained?—The vested rights would have died out in 15 years' time; they would just have ceased about that time.

134. As the tendency of your mind seems to be against compulsory retirement for the reasons which you have stated to us, have you any other scheme to suggest to the Committee whereby the prospects of the Corps which are now so black in the future, may be relieved or improved?—Yes; I would again produce the scheme which I produced before which was founded upon the Actuary's calculation, and upon the other schemes.

135. (*Mr. Milton.*)—What is the principle of that scheme?—These Memoranda will explain it. (*Vide* Appendix F, G). First, to reduce, as a temporary measure only, the qualifying service for retirement provided by the present 42,000*l.* a-year in the following manner:—for Colonels to retire on 600*l.* a-year from 30 to 28 years (that is to enable the plan to come into operation); for Lieutenant-Colonels to retire on 400*l.* a-year if Brevet-Colonels, or 365*l.* if otherwise, from 30 to 25 years. Secondly, I propose to apply a portion of the 8,873*l.* recommended in the "Actuaries Report," to be voted annually up to the year 1880 in placing on a Supernumerary List all Unattached Major-Generals (who are not Colonels Commandant) and Regimental Colonels, on their attaining 38 years' service. I do not put them as Generals, but I put them on that List only to remove them, because I know the country would not stand their being made Major-Generals.

136. (*Mr. Milton.*) Why not?—Because they would not have such a large list of Major-Generals.

137. (*Colonel Egerton.*) The effect would be to give your corps so many more Generals than one for every twenty-eight combatant officers, and that would create dissatisfaction in other branches of the Service.—Yes no doubt. The third measure would be to apply the balance in each year of the 8,873*l.* not required for the purpose I have just stated in giving bonuses or purchasing out officers under 25 years' service, according to the scale laid down in the "new proposal" which is in the Appendix of the "Actuaries' Report." The object of that is to thin out the block as we must call it. Now I will give you the estimated number of vacancies to be obtained under the scheme. Under the first head we should get seven steps annually, intead of the four that we get now; under the second head we should get six per annum; under the third head we should get three more. Those steps, together with the vacancies which we now get from deaths and resignation, amounting to fourteen annually, as I have already stated, give you thirty steps yearly.

138. (*Chairman.*) Being the ten more which you say you require?—Yes.

139. (*Mr. Milton.*) Is that in accordance with the paper which you laid before the Committee of the House of Commons on this subject?—No; not before the Committee of the House of Commons. I laid it before a Committee sitting here. What I suggested to the Committee of the House of Commons was quite different. This plan is one which I produced here after the Actuaries' Report. As you are aware, the Actuaries made a Report upon the House of Commons' scheme and the War Office scheme, and I prepared this plan founded upon theirs. The rates of buying-out the officers are founded upon the Actuaries' calculation and I take the amount they proposed to be voted, namely, 8,873*l.* a-year for the next ten years, and that produces the amount of retirements that we want.

140. (*Chairman.*) Now we will go to the last point which is as to what you think would be the fairest way of dealing with the intricate question of vested interest

think the other day your view was that all officers who had 25 years' service should have the option given to them of abiding by the present means of retirement or of coming upon whatever scheme was then adopted by the authorities, and that, if they decided to remain upon the old system, their interests in that system should be to all intents and purposes perfectly intact?—Yes; but the paper which I put in went a little further than that,—that was what I said when we met, but, afterwards, Colonel Keane and myself both put in papers, as we were asked to do, and mine went a little further than you have stated.

141. Is that the memorandum for His Royal Highness dated the 3rd of February, 1870?—I do not know the date of it. I have kept a memorandum of it, and I still think it is the best way of dealing with the question. I will read my memorandum:—1. The 42,400*l.* Retired Full Pay Vote to be allowed to die out at once, and any officer who has now completed 30 years' service should be permitted to retire upon 600*l.* a year, or elect to remain upon 474*l.* till appointed Colonel-Commandant. 2. That Colonels of less than 30 years' service, Lieutenant Colonels, and Captains (you will observe that I include the Captains), should have the option of succeeding to the retirements offered under the present Regulations for Retired Full Pay on completing 30 years' service, according to the rank they may then have attained; or, of retiring under the proposed new scale for the several grades according to age. 3. Second Captains and Lieutenants to have no option as to retirement, as they will receive all the benefit of the promotion caused by the retirement of their seniors under both the old and the new rules. These officers, therefore, to succeed only to retirements under the new scale.

142. Therefore you extend it to Captains?—Yes.

143. Whatever their length of service may be?—Yes; I think they should have the option given to them.

144. Do you think that it should be given to them immediately upon the adoption of any new scheme, and that they should be then called upon to make their election?—I do.

145. You think that that should be extended to Captains?—Yes.

146. That brings it down another 10 years' service, from 25 to 15?—It was granted to them by Royal Warrant.

147. (*Mr. Milton.*) It would be impossible in principle to draw the line between the case of a Captain and the case of a junior Lieutenant, would it not?—Yes; he would get the benefit of both.

148. (*Chairman.*) We were unanimous the other day in thinking (and I was in hopes that you came to that view too) that all men who come now within the limit of retirement, that is to say men of 25 years' service, should come within it still, but that outside that we could not logically extend the line?—I should not be inclined to insist upon my view in the least. I should be very happy to change it if you thought the other a better plan in any way for facilitating an arrangement. But I think a man who has arrived at so many years service as a Captain has, under those circumstances should have it.

149. We only want to do fair justice to the officers of the Corps?—I should not object to see it put at 25 years' service. My own opinion is that Captains ought to have it as I have stated, but I will not press my view.

150. (*Mr. Milton.*) What would be the difficulty of giving the option to every officer in the Royal Artillery?—The difficulty would be that you would keep the thing alive for so long.

151. (*Colonel Egerton.*) There is a precedent for altering the conditions of promotion completely because it was done in the Line, when the general Brevet promotions were done away with, that inflicted a great change upon the prospects of the Captains of the Army, for instead of going on to be Majors and Lieutenant Colonels and Colonels, a great number of them now do not go up at all?—That is so.

152. (*Chairman.*) The Captains did not complain in that case and say "We entered the service upon certain conditions which have been so materially altered as to affect our vested interests?"—I do not think the Brevets were a condition upon which they entered the service—the Brevet promotions were given when it was thought necessary.

153. (*Colonel Egerton.*) That was the mode by which they arrived at the rank of General ultimately?—Yes.

Maj.-Gen. Gambier, R.A., C.B.

15 Feb. 1870.

(The Witness withdrew.)

Adjourned to Tuesday, the 22nd instant, at 1 o'clock.

War Office, Tuesday, 22nd February, 1870.

PRESENT:

Captain the Honourable J. C. W. VIVIAN, M.P., *in the Chair*

Colonel EGERTON. | Mr. MILTON.

J. NORMAN LOCKYER, Esq., F.R.S., examined.

154. (*Chairman.*) I believe you are head of the Army Regulation Branch, and you were so at the time of the issuing of the warrant of 1866?—Yes.

155. General Gambier, in answer to two questions which were put by me to him at our last meeting, stated that the number of Lieutenant-Colonels of the Royal Artillery, who are entitled to retirement on permanent half-pay at their own request is limited to two annually. It seems that this limitation appears in Clause 51 of the Warrant of the 14th of October, 1858, and is continued by the Warrant of the 28th of March, 1861?—Yes.

156. But there is a new warrant for pay and promotion of the 3rd of February, 1866, I think?—Yes.

157. And this, as it now stands, appears to remove this limitation by Clause 50?—Yes; it does appear to do so, but erroneously.

158. Would you tell the Committee whether it is the intention of the authorities henceforth to remove this limitation which previously existed, or whether it is still to continue?—The limitation is still to continue The mistake made in the Warrant of 1866 arose from the fact that it was generally assumed at the time, in consequence of the wording of the Warrant in Circular 334 that the retirement of the Artillery and Engineers was additional to the general retirement, after twenty-one years' service, in the first instance, and then, later, after twenty-five years' service. But, upon examining into the matter, I found that it never was additional to the general retirement, and was never intended to be so. In fact, when you come to look at the clauses, you see that they are contradictory in terms, if you assume the retirement from the Artillery and Engineers to be an additional retirement; for the Warrant gives retirement in Clause 46 after twenty-one years' service, and then in the case of the Artillery and Engineers, it deals in Clause 51 with cases of retirement of officers of not less than twenty-four years' service.

159. But the retirement after twenty-one years' service was altered afterwards, was it not?—Yes.

160. I believe you have authority to recommend an alteration of the Warrant?—I have authority to submit to the Secretary of State that a Warrant shall be altered,

J. Norman Lockyer, Esq., F.R.S.

22 Feb. 1870.

J. Norman Lockyer, Esq., F.R.S.

22 Feb. 1870.

and I have already taken steps to get this altered; I have obtained the concurrence of the branch concerned, and I shall send it forward to be revised as soon as possible.

161. With the object of still continuing this reservation with regard to the Royal Artillery and Engineers?—Yes; the two retirements will be shown side by side: first of all, we shall deal with the officers of the Household Troops, the Cavalry, and the Infantry, giving them the 25 years' retirement; and then we shall show in the next clause the retirement of the officers of the Artillery and Engineers, limiting them to so many Lieutenant-Colonels, and so many Captains, and so many Lieutenants annually, as in the old Ordnance regulations.

162. (*Mr Milton.*) We understand you to say that the addition in the Warrant of 1866 was not intended?—It was not intended at all.

163. It was accidental in fact?—Yes; quite accidental.

164. It did not rest upon any authoritative decision; it had not been deliberately considered?—It had not.

(The witness withdrew).

Colonel the Hon. Hussey Fane Keane, examined.

Colonel the Hon. Hussey Fane Keane.

22 Feb. 1870.

165. (*Chairman.*) You are Deputy Adjutant-General of the Royal Engineers, I believe?—I am.

166. Will you be good enough to furnish a Return to the Committee showing what are the present ages and lengths of service of the senior and junior officers in each rank of the Royal Engineers doing regimental duty at the present moment?—Yes, I will do so. (*Vide* Appendix H.)

167. Will you now tell the Committee what you consider should be the service at which the officers in their different ranks should look for promotion. You will understand that compulsory retirement from the upper rank at the age of 60 is accepted as the basis of all our action?—I think that the corps is now in a very healthy condition, and therefore I might answer your question by taking the services of our juniors and seniors from the Army List as they stand at present.

168. (*Mr. Milton.*) What do you consider to be a fair service as a Lieutenant?—I think from 13 to 14 years would keep the corps in a healthy condition. I think the senior subaltern should not have above 13 years' service.

169. And what do you consider a fair service as Second Captain?—We find that it generally takes about 8 years to go through that rank. That would give the junior First Captain 22 years' service. He has at this moment 24. But I do not think that it ought to take more than 12 years to pass through the rank of both First and Second Captain. Therefore, I would say that an officer ought to be 6 years a First Captain and 6 years a Second Captain.

170. (*Chairman.*) Then after 26 years' service he would become a Lieutenant-Colonel?—I would rather make it 25 years. Then he ought not to be more than eight years in going through the Lievtenant-Colonel's. That would make him 33 years' service when he becomes a Colonel. That exactly corresponds with the present condition of things, and is consistent with what I have already stated, namely, that I consider the Corps generally to be in a healthy condition at present. The senior Lieutenant-Colonel has now 33 years' service.

171. You have described the present condition of the Corps generally as being a healthy condition—that does not extend to the upper ranks of your Corps, does it?—No. I mean, of course, that it would be in a healthy condition when the officers of 60 years of age were gone, because, in that case, several of the seniors would have been promoted. I understood your basis to be compulsory retirement in the upper rank at the age of 60.

172. But speaking generally of the condition of the Corps, although the condition of the other ranks is healthy, in the upper rank you have got now men of very extreme age?—Yes; too old for our efficiency, I think.

173. And in that respect there is a material difference between your officers and the officers of the Corps of the Royal Artillery?—Yes; a very great difference.

174. They are rather young in the upper ranks, while your excess of age is in the upper ranks?—Our excess of age is certainly in the upper ranks.

175. Given the present condition of the Corps as being healthy, how long would it remain in that state if there were no other means of retirement than the present retirement provided by the Parliamentary Grant?—It would not retain its present healthy condition for more than a year: it would begin to deteriorate, I may say, from the present day. I say that advisedly, because the present subalterns at this moment are just entering their thirteenth year of service. Therefore, I say, if it retained its healthy condition for about another year, it would put the Senior Lieutenant in about the condition I stated before as being desirable, namely, from 13 to 14 years' service.

176. What are the average retirements annually under the present system, taking, of course, the retirements from all sources, deaths, and promotions of every description?—Taking the last seven years, from 1863 to 1869, there have been 83 steps. That would give an average of 12 a year—going down to the Lieutenants.

177. Can you tell the Committee from whence those 12 vacancies a-year are derived—how many by retirements upon the 600*l.* a-year, and how many by death vacancies?—I produce a Return, which I think will explain the whole matter, and which I will read (*vide* Appendix I). In Return A, I give the number of officers removed from the List of Colonels from 1863 to 1869 inclusive, and the number of Lieutenant-Colonels consequently promoted to Colonels. In 1863 two General Officers died, one Colonel died, and one Colonel retired. That gave four in the year 1863. Under similar circumstances there were four in 1864. There were none in 1865. There were five in 1866; five in 1867; seven in 1868; and one in 1869. That gives a total of 26 in seven years, or an average of about three a year. That of course made promotions to the extent of 26 in the lower ranks. Then in List B, I give the number of Officers removed from the List of Lieutenant-Colonels from 1863 to 1869 inclusive. Of course, you will understand that that will include the 26 steps that had gone before. In 1863 there were five steps; in 1864, five; in 1865, two; in 1866, five; in 1867, nine; in 1868, eight; and in 1869, four: giving 38 in seven years, or an average of five a year.

177*. If you are to deduct 26 from these 38, you only get 12?—Of course, that is all; you must deduct them because these are worked up in consequence of those steps being given below. In List C I give you the number of officers removed from the List of Captains from 1863 to 1869 inclusive. Of course, taking these 38 steps in the same way as before, I get in 1863, 5; in 1864, 6; in 1865, 3; in 1866, 10; in 1867, 12; in 1868, 12; and in 1869, 5: making a total of 53 in seven years, or an average of about seven a year. In List D, I give the number of officers removed from the List of Second Captains from 1863 to 1869 inclusive. It gives a total of 60 in seven years, or an average of about 8 a year. Then I go as low down as the Lieutenants in List B, who get, as I said before, 83 steps in seven years, or an average of about 12 a year.

178. (*Mr. Milton.*) 1865 was a very exceptional year was it not?—Yes.

179. (*Chairman.*) Have you calculated how many retirements you would require in the year in order to arrive at that which you consider to be the normal condition of the corps, namely, that the officers should get their promotions at those ages which you have mentioned in the respective ranks. You have now twelve retirements a year, which you say will not give you that promotion; what increase of numbers to that

retirement would you require in order to secure you that promotion?—I have not gone into that point, and I do not think I could answer your question except by means of a Return, because it requires one to go into the separate ranks to know how many steps are required at the head of the Lieutenants to give them that thirteen years' service which I consider desirable.

180. In considering a scheme of retirement, would it be better to take age or length of service as the basis?—In my opinion, length of service would be preferable.

181. Why?—Because I think age is not so good a test of the efficiency or inefficiency of an officer as length of service, because one man at 60 may be a very different man constitutionally from another at 60. There is also another element which I think ought to be considered, namely, that a limit of age takes a whole year at a time, and when there are two distributions of commissions to a corps in a year, the one in June and the other in December, it is either hard or the reverse to make a man who gets his commission in December be dealt with in the same way as a man who gets his commission in June, simply because the fact of his being 60 years of age becomes an element in the calculation. And further, although two cadets may enter the academy at the same age, the one may get his commission in two years, and the other may be four years in getting his commission, and then they will both reach the age of 60 at the same time, though one has been a cadet for two years longer than the other. In dealing with them by age you deal with them on the same scale, whereas the one who took precedence of the other and got his commission two years before him, is reckoning two years more service, which ought certainly to be to his benefit in his after career when the question of retirement arises.

182. The question of physical capacity would apply equally with age or service?—Yes; equally because I think you cannot calculate upon the physical capacity of two men at the same age being alike—it is perfectly different.

183. With regard to your present annual grant, how much of that was given before the Warrant of 1854, and has, therefore, been locked up?—I could not tell you exactly now, but I will furnish a statement showing that. (*Vide* Appendix J.) You mean all the half-pays that we were compelled to absorb.

184. Our object in wishing for that information is because, as that money becomes unfettered, it will give you more money whereby to retire officers, so to speak?—Yes; it comes in, in driblets.

185. (*Colonel Egerton.*) You have spoken of retirement as being an advantage, and you said that the officer who passed out of the Academy first ought to have the advantage of retirement first, as I understood you?—Yes.

186. But do you consider that compulsory retirement would be an advantage?—The retirement of which I spoke would not be compulsory. The compulsory retirement at the age of 60 is not included in my answer, because, of course, that retirement would apply whether a man got his commission early or late, supposing you obliged him to go, on attaining the age of 60.

187. Do you not think that a man who by his talent and application passes into the Academy and out of the Academy, we will say, 2 or 3 years before another man, ought to have an advantage from that, and not be put aside to make way for the other man, merely because he entered later?—That is one of the points I wished to refer to when the question was put to me as between age and service. If age were taken as the basis, it would be the same thing whether a man was clever or stupid, and whether he got his Commission at one time or at another; whereas, if you take service as the basis, the officer who applied his talent to the greatest advantage, when a Cadet, reaps the advantage. A man likes to feel "I have served 35 years—now I can go if I like," whereas another man whom he passed in the race, in early life, and left 2 years behind him, comes in and enjoys precisely the same privilege at the same time if it is decided by age instead of service.

188. (*Mr. Milton.*) For compulsory retirement which do you consider the best basis, age or service?—Age is unquestionably the best basis for compulsory retirement.

189. Because compulsory retirement is intended to remove those who become inefficient?—Yes.

190. And age renders a man inefficient, but not service?—Yes.

191. (*Chairman.*) Given 60 years of age as the age for compulsory retirement in the senior rank, do you approve of the principle of compulsory retirement at certain ages in the junior ranks as a means of obtaining a flow of promotion?—I only approve of it because I think it is the only means of obtaining a flow of promotion.

192. And you would fix that compulsory retirement on the basis of age in preference to service?—Certainly.

193. What are the ages which you would fix for compulsory retirement in the other ranks? A Colonel being retired at 60, at what age would you retire a Lieutenant-colonel if he did not arrive at the rank of Colonel?—I agreed, as you are aware, to the ages that were laid down the other day, which were 54 for a Lieutenant-Colonel and 48 for a Captain.

194. You agree to the scheme proposed by Mr. Childers?—Yes; but only on the terms that the compulsory retirement is accompanied by a voluntary retirement, because my firm opinion is that if the ages fixed for the compulsory retirement of Lieutenant-Colonels and Captains are those given in Mr. Childers' scheme, they will practically never come into force, because the voluntary retirements will continue to cause such a flow of promotion that the senior Captain will never arrive at the age of 48, and the senior Lieutenant-Colonel will never arrive at the age of 54 before he is promoted. That is my decided opinion.

195. Therefore you think that voluntary retirement should be coupled with compulsory retirement at certain ages?—Most certainly: if a compulsory retirement at certain ages is instituted, I think that a voluntary retirement ought to be allied to it.

196. In addition to the compulsory retirement at the ages Mr. Childers proposes, coupled with a voluntary retirement, do you think that the power should be reserved to the Secretary of State to retire officers under those ages on certain conditions of inefficiency?—Certainly; that would be the greatest possible advantage to the corps; it would, in the most economical way, provide a certain small amount of promotion by getting rid of those inefficient men, of whom we are hampered with a certain number now, and who cannot be got rid of because there is no outlet for them: there is no means of getting rid of them except by turning them positively into the streets.

197. Do you think that a similar power should be reserved to the Secretary of State to relax the rule of compulsory retirement in the case of officers of very superior qualifications and of acknowledged physical capabilities?—I think it would be very desirable to reserve that right to the Secretary of State, but it would be a very difficult one to carry into force.

198. What is the average age now at which the officers enter the Royal Engineers?—At this moment it is 21 years and 6 months.

199. If the Report of the Royal Commission on Military Education is acted upon, it will alter the age of entering the Academy, will it not?—Yes; by one year.

200. It will reduce it?—Yes; it will reduce it by one year because, practically, we find that whatever the ages are (they are now from 16 to 19) the standard of education is so high that the young men always work up to the highest limit in order to get as much knowledge as they can before going in, and those who are of lower age than the highest limit (as it is now, those from 16 to 18) do not find themselves able to compete, unless they are geniuses, with the boys just above their own age (with the boys of 19 now). So that, where we have the ages altered according to the recommendation of the Commission, to from 16 to 18, the effect will merely be

Colonel the Hon. Hussey Fane Keane.

22 Feb. 1870.

to reduce the age by one year, and to reduce the standard of education to that extent on the boys entering. I do not think that it will be any disadvantage.

201. (*Mr. Milton.*) What would you say would be the average age for the last seven years at which the officers have entered the Royal Engineers; you say that it is now twenty-one years and six months?—That would be the average during the last seven years, because that has been the period when they have been examined, at from 16 to 19 years of age. Perhaps I may be allowed to add, with regard to these Tables, that the compulsory retirement at 60 is supposed to be a natural outlet that will give promotion: but it appears from an examination of what has been going on, and of what will go on for the next seven years, that although it gives a temporary relief at the rate of nine steps in the next six years, there really is no relief at all, because none of those officers, according to precedent will take the 600*l.* a-year; they will elect to go upon 474*l.* a-year in the hope of getting a battalion, and therefore at the present time, or when they reach 60 years of age, they merely give a step as if seconded. They only give that step for the time, for they come back again and fill up the Major-General's ranks, and elect for a battalion, so that when an officer who commands a battalion dies, one of these men simply comes into his place: and, therefore, although he has given a promotion before, he stops it now.

202. (*Colonel Egerton.*) Are your battalions given by seniority or by selection?—By seniority of army rank. In the year 1870 there will be two steps in the Engineers, consequent upon officers having attained the age of 60; in 1871, none: in 1872, one; in 1873, two; in 1874, none; in 1875, two; in 1876, two.

203. *Chairman.* Those steps would all be in addition to the present average of twelve steps a-year which you get by other retirements?—Yes, for the moment; none of these officers will probably take the 600*l.* a-year; we have only one instance of an officer having done so. I think in the Artillery they have two or three instances of officers having taken the 600*l.* a-year instead of the 474*l.* Presuming that none of those Colonels accept the retired full pay of 600*l.* per annum, which in all probability some will, as during the last seven years no less than six Colonels above 60 years of age have gone on the retired list, but deducting the number that are likely to go upon the list of general officers, which will be the eight senior regimental Colonels and two Colonels by brevet rank, making altogether ten, according to the number of deaths upon the list of general officers during the last seven years, from 1863 to 1869, these retirements at 60 years of age will not, in seven years hence, give the corps a single additional step of promotion.

204. Can you explain to the Committee what is the difference between the Retired List and the Reserved List?—You mean, of course, on an officer having attained 60 years of age. From that point you may describe it thus:—An officer having arrived at the top of the Colonel's list and become 60 years of age, there are two lines, up either of which he is allowed to go; one is the Reserved List, upon which he receives 474*l.* a-year, and elects for a battalion (the 474*l.* is a Major-General's pay); the other is the Retired List. If he chooses to give up the chance of getting a battalion he may go upon that list which is called the Retired List, and get 600*l.* a-year. Those who have chosen to do that, are gone from the army.

205 They are eligible for no appointments whatever?—None whatever; they are never noticed again; they are never considered as eligible for appointments of any kind. I had an application to day from an officer who has gone upon that list asking for a good service pension. My answer will be that he is wiped out; that he is not upon the Army List except as a retired officer.

206. (*Colonel Egerton.*) Can you tell me the average time it would take for your Senior Colonel now to become a Commandant, supposing he retired on 474*l.* a year?—By a calculation I made the other day I think the average time is 10 years; that would make him about 70 years of age. If he retires at 60 he has to wait about 10 years for a battalion.

207. Losing 126*l.* a-year all that time?—Yes; I know an officer of the Artillery who took the 600*l.* a year, and who reached his 77th birthday yesterday; he would have got his battalion exactly a year ago, at 76; so that the Artillery in that rank are 6 years worse off even than what I represent that ours would have been.

208. (*Mr. Milton.*) You have now 20 general officers at 600*l.* a-year in your corps, have you not?—Yes.

209. (*Chairman.*) Can you tell us what the present condition of your retired full pay list is?—Yes, certainly; I can give it you from the Estimates.

210. How many general officers have you on 600*l.* a-year?—Twenty.

211. How many have you on 400*l.*?—We have 4 Lieutenant-Colonels on 400*l.* a year.

212. No general officers?—No; we have 4 Lieutenant-Colonels on 20*s.* a day. These are men who after 25 or under 30 years' service, and on the report of a Medical Board, have retired on full pay, which is allowed to be 20*s.* a-day under the terms of the warrant; there are 3 Lieutenant-Colonels on 18*s.* 1*d.* a-day; those are some of the old ones whom we had to take up; one Lieutenant Colonel on 16*s.* 1*d.* per day; 3 Captains on 13*s.* 1*d.* per day; and 5 Captains on 11*s.* 1*d.* per day: making a total of 17,741*l.*, with 543*l.* unexpended.

213. (*Mr. Milton.*) Out of your 18,000*l.* a-year only about 2,500*l.* go to those whose pensions were given under the old system?—Yes; about 2,500*l.*

214. (*Chairman.*) Is your condition with regard to the Indian Service the same as the Artillery; have you 4 separate and distinct lists?—Yes.

215. An English List, a Bengal List, a Madras List, and a Bombay List?—Yes; just the same as the Royal Artillery.

216. Are they all running to a common centre?—Yes; the Indians are as compared to us in the proportion of 7 to 8, that is to say they have 7 battalions in India and we have 8.

217. Have you calculated when that common centre will be reached—I mean when the whole of the lists being amalgamated the officers will come upon one list pure and simple, and get promotion upon that list?—That would be in the natural term of service from the year 1863. Putting that at 40 years' service the time would come in 1903.

218. It would not be in this century?—No.

219. With regard to promotion in the Indian Corps, and your Corps, how do you run?—In the higher grades in the Indian Service they have gone completely away from us in rapidity, but in the lower ranks we are in advance of them—that is to say, we are in a better condition.

220. General Gambier told us the other day, that in the Artillery the Indians beat the English Officers by about a year in all ranks?—It is quite different with us altogether.

221. There seemed to be very material differences between the condition of your Corps and that of the Artillery?—There is a great difference. As regards our Corps, the secret of it is this: the Indians were not up to their strength at the time of the amalgamation, and they were clever enough to insist upon being augmented to their regular strength before they were amalgamated. Therefore, they got all the promotion before they came to us, which gave them a tremendous advance in the upper ranks, and, in the amalgamation with us, it brought them into a position vastly favourable to them. For instance, men who were 2 and 3 years junior to me in the Army have left the Service as Major-Generals.

222. Having turned your attention to some means of preventing the block which every one anticipates in both the Royal Artillery and the Royal Engineers, and being practically acquainted with the history of both Corps, has it ever struck you that it would be very difficult, if not impossible, to arrange a system of retirement which, in all its conditions, shall be exactly the same and which will apply with equal benefit to both Corps?—I think it would be most difficult to apply the same scheme to both Corps. I feel very strongly upon the subject, and I am quite certain that if you adopt a different scheme for the

different Corps, you at once proceed to simplify all the difficulties with regard to retirement in the Engineers. In considering all the different schemes with which we have been brought in contact, I have always found that General Gambier and myself differed because the organization of the two Corps are so different. The organization of the Artillery is purely numbers and rank for the purpose of carrying on certain duties which are sufficiently defined among their several ranks, of which there are certain proportions. There is no such great necessity for that system of proportions in the Engineers. If we once cut ourselves adrift from a scheme that would apply to the Artillery, the facility of making a scheme for the Engineers becomes much greater. I have thought very much upon this point, and I am very glad of having had an opportunity, by having the question put to me, of recording my opinion upon the subject.

223. Not only would it be more practicable, but it would also probably be more economical to treat the two corps quite differently, and not to set down a rigid line for each of them?—I have not gone into the question of economy, and I should doubt that any system of retirement or any system that would improve promotion in any corps, whatever it might be, could be economical. There must be an increase of expenditure involved in it.

224. (*Mr. Milton.*) The Chairman's question was addressed, I think, to the question of comparative economy—does it not strike you as being more likely to insure economy if the plan for retirement could be looked at in two aspects, each being settled in its own way instead of both being settled in the same way?—I think so.

225. (*Chairman.*) Do you see any practical difficulties with regard to the chances of supersession with respect to one another if the two corps are treated differently?—I do not think that that is a question which can be taken into consideration, inasmuch as we supersede each other, or rather the Artillery are superseding us every day. We are a long way behind them.

226. (*Colonel Egerton.*) But if there was any considerable supersession either of the Artillery or of the Line there might be cause for complaint, might there not?—There never has been complaint since I have been in the service, which is now over thirty-one years. Although both the Artillery and the Line have gone a-head of us in all directions we have never complained.

227. (*Mr. Milton.*) But do you anticipate that any scheme which would be within the limits of possibility as to expense would be at all likely to produce such supersession?—No, but there is a favourite scheme of mine which I rather think is mentioned in the fifth clause of the second page of a letter that was sent to me with regard to the supersession of other branches of the service—that I think would make a great difference in the feelings of both regiments. It has often been discussed before. It is to make the first Captains, Brevet-Majors.

228. (*Colonel Egerton.*) But your Second Captains count from the day of their promotion for army brevets, do they not?—Yes, they do; but since the amalgamation of the Indian services they have made the First and Second Captains two different ranks which we never thought of before. The Indians got an immense advantage over us in that respect, because they having, as I stated before, got an augmentation before the amalgamation. Numbers of them were never Second Captains at all. They skipped right over that rank and came home to England and insisted upon being placed with their Captain's commission among the first Captains. The consequence was they sat upon Courts-Martial, and were to all intents and purposes senior to the whole of the Second Captains of our two corps. That was the reason why, in the Army Lists at that time, the dates of the two different promotions to First and Second Captains were inserted, and indeed they are so now.

229. In fact, in any scheme of retirement we need not have any apprehension that we shall supersede the Indians to any extent that would cause dissatisfaction?—Certainly not.

230. (*Chairman.*) Will you furnish us with a calculation of the increased promotion which would be obtained by compulsory retirement in the upper rank only at the age of sixty, in addition to present retirement; that is to say, keeping the vested interests from twenty-five years intact up to that compulsory retirement at the age of sixty in the upper rank, how many additional steps would it give?—I have a memorandum here upon that very subject (*vide* Appendix K). The officer who stands forty-first upon the list of Lieutenant-Colonels now is Colonel Kerr. He is the junior officer of the corps, with twenty-five years' service. I think if I trace his career that will answer your question. He has sixty-six steps to go to attain the rank of Colonel-Commandant; that is taking the vested interests up to the rank of Colonel-Commandant.

231. You have stated that you will furnish us with a paper in which you will put down how many additional steps you want in addition to the twelve which you get now annually. Then I say, supposing we allow the present retirements to continue for all men of 25 years' service and upwards, and add to that a compulsory retirement at the age of 60, how many additional steps will you get?—General Gambier told me that this was what you wanted; and it appears to me that he was right in this way. When you look at the vested interests, you will see that they are carried on until a man becomes a Colonel-Commandant.

232. That depends upon what interpretation you put upon the way in which they should be treated, which is a question we shall come to by-and-bye?—You asked me to define the Retired List and the Reserved List just now. All the Colonels going upon the Reserved List have a vested interest in the original vote until they become Colonels Commandants. Therefore I have taken it up to that point. Accordingly, I say Colonel Kerr has 66 steps to go before he attains the rank of Colonel Commandant. Lieutenant-General Stehelin is the junior Colonel-Commandant, and it took him from 1850 to the end of 1868—that is, 19 years—to obtain 66 steps (that is a parallel case to that of Colonel Kerr), during which period he had the advantage of the promotions by the Retired Full-Pay Warrant of the 3rd November, 1854, coming into force, which enabled two Major-Generals and 15 Colonels to retire between December 1854 and January 1858, so as to take up the grant of 16,000*l.* per annum Retired Pay. Therefore he had the advantage of the whole application of this money, so that you may say that he was exceptionally fortunate. Lieutenant-Colonel Kerr will not have the advantage that Lieutenant-General Stehelin had, because he will only have so many steps as fall in while he is going up the ladder. He will not have the advantage that Lieutenant-General Stehelin had, in so many senior Officers retiring in the period of two years; and under the existing rate of promotion, it is not possible for Lieutenant-Colonel Kerr to obtain his battalion in less than 20 years, which will be about the year 1890. So that, as he has now 25 years' service, he could not get his battalion under 45 years' service, and he would be a very lucky fellow if he got it then. That shows just the position in which the Corps is at this particular moment.

233. But that calculation is not based upon all men of 60 years of age being taken out of Colonel Kerr's way?—No; it is placing him in a better position than he ought to be placed in, because he will have no large vote of 16,000*l.* coming in, as General Stehelin had in the interval. Until I know what the scheme you propose is, it is impossible for me to say how many steps it will give annually.

234. The scheme is, simply, that every Officer who does not elect to remain upon the old system, shall retire at the age of 60 upon 600*l.* a year?—Then I fall back upon what I said before, that the Officers who retire at 60 do not all give *bonâ fide* steps, because half of them go not upon the Retired List, but upon the Reserved List, and then they would come in before Colonel Kerr for a Commandantship.

235. But I am supposing that every man shall compulsorily go out of the Army at 60 years of age?—

Colonel the Hon. Hussey Fane Keane.

22 Feb. 1870.

Colonel the Hon. Hussey Fane Keane.

23 Feb. 1870.

That is a very different state of things; but even then I do not think that that would be more than equivalent to the great advantage which General Stehelin had in getting two Major-Generals and 15 Colonels away from before him at once. I should like the scheme adopted to be so successful and so liberal, that it would do that, and more, if possible, but I should doubt very much whether it would do so, because the case of General Stehelin, which I have referred to, was a most exceptional one.

236. (*Mr. Milton.*) Looking at the present rate of retirement, do you consider that in 5 years the corps of the Royal Engineers will be in an inefficient state in consequence of the stagnation of promotion?—Yes.

237. In what way do you consider that it will be inefficient?—I think every officer will be 4 years older than he ought to be for holding the position that he does. I say 4 years older because though you speak of 5 years hence we are still 1 year to the good. A question has been put to me as to the state of the corps at present. I have a statement here showing its condition 7 years hence. I have made a calculation of the seniors and juniors in each rank

238. (*Chairman.*) That is in 7 years' time with the present system of retirement alone?—Yes; it is founded upon the Tables which I have given you in detail, and it is applying those Tables; that is to say, applying the mean of the last 7 years to the corps as it is at present. "The period in the accompanying Statements of promotions and casualties that have occurred amongst the officers of Royal Engineers from 1863 to 1869 inclusive, has been taken as the present establishment of officers, has existed since 1863." There has not been any alteration in our numbers since 1863.

Statement.

	Numbers.
A.—Promotion of Lieutenant-Colonels to Colonels	26
B.—Captains to Lieutenant-Colonels	38
C.—Second Captains to Captains	53
D.—Lieutenants to Second Captains	60
E.—Casualties on the list of Lieutenants (I have put the number against E in italics and not counted it, because it gives no promotion.)	*23*
F.—Promotions on the Indian lists of Lieutenants	41
Casualties on ditto	*9*
Total promotions of Lieutenants to Second Captains in 7 years, or 14 a-year.	101

The promotions under F will now very soon be beginning to be coming in because we promote our young Lieutenants as we get vacancies on the three Cadres in India, in the upper ranks. That altogether makes 101 promotions of Lieutenants to second Captains in 7 years. That is at the rate of 14 a-year. From these statements it appears that, "in 7 years hence (1877), the ages and services of the undermentioned officers will be as follows." As to the Colonels, you must remember, if you please, that the officers in those days got their Commissions much earlier than they do at present; that makes a great difference.

	Age.	Years Service.
Colonels:—		
Senior ..	$60\frac{4}{12}$ ..	$42\frac{7}{12}$
Junior ..	$15\frac{11}{12}$ ..	$33\frac{7}{12}$
Lieutenant-Colonels:—		
Senior ..	$52\frac{4}{12}$ ..	$33\frac{7}{12}$
Junior ..	44 ..	$24\frac{7}{12}$
Captains:—		
Senior ..	42 ..	$24\frac{7}{12}$
Junior ..	$36\frac{7}{12}$ ..	$19\frac{3}{12}$
Second Captains:—		
Senior ..	$36\frac{1}{12}$ ..	$19\frac{3}{12}$
Junior ..	35 ..	$16\frac{1}{12}$
Lieutenants:—		
Senior ..	$34\frac{2}{12}$ ..	$16\frac{1}{12}$
	$27\frac{4}{12}$ ..	7

The position of the Subalterns is the curious part of it.

239 The whole history and position of the upper ranks is fair and good enough, and quite according to the standard, and it continues until you come down to the rank of Lieutenant?—Yes; it is the very standard which I have given you as being what I consider tolerably healthy. But when we come to the junior Lieutenant we find that he is 27 years old and has had 7 years service, and his position may be described thus: "This officer is now the Junior Subaltern of the corps," (I mean at this moment) "and in 7 years hence will stand 230 from the top, and taking 14 as the average" (I have culled that from the upper part of the Table) "number of Lieutenants likely to be promoted in each year from the Imperial and Indian Lists combined," (that is giving the benefit of them both) "according to the average during the last 7 years, viz., 101, and allowing a proportion of 3 casualties a-year to occur amongst the Lieutenants above 230," (that is those to whom anything may happen) "this officer is not likely to obtain his promotion to the rank of Second Captain until he has about 19 years' service, and at the age of 39." I do not think anything in the world could show the necessity of additional promotion so much as that Table does.

240. But also, nothing shows more clearly the difficulty of the problem, because you have there described the condition of the corps in the upper ranks as being all you could desire at the end of 7 years?—Yes.

241. But it is at the Lieutenants that you break down?—Yes; but there is an inference to be drawn from it, where is the outlet to be made for the younger ones?

242. (*Colonel Egerton.*) Your Colonels are a good deal above the standard age?—Our Colonels are above 60.

243. (*Chairman.*) Now?—Yes; and in 7 years they would be so also. The senior Colonel would be 60 years and 4 months.

244. What would be the age in the next rank?—The senior Lieutenant Colonel would be 52.

245. (*Mr. Milton.*) With 33 years' service?—Yes.

245*. That is the normal state of things?—Yes; I do not object to that at all.

246. (*Chairman.*) If you make an outlet at the top, the effect is to remove these smart men when they are just in the full prime of their power of mind and vigour of body in order to make room for the great block of Lieutenants?—If you acknowledge that an officer is in the full vigour of his life at the age of 52 years and 4 months, at all events you yourself say that he has only 8 years to work upon that vigour, because you make him go at 60, therefore you only give him 8 years before you say to him you must go, vigorous or not. With all his health and vigour at 52 as a Lieutenant-Colonel, he has still the whole rank of Colonel to go through in 8 years, taking 60 as the age for compulsory retirement.

247. (*Mr Milton.*) But the proposition now before us is to give some further relief to stop this block besides the compulsory retirement at 60 years of age, and then the question is, where shall we give this relief. If we give it at the top we shall be getting rid of these men in their prime of life?—How much more will you be giving relief to health and vigour, if you go down below to the Captains.

248. Then we must come to this, a compulsory, or a very liberal voluntary retirement in the middle?—There is a scheme which has been propounded before which, in my opinion, meets the difficulty. It is very clear, from the condition in which the junior Subaltern is at this moment, that he must be rapidly getting into a most unhealthy condition of age with reference to rank.

249. From your knowledge of the Officers now in the Corps, do you think that the permission to large numbers in the middle ranks to retire would be for the good of the Corps and of the Public Service. Have you not a lot of shady men whom you would be glad to get rid of?—If I were sure that it would be the shady men who would go, I should at once use a very strong expression in favour of such a plan, but I am not sure of

that. I am happy to say, however, that there are not enough of shady men to make any very great promotion even if they did all go. Our most valuable men in the Corps are certainly from our senior Captains downwards.

250. What is the total number of officers on your effective List?—284. (*Vide* Appendix L.)

251. In what proportions according to ranks?—There are 8 Colonels Commandant, 16 Colonels, 40 Lieutenant-Colonels, 64 First Captains, 64 Second Captains, and 192 Lieutenants.

252. How many men out of that number would be affected by any plan for allowing Brevet majority to a First Captain?—64.

253. You would not propose to make the whole of the First Captains Brevet-majors, would you?—No; I think it would be unadvisable to propose that, because we should raise an outcry on the part of the Line; but the men might easily be taken so that no injustice should be done. It would not be difficult to draw a line, and say, after 20 years' service, or 25 years' service, or some other period, a First Captain should have a Brevet majority.

254. (*Chairman.*) Having turned your attention to this question, have you any scheme to propose to the Committee which you think would effect the object that we all have in view, of securing a fair flow of promotion, and if so, will you be good enough to explain it to the Committee?—My idea is, that the question of promotion in the lower ranks in both Corps is very much mixed up with dissatisfaction (if a soldier may use such a term); that is to say, that the young Officers in the Corps very soon after they get their Commissions, realize the great want of promotion that is likely to be before them, and think of the immense time that they will remain in the lower ranks. As the idea of every young officer is to become a Field-Officer as soon as possible, I think that a scheme of bringing a Field-Officer's rank within the reach of an officer at a certain fixed period would allay a great deal of the dissatisfaction which exists now in the junior branches of both Corps from the absolute absence of any hope of ever being a Field-Officer during the course of their service. In order to accomplish this, I would suggest that the warrant of the Military Medical Profession should be taken as a basis. They have promotion to Field-Officer's rank after a certain number of years' service; and, although I should be disposed to make the whole of the First Captains Brevet-Majors, for they really represent that rank, as being the intermediate step corresponding with the Majors in the Line, between the Lieutenant-Colonels and the Captains; yet, I think, that in making a comparison with the rest of the Army, that might perhaps become invidious. Therefore, probably, it would be better that a line should be drawn of a certain number of years' service, which would do away with anything that might be invidious. In the Military Medical Profession a man who has served 20 years becomes a Staff-Surgeon-Major, which gives him the rank of a Field-Officer. If, after due consideration, you fixed upon 20 years' service, or 24 years' service, or even 25 years' service, as the time for attaining the rank of Field-Officer, it would be a very great boon for a young officer to look forward to. He would say to himself then. "It does not much matter whether my promotion regimentally may be as rapid as I wish it to be or not, for I know that in 20 years or 25 years, as the case may be, I shall, if I live become a Field-Officer." I think that that would do away with much anxious thought, and, what I have called dissatisfaction, among the subalterns.

255. That scheme would not get over the difficulty of these Lieutenants being so long in the junior ranks?—No; I quite admit that, but I start by saying that the craving for promotion is only another word for dissatisfaction, that dissatisfaction being occasioned by the prospect of remaining so long in the lower ranks. But if the officers had a particular status that they knew of, as being within certain reach at a fixed period, it would tend, in my opinion, to allay that dissatisfaction.

256. It would probably allay dissatisfaction, but we have something else to look at. We must remember that if an officer is a Lieutenant after a certain age he becomes more or less inefficient?—I quite admit that.

257. (*Mr. Milton.*) With regard to the medical officers, you are aware, are you not, that the rank you speak of is simply medical, not applying to the choice of quarters and allowances, whereas a brevet majority would be army rank?—Yes; but their rank is only medical from the beginning; it is never anything else.

258. There is no difficulty in giving that rank to the Medical Department, as it could not cause supersession by others, whereas to give brevet majority after a certain number of years' service in the Engineers, would cause supersession, would it not?—Yes; it is a question that would require very careful consideration, and it would not, as the Chairman has observed, relieve the block of old subalterns.

259. Are you aware of any branch of the service at present in which army rank is given for length of service?—No; not army rank.

260. (*Colonel Egerton.*) The Engineers are longer in becoming Captains on the average than the Line, but the skipping over the rank of Major and going from Captain to Lieutenant-Colonel at once puts you about on a level with the Line, does it not?—Yes; but the first captain in the Artillery and the Engineers is the intermediate step which represents the Major in the Line, because a Second Captain in our corps is a Captain, and we get no credit for going through two separate grades of Captains, yet we are always told what a fortunate profession we are in, in going straight from Captains to Lieutenant-Colonels.

261. (*Mr. Milton.*) You have given us the different numbers of officers in the various ranks in your corps, can you at all say upon what principle those proportions have been based; whether they are for duties, or for a fair chance of promotion, or what?—They were based originally upon the establishment of battalions. There again we go with the Artillery. The Artillery must have been taken as the datum in this matter. They required a certain number of officers to do certain duties with reference to their battalion formations, and we were formed upon the same proportions without having the same necessities.

262. Although you had not the same battalions of men?—Yes.

263. (*Chairman.*) What is your view with regard to those who may fairly claim a right of election between remaining under the present system of retirement or coming upon any other system of retirement which may be adopted; of course you will suppose the other system to hold out equal advantages?—I think that there can be no doubt upon that point, and that where the line should be drawn is where the junior officers at the time of the new scheme coming into force, may be considered to be under its influence.

264. We will take the different classes of officers who can fairly be entitled to some claim upon the present grant. First of all, there are the officers in the upper rank who have fulfilled the two requirements, namely, length of service and regimental position?—Yes.

265. These men clearly have a right to retire whenever they like upon 600*l.* a year?—Yes; whenever it is there for them; if it is not there, of course they cannot have it.

266. But they have fulfilled the two conditions; they are Colonels in the Regiment, and they have completed 30 years' service?—Yes; there can be no doubt about them.

267. The next class consists of those who have fulfilled one condition only; that is to say, those who have completed their 30 years' service, but who are not yet Colonels in the regiment?—Yes.

268. And then lastly, there are those who are neither Colonels nor have completed their 30 years' service, but who have a right to retire upon the 400*l.* a year?—Yes.

269. Those are the three classes?—Yes.

270. We will keep them distinct, if you please, and treat their different claims separately. What do you consider to be the claim of Class No. 1, that is to say,

Colonel the Hon. Hussey Fane Keane.

22 Feb. 1870.

those who have fulfilled both conditions?—There is no doubt that they are clearly entitled to elect to be upon the old scheme of retirements at 600*l.* a-year.

271. Do you mean to say that they have a right to say, we will remain upon the old system, and then to set on one side a 600*l.* a-year which might be vacant, and still remain in the service, and again set on one side another 600*l.* a-year, and finally take a third 600*l* a-year when it becomes vacant?—They would take it according to seniority. If an officer receiving 600*l.* a-year dies, another may have it. Then the senior who has put his name down is asked whether he will take it or not. If he says no, the second one is asked, and if he says no, too, the third one is asked. He may say no, also; because they may all see something in front of them which makes them not wish to retire. Then the fourth may take it.

272. What I want to know is, whether you think that the first one, having once refused it, may claim afterwards to take it?—Clearly.

273. Your view of the question is, that he may claim after a previous refusal?—Certainly; that is the system as it exists at this moment.

274. That is to say, No. 1 may refuse 600*l.* a-year three or four times, and eventually finding that he does not get on to a Colonel Commandantship as quickly as he expected, he may get tired of waiting, and say, now I will take the 600*l.* a-year which I have refused three or four times?—Yes; that is exactly what is allowed to Major-Generals who have gone upon the Retired List.

275. (*Colonel Egerton.*) Do not the officers put their names upon a List as claimants for the 600*l.*?—Yes; and when a 600*l.* a-year becomes vacant, it is offered to the Senior on the List.

276. If an officer has put down his name upon the List for 600*l.* a year, is he allowed to decline it?—Yes, if there is another below him who wants it. But let me also show the application of the system to the benefit of the public, as well as of the Corps. Suppose the Senior Officer does not take the 600*l.* a year, and suppose the second, the third, and the fourth, and all of them also decline because they are in better positions, the Treasury gets the advantage of it all the time. We do not get the advantage of it in the Corps—it goes back to the Treasury.

277. (*Chairman.*) It goes back to the Treasury for the moment?—Yes, until some one takes it.

278. The Treasury gets the interest upon it?—No; they get the money itself in the meanwhile.

279. That being the way in which you would deal with Class 1, how would you deal with Class 2—that is to say, with those officers who, having completed 30 years' service, have not yet arrived at the Regimental position of Colonel?—I say, that these men having served, as they must have done for 30 years, and for the last 12 of them having had this warrant with this retirement before them to which they have been gradually rising, I think it is only fair that they should be allowed to elect for it exactly in the same way as if no new scheme had been propounded.

280. Therefore you would treat their interests, in short, exactly as if they had fulfilled both conditions?—Yes; I would treat all the men coming within Class 1, Class 2, and Class 3, as you have described them in regard to their election of retirement exactly in the same way as if no new scheme were propounded at all.

281. But there is a material difference between the position of the three classes. You would treat No. 2 exactly as if they had been No. 1?—Yes.

282. We now come to No. 3. An officer in Class No. 3, not having fulfilled either of the conditions which would qualify him for the retirement upon 600*l.* a year, is nevertheless in a position to retire upon 1*l.* a day—how would you treat him?—He would be a man of between 25 and 30 years' service. Is it fair that after a man has been 25 years in the service, and is qualified for the lowest grade of retirement, it should be suddenly cut away from him because a new scheme is developed? He has entitled himself to 365*l.* a year.

283. That should not be cut away from him, beyond a doubt?—If he goes on to serve beyond the 30 years, I think he should be treated in the same way as the Officers in Classes 1 and 2.

284. In exactly the same way?—Yes, because he has an equal vested interest in the retirement.

285. No, clearly not?—He has not at the moment a vested interest beyond 365*l.* a year; but as soon as he has completed his 30 years' service, he goes into the second scale.

286. (*Mr. Milton.*) Is not that true of the junior Lieutenant, gazetted last week?—In point of law, I think it is.

287. (*Chairman.*) But you are aware that, practically, that principle has never been admitted. You are aware that there was a Warrant issued in 1854 which very materially altered the status of officers in the army, and that such a principle as that because an officer when he entered the service considered that certain things were held out to him, therefore you were never, as long as that officer was in the service, to do anything that might affect him in respect of those things was not admitted for a moment?—I think the only argument that could be used contrary to that is, that the scheme of 1854 was a beneficial one. If it had inflicted greater hardships upon the army it would have been another thing, but it did not, except with regard to half-pay.

288. That is just where it pinched them?—That was the Warrant, you know, that gave us these full-pay retirements. It was in 1858 that we got these full-pay retirements, but with regard to half-pay it certainly was very hard.

289. (*Colonel Egerton.*) We allude to the abolition of general Brevets, and the establishment of the five years' system or the three years' system as it was then?—Yes.

290. (*Chairman.*) Your view is that, with regard to an officer in the third of these classes, which I have attempted to describe, although he is clearly not at this moment entitled to retire upon 600*l.* a year, yet he is so near that title that he may be considered as being in that rank, and that therefore he also should have the option of going on to that retirement?—He should be allowed to serve on into Class No. 1.

291. And with regard to all three classes you consider that the option being given to them it should still not be compulsory to them to adopt that retirement, but that they might be allowed to stay on if they preferred to do so?—They should not be obliged to accept it the moment it comes to them.

292. (*Mr. Milton.*) You think that they should stand, in fact, just the same as they do now?—Yes, just so.

293. (*Chairman.*) You think, at all events, that it would be fair to draw a line at 25 years' service, and that men under 25 years' service would have no real good substantial right to complain, if they were considered to have no vested interests whatever in the present retirement?—I think it is necessary to draw a line, and I think that it could not be better drawn than when a man enters into the bracket.

294. (*Mr. Milton.*) That is to say, after 25 years' service?—Yes.

295. Do you think that the position of the British Engineers, relatively to the Indian Engineers, would cause any difficulty in carrying out any new scheme, even though the India Office did not accept it for their men?—I see no difficulty whatever in applying any scheme that may be agreed upon now to those Officers who have joined the Corps since the amalgamation—that is to say, since 1863.

296 I meant throughout the whole of your Corps. Supposing a scheme was decided upon, and on its being offered to the India Office, the Secretary of State for India declined to accept it, would that prevent its being applied to your branch of the Corps?—Certainly not; but there would be no necessity to ask, and no practical use in asking the India Office to adopt any scheme, because they have their own schemes of retirement for all their own *bonâ fide* Officers.

297. And their not adopting any new scheme would not prevent its adoption with regard to your branch of the Corps?—Certainly not; they have nothing to do with it.

Colonel the Hon. Hussey Fane Keane.

22 Feb. 1870.

(The Witness withdrew.)

Adjourned to Tuesday, the 1st of March, at 1 o'clock.

War Office, Tuesday, 1st March, 1870.

PRESENT:

Captain the Honourable J. C. VIVIAN, M.P., *in the Chair.*
Colonel EGERTON. | Mr. MILTON.

Colonel JOHN ADYE, C.B., examined.

Colonel John Adye, C.B.

1 Mar. 1870.

298. (*Chairman.*)—You are a Colonel in the Royal Artillery?—I am.

299. Have you turned your attention to the question of promotion and retirement in the Royal Artillery?—I have, and I gave evidence before the Committee which sat in the House of Commons upon the subject in 1867.

300. You will understand that the basis of the present inquiry is, that the age of 60 will be accepted as the age at which officers in the upper ranks of the Ordnance Corps shall be compulsorily retired. Will you be good enough to inform the Committee whether you think that such a system of compulsory retirement, both in the upper ranks and also in the junior ranks of Lieutenant-Colonel, Captain, Second Captain, and Lieutenant, will be a satisfactory way of securing fair and full promotion throughout the corps?—I think that compulsory retirement for the Colonels after 40 years' service, as proposed by Mr. Childers' Committee, is desirable.

301. Would you prefer to base compulsory retirement upon length of service rather than upon age?—Certainly, length of service.

302. Why should you prefer length of service to age?—Because I think it is more uniform in its working. Officers do not come into the regiment precisely of the same age, and therefore it would be very hard to oblige the officer to retire at 60 years of age, when an officer senior to him might be a few months younger.

303. You have said that you approve of compulsory retirement after 40 years' service in the upper rank; but would you extend that principle of compulsory retirement to the junior ranks?—No, I would not, because I do not think it is necessary. If you have compulsory retirement of Colonels after 40 years service, the other ranks will fall into a natural gradation of age of themselves.

304. Do you mean that if, in addition to the retirements which you now obtain under a Parliamentary grant, you have simply compulsory retirement at the age of 60 in the upper rank, that will secure a sufficient flow of promotion through the corps?—No; I take the Report of Mr. Childers' Committee in its entirety, which recommended compulsory retirement or promotion to the rank of Major-General after 40 years' service, coupled with a graduated or sliding scale of pensions according to the various lengths of service on the part of officers. Those two will then give a fair rate of promotion. With regard to the present system of retirements, I agree with the Report of the Committee, which states that "it is complicated, uncertain in its operation, based upon no clear principle, and inadequate for its purpose."

305. But the Report of Mr. Childers' Committee, of which I was a member, did recommend compulsory retirement after 22 years' service, and upwards?—I think not compulsory retirement, but voluntary retirement. From 22 years' service up to 40 years' service, the retirement was to be voluntary, and on the increasing scale laid down in the Report, and after 40 years' service, if an officer was not a general officer, he was given to retire upon 600*l.* a-year. That, I think, was a fair principle.

306. Are the Committee to understand that your opinion is, that while officers should be compulsorily retired after 40 years' service in the upper ranks, the compulsory system should not be extended to the junior ranks, but that a voluntary system of retirement should be applied to those ranks upon graduated scales of pensions?—Quite so, because a compulsory system of retirement in the lower ranks would become unnecessary, for example, if a Colonel must retire after 40 years' service, it stands to reason that all Lieutenant-Colonels and all Captains must fall into a graduated age below that, and therefore no compulsory retirement would be necessary in their case.

307. But a compulsory system of retirement after 40 years' service would not meet the difficulties which may be expected to arise in a few years from the large number of officers in the junior ranks, who will not have obtained fair promotion?—No, because the scheme of Mr. Childers' Committee has not been brought into force. In my opinion the first thing to be done is to put an end to the present system of retirements, by which all the money is heaped upon the senior officers of the regiment, and who, being comparatively young, do not wish to retire, whereas the officers in the junior ranks who may wish to retire, have no opportunity of doing so. In fact the recommendations of Mr. Childers' committee have never been brought into operation.

308. I suppose it would be next to impossible to estimate what would be the amount of promotion which would follow from a voluntary system of retirement in the junior ranks, as that would depend entirely upon how many men would avail themselves of that voluntary retirement?—Yes.

309. If you did not couple with that a system of compulsory retirement in the different ranks, you could not, I suppose, estimate what the results to the corps would be?—Yes, you could, if you had a compulsory system of retirement at the top. If you knew that no Colonel in the regiment could remain after forty years of service, then you would know that all the officers in the ranks below must have a service less than that.

310. (*Mr. Milton.*) But compulsory retirement in the lower ranks would not be after 40 years, it would be less in proportion for the lower ranks?—Yes; but I think it would be arbitrary and hard to force officers in the lower ranks out of the service, when, we know at the worst, the service can never have an officer doing regimental duty after having served 40 years.

311. The object of the Chairman in putting some limit to the expense in the case of voluntary retirement, might be met by limiting the number that in each year would be allowed to retire?—Quite so. It would be hardly prudent to open suddenly to the three great seniority corps the proposals of Mr. Childers' Committee, and to give an unlimited option of retirement on his scale, because it might lead to a great rush of officers from the corps.

312. And in the prime of life?—Yes; it might or it might not. Therefore, in my opinion, the Government should open it to the extent of their present retiring grant of 42,000*l.* a year for the Royal Artillery. They should declare the present system at an end, and that the 42 000*l.* should be given in retirements according to the scale laid down in the Report to the extent of that sum, the Senior Officer having the option.

313. (*Chairman.*) Are you not aware that the whole

Colonel John Adye, C.B.

1 Mar. 1870.

of that 42,000*l.* is now appropriated?—Not quite the whole of it, I think.

314. It is, with the exception of 200*l.* or 300*l.*?—I was not aware of that. The estimates show about 1,514*l.* unappropriated.

315. (*Colonel Egerton.*) When a full Colonel is retired compulsorily at the age of 60, would you give him the option of going on full-pay, and coming forward in his turn to be Major-General and Colonel-Commandant, or would you oblige him to retire altogether on 600*l.* a year?—I should be glad to give him the option. I think he would deserve to have the option. In that case, he might be made a supernumerary Major-General, to be absorbed on the first vacancy occurring in his turn.

316. Or he might be placed upon the Reserved List of Colonels?—Yes; in addition to the usual establishment, until he came on in his turn to be made a Major-General. But, in reply to the question put by the Chairman as to the greater part of the 42,000*l.* a year being now absorbed, and chiefly by the Colonels, my proposal is, that the present system should be stopped, and that pensions, as they drop in, should be distributed according to the scale laid down in the Parliamentary Report. And further, in order to give the system a fair start, that the Government should be induced to add to the vote, to a moderate extent, a few thousands a year—say 5,000*l.* a year for the present, just to give the new system a fair start, and to try and get some of the officers in the junior ranks to leave the Corps.

317. Do you think it would be an advantage to the Corps to induce the junior officers, young and active men, who have just been thoroughly taught their profession, and are becoming of use to the service, to retire?—As a general rule, I would say, No. But there are officers who find, after they have entered the army, that their tastes are not military. There are again officers who are married and with large families; there are some officers who come into property; and there are other officers who fall out of health. All these officers, who may be in middle life, would be glad perhaps to go, and thereby create promotion, provided they did not feel that their past services would be entirely lost to them. I believe that a moderate amount of pension would induce those officers to go, and I think that an inducement ought to be held out to them to go.

318. The money, in that case, would be sunk in younger lives?—Yes; but the amounts would be proportionately small. Then what I should like to point out to the Committee is the approximation of ages, at the present time in the regiment. The Colonels and Lieutenant-Colonels are so young, and the Subalterns and Second Captains are gradually getting so old, that the difference between the Colonels and the officer at the top of the Lieutenants is comparatively small.

319. (*Mr. Milton.*) Can you state the age of the junior colonel?—The age of the junior Colonel is only 47, and the age of the senior Lieutenant is about 32; therefore, there is only a difference of 15 years between the age of the officer at the top of the subalterns and that of the officer at the bottom of the Colonels; whereas a few years ago the difference was much greater.

320. (*Chairman.*) You have expressed a strong opinion against compulsory retirements in any of the ranks below that of Colonel; but a scheme has lately been proposed, which is a combination of voluntary retirement, upon the principle recommended by Mr. Childers' Committee, coupled with compulsory retirement in the different ranks at a certain age. I will give you an outline of the scheme, in order that you may state to the Committee generally what your opinion is. It is proposed that Captains shall retire optionally at the age of 42; that from 42 up to 48 they shall have the option of retiring upon pensions beginning at 225*l.* a-year, and increasing 25*l.* a-year until they reach a maximum of 300*l.*, and retire compulsorily at 48. Then, that Lieutenant-Colonels shall begin to retire optionally, at 48, upon a pension of 375*l.* a-year, increasing by 25*l.* a-year until they reach a maximum of 450*l.*, which might be reached, at the age of 51, and they would be compelled to retire at the age of 54. Then, again, that Colonels should retire optionally, at the age of 54, upon 510*l.* a-year, which should be increased during the next six years at the rate of 15*l.* a-year, until they reached the maximum of 600*l.*, and then that they should retire compulsorily. That, you see, is a combination of compulsory with optional retirement, and the Committee would like to have your opinion as to its effects upon the corps?—I may say that I see objection to it; and I do not think it is so simple, nor do I think it is quite so liberal as the scheme that was proposed by Mr. Childers' Committee, and which seems to me to combine simplicity of proceeding with efficiency. I think that if the scheme recommended by that Committee were introduced in the way I have spoken of, not in an unlimited way, as recommended at first, but as a tentative measure, and to be introduced gradually, it would answer the purpose, and would produce very much the ages you have alluded to in each rank; that the ranks would not get above them, if they had that compulsory retirement at the top. I think you do not require compulsory retirements below the rank of Colonel.

321. You are aware, are you not, that the objection to the scheme of Mr. Childers' Committee, was a financial objection, that it would cost such a very large sum of money, that the country would never submit to it, and the question which this Committee has to attempt to solve is, whether we can hit upon any other scheme of retirement which will have a sufficiently good effect upon the corps, and not be so costly as the scheme of the Parliamentary Committee. I ask you, therefore, what is your opinion as to the ages of the officers in the different ranks: is it satisfactory?—At the present moment, the ages of all the officers in the higher ranks are very satisfactory. They are very fairly satisfactory as regards the officers in the rank of Captains, and are only beginning to be unsatisfactory with regard to the age of the subalterns.

322. What is the age of the eldest subaltern at the present moment?—Thirty-two.

323. After how many years' service?—Rather more than twelve years' service.

324. At what age do you think that a subaltern should look for his promotion to the rank of Second Captain?—I think at about the age of 30. I should be glad to see him obtain the rank then.

325. Do you think that he should not have had more than ten years service?—I think that is a fair time.

326. How long do you think he should continue in the rank of Second Captain?—I think he ought to remain in the rank of Second Captain for 5 years.

327. That would bring him to the end of 15 years' service?—Yes.

328. How long do you think he should remain in the rank of First Captain?—I should say 7 years.

329. He would then have served 22 years before he attained the rank of Lieutenant-Colonel?—Yes.

330. How long should he remain in that rank?—Say, 8 years.

331. That would bring him to the end of 30 years' service before he attained the rank of a full Colonel?—Yes.

332. At the present time the junior Colonels have not had more than 30 years' service, I believe?—No; about that.

333. General Gambier has stated in evidence that the average number of vacancies that occur in a year from one source and another is about 20. Have you ever calculated how many more retirements you would require in a year to secure such a flow of promotion as would keep the officers at those ages in the different ranks?—No; I have not calculated that, and it is very difficult to make a calculation of that sort, but my impression is this, that the present condition of the regiment is abnormal; that is to say, the comparative youth of the Colonels and Lieutenant-Colonels has been caused by the great augmentations made in recent years and which for the moment is very satisfactory with regard to the Public Service; but it is very unsatisfac

tory with regard to the prospects of the junior officers. The only way, in my opinion, of getting rid of the block in the middle is by introducing a graduated scale of retirements.

334. (*Mr. Milton.*) Do you mean of voluntary retirements?—Yes.

335. (*Chairman.*) I believe you had an increase of as many as 80 odd officers in one year?—We have had in the last 24 years an addition of 7 brigades to the regiment; we have gone up from 10 brigades to 17.

336. And the difficulty that we all see is coming will arise from the fact of so large a number of officers in the junior ranks being so nearly of the same age?—Yes; very much so. With reference to the great cost which you stated would accompany the scheme of Mr. Childer's Committee, I am of opinion that if that idea be founded upon the Report made by the Actuaries who in 1868 reported upon that scheme, their Report rested upon rather a fictitious foundation. They proceeded upon the principle that no subaltern was to have more than 10 years' service, and it appears to me to be a fallacy to begin upon that principle. I have no doubt, in the present condition of the regiment to produce such a state of prosperity as that, the sum of money required would be very large indeed; but no amount of pensions that the Government can in any reason be expected to give would save our regiment from considerable stagnation. You can only mitigate it, because the officers in the higher ranks are so young that it is impossible to do anything now that can altogether prevent stagnation; it can only be mitigated by a sliding scale of pensions. Therefore, I think the Report made by the Actuaries is likely to mislead because they proceeded on a false hypothesis.

337. As the officers in the higher rank are so young just now, it would follow of necessity that compulsory retirement in the higher rank will not come into operation for a long time?—It will not for some years.

338. Therefore from that source you will not get any promotion?—No; not for some years.

339. If that be so, and if, as you have said, the block will be in the middle of the corps, does it not seem to be necessary to turn one's attention to some means of relieving the pressure, where it would exist, rather than to adopt the system of beginning at the top?—Very true; and, therefore, I would at once stop the optional retirement of young Colonels on 600*l.* a-year, and all pensions that dropped in I would immediately give where I know they would be felt and accepted at once—I mean in the middle of the regiment. The officers there would be glad now, many of them, to accept those retirements, and I would carry the scale proposed by the Parliamentary Committee rather lower down, because the men who are now most anxious to go have no opportunities of doing so; whereas the young Colonels who have an opportunity to go will not go, and that shows, I think, that you are planting your money in the wrong place. It is very true that the limits of age will not be reached for some time.

340. (*Colonel Egerton.*) Regarding voluntary retirement in the lower ranks as a means of promotion, do you think that a graduated scale year by year is the best way of carrying it out?—Yes; I think so.

341. Would not a man be likely to say,—"I will stay one year longer—I shall get 25*l.* a-year for life more, it is only another year to wait," and he will hang on; whereas if the increase in the amount took place every five years a man would be apt say, "I will not serve another five years, I will go now?"—There might be something in that; it is a matter partially of detail. I certainly am of opinion that the money which is voted by Parliament now is badly applied. The officers in the regiment, I know, feel—that is, the great body of the regiment—that as to the 42,000*l.*, if it were applied to a graduated scale, it would be well spent; whereas now it is chiefly spent upon the Colonels who do not wish to retire

342. (*Chairman.*) It will take some time before the whole of that sum of 42,000*l.* is liberated, and it will be coming in in such driblets that it is quite clear something else must be added. A public grant of funds must be found to provide the means of retiring officers before the money is liberated?—Quite so; but some of this money will drop in every year, and I would apply it to a sliding scale. I do think, considering the state of stagnation which is coming, that if the Government were to increase that grant in a moderate degree—say 5,000*l.* a-year—it would do a great deal of good to the regiment.

343. Then another point is, which I am only incidentally mentioning now, that there are officers in the corps who claim to have a vested interest in that money, and although 600*l.* might drop in to-morrow, there might be an officer waiting for it who would set up a claim to it?—I should issue an order to say that the old system of retirement was at an end.

344. Do you think, in that case, that the corps would think that they were being fairly dealt with?—Quite so.

345. Do you believe that a man who has travelled up until he has nearly within his grasp a retirement on 600*l.* a year, and who, perhaps, for one of the reasons you have given, either from being a married man or being tired of the service, or not wishing to go abroad, or being abroad wishing to stay there, would, if he desired to retire, feel satisfied if it were said to him, "You shall not retire now, you shall wait until you are 60 years old?"—The retirement of 600*l.* a year is comparatively of recent date. A very few years ago our Colonels, instead of being young men, were so old that, practically, as it required a man to be a Colonel before he could get the 600*l.* a-year, none but the old men took that retirement, and sometimes an officer waited until he was 70 years of age before he could get it.

346. With reference to the 5,000*l.* that you have proposed should be added to the estimates, how would you suggest that that sum should be applied in order to touch the sore in the centre of the corps?—I would issue an order that all officers wishing to retire upon the terms of the Parliamentary Report, should send in their names, and the seniors should have the option, at all times when any money dropped in.

347. And that the retirements should be limited to the amount of money put in the estimates; that is to sgy, if the Secretary of State, with the sanction of the Treasury, agreed to add 5,000 in the estimates, you would say, "Here is 5,000*l.*, and any of you who like to take advantage of the scale of retirement proposed by Mr. Childers' Committee may send in your names, and the money shall be applied as far as it will go?"—Quite so. I am aware that the report made it unlimited, but I think that as a tentative measure, and in order to see the working of the proposal made by Mr. Childers' Committee, I would limit it to the amount granted by the Government annually.

348. Then you would disregard that part of the Report of the Committee which refers to the upper rank, because the officers in the upper rank now have the means of retiring upon the 42,000*l.*, would you cut that out and confine it to the Lieutenant-Colonels, the Captains, and Second Captains?—No; I would follow the recommendations of Mr. Childers' Committee, the present system of retirement on annuities of 600*l.* a year after 30 years' service being discontinued.

349. (*Mr. Milton.*) You have been asked whether you would apply that to relieving the centre of the body, how would you relieve the upper ranks of officers?—I would relieve them if they would take it; but now they are so young that the probability is that they would not take it—they have the option of taking it.

350. You propose, as I understand, that this additional grant should be divided out in the shape of annuities or retired pay: would you prefer that plan to a sum of money being devoted in each year to buying men out entirely. Instead of giving, say, 25 annuities of 200*l.* a-year, which would require 5,000*l.*, would you consider it a better plan to buy out five men at 1,000*l.* each?—An Act of Parliament already provides that officers having pensions can commute them for lump lump sums if they like. I would not buy them out. I would give them the pensions to which they are entitled according to the scale, letting the officers change them into lump sums at their option, which is provided for by the Act of Parliament.

Colonel John Adye, C.B.

1 Mar. 1870.

351. (*Chairman.*) The question of buying up annuities would be a question for the Commissioners of the National Debt?—Yes.

352. (*Mr. Milton.*) Looking at the present rates of retirement, about nineteen or twenty in a year, do you think that in the course of five years the Corps of the Royal Artillery will be in an inefficient state in consequence of the stagnation of promotion if the present system continues for the next five years?—The Corps of Royal Artillery will not be in an inefficient state in five years. The subalterns are gradually getting older, and they will, I have no doubt, continue to do so for some years. The second Captains are beginning to get a little older each year, and they also are beginning to feel the stagnation, and then the Captains, and so on to the top of the regiment. But I cannot say that the regiment will be inefficient five years hence.

353. I do not mean absolutely inefficient; but will the regiment have suffered somewhat in efficiency?—In the course of five years it will have suffered to the extent of making the senior Lieutenants and the senior Second Captains older than I should like to see them.

354. With respect to the efficient discharge of their duties?—Yes,

355. How much older do you think they will be?—A few years. The real stagnation and the real inefficiency will not come in five years, but it will come in ten or fifteen years,

356. (*Chairman.*) And I suppose when it does come it will come altogether?—Yes, as it did after the peace which followed the Battle of Waterloo.

357. (*Mr. Milton.*) Will it not be time enough then to apply this exceptional remedy to the middle of your corps?—No, it will be too late then.

358. (*Chairman.*) The question now seems to be whether you shall make an outlet so as to allow the stream to flow off, or whether you shall wait until it bursts its banks?—Yes, and begin now. The scheme proposed by the Parliamentary Committee of 1867 will, to a certain extent, save hereafter the corps from inefficiency, but nothing, in my opinion—that is to say, no money likely to be spent—will save it from present stagnation.

359. You would recommend the scheme of Mr. Childers' Committee, (which was to be applied without reference to expense,) adding a certain fixed sum, and allowing that to be applied on the principle recommended by the Committee, as far as it will go?—Yes; I think it would be more prudent to carry out that scheme according to its principles, but with limits, instead of without limits.

360. General Gambier has stated, that if we can find the means of adding 10 to the average vacancies a year, we shall do all that it is necessary to keep the Corps healthy. Do you agree with him in that view?—That depends entirely upon where the 10 vacancies are. At the top?

361. No. Taking it generally, and supposing that there were 10 more vacancies—of course, creating them in that part of the Corps where they are most needed, would that, in your opinion, keep the Corps healthy?—No: it would not be sufficient for the Subalterns.

362. (*Mr. Milton.*) Each subaltern now only gets 20 steps per annum; he would then get 30 steps per annum. Would not that give a fair flow of promotion in the Corps?—No; it would not be sufficient.

363. (*Chairman.*) How many steps do you think would be sufficient?—As there are now 619 Subalterns on the List, it is evident that they would want at least 50 steps a year to give them fair promotion.

364. You would give them 30 other steps in addition to the present promotion?—Yes; and therefore I say that there is nothing that can save the Regiment at present from a certain amount of stagnation, because it will not obtain the number of steps which are necessary. The officers in the upper ranks being so young, the number of vacancies will be few and therefore you can only make up the deficiency by a graduated scale of pensions. I believe that the Report of Mr. Childers' Committee is one which the body of the Regiment would willingly accept even with the limits that I have mentioned.

365. Do you think that the scales of retirement proposed by that Committee are fair, and would be sufficiently popular to lead to their being generally accepted?—Yes; I think they are; but I would carry them down below the limit of service proposed by the Committee.

366. Upon those scales of retirement, how far would the 5,000*l.* go that you propose to be added to the Estimates—how many steps would be obtained?—That would depend upon the rank of the officers who took them. I do not think that any man standing high up in the Regiment would take them at present.

367. (*Mr Milton.*) What would be the average amount of the pension of the men who took it?—Say, 250*l.*

368. Then the 5,000*l.* which you suggest should be added would give 20 steps?—Not per annum.

369. Do you think that it is hopeless to look forward for a cure for the coming stagnation?—I think it is almost hopeless to expect that the Government will grant a sufficient allowance so as altogether to prevent the stagnation that is coming, but I think that by timely measures a great deal may be done to mitigate it. Gradual mitigation is our only chance, and it ought to begin at once. You ought to stop the present system of retirements at 600*l.* a-year, and give relief to that part of the regiment which is suffering.

370. (*Colonel Egerton.*) The state of the Royal Engineers is different from that of the Royal Artillery, and what you have stated as to the comparative youth of the senior officers and the block in the middle ranks does not apply to the Royal Engineers?—Perhaps not exactly, but I imagine that there is no very great difference. Our augmentations may have been rather larger, and our Colonels may be rather younger than those of the Royal Engineers, but their officers will be in a few years in the same position as ours, although they are not so now.

371. (*Chairman.*) Are not the requirements of the two corps of Royal Engineers and Royal Artillery materially different in every respect with regard to their constitution and services, &c., the one being a purely regimental corps, and the other to all intents and purposes a staff corps?—There are differences, no doubt.

372. Have you ever considered whether it would not be somewhat difficult to devise a scheme of retirement that would be equally beneficial to both corps?—I think that the scheme should be of the same character. I think that the Engineers require young men as much (although their duties may be different) as the Royal Artillery.

373. (*Mr. Milton.*) Have they not active duties to perform?—I think they require activity of mind, and also activity of body, especially in time of war.

374. Are not their duties those of great trust and confidence, in the performance of which age is not so great a disqualification as in the case of an officer who had to move about with a battery?—It may be so to a certain extent.

375. (*Chairman.*) You are probably aware that, in the Austrian service they have lately made a distinction in their engineers, that they have formed part of them into a staff corps for staff purposes, and that they have made of the remainder a regimental corps?—I was not aware of that.

376. They recognize a great difference between the duties of an engineer as a staff officer and as a regimental officer, and do you not think that it would facilitate matters if we were to consider the requirements of the two corps as distinct and different?—I would rather give my own evidence as to the requirements of my own corps. I should like to say a few words about the great expense which has been spoken of, and to point out that there 16 brigades out of the 31 brigades of Royal Artillery in India, and, therefore, that whatever sum of money is granted for the promotion or retirement of the regiment, the Indian Government ought to bear their proportionate share of the expense.

377. (*Mr. Milton.*) Has not the Indian Government

its own system of pensions without any reference to ours?—The Indian Government has its own scale of retirements for its own officers on the old Indian lists; but the officers on those Indian lists are gradually dying out, a large number of sabalterns are being added to the Royal Artillery lists and, therefore, from the date of the amalgamation, I think the India Government ought to begin to contribute towards the general retiring fund of the Royal Artillery.

378. They do so now by a fixed sum which is called the Capitation Rate for all non-effective services?—I am not aware of the provisions of the Capitation Rate.

379. If any scheme should be proposed by this Committee, which is accepted by Her Majesty's Government, but which the India Government decline to accept, would that be any reason why it should not be carried out, seeing that our officers are on an entirely different scale of pensions?—I think that the two Governments should agree to bear their share of whatever joint scheme may be proposed for the future, because the officers on the Indian Lists are gradually diminishing, and they are being replaced by officers on the old Royal Artillery Lists, so that our List is increasing, and theirs is diminishing.

380. It is only 10 years since the amalgamation took place; and you must look forward to another 25 or 30 years before you will get rid of the officers now in the late Indian Artillery?—Yes; but still officers have been joining from the date of the amalgamation, and they are gradually rising upon our list, and whatever rate of pension they may gradually become entitled to, ought to be paid for by the India Government.

381. (*Chairman.*) I find, on looking to the calculation made by the actuaries, that to arrive at the following rate of promotion, viz., that Lieutenants should become Second Captains after 12 years' service, Captains after 19 years', Lieutenant-Colonels after 27 years', and full Colonels after 33 years' service, it would cost 89,607*l.* for the Royal Artillery?—That is, I suppose, taking the age of the officers as they are now.

382. No; that is taking the corps in its normal condition, with its establishment of 56 general officers, 70 Colonels, 128 Lieutenant-Colonels, 263 Captains, 294 Second Captains, and 619 Lieutenants?—When the regiment arrives at that normal condition, 16 of the brigades will be serving in India out of the 31.

383. Yes; but if you will read the first paragraph, you will see that this is a calculation of the British proportion of the annual charge?—I have not seen the calculation you allude to until this moment, and, therefore, can give no opinion on it. No doubt any scheme of retirement for a large corps must be expensive; but it is money well spent if the result is efficiency. My proposal is that a graduated scale of pension shall be introduced gradually.

384. With regard to the present system of retirement, which you suggest should be wound up as soon as possible, there have been representations made at various times by officers both of the Royal Artillery and Royal Engineers, to the effect that it would be very hard to interfere with what they call their "vested interests." To entitle an officer to retire upon 600*l.* a-year, he must have fulfilled two conditions. First, he must have been 30 years in the service; and, secondly, he must be a Colonel in the regiment?—Yes.

385. There are a certain number of officers now, who have fulfilled both of those requirements, and they may say that they have a perfect right to retire upon that 600*l.* a-year; that it was a grant to them by Parliament, and that it would be very unfair, when it is just within their grasp, to withdraw it from them, and substitute some other scheme. What is your opinion upon that?—With regard to the officers who are now entitled to the 600*l.* a-year, after 30 years' service, I have only to remark, that several of those retirements, at 600*l.* a-year, have been lying idle for many months; they have all had the option, and they have not accepted them; they do not wish for them; and, therefore, those officers, I think, have little to say. There are a few officers approaching 30 years' service, who are looking out for those retirements of 600*l.* a-year, and, no doubt, they might consider themselves hardly dealt with, if they were suddenly withdrawn. But, in the first place, a retirement upon 600*l.* a-year is a matter of quite recent years, and an officer does not establish any right in consequence of the Government offering this retirement. The object of the Parliamentary grant is, in my opinion, to do the greatest amount of good, and it has been shown by the Report of the House of Commons' Committee, that the present system is complicated, uncertain in its operation, based upon no clear principle, and inadequate for its purpose. I agree with that, and, therefore, I am of opinion that the good of the regiment, the greatest number in it, and the public service, demand that the present system should be altered. I do not think that officers have any vested interests which interfere with the alterations.

386. In short, you hold, if it can be shown that another system of retirement would be more for the general advantage of the corps, that you have a perfect right to change the present system, and that nobody has any right to complain?—I think so, and I do not perceive that grievance can exist, as all the officers who are qualified have had the option for many months and have not taken advantage of it.

387. (*Mr. Milton.*) It has been rather a recent grant, and therefore none of the officers who are nearly acquiring a right to it, had any idea of it when they entered the army, or for 15 years afterwards?—No; the present system came into force in 1854, but it was not laid down that the money then granted was to accumulate into pensions of 600*l.* a year. That has been the usage, but there is no regulation to bear it out; it has been gradually accumulated upon the Colonels, but by no Warrant.

388. You do not think that any regulation under which the present senior officers entered the service would conflict with the proposal you have made for voluntary retirements in the centre of the corps?—No; I think that the parliamentary proposal was one which ought to be carried out.

389. Do you think that there would be no conflicting rights under the Warrants of 20 years ago that would prevent its being carried out?—No.

390. In fact, as an officer, you would say that the grant of the retirements was one which the Government were at all times entitled to vary, if they thought it would be for the good of the service?—Certainly, and they have done so within my period of service several times.

391. They have given and they have taken away?—Yes.

The Witness withdrew.

(*Supplementary Memorandum by Colonel Adye.*)

Before closing my evidence there are one or two points regarding which I wish to add a few words. The first relates to a proposed compulsory retirement of officers in the different ranks of the Royal Artillery at certain fixed ages. From the questions which have been addressed to me, some such scheme seems to be in contemplation, and of a character apparently similar to that just introduced for the Royal Navy. But the two services are entirely dissimilar in their system of promotion.

The promotion of the officers in the Royal Navy is not by seniority, but rather by selection. Many officers in that Service become Lieutenants or Commanders, as the case may be, and then go on half-pay perhaps for years, do not go afloat, and never rise any higher. Consequently, after a certain time they become inefficient and it may, therefore, be appropriate and desirable that they should have compulsory retirement, at fixed ages, in each rank.

The case of the Royal Artillery is quite different. Each officer from the date of his entering the corps remains on full-pay, and gradually rises from rank to rank by strict

Colonel John Adye, C.B.

1 Mar. 1870.

seniority; consequently, if a system of compulsory retirement is established for the Colonels at the top, the rest fall into a natural gradation. I am, therefore, entirely opposed to compulsory retirement from any rank except that of Colonel, which should be after 40 years' service, as proposed by Mr. Childers' Committee of 1867.

Finally, as the question of promotion of the officers of the Royal Artillery is one of great importance, not only to the officers concerned, but also to the efficiency of the Service, I am desirous of stating in a few words my views as to the best solution of the question at the present time, as follows:—

1. The rules of retirement now in force to cease.

2. The annual grant voted by Parliament for retirements, to be used, as far as it will go, and as the old pensions drop in, in giving pensions on a graduated scale according to length of service on the terms proposed by the Select Committee of 1867—the seniors having the first offer.

3. As the present annual grant will not be sufficient, and as the amount from pensions dropping in will not be large for some years, the annual vote should be gradually augmented within moderate and prudent limits, so as to give some present relief, and also to afford experience of the working of the scheme.

4. That, considering the present abnormal state of the corps, the comparative youth of the officers in the higher ranks, and the consequent stagnation which must ensue for some years in the junior grades, the graduated class of pensions be carried down below that proposed by the Select Committee; and that, instead of begining at 22 years' service, it shall do so after 15 years' service, the pensions being of course graduated in proportion.

5. That Colonels of 40 years' service be compulsorily retired on 600*l.* a-year, or else be promoted to be Supernumerary Generals on 470*l.* a-year—in the latter case to be absorbed in their turn—(this rule will be inoperative for some years to come).

The above rules would, in my opinion, give a certain amount of relief to the junior ranks, and would mitigate the forthcoming stagnation; but owing to the abnormal state of the corps, to the comparative youth of the higher ranks, I fear that, under any circumstances, the regiment must necessarily pass through a certain period of slow promotion, and which will not come to an end, until by the greater age of the Colonels the compulsory sory retirement clause shall come into operation, and the chances of natural vacancies be also increased.

(Signed) JOHN ADYE,
Colonel, R.A.

Colonel the Hon. HUSSEY FANE KEANE further examined.

Colonel the Hon. Hussey Fane Keane.

1 Mar. 1870.

392. (*Chairman.*) I omitted to ask you the other day to inform the Committee in detail with respect to the application of your present Parliamentary grant—that is to say, how much is absolutely applied, how it is applied, and how much you have in hand?—I have prepared a paper that will give the Committee a description of it. (*Vide* Appendix M.)

393. Is it in your power to obtain the ages of the officers?—Very nearly. I can give you all those that we took up in 1858 when the vote was granted, and I think I can give you the others as well.

394. Will you be good enough to furnish the Committee with a nominal roll, containing the particulars required by the Committee, with the ages, &c.?—Yes; the only other point that you asked me to give you information upon was the number of steps in addition to our present number that would keep the corps in a healthy state, and I find, on close inquiry, that nine additional steps a year would bring the corps into the position of the senior subalterns having thirteen years' service.

395. Will you be good enough to read the paper you have drawn up and hand it in?—(*The same was read and handed in.*) (*Vide* Appendix N.)

The Witness withdrew.

(Adjourned to Tuesday next, 8th March at 1 o'clock).

War Office, Tuesday, 8th March, 1870.

PRESENT:

Captain the Honourable J. C. W. VIVIAN, M.P., *in the Chair.*
Colonel EGERTON. | Mr. MILTON.

Lieutenant-Colonel ARTHUR LEAHY, R.E., examined.

Lieut.-Col. Arthur Leahy, R.E.

8 Mar. 1870.

396. (*Chairman.*) You have turned your attention to this complicated question of promotion and retirement in the Ordnance Corps, have you not?—Yes. As affecting my own corps, the Engineers, and especially as affecting the officers who were on the British Establishment prior to 1861, being the year in which all officers joining were first placed on an amalgamated establishment. I doubt if there is information in this office sufficient to enable the Committee to decide finally in respect of officers who joined the corps after 1860, because we do not know all the conditions of employment and service in India to the extent to which I think they should be known in order to enable a final scheme to be drawn up.

397. Do you mean that we are not in a position to deal with the corps after it comes to its normal condition—that is, after the three Indian Lists are amalgamated with yours?—Many of the officers serving in India were engaged for and are employed in the Public Works Department, and I do not think we know enough of the conditions of service and the prospects of future employment to enable the cases of officers who joined since 1860 to be finally dealt with. But I think we are in a position to deal finally with the British Establishment, that is, the establishment as it was in force up to 1861.

398. Do you mean by that answer to say that the duties which Engineer officers have to perform in India are of such distinct and different characters, that there is a doubt in your mind as to whether the corps should not be divided into two corps—a staff corps and a regimental corps?—No; I do not think that question arises; but the point is as to the number which must be employed in India hereafter.

399. It is only as to numbers?—Yes, as to numbers to be employed under military regulations.

400. Not as to duties?—No.

401. (*Mr. Milton.*) Nor as to age at promotion?—I think we are in a position to say what the age at promotion to the several grades ought to be, but as to the final cost of a scheme for retirement I do not think we are in a position to arrive at a conclusion.

402. I do not quite understand why it will affect the rate of promotion, which is the question before this Committee, whether the corps be hereafter increased or decreased?—It will affect the numbers to be employed and retired, and consequently the cost.

403. Whatever may be the numbers, the total ratio will be the same, if you ascertain it, whether the corps be by-and-by increased or decreased?—Yes, the rate of promotion should be the same.

404. (*Chairman.*) For our present purpose it will be sufficient, I think, to consider the question with reference to the corps upon its present numbers. You will please to understand that the basis of all our investigation is founded upon the fact that a compulsory retirement at the age of 60 in the upper rank is accepted. I would now ask you, first of all, what you consider should be the service of the officers in their different ranks—the time at which they may look for promotion to a superior rank?—Having regard to the age fixed for compulsory retirement, namely, 60; also to the regulations for admission to the Academy, which were in force prior to 1855 (and which are practically brought into force again), under which the minimum age at which an officer could be commissioned, averaged 18; having regard to these two limits of age, and to the rates of promotion which have obtained for the last 10 or 15 years, both in the Ordnance Corps and in the line; also to the periods of service which have been fixed for the Indian Staff Corps, a corps with which a large number (about one-half) of the Engineers are largely associated in India; and having regard also to the periods of service laid down for the Army Medical Department, I am of opinion that the flow of promotion should be such that under ordinary circumstances, an officer commissioned at 18, should be able to attain the grade of Captain at 30 years of age; that is, after 12 years' service.

405. (*Colonel Egerton.*) That is Second-Captain?—Yes; and he should be able to attain the grade of Regimental Lieutenant-Colonel—that is, a Lieutenant-Colonel upon full pay (some of our Lieutenant-Colonels are in receipt of Majors' pay now) after 26 years' service, or at 44 years of age; and the grade of regimental Colonel at 35 years' total service, that is, at 53 years of age, and then he will be retired at 60.

405*. (*Chairman.*) You prefer in making those calculations to adopt periods of service in preference to age, do you?—I adopt a period of service for promotion in preference to age. There are a few abnormal cases in the corps which may have to be treated exceptionally, but they are not sufficient to have any effect upon the general scheme.

406. Those cases might be provided for by the Secretary of State's reserving to himself power to treat special cases by special regulation?—Yes.

407. (*Mr. Milton.*) Would you assign a period for the time that an officer should remain a Second-Captain before being made a First-Captain?—My idea is, that in the Engineers the grade of Second-Captain is altogether a mistake, and that we should not have any Second Captains, but that all Captains should be alike. I would prefer to introduce the rank of Major after 20 years' service, as in the Indian Staff Corps.

408. (*Chairman.*) You would substitute the rank of Major for the rank of First-Captain?—Yes; instead of making a man a First-Captain, after 17 or 18 years' service, I would give him the rank of Major after 20 years' service.

409. Would not that give him a very preferential advancement over the officers of the line?—It would correspond with the Army Medical Department and the Indian Staff Corps.

410. How would it compare with our own line?—I believe it would be a fair average. You must recollect that the officers in the line may have obtained their commissions at 16 years of age, and that Captains now (as shown by the Army List) obtain their companies at an average of 10 years' service, by purchase, or 12 years without purchase, apparently. I have just looked into the Army List and I find that result, taking ten regiments indiscriminately.

411. Just turn to the 44th or 45th, or somewhere about there?—I took the List between the 60th and 70th.

412. Of course you ought not to take an exceptional case, you must take the average?—In the 40th the service of the Junior Captain is 11 years; that is, of course, only 10 years' completed service.

413. Will you look at the top of the Lieutenants' List?—I was giving evidence as to the age at which men should attain the rank of Captain; the Lieutenants at the top of the list may be exceptional men who do not purchase.

414. The question is whether, if we were to suggest this scheme, it would not give the Engineers a great preference over the Line?—I think the exact period should be fixed with reference to the Line. What that period should be is a matter which requires to be gone into in detail, but I have given the periods I have mentioned as being what I believe to be correct, having regard to existing interests. I find that, taking the average of eleven regiments from the 40th onwards, the Junior Captain is in his 12th year of service, and the Senior Lieutenant in his 13th year of service: that is 11 years completed and 12 years completed respectively. Now when an Engineer officer goes to the Academy he spends 2 years there without pay, and 12 years' service as a Subaltern in the Engineer or the Artillery are equivalent to 14 years' service in the Line. Taking that into consideration, I do not think that the period I have fixed would give an undue preference to the Engineers over the Line.

415. You calculate the educational period?—I calculate that the officer has to pass through a series of competitive examinations before he gets his commission, and to learn at his own expense that which an Ensign is taught at the expense of the State. I was at Woolwich for two years, and my Cadets bills cost me as much as an Ensign's commission.

(*Colonel Egerton.*) My Cadet's bills at Sandhurst cost me quite as much.

416. (*Chairman.*) Now, with regard to the Majors. If your proposal to convert the First-Captains of the Engineers into Majors were adopted, how would that affect the Majors of the Army?—I have named 20 years' service for promotion to the grade of Major, being the period fixed for the Indian Staff Corps, with whom our Captains will be most closely associated. If 20 years is wrong, let it be 21, or whatever is right. It is a matter of detail to fix the period. I do not want to get any preferential promotion for the Engineers.

417. (*Colonel Egerton.*) But from the time that an officer of Engineers becomes a Second-Captain he goes on with the rest of the Captains in the army, I think, to Brevet promotion?—There is no difference in the regimental pay of a Captain and a Second-Captain of Engineers, and there is no difference of employment.

418. I ask whether they do not go on with the rest of the army for Brevet promotion?—Yes; and now they are the oldest Captains in the army—the last Captain gazetted to a Brevet Majority for length of service was a Captain of Engineers.

419. (*Chairman.*) To turn to another point, would you be good enough to tell the Committee whether you consider the present condition of the Engineer Corps so far as the ages of the officers in their different ranks is concerned, satisfactory?—It is satisfactory in so far that the ages and service of the Junior officers of the several grades do not exceed the ages that I have named.

420. They do not exceed those which you consider to be a healthy condition?—No.

421. Do you think that that condition will continue if there is no other means of retirement provided than what is provided by the sum annually granted in the Estimates voted by Parliament?—Under the principle of compulsory retirement from the upper rank at the age of 60 (which I may observe only comes into operation for one year), and provided that there be no alteration in numbers to affect the actuary's calculations, the upper ranks of the corps, that is to say the promotions to the rank of Colonel and Lieutenant-Colonel will continue in a healthy condition for the next 10 years; how much longer I cannot exactly say, but at any rate for 10 years, according to the Tables attached to the Actuaries' Report.

422. Do I understand you to say that, if nothing further were done than to leave the present retirement alone as it is now, and to compulsorily retire officers from the upper grade at 60 years of age, the corps would remain for 10 years in a healthy condition?—It would for the higher ranks if the actuary's calculations

Lieut.-Col. Arthur Leahy, R.E.

8 Mar. 1870.

be correct (I cannot speak as to their correctness), and if there be no disturbing element in the shape of an alteration of numbers.

423. But the anticipated danger arises from the fact of a large augmentation of the corps, does it not?—It arises from two causes—in the first place, the large number of officers commissioned in extraordinarily large batches since 1855; and in the next place, the alteration of the regulations for entry into the Academy, which disturbed the average age of entry into the corps, and raised it from 18 to over 21 years. These are the two disturbing elements.

424. In what year were those batches of officers commissioned?—There were enormous batches in 1857, 1858, 1859, and 1861—in 1861 we were getting back to a normal condition as regards numbers. In 1862 there was a large batch.

425. (*Mr. Milton.*) What was about the largest batch in numbers?—The largest batch on the original Establishment appears to have been in 1857. The officers who received their commissions in that year have now completed 12 years service. There are still 37 officers remaining on the list who were commissioned in that year.

426. Whereabouts are those batches in the corps now; are they Lieutenants or Captains?—Half of that batch are Second-Captains (that is the first batch), and half are Lieutenants. It is beginning to cause the block.

427. (*Chairman.*) Therefore, those batches of which you have been speaking, are in the lower grades of the corps, are they?—Yes, in the lower grades of the corps.

428. Will you be kind enough to explain to the Committee how you think that the present retirement, which is given mainly, indeed almost entirely, to officers in the upper grades, combined with a compulsory retirement in the upper grade at the age of 60 will give you relief in the lower grades?—I did not say that the present retirement and compulsory retirement at the age of 60 will give relief in the lower grades, but it is sufficient for the higher grades.

429. I understood you to say that compulsory retirement at the age of 60, combined with the present vote by Parliament, will keep the Corps in a healthy state for the next ten years?—Only the higher grades of Colonel and Lieutenant-Colonel.

430. Then you qualify the answer which you gave to the Committee as to the healthy condition of the Corps being maintained by the two means of retaining the present Parliamentary vote, and adding to it compulsory retirement at the age of 60?—I say that it will only produce a healthy condition as regards the Colonels and Lieutenant-Colonels.

431. But it will not at all meet the difficulty which is coming from the large batches of officers in the lower grades?—No.

432. Do you approve of a system of compulsory retirement applicable to the different ranks?—No; I do not approve of compulsory retirement for the purpose of producing a flow of promotion, at least, not by roster.

433. You have seen the Report of a Committee of which Mr. Childers was the chairman, and of which I was a member, which recommended voluntary retirement in the different grades?—Yes.

434. Since then there has been a suggestion, that in lieu of voluntary retirement, or rather coupled with voluntary retirement, there should be compulsory retirement also from the different grades. Will you tell the Committee whether you approve of that principle?—For the purpose of producing a flow of promotion, I do not approve of either voluntary or compulsory retirement.

435. In the lower grades?—In any grade for the purpose of producing an additional flow of promotion. With regard to voluntary retirement, of course, an officer can have no objection to it; but in order to produce the desired result it must be very expensive, and it would have the effect of inducing experienced officers, the very best men, to go, the very men you want to keep. If you make the voluntary retirement sufficiently liberal to be effective in producing a flow of promotion, your best men will go and get some other employment. If, on the other hand, you adopt compulsory retirement for the purpose of producing a flow of promotion, it may act very unequally and very hardly upon the officers in this way. The age at which an officer was commissioned (and I suppose the same thing applies now), formerly depended in some degree on the age at which he entered the Academy. Some got in at 15, some at 16, and some at 17. It did not then depend upon the Cadet, it depended upon his interest with the Master-General. There were an unusual number of Cadets commissioned in the year in which I was commissioned. Two of the ablest men of my time entered some months after the bulk of those Cadets—they were necessarily one or two classes below them in the Academy—they could only rise by rotation of classes. Whenever they came into competition with the whole body, they were the best men; but they were several places below the others when they were commissioned. One of them is now 40 years of age, and some officers several places above him are some months younger. If you had a system of compulsory retirement by roster; that is to say, if an officer who happened to have the good luck to be a Lieutenant-Colonel was kept on, but an officer of about the same age who happened to have the ill luck to be a Captain was sent away, you might lose some of your best officers. And this, I apprehend, might apply still more injuriously to the Service amongst the younger officers who have come in since. There are two Subaltern Officers now in this office. It so happens that their ages are the same within a month or two. One is about the 12th from the top, and will be a Captain at 30 years of age, while the other is the 165th from the top, and will not be a Captain at the present flow of promotion for another 14 years. Both are equally valuable men; each has a special talent. Some years hence you would, under the system of compulsory retirement, send adrift a man whom you wanted very much, to find some other employment; whereas you would have to replace him with a junior officer of less knowledge and experience.

436. And possibly of less talent?—Yes; and possibly with less talent. The case of the Engineers is different from the Navy. The Admiralty cannot employ their officers in the Navy, so the system of compulsory retirement will work out economically there; but we can employ our Engineer officers. The Indian Government are now asking for 100 additional Officers of Engineers. Surely there is an extravagance in compulsorily retiring men who are fit for service and willing to give good service, in order to bring in others of less experience at the bottom of the list.

437. Therefore, while you assent to compulsory retirement at the age of 60, you dissent from the rest of the proposal, which involves the compulsory retirement of a Lieutenant-Colonel at 54, and the compulsory re-ment of a Captain at 48, for the reasons which you have just given?—I would substitute another scheme, by which those ranks would be kept efficient.

438. You object, however, to that compulsory retirement?—I object to that compulsory retirement for the purpose of obtaining a flow of promotion; but I would retain compulsory retirement for inefficiency; compulsory retirement, when it is applied in the Engineer Corps, should be by selection and for inefficiency; or possibly there may be cases where it may have to be applied for reduction, but such cases have not arisen yet.

439. You would reserve to the Secretary of State the power of retiring any officer who might be reported inefficient to him?—Yes; or redundant.

440. (*Mr. Milton.*) But when a reduction takes place, it is the junior who goes, is it not, not the senior?—I will come to that point presently.

441. (*Chairman.*) Before we go to that point, I wish to ask you this. You spoke just now of the duties of the different officers being very distinct in the Engineers' Corps. You are aware, probably, that the Austrians have lately recognized a difference between the duties of the Engineers to the extent of establishing two distinct corps—one, which they call the Staff Corps; and, another, which they call the Regimental Corps of Engineers?—I have seen the Austrian Regulations, and they have

been explained to me by an Austrian Engineer Officer. Engineer Officers are brought in first to serve in the Regiments. There are 2 Regiments of Engineers, of 20 Companies each, in Austria; that is pretty much what we have. The officers are brought in to serve there in the due proportion in the regimental grades. There is in addition to that a section of the same corps, called the Engineer Staff; and there is also a body of officers under the superintendence, at the War Office, of a Colonel of Engineers, charged with the supervision of military buildings, and in which a large proportion of the Officers of Engineers serve with officers from other Departments of the Army. All those Corps are under the inspection and general supervision of the Inspector-General of Engineers, and also under the Chief Engineers attached to the General commands. There is attached to every military command an Officer of Engineers, a General or a Colonel, who has the inspection and supervision of the Engineer duties in that command. Those officers are responsible for the training and condition of the Engineer troops, and for the inspection of the fortification buildings and all military buildings in the command, including, I believe, furniture, such as tables and chairs. Those officers are not executive; neither the Inspector-General nor those who correspond to the Commanding Engineers in our service. The direction of the expenditure for works is under Officers of Engineers, who are called "Direction Officers," at each station. I think there is generally one for fortifications, and one for barracks, in certain districts, which are specified in the schedule attached to the Warrant. When an officer is appointed, he first joins as a Cadet, and then he becomes a Lieutenant in the Regiment. There are no Subalterns in the Engineer Staff, but they have a limited number of Subalterns from the Regiments attached to them on probation, and an officer must show his aptitude for the higher duties of the Corps before being eligible for the Engineer Staff; but an Officer in the Staff is always eligible for Regimental duty, so that a species of selection is introduced with reference to the Engineer Staff.

The composition of the Peace Establishment of the Austrian Engineer Corps will be best understood from the annexed Table (which does not include the officers in Reserve):—

Austrian Engineer Corps (Officers) Peace Establishment.

	Generals.	Colonels.	Lt.-Colonels.	Majors.	Captains. 1.	Captains. 2.	Staff Lieutenants.	Subalterns.	Total.	Cadet Officers.
Engineer Staff	5	12	12	12	35	18	...	...	94	...
Regiments of Engineers ... (= 10 Battalions. = 40 Companies.)	...	2	4	6	40		9* 14†	120	195	40

442. Does the promotion go through the corps regularly?—I am not exactly certain how the promotion goes. Of course all the Lieutenants are on the Regimental Establishment, and then the Captains are selected from them.

Lieut.-Col. Arthur Leahy, R.E.

8 Mar. 1870.

443. How is it with regard to the higher ranks?—As I understand the Austrian system, the Captains take seniority according to the date of their commissions.

444. Whether they belong to the Engineers' Staff Corps or not?—Yes; but a man may be a Captain of the regiment, and yet not eligible for the Staff. The promotion is under one direction, but there is a species of selection; the whole of the business is under the supervision of the Inspector-General of Engineers and of the Commanding Engineers.

445. Now I will turn to another point. Having objected, for the reasons which you have given, to a compulsory system of retirement in the lower ranks, and having turned your attention to this question, have you any scheme that you could propose to the Committee which you think will effect the object we have in view?—Yes; the scheme which I would propose for the promotion in the Engineers is, that there should be promotion to the higher grades after stated periods of service.

446. You say to the higher grades?—Yes, to Captain and Lieutenant-Colonel, and also to Major, if that grade be adopted.

447. How do you propose to effect that artificially?—When a Lieutenant has completed twelve years' service, and is reported to be eligible for promotion, I would make him a Captain; I would keep the total number of the corps within the approved establishment; I have assumed an establishment of the same total number as at present.

448. What would you do with a man when he gets to the head of the whole corps, and he is only 55. You cannot make him anything, because he is the head of everything. If the man at the head of the Lieutenant-Colonel's list has arrived at that period when you would make him a Colonel, unless you could get somebody out of his way at the top, you must add one on to the list?—But you have an outlet at the top in the compulsory retirement at 60 years of age.

449. But supposing the man is less than 60 years of age?—Then he may stop on till he is 60.

450. Then you add one to the list of your Colonels?—Yes; I qualify the plan of promotion by length of service in this way. You may limit the number of officers in receipt of Regimental Colonel's pay without at all interfering with the principle of promotion by length of service, because a Lieutenant-Colonel becomes an Army Colonel, after five years' service, the subsequent Regimental promotion is only a question of pay; it is not a question of rank as compared to the rest of the Army.

451. Your principle is irrespective of the numbers in the different ranks?—Yes, with the exception just explained.

452. Having regard to the great numbers of men who have entered in the same year sometimes, would not the effect be that you would have twenty or thirty Lieutenants all arriving at the age for promotion at the same time, and you would have to make them all Captains at once?—Yes, you would have to make them all Captains together, no doubt.

453. Then you would have a very bloated list of Captains in some of those years, would you not?—There would be an excess of Captains in some years, and a corresponding reduction of Subalterns. The result can be exactly calculated both as regards expense and supersession, or any other question that might arise; it is a very small question indeed, so far as relates to the relative proportion of Captains and Subalterns. The serious question is with regard to the number of Lieutenant-Colonels that you may have; but independently of the fact that this alteration of the proportion of ranks is the "very cheapest" way by which you can give the increased flow of promotion which is necessary for efficiency, the plan will work out economically for several reasons: in the first place, there need be no increase in the total number of Colonels and Lieutenant-Colonels

Lieut.-Col. Arthur Leahy, R.E.

8 Mar. 1870.

for many years to come. Appendix No. IV of the Actuary's Report shows that clearly.

454. If you have now disclosed your scheme altogether, I will ask you to tell the Committee whether you have worked out the effect of it, and if so what the effect would be upon the corps in its abnormal and also in its normal condition hereafter?—Without actuaries' calculations I cannot work it with precision, but I will tell you the effects as well as I can. There are a number of special appointments held by officers of the Royal Engineers, the salaries of which are consolidated and do not vary with the rank of the officers. In such cases, the salaries of those appointments being as a rule in excess of what the officer holding them is entitled to in respect of his regimental commission, the increase of rank would carry no increase of pay. For example, the appointment of Instructor at Chatham may be held by a Captain who is a Brevet Colonel; it is a special appointment with a salary equal to what a regimental Lieutenant-Colonel would get without any special pay. It does not matter to the public whether the officer holding that appointment is an army Colonel or a regimental Lieutenant-Colonel.

455. But the regimental pay increases?—There is no regimental pay; it is a consolidated salary. That system is largely applied in India, where the great bulk of the junior officers are serving. In the next place, a certain number of our officers of the rank of Captain and Lieutenant-Colonel are now seconded or made supernumerary for employment upon civil or semi-civil duties. The names of those officers are put in italics, and their places in the List are filled up. Under the plan which I propose it would not be necessary to fill up their places in the list of Captains or Lieutenant-Colonels, but if you wanted to fill up their places in the corps you would bring in officers at the bottom. For instance, supposing you want a Lieutenant-Colonel to serve at the Board of Trade, the Board of Trade will provide, as now, his pay, and you will not replace him by a Lieutenant-Colonel, but if you replace him at all it will be by a Subaltern. The Army Estimates will thus be relieved of the difference between a Lieutenant-Colonel's pay and that of a Lieutenant; and while retaining hold over officers so seconded, and having the power of calling them back at any time for military service, if it be necessary to fill up their places in the corps, they will be filled up by less expensive officers. Taking these circumstances into consideration, I have not the slightest doubt but that with the aid of an Actuary and a member of the Account Branch, I could lay a scheme before the Secretary of State which would provide for the flow of promotion which I propose to give, and at a cost certainly less than any other scheme which I have heard of; I believe it would cost very little.

456. The basis of your scheme is, that every Lieutenant, directly he has completed 12 years' service, should be made a Second Captain?—Yes.

457. That every Second Captain, after he has completed a certain number of years' service, should be made a First Captain—how many years do you propose?—I did not say anything about Second Captains.

458, Then it would be that every Captain, after he has completed 26 years' service, should become a Lieutenant-Colonel?—Yes.

459. That every Lieutenant-Colonel, after he has completed 35 years' service, should become a full Colonel, and that when he is 60 years of age he should be compulsorily retired?—Yes, with this qualification, "That I do not think it is essential that a man at 35 years service should have a full Colonel's pay given him." I think for all the higher commands the pay is fixed at a certain sum. At Portsmouth, Devonport, and other places it is a consolidated salary. That principle may be extended for this purpose.

460. You would give him the rank of Colonel without the pay?—He now becomes an army Colonel before he becomes a Regimental Colonel. It gives him no additional rank now.

461. (*Mr. Milton.*) And you would give these promotions according to length of service, without reference to the numbers in the class?—Yes.

462. And also without reference to the duties to be performed?—I have already stated that if the numbers are redundant, I would reserve a power to the Secretary of State to compulsorily retire officers by selection.

463. I did not mean the total number of the Corps being redundant, but the numbers in the higher ranks. If you give promotion by length of service you would have all the officers in the higher ranks, and neither would the duties be commensurate with the pay, nor the pay with the duties?—I think, for many years to come, it would work out right.

464. The principle applied throughout the service at present, in the Line, in the Artillery, and in your own Corps, is, that men are paid certain salaries for more or less responsible duties. If you promote men wholly by the almanac you are abandoning the principle of paying according to duties, are you not?—I have already stated my opinion, that taking into consideration the appointments which are specially paid, this increase of rank will not work inconveniently.

465. I do not allude only to the higher appointments for which there are fixed salaries, but does not the same principle hold throughout the corps—a Captain has heavier duties to perform than a Lieutenant, and a Lieutenant-Colonel than a Captain?—In the Engineers' Corps the character of a large proportion of the duties depends more upon the individual capacity than upon rank in the Corps.

466. (*Chairman.*) Does not it follow that your men are making their work?—No; I say that our promotion ought to be regulated with regard to our efficiency, and that it ought to be that which is necessary to keep the ranks in an efficient state.

467. (*Mr. Milton.*) And, therefore, if the retirement of full Colonels at the age of 60 is not sufficient to keep the corps in a healthy state with the present system, I do not see how you can keep the corps in a healthy state by merely calling the officers by other names, and giving them, nominally, other ranks?—Retirement at the age of 60 would not now be necessary at all, were it not for the rule, the principle of which I do not understand, by which Colonels of Engineers are promoted to be Generals out of their turn, not only in corps but by army seniority. It appears to me that if an officer of Engineers becomes a Colonel for field or other army service, out of his turn regimentally, he should not be promoted to be a General until he arrives at his turn by army seniority, then he should be borne as a supernumerary General until his turn arrives for absorbing him by corps seniority. Had it not been for that rule, you would not now have had to provide for compulsory retirement at the age of 60. Sir Frederick Chapman and Sir Lintorn Simmons were promoted to be Generals out of their turn both as regards their corps and army seniority. The consequence is, that you have two full Colonels at the top of the list over 60 years of age.

468. Were they promoted for distinguished service?—Yes; they became Colonels for distinguished service.

469. (*Chairman.*) Will you have the goodness to complete your statement of your scheme. We have got as far as this—that after a certain number of years' service you would promote an officer to the upper rank all through?—I will put in a paper (*vide* Appendix O.) You will see that I have put sixteen as the age of entry to the academy, and then I note that two years' service are not counted for retirement. The officer is commissioned at eighteen, and serves for twelve years as Lieutenant, that brings him to the age of thirty, when he gets his Captain's commission. He serves as Captain from ten to twelve years, according to what may be the proper average—I leave that quite open.

470. You mean with reference to the supersession question?—Yes; so that he will be a Major at from 38 to 42 years of age, according to what may be the correct time to take. He will be a regimental Lieutenant-Colonel after 26 years' total service, and at a minimum age of 44. Then comes the question of promotion to full Colonel. I would limit the number of officers on full Colonel's pay to the present number, namely, 16.

471. You would not limit the List, but you would

limit the pay?—I would keep the 16 on the top of the List on full Colonel's pay. Those officers have always had certain important commands set apart for them, such as Gibraltar, Malta, Portsmouth, Devonport, and Ireland.

472. Are all the 16 provided for in that way?—Not the whole 16; some are unemployed. Then with a view to forcing out officers who, when they come to the top of the List, are not considered by the Commander-in-Chief fit for the more important commands, I would let them remain, as now, on the unemployed List; and I would reserve the option of saying that unemployed service shall not count for pension. I do not mean that a man is to be told when he gets to the top of the List, "You are to go," but the Commander-in-Chief would have a private interview with him, and tell him, "I do not think you are fit for the command of Malta or Portsmouth, and you must remain unemployed." It will then be the interest of that officer to retire as soon as he can. Influence will be brought to bear upon him without bringing in compulsory retirement. That I think completes the statement of the scheme I would propose.

473. Will you first of all tell the Committee what would be the expense of that scheme?—I have already said that I could not work it out without an actuary, but I believe it will be cheaper than any other.

474. You cannot give any nearer statement of its expense than that you believe it will be the cheapest plan as well as the most effectual?—Yes; and I believe if it were worked out according to my own views it would not cost more than the present retirement, and that which is necessary to compel the officers of 60 to go, which is accepted. You may take it that it would not be dearer than the two modes of retirement which are practically in force now.

475. Will you now tell the Committee the advantages of your scheme as they occur to you, and also any objections which may occur to you?—The first advantage is the certainty of the promotion necessary for efficiency. The next is that it would give a facility for the immediate amalgamation of the four separate Establishments into which the corps is now divided, and thereby give greater facility for employing officers of the British Establishments in India. There is a demand for an additional number of officers in India, but questions of supersession arise under the present system when they are employed there.

476. You refer to the amalgamation of the three Indian Lists with ours?—Yes. Under this plan there would be no more questions of supersession, the officers would be amalgamated as they stand in the Army List. In the next place, if an augmentation was necessary (there being a demand for one at the present moment), it would not involve the promotion of junior officers to the rank of Captain before they had served the full period of 12 years. You would not, as you did after the Crimean War, promote officers of six years' service. In the next place, if the total numbers were excessive you could reduce the excessive numbers in any rank without hardship upon any individual. You would not stop the promotion of any one. You would reduce by selection, and compulsorily retire those who are redundant. In the next place you would not interfere with the existing interests in voluntary retirement. If any man considers it to be his interests to elect to retire on the existing scale, he may be allowed to do so. There will be no grievance in that respect.

477. You mean with regard to the vested interests?—Yes.

478. But if the present application of the Parliamentary Grant is to be interfered with, you must not credit yourself with any amount of it to your scheme?—I do not require any extra retirement.

479. You do not require any additional annual retirements at all?—No; we should not require any extra retirement, certainly, not for several years to come. The possible objections to the proposal are, in the first place, the alteration of the present proportion of ranks; but I think this is not of importance in the Engineers so long as the total number of officers is correct, because the fitness of an officer for many corps duties depends more upon his personal qualifications than on his rank. In the next place it may be objected that the plan is not equally applicable to the Royal Artillery. But the circumstances of the two corps are not identical, and the scale of voluntary retirement that would be satisfactory for a Captain of Artillery would not satisfy a Captain of Engineers when he had served through the hard work of the corps and was beginning to look after the prizes.

480. The whole circumstances of the corps are perfectly different?—Quite different. In the Engineers one-fifth of the officers are employed regimentally, whereas in the Artillery the whole are so employed.

481. Is your opinion very strong upon that point that it would be impossible to devise a scheme which would be equally good for both corps?—The principle could be applied to a limited extent only in the Artillery.

482. The principle you have just alluded to?—Yes; that principle could, I think, be applied to a limited extent in the Artillery with advantage.

483. I suppose you have not considered that subject in detail?—Only as affecting the junior ranks.

484. Have you completed your statement of your scheme for the Engineers?—I have stated all the advantages and objections that occur to me.

485. Will you now be good enough to explain to us the application of your scheme to the Artillery?—The chief principle involved is an alteration in that proportion of ranks. That might be adopted so as to give relief to the subaltern's grade by increasing the proportion of Captains serving with field batteries. This could best be done by dividing the present number of field guns into four-gun batteries instead of six-gun batteries.

486. Perhaps you could make it clearer to the Committee if you were to tell us the proportion of the number of officers to batteries and to the number of guns?—There are now five battery officers to six guns.

487. (*Mr. Milton.*) What are those battery officers?—There are a Captain, a Second Captain, and three subalterns for six guns. I believe the reasons for having six gun-batteries no longer obtain; they were formerly necessary because one-third of the guns were shell guns, so that the smallest unit was one shell gun and two shot guns. That reason no longer obtains. In a field-battery there are 15 non-commissioned officers and 163 men, or a total of 178 non-commissioned officers and men. The proportion of officers is about 1 officer to 36 non-commissioned officers and men, or 5 officers to 6 guns; whereas, in a regiment of Cavalry there are 17 troop officers to 447 non-commissioned officers and men, or about 1 officer to 27 men. By increasing the proportion of officers in the batteries from 5 officers to 6 guns to 6 officers to 6 guns, you could alter the proportion of grades, and your number of battery officers would be 1 officer to 1 gun, or to 30 men. It appears to me that, taking into consideration the more expensive character of the Artillery equipment and ammunition (every shot is more valuable than it was in olden times), and the greater importance of accurate fire, and the fact that it requires a greater amount of skill and calculation now to get at the range of artillery than it did in former times, because you have to calculate for 3 or 4 times the distance; an officer to a gun is not too much for service, and in time of peace it is not too much for a nucleus, and it is not so much as the 1 officer to 27 men in the cavalry. In that way we should get a larger number of Captains and increase the proportion in that grade.

488. (*Chairman.*) How would you get a larger proportion of Captains; how would you divide your 6 officers in a battery?—The proportion I would have would be 2 Captains, 2 Second Captains, and 4 subalterns to 8 guns.

489. You would have your batteries then with 4 guns instead of 6?—Yes; I would have 2 batteries together, making 8 guns under 1 field officer; that would, I expect, about correspond to what is necessary for a brigade of Infantry, or would do so more nearly than the present proportion. I have not gone into the question of proportion of ranks as regards the higher grades of the Artillery.

Lieut.-Col. Arthur Leahy, R.E.

8 Mar. 1870.

490. You have said that one of the advantages of your scheme is, that it will get rid of the difficulty of how to deal with what is familiarly called the vested interests; but supposing that your scheme is not accepted, what do you think would be the fair way of dealing with the vested interests of the officers of the Engineers?—I think the principle to be laid down is, that officers who do not derive an advantage in the way of promotion by any change should not be compelled to give up their chances of retirement under the existing plan. That is the principle that I would lay down.

491. But would you apply it to all ranks?—Yes; I think that the scale of retirement might with advantage be altered so as to be accepted by officers who have vested interests, and so produce the desired result; it is not a well-framed regulation at present. I think it might be altered so as to be accepted by all but a few who have a prospect of getting 600*l.* a-year before 55 years of age, and who have already made up their minds to retire.

492. Any alteration in it would interfere with the vested interests of some. For instance, supposing you were to suggest that in future the retirement in the upper rank after thirty years' service conditional upon being a full Colonel in the corps, instead of being 600*l.* a-year, should be 550*l.*, and that the 50*l.* thereby saved should be appropriated to retirement in the lower rank, that would interfere with the vested interests of the upper rank, would it not?—In the case of a few individuals only. There is no use in having a right to retire after thirty years' service, conditionally on having attained the rank of full Colonel, if there be no prospect of being a full Colonel at thirty years' service.

493. The question is this, there are two classes of officers who, at the present moment, may be said to have, or claim to have, a vested interest: the first is an officer who has fulfilled the two requirements, that is to say, served for thirty years, and is a Colonel in the corps; he has the right to retire, if he likes to do so, upon 600*l.* a-year. Then there is the other case of an officer who has fulfilled one of the requirements, namely, the thirty years' service, but has not yet arrived at the rank of Colonel in the corps; he has to a certain extent a vested interest in the retirement; clearly in one sense he has a vested interest, inasmuch as he could retire to-morrow upon 400*l.* a-year if he liked?—Yes, if there be available funds.

494. And he has an indirect interest in the other retirement, inasmuch as having fulfilled one of the terms, he has only to wait a little longer to fulfil the other, and when he has done that he can retire upon the 600*l.* a-year?—It is a matter of calculation how long he may have to wait to fulfil the other requirement. There must be money on the grant; that must be taken into consideration in calculating the chances.

495. Without interfering with all that, and without expressing an opinion, whether we agree with you in its being a very stupid arrangement or not, what I want to ask you is, what would be a fair way of dealing with the vested interests of these officers?—I lay down the principle that any officer who does not derive an advantage in the way of promotion from the new scheme should not be compelled to give up his present chance of retiring. It is a matter which could be dealt with by an actuary. For example, unless the grade of Major were established, the scheme I have proposed would not benefit the First Captains; but if that grade were established it would benefit most of them, and those who benefited by it should be required to give up their interests in the former arrangement. It becomes a matter of calculation. You could deal with any man's claim upon that principle.

496. You are treating the question now as affected by your proposal?—Yes; as an example of the application of the principle.

497. I want you to deal with it in two phases—first, as affected by your proposal; and secondly, as if you had never made any proposal at all, and as if we had got an idea in our heads with which you were quite unacquainted, and which would eventually affect the fund?—I would adopt the principle, that if an officer can show that he derives no advantage in the shape of promotion by the changes you make in the organization of the corps, he should be allowed to retain his option.

498. But every officer obtains a fractional advantage from every promotion, because if there is a step given by the retirement of a Captain, the officer who is tenth on the list of Lieutenants becomes ninth, and therefore he is one step nearer his promotion?—Yes; I presume the Lieutenants will gain under any scheme that may be adopted. I will take my own case; I am a First-Captain, some places down; according to the present average rate of promotion I shall be a Regimental Lieutenant-Colonel just as soon as under my scheme.

499. (*Mr. Milton.*) What is your length of service, now?—I have nearly finished 22 years' service.

500. According to that view, taking your own case, the present system would have to be retained for 8 years longer?—The officers who are on it would be designated, but they might continue for perhaps longer than that.

501. According to that there would be no means of drawing a line, and closing the present scheme for many years to come?—You would know exactly the individuals who elected to go under it.

502. There would be no means of closing the present scheme and applying the money derived from it to any other scheme for many years to come, would there?—I think there would; you would know exactly the officers who came under it, and calculate accordingly.

503. If the decision was that a Lieutenant of 7 years' service would have a right to hold on to the old scheme you could not close that scheme for 23 years?—You cannot close it for 23 years, now; some of the officers now on the list will probably live longer than that.

504. But it might be closed and abolished at once if another scheme were started; the Government might say that they would not again give a single annuity on those terms, and so wipe away all vested rights altogether. The Chairman asks your opinion as to the extent to which you think that these vested rights in the retention of the present system should be respected?—The only answer I can give is that I have already stated; the object of the new scheme would, no doubt, be to give a flow of promotion, and it should be a matter of calculation whether an individual benefited by that promotion.

505. (*Chairman.*) You wold not calculate it on the footing that every man should be considered to have a vested right, to a greater or less extent, who has now some claim upon the fund, would you?—I suppose we have all now, some claim upon the fund.

506. No, you have not; you could not retire for instance upon any condition now, not even upon the certificate of a Medical Board, for you have not served for 25 years?—But I may have laid out my plans upon the faith of that scheme, so as to retire when I have served 30 years.

507. There are a certain number of officers at this moment in the corps who could retire in one way or another if there was money enough to provide them with their retirements. The officers whom I have mentioned, who have completed the two conditions can retire upon 600*l.* a-year. The officers who have completed only one condition can retire upon 400*l.* a-year, and officers of 25 years' service, in the junior rank can retire on account of ill health, on the certificate of a Medical Board, if there is money enough in the bank. Those officers have all got a direct claim upon that fund, but you have none at all?—There are three "ifs;" first of all the two conditions we have already referred, to and then "if" there is money to provide the retirement, and there is a degree of interest according to the extent to which these requirements are satisfied. In my own case, I admit, of course, that my degree of interest is less than that of a man who has completed the first two conditions.

508. (*Mr. Milton.*) But, as the Chairman has already put it, certain officers have acquired a right already to retirement from any money that may fall in to-morrow, but you have not acquired that right yet; yours is only prospective?—Can you tell me of any officer who has acquired that right?

509. Yes, I think Colonel Keane can retire on 400*l.* a-year to-morrow?—Not if Colonel Hamley, who is a full Colonel, chooses to take the available funds in place of him.

510. (*Chairman.*) Then Colonel Hamley has it?—Then there is only one in the corps who has actually acquired the right.

511. (*Mr. Milton.*) If the fund was liberated to-morrow it might supply the requirements of a great many—it only depends upon the amount of money that there is available. It appears that every man who has already served for 25 years has acquired a right under that Warrant, because his health might fail to-morrow, and on the first money coming in, he will be able to claim his retirement?—I have laid down the principle which I advocate, and there would be no difficulty in applying that principle, if it should happen that I have said sufficient to induce the Committee to accept the scheme of promotion which I propose. I cannot speak upon the alternative schemes.

512. In fact, you say that under any altered scheme the line of vested right which you would draw, would be that an officer who derived an advantage under the new scheme would lose his right under the old, and an officer who did not derive advantage from the new scheme would not lose his right under the old?—Yes; but I would not leave it optional for officers to take the advantage of promotion or not. I would not let it be at the option of an officer to say, "I will not be promoted."

513. You have alluded to large batches of officers receiving their commissions in the same year, and you mentioned one of 37—do you consider that a large batch?—It was an unusally large batch.

514. Do you know the number of Lieutenants in your corps?—At present, I believe, the total number is 313. The number on the British Establishment is 192. I have not pretended to investigate the Indian Establishment. I do not think that either you or I could do it. I am speaking in reference to arriving at a final conclusion, not an approximate conclusion.

515. Is not the total number 370 at this moment?—There are 192 on the British Establishment; when the amalgamation took place the number was 192.

516. In what year was the batch of 37 added?—It was in the year 1857.

517. Will you give us a list of the numbers who entered the corps in each year since 1865, because I think it will show that 37 is a normal number?—If you compare 1857 with 1865 you must remember that in one case the entries applied to 8 battalions, and in the other case applies to 15.

518. The 37 officers you allude to are all provided for; they have got their first step in 12½ years, therefore their promotion was not abnormal, for your own figure was 12 years?—That is quite satisfactory so far, but you will have to provide for them hereafter.

519. The promise is very good, when they have got their first promotion in 12½ years, is it not?—That is to Captains.

520. That is the first step; 37 is by no means so abnormal a number?—I should like to refer to years in a normal time. I will take the years from about 1850 to 1854. In 1849 there were 2 commissioned; in 1850 there were 6 commissioned; in 1851 there were 4 commissioned; in 1852 there were 3 commissioned; in 1853 there were 6 commissioned; in 1854 there was an augmentation of battalions, but when you brought in an extra number at the bottom, you brought in a number at the top to relieve them; that was not the case in 1857, so 1854 is not a normal year. There was a large number commissioned in 1855 that was also connected with the augmentation; the places were not filled up in 1854. In 1856 there were 18, and in 1857 there were double that number. These numbers represent those now remaining on the list who were commissioned in those years.

521. Will you kindly furnish the Committee with a return of the numbers appointed to the Royal Engineers in each year since 1850, with any remarks upon that which may occur to you?—I will do so, if you wish it, but of course I can only take my information from the Army List. It ought to show the Establishment in each year.

522. (*Chairman.*) Is there anything else you would wish to add?—There is one point I would mention, that is, as to whether it is better to take age or service as the basis of a proposal for retirement. If it is necessary to apply compulsory retirement, I think that efficiency, of which age is a principal element, should first be taken into consideration; therefore, in making a selection from a particular grade, as to the officers you would retire compulsorily, you would first review the cases of the older officers in that grade. But in determining the amount of the retirement, service alone should be the governing consideration, and I think service in a tropical climate should probably count for more than service in a temperate one.

523. Do you mean that it should count towards increasing the pay?—I think it should count towards the amount of the retirement. Voluntary retirement should, on the other hand, go by service. The only other point I would mention is with regard to the scale of retirement. I worked it out with a good deal of care to see what would be fair and satisfactory, and I can lay a scale before you if you wish.

524. Will you have the goodness to state it?—In the first place, I think that in laying down a new scale of retirement regard should be had, first, to the existing engagements, and, secondly, to the conditions laid down for retirement in other branches of the service similarly situated.

With regard to existing interests, a Colonel of the Royal Engineers, removed from active employment as a general officer, having served faithfully through all the grades of his service, now succeeds to his share of the pay set apart for the sixteen unattached Generals. This would be at the following rate:—

	£
Eight Colonels-Commandant, at 1,000*l.* a-year	8,000
Eight Major-Generals, at 475*l.* a-year	3,700
Total ..	£11,700

Which would give an average of 737*l.* That is what an officer removed from the list gets now. A Colonel of the Royal Engineers, of thirty years' service, can succeed to 600*l.* a-year probably not later than 55 years of age. Under the scheme I propose he may be a Colonel at 53, but he may, and probably will, have to wait two years, until there are funds, so that the chances are that he would get it at 55. A Lieutenant-Colonel of the Royal Engineers has a fair chance of getting 400*l.* a-year after thirty-two years' service—say at 50 years of age. These are the existing interests in the Corps.

Next, as regards precedents—the most recent is that of the Navy, that is within the last few days. A Captain of the Navy gets 600*l.* a-year for twenty-seven years' sea service, but it is increased by 10*l.* a-year up to thirty-two years' sea service, so that he gets 650*l.* after thirty-two years' sea service. I think that taking 18 as the minimum age of entry, a Colonel of Engineers, who serves for forty-two years, that is to say, who serves continually, and is not removed from his employment through any fault of his own up to 60 years of age, ought to get that which a Captain of the Navy can get for thirty-two years' sea service. You must take into consideration that commissions in the Royal Engineers are obtained after a succession of competitive examinations, and then that the time spent as a cadet does not count at all. In the Control Department, which is the most recent precedent in this office, a controller removed from active employment at 60 gets 730*l.* a-year, a sum corresponding to what a Colonel of Engineers now gets on removal as a general officer. A Deputy-Controller can take 1*l.* 13*s.* a day, or 603*l.* a-year, after thirty years' service, but although it is the same as a Colonel of Engineers can get after thirty years' service, there is this difference between the cases, that a Deputy-Controller can claim it after thirty years' service, without waiting to know

Lieut.-Col. Arthur Leahy, R.E.

8 Mar. 1870.

if any funds are available, whereas, in the case of a Colonel of Engineers, there must be funds available, and he must be a Regimental Colonel; it will not do to be an Army Colonel; 650*l.* a-year would correspond with the maximum Naval rate. For the important commands I have mentioned—such as Portsmouth, Plymouth, the consolidated pay is 1,000*l.* a-year. Comparing that with the Civil Ssrvice retirements $\frac{42}{60}$ths of 1,000*l.* would be about 700*l.* a-year. I think, therefore, that 650*l.* a-year is a fair maximum retirement for an officer who has served forty-two years, and the amount would correspond with the Naval rate.

As regards the lower grades of Lieutenant-Colonel and Captain, these are the existing engagements and precedents.—A Deputy-Controller of less than thirty years' service gets 456*l.*; a Lieutenant-Colonel of thirty years' service, say 48 years of age, may get 400*l.*; a Captain or Commander in the Royal Navy of 48 years of age, and twenty-one years' sea service, gets 400*l.* also; an Assistant-Controller of thirty years' service, say 46 years of age, gets 365*l.*; an Assistant-Controller, of twenty years' service, may get 273*l.* The minimum retirement proposed for the Navy is 200*l.* a-year. Upon these precedents I have framed a scale, in which provision is made for a deduction for each year wanting to complete the maximum period of service in each grade. (Included in Appendix O.)

When you wished to retire a Lieutenant for inefficiency—for example, if a man came to the top of the Lieutenants' List who was not considered fit to be a Captain, I think 10*l.* for each year's service would be a fair scale.

525. Then you would give these retirements in the lower ranks only to men who were inefficient, or to men whom you wanted to get rid of?—First of all I assume the established proportion of General Officers to remain as at present, the total amount of voluntary retirement being at present 18,000*l.* a-year, I would not add to or diminish from that. Then you have compulsory retirement at 60 years of age—that I apprehend is accepted. Then if an officer retired voluntarily of course he must get his retirement out of the 18,000*l.* a-year. If the Duke of Cambridge or Secretary of State considered it necessary to compulsorily retire an officer and replace him at the bottom I would make his retired pay come out of the 18,000*l.* also, but if the compulsory retirement were for purposes of reduction and they did not replace him, then I should not make it come out of the 18,000*l.*

526. Suppose the 18,000*l.* were all appropriated, what should you do then?—Of course the Secretary of State must wait in that case before retiring an officer who would have to be replaced. He cannot retire an officer until there are funds available.

527. (*Mr. Milton.*) Then the bad man will get his retirement to the exclusion of the good man?—He gets it for the good of the service. I do not think that any officer ought to have a right to claim it.

528. If an officer under the present arrangement of 18,000*l.* has a right to claim a pension, and a vacancy on the 18,000*l.* takes place, is it right that a bad officer should go and that a good one not get the retirement?—As I have just said, I do not think that any officer has a right to go; his right is contingent upon so many "ifs."

529. Supposing all the "ifs" done away with—supposing the money is there, is it fair to take it away from a good man and give it to a bad one?—I do not think that case can arise, because he must be a full Colonel of thirty years' service, and if he is a good man his regimental pay and good service pension will amount to the value of the retirement, so that he will not go. Very few of the best men take it now.

530. (*Chairman.*) If I understand your proposal it is that this scale for the lower ranks is only to be given to those men whom you want to get out of the way?—I would make it the scale of both, compulsory and voluntary retirement.

531. You would allow any of the men in the lower ranks voluntarily to retire upon that scale if they liked?—Yes, but it must always come out of the 18,000*l.* a-year. I would allow them to retire if there was any of that money available. I think some of the 18,000*l.* a-year would be well applied in the junior ranks.

532. (*Mr. Milton*). How many vacancies do you think there would be upon the 18,000*l.* per annum?—I think the number is about 2. I think it would also be attended with great advantage if a revision of the rules regulating the pay of the fixed establishment of unattached Generals were made. I think it would be much better to put all effective Major-Generals on unattached pay at 600*l.* a-year, and that part of the pay of the effective Generals on the Establishment should be made up with good service pension. I do not mean field-service pension, but pension for long and faithful service, so that when an officer came to the top of the list the total amount he would receive would be made up by giving a part of the pay in the shape of a pension for long and faithful service (not necessarily field service). By that means the retirement of officers, without strong claims, could be facilitated. The unattached pay might be made 600*l.* a year, with a prospect of being increased to the present average, partly by good service pension, and partly by promotion to the ranks of Lieutenant-General and General. The retirement of officers whom it was desirable to get rid of might be provided for without their being actually sent away, because an officer who came to the top of the list could be told: "You have no chance of a good service pension, so you had better take the retirement of 650*l.* a year."

533. Do you think that it would be necessary to have a scale so much graduated as you have framed it—would it not do to have one rate for each rank?—I think a graduated scale is much better.

534. (*Chairman*). And it is also more seductive?—Yes; a man will not hold on then as now, because at present there is nothing between 400*l.* and 600*l.*

535. (*Mr. Milton*). But the seductive element would not apply, if your proposal of compulsory retirement by selection were carried out?—The compulsory retirement by selection is only an important element in it.

536. In the other branches of the Army the half-pay is at one rate for each rank, is it not?—I believe it is; but it does not follow that that is the right system.

537. Certainly not. But is there any necessity to introduce a new thing?—The necessity of introducing a new thing is admitted, or else this Committee would not be sitting. It is admitted that something is to be done; and I am giving my views as to what is the best for efficiency and at the same time the cheapest thing that can be done.

538. Do you think that there is any healing power in the annual gradation?—Yes; I think there is. At any rate, it seems very popular now. Everybody likes the Naval scale as far as I have heard.

[The Witness withdrew.]

Denham Robinson, Esq., and R. R. F. Davey, Esq., Examined.

Denham Robinson, Esq., and *R. R. F. Davey, Esq.*

8 Mar. 1870.

539. (*Chairman to Mr. Robinson.*) I believe you are not sufficiently advanced in all your calculations to go into the detail of the results with regard to the late scheme which has been proposed to you?—Not for any number of years.

540. Therefore we will postpone that. We only want to ask you this question at present: Major-General Gambier, in his evidence the other day, told us that the average number of vacancies in the Royal Artillery per year was twenty, and that if any means could be devised of adding to these vacancies ten more, so as to make the average annual vacancies thirty, that would keep the corps in an efficient state. Will you be good enough to tell the Committee whether you have made any calculations upon this point?—We have, and we do not concur at all in that number. We find that the average

Denham Robinson, Esq., and R. R. F. Davey, Esq.

8 Mar. 1870.

nual number of vacancies now is fifty-five, and that venty-three are required to keep the corps in a healthy ate.

541. You are including, of course, now, the Indian stablishment as well as the British Establishment?—xactly.

542. General Gambier's answer referred only to the ritish Establishment?—We do not find it possible to parate them; because in two years the Lieutenants who me in at the time of the amalgamation of the British d Indian Establishments will have completed their elve years' service, and, therefore, they would come for promotion, according to General Gambier's eory of a healthy state of the corps. Therefore, it impossible to separate the two things.

543. Did you say that your number of vacancies was ty-four?—Fifty-five.

544. How are they divided?—Deaths, resignations, d retirements on permanent half-pay give thirty-one. his is the average for the next ten years. The cancies by retired full-pay are four, and by succession the Indian vacancies twenty, making fifty-five in ; but that includes the vacancies in the rank of eutenant.

545. General Gambier said: "A Lieutenant entering regiment gets fourteen steps," annually?—General mbier must be mistaken there, for if you merely count names in the Army List of the last ten years, it es an average of fifty-two steps to the Lieutenants.

546. He based a very elaborate argument upon these ancies which he gave to us as a fact. I suppose the rage of first appointments that you now give us, lounting to fifty-five, is exactly the fact?—That is prognostic of the average for the next ten years.

547. Fifty-five per annum?—Yes.

548. How are these divided over the ten years. Could give us the detail of that?—We can give you the detail by the year. Vacancies attributable to deaths, resignation, and retirement to permanent sick half-pay on the British List, thirty-one; by annual retirements on full pay out of the 42,400*l.*, four; by succession to the vacancies on the Indian List, twenty,

549. Would those be pretty equally divided every year, or would there be more in some years than in other years?—They would increase a little, because the officers in the corps gradually age, and, therefore, they die off a little faster. On the other hand, the Indian vacancies gradually diminish as the Indian Lists tend towards extinction.

550. Then how many would you add to that to keep the corps in a healthy state?—Eighteen.

551. What would the result of that be?—The result of that would be that 18 retirements must be provided between Great Britain and India. If India will provide any number of retirements for officers on her lists it will be so much off that eighteen.

552. And what would the effect be upon the corps?—The effect would be that you would have the periods of promotion which General Gambier described as healthy.

553. That is to say, Lieutenants having 12 years' service, and so on upwards?—Yes.

554. This is not calculated with regard to money at all?—The figures we have given you are on the supposition that the 42,400*l.* continues.

555. And is available?—When we take the present average of 55 vacancies, that is upon the supposition that the present system continues entirely unaltered; that nothing whatever is done.

556. (*Colonel Egerton.*) But you have calculated upon the lives of the holders, of the greater part of that 42,000*l.*; it is allotted at present?—Yes; we have assumed that it will give us 4 vacancies a year, which represents the average mortality of the holders of it.

(The Witness withdrew.)

Adjourned to Tuesday next at 1 o'clock.

War Office, Tuesday, 15th March, 1870.

Present:

Captain the Honourable J. C. W. Vivian, M.P., *in the Chair.*

Colonel Egerton. | Mr. Milton.

Major-General Sir Lintorn Simmons, R.E., K.C.B., examined.

Maj.-Gen. Sir Lintorn Simmons, R.E., K.C.B.

15 Mar. 1870.

557. (*Chairman.*) You are at the head of the Royal ilitary Academy at Woolwich, are you not?—Yes.

558. You have turned your attention I think to the stion of retirement in the non-purchase corps, the tillery and Engineers?—Yes; but more particularly h reference to the Royal Engineers.

559. Would you be good enough to tell the Committee what you consider the present condition of the ps of the Royal Engineers to be, so far as the age of officers in the different ranks is concerned?—The sent condition of the corps shows the extreme necesy of some measure of relief.

560. Over and above the present annual Parliamentary ant?—Yes; beyond what is now existing. It appears at there are three periods at which young officers have en admitted into the corps in great numbers. In 1845 d 1846 there was a great influx in consequence of an gmentation of the corps. In 1855 and 1856, during Crimean war, there was another great increase, and bsequently to that the increase has gone on in consence of the amalgamation of the Indian with the yal Service.

561. But at present these large increases have not terially affected the healthy condition of the corps, ve they?—I think they have; I think the corps is not any means in a healthy condition at the present time the junior ranks, far from it.

562. At what period do you think that a Lieutenant ould be advanced to the rank of Second Captain?—In about twelve years; but my reason for saying that I think the corps is not in a healthy condition is that the large mass of officers in the junior ranks are losing hope of promotion. It is not that the senior men of each rank are actually of longer service than they ought to be, but it is the hopeless condition of those who are below them consequent upon there being so large a number who are nearly of the same age.

563. Then I may assume that you consider the corps unhealthy now, not on account of its present condition, but rather on account of its prospects?—On account of its prospects, which are due to its present condition. I find that these periodical influxes of officers have been combined also with changes in the ages at which Cadets have been admitted to the Academy, and therefore with the ages at which they have been commissioned as officers; this has affected the prospects of officers very materially, from its causing a larger number to be about the same age. I find, on looking at the list, that there are 30 First Captains at its head, who are about the same age consequent on the increase in 1845 and 1846; they are about 42 years of age, and as the rate of promotion is about 5 or 6 per annum it would take 6 or 7 years to work off those 30 who are practically of the same age; that is to say, one of them will arrive at the rank of Lieutenant-Colonel at the age of 42, and another not till he is 50. However, this will settle itself; it is not so large a question as what follows, but it materially illustrates

Maj.-Gen. Sir Lintorn Simmons, R.E., K.C.B.

15 Mar. 1870.

what will happen hereafter, unless something is done to relieve the great body of officers in the lower ranks to whom I am going to allude. I find that there are 136 officers, including 67 Second Captains, who were commissioned within 5 years; that is, between February 1855 and December 1859, who are all, within one or two years, of the same age. From the records of the Academy I have extracted the ages of a few which will serve to illustrate my point. First Captain Cornes, with 26 First Captains below him, is 35 years of age. Captain Webber, who is within either one or two of the top of the Second Captains, with 66 Second Captains below him, is 31½ years of age; Captain Festing, who is the next below him, is 30½ years of age; Captain Stockley, who is the next below him, is 32 years of age. Then I go to Lieutenant Wynne, who is the 31st Lieutenant on the list, his age is 32. You will observe that he is older than the Senior Second Captain, and he is the 31st down on the list, or 100 places below Captain Webber. Lieutenant Collins is the 54th Lieutenant; he is 31½ years old, the same age as Captain Webber, although 123 places below him. Then Lieutenant Buckle, who is 51st on the list, is 31 years of age. Then I come down to Lieutenant Bucknill, the 156th on the list, who is 26¾ years of age. Lieutenant Ottley, the 163rd on the list, is 28½ years of age, and Lieutenant Ommanney, the 165th on the list, is 28 years of age. It would appear, therefore, that the 232 officers who are comprised within these limits are within 3 or 4 years of the same age; and if the list be examined still lower, there is Lieutenant Washington, who has 205 Lieutenants above him, and who is 27 years old. I think that presents a most serious prospect for those officers, and, as a consequence, they are becoming absolutely hopeless.

564. (*Mr. Milton.*) What were the changes in the age at entrance that you refer to?—About 1856 I think it was the age was increased from 16 to 19, and for a short period to 20, and the course of study at the Academy has been retained at 2½ years; so that the greater part of the cadets for the last 10 years, I may say, have been commissioned in their 21st year.

565. (*Chairman.*) Lieutenant Ommanney was 22 years of age when he got his commission?—Yes; he was in his 22nd year, I presume. I have not abstracted these cases myself, I have put them into the hands of others to abstract, and I believe the information to be absolutely correct within a few months, but I can verify them afterwards. Then I think the Committee should bear in mind, with reference to these officers, that they enter the academy by open competition for which there is no qualification whatever required beyond 3 years' good character and a certificate of birth, to show that they are within the prescribed limits of age, and also of course a medical certificate of fitness.

566. That is to say that there is no patronage whatever; it is open to the whole world?—No patronage whatever; your shoemaker's son may enter if he is sufficiently educated.

567. (*Mr. Milton.*) Since what date has that been the case?—Since 1855, with the exception of some to whom nominations had been previously promised.

568. (*Chairman.*) You know the question we have got to try to day is one which a great many persons have tried their hands at, and for which a great many schemes have been suggested, amongst others, a scheme proposed by a Committee of the House of Commons, over which Mr. Childers presided. That scheme was a scheme of voluntary retirement at certain sums at certain ages. Are you acquainted with that scheme?—Yes; I have read the scheme as propounded, carefully.

569. Setting aside the financial objections to it, do you think that that scheme would have carried out the result we want to arrive at, namely, a fair flow of promotion?—I think it would have carried out a fair flow of promotion, but at great cost, and in some cases it would have been attended with great individual hardship, because there is great difficulty in drawing a rigid line for compulsory retirement from the junior ranks when a man is in the prime of life, and has a great deal of work still left in him. I think Mr. Childers' scheme included some compulsory retirements as low as 40 years of age.

570. The scheme of the Committee of which Mr Childers was Chairman was based entirely upon voluntary retirement, but a subsequent scheme of Mr Childers' was a combination of compulsory and voluntary retirements?—I am afraid I was confusing the two

571. The basis from which we start is compulsory retirement at the age of 60 in the upper rank, and that being accepted, we want to arrive at the best means of securing, at the cheapest rate, of course, a fair flow of promotion through the corps, the first object being the efficiency of the corps, the next object being economy, so far as we can combine it with efficiency Will you be good enough to give to the Committee your views as to how that may be best obtained?—I think from what I have stated, as to the present condition of the corps, that any scheme that should be adopted should be very comprehensive, and should have a prospect in itself of lasting for some years; and I think that the observations made by the Actuaries upon Mr Childers' scheme, in which, as the result of their calculations, they recommended a re-adjustment of the corps as to the numbers serving in the various ranks are true and that their recommendation is essential to keep up a steady flow of promotion. I mean that the numbers in the various ranks might be so adjusted that subalterns, for instance, should be promoted, say, after 12 years, and Captains after a certain other fixed period of years, and so on with each rank. That re-adjustment might be brought about, but it would require a great number of years to effect it. However, I think it might be brought about by degrees in our corps, between which and the Artillery I should draw a broad distinction, by promoting, say, in the first instance, the subalterns to Second Captains after 12 years' service, the Second Captains to Captains after a certain other number of years; and so on after a certain fixed period in each rank; because our duties are for the most part staff duties, irrespective of and not dependent upon an organization of men as in the Artillery, and as in other branches of the service.

572. The first part of your scheme is promotion after a certain period of service without regard to number —Yes.

573. You would promote your Lieutenant after years' service?—Yes; which in time would bring about I anticipate, that readjustment of numbers in the various ranks which was recommended after a careful calculation and careful consideration of the question by the actuaries.

574. There is one point which has been urged upon the Committee, namely, that in considering any such proposal they must look to the Line, and they must consider the danger of any preferential promotion in the non-purchase corps effecting a supersession of the officers of the Line; will you be good enough to tell the Committee your views upon that point?—On looking over the list of the senior subalterns of the Line, without doubt there are a great many who have more than 12 years' service, At the same time there are a great many who have less, and the average services, I believe of the senior Subalterns in the Line is at the present moment about 10½ years. Therefore, I think it is perfectly right that in our service, in which the promotion goes by seniority, the senior Subaltern should be compared with the average man of the Line, and not with the senior. Another thing is that in our service an officer has no outlet from the profession, whereas, in the Line, an officer can realize his money and leave That, I think, is a very important point to bear in mind especially when you consider the great expense that the Government have gone to, and the high class of men they have got by open competition. If they are chained all their life, or for a very large proportion of their early life, and more than is right in the junior ranks, they lose that zeal and energy for the service which they ought to have, and therefore the Government suffers in not having the same amount of efficiency in the corps that it would if the officers were encouraged by the prospect of a steady flow of promotion.

575. Then you would fix 12 years' service as the

riod at which you would wish a Lieutenant to rise to e rank of Second-Captain?—Yes; that being the ne period as has been already fixed for the Staff Corps India; and in fixing this period I have made no allow- ce for the time he has passed as a cadet, during the hole of which he has exceeded the age at which officers dinarily enter the other branches of the service.

576. When you promote a Lieutenant after 12 years' rvice how long do you think he should take running through the list of Second-Captains?—I think about or 6 years.

576*. Then you would promote him again after 17 ars' service from Second to First Captain?—Yes.

577. And how long should he take in running up rough the list of First-Captains?—6 or 7 years, that ould bring him up to 24 years' service.

578. After 24 years' service, then you would promote m to the rank of Lieutenant-Colonel?—Yes.

579. Again without reference to the numbers in the nks?—Yes.

580. When would you promote him from the rank of ieutenant-Colonel to Colonel?—In about 8 years.

581. That would be after 32 years' service?—Yes.

582. You select a period of service in preference to e for your promotions?—Yes.

583. Will you now go to the second point in your heme?—The second point in my scheme is to ideavour to relieve the great mass of officers whom I ve described to you as being of nearly the same age throwing open in the widest possible way all civil nployments under the Crown at home, in the Colonies, d in India, to officers of the Royal Engineers. As ose officers have entered the army by open competition the widest description, there can be no complaint hatever on the part of the civil community if the overnment, having gone to the expense of having em properly educated as Engineers, employ them as gineers in all the different ways in which the Govern- ent requires the services of engineers. Having stated at, broadly, as the principle, I will now proceed to plain some of the points in reference to it. I find at at the present time there are 72 officers of the old oyal List who are seconded and are performing rvice in the Public Works Department in India, and at there are 29 who are performing civil service in the ublic Works Department who are not yet seconded.

584. They are probationary, I suppose?—Yes; pro- ationary, or waiting until they have become sufficiently cquainted with the language; studying, in fact, until ey can take up their civil duties. These make together 01 officers on the old Royal List. In addition to ese, there are 30 officers seconded who are employed the Civil Departments of the Government at home nd in the Colonies. When these latter officers shall ave completed their 10 years' service, they will be called pon to elect whether they will return to their military uties or continue in Civil employment; in which case, he rule has been hitherto (although it has been broken), hat if they elect to remain in the Civil Service, they hall be retired from the Corps, and pensioned or allotted retiring allowance from the money which is provided for he retirements of the Corps, that is, if they have suffi- ient service. I think it works with very great hardship pon the Corps, that the money which Parliament allows or retirements should be absorbed in that way. As an nstance, I would state the case of General Wortham— General Wortham was seconded 23 years ago and has been retired for 12 years. When he retired, he was allotted a retiring allowance of 600*l.* a year from that fund which Parliament votes for the Engineers' retire- ments, this allowance being greatly in excess of what would have been granted if his purely military services alone had been considered. In that case he would have retired as a Captain and Brevet-Major; whereas, by the accession of rank during his seconded service, he obtained 600*l.* a-year as a full Colonel.

585. From the 18,000*l.* a year?—Yes; at that time it was 16,000*l.* He has held a Civil appointment under the Crown ever since, which was worth more than the 600*l.*, and, as a consequence, he has never been allowed to draw one fraction of that money; and although Parliament has voted that money annually, it has gone back to the Treasury, and the Corps have lost the benefit of it for promotion.

586. There is 600*l.* locked up out of the 18,000*l.*?—Yes. This is not a solitary case; for, some years ago, I drew up a memorandum upon this subject privately for the information of a Member of Parliament, who occupied an important position in the old Board of Ordnance—and at that time there were several other officers for whom retiring allowances were locked up. There was Colonel Dawson, who was in the Inclosure Commission, and for whom a retiring allowance was locked up for 14 years until the day of his death. There never was a penny drawn of that allowance. Sir Joshua Jebb also died without drawing any of the allowance reserved for him.

587. Was that 600*l.*?—No; it was not 600*l.* I forget the exact amount, I think it was 400*l.*; but whatever the amount was, it was locked up. Sir Joshua Jebb was another case of an officer who died in harness in Civil employment, and never drew a penny of what was allotted to him, though the money was voted year after year by Parliament. I understand that the principle upon which this has been done (it is by an arrangement of the Treasury) is this, that the Government considers that any one of those men may at any moment throw up his Civil employment, when he would be entitled to his retired allowance, and therefore it is necessary to provide this allowance for him for the period which may intervene before he could be absorbed in the Retired List; and, otherwise, that would be a surcharge upon the Government, unless they retained the money in their hands. But as it is not likely that where there are several officers seconded all will throw up their appointments at the same time—indeed, it is not probable that it will happen with more than one in any one year; it appears to me that the justice of the case would be either to keep a strict debtor and creditor account, carrying over the balances from year to year, or else to do, what is always done in the case of effective officers who may throw up their Civil employment, namely, to absorb them into their rank upon the occurrence of the first vacancy; in the same way those officers might be absorbed into the Retired List whenever there was money enough to provide retirements for them. This point, I think, is of great importance with regard to the Civil employment of our officers in general, because it is, no doubt, as the Actuaries have stated in their report, a very great advantage to the Corps to have officers seconded. It tends to that end to which I alluded first of all—the re-adjustment of the numbers in each rank, because those officers are generally of a certain rank in the Corps; and when they are seconded, they are generally succeeded by others of nearly similar rank. The number of officers employed on Home Service has not fluctuated much of late years; but if those officers at the end of 10 years, or whenever they are called upon to elect in which service they will make their future careers come as a certain charge upon our retiring fund, it is clear that their return to the Corps stops the promotion, and that relief which the retiring fund is intended to provide. If the principle, therefore, which I am advocating of employing our officers as largely as possible in the Civil Service of the Crown to do the engineering work of the Crown in all its dependencies is carried out, it would be necessary to consider the manner in which those officers should be retired. My own impression is (and this applies particularly to India), that where an officer passes into the Civil Service in the very early part of his career—say within the first 10 years—and does not return to the Military Service at all, he should get no pension, and not have a right or a claim to any pension whatever from the Military Service. I specify 10 years, because in the working of the Superannuation Act as regulated by a Minute of the Treasury, an allowance is made, in computing their superannuations, to all professional Civil Servants of the Crown of 7 years, in addition to the number of years they actually serve; therefore I think there would be no hardship upon the officers if they entered the Civil Service, say, within a period of 10 years, considering that they generally get

Maj.-Gen. Sir Lintorn Simmons, R.E., K.C.B.

15 Mar. 1870.

very much higher pay, if they had no claim whatever upon the military retiring fund. Then in order to encourage officers who have more Military Service than 10 years to enter into the Civil Service of the Crown, I think some equitable arrangement could be made by which, when the time for their retirement came, they might be credited with the retiring allowance due to their purely military service, the remainder of their retiring allowance being made up from the Civil Service Estimates in respect of their Civil Service. That seems to me to be justice. It would meet the claims of all officers, and would prevent the Military Estimates from being charged with the retiring allowances due to Civil Service, and would also prevent the small allowance that the Government has hitherto given for retirements from the Corps from being swallowed up by those men who have not been serving in the Corps, but in a Civil capacity.

588. It would, in fact, liberate that sum, and would render it applicable to the living corps instead of to the dead branches?—Exactly so; if this principle of employing officers in the Civil Service were carried into effect to the fullest extent I believe it would be of the greatest possible benefit to the corps, and not only so but it would, to a certain extent, prevent the great number of promotions which would otherwise take place, by adopting a fixed limit of service for promotion to each rank. I believe that by its operation the corps would, in a great measure, adjust itself. An objection which might fairly be taken to my first proposal that Captains should be promoted to Lieutenant-Colonels after 24 years' service is, that those that remain alive of those 230 men to whom I before alluded as being nearly of the same age would all have to be promoted t the same time; but my object in making this proposition is to relieve the corps from that large list of 230 and to break it up, as it were, so that when the time came for promotion there would not be that great number to be promoted which at first seemed probable.

589. You would purge the list of all Civil servants?—Yes; there is a point with reference to this which I would mention, namely, the great difficulty officers experience when they have to make their election. Part of the difficulty arises from sentiment; they like the military rank, and having commenced their career as soldiers they do not like to give up their military rank. I think that might be met, and fairly met with very great advantage to the Crown in this way. Allow them to retain their places in the army list after having elected to remain in the Civil Service; do not let them have any claim whatever to return to the corps or to the military service of the Crown; but let the Crown have the right of calling upon them to serve if they require them; so that really they would be out of the service, but their military rank would go on accruing without any possibility of charge. It would be merely honorary, subject to the power which the Crown would reserve of recalling them into the Service in case of urgent necessity. I think this power would be of great consequence in India; and for this reason, that if the Civil Engineer Service in India, or the Public Works Department, were supplied through the Academy at Woolwich, and through the corps of Royal Engineers, there would be a large number of men out in India who, instead of being civilians, would have some knowledge of military organization and military principles, and who would, in the event of disturbance, be at once available and of the greatest possible use to the military authorities and to the Government. They could be called in at any moment and placed in positions of trust, militarily speaking, in which you could not place men who were mere civilians. When you think that there are 180,000,000 of population in India who are controlled by a few thousand or a few hundred thousand Europeans, it seems to me of the greatest consequence that the civil servauts of the Government, who are in important positions as Engineers, controlling the railways, the canals, and other great public works, should be capable of being used as military men and of applying heir knowledge militarily for the defence of those works or for aiding the troops in their movements in war.

590. Those gentlemen who are now employed on the Public Works Department stand in the Army List in italics, do they not?—Yes; all except those 29 whom I mentioned as not yet seconded, although waiting to be seconded.

591. Do you propose that they should still stand in the Army List in italics?—Yes.

592. But that their places should not be filled up in the corps?—I would fill up their places to the extent that the public service might require. I look forward myself to a very material reduction in the corps before many years are over,—I mean in the corps for the service of the Home Government. Our corps has been increased of late years in consequence of large public works going on and in consequence of war; and when these great public works, the fortifications of Great Britain, come to a state of completion, it is natural to suppose that there will be a reduction; and I have not the slightest doubt that there will be a reduction in the corps of Engineers. In fact, I have seen articles already in some of the leading papers in the last ten days on that subject; and when once such an agitation begins it is not without some ground. I think we may look forward in the next few years to some great reduction that will tend to stagnate promotion unless you can find an outlet for those whom it will be necessary to reduce; and if you can find this outlet in the Civil Service it has the great advantage of meeting the requirements of the country as regards Engineers.

593. I do not quite understand how you would treat these officers, because you would allow them to remain on the list for the purpose of getting military rank?—Yes.

594. How would that relieve your list?—They would get no pay, and not be chargeable as effective officers on the army estimates. Their position in the Army List would be merely honorary.

595. It would relieve the financial list, but how would it provide promotion which would break up the blocks of which you have spoken?—Every man who would go into the Civil Service would give a step to those below him—he would only remain in the list in italics, he would not be virtually in the corps, though his promotion would run on, he would be like seconded officers at present—every seconded officer gives a step.

596. But junior officers could not go over his head?—No, but he would not stop the promotion; as regards the seconding system it is this, when a seconded officer arrives at the head of the list of officers of his own rank, the first vacancy that occurs promotes him and the man below him—he remains a supernumerary in the next higher grade, and so these men, however many there may be of them in the list, would not affect the promotion. The list for promotion would be just the same as if they were out of it. This point appears to me to be of very great consequence also for another reason. Already the reduction of the Artillery has commenced, and we, the Engineers, are over our strength at the present moment. There has been an announcement made by the Secretary of State for War in the House of Commons, in which he proposes that the reduction in the Artillery should be effected by absorbing one in every three vacancies. Now that system, if carried into effect in the two corps (and I have very little doubt in my own mind that the Engineers will follow), would bring about this state of things that a young officer instead of being gazetted in his 21st year, will have to wait three years in idleness, and be gazetted in his 24th year; and already that statement of the Secretary of State has given alarm. A few days ago I was spoken to by the friends of a Cadet as to his prospects, and asked whether, although he had entered the Academy by open competition and his parents had been at the expense of keeping him there, it was not advisable to remove him from the Academy because of the bad prospect there was of his being commissioned. You have not only to deal with a state of things, therefore, in which the promotion of the junior officers is checked, but you have got a bad state of things coming from the number who for the next six or eight years will be entering the service and gazetted at the advanced age of 26. I think this is a most serious matter.

597. That is not attributable, I think, to anything which has been done by the Home Government; it is rather attributable to a change in the Indian policy, is it not?—Yes, it is due to the Academy having been increased three or four years ago in order to meet the demands of the Indian Government for Engineers, and the consequence is that there are 173 Cadets to be commissioned in the next two years in the two corps, and if you follow out the principle of absorbing one in every three vacancies those will not be all gazetted for about five years. I think it is of very great importance that this question should be considered at the present moment, because I have been informed that it is in contemplation by the Government to establish a college for the education of young men as Civil Engineers for service in India. If this college be established it will be a duplicate of Woolwich and Chatham, and will effectually bar the consideration of this suggestion, which I look upon as the greatest, if not the only effectual, relief possible to our list.

598. (*Mr. Milton.*) What are the posts as Engineers in the appointment of the Crown other than in India, which you think would be available for Royal Engineer officers?—At the present time the survey is about to be handed over to the Department of Works. All the officers on the Survey will either go to that Department, or their places will have to be supplied by civilians. I think it is a very legitimate occupation for our officers to carry on the great work which they have begun, and hitherto carried on with so much credit to themselves—that is one mode of employing them—and there have always been a certain number of officers employed at the Board of Trade, and the Admiralty have always employed a certain number of our officers.

599. In what posts?—Generally in the Engineering Works in connection with their dockyards; several are so employed at the present time. Officers of Engineers have been employed frequently in the colonies as Surveyors-General, and in that capacity have carried on and superintended the Civil Engineering Works of those colonies. There is no reason therefore, I consider, why, in the same way, Engineer officers should not be employed generally to carry on the Engineering Works of the Government at home for the Public Works Department. You have, moreover, within your own knowledge, that an Engineer officer within the last few years has taken away the first prizes in open competition against all England for architectural designs, and that he has carried out some very large works in this country. I am alluding to Captain Fowke. You have also, at the present moment, an officer of Engineers carrying out one of the largest buildings in London, or I may say the world—a building of great difficulty and great complication: it is entirely his design and his execution. I am alluding to the Albert Hall at Kensington.

600. (*Chairman.*) Who is the officer who is doing that?—Colonel Scott. You have also Engineer officers in charge of the buildings and the works connected with the manufacturing departments of the Arsenal. An Engineer officer also, Colonel Ward, established one mint in Australia, and has lately gone out to set up and work another. Therefore, as Engineer officers have gained credit for themselves and for their corps in all these appointments, I cannot conceive why the Government should not look upon them as their Engineer Corps for general Engineer service, whatever may be the nature of the work the Government may require to be done.

601. You consider that the education which they get at Woolwich will enable them to compete, and compete successfully, with any body of Engineers in the world for any engineering employment?—Yes, quite so, that is the education at Woolwich and Chatham.

601*. Have you any evidence to show that, besides the cases of those engineers who have been employed upon these works you have referred to?—Yes, I happen to have a very strong case. About three years ago I had occasion, when Director of the Engineer Establishment at Chatham, to get rid of a young officer from the Corps of Royal Engineers. He was by no means one of our best men. He went up immediately afterwards for a competitive examination, open to the whole profession of Civil Engineers for appointments under the Public Works Department in India. He competed with a very large number, almost all of whom were I believe very much older than himself, and many of whom had practised in the Civil Engineering profession in England for several years, and in that competitive examination, which was conducted under the Civil Service Commissioners, he came out first on the list by a great number of marks—making 827 out of a total of 1,000 marks. That warrants me, I think, in the conclusion I have come to that the education at Woolwich and Chatham, following as it does upon a competition of the widest nature for admission to Woolwich produces men who have a better education for starting in life as Engineers than is ordinarily to be found among men starting in the same way as Civil Engineers.

602. (*Mr. Milton.*) Can you at all estimate roughly the number of officers that would be so provided for if that scheme were carried out to its fullest extent?—It is difficult to estimate the numbers; but I have very little doubt that, with very few exceptions, all the men whose health will stand it, and who therefore can remain in the country, would elect to continue in the Public Works Department in India. In fact, nearly all would prefer to remain, and I think that India would for some years to come be our principal outlet. It is difficult to estimate the numbers that could be taken for service in India, but they are very considerable. In England and the Colonies the numbers would not be so great. The number we have at present seconded for service in England and the Colonies is thirty. Then there is another point as regards your home estimates, which, in this question, I think, is of great consequence. Any one of these officers now on the amalgamated list, after he has been on the seconded list in India for any number of years, may at once throw up his appointment and elect to come home to England, and then we are obliged to provide for him in the Royal Engineers. The result of which is, that, after he has served a certain number of years, and comes to receive his retirement, he gets a pension charged against the Military Fund for the whole of his service, whereas a part of that service, say the ten or twenty years he may have served in India, ought to be charged against the Public Works Department of that country. I do not know how the account stands between the Indian Government and the Home Government, but the subject ought to be looked into to insure that the Indian Government shall take their proportion of the retirement of such officers.

603. (*Chairman.*) What is the rule now with regard to officers in Civil employment—take, for instance, an officer like Captain Du Cane?—He does not draw any military pay whatever; his whole pay is drawn from his Civil employment. At the end of ten years he will be called upon to elect whether he will return to the military service, or give up the military service entirely and follow a civil career. I may state that this rule acts with very great hardship indeed upon some officers. There was the case, the other day, of Captain Tyler, who had upwards of twenty years' service, and when he was called upon to elect took the Civil Service, and got nothing whatever for his military service. His name has been struck out of the corps; he gets no military pension in any way, because he had not sufficient service to entitle him to it, and it has been a case of very great hardship to him. Such a case as that would be met by my recommendation.

604. You think that he should count his service?—Whatever pension was due to him for his military service he should get for that, and let the rest of his service go on for a Civil Service pension.

605. I suppose that also works badly in another way, that the officers knowing the penalties attached to election it is evaded, is it not?—Yes; there is a case which has just happened which will illustrate that. An officer at South Kensington has just got an addition of two

[Maj.-Gen. Sir Lintorn Simmons, R.E., K.C.B

15 Mar. 1870.]

years; in his case the two years will not bring him up to a period which will entitle him to receive his military pension, but in another case such an extension might.

606. (*Colonel Egerton.*) You have just stated that an officer who passed ten years in Civil employ was required to elect, either to re-join the corps, or to give up the corps?—Yes.

607. How did it happen that Sir William Denison, on resigning his government, returned to the corps after he had been much more than 10 years' away?—Sir William Denison went out first of all as Lieutenant-Governor of Van Dieman's Land in 1846. He was promoted from one Government to another, until he became Governor of Madras and Acting Governor-General for India, and came home eventually, I think, in 1866. During the whole of that period of 20 years he never performed a day of any duty with his corps. At the period at which he was seconded I think the regulation was that officers were lent for 2 years, and then seconded for 10, and therefore at the end of 12 years came the period of election. There was some change in the regulations, and, as well as I remember, Sir William Denison came back to the effective list and got a fresh period to start with, and then at the end of that period he was called upon to make his election; and, inasmuch as the period nearly coincided with the end of the 5 years, which was the term of his government of Madras, he decided to remain in the corps, and so gave up the Civil Service; since he has come back, although until his promotion to Major-General in 1868 he counted as an effective Colonel of the corps, he has never done a single day's military duty with it.

608. (*Mr. Milton.*) Is that on account of his health?—No. I will add I should hope that if a scheme were based upon what I have stated to the Committee it would relieve the list sufficiently, or very nearly so.

609. (*Chairman.*) You cannot give the Committee a rough estimate of how many you would clear your list by in the junior rank?—I should think you would certainly clear off the whole of the 101 now employed in India with perhaps a very small per centage of deduction, say three or four.

610. In what ranks would they be?—At present there are 3 Captains, 3 Second Captains, and 95 Lieutenants employed in India.

611. (*Mr. Milton.*) Are those officers now seconded?—They are all seconded except 29.

612. (*Colonel Egerton.*) And their places have been filled up?—Not all of them. With regard to the Indian Service, many have been seconded, but their places have not been filled up.

613. (*Mr. Milton.*) Will you explain how the list you have mentioned is framed?—The list that I have given you has been framed by taking Hart's Army List corrected up to the present day, and counting all those who are marked in that, and correctly marked, as being employed upon the Public Works Department in India, and whose names are in italics. That accounts for the 72, and the 29 are officers who, according to the knowledge of those with whom I have communicated in making this list, are employed with sappers, or are under instruction at Roorkee or, waiting to be gazetted to the Public Works Department.

614. Have you any Lieutenant-Colonels seconded in India?—Not that I am aware of; we have Lieutenant-Colonels seconded in the Colonies and elsewhere. For example, there is Colonel Mann, the Surveyor-General of Roads in Jamaica, and Colonel Ward, Chief Officer of the Branch Mint at Melbourne.

615. I think the question put to you by the Chairman would resolve itself into this—What do you calculate would be the annual number of steps which such a plan as yours would give to your corps for promotion?—It is impossible to say at present, but I believe the number will be very great, because the demand for Civil Engineers in India is so great that the Government are at this moment contemplating the establishment of a Civil Engineers' College. The great outlet, no doubt for some years to come, would be India, and I fancy that India is quite capable of absorbing for its engineering wants the whole of our corps if necessary; that is my belief from what I am informed by officers who have served in India.

616. (*Chairman.*) Your proposal comes to this, that we should enlarge our College at Woolwich, and that we should there turn out all the men whom India might require for her Civil and Military Engineering?—Yes; eventually it would come to that; but, in the meanwhile, we could draft off a large number to India without difficulty or inconvenience to the home service.

617. (*Mr. Milton.*) The first object being to relieve the large number of officers who now form a block in prospective for your corps?—Yes.

618. (*Chairman.*) Will you kindly proceed with your scheme?—I think that, to supplement the propositions I have already made, the Government should allot a certain sum as at present to pay the expense of the military retirements of officers, which should be allotted as far as possible in the present exceptional state of the corps, so as to encourage men of the junior ranks, rather than men at the top of the list, to retire.

619. You are now speaking of a sum in addition to the present Parliamentary grant?—A sum in augmentation of it—including it.

620. Have you calculated at all what that sum should be?—No; I would propose that this part of the scheme should be worked tentatively. I believe myself that after a short time the charge for this special relief of the junior ranks would be small, in consequence of the outlet which I have previously described, and therefore I propose that it should be tried tentatively in the first instance.

621. How many additional retirements do you think it would be necessary to provide in the corps in a year beyond the ordinary average number of annual retirements now?—It is very difficult with this amalgamation going on to know exactly what ought to be done; I have not had sufficient time to go into that calculation to be able to answer a question of that sort off-hand.

622. The sum you would propose depends very much upon the number of additional retirements you wish to provide for?—Yes; quite so. I see the point of the question, but I could not at once give an answer to it. It would require a good deal of consideration and abstruse calculation, based upon data which are very difficult if not impossible to acquire, to say what would be the proper sum; but I think that the only way to get the officers at the top of the list to go is by increasing the retirement, as has been done in the Comptrol Department, where, after twenty years' service, an officer may retire upon 730*l.* a-year, but, short of that, I think it would be desirable in the present exceptionable state of affairs to encourage promotion among the junior ranks (and I would open it even to officers of only fifteen years' service, as being more economical), giving the individuals who retire an allowance at the rate of about 10*l.* for each year's effective service.

623. What pension would you attach to a voluntary retirement after 15 years' service?—A sum of 10*l.* per annum, that would be for fifteen years—150*l.* would induce some to go. Some would take it in order to follow up other careers, if they saw that the prospect of promotion was bad.

624. Would you not couple that with a restriction in the hands of the Secretary of State, to refuse to allow a very good man to go?—Yes; it might be considered as a boon, and therefore capable of being refused.

625. But then the worst of that would be that you would refuse the boon to the good man, and give it to the bad?—Yes; but you have gone to the expense of educating the officers, which the Government does to a certain extent. It costs by the time every officer is turned out of Chatham about 450*l.* for educating him.

626. The Government have paid as much for the bad officer as for the good one?—It is true economy to keep your best men, and it is a good thing to get rid of bad servants.

627. Is it not a serious drawback to any system that it allows an advantage to a bad officer and refuses it to a good one?—Some would desire to go whilst actually employed upon some work from which they could not be spared. In that case the convenience of the Govern-

ment should be consulted, and they should not be allowed to go while the work was going on, though they might be allowed to go afterwards, in the same way as you do not now remove a man from work he is upon, though, according to the Roster, he should be removed; so here again, I think, it should be left to the option of the Secretary of State.

628. I put it to you, whether there ought not to be an option on the part of the Secretary of State for War to decline to lose the services of first-rate men?—I do not know that there should be such an option if once the rule were adopted. I see no reason to object to a first-rate man going the same as other men.

629. Do you not fear the loss to your corps?—No; I do not, because I think there are plenty more who will come up and take their places.

630. (*Chairman.*) Is it not generally very bad policy, after spending so much as you say upon educating a man, when he comes to the prime of life to hold out an inducement to him to leave the corps?—I think it is bad policy, and it is for that reason that I desire that they should have employment on Civil Service duties. If you keep a man in an inferior position, where there is no scope for his knowledge and ability, you do that man a wrong. You disgust him, and he becomes an inferior officer after a few years. It is better to suffer the inconvenience of now and then losing a first-rate man than that the promotion should be clogged. The difficulty all arises, I think, from the unwise action of those who have gone before us, in increasing the corps by bringing in these large bodies of officers whenever there has been a temporary pressure.

631. Then you would suggest that a sum of money should be taken in the Estimates in addition to the present Parliamentary grant for the purpose of holding out inducements to officers in the lower ranks to leave the service?—Yes.

632. And that you would begin after 15 years' service?—Yes, during the present exceptional circumstances of the corps; not to continue for ever, nor to give a prescriptive right, but to last for a certain number of years tentatively.

633. (*Mr. Milton.*) The number added to your corps last year amounted to 40; what was the cause of that large number being required?—It was in consequence of the demand in India, and now it appears that the Indian Government do not require them. That accounts for our corps being over its strength, I believe, at the present moment, and also for the large number of Cadets in the Academy who will have to be commissioned.

634. Do you consider from the present state of the corps that some measures of relief beyond the present means of retirement are at once necessary?—I am certain of it. I think the extreme uneasiness in the junior branches of the corps is very much to be regretted, and that officers are losing heart, and when they lose heart we know very well what that means. It means that they will not study their profession; that they lose efficiency, and do not qualify for the higher positions which they will be called upon to fill afterwards.

635. Have you considered the operation in your corps of any measure of compulsory retirement in the several ranks?—I have seen a proposition of that nature, but I think it will work hardly upon some officers, and also I think that it has the great defect that you were pointing out just now with reference to voluntary retirement—that you retire the good and the bad at certain fixed periods; you do not have that power of selection which is necessary.

636 There might be coupled with compulsory retirement the power for the Secretary of State to retain any officer who was specially useful, might there not?—Yes; but that would dwindle very much I fear into a question of favouritism.

637. (*Chairman.*) Would not compulsory retirement at certain periods operate in a very strange manner when these large batches came up. You would be compulsorily retiring a very large number of officers all in the same year, would you not?—As I said in the early part of my examination you would have at a certain period 230 officers, or what remained alive of them, when the time came to retire, to put out in a period of four years. I am speaking of their ages.

638. (*Colonel Egerton.*) In the voluntary retirement which you propose in the lower ranks, would you go as low as the Lieutenants?—No. One of the first things that I started with was that there should be promotion of a Lieutenant after 12 years' service irrespective of numbers.

639. (*Chairman.*) To sum up your recommendations—your first proposal is that there should be promotion after a certain number of years' service without regard to numbers?—Yes.

640. And you fix that promotion to begin after 12 years' service in the rank of Lieutenant?—Yes.

641. Your second proposal is, that a larger employment should be given in the Civil Service, and that you should extract the names of those employed in such service from the active list after 10 years' service in it?—Yes, combined with their being pensioned from the Civil List, and not coming back to what you may call the effective Military Pension List.

642. Your third proposal is, that a sum additional to the present grant should be taken in the Estimates and applied to retiring officers in the junior ranks beginning after 15 years' service?—Yes.

643. Those are the three heads of your plan?—Yes.

644. (*Mr. Milton.*) Have you any other suggestion to make beyond those three?—As in a large body of men there must always be a few who are drones and useless, and the Royal Engineers are not altogether free from such, it might be worthy of consideration, in opening the retirements to officers of fifteen years' service, whether a power should not be reserved to the Secretary of State to compel an officer to retire if he were not diligent and attentive to the duties of his profession. The duties to which I refer are purely professional, for, of course, if an officer neglects his military duties, he is amenable to the military authorities, who have full powers to deal with him; but I have known a few cases, happily they are very rare, of officers who are totally wanting in zeal, take no pleasure in their profession, and are too idle to keep themselves up in its requirements by study, and, as a consequence, become perfectly useless as Engineers, although there may be nothing otherwise against their characters as officers and gentlemen. The sooner such men are got rid of the better, as their promotion by seniority to high rank leads to embarrassment as to their employment when they reach the higher ranks, and is a very bad example to their juniors. Such men are well known by the confidential reports that are made of them by their commanding officers when in the junior ranks; and any arbitrary or supposed arbitrary exercise of the proposed power by the Secretary of State to the detriment of an officer might be guarded against by its being exercised only after an investigation and report by a board, say of three of the senior officers of the corps serving in England.

645. Then you are not disposed to add to the points that you suggested to relieve the corps, any recommendation for compulsory retirement from the lower ranks?—No, I am not. I would rather try the experiment of opening the Civil Service, which I look upon really as the only feasible way of relieving our corps. The whole question, I think, is involved in the employments which our corps are capable of undertaking, and which the Government choose to employ them in.

646. Assuming that the other measures are adapted to keep the corps in a healthy state, any system of compulsory retirement would, of course, be simply prophylactic or guarding—they would not come into operation so long as the corps was in a healthy state?—No.

647. Do you see any objection to the basis upon which we have started, that the retirement should be compulsory at 60 years of age?—No, I see no objection to it whatever; but that would, I hope, never come into operation. On the contrary, I think it is very sound.

Maj.-Gen. Sir Lintorn Simmons, R.E., K.C.B.

15 Mar. 1870.

648. To what extent do you think that the present members of the corps have a vested right in the advantages of the retiring scheme as now existing?—Every officer who has 25 years' service has a vested right to a retirement; and I think that, if vested rights are considered, a certain number of those who approach the 25 years' service ought to be considered likewise being very nearly in it—as almost interested.

649. What line would you draw?—I think I would say that those who are five years below that length of service have a fair and reasonable right to look to that retirement as the only outlet from the corps, if circumstances should require them to leave the corps.

650. (*Chairman.*) How do you define vested rights?—This is a difficult question. A vested right is one I suppose in which a man has, strictly speaking, a legal interest.

651. We will take those gentlemen who are at the present moment qualified to retire upon 600*l.* a-year, that is to say, who have fulfilled the two requirements of being Colonel in the corps and of having completed thirty years' service. What do you consider their vested right to be? Do you consider that they should have the option to take the 600*l.* a-year when they like—to refuse it to-day, to refuse it to-morrow, to refuse it till the next time and, then take it the fourth time, or do you think that they should elect at once to come under any new plan, or to take the first 600*l.* that becomes vacant and go?—Their vested right is to take it whenever it is offered to them, whether the first, second, or third time—to take it at any time—that I apprehend is their vested right; but they have no vested right to employment, and if they are not employed, they will not be in receipt of better pay than the 600*l.* a-year, and you would put them in the position of tiding over the period which otherwise they would have to pass as Major-Generals removed from the corps at a lower rate of pay—at 450*l.* or 460*l.* They would be tiding over that period at a higher rate, but certainly going by compulsion is rather against the vested right of the officers, though I do not think that they would suffer by it themselves.

652. Do you think it would be fair to go to a Colonel who is now entitled to retire on 600*l.* a-year, and to say to him, "Colonel So-and-so, here are 600*l.*: if you choose to retire they are at your disposal; if you do not we shall consider that you have given up your vested claim upon this fund, and we shall put you on the new system of retirement"?—It would be no hardship to him to say, "If you refuse it now, we will not give you the chance again," and to let the retirement go to others below him.

653. Then he would have no interest in it at all?—No, he would have no interest then: he would lose his chance. I think what checks some of them from going is that, in case of their death, their families would not receive, under the present arrangement, the pension due to a General's rank, if they accepted it voluntarily as Colonel. If you put them out compulsorily you should reserve to their families the same pensions as they otherwise would have had.

654. Do you suppose that, if the system about to be adopted in the Navy of compounding pensions was permitted, there would be many persons who would take the 600*l.* a-year?—Not very many in our corps, because the emoluments in our corps for officers who are high up are so great that they hang on to them as long as they can, as a general rule.

655. Suppose a man with a family wanted to leave some money behind him, and he could go and sell his 600*l.* a-year to the National Debt Commissioners, would not that be rather an inducement to him to take the 600*l.* a-year?—He might do so if he was in very bad health, or had been ordered to a very bad climate abroad, but otherwise, unless under exceptional circumstances, as a general rule they would not, because their present emoluments, when employed, are so much better.

656. Then with regard to the officers below the 600*l.* a-year retirements—those who have fulfilled one of the conditions but not both—who have served over thirty years, but have not yet become Colonels in their regiment—they are now entitled to retire upon 400*l.*?—Yes.

657. Do you consider that they have a right also to elect to remain on until they, come to the 600*l.*?—As it is at present worked, they have a right to do so.

658. But in considering the vested interests, as affected by any new scheme, do you consider they should still have the option of remaining on?—They have the right at present. You would have to override it.

659. What do you think would be fair to the corps?—I think it would be a hardship to override that right.

660. Do you think that they ought to have the option of remaining?—I think they ought to have the option to remain, so long as they are competent to perform their duties, and that is the great difficulty of applying any compulsory system of retirement.

(The witness withdrew.)

Lieutenant William Henry Collins, examined.

Lieut. William Henry Collins.

15 Mar. 1870.

661. (*Chairman.*) You are a Lieutenant in the Royal Engineers, I believe?—I am.

662. In what year did you enter the service?—I entered the Academy in the year 1858, and the service in 1859.

663. What was your age then?—Twenty-one.

664. How many years have you been in the service?—I have been in the service for more than ten years.

665. What is your position in the corps now?—I am fifty-fourth Lieutenant from the top of the list.

666. What are your prospects of promotion?—At the rate of last year it would be twelve years before I should get promotion.

667. Before you would become a Second Captain?—Yes; but, if you took a more generous average, taking it back over some preceding years, it would take me about eight years to become a Second Captain.

668. I think you have seen service?—I have, in India.

669. You were wounded in India, were you not?—I was very badly wounded, indeed, in the Bhootan Campaign.

670. And you were recommended for promotion, were you not?—I was recommended by my General, for distinguished service, to be promoted to my brevet majority. That was the only reward he could offer me—it was a prospective reward, and it was with difficulty granted, because the subalterns are supposed to be outside all reward on active service; but, as I had an important command, and had done several things in the way of blowing in gates, and taking stockades, he recommended me for it, and, after some hesitation on the part of the authorities, and in consideration of my being very severely wounded—for I am lame for the whole of my life—it was granted by Sir John Pakington and the Duke of Cambridge.

671. In what operation were you wounded?—In the taking of Fort Dalimkote. It was the stronghold of the Bhootan people.

672. For that service you were recommended for a brevet majority?—Yes; that was in 1864, and I have had no reward as yet.

673. According to the present brevet rate of promotion, when shall you get your reward?—In about twelve years' time, whereas officers who were serving cheek by jowl with me, of course being either senior in age or of higher rank, were rewarded right and left.

674. What is the position of your colleagues who competed with you at the Academy?—One of them, Captain R—, of the — Regiment, was rejected at the examination in January 1858—that was the year in which I entered. He became a Captain in the Line in 1863, therefore he has been a Captain seven years; and Captain T—, of the — Foot, was rejected at his second

rial, after having made two attempts in 1858. I
ucceeded at that examination, when he was rejected for
he final time. He has now sold out as a Captain,
bout three years ago. I think I need hardly go on
ith these cases, about 20,—containing even some who
ere dismissed from the Academy in the year 1858—all
which I have verified myself; but I may mention
hat I was at school with two officers who are now in the
ngineers—Captain Twigge and Captain Berkeley, and
ey left school and went into the Academy, while
went on with my school course, and afterwards I went
the University, and came into the Academy by
mpetition, which is supposed to be more advantageous
the Public Service than their system of entering.
ow I am at a disadvantage of about twenty years, in
ference to them. They are younger than I am, but
ey are Captains.

675. Are they younger in age?—Yes; they are
unger in age by about three months.

676. And in service?—They are, I think, about
e thirteenth from the top of the list of Second-
aptains.

677. How much longer have they been in the Corps
an you?—I could not quite say. Probably they have
en about four years longer in the Corps, but that has
ollen to about twenty years' seniority.

678. You mean to say that it will take you twenty
ars to get to where they are in the Corps?—I should
ink it would take me fully that time at the present
te of promotion.

679. (*Mr. Milton.*) Does any suggestion occur to
u for curing that stagnation?—Yes; several sugges-
ons occur to me and to the whole body of subaltern
gineers who have asked me, as their representative,
come and speak about it. One suggestion—the one,
fact, is this, that after a certain period of service a
baltern might be promoted to Second-Captain.

680. (*Chairman.*) Irrespective of numbers?—Irre-
ective of numbers altogether, because there is no
ason in the nature of things why any particular
oportion of numbers in the various grades should
ist in the Engineers.

681. (*Mr. Milton.*) But, to put an extreme case, it
uld not do, would it, for example, for the whole
rps to be Lieutenant-Colonels?—It would not make
y difference as regards army rank, because our officers
e all employed upon duties which have no reference
hatever to army rank.

682. Some large works require several Engineer
icers, some of higher and some of lower rank; in
ch a case does not one Engineer officer serve under
other?—Yes; no doubt.

683. Then the officers should not all be of the same
nk. I here put, of course, an extreme case?—Yes.
may serve now with a man who may be the next
ove me in the list. Seniority in the list is the thing
at guides you; it does not matter whether a man has
ree years' service or ten years' service more than you
ve, you pay him the same respect.

684. How do you think it would work in regard to
e supersession of the officers in the Line?—I think it
uld work extremely well; we should still be at a
ry great disadvantage compared to the Line. I have
yself made out the average time of promotion to
aptains in the Line as they exist at the present
oment, and their average is now about a year and
half less than the absolute time for us, although we
ter at a disadvantage of about three years in age.
herefore, adding that time which is spent at Woolwich,
at is about two and a-half years, to the extra length
our service as a subaltern, it gives us a disadvantage
about four years as compared with the Line, and I know
case of an officer at present in the Line who got his
mpany in four years and two months. Of course others
not get out till twelve or thirteen years; but there
always that chance in the Line, and one gives a great
al for a mere chance of getting anything.

685. But, in considering the question of supersession
ith regard to the officers of the Line, the matter of age
ill not count for anything?—We shall all be older than
ey are.

686. There is no comparison between the ages, but there is a comparison between the army rank of the different officers: the supersession goes by service and not by age, does it not?—Yes.

Lieut. William Henry Collins.

15 Mar. 1870.

687. By your own figures you are within a year and a-half of the Line officers?—Yes, in service, not counting the time at Woolwich.

688. Then in many cases you would supersede them, if what you wish were carried into effect?—Yes; but you must recollect that we have spent two and a-half years at Woolwich, and in many we should fall behind them.

689. (*Colonel Egerton.*) But the officers of the Line may say that they have paid largely for their commissions?—But, in order that Line officers may be fairly compared with ours, they should be taken at their average. Our absolute term of service now is twelve and a-half years before promotion to Second Captain. To make a fair comparison, you should always take their average, because some get out in four years and others in twelve in the Line. My expectation, in the Line, if I had calculated it, would surely have been the average, and this average is lower by one year and a-half than our certainty.

690. (*Mr. Milton.*) But assuming that the Government adopted a quite new system, that of giving rank in proportion to length of service, several cases would arise in the Army of supersession; and the officers so superseded would not, for a moment, think of taking the average length of service?—They might not; but, if they did not, they would have no justice behind their complaint. Of course, one can only speak of the matter theoretically, and in that point of view they would have no justice whatever on their side, because their average expectation is that they will have to serve so long, and one would embark at long odds for the chance, if you gave a man the chance of being a Captain in four years, I would risk anything for it, if the chance were given to me.

691. (*Colonel Egerton.*) Do not the officers of the Royal Engineers recover their position by passing direct from the rank of Captain to that of Lieutenant-Colonel?—I do not think so.

692. (*Mr. Milton.*) What do you think should be the period at which a subaltern should be promoted to the rank of Second Captain by length of service?—I think it should be after ten years' service in the corps; or, if you dated the service from the time of entering Woolwich, you might make it more.

693. I would rather take it from the date of the first commission?—Then I should say that it should be ten years at the outside, and that would leave our officers then at a considerable disadvantage as compared with the rest of the Army. And, in saying that, I bear in mind that, according to the rule of the Service, no subaltern can get any sort of reward for anything that happens, so that you virtually exclude us, who have been sifted through many examinations, and all that kind of thing, from the prizes which are open to the officers of the Army.

694. What service do you think should qualify for the next step from Second Captain to First Captain?—Perhaps the Committee will allow me to look at a paper I have brought with me. Several of us have put our heads together, and we have put down 10 years again for that step.

695. (*Chairman.*) You think that a man should be 10 years in the rank of Second Captain?—Yes; and then we put in the rank of Major. That is a mere suggestion, which we, as Subalterns, have proposed.

696. You propose that, instead of there being First and Second Captains, the First Captains should be converted into Majors?—Yes; we propose that the First Captains should be abolished.

697. Is there a strong desire on the part of the subalterns of the corps to be able to feel that they can, within a reasonable time, reach a Field Officer's rank?—Very strong indeed. At present there is a feeling of complete despair all through the subalterns who have spoken to me. The game has been lost, and they have just thrown down their hands. The view they have asked me to express is, that they feel that their interests are not precisely those of the senior

Lieut. William Henry Collins.

15 Mar. 1870.

officers of the corps. They want to oppose, if they can, a suggestion that a few large sums of money should be granted to buy off the heads of the corps. One of those sums, say 700*l.*, if given to the senior ranks, would represent one promotion only from subaltern to Second Captain; but the difference between the pay of a subaltern and a Second Captain is 56*l.*—that would go about 12 times into 700*l.*, so that if, as many propose, certain large sums of money should be given to get rid of the senior men, about one-tenth part of the advantage will accrue to those men who want it, as compared with what they might otherwise have by a different application of the same funds, viz., by twelve promotions to Second Captain. Another thing we wanted to say was, that the seniors have nothing to complain of. They are suffering from a plethora of promotion—they are not hurt: we are—and to relieve us, we do not so much want six or seven men to go from the top of the list; but if you could take out some of that broad stratum which lies between me and the men twenty years senior to me in the regiment, and who are yet of my own age, who passed in at the time of the Crimean War without any test, and who now block the way, that would be the relief we want.

698. (*Mr. Milton.*) You have given us 10 years as the period of service as a subaltern and 10 years as a Captain—how long should it be as a Major?—Five years' service as Major, and then five as Lieutenant-Colonel, and then ten as Colonels, are the periods we have put down. If you add all those periods together, you will find that they come to forty years' service—that would be about sixty years of age.

699. Then do you think that there should be compulsory retirements at the age of sixty?—Yes.

700. (*Chairman.*) The junior ranks concur in that?—Yes; I think they are all agreed about that, and they want very much to urge, if they possibly can, that a sum that would be exhausted in one retirement from the senior rank would give a certain measure of satisfaction to the junior ranks, and would cause no excess, or a very slight one.

701. How would you apply that sum?—I would say that all those Lieutenants who had had ten years' service, or whatever other time might be fixed for the purpose, should be promoted.

702. You would distribute the 600*l.* a year in paying them?—Yes; and by that means the feeling which at present exists of extreme discontent and disappointment, would be removed, and those who are more or less enthusiastic and energetic would be satisfied.

703. In some of those years, when you came to one of those great blocks where there are numbers of men of the same age, or of the same length of service, you would have a plethora of Captains, would you not?—Yes; there would be a great many promoted at once; but that would not be of the smallest importance, because we are seldom or never put in juxtaposition with other officers, and there is no Army rank, as far as duties go, which makes it necessary to have subalterns and Captains in certain proportions. There is no regimental duty. I have not had any regimental duty to do since I joined, except on active service, therefore it would not matter if you made us all Captains to-morrow. You will sometimes find a subaltern whose work is more responsible than that of an officer in the highest ranks; he might be a General or a Field-Marshal, as far as the importance and responsibility of his duties go.

704. (*Mr. Milton.*) I think the difference of 56*l.* which you speak of between Lieutenant and Captain is in pay, is it not?—Yes.

705. The allowances would make it half as much again, or twice as much again, would they not?—I think the allowances do not affect it at all.

706. What is the pay of a Lieutenant?—6*s.* 8*d.* a-day.

707. And what is the pay of a Captain. It is 11*s.* 7*d.*, is it not?—I do not know, indeed. One thing which makes us not know particularly what these rates of pay are is that there are so many of us whose pay is not at all gauged by any regimental scale of that kind. Our pay is according to our duties. If you made me Field Marshal to-morrow, it would not affect my pay in the least, but it would allow me to get some reward for my past service.

708. You are speaking of cases of seconded officers now, are you not?—No, that applies even to those who are not seconded, because they get other kinds of pay. For example, if you are in charge of a district, the Public Works Department gives you so much, and that alters the whole footing of your pay.

709. A Lieutenant receives 6*s.* 10*d.* a-day; a Captain receives 11*s.* a-day; there is, therefore, a difference of 4*s.* 2*d.* a-day, which is equal to 56*l.* a-year in pay; and then you must take at least one-half more for increased allowances. Your pay would increase by 56*l.* if you were made Captain, and your allowances would increase by 28*l.*?—I do not think the allowances would increase quite so much as that. The whole total increase is about 56*l.* At all events, if that were the case, it would not affect my argument very much. These matters are a little complicated, for a Captain gets some proportion of his regimental pay in lieu of quarters, while we get half of 6*s.* 8*d.*, that makes the difference; but it would not affect the idea at all.

710. (*Chairman.*) Your theory—and in expressing it you say you speak the sentiments of the subalterns generally—is this, that any relief which we may give for the purpose of securing to you a greater flow of promotion should be applied to the lower ranks, and not to the upper ranks?—Yes, it should only be applied to the upper ranks in so far as the upper ranks are really suffering for want of it; but for them to gain all the benefit of your inquiry, for you to be paying so much to them because *we* want relief, is what we submit is not right.

711. (*Mr Milton.*) Do you think that the subalterns and the junior Captains of the corps would accept as a relief any right to retire voluntarily on some fixed scale, say 10*l.* for every year's service after a certain time, so that a man of 15 years' service would have 150*l.*, and so on?—Yes, I think some would, but I do not think that very many would go.

712. Would the good men go, or the bad men?—All those men who had go, or energy, or pluck in them, would go, and the rest would stay. Most of us who are now crying out would go. I would go myself except that I am lame; I cannot walk a mile; I have been wounded in ten places. Of course, my whole capital is sunk in my hopes from the Service, which at present have resulted in very little indeed.

713. (*Chairman.*) You think that the effect of retiring men from the lower rank at the rate of so much a-year would be, that you would get all the smart fellows to go at once?—Yes, all who could see their way to doing anything in civil life.

714. They would go to get remunerative employment in civil careers?—Yes, and those who thought they had no chance in civil life would stay.

715. The dullards would stay?—Yes.

716. (*Mr. Milton.*) Does any other observation occur to you?—Yes. There is a sort of feeling among ourselves that, as we have been first taken in by competition from all the schools of England, and then passed through five examinations, in which the Engineers come out the sifted grain each time, we may be considered as something of a *corps d'élite*, and that it is not too much to ask that our position in respect of promotion should be a little superior to that of the Infantry and the Cavalry, and even the Artillery, for our labours are more arduous, our expenses are greater, and our responsibility is higher; and yet we are now craving for a sort of equality, and would be satisfied with it instead of superiority.

717. (*Chairman.*) But you are pretty equal with the Artillery now?—Yes, we are just in the same boat with the Artillery, but there are various anomalies in the corps. I have represented my own case, but I am not the only man in this position; other men entered at the same age with me; we came in of course being ignorant of everything that was going to happen, so that when I speak of myself mine is not an individual case, but I am a representative. There are, as I have said, men several

ars senior to us in the corps who are junior to us in , and who have not had the same education as we ve.

718. And who have not had the same amount of sift- ?—No, not at all. I may say that while this man was amusing himself at Bermuda, I was going through the toils of school and college, and yet he has benefited to the extent of about twenty years as compared with me.

Lieut. William Henry Collins.

15 Mar. 1870.

(The Witness withdrew).

Adjourned to Tuesday, the 22nd of March, at 1 o'clock.

War Office, Tuesday, 22nd March, 1870.

PRESENT:

Captain the Honourable J. C. VIVIAN, M.P., *in the Chair.*
Colonel EGERTON. | Mr. MILTON.

Captain ARTHUR HARRISON examined.

719. (*Chairman.*) You are a First Captain in the yal Artillery, I believe?—I am.

720. In what year did you enter the Service?—In cember 1850.

721. How many Cadets entered at the same time with rself?—Our batch was seventeen.

722. How many years were you Lieutenant in the ps?—I got my Captaincy in August 1857.

723. Then you were seven years a Lieutenant?— s; nearly.

724. How long were you a Second Captain?—I got First Captaincy in December 1864,

725. Then you were seven years a Second Captain?— ven years and three months.

726. What is your present position in the rank of st Captain?—I am 87th.

727. And at the present rate of promotion, what are r prospects of getting your next step?—I should nk it will be about twelve or fourteen years before et my Lieutenant-Colonelcy.

728. (*Mr. Milton.*) Do you mean twelve or fourteen rs more?—It is very difficult for me to say what spect I have. In the last year, taking it from the h of March, 1869, to the same date in the present r, there have been six Captains made Lieutenant- lonels.

729. (*Chairman.*) You are anxious to be examined ore this Committee, in order that you might tell us at the feelings in the junior ranks of the Artillery with regard to their future prospects?—I am.

730. I suppose you anticipate that unless some special islation is had recourse to there will be such a block, your condition will become gradually so hopeless as give rise almost to despondency in the corps. Is that —Yes, undoubtedly.

731. Have you any suggestions to offer to the Com- tee with regard to the alterations which you think uld be acceptable to the corps, and which would effect changes which are necessary to keep it in a healthy ndition?—I would say that I think the principles ich were laid down by Mr. Childers' Committee, ich sat in 1867, as far as I have been able to gather opinion of the regiment, gave universal satisfaction to regimental ranks, that is to say,—1st, a limit for mpulsory retirement; 2nd, a graduated rate of retired y, which every officer could claim after a given mber of years' service; and 3rd, facilities for com- uting the retired pay; but I would ask one question, nely, whether I am to consider that it is to be taken granted that the question of age as against service is cided, and that that is no longer an open question?

732. The only point which is not an open question is, t compulsory retirement at the age of 60 in the upper nk is accepted as a principle.—Then it is not an open estion whether, instead of taking 60 years of age as limit for compulsory retirement, you may substitute eriod of service in lieu of it.

733. The difference between the period of service and age is not very great; 60 years of age would give you ty years' service?—Yes, on an average. But the int that occurred to me is this, whether, taking our regiment as a strictly seniority corps, there is any means of getting out of this difficulty. The recommendation of Mr. Childers' Committee, was, I think, that those officers who were compulsorily retired should have the option of taking 600*l.* a-year and retiring absolutely with a step in rank, or taking a smaller scale and retaining their position for promotion.

Capt. Arthur Harrison.

22 Mar. 1870.

734. You are speaking of the upper rank entirely now, are you not?—Yes. If that system is to hold good I cannot see how you can possibly retire a junior officer because he is 60, so as to give him a lift and put him in a superior position over the head of a senior officer to him, which would inevitably be the case if that rule were applied now, owing to the extraordinary and abnormal state of our regiment as regards ages. In order to give you an instance of the exceptional state of age in regard to service, I will take my own case and that of two subalterns who were in a battery I commanded. I was 37 years of age last November. The two officers whom I refer to came in by direct commissions—they were both Cambridge men—and the case with regard to them stands thus at the present moment (I take their present position; of course it was much worse when we were serving together, but they have gained places considerably in the mean time): One of these officers is only fourteen months junior to me in age, and he is 204 places below me in the regiment. In the case of the other officer, there is sixteen months difference in age between us, and he is 168 places below me in the regiment, and although thus not older than myself, they are older than many of the officers in the long list which intervenes between us.

735. How long after you did these two officers come into the corps?—They entered in 1856; that is between five and six years after me.

736. What was your age when you came into the corps?—I was just turned 18.

737. Then how old were these two officers when they came into the corps?—That I do not know; their ages are not stated in Kane's List, because they came in by direct commissions. I obtained the statement regarding their present age from the Horse Guards. Captain Harvey is one of the officers that I speak of, the other is Captain Brancker. But the point that I was alluding to was the difficulty which would arise, and which I do not see how you would get over, if you took an arbitrary limit of age. After all, there is nothing magical in the age of 60. A man of 58 may be worse than a man of 60, and a man at 62 may be better than a man of 60; therefore, it seems to me that you do not gain anything by taking 60 years of age, whereas if you took 40 years' service, which would bring you practically to the same point, you would do no injustice.

738. You argue that, in taking a basis for compulsory retirement, service would be a better basis to work from than age?—Quite so; that is my opinion.

739. (*Mr. Milton.*) But then does it not occur to you that this compulsory retirement is in consequence of loss of efficiency?—My answer is, that it is quite a toss-up whether one man at 58 is or is not more efficient than another man at 60. I should quite agree with you

Capt. Arthur Harrison.

22 Mar. 1870.

if it was a case of a great gap of age—for instance, if it was a matter of ten or twelve years.

740. Is it not the principle of compulsory retirement that an officer should be compelled to leave the service in consequence of loss of efficiency?—Yes.

741. What is the cause which impairs his efficiency—is it increase of age or length of service?—As a rule, it would be increase of age.

742. An officer is the more valuable the longer service he has; he only becomes inefficient through age?—Quite so.

743. Then how could we take length of service as the disqualifying cause instead of age?—The Committee may have made up their minds upon that point, and may see their way out of the difficulty I have stated; but it seems to me a very serious difficulty, and one which anybody will see who will take notice of the variation which there is in the ages of the officers. During the time of the Crimean War we had men brought into the regiment under every sort of system—young boys from the academy, men of intermediate ages by competition, and others who were older (like Captain Harvey and Captain Brancker) by direct commission. Thus it seems to me that without doing injustice, it is impossible in a seniority corps like ours to carry out the system recommended by Mr. Childers' Committee, of removing officers compulsorily at a certain age.

744. But did you understand that those officers who took the 470*l.* a-year, and went upon the Reserve List, got any steps of promotion above those who remained upon the list?—I understood, certainly, that they would have the chance of becoming Colonels-Commandant.

745. (*Colonel Egerton.*) They would stand aside in their own date as colonels?—I did not understand that.

746. (*Chairman.*) There is no supersession according to that proposal?—Then that removes one difficulty. But there is another, which I can perhaps illustrate in this way. I will take the case of two cadets who join the Academy together, of the respective ages of 18 and 20. The younger, being industrious and clever, gets his commission a year before his elder companion, who is idle and stupid. Then when you come to apply the compulsory retirement by age, you give an option of 600*l.* a-year and a step of honorary rank to a junior before you give it to the clever and industrious man who is his senior in the regiment by one year's service.

747. Of course, if an officer has become 60 years of years of age, whatever his position may be, he must go; but you are mistaken in your understanding of the proposal; in any case he would only remain in his own rank.—But you still give the junior the option of accepting the 600*l.* a-year, with a step of honorary rank.

748. (*Colonel Egerton.*) Would it not be a great advantage to the service to remove the man whom you describe as being stupid and idle, before the younger and more talented man?—That I am not quite sure of. It does not follow, because a cadet is idle and stupid (and when I say stupid, I mean at book-work), or not quite so talented as a boy, that in the regiment he will not make just as good an officer. It may merely have been that he was not quite so quick as a boy, or there may be fifty other things to account for the difference at the Academy.

749. (*Mr. Milton.*) On the other hand, do you consider the compulsory retirement a boon?—That depends upon circumstances; it might be a boon to one man to get 600*l.* a-year and retire, and to another man it might not. It all depends upon the individuals.

750. I am not at all unwilling that the compulsory retirement should be looked upon as a boon, but do you think that the regiment would so regard it?—As I say, it depends upon the individual. I have stated the difficulties which occurred to me—one of them, as I understand from the Committee, now is no longer a difficulty; but I think you do not raise the question at all if you take service instead of age, and, practically, you arrive at precisely the same result. The objection I have raised does not apply, of course, in the Infantry. I know very well that although it has not been much acted upon, there is a rule applicable to the Infantry of removing officers at a certain age; and there is precisely the same thing in the Navy. But with us we are a strictly seniority corps. It seems to me that by adopting service you arrive at the desired result without inflicting hardship on any one.

751. (*Chairman.*) In short you would prefer that, in any arrangement for compulsory retirement, length of service should be taken as the basis in preference to age?—I should.

752. Now with regard to the other portions of the scheme of Mr. Childers' Committee to which you have referred. First of all the scheme proposed voluntary retirement after certain periods of service in the junior ranks?—Yes.

753. And there has been a modification of that since; and coupled with that voluntary retirement it has been suggested that there should be compulsory retirement also in the junior ranks at certain ages. What is your opinion upon that?—I think that that would be most unfair to our regiment.

754. For what reason?—Because we are a seniority corps. I can understand perfectly well that in the Navy, a selection service, you should compulsorily remove an officer who has not been at sea for a long period, because he loses his knowledge of his professional duties, and to all intents and purposes, after a certain period, he becomes inefficient for his position. But the same reason cannot apply to us, and you would be absolutely punishing a man for his very misfortune, namely, that he is in a non-purchase regiment. As I understand you, the proposal is that you are to have compulsory retirement in the lower ranks as well as a compulsory retirement at the age of 60.

755. The proposal is that Captains shall retire optionally at the age of 42—that from 42 up to 48 they shall have the option of retiring upon pensions beginning at 225*l.* a-year and increasing 25*l.* a-year until they reach a maximum of 300*l.*, and retire compulsorily at 48. Then that Lieutenant-Colonels shall begin to retire optionally at 48 upon a pension of 375*l.* a-year, increasing by 25*l.* a year until they reach a maximum of 450*l.*, which might be reached at the age of 51, and at the age of 54 they would be compelled to retire. The Colonels might retire optionally at the age of 54 upon 510*l.* a-year, which would be increased during the next six years at the rate of 15*l.* a-year until they reached a maximum of 600*l.*, and then they should retire compulsorily at the age of 60. That is a combination of compulsory with optional retirement—how do you think that would work in the corps?—My objection to the compulsory retirement in the lower grades is founded on the reason which I was stating before, that I think you are punishing a man unnecessarily for his very misfortune—that is to say, that his promotion has been extremely slow, and you are compelling him to leave the Service when individually he is not inefficient. It is perfectly true that if you keep a subaltern going on year after year getting no promotion, or next to no promotion, he naturally becomes sick at heart, and he is not the man he was when he was a subaltern of a more reasonable length of service, But it is impossible to say that that man is inefficient; on the contrary, he has got increased experience. He may require more keeping up to his work to compel him to do it properly, but it is impossible to say that that man is inefficient. I say the same thing of Captains. It may be very disheartening and disappointing to a Captain of Artillery to find officers in the Line going over his head after his special education at the Academy, and without any fault of his own, particularly when you are prohibited from assisting yourself as many officers in the regiment wished to do at the time that General Lefroy made a suggestion to that effect.

756. How do you mean assisting themselves?—By a bonus system. All that may be very disheartening, but it is doubly hard if the State is then to turn round and say, "Because you have had slower promotion than an officer in the line, because you may not assist yourself by the bonus system, therefore now, as you are a Captain and not a Lieutenant-Colonel, you must go out."

757. How was the bonus system proposed?—What General Lefroy contemplated was, that officers should be invited to subscribe amongst themselves certain sums

which he considered, in addition to the Government retirement allowance, would induce many officers to go. For instance, if the State says to an officer of fifteen years service, We consider your service only worth 1,000*l.* or 1,500*l*, and we cannot afford to give you more than that, General Lefroy's idea was, that if the officers themselves said, Here is another 500*l.*, that would in many cases turn the scale, and the officer would go.

758. Was that proposal put before the authorities?—Yes, it was put before Mr. Childers' Committee. You will see that the Committee say in their report that they think it is objectionable.

759. I know that we had evidence before us about the bonus system with regard to the Indian Army, but I had no idea that it had been officially proposed to connect it with our Royal Artillery?—Yes; when you say officially, I do not think the proposal was more official than by means of this pamphlet, which, of course, General Lefroy sent to the Duke of Cambridge, and he also gave evidence upon it before the Committee. In justification of my statement just now, that the bonus system is prohibited, I would point to a remark made by the Retirement Committee of the House of Commons: "It has been suggested that a bonus system should be established, and that officers should be bought out of the service by means of a fund created by the subscriptions of their brother officers. To this, as introducing an objectionable purchase system into these corps, your Committee are opposed." Therefore, when I said that it was forbidden, I meant that I conceived that, in the face of that remark, it never would be allowed. And then you will bear in mind that at the present time we are absolutely alongside of part of our own regiment, who are, I believe, occasionally getting promotion by means of this very system.

760. You speak of the Indian Artillery, I presume?—Yes. We have got the officers of the Line on the one side, who go over our heads every day by means of purchase, and we have on the other side the officers of what is now an essential part of our own regiment, the Indian Artillery, who are assisted in going out first of all by the liberal arrangements of the Indian Government, and secondly by a bonus system, while we are without anything of the kind.

761. Does the bonus system prevail now in the three Presidencies?—The plan, as a system is stopped, but I am told that money is still subscribed in some cases to induce officers to take retiring allowances.

762. You have spoken just now of the abnormal condition of your corps, and that is quite true. It arises from the fact of there having been a large augmentation after the Crimean War, and there being a very large number of officers of the same age in the junior ranks?—Yes.

763. At present the only means of retirement from the corps is by an outlet at the top, obtained by a grant of Parliamentary money amounting to 42,000*l.* a-year?—Yes.

764. That does not affect, or it only very slightly affects the lower ranks?—That is the case.

765. What we want to get at is some scheme within the possibility of finance and reason, whereby we can obtain a more rapid promotion in the junior ranks?—I believe that it is perfectly feasible to obtain that by carrying out the recommendations of Mr. Childers' Committee with slight modifications. I am quite sure, from the conversations which I have had in the last three years with junior officers, that the officers of the regiment do not expect anything unreasonable. We know, of course, that it is a matter of money, and that we never can have very quick promotion; that we are quite aware of, but that which has given rise to so much dissatisfaction is the utter absurdity of continuing a system which was perfectly good and right at the time when it was adopted in 1854, and answered perfectly well at the time, but which has been allowed to go on until it is a simple absurdity. At the time when every body has been complaining about there being no promotion in the regiment, you have absolutely had, up to within a very few months ago, 1,800*l.* of the money voted by Parliament for the benefit of the regiment, and not for the benefit of any particular rank in the regiment, going a-begging. And why? Because the officers who are solely entitled to it will not take it. And with regard to the two steps which the regiment has recently got out of this amount one of them was purely exceptional—General Boxer's step—for had it not been for his resignation of his appointment as Superintendent of the Laboratory, he certainly would never have taken the retirement. Moreover, these two steps are almost the very worst we could have got.

766. You must remember that the officers in the upper grade of the Royal Artillery now are very young?—Yes.

767. It is very natural that being young in age they should prefer the prospects of their profession for some years to come, to taking the 600*l.* a year and going?—Yes.

768. When the money was originally granted, it was never intended that it should be applied to the retirement of officers of thirty years' service at all?—Never, and it is a misfortune for the regiment that it has been so applied. It is now three years since the whole matter was clearly put before the public by Mr. Childers' Committee, and yet we are still going on as before, in fact, the case is getting worse and worse, I think at that time the service of the subalterns showed 9½ years, now it has crept up to 12½ years. I believe there is a sum of money now unused.

769. You are mistaken about that?—Then it was the case very recently. I know that it was up to within a very short time; and, as I said before, the two last steps we got (General Boxer's and General Longden's) were two as bad steps as possible.

770. (*Mr. Milton*). What do you mean when you speak of them as "bad steps?"—I simply mean that those officers were men of 30 years' service and about 48 years of age, and the money is probably lost to the regiment for the next 20 years. I imagine that it was never contemplated when the money was originally granted in 1854, that you should retire officers of 48 years of age upon 600*l.* a-year.

771. (*Chairman*). You have expressed a very strong objection to compulsory retirement in the junior ranks, but at the same time you have expressed a very favourable opinion of the recommendation of Mr. Childers' Committee that there should be a voluntary retirement in the junior ranks?—Quite so.

772. Has it not struck you that the effect of a voluntary retirement in the junior ranks would be to take away the best men from the corps?—I cannot admit that it would take away the best men in the corps; it may take away some good men from the corps, but any one who looks into the question will see that it is absolutely necessary, whether they are good men or not, that you should remove some of the officers who came in in large batches; it is not only that large numbers are of the same age, but the ages are absolutely topsy turvy. There are many groups of officers who came in exceptionally old by direct commissions, who stand hundreds of places below men who came in from the Academy as boys. I say, therefore, even if the regiment loses some good men by this means, I believe the State would gain by the greater efficiency of the corps which would thus accrue.

773. Would it not be better, as a general principle, if the Committee could devise some scheme irrespective of compulsion or any thing of the kind, whereby you could retain these good officers and still obtain a good flow of promotion?—By all means, I would not part with any good officers if I could avoid it; but I do not think that that argument will hold, because the present state of our regiment is absolutely abnormal and something exceptional must, therefore, be done. Looking at it in that point of view, I say, even if it cost you the loss of some good officers, I would make an offer to get rid of them, and I believe the regiment would gain by it; because you must remember that the retaining of these good officers is to the disgust of your 600 and odd subalterns who are standing fast and getting no promotion.

774. How would a system of promoting officers in each rank after a certain number of years' service,—care

Capt. Arthur Harrison.

22 Mar. 1870.

being taken that it should not effect any jealousy on the part of the line,—work in a regimental point of view? We will suppose that a subaltern after 12 years' service was made a Captain, and a Second Captain after 18 years' service was made a First Captain, how would that work?—I presume it would not be Brevet-rank.

775. How would it do as regards your regimental duties, because you must not increase the numbers of your corps?—You do not mean that you would increase the numbers in the various ranks. Suppose there were ten subalterns at the top of the list who arrived at the time you fixed for becoming Second-Captains, if you were to promote them to Captains, irrespective of vacancies, that would be a very expensive system I should think.

776. We are not looking at it in a pecuniary point of view, just now; the question I want to ask you is, how it would affect your regimental duties?—I do not see how it could possibly work.

777. You do not think it would work?—No. I thought at first that you meant that you would like a limit of service, and make vacancies to employ those officers. I do not see how you could make it work in any way.

778. (*Mr. Milton.*) It would disturb the regimental organization, would it not?—It would quite disturb the regimental organization.

779. Why do you say that something must be done to relieve the expected block; if nothing is done what would be the result to the public service?—What I wish to convey to the Committee is, that a continuance of the present state of stagnation must ultimately make the regiment inefficient.

780. I mean, in what way will the service be damaged if nothing is done?—I would refer to the words which Mr. Childers made use of in the House of Commons when he spoke about the retirement scheme which he has proposed for the Navy and Marines. He said, the Government wished "to render the service contented," and no officers can be contented who are in the sort of hopeless condition in which the regimental officers of the Royal Artillery are in at the present moment.

781. Do you think that the Royal Artillery is at present suffering in its efficiency from a block of promotion, or do you think that you might say that five years hence, or ten years hence, it would suffer if nothing was done?—That is a very difficult question to answer. I should be sorry to take upon myself to say that the efficiency of the regiment is affected at the present moment, but I think I may safely go the length of stating, honestly and candidly, that the junior officers of the regiment at present are extremely disatisfied with their prospects, and I think to that extent the efficiency of the regiment may be considered as having been seriously affected already.

782. What is the age of the senior Lieutenant now?—The senior Lieutenant has now twelve years and three months' service.

783. What do you think would be a fair average length of service for a Lieutenant?—The limit of service I should like to see, would be ten years. I think if you take the average of the Line service you would find that men remain there from nine to ten years as subalterns.

784. You are mistaken in that; a man does not often get his captaincy in the Line under fifteen years' service without purchase?—But I am taking the average, because you start in life together, and it is very little consolation to an Artillery officer to be told that so-and-so has gone over his head because he has purchased his step, while we are, at the same time, forbidden to purchase.

785. (*Colonel Egerton.*) You must not lose sight of the fact that the Artillery obtain an advantage in skipping the rank of Major. They become Lieutenant-Colonels earlier than the Line?—I think not. I quite admit that every man looks to rank more than pay; but still you must remember that we only become Lieutenant-Colonels on Major's pay, and taking the average from the year 1800 the length of service is this —the junior Lieutenant-Colonel in the Line, twenty-eight years and one month, and, in the Artillery, twenty-eight years and ten months. But if you took the other ranks, for instance, the Captain's, you would find that the average service in the Line, to the Field Officer's step, is twenty-one years and eight months, whereas in the Artillery it is twenty-eight years and ten months.

786. You take the First-Captains, but the First-Captains in the Artillery should be compared with the Majors in the Line, because they go on at the next step to Lieutenant-Colonels?—But I answer that we do, and we do not; it is perfectly true that we jump in our rank, but we do not jump in our pay; we become Lieutenant-Colonels on Major's pay.

787. (*Chairman.*) I wish to ask you a question upon another point. Do you think, looking at the question from a purely regimental point of view, that you might alter the proportion of Subalterns to Captains in the Artillery by increasing the proportion of Captains serving with field batteries. You have now six guns in your batteries?—Yes.

788. There are now five battery officers, are there not? a Captain, a Second-Captain, and three Subalterns for six guns?—Yes.

789. Supposing you divide the present number of field guns into 4 gun batteries, and supposing there were 2 Captains, 2 Second-Captains, and 4 Subalterns for 2 batteries, that is, for 8 guns, there would be an officer to each gun, and those 2 batteries would be under 1 field officer; how do you think that would work?—I can only say that my own idea is, that the present system of having 5 officers to a field battery is a very good one indeed; you have a Subaltern to each division.

790. You are talking of the 6-gun batteries?—Yes.

791. I am speaking of dividing the batteries into 4-gun batteries. Instead of having, as now, a 6-gun battery with a Captain, a Second-Captain, and 3 Subalterns, supposing you divided your batteries into 4-gun batteries, and put 2 batteries under 1 field officer, and had to those 2 batteries 2 Captains, 2 Second-Captains, and 4 Subalterns, all commanded by a field officer, how do you think that would work, the object being to increase the number of Captains and reduce the number of Subalterns?—would you have a Second-Captain to every 2 guns, and a Subaltern to each gun?

792. No, there would not be a Subaltern to each gun, there would be 4 Subalterns to 8 guns?—There is no doubt, I suppose, that in all operations, whether our batteries remain of 6 guns or are of 4, they will be under a field officer in future.

793. The reason of the 6-gun organization was because one-third of the guns were shell guns, was it not?—Yes.

794. But that reason does not exist now?—No; and there would be this advantage in what you suggest, that if you had to detach 2 guns at any time you would have a Captain with them. As it is now, your Second-Captain may be employed in bringing up ammunition, or other matters, and then he would be away, and you would have to send your division away under a Subaltern. But I am afraid that when the question comes on for consideration, the expense would be objected to. Every one is quite aware that the question is constantly asked, why we have such a large proportion of officers in comparison to foreign armies. I am afraid by increasing the expense of our organization, even if it passed at first, that sooner or later questions would be raised about it.

795. I do not think you have a very large proportion of officers in the Artillery, though that may be the case in the Line?—No, we have not in the Artillery, but this would be an alteration of a system which has existed for a great many years, and which will be, as regards the officers of the Artillery, a more expensive organization. I suppose the idea is, that this arrangement would prevent so large a retiring allowance being required, and that it would thereby make the service more efficient; that would probably be the reply to the objection; but this plan would only benefit the Subalterns to a very limited extent, as the proposal only

affects the smaller portion of the regiment, viz., the Field Artillery, and would not remedy the evil under which the regiment is suffering from peculiarities of age.

796. Yes, the idea is as you suppose; and you would not have such a bloated subaltern rank?—Yes; but then one reason why our subaltern rank unfortunately has got to this state is in consequence of not having a peace establishment of subalterns as regards the garrison artillery. There is no doubt that, in the case of Field Artillery, you must keep your subalterns complete, but as regards your garrison battery, I think in peace you could do with two subalterns per battery.

796*. You would reduce the list in the garrison batteries, but not in the field batteries?—Yes; but if this is carried out all employed subalterns ought to be made supernumerary, so as to ensure that no battery is left with less than two for regimental duties. In the field batteries it is impossible to reduce the subalterns.

797. (*Mr. Milton.*) For field batteries, which organization would you prefer—the present, or that suggested by the Chairman?—I think that the organization mentioned by the Chairman would be the most complete.

798. Have you any proposal to make to the Committee, or is there any suggestion which you would like to offer for us to consider?—Taking the state of our regiment at the present moment, I presume that the Committee will admit that it requires exceptional treatment. If we are only going now to have a definite system which might be very good, supposing our regiment was in its proper state; that is to say, supposing you had nothing but junior men at the bottom, and a regular proper gradation of age up to the top—a system of retirement which would work very well under these circumstances will not work well when you have got to deal with the extraordinary state of things now existing in the regiment. Therefore you want special treatment. Under these circumstances, I presume, the recommendations of Mr. Childers's Committee, that no retirement should commence under 22 years' service, will not meet the present state of the Artillery. The recommendations of that Committtee were, that you should take 22 years' service as the lowest period entitling an officer to claim retirement.

799. We took a basis of age; the term proposed was 42 years of age, which would be equal to 22 years' service?—Yes; and that an officer should then get a certain addition for each year after, if he chose to retire. Looking at what we wish, namely, that you should break up the long list of men in the regimental ranks, and considering that what you in fact want to do is absolutely to induce men to leave, I think that giving men a yearly increase is a very bad way of arriving at your result. On the contrary, I take it that what you want is something of this kind. Supposing that the Committee chose, under the peculiar circumstances of the case, to say, We will, as a tentative measure, even go the length of offering men inducements to leave at 15 years' service, it seems to me that the proper thing would be to say, At 15 years' service you will get a certain sum. Of course, I do not wish to put this pecuniary matter as a definite proposal, for it is not my province to say what an officer's service is worth; but I have merely taken the sums on precisely the basis of the recommendations of Mr. Childers' Committee; that is to say, at 22 years' service a man was to receive so much, and at other ages so much more, and so on. My proposal would be, that at 15 years' service a man should receive 125*l.*, which is working the sum down precisely from that which was proposed to be given at 22 years' service. And I would not then give an officer a shilling more until he had 20 years' service; that is to say, I would not say to an officer at 16 years' service, If you like to wait you shall get so much more for every year you stay.

800. You would not break the 5 years?—I would not. And I would do precisely the same thing after 20 years up to 25 years' service, and again after 25 years up to 30 years' service; but after 30 years' service I should be inclined to fall into the recommendation of Mr. Childers' Committee, for this simple reason, that there are many officers of very near 30 years' service who have been looking forward to deriving the benefit of the existing system, and I think that it would be perfectly fair in their case to allow the annual increase which Mr. Childers' Committee recommended to come into operation.

801. You talked of it as a tentative plan; do you think that that plan could be tried on a limited scale; that is to say, that a certain sum should be taken in the estimates and applied, so far as it would go, in that manner?—I think that that would be most desirable.

802. Would it not create a certain sort of irritation in the corps if a man wanted to go, and found that there was not sufficient money to allow of his going?—I think not in the least.

803. (*Mr. Milton.*) How would you apply it? would you offer it first to the seniors?—Yes; I should offer it first to the seniors, of course with the limit that it did not go beyond a certain point. I do not think that that would lead to any dissatisfaction, and by being tried in that tentative manner it would enable the pulse of the regiment to be felt.

804. (*Chairman.*) You know the corps pretty well, probably you know every officer in it. Do you think that many men would take advantage of that retirement?—Provided that there was a step in rank, I know 3 or 4 officers in the most eligible positions in the regiment as regards those below them, men in the prime of life, who would be glad to take the scale which I have mentioned.

805. With an honorary step in rank?—Yes.

806. (*Mr. Milton.*) An officer of 19 years' service would only get an annuity of 125*l.*?—Yes.

807. (*Chairman.*) What would an officer of 20 years' service get?—As regards an officer of 20 years' service I fall into the old proposal, which is, that he shall receive 250*l.* I only took the mean of those 5 years; that is to say, an officer of 15 years' service gets a few pounds a year more than would be the equivalent of his 15 years; but on the contrary, an officer of 18 or 19 years' service gets rather less than his equivalent would be; therefore a man would say, It is of no use my hanging on till I have 18 or 19 years' service.

808. (*Mr. Milton.*) Do you think it would do to fix so much for each rank, and to say that the retirement should be so much for Lieutenants, so much for Second Captains, and so much for First Captains?—No, certainly not. I think nothing can be fairer than to sink rank entirely as regards retiring allowances, because if you have had the misfortune of slow promotion, it is hard that that misfortune should follow you into your retirement, and that you should have a less retirement allowance on that account; whereas, if you put the retirement for length of service, the misfortune of slow promotion does not follow a man.

809. What, then, is the scheme which you would propose to the Committee for the purpose of removing the prospective block of promotion in the Royal Artillery?—I should say that there are two causes, independently of the exceptional manner in which officers have been brought into the regiment, which must have affected the slowness of our promotion to a certain extent. First of all, we have been for some years short by seven of the number of our Generals.

810. (*Chairman.*) Do you mean to say that you are seven Generals below your establishment?—What I mean is this. If a certain number of Generals was considered the equivalent to a certain strength, of course when our regiment became larger in proportion to the rest of the army, one would have imagined that the number of Generals ought also to have been increased. Taking it in that way, in comparison with the rest of the army, the difference between the number which we have and the number which we ought to have is seven Generals.

811. (*Colonel Egerton.*) Have you not such a number of Generals as to give you 1 General to every 28 combatant officers?—Our Generals now are 32.

812. I think that you will find that you have 1 General for every 28 combatant officers?—Then we must have been in excess previously. We must have had too many in the first instance; however, I do not

Capt. Arthur Harrison.

22 Mar. 1870.

think that I am wrong. About the second point, for a series of years our retiring money, as you are just as well aware as I am, was considerably short of what we were entitled to; and, in fact, it was only after a tremendous correspondence with the Treasury that we got an increase, and then we only got 5,000*l.* out of 10,000*l.*, to which we were fairly entitled. It stands to reason that that must have acted prejudicially on our promotion. I only allude to that with reference to this point. If now an extra sum of money is required to deal with the special circumstances of the regiment, it ought to be borne in mind that the country has, for a series of years, had so much less to pay. Whereas now, although it is true that we have 42,000*l.* a year, it is equally true that for a considerable number of years, after we had an increase of three brigades, our retiring allowance was kept down to 32,000*l.*

813. But it could not have affected your promotion much, because, as you said just now, there have not even been men found to take what was left to you?—It is perfectly true that it has been difficult to induce Colonels to retire, but I think that if we had had 10,000*l.* or 12,000*l.* a-year going begging that would have raised such a storm of discontent as to bring about a change. As it is, there was always a very good answer, namely, that the amount paid into the Treasury was small, but I do think that if 10,000*l.* or 12,000*l.* had been paid back, the regiment would at once have made an outcry, and said, "This will not do; if Parliament will vote us 42,000*l.* a year, it is utterly impossible that it can be right that because you senior officers will not take it you are to keep the regiment from having the benefit of it."

814. Your argument is that it has been mis-applied?—Yes.

815. Are there not cases where sums of 600*l.* a-year have been locked up year after year for officers who have been then on civil employment, and who, being in receipt of civil salaries, were not eligible for it, but still had a right to fall back upon that when they gave up their civil employment?—I am not aware of that, but I wish to guard myself from misapprehension with respect to my reply to your previous question as to the money having been misapplied. I think that it is only from a total change of circumstances that it has become misapplied. I have no doubt that when the present system was adopted of giving 600*l.* a-year to the top, it would have been absolutely foolish to introduce the system which I now advocate. At that time you wanted to get rid of the seniors; the junior ranks were in good order, but unfortunately the system has gone on for too many years.

816. (*Mr. Milton.*) What system do you propose, in lieu of it, to prevent the prospective block in the Royal Artillery?—With the two variations which I have referred to, I would say, exactly the scheme recommended by Mr. Childers's Committee. I would prefer to see service substituted for age at 60 years, and I should propose that instead of beginning the voluntary retirement at 22 years' service, you should begin it at 15 years' service; that a sum of money should be given to a man of 15 years' service, and the same sum up to 19 years' service, and a larger sum after every 5 years up to 30 years. At that point the scheme would fall into what was recommended by Mr. Childers's Committee, namely, an increase of 15*l.* a-year.

817. You would desire also to exclude from the proposed scheme the compulsory retirement in the lower ranks?—I would, most decidedly.

Captain V. D. Majendie, R.A., examined.

Capt. V. D. Majendie, R.A.

22 Mar. 1870.

818. (*Chairman.*) You are a second Captain in the Royal Artillery, are you not?—Yes.

819. In what year did you enter the service?—In 1854.

820. You came, of course, from the Academy?—Yes.

821. How many cadets were there in your year?—If you mean, how many got their commissions at the same time as myself, I should say that the batch was 15 or 16.

822. Only that?—Only that; it was not a large batch.

823. Were you a batch before the augmentation or after the augmentation?—After the augmentation.

824. How long were you in going through the rank of Lieutenant?—Six and a-half years.

825. And how long have you been a second Captain now?—Nine years.

826. What is your position in the rank of second Captain?—I am about twenty-third on the list.

827. Then what are your prospects according to the present rate of promotion?—I have never calculated exactly how long I shall take to become a first Captain; but my promotion has been very slow as a second Captain. I was exceedingly fortunate up to the rank of second Captain, but I have been overtaken since then by the tide of stagnation.

828. I suppose that your prospects, according to the present rate of promotion, of becoming a Lieutenant-Colonel are so utterly beyond all calculation that you have not gone into it?—I have not gone into it at all; but I have seen Mr. Sprague's Statement, and the prospects must be very bad indeed according to that.

829. (*Mr. Milton.*) What length of service do you consider would be a fair average for an officer to look to his step as first Captain?—I should think 15 or 16 years.

830. And how long out of that would you think he might fairly remain a subaltern?—You are supposing a time of peace, when there is nothing special to cause promotion. Under those circumstances, I should say about seven, or eight, or perhaps nine, years.

831. And then another six years as second Captain?—Yes.

832. That would give a man fifteen years before obtaining his commission as first Captain. How much longer would he be before he became a Lieutenant-Colonel in a fair course of promotion?—I suppose it would be about another six or seven years.

833. Then he would become a Lieutenant-Colonel in about twenty-one years?—Yes, in about twenty-one or twenty-two years.

834. Do you know at all the average service of officers in the line who become Lieutenant-Colonels?—No, I do not.

835. (*Chairman.*) I suppose you have thought and talked with your brother officers a great deal about the present condition, or rather the future prospects of the corps?—Yes; it has occupied the attention, I think, of most officers of the regiment a great deal lately—that is, during the last year or two; and being at Woolwich I have had opportunities of seeing a good many officers, and, as it is a subject which has interested me, I have talked with a good many in my own rank and in the ranks above and below it.

835*. What is the opinion of the corps as to the cause of this unsatisfactory state of things?—I think we trace it generally to two or three different causes. If we take, first, the present inverted order of the corps—that is to say, the old men being relatively at the bottom, and the young men relatively at the top, that I believe to be mainly the result of the augmentations and acceleration of promotion which took place in the Russian War. But the absence of any present promotion we believe to be due in great measure to the arrangements under which promotion is at present conducted, they being inadequate to the purpose.

836. You mean the application of the Parliamentary grant?—I mean partly, and I should say principally, the application of the Parliamentary grant, it being given solely to a part of the corps which really does not require promotion. In point of fact, to put it in this way, you are applying the lubrication to a part of the machinery which is in perfectly good order. A very good instance of that—which, I dare say, has been mentioned to the Committee—was afforded a little time ago. I do not think it exists now, but I think it existed about December or

January, when there was a sum of about 1,800*l.* or 1,900*l.* locked up because no Colonels were prepared to take the retirement, at a time when the junior ranks of the regiment were calling out for promotion.

837. Then you think that the prospects of the corps would be materially improved if that 42,000*l.* was applied for the general retirement of officers of different ranks rather than confined entirely to the retirement of officers in the upper rank?—I am sure of it. I think that the present application of that money is about the worst that you could possibly suppose. I have drawn up a few notes upon this subject, which I will read if the Committee will allow me.

838. We should be very glad to hear them.—"The endeavour to fix a regular, constant, and reasonable flow of promotion, is, I presume, determined by two considerations—first, the advantage of the State; second, justice to individuals. With regard to the first, advantage to the State. If it can be shown that unduly retarded promotion, or a spasmodic promotion, or a promotion which while satisfactory at one point, is unsatisfactory at another (as when all the senior officers are very old men, and all the juniors very young, or *vice versâ*), if it can be shown that any one of these results is unfavourable to the efficiency of the corps, then, directly such a state of things arises, it is obviously to the advantage of the State, and its duty, if it value efficiency, to take steps to remove or avert it. It is so generally and freely admitted that a languid or imperfect circulation of promotion is unfavourable to efficiency, that it would be superfluous to argue this question. The only point on which discussion is possible is, When may promotion be said to be unduly retarded? The answer to this question may be given in general terms without going into figures. It is not necessary to assign—even were it possible so to assign—a fixed limit of age for each rank; for the question is not so much one of sheer physical incapacity (and if it were, could not in the junior ranks be determined by arbitrary limits, since some men remain physically capable for a much longer period than others),—it is rather a question, as far at least as the junior ranks are concerned, of moral incapacity, of deadening influences, of relative disadvantages." I might illustrate that by a reference to the present position of the corps. No one would contend that the present Lieutenants are physically incapable of performing their duties, but I will venture to say that those at the top of the list perform them with very little heart.

839. I suppose you would admit that the present condition of the corps is not what you would call unhealthy?—If it were never going to get any worse than it is now, I do not think there would be much to be said about it. It is because the present subalterns feel that they are not only old for their position, but that they have no reasonable hopes of promotion into the higher ranks, that they are so depressed by the prospect before them. It is in fact rather their prospective than their present position which is so intolerable. I will proceed with my paper:—

"For example, with duties more or less routine, like those of a subaltern, it is unreasonable to expect the same close and uniform attention to them, the same zealous labour, the same hearty interest, after ten or twelve years, as you may look for within the first six years or so of an officer's obtaining his commission; and still less is this zeal and continued application to be expected where an officer is highly educated, as the subalterns of the Royal Artillery and Engineers are supposed to be. Again, the circumstance that this officer, knowing himself to have been educated above his fellows in other corps, and to have satisfied a higher standard, finds himself superseded by them habitually and in a large degree—this in itself exercises a depressing and unfavourable influence. And these results tend ultimately to make themselves felt outside the regiment and to discourage youths of ability and promise from entering a corps in which the prospects of advancement are relatively so bad. Therefore as regards the lower and middle ranks, the working parts of the corps, if I may be allowed the expression without offence, what seems to be required is, a flow of promotion which will secure to the officer such a rate of advancement as will prevent any rank from being encumbered by men morally, if not physically, too old for their work, and as will secure the officers generally from supersession by their comrades and contemporaries of the line. In these respects the interests of the State are concerned as deeply as in the provision of efficient *matériel*. Indeed, the money expended in *matériel* may be thrown away by the neglect to provide an efficient and contented *personnel* to superintend and direct its use. In the case of the higher ranks it is possible to assign more confidently distinct limits of age, because here the question becomes rather one of physical incapacity, and it seems to be a matter of general agreement that as a rule officers are no longer fit for active regimental employment after the age of 60.

"The 2nd point is—Justice to individuals.—What has to be aimed at here has been partly indicated in the remarks which have been made under the first head. It is a matter of simple justice to officers entering a corps that they should be guaranteed, if that be not too strong an expression, an average rate of promotion which shall bear some close relation with that observed in the other branches of the Service. When an officer enters the Artillery he does so on the implied, if not the express understanding, that he will in about a certain number of years become a Captain, and in so many years more a Colonel. If that rate of promotion be largely departed from, his expectations—his legitimate expectations, as I may call them—are disappointed; and the inevitable result will be, not the mere discouragement of the individual, but a reaction throughout the country, and the ultimate discouragement of those who had contemplated making this branch of the Service their profession—the depreciation, in fact, of this branch of the Service. It is in this matter much as it is in the matter of the obtaining of recruits for the ranks. A certain career is promised or implied—a career with at least a miminum of advantages. If by defective or insufficient arrangements you fail to secure the minimum of advantages, you fail *pro tanto* to fulfil your engagements, and you fail ultimately to obtain your recruits. But this is not all. You have to consider also whether an officer who has spent a certain number of years in your service does not thereby become entitled to certain absolute advantages in the matter of retirement, and whether he should not be able, after a certain term, to capitalize his services, so to speak. If you adopt a rule of compulsory retirement at any age, it is clear that you cannot turn your officers adrift without a moderate provision. In proportion as you raise the limit of age so will the officer's expectations with regard to the amount of that provision legitimately increase. So also looking to the natural duration of human life, can you afford to increase this provision? Therefore, in justice to your officers, and without reference to the advantages to the Service direct and indirect which will thereby accrue, it seems to me that you should satisfy three principles:—1st. You should secure a due average rate of promotion. 2nd. You should enable him after a certain number of years to capitalize his service. 3rd. You should, if you impose a limit of compulsory retirement, see that you accompany that retirement with a sufficient, although moderate, provision for life.

It is also to be borne in mind that it is not with officers as it may be with the soldiers. In the case of the officer you do not wish to encourage short terms of service. You are bent on inducing him to make the army his profession, and in proportion as he meets your wishes in this respect, in proportion as he educates himself specially for military service, and applies himself diligently and exclusively to military duties, so will he be incapacitated for a return to civil life,—an incapacity which will increase with each year of his service.

These two principles so blend with and interpenetrate each other that they scarcely admit of separation. "If you establish a system of promotion which is beneficial to the interests of the State, you will generally find that you are, approximately at any rate, satisfying the requirements of justice with regard to individual officers." (I use the words "justice" and "injustice" for want of better ones; I do not want them to be

Capt. V. D. Majendie, R.A.

22 Mar. 1870.

construed too literally.) "And on the other hand it is almost, if not quite, impossible to do injustice to individuals without directly or indirectly prejudicing the interests of the State.

"Regarding these as the test principles of any system of retirement, I have applied them, first, to the existing system, secondly, to a system which I would propose to establish. If we apply these principles to the existing system, we observe at once that it fails to satisfy them. As regards the advantage to the State of that system, I do not think I use too strong an expression when I say that a more disadvantageous system could hardly be devised. In the first place, we have the eloquent evidence of the present and prospective condition of the regiment in proof of the fact that this system is quite powerless to avoid stagnation. This condition of things has no doubt been described to the committee. It is indicated by the facts that the senior subaltern has over twelve years' service, and is over 31 years of age, and that according to the calculation of Mr. Sprague, an eminent actuary, the following will be the ages of the different ranks up to the end of the present century, in the absence of any accelerating causes:—

	1874	1879	1884	1889	1894	1899
	Yr. M.	Yr M.	Yr. M.	Yr. M.	Yr. M.	Yr. M.
Senior Lieutenant-Colonel	49 8	52 9	55 11	58 6	61 5	63 2
„ Captain	45 3	48 2	51 3	53 9	57 1	60 3
„ Second Captain	37 11	41 9	45 5	49 2	52 10	56 2
„ Lieutenant	34 4	38 3	42 2	45 8	47 4	46 4

"As a matter of fact, a good many will be older as some get their commissions over 20; this is a prospective condition of things which I submit cannot be contemplated without grave anxiety. But the state of things is really far worse than appears, in consequence of the overlapping of ages in the different ranks. For example, I find that Captain C. O. Browne, Second-Captain, was, on the 1st December, 1869, 31 years 7 months; Lieutenant H. St. J. Bowen, was on same date 31 years 11 months, or 4 months older, and between Browne and Bowen there are no less than 217 places. Nor is this an isolated case. Several other similar instances are afforded by the table of ages. Some are not quite so bad, others are worse; for example, Second-Captain Hall, age 30 years 2 months, Lieutenant Carlile, 30 years 3 months, and the officer who is the senior of these two, according to age by 1 month, is 222 places junior on the list. The result may thus be that the time will come when the senior subaltern will be older than the senior Second-Captain.

"With regard to the approximation of ages in the several ranks: Between the senior Second Captain and and the 180th Subaltern (Lieut. Tollner), total, 357 officers, there is only 4 years difference of age (the difference between 34 and 30 years). Again, the 354th Subaltern (Dodsworth) is 28, the same age as the 163rd Second-Captain, there being a difference of no less than 368 places between them, which would give, under most favourable circumstances, at least 12 years difference in rank;" that is, if we took a *very* favourable state of promotion—a very much more favourable one than we have now. "Under the present system it would be very much more. It is evident, therefore, that the present system fails to accomplish that for which it was designed. It is unfavourable in other respects—it is absolutely inelastic. A good example of this is afforded by the circumstance (which I mentioned before) that on the 1st December last, while the middle and junior ranks were languishing for promotion, over 1,800*l.* were tied up, because there were no Colonels who were disposed to accept the 600*l.* a-year retirement. Again, it has been stated by Colonel Adye, in evidence before Mr. Childers' Committee, that 'within the last few years we have seen Colonels doing duty when over 70 years old, whilst others have obtained 600*l.* a-year retirements when they were under 50' (Q. 1459). And this brings me to another grave disadvantage of the present system. The effect of it is to tempt not the older Colonels but the juniors to retire. The seniors prefer, naturally, being near promotion to wait on for their chance of a brigade, and so the retirements are practically limited to the younger Colonels (See Report of Mr. Childers' Committee, p. 136, para. 5; see also Q. 1265). Again, the effect of these liberal retirements given to one single rank is to induce officers to wait on until their 30 years' service and their rank of Colonel is obtained. The system is, in fact, a premium on non-retirement. Further, the system is an uncertain system. It is, as Captain Galton observed, 'a chance whether the officers are old or not' (Q. 182). It is unsatisfactory, because, as the Duke of Cambridge stated, 'officers retire whom we would much sooner see not retire, while others remain whom we should be glad to see removed from the active service of the regiment' (Q. 1841). The system is, in short, as Mr. Childers' Committee reported, 'complicated, uncertain in its operation, based upon no clear principle, and inadequate for its purpose.'

"Applying to it the other test of the benefits which a retirement system ought to bestow upon individual officers, we find that it fails as signally. It neither gives the officers of the regiment, as a body, the flow of promotion which they have the right to expect, nor does it secure them against supersession, nor does it enable them to capitalize their services until they have served 30 years, and have, by a favourable combination of circumstances, attained the rank of Colonel. It is also to be noticed that the system fails not merely to fulfil, but even to approximate to, a theoretical requirement of a good system of retirement. Such a system of retirement ought to give retirements in proportion, (or some sort of proportion) to the number of officers of each rank. Thus the establishment of a Brigade of Artillery is—

1 Colonel Commandant.
2 Colonels.
4 Lieutenant-Colonels.
8 Captains.
9 2nd Captains (including Adjutant).
24 Lieutenants.

"A theoretically perfect system would for each Colonel removed, remove something in the proportion of 2 Lieutenant-Colonels, 4 Captains, 4 Second-Captains, and 12 Lieutenants. But the present system at best only gives for each Colonel removed, *one* step in each rank all down, and in practice it gives less, as there are generally seconded steps to be absorbed.

"It may, therefore, confidently be said that the present system of retirement, whether considered practically or theoretically, is unsound, and that it fails signally to satisfy either of the two fundamental principles which should underlie any system of retirement.

"Before passing to the consideration of an alternative system it may be worth while to inquire how so unsatisfactory a mode of retirement came to be adopted. This is not difficult to explain. When the system was introduced in 1854, the stagnation was in the higher ranks. The senior Lieutenant-Colonel was 67 years of age, the senior Captain 50, while the senior Lieutenant was only 27, and the senior Second Lieutenant only 20 or 21. ("Q. 1529. Mr. Childers' Committee.) It was the top of the regiment which required relieving, and it was to the top, therefore, that the relief was applied. The Royal Commission of 1854 probably failed to anticipate so complete an inversion of the natural order of things as now exists. At present the senior Lieutenant-Colonel is only 46, the senior Captain is 41; the senior Lieutenant is 31; while there are Lieutenants some way down on the list of 32 years of age. At present, as I have endeavoured to show, it is the junior and middle ranks which require relieving, but the inelastic system now in force does not admit of this relief; we are diligently lubricating the parts of the machinery which are acting perfectly, and neglecting to apply any oil to those wheels which are creaking discordantly. I may also, perhaps, be permitted to mention one of the causes to which we, in the middle and junior ranks, attribute the continuance of the present system, and the absence of all attempts to modify and adapt it to an altered condition of things. It is this. The administration of that sys-

tem resides in the hands of the senior officers of the corps; those who are on the whole, personally interested in its continuance are the officers who are charged with its administration. The result is that there has been a tendency rather to maintain the present system in all its rigid inelasticity than to bend it to the advantage of the junior ranks.

"The explanation of the circumstances under which this inverted order of things has arisen is easy. It is the direct result of the augmentation and exceptional promotion which took place at the time of the Crimean war. This inversion in itself is, therefore, an abnormal condition; and I think it should be dealt with exceptionally. We are suffering from the back-water of the Russian war; and our ills are to be traced, it seems to me, just as directly to that period as are the sufferings of a man who lost an arm or leg, or who received other hurt in the trenches of Sebastopol. Before proceeding to establish a fixed system of retirement, or, I should say, before you can hope that any system suitable to the normal wants of the regiment will relieve its present and prospective distress, you must, therefore, I would respectfully say, restore the regiment to a normal and healthy condition. Get your older men at the top, your younger men at the bottom, and dissipate the present approximation of ages before attempting to apply a permanent system of retirement. The regiment is now in the condition of a stream striving to flow through too narrow an outlet, the narrowness of that outlet being measured by the comparative youthfulness of the senior grades—or, perhaps I should say, by the comparative oldness of the junior ranks, since, of course, no sort of objection is to be taken to the senior officers being, as they now are for the most part, young and vigorous. Either widen the outlet artificially or lessen the stream behind by tapping it before it flows up to the point of obstruction. To this end exceptional measures must, I believe, be applied.

"I will now proceed to consider briefly the system which would be most likely to satisfy the general requirements of the regiments, assuming it to have been restored to a healthy condition, or at least to a more healthy order of things."

840. You are going now to give us a scheme which assumes that we have got the regiment into a healthy condition, but how do you propose that we are to get the regiment into this healthy condition?—As far as I can see, the only way is by offering inducements to the senior subalterns, and, perhaps, to some of the older officers in the middle ranks, to retire, and I believe the Committee would find that a comparatively small inducement would lead many subalterns to retire. I have talked upon that point with many subalterns, some of whom have said that they would be very glad to go—they see no prospect of ever being a Lieutenant-Colonel. They think they made a mistake in coming into the regiment, and if they could get some little equivalent for the time and money they have spent in their education and in the regiment, they would be very glad to go to the Colonies or to take up some other profession. It is worth while also to notice that the present moment is favourable to this, as the regiment is to be reduced by about 100 subalterns, according to this year's Estimates.

841. Is not that proposal open to this objection, that it would offer an inducement to the smart, active, clever young subalterns to go—men who know they have brains which they could apply in a better market—while it would keep the subalterns who, either from want of brains or of energy, have not the capacity of getting on elsewhere?—I think that a man would be determined rather by his liking for the profession than by whether he felt within himself that he had the power for getting on outside. I think the mass of the Artillery officers of the present day, having passed through considerable educational tests, believe themselves capable, at all events, of doing something outside the corps. Few men having an inclination to go, would be likely seriously to sit down and say to themselves, "I am such a dull fellow that my only hope is to remain in the Artillery."

842. I mean in the case of a smart young man like yourself, if you found that your passage was blocked in the corps, and that you had not much chance of getting on very fast, and the State offered you a sum of money which would enable you to live like a gentleman and seek your fortune elsewhere, would you not be inclined to leave the regiment?—Of course that very much depends upon what the amount of the inducement might be. I do not think in my own case that I individually should be inclined to leave the regiment, because I am sufficiently far up the list to hope for promotion, and because I am much attached to my profession. *Capt. V. D. Majendie, R.A.* 22 Mar. 1870.

843. As regards those who are not in so good a position as yourself, would not the effect of the retirement being offered to them be to induce the smart follows to go and the dull fellows to stay?—No, I do not think it would. You might get some cases of that, but that would not be the general tendency, whereas the tendency of the present system is to reduce the dull and the smart officers to one level of despondency. In fact, you lose much more by the present system than you would be likely to lose by offering a limited number of moderate retirements.

843*. Your first step would be to apply a sum of money to purchasing out by a system of annuities a large number of officers in the junior ranks?—Yes, or by giving lump sums down. I will give an example to the Committee. Supposing we said, as a temporary expedient, that every subaltern, going down to subalterns of 7 years' service, might receive 100*l.* for each year's service, you might say that that would be very little, for a subaltern of 7 years' service would get 700*l.*, and you might ask, "Would it be worth his while to go?" Well, my impression is that some, at least, of them would go under those circumstances, and I do not think those terms could be considered extravagant. It is not so much that the junior officers expect to find themselves provided for for life after 7 years' service, but rather that they dislike the idea of having thrown away, so to speak, 7 years of their life, besides so many years of their education, with no results, and having to go away with no advantage whatever. That is what induces them to look for some equivalent.

844. Then your first proposal would be that a sum of money should be taken in the estimates to be applied to the purchasing out of officers in the junior ranks on this system?—That is my first proposal.

845. Until you get the corps into its normal condition?—Until we get the corps into something more like its normal condition, the object being to try and break up this objectionable state of things, in which you have older men than you ought to have in the junior ranks. Your money should be directed to getting these older juniors out as far as possible.

846. Having arrived at a normal state of things, will you proceed to state what you propose?—"Such a system" (that is to say, a system which might be considered likely to work afterwards), "is, I believe, only to be found in the application of two principles. First. The establishment of a limit for the compulsory retirement in the higher regimental rank. Second. The establishment of a graduated scale of retirement, of which every officer, on attaining a certain number of years' service, would have an absolute right to avail himself. These, I need hardly say, were the two leading principles of Mr. Childers' Committee. And I think, if you apply to them the tests which I have applied to the existing system, you will find that they satisfy those tests just as surely and completely as the present system fails to do so. You require the advantage of the State. Well, by establishing a system which will carry away from active regimental service all senior officers who are no longer physically fit for such service, you go far towards affording that advantage; and to the same extent you relieve each of the other ranks. Again, you proceed upon a fixed principle, which is always an advantage; and you so arrange that your retirement shall always be so far certain in operation that no man of over a fixed age can remain in the corps. By itself the application of this principle would

Capt. V. D. Majendie, R.A. 22 Mar. 1870.

not be adequate for the purpose. For example, at the present moment it would not give a single step, since the Senior Colonel is under 60 years of age. But, supplemented by a liberal graduated scale of voluntary retirement, it would go far towards accomplishing its object, and it would satisfy that other requirement of justice to the individual officer, who, after 15 or 20 years' service, would thus be able to capitalize his services. Again, the combined system of compulsory retirement in the higher ranks, and of a graduated scale, would be self-adjusting, since more men in the junior ranks would be tempted to accept the retirements in proportion as by retardation of promotion their prospects became clouded —and *vice versâ*.

What the details of this scheme would be, I can hardly venture to say. "Of course, there are a great many things to be considered, and there have been so many different schemes put forward, that you may ring the changes indefinitely upon 250*l.* at 22 years' service, or 150*l.* at 15 years' service, and so on: therefore I have thought it better not to attempt to go into that. The scale which has been adopted for the Marines appears to be generally a fair and judicious one. I suppose that 60 years would be taken as the limit of active regimental duty. It is to be observed that the Royal Warrant of the 3rd of February, 1866, sec. 88, provides for the retirement of Lieutenant-Colonels from regimental command at this age. But if you propose to pass the compulsorily retired officers on to a supernumerary Major-General's list, where they would succeed to the position of substantive Major-General, it would be necessary, for an obvious reason, to make the limit a limit of service not of age, otherwise all successions to Major-Generals would violate the strict system of seniority promotion by length of service, and would proceed upon the principle of seniority by age. You would have the officer who is 217 places junior to Captain Brown becoming a Major-General before him. Further, by adopting a limit of age, you would be liable to lose a large number of officers at the same time. The best solution —a solution which avoids apparently both difficulties— is probably to be found in the adoption of a limit of age combined with a limit of service. Say, for example, that regimental retirements are to be compulsory when an officer attains 40 years' service, and the age of 60. With regard to the graduated scale, it is necessary to guard, on the one hand, against making the system practically inoperative by imposing too hard terms." (For example, I believe, under the present system, one subaltern or two subalterns may retire upon a certain rate if they are over 22 years' service. But then we have not arrived at that yet; I hope we never shall— and therefore it is inoperative.) "And on the other, against making the retirements so favourable as to tempt officers away from a profession to which they are attached, by strong pecuniary considerations. The mean must be carefully struck between these extremes. Also it is undesirable to make the annual increments too large, or you might tempt officers to prolong their service. The better way is, I think, to make the increments not annual, but biennial or triennial, and so to avoid tempting an officer to stay on year by year by a bait always just dangling before his eyes. Of the right to commute pensions I say nothing, because this has been conceded by the Pension Commutation Act (at least, so I understand it). But, as I have said, an attempt ought to be made first to place the regiment which is at present standing on its head on its feet."

846*. Then I understand that your first suggestion would be that, in conformity with the recommendation of Mr. Childers' Committee, the present 42,000*l.* should be closed, so far as its present application goes, and be otherwise distributed?—Yes; that it should be otherwise distributed.

847. How would you deal with the vested interests? supposing you had been a Lieutenant-Colonel in the upper rank, and had been looking forward to getting your 600*l.* a-year retirement after 30 years' service, and upon becoming a Colonel in the corps, what should you say if I were to shut that up at once?—I should consider that it was very hard.

848. We have to consider all those gentlemen?—Yes: I did not wish to give the Committee the impression that I would shut up the present system like a clasp-knife. I wish that you should reverse gradually or recede from your present policy. Your present policy is, as the retirements fall in to make them 600*l.* a-year retirements. Your policy should be, as the retirements fall in, to make them not 600*l.* a-year retirements. I think it would be exceedingly hard upon the officers of very nearly 30 years' service to deprive them of what they have been looking forward to for some years.

849. If we get hold of a sum of 600*l.* a-year directly it falls in, and say we are not going to apply this in the manner in which it has been applied, we shall deprive the men who have been waiting for it of their chance of getting it?—You would if you were to cut it all off at once, but I see no reason why it should not be done gradually, without injustice or hardship.

850. The fund is all taken up now. A man dies and liberates 600*l.*; there may be a Lieutenant-Colonel waiting for that 600*l.*; but if we took it and said, "No, we are not going to give the 600*l.* in that way, but we will apply it to other purposes," we should deprive him of that chance for which he has been waiting?—Yes; but if you said that for every two or three retirements only one or two, whichever number you might think most fair, 600*l.* a-year retirements should be given to Colonels, you would, by degrees, get over the difficulty by that process of gradual absorption, and after a certain number of years you would come upon a stratum of men who are not looking for that retirement.

851. You might limit what we have called in this Committee the "Vested Interests" to a certain period of service, and say that a man who has not had 25 years' service has no claim at all upon the retirement, and therefore we will treat him as we like, but with regard to the officers of more service than that, there does come a question, whether we could deprive them of it when they have come almost within the class?—There is one consideration to be borne in mind with regard to that; it does appear that at this moment, and during the past few years, officers have been able, by reason of a combination of favourable circumstances, to get that retirement very early; but it is not right to suppose that Artillery officers have a natural and absolute right to retire after 30 years' service upon 600*l.* a-year. It is conditional, of course, upon your being a Colonel; it is also conditional on there being vacancies in the retired list; and, as we have seen, there have been long epochs when that rank has not been attained till long after 30 years' service, and then when the vacancies in the retired list have been few. I suppose if you took the average of 20 or 30 years, you would find that the right to retire absolutely would resolve itself into a right to retire not much before 35 or 36 or even more years' service.

I have got a list here which gives the age of every officer in the regiment, and if the Committee have not got that information in their possession, it might be useful to them.

852. I think the Committee would very much like to have it?—I believe it is correct; it was made out at the Royal Artillery Institution, and corrected up to the 31st December. I have checked it in several instances, and though perhaps the months may not be correct, I believe the years are correct.

853. (*Mr. Milton.*) If a capital sum were given for each year, what do you think would be a fair sum to give an officer for each year's service?—I do not want to commit myself to any sum; 100*l.* for each year's service might tempt an officer out; you might in the case of the Second and First-Captains say, "You have been so many years a First-Captain or a Second-Captain, we will give you a little more in respect of that." I assume that you are speaking of bonuses offered with a view to effect temporary relief and re-adjustment, and not to the scale of retirement to be permanently adopted. For the latter purpose I think you should adopt the Marine scale, or something very like it.

854. (*Chairman.*) As this would be an experiment I suppose you would suggest that there should be a sum taken in the Estimates and applied by giving

retirements, not to every officer, but as far as it will go. If you were to say to every officer, You may have 100*l.* for each year's service, do you not think you would have what the Americans call a skedaddle?—Certainly; you must feel your way with any system of retirement; and with regard to this graduated scale of retirement, I think there ought to be the right reserved to abandon it, as has been done in the case of the Marines,—at least to suspend its operation in the case of any rank, or to modify the scale, if it was thought necessary.

855. (*Chairman.*) You have referred to Mr. Childers' scheme; probably you have heard Mr. Childers has proposed since a modification, or rather an alteration of that scheme; he has proposed to couple with voluntary retirement in the various ranks compulsory retirement at certain ages?—Yes; I am aware of that.

856. How do you think that that would work?—I do not think that it would suit a regiment like ours at all.

857. Do you think that it would be unfair upon the officers?—Yes; I think it would be exceedingly unfair; I think many cases of great individual hardship might arise under that system. Besides, I think you would be losing the services of very valuable men. You would be punishing a man twice over who has been unfortunate in his promotion. He may be an ardent soldier, and you tell him that he must go: he may be rather old, too old for a Subaltern, though as I have said, it is not that he becomes physically unfit, and he may be in many ways very well fitted for the post to which he aspires, but you retire him, although he might have been a most excellent Captain. I think that you would find that there would be great disadvantages and objections to that system. Again, that system appears to me to be based upon a misconception of the true principles. It appears to me to confound the causes of inefficiency in the junior ranks with those of inefficiency in the higher ranks. In the latter case it is a matter of physical incapacity, in the former it is not. Moreover, there is another feature in the case. We get our commissions by batches of 15 or 16 at a time; the ages within these batches generally pretty nearly approximate. Therefore, you would have sometimes the inconvenience of whole batches going within a few months of one another, which, I think, would be a disadvantage. Finally, the adoption of such a system implies the anticipation of failure in your scheme for retirement—as it presupposes the existence of a condition of stagnation which under a good system should never arise.

Capt. V. D. Majendie, R.A.

22 Mar. 1870.

858. It would not only be a disadvantage, but it would have such an effect upon the Treasury that just at the time when you wanted the scheme to work it would be shut up on account of the expense?—Very likely.

859. (*Mr Milton.*) How many additional steps in the corps do you think would produce a healthy flow of promotion in the Royal Artillery?—I do not know; I have not considered that question. It is a very difficult one.

Lieutenant William Innes, R.E., examined.

860. (*Chairman.*) You are a Lieutenant in the Royal Engineers, I believe?—Yes; I am one of the senior Lieutenants.

861. In what year did you enter the corps?—In the year 1858.

862. From Woolwich Academy?—Yes.

863. How many cadets came in in that year with you?—I forget the exact number in my batch just now, but it was about eight or ten I think. There were more who came in in that year, but this was the number who came in along with me.

864. That was after the great increase in the corps, was it not?—Yes; there was one increase of half a battalion, I think, after I joined in 1858.

865. What is your position amongst the Lieutenants now?—I am eleventh from the top.

866. Who is the senior now?—Lieutenant Crowdy is the senior, I think.

867. What is your prospect of promotion in the corps as promotion now goes?—As promotion now goes I should think I should have to wait probably eighteen months.

868. Before you became a Second Captain?—Yes; taking the promotions as they have been in the last two years.

869. How many years' service will that give you as a Lieutenant?—Between 13 and 14.

870. That is rather longer than an officer ought to be in going through the rank of Lieutenant, but it is not what might be called a very unhealthy state of the corps as yet, is it?—I do not know; there is one point in connection with it to which I have given a good deal of consideration, and which perhaps I may be allowed to mention. I have considered our position a good deal lately with reference to our relation to other branches of the service. Our promotion has been becoming relatively slower (in the junior ranks) than that of regiments of the line for some years past. When I joined, the service of our senior Lieutenants was, I think, about the same or even less than that of the junior Captains who had purchased their steps in line regiments, and I do not think it will be said that this gave rise to any inconvenience or was found detrimental to the service, but rather the contrary. The relative position is very much altered now, our subaltern's service is far longer than it was then. I have here a Statement showing the completed service of the shortest service Captain and the longest service Subaltern in all the Infantry regiments from 1 to 100 upon the 1st of January last. They may be taken to represent, I suppose, the purchase and non-purchase classes in the service; and it will be seen by this that the average service of the junior Captains who have purchased their step is now 9 years and 6 months, and the average service of the oldest Lieutenant, not the top one on the list but the longest service Lieutenant, is 13 years. At the same date our Senior Lieutenant had just completed 12 years' service, which is considerably above the mean of the two above averages, namely 11 years 3 months, so that we are practically suffering supersession at present by all the purchase steps.

Lieut. William Innes, R.E.

22 Mar. 1870.

871. That is to say you consider that if Lieutenants were promoted immediately they had attained 12 years' service the Line could not complain of their getting any preferential promotion?—Certainly not. I think if you took a fair average, it should be 11 years' service. If you take the average of the Captains who have purchased (9 years and 6 months), and of the senior Lieutenants who did not purchase (13 years), the mean between those two is a little over 11. It has gradually been becoming commoner of late years (I know by my own experience and that of my brother officers) to find officers of Engineers placed under officers of shorter service in other branches when associated with them in joint duties, such as Boards, Courts-martial, mixed detachments, &c., where they are expected to take a share of the work and responsibility out of proportion to their nominal status. This sometimes gives rise to a feeling of soreness, besides being, as it seems to me, directly prejudicial to the Service. It used not to be so because we practically superseded the rest of the Service, as it were, some ten years ago. In the junior ranks an officer of Engineers has as a rule had more various and responsible employment than an officer of Infantry, and when he has greater length of Service, and consequent experience as well, it seems a mistake that he should be put in an inferior position on any joint duty. I only speak of the junior ranks. It seems to me that our promotion should at the very least not be less rapid than the mean of the two averages already given, namely 11 years 3 months; indeed, considering the nature of our training and employment, it should, I think, be more rapid.

872. (*Colonel Egerton.*) You regain your position relatively to the Line, or very nearly so, when you become a Lieutenant-Colonel, by passing over the intermediate rank of Major?—That is a very distant prospect. I do not look at it so much as a question of feeling as a matter of practical moment. I do not think it is for the

Lieut. William Innes, R.E.

22 Mar. 1870.

good of the Service that we should be put underneath the average of the Line and other services when we are subalterns or Captains. It would not remedy the matter in the least that I should regain my position hereafter, if I am not able to do my duties just now.

873. The object of my remark was, that we must consider both the top and the bottom of the corps now?—Yes—I am not looking at it as a matter of dispute, or of justice as between the different officers, but as affecting the discharge of our duties. It is not desirable that our officers should be put below those of a similar standing in other branches—at present taking subalterns with subalterns, a subaltern of Engineers is always senior to a subaltern of Infantry of equal service, owing to our having no Ensign's rank, and I do not think the consequent supersession is found to work ill—in fact, in the positions in which we are often placed, it is desirable. But at the Captain's step the state of affairs is now reversed, producing supersession the other way, which is likely to be detrimental in proportion as it becomes more extensive,—that is to say, it cannot be right that as a rule we should supersede them up to one step, and that then the supersession should be reversed. In fact, until within a few years, we did practically supersede other branches in both the lower grades with advantage, I think, to the Service, and without, so far as I know, any objections ever being raised; in fact, the arrangement worked so smoothly and naturally that most of those concerned never thought about it. If a term of service longer than between 10 and 11 years is fixed on for our subalterns, we should, I think, be allowed to reckon our cadets' time, for our people are from 18 months to 2 years older than Line officers when they are commissioned, the course at Sandhurst being a year shorter than the course at Woolwich, whilst though the age of admission is nominally the same, the severe competition for Woolwich keeps it up to the higher limit there. To put it in another way, an officer of Infantry may get his commission at the age of 17, and an officer of the Artillery or Engineers cannot possibly get his younger than 18 years and 6 months. The maximum age for officers getting direct commissions in the Line is less than the average age at which our people get it; that is to say, the average age for officers getting a direct commission is 20, and the average age of ours is 21.

874. (*Chairman.*) You are speaking of the present regulations?—Yes; but then the existing regulations are those under which almost the whole present body of subalterns got their commissions.

874*. Will you please proceed with your suggestions?—Only one other point occurred to me; but by the way with regard to the question of age, when the question of promotion in the Medical Department was under consideration some time ago, the greater age of the medical men at entry was made an argument for giving them their first step at a short term of service.

875. (*Mr. Milton.*) How do you mean giving them their first step?—They are given that first step, I believe, after seven years.

876. They have no step by service; they are debarred from taking their promotion if there is a vacancy.—In seven years time they get a step.

877. Of relative rank?—I am looking at it from the point of view of relative rank just now. My point was, that considering it as a question of relative rank the medical men were given their step of relative rank after a much shorter period of service than other branches on account of their making their first entry into the service at a more advanced age. Then, with regard to the great cost of any adequate scheme of promotion and retirement, I am not aware what the necessary expense would be, but I think it might, as regards our Corps, be met, to some extent at all events, by finding extra regimental employment for all, or as large a proportion as possible, of that portion of the officers not absolutely required for military duty in peace time.

878. (*Chairman.*) You mean employment in civil works?—Yes.

879. In India and the colonies?—Yes, wherever there is any opportunity for employing them and placing them on the seconded list without filling up the vacancies. The Government often require services which can be rendered by Officers of Engineers in other State Departments; and considering the costly and elaborate manner in which they are trained, after selection by a very severe open competition, it seems rather a waste and bad economy to keep them inadequately employed when you are obliged to get other people to do what they could do.

880. How many officers have you upon the seconded list now, engaged in civil or other employment in India and elsewhere?—I do not know.

881. Very many?—Not many out of India; a good many in India.

882. Engaged on public works?—Yes; many of our officers are not seconded in India, who if the rule were carried out in the same manner as it is at home would be.

883. But why does that tend to block promotion?—I do not quite understand; it depends upon whether you fill up the vacancies or not.

884. As the present rule goes I mean?—That is the effect of it.

885. And you propose that the men so employed should be taken out of the Corps altogether, and be put upon a separate list, but the vacancies not filled up?—Yes; that is not with a view to promotion, but rather to saving money for any complete scheme that might be considered desirable. It would merely give a temporary lift if you took them out and filled up the vacancies—it would be like the augmentations that have gone before—it would give a temporary relief and leave things worse than ever eventually. This is a list showing the average length of service. It is taken from "Hart's Army List." I have had the figures checked.

886. Will you hand it in?—Yes.

887. You are doing active duty with your corps now, are you not?—I have been on the staff for the last eight or nine months. I had done duty with the corps up to that time. I am just going back to the corps again now.

888. I suppose there is a strong feeling amongst the junior ranks of despondency, and very little hopes of promotion at present?—Yes, certainly; they are just beginning to appreciate it in fact. I cannot, myself, conceive what brings people into the corps in the present state of it, with our present prospects. It seems perfectly astonishing that, with the prospect of being—say another twenty years—a subaltern, any one should want to enter now at all.

889. (*Mr. Milton.*) I suppose there are no cases of young men who have qualified for the Engineers declining to enter the corps and going into the Artillery, or anywhere else?—Yes, there are such cases. There was a man in my own batch who did so. I was head of the batch, and the second did so. There are cases, but it is not at all common, at least in my experience.

890. (*Chairman.*) Have you prepared a paper to put in?—I have prepared a paper, but it is not quite in the form in which I should like to put it in. If you will allow me, I will correct it first.

(Adjourned.)

Tuesday, the 26th April, 1870.

PRESENT:

Captain the Honourable J. C. VIVIAN, M.P., *in the Chair.*

Colonel EGERTON. | Mr. MILTON.

DENHAM ROBINSON, Esq., and ROBERT R. F. DAVEY, Esq., further examined.

891. (*Chairman.*) You are, I think, Actuaries, and attached to the War Office?—We are.

892. In that capacity you have during the last two years been employed in making various calculations in reference to promotion in and retirement from the Royal Artillery and Royal Engineers?—We have.

893. Will you be good enough to state what proposals you first investigated?—The proposal of the Select Committee of the House of Commons of 1867, that the present system of retirement should cease, and that compulsory retirement at the age of 60, with voluntary retirement on graduated annuities down to the age of 42, should be substituted. We also inquired into an alternative system proposed by the War Office, viz., that the present retirement should be maintained, but that it should be supplemented by the forced retirement of all officers on attaining the age of 60.

894. What were the results of those calculations?—As the whole scheme of the Committee, so far as it would act for a number of years, was based on voluntary retirement, it was necessary that some fixed basis should be assumed for the calculation. The basis we were directed to employ was that Lieutenants should obtain promotion on completing ten years' service.

895. By whom was that direction given?—By the War Office authorities—by Sir John Pakington.

896. That was a basis given to you by Sir John Pakington?—Yes. On this assumption we found that the alternative scheme proposed by the War Office would not act at all in aid of promotion for many years, except to a slight extent, and for a short time, in the Engineers. The proposal of the Committee would not, for more than three years, have secured the promotion of Lieutenants after ten years' service; for to effect that promotion the retirement of more officers would have been necessary than would have remained in the corps of an age to qualify them to retire. As years went on, however, the promotion of ten-year Lieutenants could be obtained on condition that the senior officers in the corps only served for twenty-four years, and then retired on a pension less by more than one-half than the pay they drew. The cost of such a measure would at the least have been 176,609*l.* per annum for the Artillery, on the British establishment, and 90,678*l.* for the Engineers. Of course the result arrived at involved an absurdity; but the absurdity arose from the attempt to obtain promotion for Lieutenants after ten years' service with the ranks proportioned as they now are. We pointed out that a re-adjustment of the ranks would be the only method of securing reasonable service in each.

897. Then all that calculation was based upon the desire to promote a Lieutenant after 10 years' service?—It was.

898. But Mr. Childers' committee hardly proposed that?—No; but Mr. Childers' committee left the matter entirely subject to voluntary retirement. We could not compute anything unless we had a fixed basis of some period for promotion or other certain result to be attained.

899. What were your next calculations?—It was not considered satisfactory that the whole conditions of service should be based on the mere period of service as Lieutenant; and, moreover, 10 years was thought too short a period. We were therefore instructed to recalculate the proposal of the Select Committee of 1867, with this limitation, that it should only act so far as to procure the promotion of Lieutenants after 12 years' service, and that officers should become First-Captains not later than at 18 years' service, Lieutenant-Colonels at 25 years' service, and Colonels at 34 years' service. As an alternative, was proposed a scheme in which certain annuities, different from those suggested by the Select Committee, were to be given for optional retirement of officers of 21 years' service and upwards, and in addition, officers of 7 years' service and less than 21 were to be permitted to sell out for lump sums proportionate to their service. These means were to be employed for securing additional retirement to that provided by the fixed retirement of 42,400*l.* for the Artillery, and 18,285*l.* for the Engineers which fixed sums for retirement were to be retained.

900. Whose was that alternative scheme?—It is mentioned in the previous witnesses' evidence as General Lefroy's scheme, but we do not know that officially.

901. It is the scheme proposed in General Lefroy's pamphlet, that you are now discussing?—We cannot say that it is precisely the scheme proposed in his pamphlet. We had before us a memorandum prepared by him, which is in the War Office. We can give in that memorandum if necessary. We hand in a statement of the precise terms of the scheme calculated. (*Vide* Appendix P.)

902. (*Mr. Milton.*) As I understand you, that scheme gave 12 years' as a Lieutenant, six years' as a Second Captain, seven years as a First Captain, and nine years' as a Lieutenant-Colonel?—Yes, that was the basis we were to take in calculating the effect of the Select Committee's proposal. The same limitation as in the Committee's proposal was to be adopted with reference to the alternative scheme. We found that the retirement necessary to secure service in the several ranks at the periods given would cost yearly for the next 10 years, on an average, for the Artillery on the British Establishment, 68,820*l.* under the plan of the Committee, and 75,932*l.* under the alternative proposal; or, if the corps were in a normal state, 167,803*l.* under the Committee's proposal, and 163.931*l.* under the alternative. The annual cost for the Engineers would for the next 10 years' have averaged 40,182*l.* on the Committee's basis, or 39,721*l.* on the alternative. In a normal state this cost would be 103,512*l.* on the Committee's proposal, and 81,815*l.* on the alternative. Great as was the cost of these proposals they both involved the necessity for many Colonels and Lieutenant-Colonels accepting retirement at 250*l.* a-year. We pointed out that the alternative proposal acted best for the Engineers, and the proposal of the Committee of 1867 best for the Artillery. The reason of this difference is, that in the Engineers every rank bears too large a proportion to that above it for the assumed periods of promotion to be preserved by ordinary casualties; and that, consequently, any scheme which permits of retirement down to an early period of service will relieve the blocks more efficaciously than one which only affords an exit down to 22 years' service. In the Artillery, on the other hand, the Lieutenants are not too numerous in proportion to the Second Captains and Captains, so that if due promotion be afforded for the Captains, the promotion of the Subalterns will not require any special provision. Consequently, money would be applied otherwise than to the best advantage in tapping the list of officers below the higher strata of the Captains. This argument is yet more enforced by the reduction of 84 Lieutenants which has been since decided on. In reporting on these proposals, we again pointed out, more forcibly than before, that of all plans for ameliorating the position of the officers, a re-adjustment of the ranks would be the most economical.

903. (*Colonel Egerton.*) Do you mean a re-adjust-

D. Robinson, Esq., and Robert R. F. Davey, Esq.

26 April, 1870.

ment in both the Artillery and the Engineers, or only in the Engineers?—In both corps.

904. (*Mr. Milton.*) When you speak of a general readjustment, in what direction would that readjustment go?—In the Artillery the readjustment would be in the direction of increasing the number of Lieutenant-Colonels as compared to Captains. In the Engineers it would be to increase all the upper ranks as compared to the ranks immediately below them.

905. (*Chairman.*) Have you suggested any specific scheme for readjusting the ranks?—We have worked out the proportions in which the ranks should be, in order to secure the promotion required.

906. Have you made any calculations on the subjects in question between those to which you have just alluded and those which you have made for this Committee?—We have calculated for Mr. Cardwell the probable effects of various suggestions; but those suggestions are so mingled, directly or indirectly, with the proposals that are before your Committee, that what remarks they call for will best occur in our reports on those proposals.

907. What are the specific systems of promotion and retirement which you have now calculated?—We have calculated, as far as the year 1893, the cost and promotion which would probably be given by four systems, taking the officers at their actual ages, and in the order they stand by seniority. First, we have carried on the present system of retirement, *i.e.*, fixed sums of 42,400*l.* for the Artillery, and 18,285*l.* for the Engineers, without any limit to the age for regimental service. The results of this calculation are to show the state of promotion during the next 23 years, should no ameliorative measure be adopted; the cost, of course, remaining a fixed sum. Secondly, we have taken the basis fixed by the Secretary of State for your deliberations, that the present fixed sums for retirement be abolished, and that retirement be compulsory at the age of 60. This calculation shows the probable minimum of cost for retirement, and the state of the several ranks which that minimum expenditure for retirement would be likely to bring about. It affords, as it were, a substructure on which you can build such improvements as you may think expedient. Our third and fourth calculations have reference to the measure suggested by Mr. Childers, viz., compulsory retirement from the rank of Colonel at 60, from that of Lieutenant-Colonel at 54, and that of Major at 48, with voluntary retirement in each rank for six years previously. The voluntary retirement causing an element of uncertainty, our third calculation is based on the supposition that every officer serves until his age compels his retirement, while our fourth calculation supposes that each retires as soon as it may be in his power to do so. The results show the limits of the action of Mr. Childers' scheme, the one giving the minimum, the other the maximum cost for retirement and results in promotion. The actual effects would lie between the two. In addition to these specific systems, we have made many calculations as to normal establishments and the general theories of promotion and retirement. We beg to hand in statements and diagrams for the Artillery and Engineers respectively (*vide* Appendix Q, R, S, T), showing under the several systems for each year, first, the probable completed service of the senior officer in each rank; second, the total cost of the non-effective list; third, the number of retirements. As regards the present system, the diagrams carry back the promotion to the year 1850, for the purpose of comparing the action of promotion for the past 20 years with that which may be expected to occur for the future.

908. As a matter of calculation, have you found such identity between the Artillery and Engineers that it would be necessary or desirable to apply the same measures of relief to the two corps?—On the contrary, we find that the two corps are so differently circumstanced as regards proportions that the stagnation they respectively suffer from, neither occurs at the same point nor is necessarily remediable by the same measures. From the evidence of previous witnesses, it would appear that there is no military necessity for parallel treatment of the two corps.

909. Then it will probably tend to the simplification of the difficult subject before us if we take your evidence on the two corps separately, beginning with the Royal Artillery. Adverting to the existing system in the first instance, what allowance have you made for the Indian amalgamation?—We have treated the Indian amalgamation in precisely the same manner in all the different schemes. Prior to 1860 there were a regiment of artillery and a regiment of engineers in each of the Indian Presidencies; but in that year it was decided to amalgamate them with the Royal Artillery and Royal Engineers by processes of gradual absorption. The officers then in each Indian regiment were to be promoted as if no change had occurred; the vacancies, however, at the bottom of their respective regiments were not to be filled up in such regiments, but by the appointment of a lieutenant (for each vacancy) to the Royal Artillery or Royal Engineers. For example, if a vacancy were to occur in 1871 among the Colonels of Bombay Artillery, promotion would be given to the senior Lieutenant-Colonel, Captain, Second Captain, and Lieutenant on the Bombay List, and one Lieutenant would be added to the Royal Artillery. Under this arrangement the number of Lieutenants in the Royal Artillery and Royal Engineers has been continually increasing since 1860, and will continue to increase until all the Indian Lieutenants shall have been promoted in their respective establishments to the rank of Second Captain. When that shall happen, the total List of Lieutenants will be complete, and a similar gradual increase of Second Captains will take place in the Royal Artillery and Royal Engineers. This process will be continued until all the Indian ranks shall have been absorbed, many years hence. As an instance of the intermediate action, we may suppose a vacancy among the Colonels of the late Bombay Artillery in the year 1880, when all the Bombay Lieutenants and Second Captains will have disappeared. In this case promotion in the Bombay regiment will be given to the Senior Lieutenant-Colonel and Captain, and in the Royal Artillery to the Senior Second Captain and Lieutenant, an addition of one being concurrently made to the Captains on the Royal Artillery List. In order to appreciate the action of any scheme of promotion, it is necessary to know when the several Indian corps will commence in each rank to contribute promotion to the British List. Precise data as to the mortality and promotion in the Indian cadres being unattainable, we have assumed that the future will follow the rule of the past, and have carefully ascertained for twenty years prior to 1868 the rate of progression in each rank and corps. On this basis we anticipate, as regards the artillery, that the Indian Lieutenants will be extinct in 1875, Second Captains in 1884, Captains in 1895, Lieutenant-Colonels in 1906, and Colonels in 1915; when the amalgamation will be completed. The Table which we hand in shows more in detail the years in which the British Artillery and Engineers will commence to profit directly by the Indian vacancies. (*Vide* Appendix U.) With regard to the effect on the British list from 1860 to 1875, the list of Lieutenants increases gradually from 413 to 619 in the Royal Artillery, while the Second Captains only begin to increase in 1872. The *apparent* result is that the Lieutenants, relatively with the higher ranks, reach a position which is every year more and more unfavourable. In *reality* this is only partially the case; for every Indian vacancy clears an Indian Senior out of the way; and partly after 1872, wholly after 1875, every Indian vacancy will give promotion to a British Lieutenant. The unfavourable effect caused by the Indian amalgamation arises from the circumstance that the upper ranks in the British Artillery and Engineers give a better ratio to the lower ranks before that event, than they will do when the amalgamation shall have taken full effect.

910. How have you treated the Seconded and Supernumerary officers?—As an augmentation of the ranks in which they occur. Their numbers we find to be tolerably uniform from year to year. To complete the regiment, the place of an officer Seconded or made Supernumerary is filled up by the promotion of an

officer from each lower grade, and by the appointment of a Cadet to a Lieutenancy. In most cases the Seconded or Supernumerary officer ultimately returns to the active list, absorbing, when he does so, a vacancy in the rank he may then hold, and so depriving the lower ranks of a step of promotion. If the transaction ended here the result would merely have been the expediting of a promotion, and would have had an insignificant effect on the body of officers. In a considerable series of years, however, the number of officers of the several ranks in the Seconded and Supernumerary Lists is remarkably stationary; the only inference being, that when one officer returns to the active list of the corps from his *quasi*-military or civil post, another from the active list takes his appointment, and is transferred (causing a promotion) to the Seconded or Supernumerary List. This being the case, and the Seconded and Supernumerary officers retaining their rights of succession to the Retired Full Pay, it follows that those lists are virtually an increase of the upper ranks of the corps, and that the greater the number of officers on them the better it is for the junior ranks in regard to the ordinary casualties causing promotion. As regards the public, so long as retirement is limited to a fixed sum annually, this benefit to the officers only costs the charge necessary for converting Cadets into Lieutenants. When, however, a fixed age for retirement shall be adopted these Seconded officers will cause a direct increase to the non-effective charge.

911. What is the service at present of the senior officer of Artillery in each grade?—The Senior Colonel has completed 38 years' service, the Lieutenant-Colonel 28 years, Captain 23 years, Second Captain 16 years, and Lieutenant 12 years.

912. Does that length of service represent efficiency?—With the exception of the Lieutenants, in all ranks the service is below those standard periods which have been assumed to represent a proper state of promotion.

913. You refer to the periods which have been given before?—Yes, 12, 18, 25, and 34 years' service.

914. (*Mr. Milton.*) They are now 12, 16, 23, and 28, are they not?—Yes.

916. (*Chairman.*) How do these periods of service compare with those of earlier years?—We have not thought it necessary to go farther back than 1850, as that year came towards the close of a long period of peace, and shortly before the great augmentations of the Russian War. In 1850, the Senior Colonel had served 33 years; Lieutenant-Colonel, 46 years; Captain, 36 years; Second Captain, 15 years; and the Senior Lieutenant, only 7 years. The great difference of 21 years between the Captain and Second Captain must have been due to recent augmentations. In considering these terms of service it should be borne in mind that officers in those days entered the corps from 2 to 4 years younger than at present, so that an officer who, in 1850 had 12 years' service might not have been an older man than one who in 1870 had but 8 years' service. Immediately following the year in question came the Russian and Indian Wars, with great augmentation of the corps, so that by the year 1857 the officers (excepting the Colonels), had fallen to their shortest periods of service. Colonels still reckoning 52 years' service, but Lieutenant-Colonels having descended to 31 years, Captains to 20 years, Second Captains 11 years, and Lieutenants 6 years. From that year, 1857, to the present time, the service in each rank has gradually increased.

917. The causes of complaint must have reference rather to future than to present stagnation, must they not?—The approach to inefficiency must at present be rather from moral than physical causes. The officers are not as yet beyond the standard limits of service. The inefficiency, if it exist, must be caused by despondency in officers who see before them a probable slowness of promotion, while they can look back to a very recent period when at their present completed service they would have had higher rank than they now hold. The service of the present Senior Lieutenant would in 1857 have made him a First Captain nearly half way up the list of that rank.

918. And that rather than the age of the officers is the cause of the present dissatisfied state of the corps?—Yes, it must be so; that they look forward to long service in low rank rather than that they have actually passed through it.

919. Now, passing to the future, what may be expected to be the periods the officers will have to serve to obtain promotion?—In 1875, that is five years hence, the Senior Colonels will have thirty-five years' service, Lieutenant-Colonel thirty years, Captain twenty-five years, Second Captain nineteen years, and Lieutenant fourteen years. Here the Lieutenants, Second Captains, and Captains will have overpast their standard periods; while the Lieutenant-Colonels and Colonels will be considerably below the standards assigned to them. Five years later, in 1880, every rank will have increased two or three years in service, except the Lieutenants, who will have risen one year. At that time Lieutenants will have attained a service of fifteen years, a point they will not pass, up to the year 1893.

920. Is that the worst that will be reached?—1893 is the limit of our calculations.

921. The worst between now and 1893 will be fifteen years' service?—Yes, for Lieutenants of Artillery; not for Lieutenants of Engineers, At that time, 1880, Second Captains will have passed their standard period by four years, Captains by three years, the Senior Lieutenant-Colonel will have thirty-three years' service, but the Senior Colonel not more than thirty-seven years. Passing now to the latest year to which our calculations extend, viz., 1893, we shall have Colonels of forty-two years' service, Lieutenant-Colonels of thirty-nine, Captains of thirty-six, Second Captains of twenty-six, and Lieutenants of fifteen years' service. The Lieutenant-Colonels, Captains, Second Captains, and Lieutenants being severally five, eleven, eight, and three years above the standard periods, and eleven, thirteen, eleven, and three years above their present seniority. Therefore in twenty-three years the three ranks of Lieutenant-Colonel, Captain, and Second Captain would, if the present system were to continue unaltered, have increased on an average twelve years in their length of service. The officers may consequently be considered to have strong grounds for thinking that remedial measures are necessary.

922. Then, the Colonels at the very worst period will only be three years above the standard?—The Colonels will not exceed the age of 60; they will have forty-two years' service, but they will have come in at 18.

923. But will they never exceed the age of 60?—Not up to 1893.

924. To what do you attribute the small increase of service in the rank of Lieutenant comparatively with that in the other ranks?—Partly to the reduction of eighty-four Lieutenants recently decided on, and to the reduction of the Subalterns of two Indian Brigades, in which the reduction in superior ranks will not be felt until future years. In a great degree, however, the disparity of loss in favour of the Lieutenants is attributable to the large effect which will be derived shortly from Indian vacancies.

925. A pamphlet has been quoted by one or two witnesses who have appeared before us written by a gentleman with whom you are probably acquainted, a Mr. Sprague: have you read that pamphlet, it is a pamphlet on the prospects of promotion in the Royal Artillery?—We have read it.

926. (*Mr. Milton.*) What is the date of it?—January last.

927. (*Chairman.*) Do you agree with the results which he obtains?—Mr. Sprague's calculation extends to the year 1899, whereas ours have only been carried to the year 1893. We are, therefore, unable to follow him through the last six years of his Table. As regards the period from 1870 to 1893, we do not differ substantially from Mr. Sprague, so far as the Lieutenant-Colonels and Captains are concerned; but we dissent totally from the forecasts he has made in regard to Second Captains and Lieutenants. He considers that Lieutenants will in 1894 reach a service of twenty-seven

D. Robinson, Esq., and Robert R. F. Davey, Esq.

26 April, 1870.

years; whereas, to the best of our belief, in 1893 their service will not exceed fifteen years.

928. Can you account for so remarkable a difference between your calculations and those of Mr. Sprague?—Yes. Mr. Sprague not being acquainted with the intricacies of military promotion, has been unable to detect omissions in the data given to him. The rate of mortality he has employed is too low; but the great error lies in the proportions between the several ranks. While taking the actual number of Lieutenants on the British List (587), he only allows them succession to the superior grades on the British List (in all 463); whereas, in point of fact, at least 200 of these 587 Lieutenants have been appointed in succession to vacancies on the Indian Lists, and, with the exception of the senior 134, all the Lieutenants will succeed for promotion to vacancies in the higher ranks on the British and Indian Lists combined, or on a total nearly double the 463 allowed by Mr. Sprague. It need scarcely be pointed out that the difference thus made in the rate of promotion would be prodigious, and that the average number of promotions will much exceed those in the last paragraph but one of Mr. Sprague's Report, though, except as regards Lieutenants, that difference would not be materially felt during the next ten years. As regards the rate of mortality, we made use of that derived from the lives of Government annuitants—picked lives.* Now, the fear we always had was, that we were taking a Table too favourable to longevity, and we still think that such a conclusion has some grounds to rest on. To our surprise, however, Mr. Sprague takes a Table far lower (in some cases less than half) than the death-rate of these Government annuitants. In support of his Table, Mr. Sprague gives the three following reasons; first, "All the officers are in the first instance select lives;" secondly, "Those who fall into ill-health are constantly removed;" and thirdly, "Those who remain in active service are exposed to no special influences dangerous to health or life." The first only of these assertions is correct, and we have duly appreciated the fact in the mortality Tables used by us. In contradiction to the other two assumptions we can merely observe that men in ill-health do not resign; but as a rule remain on full-pay and so die, making vacancies. (If they die on temporary half-pay they create vacancies equally.) The officers spend one-half their time on an average in India, and of the remainder of their military career a portion is spent by the majority in unhealthy climates as China, Ceylon, Bermuda, the West Indies, to say nothing of Malta, Gibraltar and Mauritius. Abandoning theory, however, we have ascertained the actual mortality during the last twelve years, a tolerably representative period, although without very serious action consequent on India. Taking the average rate for each rank as the mortality for the mean age in that rank, we obtain the comparison shown in the Table which we now submit to your Committee, between Mr. Sprague's rates, our assumed rates, and those which have actually obtained during the past twelve years.

COMPARISON between the Rates of Mortality at at certain ages, as used by Mr. Sprague and at the War Office respectively, in calculating Artillery Retirement and Promotion and the Rates which have actually obtained, on an average, from 1858 to 1870.

Age.	Mr. Sprague's rate.	Actual Artillery experience.†	War Office rate.
25	·62	1·10	1·30
31	·67	1·16	1·14
37	·77	1·51	1·30
46	1·11	1·06	1·41

* See Mr. Finlaison's evidence (Q. 1969) before Select Committee of 1867, on Army System of Retirement.

† Service in India will have had a very small effect in the earlier years of the period on which this average is founded; whereas in future years, as the Indian amalgamation takes increased effect, it may be expected to exercise heavy influence in raising the rate of mortality.

In these it is to be remembered that the rates in the lower ranks are those which principally influence the results. Mr. Sprague likewise rests the proof of his mortality Table on the steps of promotion gained in the past few years which should according to him average 13·7 from Lieutenant to Second Captain. The annual number of steps since 1858 has actually been 17·3 being 26 per cent. higher than Mr. Sprague's calculation. We need say no more in proof, that Mr. Sprague has under-estimated the mortality to which the corps would be liable.

930. In going into this matter have you come to the conclusion, that this impending stagnation is attributable to the large augmentations made from 1854 to 1858?—Up to the present time, only to the small extent which is represented by the proportional difference in the augmentation of the corps and in that of the sum granted for retirements. If the sum now available for retirement bears a less proportion to the number of officers in the corps than it did before the augmentations, then promotion has been permanently retarded. Otherwise, inasmuch as the augmentations affected all ranks and left them though larger absolutely, yet relatively in the same proportion they held before, there was no reason why the periods of promotion should suffer any ultimate change. When a considerable augmentation occurs, the senior-officers are pushed rapidly up to higher rank, and therefore are great gainers. Those who take their places in the lower rank rise speedily towards the top of the rank, but have to wait for vacancies above them for promotion out of it. If the proportion between the ranks remain as before, the temporary stagnation will be that caused by the abnormally small ages of the officers who have been promoted under the augmentation. This describes the position of the large number of officers who entered the Artillery at the period of augmentation referred to. They are now awaiting promotion, and there is not adequate promotion for them. Inasmuch however, as the augmentation left the proportion of the ranks as it stood before (and the Retired List is usually full), that augmentation is not as yet responsible for the stagnation of promotion which would, proportionally to a smaller corps, have been as great had the augmentation never taken place. Should the period arrive when there shall not be enough officers of long service to keep the Retired List full, then promotion will directly suffer from the augmentation.

931. Will you tell the Committee which you think the fairest basis upon which to make a calculation for retirement, age, or length of service?—As regards the final retirement from the corps, we presume that physical efficiency is the thing looked to, and therefore age must be the basis; but as regards any intermediate retirements, should they be decided upon, age seems scarcely a fair basis, because it gives so much greater chance of promotion to the youngest men in each batch who come in.

932. We assume, as our basis, that it is settled that 60 years of age in the upper rank shall be the age for compulsory retirement; but it was with regard to any scheme of retirement in the junior ranks that I wished to ask you whether, for those ranks, you thought age or length of service would be the best basis?—Should you fix upon any compulsory retirement at earlier periods than 60 years of age we certainly think that service rather than age is the fair basis.

933. (*Mr. Milton.*) You observed, I think, that you did not consider that the extraordinary augmentation chiefly at the time of the Crimean War, was responsible for the retardation of promotion which is now complained of. Did not that augmentation at the time cause accelerated promotion to certain fortunate officers?—Undoubtedly.

934. Then it was responsible for that accelerated promotion?—Yes.

935. Must it not, therefore, have been responsible for the retarded promotion of those who were less fortunate?—Supposing we are right in the assumption that the proportion between the ranks was unaltered it would

only responsible until the former period of service had been recovered.

936. Must you not add to that the fact that those men were promoted at an earlier age and therefore kept their places longer?—Yes; if you have a compulsory retirement that must be remembered.

937. I am not speaking of compulsory retirement in the lower ranks, but only in the upper ranks?—We think all that has been lost is owing to the fact that those men have been a little younger, and therefore the rate of mortality has been lower. They will retard promotion, hereafter, as in the earlier years less than the normal number will be qualified to retire in each year.

938. It has occurred to me throughout the whole of this investigation that the real moving cause of the block, as it has been termed, which is now existing or foreseen in the Artillery, was the fact of the large promotion made at the time of the augmentation?—That will be so to a more perceptible extent in the future. The present stagnation is rather attributable to an impracticable proportion between the several ranks and to an insufficient retirement. Retirement not being yet exhausted, we ought to have an increased flow of promotion in proportion to the augmented Corps.

939. I think you would, but for the fact that, as these vacancies went to men at a very early age, compared to what was the case previously, they, to a very disturbing extent, do not give the vacancies you would otherwise have had?—Of course they will hold the ranks longer.

940. (*Chairman.*) If the Corps were in a normal state, what would be the periods of promotion under the present system?—Lieutenant-Colonels would become Colonels at forty-two years' service; Captains would serve as such till they completed thirty-five years' service; the Senior Second Captain would have served twenty-five, and the Senior Lieutenant sixteen years.

941. What is the precise meaning you attach to the expression "a normal establishment?" — A normal establishment implies, that the numbers at each year of service shall regularly decrease as the years of service increase. The largest number being the Cadets, who enter at the bottom, and the smallest those old officers who annually reach the limit for regimental service. If year by year the same number of Cadets entered, the officers would be arranged in a regular series, and promotion would be uniform, and constant in its degree. That is what we consider a normal establishment.

942. At what period would such a normal establishment be obtained?—If ever, at a very distant period; and not until many generations of officers had come and gone. The Corps is highly abnormal now, the batches of some years of service being far above the average. When those batches arrive at the period for compulsory retirement, there will, at one time, be an abnormally large number retired, and a consequently abnormal addition of Cadets to the Corps. These new Cadets being above the average number would constitute an abnormal batch throughout their service, and their retirement would again introduce an unduly large number of Cadets. It is true, that in each military generation the divergence from the normal would be reduced by casualties; but, nevertheless, it is difficult to foresee how long a period would have to elapse, without any disturbing cause, before an absolutely normal state of the Corps could be reached.

943. Treating the Royal Artillery alone, assuming that it is necessary to do something for the Artillery, and that that something should be based first of all upon putting a stop to the present system of retirement; and, secondly, upon a compulsory retirement at the age of 60, what would be the effect of such an arrangement upon the Corps?—Of course a bar would be placed to the ultimate ageing of the Corps; but from the comparatively small range of the ages of the present officers, and from the exceptionally low ages (as a rule), of those in the higher ranks, it would be many years before retirement at 60 could come into operation, or, therefore, create promotion. We reckon that its first action would occur in 1880–81, when one Lieutenant-Colonel would go. In 1881–82, there would be three Colonels to retire; four in 1882–83; and for the remaining years to 1893, they would average about nine per annum. When that average action should take place, the relief to the ranks below would be more than double that afforded by the present system, of course at an increased expense. In the intervening years, however, while the retirement had not yet come into play, the ranks would continue to increase in age and length of service, so that until the year 1890, every rank would be worse off than if nothing were done, and the present system permitted to run on without alteration. From 1890 to 1893, the turn would begin. Colonels would still, as under the present system, have forty-two years' service; but Lieutenant-Colonels would have fallen a year to thirty-eight years' service; Captains, a year to thirty-five years' service; Second Captains would have the same service as under the present system. Lieutenants would have gained a year, and have fallen to fourteen years' service. Concurrently with the preliminary ageing of the ranks there would be a lessening of the cost for retirement The 42,400*l.* ceasing to be filled up, would gradually die down as vacancies occurred, until in 1880–81, when the 60-year-old retirement would first take effect, it had dwindled down to 18,489*l.* It would not be until 1882–83, that the cost of new retirements would exceed the sum falling in from death vacancies on the old list. In that year the total charge for the non-effective list would be 19,434*l.* The cost would then rise by about 4,000*l.* a-year, reaching 31,395*l.* in 1886–87, passing the original 42,400*l.* in 1889, and attaining the sum of 54,011*l.* in 1892–93. Owing to the slowness with which this retirement would operate, and the large number of officers who would come under its action in the last three or four years of the century, the greatest cost is far from being reached in 1892–93; but time has not allowed of the calculations being carried further. It is evident that there would be a great number of officers to retire from 1897 to 1900, being the men who came in at the Crimean augmentation.

944. Then you could not say what would be the cost of this retirement if the corps were in a normal state?—Yes; the charge for the British establishment would be 74,040*l.*, being 31,640*l.* more than Great Britain at present pays.

945. What promotional periods would be obtained in return for that expenditure?—Officers would have served on becoming Colonel 37 years, on becoming Lieutenant-Colonel 31 years, on becoming Captain 23 years, on becoming Second-Captain 15 years; showing the following gain over the present system, that the Senior Lieutenant would be younger by one year, the Senior Second-Captain by 2 years, the Senior-Captain by 4 years, and the Senior Lieutenant-Colonel by 5 years.

946. I now pass to the proposals made by Mr. Childers of having a compulsory retirement at the intermediate ranks of Lieutenant-Colonel and Captain; for the sake of comparison, what would be the cost of that upon a normal establishment?—The proposal of Mr. Childers at its greatest cost, that is on the supposition that every officer retires as soon as he has the option of doing so, would represent for the British proportion of the annual charge for retired pay 119,989*l.*

947. Is that from the corps in its normal state?—Yes; the normal corps with cadets entering at the age of 20. With the scheme operating on its most economical basis, *i.e.*, when every officer served until the period at which by age he should be compelled to retire, the annual British non-effective charge would be 84,146*l.* Taking for purposes of comparison the last and least expensive of these results, viz.: that when Colonels retire only at 60, Lieutenant-Colonels at 54, and Captains at 48, the excess over the existing charge would be annually 41,746*l.* But this increased charge would give promotion after the following periods: on becoming Colonel, 34 years' service; on becoming Lieutenant-Colonel, 28 years' service; on becoming Captain, 21 years' service; on becoming Second-Captain, 13 years' service; being an improvement on

D. Robinson, Esq., and Robert R. F. Davey, Esq.

26 April, 1870.

the existing promotion to such an extent that the Senior Lieutenant would be younger by 3 years, the Senior Second-Captain by 4 years, and the Senior Captain by by 7 years, and the Senior Lieutenant-Colonel by 8 years.

948. If you compare this measure of retirement and promotion with that given by retirement at the age of 60, the corps being in its normal state, what are the results?—The cost for the British Establishment would be greater under Mr. Childers' cheapest action by 10,106*l.* per annum, for which the following reduction in the ages of the officers would be obtained. The Senior Lieutenant would be younger by 2 years, the Senior Second-Captain by 2 years, the Senior-Captain and the Senior Lieutenant-Colonel by 3 years.

949. If that is the result of Mr. Childers' proposal on the corps with its normal establishment, what would be the effect of it upon the corps in its present abnormal condition?—The promotion of the corps in its present state is shown by the red line on the diagram which we have handed in (Appendix S), so far as Mr. Childers' scheme should act at the compulsory ages only. Supposing for the moment that officers were eager to retire to such an extent that the measure acted at its lowest optional ages, the effect would be enormous from the first. 27 officers would retire in 1870-71 at a cost (including the Dying-out List) of 46,648*l.*

950. (*Mr. Milton.*) What do you mean by the Dying-out List?—The 42,400*l.* closed against further admissions.

951. (*Chairman.*) In addition to that there would be a cost of nearly 47,000*l.* for 27 retirements?—No; it would include that. In the first year it shows an increase of 4,000*l.* odd. The numbers of retirements would fluctuate (never falling below 12), until in 1883-84 there would retire 62 officers, and the annual charge would have risen to 106,151*l.* Should this great retirement continue, the charge in 1886-87 would be 129,061*l.*, and in 1892-3 it would be 151,254*l.*, officers from the amalgamated list having been retiring for 10½ years, a portion of the charge having been so far incurred on behalf of India. The promotion would have been so extensive that in every rank the senior officer would be much below the standard periods of service. His estimated service is shown in the tabulated statement we have given in. Adverting, however, to Mr. Childers' proposal in its cheapest form, when it gives least promotion, that is, where officers only retire at the ages at which retirement is compulsory, we find that from the present low ages of officers, as in the 60 years' retirement, the measure would not act at all for several years, during which time the ranks will be continuously ageing. The first operation will not commence until 1874-75, when one Lieutenant-Colonel will retire. Two Captains will retire in each of the two following years:—In 1877-78, the retirement will extend to Lieutenant-Colonels, but will not touch the Colonels until 1881-82. From that year forward there will be retirement in each of the three ranks, with a considerable augmentation of promotion. The cost of the Retired List will decrease from the present 42,400*l.* until 1877-78, when the lowest charge (28,115*l.*) will be reached. From that point the cost will increase with great rapidity; will pass the present 42,400*l.* in 1882-23, reach 72,490*l.* in 1886-67, and 126,384 in 1892-3, being then very far from its maximum. At this time officers appointed to the amalgamated list will have been retiring as Captains for 4½ years. With regard to promotion, it would not be until 1881 that the periods given by the present system would diminish, and for the first few years they would be overpassed. Thence, until 1893, the shortening of service would be very considerable.

952. The promotion you have shown would be considerable, and, having ascertained the cost, what would have been the action upon the officers concerned?—So far as those officers are concerned who remain in the corps, after the first few years of stagnation they will benefit by a more rapid promotion, the benefit being somewhat balanced by an uncertainty as to whether at the next stage they may secure promotion, or be forced to retire. To those officers, however, and their number will be large, who have to pass compulsorily to the non-effective List, there will be a loss as compared with those on the present Retired List. Those who retire at present do so on incomes averaging considerably above 500*l.* On Mr. Childers' cheapest system, that is where retirement is compulsory, and the annuities are largest, the average would be about 360*l.*

953. Mr. Childers' maximum, I think, was 600*l.*, was it not?—Yes, Mr. Childers' maximum was 600*l.* to Colonels retiring at 60. That is the same as Colonels get now, at whatever age they retire, if they have thirty years' service.

954. You have now given us the results of your investigations as to the several schemes which have been referred to you by the Secretary of State. Have you also investigated any of the proposals made before this Committee by previous witnesses?—We have.

955. We will take, first of all, General Gambier: you are prepared to go into General Gambier's evidence, I think?—Yes.

956. General Gambier calculated that in 1884 there will be 27 officers to retire at 60, and 26 in the two following years. Do you concur in that calculation?—We calculate that there will not be any such retirements until 1880, when one may take place. In the six following years there will be 39 retirements, averaging 6½ a-year. The normal number would be 8½.

957. General Gambier has handed in a Return showing, for a number of years, the probable positions of certain officers. Have you seen that Return?—We have.

958. Do you agree with it?—We agree substantially with General Gambier's Return, except as regards Lieutenants whose case he states too badly; probably from not having given sufficient credit to Indian vacancies.

959. General Gambier in certain parts of his evidence, proposes a scheme of retirement and promotion. Upon what principle do you understand that that proposal is based?—As we read General Gambier's proposal, we take his recommendations to be, first, that the present service for voluntary retirement be reduced from thirty to twenty-eight years; second, that all Major-Generals or Colonels be removed from the Effective List on completing thirty-eight years' service; third, that for the next ten years, 2,000*l.* a-year be spent in buying out Junior Officers; fourth, that the ranks of Lieutenant-Colonel, Captain, and Second Captain, be gradually augmented by the promotion of 82 Lieutenants in ten years.

960. Have you considered what would be the financial effects of this scheme?—General Gambier estimates that to promote in twelve years the Lieutenants on the British establishment, there must be annually 34 vacancies in the higher grades. The casualties are stated to afford 17 vacancies, and (taking one year with another until 1880) General Gambier proposes to obtain 7 others by an additional measure of retirement; while the remaining 10 are to be secured by a gradual increase of the upper ranks, and by the investment annually, of 2,000*l.* in purchasing officers out. Before inquiring into the cost and results, it is necessary to examine carefully the accuracy of these premises; first the vacancies necessary and the casualties; second, the probability of the 7 vacancies being obtained from the contemplated increase of retirement. First, in computing the vacancies necessary, it is not sufficient to take into consideration merely the Lieutenants on the British Establishment. Since 1860 no Lieutenants have been appointed to the Indian Lists (which are gradually dying out); but as a vacancy in either of them has occurred, a Lieutenant has been added to the General or British List. In two years these Lieutenants appointed indiscriminately in succession to British or Indian vacancies, will (by the theory of twelve years' service) begin to require promotion; and will succeed to vacancies in the higher ranks in order of seniority, whether the Lieutenant promoted be on the

British or Indian Establishment. It therefore is not safe, in any calculation, to treat the British and Indian Establishments as separate bodies. The only accurate way is to throw the whole of the four Lists into one general Corps—as they will ultimately become—and find the vacancies given by the upper ranks of the whole to the whole List of Lieutenants. We find that for the whole list of Lieutenants (British and Indian) 46 promotions will, on an average, be required annually for the next ten years. The Indian Lists provide 10 of these, and ordinary casualties in the British List 18, leaving 18 to be obtained by special means between the British and Indian Establishments. Ten vacancies, irrespective of those furnished by India, may be taken as the approximate annual average to be specially secured on the British Establishment.

961. The amalgamation will not take place until 1894, I think?—The total amalgamation will not be entirely completed until 1915, but the amalgamation of Lieutenants will probably be completed in 1875.

962. During these next five years is it quite fair to take the whole calculation of the vacancies in the upper ranks?—Yes; because our Lieutenants are profiting by them now; since, though they are not promoted, they are brought up nearer to promotion. Every Indian Lieutenant who is promoted to be a Second Captain removes one senior officer out of the way of our Lieutenants when their turn comes. Ten vacancies, irrespective of those furnished by India, may be taken as the approximate annual average to be specially secured on the British Establishment.

963. (*Mr. Milton.*) Instead of seven, as General Gambier proposed?—No; we think that agrees with General Gambier. He wants to get seven by an additional measure of retirement.

964. And ten by a system of buying out?—Ten are to be secured by a gradual increase of the upper ranks, and by spending 2,000*l.* a-year in purchasing officers out.

965. Then how much difference is there between you and him?—We do not think that there is any difference, so far. Secondly, the measure by which General Gambier proposes to obtain an average of seven additional retirements, we understand to be the forced retirement of all Major-Generals (not being Colonels-Commandant) and Colonels as they complete thirty-eight years' service. These officers are to be placed on a Reserved List as Major-Generals, at 474*l.* a-year, with the right of succession to the appointment of Colonel-Commandant, at 1,000*l.* a-year, or the option of retiring altogether on 650*l.* General Gambier shows that sixty-seven officers will be thus affected during the next ten years, giving nearly seven per annum. This nearly amounts to a provision that all officers shall, before compulsory retirement, pass through a rank of sixteen general officers. There are, it is true, at this moment on the Effective List sixty-seven officers, who (should they live long enough) would during the next ten years come under the operation of this retirement. In that period, however, it is probable that twenty of them will die, and credit for their deaths has been already taken in estimating the vacancies for promotion. This will leave but forty-seven extra steps, and of these about fifteen will succeed during the ten years to vacancies among the Colonels-Commandant, absorbing as many promotions. The actual extra steps to be derived from the sixty-seven officers will, therefore, not exceed thirty-two; or, roughly, three per annum. For calculation, it is necessary to assume a proportion between those retiring absolutely on an immediate 650*l.* a-year, and those preferring to remain on a Reserved List, in the hope of eventually attaining the 1,000*l.* Regulating the proportion by the chance of reaching the greater prize, we consider that about two-thirds will elect to retire absolutely. In the Memorandum submitted by General Gambier, the total cost of this retirement for the next 10 years is stated at 31,758*l.*; but we conclude that that sum is intended to designate merely the summation of the charges incurred each year for the first time. In alternate years, Captains and Second Captains are to be promoted, and Lieutenants every year to the number, in all, of 18 Captains promoted, 19 Second Captains, and 82 Lieutenants. These, numbers will be permanent additions to the higher ranks and a diminution of that of Lieutenants, the gross number of officers remaining as before. This special promotion, together with the forced retirement already described, will provide, over and above ordinary vacancies, for 50 Captains, 51 Second Captains, and 114 Lieutenants, being more Lieutenants than are necessary, but considerably less than the required number for the Second Captains and Captains, in which last rank, under any scheme, the real block will occur. General Gambier proposes an additional exit for young officers by spending 2,000*l.* annually in purchasing two out. From the smallness of the sum these officers would probably be a Lieutenant, and a Second Captain; and as the previous part of the proposal provides ample promotion for the former rank, we cannot but regard such an application of the money as comparatively wasteful expenditure. It would be more profitably invested in buying out *one* Captain from towards the top of the list of that rank; but even with this additional measure the promotion of all Captains on completing 25 years' service could not be obtained. The additional expense for the next 10 years, for the British Establishment only, will be as shown in the Table which we now hand in. (*Vide* Appendix V.)

966. General Adye, in the course of his examination, rather led the Committee to fancy that your former calculation of the expense of Mr. Childers' scheme was likely to mislead the Committee. Have you any observations to make upon that statement?—We were ordered to calculate the cost of such a retirement as should procure the promotion of Lieutenants after 10 years' service, being the very period General Adye in his evidence before your Committee suggests as that at which they ought to be promoted. In showing how great the expense would be, we most clearly pointed out that that expense depended on the precise measure of promotion obtained, and that less retirements would cost less money, and at the same time give less promotion.

967. You have read General Adye's evidence?—We have.

968. What do you understand his proposal to amount to for accelerating the promotion in the Royal Artillery?—To apply to the corps the system of compulsory retirement after 40 years' service with optional retirement at smaller annuities at any time after 15 years' service, limiting the maximum amount to be granted to 5,000*l.* more than the present grant of 42,400*l.* The smaller annuities (at and above 22 years' service) to be those recommended by the Select Committee of 1867.

969. What would be the effect of that proposal?—Assuming that voluntary retirements equal to the 47,000*l.* annually can be procured from the first, the expense would, for the next 12 years, exceed by more than 160,000*l.* the scheme of retirement on the plan of Mr. Childers at compulsory ages, which gives, at the end of 12 years, the following service:—Senior Colonel, 40 years; Senior Lieutenant-Colonel, 35 years; Senior Captain, 29 years; Senior Second Captain, 23 years; Senior Lieutenant, 15 years; while it would cost less by 190,000*l.* in the 12 years than Mr. Childers' proposed system, if worked at the lowest optional ages, which system only gives the following service:—Senior Colonel, 35 years; Senior Lieutenant-Colonel, 30 years; Senior Captain, 24 years; Senior Second Captain, 18 years; Senior Lieutenant, 10 years; or less than the promotion which General Adye has described as proper to the corps.

970. Colonel Leahy also has proposed a scheme to the Committee—have you read that scheme too?—We have.

971. Will you be good enough to give the Committee your views with regard to it?—Colonel Leahy proposes to increase the proportion of Field-officers and Captains by substituting, in field brigades, four-gun batteries (having each 1 Captain, 1 Second Captain, and 2 Sub-

D. Robinson, Esq., and Robert R. F. Davey, Esq.

26 April, 1870.

alterns) for six-gun batteries (having each 1 Captain, 1 Second Captain, and 3 Subalterns), a Lieutenant-Colonel to have, as at present, the command of two batteries.

972. What alteration would the adoption of that proposal make in the numbers in the several ranks of officers?—If the alteration be held to affect the brigades of Horse and Field Artillery in India as well as at home, 104 six-gun batteries would be converted into 156 four-gun batteries; the Lieutenants would remain as at present, and there would be an addition to the corps of 52 Second Captains, 52 Captains, and 21 Lieutenant-Colonels, causing a proportionate increase of charge. If the measure only applied to the corresponding 30 batteries on the British establishment, those batteries would be replaced by 45 four-gun batteries, and there would be an addition to the corps of 15 Second Captains, 15 Captains, and 7 Lieutenant-Colonels, causing, of course, a flow of promotion.

973. A temporary flow of promotion?—No, a permanent flow of promotion; because the upper ranks would be in a better state.

974. (*Mr Milton.*) Have you calculated at all what would be the extra cost of that proposal?—No, we have not calculated the cost of that proposal at all, because it involved a very large absolute addition to the numbers of the corps.

975. (*Chairman.*) Captain Harrison also has given evidence before the Committee, and he has made a suggestion for improving the position of the junior ranks in the Royal Artillery. Would you tell the Committee what your views upon that are?—Captain Harrison would adopt the suggestions of the Select Committee of 1867, with substitution of service for age as the basis of retirement; and the grant of Voluntary Retirement to be brought as low as 15 instead of 22 years' service. The progressive scale of the retiring annuities to be by periods of 5 years (up to 30 years' service) instead of annually. The calculations which applied to the proposal of the Select Committee apply in a great degree to this also. It is not economical to expend money in removing officers of from 15 to 22 years' service; for if the Captains can be secured reasonable promotion the present proportion of the junior ranks involves their promotion, as of course. As an example of this, it may be stated that, supposing the continuance of the present system, while the Senior Captain would in 1893 have attained the long service of 36 years, the Senior Subaltern will only have completed 15. Similarly, if retirement at 60 years of age only were adopted, the Senior Captain would in 1893 have completed 35 years' service, while the Senior Lieutenant would have but 14.

The Witnesses withdrew.

Adjourned.

Friday, 6th May, 1870.

PRESENT:

Captain the Honourable J. C. VIVIAN, M.P., *in the Chair.*

Colonel EGERTON. | Mr. MILTON.

DENHAM ROBINSON, Esq., and ROBERT R. F. DAVEY, Esq., further examined.

D. Robinson, Esq., and Robert R. F. Davey, Esq.

6 May, 1870.

976. *The Chairman.* On the occasion of our last meeting you were good enough to give us the results of your enquiries as affecting the Royal Artillery, and also as affecting the evidence which had been given before us as to that corps. I now wish to continue the examination with regard to the Royal Engineers, and I will ask you first of all to state what has been the past, and what is the present state of the several ranks in the Royal Engineers?—On referring to the diagram already handed in, it will be seen that in 1850 the Senior Colonel of Engineers had 47 years' service, the Senior Lieutenant-Colonel 43, the Senior Captain 35, the Senior Second Captain 17, and the Senior Lieutenant only 10 years' service. But, owing to extraordinary promotion, consequent upon augmentations to the corps, it will be found that in 1860 the periods of service had greatly decreased, and in the three lower ranks had reached the minimum; Lieutenants were promoted after six years' service, Second Captains after 13, and Captains after 22 years' service; the Senior Lieutenant-Colonel had served 35 years, while the Senior Colonel's service was longer by one year than it had been in 1850. In the three lower ranks, since 1860, and in the two upper ranks, since 1864 (when the minimum service in these ranks was attained, viz., 39 years for Colonels, and 32 for Lieutenant-Colonels), the periods of service in the several ranks, except in that of Lieutenant-Colonel, have gradually increased, and at the present time the Senior Lieutenant has 12 years service, the Senior Second Captain 14, the Senior Captain 23, the Senior Lieutenant-Colonel 32, and the Senior Colonel 43. These periods, omitting the rank of Colonel and Second Captain, approximate very closely to the standard periods of service, and consequently the corps, so far as its present periods of service are concerned, may be said to be in a healthy condition.

977. What would be the effect on future promotion if the existing system were continued without any other alterations or changes?—If nothing were done to ameliorate promotion in the corps for the future the service in each rank will continue to increase, so that in 1880, 10 years hence, Lieutenants will have served 17 years, Second Captains 21 years, Captains 25 years, Lieutenant-Colonels 35 years, Colonels 41. From this it will be seen that the two junior ranks will have overpassed the standard periods of service by five and three years, but that the senior ranks will still remain in a healthy condition. However, in 1893, the limit of our calculations, the standard periods of service will have been exceeded in every rank—Lieutenants will not be promoted till after 16 years' service, Second Captains not till after 24 years' service, Captains will attain 34 years' service, Lieutenant-Colonels 38, and Colonels 42. This proves strongly the necessity for adopting remedial measures, for in every rank the service will not only have exceeded the standard periods but will have attained almost the limit of service for the rank above. Thus Captains will have served 34 years when, according to the standard periods, Lieutenant-Colonels should become Colonels, and Second Captains will be within one year of the period when, as Captains, they ought to be promoted to Lieutenant-Colonels. The average service in the corps for each rank for the next 23 years would be as follows: Lieutenants will have served, on becoming Second Captains, 16 years, Captains 21 years, Lieutenant-Colonels 28 years, Colonels 35 years, and General Officers 40 years. The existing

system of retirement in a normal state would only allow of promotion at the following still more advanced periods: Lieutenant-Colonels would become Colonels at 44 years' service, Captains would serve as such till they completed 36 years' service, the Senior Second Captain would have served 26, and the Senior Lieutenant 19 years. These periods would represent the average service in the different ranks of the corps if a sufficiently long series of years were taken into account. The present position of the regiment is highly abnormal, from the fact of so many young officers being in the upper ranks; and a strictly normal state of the corps might never be reached. Nevertheless the above normal periods represent the the mean service in the different ranks which would obtain if several military generations are taken into consideration.

978. *Mr. Milton.* What do you call the standard periods of service?—Twelve years on becoming Second Captain, 18 years on becoming Captain, 25 years on becoming Lieutenant-Colonel, 34 years on becoming Colonel, and compulsory retirement at the age of 60 from that rank.

979. *The Chairman.* Can you tell the Committee what would be both the financial results and the effect on promotion, if the existing system of retirement were abolished and compulsory retirement, at the age of 60 only, substituted for it?—If the existing system be altered to the extent of abolishing the present annual grant of 18,285*l.* and of introducing in its stead compulsory retirement at the age of 60 on 600*l.* a year, the results upon promotion are indicated by the blue lines in the diagram already referred to. From which it will be seen that the service in each rank, during the greater part of the period we have calculated, will exceed what it would be if nothing were done and the existing 18,285*l.* were maintained in full operation. On the other hand the cost would be at first proportionately less. However in 1893, the service in every rank would coincide with that under the present system—that is the Senior Lieutenants would exceed their present service by 5 years—the Senior Second Captains their present service by 10—the Senior Captains their present service by 11 years—the Senior Lieutenant-Colonels theirs by 6 years—whilst that of the Senior Colonel would have decreased by one year. The total cost of this retirement, would for the next 23 years amount to 387,522*l.* including the cost of those who are already on the Retired List. This sum will give an average of 16,849*l.* a year for the 23 years. The cost however for the first year would amount to 19,262*l.* and gradually decrease till 1880–81 when the annual charge will have attained its minimum, viz: 11,756*l.* being nearly 7,000*l.* less than at present. The cause of this decrease is attributable to the comparative youth of the present senior officers, of whom only 5 will attain the age for retirement during the first 11 years (leaving out of account the present Seniors among the Colonels who would be retired immediately causing thereby the excess over the present 18,285*l.* for the first year). From 1880–81 the system begins to have effect, and the charge for retirement gradually increases till 1892–3, when it reaches for the British List 24,707*l.* This however is only about half what it would be in a normal condition of the corps when the annual charge for the British Establishment would amount to 47,479*l.* That normal condition as previously explained, would allow of the following periods of service. Lieutenants would be promoted after 17 years' service (five years in excess of their present service). Second Captains would be promoted after 23 years' service (or 9 years later than at present). Captains would be promoted after 31 years' service (or 8 years later than at present). Lieutenant-Colonels would become Colonels after 38 years' service (or 6 years later if compared with their present service). The service of the Colonel would depend entirely upon the age at entry as cadet. In comparing these results with those obtained for the system of retirement now in force, when in a normal state, it will be found that for the annual increased expenditure of 29,194*l.*, the following improvement in promotion will have resulted: Lieutenants before promotion will have served less by 2 years; Second Captains before promotion will have served less by 3 years; Captains before promotion will have served less by 5 years; and Lieutenant-Colonels before promotion will have served less by 6 years. Although the periods of service now given as the normal condition with retirement at 60 only, will obtain as the average of a very long series of years, it must be distinctly understood that that average will have been often considerably exceeded, for example, on referring to the diagram it will be seen that the service of Lieutenants will be 18 years for no less than 4 years during the next 23. The average annual charge for the retirement during the 23 years would be 16,849*l.*, while the average service in the different ranks for the same time would be 16 years for Lieutenants, 21 years for Second Captains, 29 years for Captains, 36 years for Lieutenant-Colonels, and 41 years for Colonels, shewing a retardation when compared with the average service for the same period, if the existing system were kept in force, of one year for the ranks of Captain, Lieutenant-Colonel, and Colonel.

980. *Mr. Milton.* You stated that the minimum cost under that arrangement would be reached in 1880–81. What will be the services of the Seniors of that year?—17 years for Lieutenants, 22 for Second Captains, 30 for Captains, 36 for Lieutenant-Colonels, and 42 for Colonels.

981. *The Chairman.* Will you be good enough to state what the effects on promotion and the cost will be if Mr. Childers' proposal be adopted?—The proposal of Mr. Childers at its greatest cost, that is on the supposition that every officer retires as soon as he has the option of doing so, would represent for the British proportion of the annual charge for Retired Pay 77,477*l.* in a normal state. Taking for purposes of comparison the last and least expensive form of Mr. Childers' proposal, that is when Colonels retire only at 60, Lieutenant-Colonels at 54, and Captains at 48, the British proportion of the annual non-effective charge would be 54,678*l.*, or an excess of 36,393*l.* over the present Full Pay retirement, or 7,199*l.* more than the charge for compulsory retirement at 60 only. For this excess of charge the following reductions in the periods of service would be obtained. Lieutenants would have served 15 years on becoming Second Captains or 4 years less than under the existing system and two less than under the system of retirement at 60 only; Second Captains would have served 21 years on becoming Captains, or 5 years less than under the existing system, and 2 years less than under the system of retirement at 60 only; Captains would have served 28 years on becoming Lieutenant-Colonels, or 8 years less than under the existing system, and 3 years less than under retirement at 60 only; Lieutenant-Colonels would have served 34 years on becoming Colonels, or 10 years less than under the existing system, and 4 years less than under the system of compulsory retirement at 60 only.

The normal condition here described would only be reached at a very distant period, if ever, but, as in previous cases, these lengths of service, and cost represent the averages which would obtain when several generations of officers have passed through the corps. During the first 5 years of Mr. Childers' scheme (at compulsory ages) being in force, no difference from the retirement scheme at 60 only, either as regards expense or results upon promotion would arise. In fact, for these years it is only in the rank of Colonel that Mr. Childers' compulsory retirement would operate at all; which proves the abnormally short service in the present senior ranks. In 1875–6 it commences to operate slightly and continues in gradually increasing force until from 1888 to 1890, when 59 Captains will be compulsorily retired within the 2 years. However, from 1874 till 1889 (for 15 years) the service of the Senior Lieu-

D. Robinson, Esq., and Robert R. F. Davey, Esq.

6 May, 1870.

tenant will never be less than 15 years, and during the greater part of this time Lieutenants will have served 17 years before becoming Second Captains. The annual average charge for retirement during the next 23 years would amount to 26,743*l.* With retirement at 60 only, the average for the same period would be 16,849*l.* But for this increase of charge (viz. 9,894*l.*) the average service in the several ranks will be less by one year for the ranks of Lieutenant, Second Captain, and Lieutenant-Colonel, and two years for that of Captain.

982. As these figures shew the results of Mr. Childer's scheme in its cheapest form, what would be its action, assuming that every officer elected to retire as soon as he had the power of doing so?—With this hypothesis the average annual charge for the retirement of the British List, and after 1882 of the amalgamated List, would be for the next 23 years, 46,432*l.*, or 29,583*l.* a year more than under the system of retirement at 60 only; or more than 2½ times the present charge. But for this increased cost the average periods of service on promotion will be 12 years for Lieutenants, 16 for Second Captains, 23 for Captains, 30 for Lieutenant Colonels, and 37 for Colonels. In a normal condition the British proportion of the charge for retirement will be 77,477*l.*, and the periods of service in the several ranks will be as follows:—On becoming Second Captains, 12 years; on becoming Captains, 17 years; on becoming Lieutenant-Colonels, 22 years; on becoming Colonels, 28 years, and on becoming Major-Generals, 34 years. The yearly effect of this view of Mr. Childers' scheme can be best understood by referring to the tabulated statement already given to the Committee. In that statement it will be seen that in 1892–3 the charge will have reached 76,594*l.* a year, and the service on promotion to the several ranks will be as follows:—Lieutenants on promotion to Second-Captain, 9 years; Second-Captains on promotion to Captains, 14 years; Captains on promotion to Lieutenant-Colonels, 20 years; Lieutenant-Colonels on promotion to Colonels 29 years; and Colonels on promotion to General Officers, 37 years. It must be understood that although for purposes of calculation Mr. Childers' proposal will admit of being divided into two schemes, and of being considered under these two aspects, yet the actual effect of the proposal would be a combination of the two, and the results would lie within those limits. The first, where officers retired only at the compulsory ages, gives the least cost and slowest promotion; the second, where every officer retires so soon as he has the power of doing so, gives the maximum cost, but the quickest promotion.

983. Have you read the evidence given by Colonel Keane before this Committee, and the suggestions which he submitted to them?—Yes.

984. He has given a forecast of the service of the senior officers in each rank 7 years hence, viz.:—Colonels, 43 years; Lieutenant-Colonels, 34 years; Captains, 25 years; Second Captains, 19 years, and Lieutenants, 16 years. Do you agree with that forecast?—Our calculations shew that the probable service will then be for Colonels, 39 years; for Lieutenant-Colonels, between 33 and 34 years; Captains, 26 years; Second Captains, 19 years, and Lieutenants, between 15 and 16 years.

985. (*Mr. Milton.*) In what respect is there any difference?—The difference is chiefly in the case of the Colonels.

986. (*The Chairman.*) Colonel Keane estimates 19 years as the probable service of the present junior Subaltern before promotion to the rank of Second Captain. Do you agree with that?—We do not think that his service would exceed 17 years.

987. (*Mr. Milton.*) That is assuming that the present regulation is not altered?—Yes.

988. (*The Chairman.*) A suggestion has been made that the First Captains of Engineers should be made Brevet Majors; but Colonel Keane in his evidence appears to be rather apprehensive of some jealousy being thereby created in the rest of the army. How would First Captains of Engineers compare with Regimental Majors of the line in point of service?—The service as First Captains if the desired standard be taken, is from 18 to 25 years. Majors of the line average as follows:—Cavalry from 14 to 18 years; Infantry, by purchase, from 17 to 22 years; Infantry, without purchase, from 19 to 25 years.

989. Do you agree with Colonel Keane that nine additional steps per annum would on an average secure promotion to Lieutenants after 13 years' service?—We do.

990. Referring to the evidence of Sir Lintorn Simmons, in answer to question 563, he estimates the promotions in the Engineers to the rank of Captain at 5 or 6 per annum. Do you agree with that estimate?—For the next 10 years we anticipate that such promotions will not average more than 4½ annually.

991. In answer to question 574, Sir Lintorn Simmons proposes 12 years as the limit of service for Lieutenants in the Royal Engineers, and does not anticipate the supersession thereby of Subalterns of the Line. Will you say what service is given by Line Subalterns?—Officers of higher rank now in the Cavalry served on an average as Subalterns, 6½ years; in the Infantry, those who purchased both steps, 8¼ years; those who purchased the Company only, 8½ years; those who purchased the lieutenancy only, 9 9/10 years; and those who purchased neither, 10 years. All Infantry Officers, on a general average, under 9 years; Officers of Infantry and Cavalry taken together, 8¾ years. As Officers enter the Line younger than the Engineers, promotion in the latter after 12 years' service would certainly not cause, on an average, the supersession of Line Officers.

992. Among the proposals of Sir Lintorn Simmons is, that, as an economical measure, officers of short service should be encouraged to retire on small annuities. He suggests 150*l.* as a fair annuity for an officer of 15 years' service. How would the interest of the State stand in regard to that annuity?—An annuity to an officer retiring after 15 years' service which should cost the country no more than an annuity of 600*l.* given to an officer retiring at the age of 60 should be 87*l.* 5*s.* 8*d.* To give an officer of that short service 150*l.* a year would be as expensive as retiring a Colonel at sixty on 1,031*l.* a year, while in the latter case a step would be given in every rank, and in the former to the two lowest ranks at the most. This is on the supposition that there is no saving on the Effective List.

993. Will you be good enough to state as briefly as you can, consistently with clearness, the principal points in Sir Lintorn Simmons' proposals in regard to the Engineers and their probable effects?—Sir Lintorn Simmons proposes, 1. That promotion shall be after fixed periods of service and irrespective of the numbers in the several ranks. 2. That every available opening for employment under Government as Engineers, at home, in India, and the Colonies, be thrown open to the Royal Engineers. That officers accepting such employment be seconded; and after 10 years be required to elect whether they will return to the corps or quit it permanently. That officers thus quitting the corps be allowed to rise in honorary rank according to seniority; but that their ultimate pensions be provided by the Civil Departments under which they shall have served, except that, in some cases, a small annuity proportional to their amount of previous military service might be defrayed from Army Votes. 3. That comparatively small annuities of 10*l.* for each year of service be offered to officers of 15 years' service and upwards, to induce them to retire. 4. That retirement at 60 be compulsory.

994. Have you calculated what would be the result of those suggestions?—1. The effect of promotion after

fixed periods of service, irrespective of numbers in the several ranks, would be gradually to bring those numbers to the normal establishment required for given periods of service. But when certain large batches of Cadets, who entered some years since, attain the period for promotion, an unusually great number of promotions will take place at one time; thus causing considerable fluctuation in the numbers in the ranks. It may be observed that those schemes which deal soonest with these abnormally large batches of officers of the same service, will shew most quickly the great increase in cost, and at the same time will soonest afford relief from stagnation. 2. The removal of officers to civil employment after 10 years' seconded service would not affect promotion, since promotion depends on fixed periods of service; but it would relieve the Non-Effective List of any charge except for actual military duty. The only danger likely to arise would be the sudden return of a large number of officers from the seconded to the active list, who would be redundant, and consequently stop the flow of young blood, in the form of Cadets, into the corps. 3. It would be more expensive to the country to allow an officer of less than 33 years' service (*i.e.* 53 years of age) to retire on 10*l.* for every year of service than to retire a Colonel at 60 years of age. on 600*l.* a year, unless a saving were caused on the Effective List.

995. Colonel Leahy in his evidence proposed that Engineer Officers should be made Majors after from 18 to 24 years' service. Would that proposal, do you think, affect the question of supersession of the line?—No; officers of Infantry are Majors, on an average, from 17 to 22 years' service, by purchase, or from 19 to 25 without purchase, or taken together, from 18 to 24; but Line officers enter younger than those of Engineers, wherefore Colonel Leahy's 18 to 24 years' service in the Engineers would, as a comparison, more accurately represent 20 to 26 years' service in the line.

996. In the Appendix is shewn a proposal by Colonel Leahy for altering the system of promotion and retirement in the Engineers. Will you state briefly what you consider the leading features of that proposal?—Colonel Leahy has made two proposals. In one, promotion to be by seniority, after fixed periods of service in the several ranks, which would cease to have fixed establishments. Retirement to be compulsory at 60. Under 60, retirement to be by selection—for inefficiency—at graduated rates: the total amount being limited to 18,285*l.* Lieutenants to enter at 18; to become Captains after 12 years' service; Lieutenant-Colonels, on Majors' pay, after 24 years' service; Lieutenant-Colonels, on 18*s.* a-day, after 26; and Colonels after 35 years' service; but the number of Colonels, paid as such, to be limited to 16.

997. Have you calculated the cost of this scheme, and its effects on promotion?—Yes; we find that the charge, as compared with the present cost, for effective and non-effective, would be as follows:—(For an establishment of 400 officers.)

	£	
In 1870–1.....	2,217	increase.
1875–6.....	5,019	„
1878–9.....	4,439	„
1882–3.....	12,525	„
1887–8.....	19,028	„
1893–4.....	23,837	„

In the statement we now hand in (*vide* Appendix W) will be seen the numbers in each rank between the proposed periods of service for the years just named, and also when in a normal state. In a normal condition, supposing Cadets to enter at 20, and the 18,285*l.* for compulsory retirement to be in full operation, the increased annual cost would be 48,431*l.* If Cadets entered at 18, and the 18,285*l.* were not in operation, the increased annual cost would be 38,720*l.* It must be understood that these figures are based on the supposition that officers retire at 60 on 600*l.*; while Colonel Leahy's proposal would grant 650*l.* to all who entered at 18 and served till 60 on the effective list.

998. Colonel Leahy has an alternative proposal. Will you now state what you consider that proposal to be?—It differs from the previous one merely as to the periods of service, and in the adoption of the rank of Major. Lieutenants to become Captains after 12 years' service; Majors after 21; Lieutenant-Colonels after 26, and Colonels after 35 years' service; but the number on 26*s.* a-day is to be limited as before to 16.

999. Colonel Leahy's proposal would obviously prevent stagnation of promotion. Will you say what you consider will be the cost in future years of this alternative proposal?—It is difficult to calculate the effects of the selected retirement for inefficiency, but omitting that from both sides of the account, that is, from the charge for retirement on the one hand, and from the saving it might effect in increased pay on the other, we find that the total additional charge, as compared with the present cost, would be as follows, for 400 officers:—

1870–1.....	£11,016
1875–6.....	12,100
1878–9.....	15,130
1882–3.....	21,660
1887–8.....	25,765
1893–4.....	28,893

On a normal corps of 400 officers, the charge for the additional effective pay and for the total non-effective pay for the British establishment, might be expected to amount to 58,971*l.*, showing an increased cost annually of 40,686*l.* The numbers in the several ranks at six different periods and in the normal, would be as shewn in the Table we now hand in. (*Vide* Appendix X.) As the basis of previous calculations, and the only data we could take, without very great additional labour, had reference to Lieutenants entering at an average age of 20, these estimates are based on the supposition that Lieutenants enter at 20 and serve till 30; whereas Colonel Leahy's proposal is, that they should enter at 18 and serve till 30. The result of entering at 18 would be to decrease the cost of retirement at 60 by about one-thirtieth, and to defer a portion of the increase of pay caused by the augmentation of higher ranks. The officers would serve 42 instead of 40 years in the regiment. Should there be any intention of adopting this proposal, we can calculate the precise cost, with entries at 18.

1000. The effect, as regards the ranks, would be to increase the upper ranks and decrease the lower ranks. What proportions would be arrived at?—The numbers in each rank on the British establishment for the periods named are stated in the Table already handed in. In a normal state the numbers (as a per centage) would be as follows, on the supposition that Lieutenants enter at the age of 20:—

Colonel.....	12
Lieutenant-Colonel....	18
Major	11
Captain.....	25
Lieutenant	34
Total....	100

If Colonel Leahy's proposal in the Appendix, viz., that Captains should serve 12 years, and become Lieutenant-Colonels on Majors' pay for two years before becoming Lieutenant-Colonels on 18*s.* a-day, at the age of 44, were adopted, with entries as Lieutenants at 18 years of age, the proportion per cent. of the several ranks in a normal state would be (exclusive of any operation from the selected retirement provided by the 18,285*l.*) as follows:—

D. Robinson, Esq., and Robert R. F. Davey, Esq.

6 May, 1870.

Colonels on 26*s.* a-day	4
Colonels or Lieutenant-Colonels on 18*s.* a-day	24
Lieutenant-Colonels (on Majors' pay)	4
Captains	32
Lieutenants	36
	100

If the selected retirement be supposed in full operation, the proportion per cent. of the several ranks in a normal state would be :—

Colonels on 26*s.* a-day	4
Colonels or Lieutenant-Colonels on 18*s.* a-day	18
Lieutenant-Colonels (on Major's pay)	4
Captains	32
Lieutenants (entries at 20, age)	42
	100

1001. Have you any further observations to offer on Colonel Leahy's evidence?—Yes. 1°. It must be observed that the more immediately any scheme for retirement or promotion deals with those abnormally large batches of officers of the same service, the sooner does the excess in the cost of the scheme over the existing charge appear. Colonel Leahy's system of promotion by length of service deals with these batches even sooner than Mr. Childers' at the optional ages. 2°. Colonel Leahy is of opinion that were his proposal adopted it would ultimately lead to a reduction of one quarter of the corps for military requirements. And, of course, if it can be shown that this reduction could not be equally effected under the other proposals, the saving eventually would be very great. The cost of this reduced corps in a normal condition is shewn in the paper handed in by Colonel Leahy, (*vide* bottom of Table at page 98, Appendix O). 3°. As the 18,285*l.* is to be spent in retiring officers by selection, *i.e.*, in getting rid of those unfit for promotion, it would be unfair, in estimating the cost of Colonel Leahy's proposal, not to draw attention to the great gain to the State by such a system, if practicable, over any other plan of compulsory retirement. Colonel Leahy's proposal eliminating officers on the ground of inefficiency, while all other suggestions for compulsory retirement have eliminated officers simply because of age or service, with a view to create promotion. 4°. Colonel Leahy's scale of retired pay is considerably more liberal than that proposed by Mr. Childers; for example, officers aged 60, but who had had 42 years' effective service, might retire on 650*l.* At the same time a provision has been made similar in principle to a suggestion of Sir Lintorn Simmons, of reducing the pension by 10*l.* for every year passed in a civil or seconded capacity. 5°. Colonel Leahy promotes a Lieutenant-Colonel after 35 years' service to the rank of Colonel, but only the 16 senior Colonels will be entitled to the Colonel's full pay. The result of this plan will be, that in a normal condition Colonels will only draw pay as such during 3 years.

1002. *Mr. Milton.* I think you stated that all the other schemes for compulsory retirement—except this one of getting rid of inefficient men for misconduct, or for being unfit for promotion—were solely based on the object of accelerating promotion. Are you not aware that compulsory retirement proceeds on the principle that men after a certain age are not efficient for duty?—We think that the total period of regimental service may be limited by age as a standard of inefficiency; but not service in the intermediate ranks.

1003. Do you not gather from Mr. Childers' scheme, and all the schemes which have been laid before the Committee, containing the element of compulsory retirement, that the sole principle of that compulsory retirement is loss of efficiency by lapse of time, or increase of age in the officers?—Is not that inefficiency rather a moral than a physical inefficiency, or is not the moral inefficiency produced by the loss of hope from stagnation, and not from physical inefficiency on the part of the officer for the duties of the rank?

1004. *The Chairman.* Will you be good enough to state to the Committee what you consider to be the substance of Lieutenant Collins' scheme?—That promotion in the Engineers should be by periods of service, without reference to the numbers in the several ranks. That Majors be substituted for First Captains. That retirement be at 60 only. The periods for promotion correspond so nearly with those suggested by Colonel Leahy in his second or alternative proposal, that the remarks made in that case will apply almost equally to the present. The principal points of difference would be that in Lieutenant Collins' scheme officers would be a year later in becoming Majors and Lieutenant-Colonels, which would be an element of economy in his favour; while Colonel Leahy limits Colonels to 16 in number, which Lieutenant Collins does not, a source of considerable expense in the latter's proposal.

1005. I come now to the question of service in the Line. Have you taken any steps to ascertain the rate of promotion in the Infantry and Cavalry where the element of Purchase disturbs the course of seniority advancement?—We have averaged with great care the service of several hundred Infantry Officers who have obtained promotion with purchase, and of a similar number who have obtained it without purchase. In the Cavalry nearly all officers purchase; and, therefore, we contented ourselves with a general average. The officers we took are those now serving in regiments, which will give a fair average of the service of officers during the past 20 years. As, however, several disturbing causes tending to hasten promotion may be thought to have distinguished that period; we considered it would be well, for the sake of comparison, to take the averages after a long period of peace. We adopted the same principle in arranging the data, and averaged the services of the officers in the regiments in 1852. Except in or immediately after a severe war, when service is abnormally shortened, and that of non-purchase officers approaches more closely to that of purchase officers, these periods ought, we think, to furnish a fair criterion of Line promotion. We hand in a table showing the periods at which officers attain the several ranks, on an average, when they purchase, and when they do not purchase the various steps. (*Vide* Appendix Y.) There is also shown an average of the service of all the Infantry Officers concerned in the previous averages, purchase and non-purchase together; and a similar general average of Cavalry Officers. The figures in ordinary type are those from the Army List of 1870; those in *italics* from that of 1852.

1006. Not to go into the details of the table, will you say generally what service is required to attain the several ranks by a Cavalry Officer?—According to the present year's Army List, Cavalry Officers have served 2½ years on becoming Lieutenant, 6½ years on becoming Captain, 14⅓ years on becoming Major, and 18⅓ years on reaching the rank of Lieutenant-Colonel. The officers of 1852 had had slower promotion, the time in each grade being somewhat longer, and the Lieutenant-Colonel having taken in all 20¾ years to attain his rank.

1007. As, perhaps, for the purposes of our inquiry, and for comparison with the Ordnance Corps, the Cavalry is of less importance than the Infantry, what service has been given by Officers of Infantry who purchased all their steps?—Taking the officers of 1870, the rank of Lieutenant has been attained in 2¾ years, that of Captain in 8¼ years, Major in 17⅓ years, and Lieut.-Colonel in 22⅓ years. The officers of 1852 had passed about the same time in the lower ranks, but had shorter service as Majors, becoming Lieut.-Colonels almost a year earlier.

1008. That being the service of officers who have purchased all their steps, what have been the services of those who purchased no steps at all?—They would

have become Lieutenants in 2¾ years, Captains in 10 years, Majors in 19 years, and Lieut.-Colonels in 25 years. These periods are derived from the officers of 1870. Turning to those of 1852, we see how peace prejudices the non-purchasing officers, for they had had to serve 3½ years for Lieutenant, 11⅓ before becoming Captain, 23⅔ on reaching Major, and 30 years before becoming Lieut.-Colonels, or just 5 years longer than given by the officers of 1870.

1009. You say that Lieutenants obtain on an average their companies without purchase after 10 years' service, and that in 1852, with more adverse promotion, they obtained their companies in 11⅓ years?—Yes.

1010. Yet, looking to the Army List, there are in many regiments at the head of the Lieutenants officers of considerably longer service. What allowance have you made for these?—Their long service has been duly allowed for, and goes to swell the average; but seeing that many non-purchase officers obtain promotion at periods far earlier than those stated by us, it would be unfair to regard as the term of service in the rank the exceptional periods served by the Lieutenants to whom you allude. To show that officers may reach high rank at an early age, without purchase, we cite the case, as an example, of Colonel Torrens, C.B., of the 23rd Foot, who has not purchased a step, but became a substantive Major after nine years' service, and a Colonel in the Army after a total service of 14½ years. We do not know at what age Colonel Torrens entered the Army; but if he was commissioned at 18, he became a Colonel at the age of 32½. The method we adopted in finding service as Lieutenant, for instance, was not to take any existing Lieutenants; but to ascertain what service as Lieutenant had been given by the present Captains, Majors, and Lieut.-Colonels. By these means we spread the average over a longer period of time; and we included the lucky with the unlucky officers in one general result.

1011. What do you make the average difference in service between purchase and non-purchase officers?—Judging by the officers of 1870, the following is the result: Service as Ensign is not shortened by purchase; as Lieutenant, the purchasing officer gains 1¾ years; as Captain, 1 month; and as Major ¾ of a year; making the total advantage of the purchasing officer on becoming a Lieutenant-Colonel 2⅔ years. In 1852, after a long peace, the scale was more against the non-purchaser. He lost ½ a year as Ensign, 2 years as Lieutenant, 3⅔ years as Captain, and 2½ years as Major; the difference on reaching the rank of Lieutenant-Colonel being 8¾ years in favour of the purchaser, or six years more than at present.

1012. What is the service on an average of all the infantry officers you have dealt with?—Those of 1870 give 2¾ years on becoming Lieutenants, 9 years on becoming Captains, 18 on becoming Majors, and 23¾ on reaching the rank of Lieutenant-Colonel. The officers of 1852 were a year-and-a-quarter longer in reaching the grade of Lieutenant-Colonel.

1013. Omitting combinations of purchase with non-purchase in the service of officers, you have given us the average periods of service of three classes of officers: first, those who purchase all their steps; second, those who purchase none; third, the other two taken together. Will you say with which of these you think it fairest to compare the officers of the Ordnance Corps?—There are several considerations involved. The officers of the Artillery and Engineers have not paid anything for their Commissions, but they have passed to obtain entrance to Woolwich Academy, as difficult an examination as that which has admitted the non-purchasing officers into the Army, and a far more difficult one than that under which the purchasers have entered. Subsequently they have passed a most arduous course of study and a very severe final examination. We base these remarks on the report and evidence of the Military Education Commission. This being the qualification which the Artillery and Engineer officers have had to undergo; how do the other classes compare with them? The non-purchasing officers of infantry have passed through a less severe mental training, while the cost of their course at Sandhurst may perhaps be held to equal that at Woolwich. Assuming the officers of the two bodies, the scientific corps and the line, to start at the same age, it would seem fair that some advantage should accrue to those who have overcome most difficulties, viz., the Artillery and Engineers. Compared with purchasing officers, these latter will have passed a far less arduous examination, and the majority will not have been subjected to the cost of Sandhurst; but before they become Lieutenant-Colonels, they will have paid 4,500*l.* for their commissions. It is difficult thus to set money against science; but it will probably be considered that so large a sum risked on military life should give the possessor some claim to a return in quicker promotion than obtains in a seniority corps. From these considerations it would seem that the fair average service of the Artillery and Engineers should be somewhere between that of the purchasing and non-purchasing officers of the infantry. There will, perhaps, be the less objection to this conclusion, when it is remembered that, according to the evidence of previous witnesses, officers of the scientific corps usually enter at an age later by about two years than that at which Ensigns are gazetted to the Army. If this intermediate place be admitted as that to which Artillery and Engineer officers may fairly look as their average for promotion, the mean between the averages of infantry purchasing and non-purchasing officers, will afford the best standard of comparison.

1014. Accepting, for the sake of argument, your comparison, how would this general line standard compare with what, in the course of this inquiry, we have been accustomed to call the standard periods for the Artillery and Engineers?—Those periods are, 12 years on becoming Second Captain, 18 years on becoming Captain, 25 for Lieutenant-Colonel. Comparing these with the general infantry average, the officers of Artillery would become Second Captains three years later than the infantry officers would become Captains; they would become First Captains at the same time that the infantry Captains are promoted to Majors; and they would reach the rank of Lieutenant-Colonel (on Major's pay) 16 months after their infantry competitors have attained the full rank and pay of Lieutenant-Colonel.

1015. Then throughout the whole of their service, at the assumed standard periods, Artillery officers would be worse off in rank than the general average of officers in the infantry?—Undoubtedly. And not merely so; they would reach the grade of Lieutenant-Colonel no sooner than the average line officer who did not purchase a step, while in the previous ranks they would be worse off throughout their service.

1016. Assuming, for the moment, that it should be contemplated to re-establish the rank of Major in the Ordnance Corps, at what point in the service would it be right to introduce it?—Taking the standard periods so often alluded to, it would be proper to convert the Second Captains into Captains, and the First Captains into Majors; for an infantry Captain becomes, on an average, Major after 18 years' service; which is the very period in his service at which, according to standard periods, the Second Captain should be promoted to Captain.

1017. In order to keep clearly in mind the cases of the two corps with which we have to deal, will you point out once more what are the essential distinctions in the condition of the Artillery and Engineers?—The chief difference between the Artillery and Engineer corps is (so far as regards the question of promotion and retirement): 1st. That the existing proportions between the ranks are not the same. In the Artillery the great block is the disproportion between the captains and the ranks above; while in the Engineers the disproportion is more general. 2nd. There is less necessity for adhering to the present organization in the case of

D. Robinson, Esq., and Robert R. F. Davey, Esq.

6 May, 1870.

the Engineers than in that of the Artillery. 3rd. The system of seconding officers is capable of more extensive application in the Engineer corps than in the Artillery. 4th. The present annual grants for full-pay retirement are not in the same proportion to the respective strengths of the two corps. To place the Engineers on an equality with the Artillery, the 18,285*l.* should be increased to 22,770*l.*, that is, taking into account the retirement needed for seconded officers.

1018. *Mr. Milton.* What do you mean by the words "the disproportion is more general." If it were so, there would be none at all?—In the Artillery corps the proportion borne by the Lieutenants and Second Captains to the ranks above is much greater than in the case of the Engineers.

1019. As I understand, there are five ranks in the Artillery, and one rank, the Captains, is greatly out of proportion. In the Engineers how many ranks are out of proportion?—The four lower ones. Every rank is too large for the rank above it to absorb it by promotion.

1021. (*Chairman.*) To what in the two corps respectively are the prospects of future stagnation to be attributed?—There are common to both corps the three following causes:—1st. Inadequate provision for retirement. 2nd. Preponderant proportion of junior to senior officers. 3rd. An abnormally large number of young officers in the senior ranks, in consequence of past augmentations. These three causes act in each corps; but in each in a different degree.

1022. So far, then, as existing officers are concerned it is to these points that we must seek to apply remedial measures?—Yes: the two first points apply to future as well as to present officers. The third is more peculiar to those now on the list.

1023. Is it not then the case that we have two distinct duties before us in regard to either corps. First to try to remedy the expected stagnation among existing officers whose condition is highly abnormal, and secondly to provide such a scheme as shall maintain efficiency with officers who are to enter hereafter?—It is; but we think that the same principles will be found to apply to both cases, although they may have to be stretched, so to speak, beyond their normal limits and normal cost to afford relief to the present abnormal states of things. There would be ultimate reaction to the normal limit of operation and cost, as those died out for whom the stretching had been necessary.

1024. That being as you say, let us, in the first instance, consider the corps in their normal condition. Notwithstanding the difference in their constitution, I presume the general laws affecting their promotion and retirement are the same?—Yes. The one general principle is, that to attain given service the several ranks must be in a given ratio; and that in the proportion that that ratio between the ranks cannot be obtained, retirement, other than that for old age, must be provided.

1025. Our starting point is, that whatever else may be added, officers will retire from regimental duty at the age of 60. To what amount of annual retirement does that commit us?—To 77,054*l.* per annum for the British establishment of Artillery, and 49,281*l.* for the British establishment of Engineers, on the supposition that Cadets enter at 21, as they have done since 1855. If, however, Cadets enter at 20, under the new Academy Regulations, the charge will be 74,040*l.* for Artillery and 47,479*l.* for Engineers.

1026. What periods of promotion does that give?—With entries at 20, in the Artillery, promotion to Scond Captain after 15 years' service, Captain 23, Lieutenant-Colonel 31, and Colonel 37. In the Engineers, promotion to Second Captain after 17 years' service, Captain 23, Lieutenant-Colonel 31, and Colonel 38.

1027. Then what we have to deal with is a state of things in which there is a retirement already settled to cost ultimately, for the two corps, about 126,335*l.* a-year, or possibly only 121,519*l.*, and giving us less promotion than the standard periods which have been suggested?—Yes. If those standard periods represent the promotion to be obtained, you must provide, by the measures you adopt, an alteration of the service in each rank to the following amount in the Artillery: as Lieutenant, 3 years less; Second Captain, 2 years less; Captain, 1 year less; Lieutenant-Colonel, 3 years more; and Colonel, 3 years more.

1028. And similarly what should we have to provide for in the Engineers?—Less service as Lieutenant 5 years, as Captain 1 year; more service as Lieutenant-Colonel by 2 years; and as Colonel by 4 years.

1029. If retirement were to be at 60, and at 60 only, what proportions between the several ranks in a normal state would give the standard promotion?—As a percentage there must be:—

Colonels	10
Lieutenant-Colonels	17
Captains	16
Second Captains	16
Lieutenants	41
	100

This applies to the Artillery.

1030. What is the percentage given by the present numbers?—The actual numbers when the contemplated reductions shall have been completed, will be 70 Colonels, 128 Lieutenant-Colonels, 263 Captains, 294 Second Captains, 619 Lieutenants, making a total of 1,374, for the whole corps, British and Indian; which give, as a percentage:—

Colonels	5
Lieutenant-Colonels	10
Captains	19
Second Captains	21
Lieutenants	45
	100

1031. Taking the British and Indian Lists together, what alteration in the present ranks will be necessary to carry out the percentage required for the promotion at standard periods?—There ought to be 137 Colonels, 234 Lieutenant-Colonels, 220 Captains, 220 Second Captains, and 563 Lieutenants; 67 Lieutenant-Colonels would have to be promoted to be Colonels, 173 Captains must become Lieutenant-Colonels, 130 Second Captains will rise to Captains, and 56 Lieutenants to Second Captains.

1032. Would the Retired List be increased?—Not in a perceptible degree. The total period of service being the same, the entries of Cadets and exit of Colonels would be nearly the same also. The only element of variation is that the more favourable aspects of promotion might, and probably would, lead to a decrease in the resignations; but the insignificant effect of this is scarcely susceptible of calculation.

1033. Will you give similar particulars with reference to the Engineers?—If retirement were to be at 60, and at 60 only, in order to procure the standard promotion in a normal state, the following proportions, as a percentage, must obtain:—

Colonels	10
Lieutenant-Colonels	18
Captains	16
Second Captains	16
Lieutenants	40
	100

1034. What is the percentage given by the present numbers?—The actual numbers for the British and Indian lists together are, including the seconded and supernumerary officers, 31 Colonels, 91 Lieutenant-Colonels, 146 Captains, 131 Second Captains, 370 Lieutenants, in all 769, which give as a percentage:—

Colonels	4
Lieutenant-Colonels	12
Captains	19
Second Captains	17
Lieutenants	48
	100

If the proportions between the ranks were altered, so that promotion at the standard periods of service might hold with the present total establishment, there should be 77 Colonels, 138 Lieutenant-Colonels, 123 Captains, 123 Second Captains, 308 Lieutenants, making in all 769. If you compare those numbers with the numbers at present, you will see that the existing numbers in all ranks are out of proportion.

1035. *Mr. Milton.* Where do you get your starting-point of 10 Colonels; on what basis is that taken? —That is a percentage.

1036. What percentage?—That is a percentage of a corps of 100 men, in order to secure promotion from the different ranks at the standard periods.

1037. Not with reference to regimental or other duty?—No. In comparing these numbers with the existing proportions, it will be seen that, while at present there are 122 Colonels and Lieutenant-Colonels to 647 officers in the junior ranks, there should be, to afford promotion at the standard periods, 215 Colonels and Lieutenant-Colonels to 554 officers in the ranks below. The British portion of the annual charge, including the increased Effective Pay and Allowances would amount to 66,300*l.*, being an excess of 48,015*l.* over the present cost, or of 18,821*l.* beyond the cost of retirement at 60 only, without readjustment of ranks.

1038. Before proceeding to ascertain your views as to the precise methods by which the conditions of promotion, which are complained of, can be improved. I should like to know if, in the course of your calculations, you have reached any general conclusions on the subject of retirement which would constitute, as it were, unalterable laws, on a knowledge of which all schemes or regulations ought to be based? —We think we have done so.

1039. What are the main points of view from which the question of retirement must be regarded?—There appear to us to be three distinct points from which to approach it. First, economy to the State; second, efficiency as regards the corps generally; third, the interests of the officers in it, or retired from it.

1040. What is the proper demand of the State as regards economy?—There is naturally a first demand that the State should not pay to individuals more than the market value of those individuals' time and labour; but it does not appear to us that that is a question with which we have anything to do; and we assume that the pay of the several ranks and the retired allowance of 600*l.* a year from the age of 60 are a fair remuneration. The body of men whose lives are devoted to Artillery or Engineer duty consists of those in the corps and of those retired from it. As military life is, as a rule, merely protective labour, the State has a right to demand that this body of men shall be as small as possible. The number on the Effective List being fixed, and the limit of life being in any case the same, the body of men referred to may be looked on, roughly, as a triangle; of which the base is a line representing the Cadets entering, and the apex is the last survivor at the extreme limit of life. The Effectives being a fixed number, the higher up, towards the apex, is placed the line which divides the effectives from the non-effectives, the narrower will be the base (representing the Cadets), the smaller the triangle generally; and, the effectives having a constant area, the smaller the triangle at the top, representing the non-effective list. From this it follows that, in diminishing the age for retirement, it is not merely that you increase *pro ratâ* the period during which pensions will be drawn, but that you widen the base of the triangle, increase the total number of men drawn from civil life, and increase the number on the Retired List, as well as the length of time for which each officer on it would draw his retirement. In other words, for every reduction in the length of service, the Retired List increases both in length and breadth. It is against the interest of the State that a man fit for service, and trained at great expense should be maintained in idleness, as he is in effect if he is retired while still efficient. This principle is recognised in the Civil Service, where an able-bodied man has not the option of retiring before 60; and it has hitherto been recognized in the Artillery, in so far as the acceptance of the retired full pay after 30 years' service is optional.

1041. As regards the corps generally, what do you hold that efficiency demands?—The efficiency of a corps, taken as a whole, depends upon the limit of age at which retirement from regimental service is compulsory. It is against the interest of the State that a man should remain on regimental duty after he ceases to be physically fit for it. This is recognized in the Line by the Regulation, which makes retirement compulsory at 60 years of age; and it is also so recognized now in the basis on which you are working for the Ordnance Corps.

1042. What do you consider that the interest of the officers requires?—That they should have a fair amount of promotion in their profession; with a moderate guarantee that so long as efficient they shall be permitted to enjoy the advantages of service. The scientific corps, are filled, far more than the Line, by officers who look upon their duty as a profession, from which their means of subsistence through life will be greatly derived. The class of men who will be attracted to the corps will be superior, it may be assumed, in proportion to the attractions offered. Retirement at 60, on 600*l.* a-year, is apparently a necessity; but retirement at 45 or 50, with considerable loss of income at a time when a man will not readily be prepared to embrace another occupation, constitutes a loss to the individual which seriously diminishes to a Cadet entering the corps the present value of his prospects in it. To understand this change in the value of the employment which early retirement would involve, it may be stated that the officers who now retire do so on an average income which is over 500*l.*; while under the proposed compulsory retirement, when acting least hardly on the officers, the average pension would fall during the next 23 years to about 350*l.* As another illustration we may state what would be an officer's expectation of receiving pay or retirement to the end of life under the several schemes. For every 100*l.* which he would receive under the existing system, or under the plan of a compulsory retirement at 60, without other alteration, he would only receive 96*l.* under Mr. Childers' plan working least expensively, and less if it were working more expensively. The chance of early retirement, if compulsory, is therefore a diminution in the value of an officer's position from the moment of his entering the corps.

1043. Has not the State any ground for desiring that there should be retirement at an earlier age than 60?—The State has antagonistic interests; first, in obtaining the full period of regimental service from officers; second, in obtaining General Officers at a comparatively early age. This antagonism arises from the rule that promotion to General Officer is by seniority from the top of the list of Colonels; whence has perhaps sprung the expensive compromise of a retirement after the short service of 30 years. The inefficiency of this mode of promotion is admitted by the regulation, that officers for duty as Major-Generals may be chosen from any part of the list of Colonels. The State may have also the desire for early retirement; first, if it want a very young corps, in which case it must pay heavily for it; secondly, if it be unwilling to grant such a proportion between the ranks as shall secure promotion at proper periods.

1044. You have dwelt rather strongly on the additional cost caused by early retirements, but have you taken into account that officers thus retiring early would do so on pensions much smaller than if they served to 60?—The first point is, that the expectation of life is greater in the case of early retirement; and that therefore with the same number retiring each year, the total number on the Retired List would be greater, the lower fell the age

D. Robinson, Esq., and Robert R. F. Davey, Esq.

6 May, 1870.

for retirement. Of course this would be more or less neutralized by reducing the annuities. As an example of the action of this law, we hand in a statement (*vide* Appendix Z), showing, at the rates of pension suggested by the Select Committee of 1867, the maximum cost per annum of retiring one officer yearly at each age from 60 down to 42, from which it will be seen that the 600*l.* at 60 was by no means the most expensive retirement. That statement is far from shewing the additional cost caused by early retirement, for the second and most important consideration is the larger number who will retire as the age for retirement descends. We have already explained our meaning under the simile of a triangle, whereof the base is widened as the period of service is shortened. In some calculations we had to make with reference to Colonel Leahy's proposals, we took a very extreme case in support of this view. Of course so extreme a case could not occur in practice, but as this principle of the effect of early retirement is of the utmost moment in any consideration you give to retirement generally, we venture to lay the figures before you as an illustration. We compared two cases; one, in which a Cadet should enter the corps at 20; serve to the age of 42 on an average pay of 200*l.* a-year; and from 42 to 60 on an average pay of 515*l.*; then retiring on 600*l.* a-year. The other, where the Cadet should similarly serve to the age of 42 on 200*l.* a-year; but should then retire on 300*l.* a-year. The following was the result:—

1. The present value to a Cadet, entering the corps at 20, of pay averaging 200*l.* a-year to 42, and of pay averaging 515*l.* a-year from 42 to 60, and of 600*l.* a-year for the remainder of life, would be 4,891*l.*

2. The present value to the Cadet of 200*l.* a-year to 42, and of 300*l.* a-year for the remainder of life, would be 3,853*l.*, shewing a gain to the public on the *individual* of 1,038*l.*

3. To keep a corps of 400 officers full, 12·8 Cadets must enter annually, on the first hypothesis, but 20·7 on the second.

4. The cost of the batch of Cadets who would have to enter each year to the public would therefore be greater by 17,152*l.* on the second hypothesis than on the first. [As this was a mere hypothetical comparison, allowance was not made for resignation, &c.]

5. What would apply to the whole batch would equally apply to a series of individuals, and therefore every retirement at 42 on 300*l.* a-year would be more expensive than retirement at 60 on 600*l.* a-year.

In another yet more extreme case a system under which all officers in the corps of 400 officers served on only 125*l.* a-year to the age of 42, and then retired on 300*l.* a-year, actually cost more for effective and non-effective pay, taken together, by 15,994*l.*, than a system in which the officers drew the ordinary pay of their ranks, with promotion at the standard periods from Lieutenant to Colonel, and retired at the age of 60 on 600*l.* a-year.

1045. But setting aside the question of employing more men than might be indispensable, there must be retiring annuities at various ages which shall represent in cost to the public exactly the same expense as 600*l.* a-year to men who retire at 60?—There are; but those annuities fall so rapidly in amount that their acceptance for purposes of voluntary retirement must almost be confined to those officers who, under existing regulations, would either retire on half-pay after 25 years' service, or to those who now resign without any retiring pension whatever. If the annuities which were proposed by Mr. Childers for compulsory retirement were considered fair compensation for the loss of an officer's military prospects, these annuities now spoken of would constitute a hardship, if forced on an officer's acceptance. The annuities in question corresponding in expense to the public to the retirement of an officer at 60 years of age, on 600*l.* a year, are shown in Column 1 of the Statement now handed in. (*Vide* Appendix AA.) In Column 2 will be found the lump sum for which each annuity could be commuted under the Pensions Commutation Act. It will be observed that at very few ages do these sums amount nearly to the Regulation value of an Infantry Commission of the rank the officer would hold according to the so-called standard periods of service.

1046. The diminution in these annuities as the age decreases, we are to understand represents, not merely the longer expectation of life involved by the earlier age, but also a compensation to the public for the enlargement of the base of the Retired List?—That is exactly the case. The public loses nothing in money by an officer accepting such an annuity, except perhaps a slight increase to the charge for Woolwich Academy, and it gains by the additional infusion of youth thrown into the corps.

1047. How do these annuities compare with those suggested by Mr. Childers?—The annuities which Mr. Childers has proposed and has adopted for the Marines are those shown in Column 3; the commutable value being given in Column 4. At every age they are considerably in excess of what we may perhaps call the "Equivalent" annuity. The best comparison is the commutable value, which is about 1,300*l.* in excess at the age of 55, about 1,800*l.* (or a Captain's Commission) at 50; about 1,450*l.* in excess at 45; and more than 1,000*l.* at the age of 42.

1048. Then in point of fact every annuity given under Mr. Childers' proposal, however it may affect the officer, represents a loss to the public as compared with the retention of the officer till 60 years of age?—Yes, a money loss to the public, assuming, of course, that the vacancy created be filled up; and, according to the evidence of previous witnesses, a hardship to the officer if the retirement be compulsory. But promotion will be expedited, and it is for your Committee to consider whether in that expediting of promotion you obtain your money's worth for the extra outlay. It is, of course, in regard to the greater charge for these annuities than for the "equivalent" annuities that consists the cost of Mr. Childers' scheme over that required for retirement at 60 only.

1049. How do these annuities compare with the case of an officer selling out from the Line?—In Column 6 will be found the Regulation prices of Commissions, according to the standard periods of service, and in Column 8 according to the average service of non-purchase Infantry officers. In Columns 5 and 7 are shown the annuities which, under the Pensions Commutation Act, could be commuted for such lump sums.

1050. Are the annuities in Columns 5 and 7 of this statement, those which officers would purchase with the prices of their commissions, shown in columns 6 and 8?—No, they are larger. Government acts differently, if a buyer or a seller. It is willing, under the Pensions Commutation Act, to purchase annuities at five per cent. to its own gain; but when selling comes in question, it will take the market value of money, less than 3½ per cent, and will reduce the annuity accordingly.

1051. From your previous answers, I infer that you do not recommend any fixed limit to the sum granted for retirement?—With retirement compulsory at a given age, any limitation is impossible. The duration of life can alone afford a limit. The amount of the retirement is in direct ratio to the total of the corps, or, more strictly speaking, to the number of Cadets who enter; because, out of every batch who enter at a given age, a certain number will attain the time for full pay retirement. Therefore, any scheme which increases the number of Cadets must increase the cost of retirement. Schemes have been devised for retiring officers, either voluntarily or compulsorily at earlier periods than that already fixed. The inevitable result of such schemes is a greatly increased retirement. As has already been pointed out, the younger the age for retiring, the greater the number

attaining it. It might be observed that the proposed pensions at these lower ages are less than that at 60. To this we would answer that we have given you a table of annuities which would not exceed the cost of the 60 years' retirement; and that these pensions are far lower than any which have been proposed.

1052. Before proceeding to inquire into the principles upon which any scheme for retirement should be built up, will you give the Committee your views upon the relative advantages of optional and compulsory retirement at earlier ages than 60?—Voluntary or optional retirement is not open to the charge of harshness, to which compulsory retirement, through no fault or incapacity of the officer, is liable. By means of compulsory retirement, any given limit, beyond which service in the rank is forbidden, can be fixed; but these standard periods of service could never be made a certainty by means of optional retirement alone. In optional retirement the officer accepts a given annuity with his eyes open. The only difficulty is to induce him to accept such an annuity as shall not cause loss to the State by his doing so. The more officers who could be induced to retire on the annuities in Column 1 of the statement last handed in, the younger would be the corps, but those annuities are very small, and would compare disadvantageously with the officer's expectation of life in the corps, and of retirement after 60. It is a question of relative advantages. When promotion is very stagnant, and prospects in it are at the worst, small annuities may induce retirement; but when promotion is brisk, larger inducements will be needed to persuade officers to go; while, on the other hand, it will be less necessary that they should go. Compulsory retirement, at Mr. Childers' rates, might cost only a few thousand pounds more than the system of altering the proportions between the ranks; still this latter plan is the more economical because it grants to all the officers their just expectation, while the system of compulsory retirement at Mr. Childers' rates, though costing more, yields less to the officers on an average. Every system which induces or compels the retirement of young officers, has the drawback that the State may lose many of its most efficient officers.

1053. In case the Committee should find it necessary to recommend compulsory retirement, we should like once more to hear your reasons for or against age compared with service, as a basis of selection?—Taking the corps in its present condition the limit to total regimental service would be more advantageously fixed at the age of 60 than after 40 years' service; for, if service were adopted, many officers would be retired on the score of physical inefficiency through age, when only 56 or 57; since Cadets, in times past, have entered at ages running as low as 16, and rarely exceeding 19; while those who have come in under competition sometimes enter as late as 23. To retire these after 40 years' service would spread the retiring age from 56 to 63; which would be illogical, if 60 really, as is assumed, represent the limit of physical efficiency. If you come, however, to compulsory retirement, otherwise than from the top of the corps, service seems to present a far fairer base than age. Such a retirement is intended to create promotion, and to remedy a moral rather than a physical disqualification; for an officer fit for promotion to Lieutenant-Colonel can scarcely be unfit physically to perform a Captain's duties. Lieutenants enter the corps in half-yearly batches; and each batch ranges, in point of age, over several years—perhaps from 18 to 22. Now the older men within this narrow limit of age in each batch may be, in middle life, the better officers mentally and physically; but with retirement based on age, they will almost certainly be those selected for retirement rather than for promotion, since while the officers in one year's batch are in course of promotion the oldest in the batches of the next two or three years will probably be required to retire. If retirement were compulsory, according to service, there would be cleared one year's batch from the rank every year; those who stood first being promoted, and those lowest being retired. Comparing the two systems, retirement by age would give promotion to the man who was youngest; retirement by service, to him who passed best out of Woolwich Academy. Neither criterion may point out the best officer; but the second is of the two the more likely, perhaps, to do so.

1054. Is there any measure, not involving expense in some other shape, which could be adopted to decrease the total cost of the Retired List?—Yes; so long as final retirement is at a fixed age, any measure will have this effect which shall cause Lieutenants to enter the corps younger than at present, for the number of officers retiring will, in round numbers, be in direct ratio to the Cadets entering, and in inverse ratio to the total length of service. The alteration of age for entrance from 18 to 21 has added nearly 5 per cent. to the officers for whom retirement must be provided; and with the late fixed sum allowed for retirement has contributed to bring about the apprehended stagnation. The reduction of a year in the age, effected by the recent regulations, based on the Report of the Military Education Commission will save between one and two per cent. on the ultimate cost of retirement.

1055. Passing now to the problem before this Committee, let it be assumed that we have determined by some means or other to bring about promotion after certain specific periods of service—it does not matter what periods—will you give your views as to the modes in which we can accomplish it?—There are three principles by which a fixed period of service in the different ranks can be attained; and there are only three principles, although by a "combination of contrivances" portions of each may be welded into one scheme.

The first, which we will call **A**, is that repeatedly pointed out by us, namely, adjusting the numbers in each rank, so that the approved periods of service be on the average attained; the total number of officers in the corps remaining fixed. We have already shown for the periods called the standard periods, what these proportions should be*—compulsory retirement at the age of 60 is pre-supposed—and cadets are assumed to enter at 20. With these proportions no further retirement, either voluntary or compulsory will be necessary, and, one year with another, the periods of service will be attained. With other periods of service, of course the proportion between the several ranks would be altered. This method of all probable methods is the cheapest. The objection to which it is open is a military one, viz., the alteration in the numbers of each rank. However, from the evidence of the officers, taken before this Committee, in the case of the Engineers this objection appears to be without foundation; and as regards the Artillery, although Captain Harrison has apparently considered that the numbers should not vary from the present; General Gambier has not hesitated to propose a change of proportion: and a reduction of 84 subalterns has been already agreed to. There are two ways by which the necessary proportions between the several ranks can be brought about:—1st. By fixing the numbers in the various ranks to suit the periods during which the officers should serve in them: thus the numbers in each rank will be constant and the periods of service will, on an average, be those determined upon. The 2nd way of effecting this method of promotion is to fix the periods of service, and to promote all officers on attaining the prescribed limits; thus the periods of service in the ranks will be constant, but the numbers in the different ranks will vary. The expense of the two plans will vary but slightly; and it becomes a question only, which, for military purposes, is the better of the two: To fix the numbers in the ranks and allow the periods of service to fluctuate about the prescribed limits; or to keep

* See Answers to Questions 1029 and 1033.

D. Robinson, Esq., and Robert R. F. Davey, Esq.

6 May, 1870.

the periods of service constant and to allow the numbers in each rank to continually vary, but to average the numbers the prescribed periods would be calculated to produce.

The second method is that adopted in part by Mr. Childers, so far as the ranks of Captain, Lieutenant-Colonel, and Colonel are concerned; we will call it **B**, and its principle consists in the compulsory retirement from each rank of all officers attaining the limit of service or age in the rank. Here the existing proportions are maintained between the various ranks; and the total number of officers in the corps remains constant. There appear to be two grave objections to this method, both actuarial questions, 1st, of expense; 2nd, the result to the officers consequent upon such a system. This method is more expensive than method **A**, more expensive to the public, less remunerative to the officers on the effective and non-effective lists taken together. The annual sum spent would be greater, but it would be divided among a disproportionately greater number of men; consequently each on an average would receive less. Again a greater portion of the expense would be pensions to officers without any return in the shape of service performed. In the Artillery the greatest number of retirements would, be Captains of from 48 to 42 years of age. 2nd. The effect of this principle, if carried out in all ranks, is that every year (in a normal condition) in the Engineers to maintain the standard periods, two or three Lieutenants would have to be pensioned off, 4 Captains (out of 8 reaching the limit, *i.e.* half of them), and every other year one Lieutenant-Colonel. Now take the stronger case, that of the Captains. In a normal state, 8 Captains yearly attain the limit of age in the British 8 Battalions, and out of these 8, four are promoted and four retired. Before proceeding to discuss the third and last method of promotion it will be well to compare the two first methods together. Method **A** would ultimately cost less than method **B**; and yet the officers under **A** would receive on an average more than under **B**. Method **A** would secure the retention of all the able officers, whilst under **B** their service might be lost to the corps. Under **A** the hardship of compulsory retirement to officers does not exist. The Cadets under **B** would greatly exceed those necessary to maintain method **A** in force. By method **A** any periods of service could be attained; by method **B** only a limit to the service can be fixed, so that that limit shall not be exceeded; but when the limit is fixed in an upper, the service in the lower rank might never reach, within some years, the limit for that rank; as would actually be the case with the existing proportion of Lieutenants in the Artillery. On the other hand, method **B** secures the existing proportions between the ranks and a greater proportion of young officers: two results which could not be attained by method **A**.

The third and last only possible principle by which a fixed period of service in the different ranks can be attained we will call **C**. It is to promote officers on attaining the limit of service or age as under method **A**, but to appoint a Cadet, and to give promotion in the ranks below that from which the promotion took place, as under method **B**. To explain the several points peculiar to this method, we will compare it with the other two. It has the advantage over method **A** of retaining the present establishment of officers for the different ranks as a minimum. It also, similarly to method **B** ensures a greater number of young officers than could be obtained under **A**, but it increases the total number of officers in the corps. It would exceed **A** in expense, and also **B**, unless the surplus officers—those redundant to the fixed numbers for the several ranks—could be employed on other than military service; and thus relieve the effective votes of this excessive charge. The non-effective portion of the Retirement might also be reduced, if seconded employment be made a bar to the full Retirement allowance at 60. If both these requirements could be fulfilled, the total cost would be about the same as that of the existing system with retirement at 60; but of course the same means of reduction would apply more or less to the other principles. At the same time it avoids the harshness of method **B**, the inevitable result of compulsory retirement from the lower ranks; and where **B** loses the service of the officers who fail to obtain promotion, method **C** would retain their service as a reserve in case of need. It should be understood that the seconded officers would be promoted in their turn; and consequently if at any time these officers could not find Civil employment, the Lists would become bloated, and the cost increased.

Any system which may be adopted will be found to rest on one of these principles. Of course a combination may be deemed the most expedient, *e. g.*: System **A** may not secure a sufficient number of young officers; then it might be supplemented by system **C** being brought into partial operation. Again system **B** might come into operation to the extent suggested by Colonel Leahy, viz: in the case of inefficiency—a plan not chargeable with harshness to the officers, and greatly to the advantage of the public.

1056. Will you recapitulate, in as few words as possible, the leading idea of the three principles which you have called **A**, **B**, and **C**?—**A** is to alter the ranks to such a proportion that the required periods of service shall be afforded. **B** leaves the ranks as they are; but provides an exit from each for such officers as the promotions to the ranks above fail to absorb, in time to prevent the standard periods being overpassed. **C** treats the present numbers as the minimum in each rank, but allows each rank to expand as officers complete the service entitling them to promotion to it.

1057. You have spoken of the necessity of introducing young officers in sufficient number at the bottom of the list; would system **A** introduce fewer cadets than come in now?—With retirement at 60, and in a normal state, there would be a greater influx of Cadets than now. Until, however, the retirement at 60 shall come into operation there will be a decrease of four Cadets per annum in the Artillery and two in the Engineers, consequent on the cessation of the 42,400*l.* and 18,285*l.* respectively. Added to this, there might be rather fewer resignations in a better situated corps, so that fewer Cadets would be needed to replace those officers resigning; but this last consideration would apply to any ameliorative measure. Systems **B** and **C** would bring in an equal number of Cadets, and in each case more than at present.

(*The Witnesses withdrew.*)

(Adjourned.)

Friday, 10th June, 1870.

D. Robinson, Esq., and Robert R. F. Davey, Esq.

10 June, 1870.

PRESENT:

Captain the Honourable J. C. VIVIAN, M.P., *in the Chair.*

Colonel EGERTON. | Mr. MILTON.

DENHAM ROBINSON, Esq., and ROBERT R. F. DAVEY, Esq., further examined.

1058. (*Chairman.*) At our last meeting we asked ou to make some calculations for us. Having regard o vested interests, have you calculated what would be he cost of the Retired List for future years, on the upposition that only those officers should succeed to he present fixed retirements, who have already ualified by completing 30 years' service?—Yes; we and in a tabular statement of the cost for each year o 1892-3, based on that supposition and on the rule hat all officers not so included shall retire from regi- ental duty at the age of 60, unless promoted earlier. (*Vide* Appendix BB.)

1059. (*Mr. Milton.*) You have proceeded on the upposition that every one who had the right has ailed himself of it?—Yes; as soon as there was a acancy.

1060. (*Chairman.*) We also asked you to work out he average service of Infantry Officers of the Line. ave you done that?—Yes; and we produce several esults from which we must leave the Committee to elect that which is considered the most trustworthy. t our last examination we handed in a table showing he average service of purchase and non-purchase fficers taken separately, which averages were based n the officers of 1870 and of 1852 respectively. To nd the average for the Infantry generally, it was ecessary either to find the service of every officer in ; or, having already a fair average of each class, urchase and non-purchase, to ascertain the propor- on who purchase and the proportion who do not rchase. The first process would have involved a ry great expenditure of time; we, therefore, opted the second. To ascertain the proportion rne in each rank by purchasing to non-purchasing fficers, we found the actual numbers who had ob- ined commissions by purchase and without purchase, spectively, in the year 1869. Reduced to a per- ntage the numbers were found to be as shewn the statement which we now hand in. (*Vide* ppendix CC,) Based on those percentages, the erage service of Infantry Officers would be as llows:—On attaining rank of Lieutenant, $2\frac{8}{10}$ years; attaining rank of Captain, $8\frac{5}{10}$ years; on attaining nk of Major, $17\frac{6}{10}$ years; on attaining rank of eutenant-Colonel, 23 years. As it is possible that 69 may have been an exceptional year—though see no reason for supposing it was—we sought rroboration by finding the Commissions actually rchased by all the officers at present in the Pur- ase Regiments of the Army (except the Foot uards). In the table we now hand in (*vide* Appendix D), under the head "Total Number" are shown e actual numbers of commissions in each rank which ve been obtained by purchase and without purchase; d under "Percentage," the results reduced to a rcentage. Comparing that percentage with the urn last given, it will be seen that the propor- n of purchase differs by about 15 per cent., the fference being accounted for by the great number of mmissions obtained without purchase during the ussian War and the Indian Mutiny. Based on this w percentage, the average service becomes,—On aining rank of Lieutenant, $2\frac{8}{10}$ years; on attain- g rank of Captain, $8\frac{8}{10}$ years; on attaining rank of ajor, $17\frac{9}{10}$ years; on attaining rank of Lieutenant- olonel, $23\frac{3}{10}$ years; or about 4 months longer than fore.

1061. Do those averages represent the services of ual officers?—Approximately. Each total period at is, up to the rank of Lieutenant-Colonel) is mposed of four periods of service in the several aks of Ensign, Lieutenant, Captain, and Major. ch of these four separate periods has been most carefully averaged from existing officers; and taken together we believe that from being based upon a much larger number they constitute a better average than could be obtained from the continuous service of particular officers. For instance, if we depended on Lieutenant-Colonels for giving us the average service on reaching that rank, the average would be based on, perhaps, 200 officers who would have included all the combinations of purchase and non-purchase, whereas by taking the composite average we can readily obtain 350 Captains, 600 Lieutenants, and 800 Ensigns for a basis.

1062. Can you give us the average service given by Lieutenant-Colonels and Majors on attaining their ranks?—Yes. The Lieutenant-Colonels of 1870 of the Infantry (including those of the 9 non-purchase regiments) in all 137, averaged a service of $21\frac{7}{10}$ years on attaining their rank. Of these officers, those in the double-battalion regiments averaged $21\frac{6}{10}$ years; those in single-battalion purchase regiments $21\frac{5}{10}$ years; and those in the 9 non-purchase regiments $24\frac{4}{10}$ years. Omitting the last, there are 6 Lieutenant-Colonels of Infantry who have purchased all their steps; and their service averaged $19\frac{5}{10}$ years on becoming Lieutenant-Colonel; while 8 obtained the rank without purchasing any steps, after an average service of $24\frac{7}{10}$ years. Turning to 1852, the Lieutenant-Colonels had only obtained their rank after much longer service; 118 officers averaged $23\frac{4}{10}$ years. Of 36 officers who had bought all their steps the average was $20\frac{3}{10}$ years. The Majors of 1870 had on an averge served $17\frac{7}{10}$ years on reaching the rank, of whom 43 bought all their steps and averaged $16\frac{4}{10}$ years; and 38 obtained all steps without purchase, averaging $21\frac{4}{10}$ years. In 1852, the Majors had had a service of $19\frac{4}{10}$ years, of whom the 91 who bought all their steps averaged $17\frac{6}{10}$, and the 9 who bought none averaged $25\frac{8}{10}$ years.

1063. How do you account for the much longer service of the officers of 1852 as compared with those of 1870?—By the fact that the Lieutenant-Colonels and Majors of 1870 have almost all profited by the rapid promotion of the Crimean and Indian wars, while those of 1852 had been subjected to the great and long stagnation of promotion which took effect between the French and Russian wars.

1064. Will you recapitulate the several averages you have just given?—We have given:

First, a composite average of purchasing officers of 1870.
Secondly, a composite average of non-purchasing officers of 1870.
Thirdly, the mean of purchasing and non-purchasing officers of 1870.
Fourthly, a general average of Infantry officers, based on the proportion of commissions purchased in 1869.
Fifthly, a general average of Infantry officers based on the proportion of commissions which have been purchased by officers now in the regiments.
Sixthly, the average service of present Lieutenant-Colonels on reaching that rank.
Seventhly, the average service of present Majors on reaching that rank.
Eighthly, the composite average of purchasing officers of 1852.
Ninthly, the composite average of non-purchasing officers of 1852.
Tenthly, the mean of the service of purchase and non-purchase officers of 1852.
Eleventhly, the average service of Lieutenant-Colonels of 1852 on attaining that rank.

D. Robinson, Esq., and Robert R. F. Davey, Esq.

10 June, 1870.

Twelfthly, the average service of Majors of 1852, on reaching that rank.

We hand in a table shewing (for the Infantry) these several averages (*vide* Appendix EE).

1065. You were good enough at the last meeting of the Committee to say you would prepare the per-centages of the Infantry of the Line, showing the proportion between the several ranks similar to that you gave us for the Artillery and Engineers. Have you done that?—We have; but there is some complication in obtaining numbers which will fairly compare with the Ordnance Corps. In the first place the officers actually serving in Infantry Regiments do not give a proper comparison. There are 5,143 such officers. To them must be added 1,016 officers, principally in the upper ranks, who are unattached, but who represent promotion for the junior regimental officers. Attached and unattached officers taken together, for the Infantry, give, as a percentage:

General Officers	5½
Lieutenant-Colonels	6
Majors	8
Captains	29½
Subalterns	51
Total	100

1066. What are the corresponding percentages for the Artillery and Engineers?—They are as follows:

	Artillery.	Engineers.
General Officers	12½	10
Colonels	4½	4
Lieutenant-Colonels	8	11
Captains	17	17
Second Captains	19	15
Subalterns	39	43
Total	100	100

1067. Do these percentages, which are so much against the Infantry, give a fair comparison?—As regards the actual proportions between the ranks, they show their relative strength at any one time; but as a criterion of promotion they afford no guide. For promotion to the highest prizes will fall, not to the total number of officers, but to the more limited number who make the army the business of their lives. Out of the total 6,159 Infantry Officers, no less than 4,721 may be expected to sell out, leaving only 1,438 for continuous service. Allowing for resignation in the scientific corps, the percentages, given by those officers whose object is to serve continuously until either the highest rank or retired-full-pay be attained, are—

	Line.	Art.	Engrs.
General Officers	23	14	11
Colonels	—	5	4
Lieutenant-Colonels	25	9	11½
Majors	12	—	—
Captains	19	18	17½
Second Captains	—	18	14
Subalterns	21	36	42
Total	100	100	100

These several percentages divided among General Officers, Field Officers, Captains, and Subalterns are recapitulated in the table we here hand in (*vide* Appendix FF).

1068. Do you consider these last percentages the fair comparison between the Line and Scientific Corps?—Yes; and those numbers give the service obtaining in the several corps in a normal condition.

1069. (*Mr. Milton.*) The figures of the percentages of the Artillery and Engineers are calculated on the 100 getting their rank after normal periods of service?—Those figures would give the periods of service which obtain if the corps be normal.

1070. *Chairman.* In this table of the average service of Infantry Officers, under various conditions, do you include the brigade of Guards?—No.

1071. You have spoken of the officers who, in the line, will serve continuously. Are you able to tell us how far the ranks are relieved by the action of purchase?—In the table we now hand in (*vide* Appendix GG), is shewn the probable division of the present Infantry Officers, 6,159 in all: 218 are on retired full pay, 1,220 mean to serve continuously, and 4,721 to sell, viz.; 94 as Ensigns, 1,023 as Lieutenants, 2,082 as Captains, and 1,522 as Field Officers. These numbers are subject to the chances of dying before the intention can be carried out. We can scarcely say that this relief is attributable to purchase. If purchase did not exist, resignation might more or less take its place.

1072. You can foretell what would be the disposal of any given number of officers entering the Infantry?—Yes.—The table which we now hand in (*vide* Appendix HH), shows the probable destination of 1,000 officers entering as Ensigns. You will perceive that 665, or almost exactly 2 out of 3 who enter, will relieve the ranks and the retirement by selling out. Of those who enter, 1 in every 11 will require retired full pay.

1073. Have you calculated at all, or considered in any way, how far India should equitably unite with us in any measures calculated to accelerate promotion?—While the existing Indian lists of officers continue, promotion and retirement will be entirely separate. Identity of measures, therefore, is not indispensable. Inasmuch, however, as the junior officers in the British list are dependent for promotion on vacancies on the British and Indian lists taken together, it is most important that India should provide, though in what way it pleases, a current of promotion for its expiring lists not less in proportion than that provided by the British Government for its own list. It may otherwise happen that vacancies secured at British expense will be absorbed by Lieutenants virtually belonging to India, without an adequate return.

1074. With regard to retired pay, what proportion should, in your opinion, fall upon India?—Supposing that the British and Indian retirements were at the same rate of pension per individual, the only fair principle would be to charge each revenue with so much of each retirement as should be equivalent to the individual's length of service on the British and Indian establishments respectively. So long as the separate rates of retirement shall be maintained some special adjustment may be requisite.

1075. Colonel Leahy made a proposal for an alteration in the constitution of the field batteries of Artillery. Do you see any reason to alter the evidence which you have given upon that point before the Committee?—Yes; for although the intention is not mentioned in his evidence, we find, on referring to Colonel Leahy, that he intends to compensate for the increased number of officers with field batteries by a reduction of those with garrison batteries; so avoiding an increase in the total number of the corps.

1076. What exactly is his proposal, as you understand it?—Field batteries having now 6 guns, with 1 Captain, 1 Second Captain, and 3 Subalterns to each, Colonel Leahy proposes to convert them into batteries of 4 guns; each battery would then have 1 Captain, 1 Second Captain, and 2 Lieutenants. There would be, as now, 1 Lieutenant-Colonel to 2 batteries.

1077. To carry out this organization what would be the necessary alterations in the ranks?—The Lieutenant-Colonels would be increased from 128 to 154; the Captains from 263 to 315; while Second Captains would diminish from 294 to 262; and Lieutenants from 619 to 573. As the field batteries

nder the proposed re-organization would require s many Lieutenants as at present, and as the gar-ison batteries at home have already been ordered o be reduced to 2 Subalterns each, it would be ecessary to reduce the second Captains of each arrison battery on the British establishments in rder to avoid (after allowing for seconded, &c., fficers) increase to the total number. These num-ers of officers would provide the following battery stablishments.

2 Batteries.	Field.	Garrison.
ritish—Lieut.-Colonel	1	1
„ Captains	2	2
„ Second Captains	2	—
„ Lieutenants	4	4
Total	9	7

	Field.	Garrison.
dia—Lieut.-Colonel	1	1
, Captains	2	2
, Second Captains	2	2
, Lieutenants	4	4
Total	9	9

1078. What would be the result of that alteration regards the immediate promotion of officers?—Captains would become Lieutenant-Colonels, 78 ond Captains would be promoted, and 46 Lieu-ants, on the British and Indian lists together.

079. And when the corps comes to its normal dition what would be the effect on promotion?—e change would be in the right direction; but the utenant-Colonels would not be sufficiently aug-nted to produce the so-called standard periods.

080. And what would be the increased cost?—regards the non-effective list there would be no sible alteration. As regards the effective list, for reasons named in the preceding answer, a transfer 46 Officers would have to take place from Britain India, causing a saving on the British charge of 127 (for *pay* only), with, of course, a correspond-increase of charge to India.

081. *Colonel Egerton.* What percentage of ers would that make in the different ranks?—pared with the percentage given in A. 1030, this osal would give

Colonels	5
Lieutenant-Colonels	11
Captains	23
Second Captains	19
Lieutenants	42
Total	100

1082. (*Chairman.*) In your evidence at page 4, Q. 986, you are asked whether you agree with Colonel Keane's estimate of 19 years as the probable service of the present junior subaltern before promotion to the rank of Second Captain, and you say you think it would be 17 years. Then, in Q. 989, you say that you do agree with Colonel Keane that 9 additional steps per annum would on an average secure promotion to Lieutenants after 13 years' service. I understood from Colonel Keane that he based that calculation on the fact that the present junior subalterns would be 19 years getting their promotion. How do you reconcile your differing from him as to the period in which they get their rank and yet agreeing with him as to the number of steps per annum necessary to secure their promotion?—We cannot say exactly how Colonel Keane obtained the figures he has given, but we supposed they were rough estimates, and though correct in the one statement, his forecast is not, in our opinion, quite so correct in the other. *D. Robinson, Esq., and Robert R. F. Davey, Esq.* 10 June, 1870.

1083. Though his forecast is not correct yet the conclusions at which he has arrived are correct?—Yes, as to the steps required.

1084. In short he has arrived at just conclusions from erroneous premises?—We do not see that there is any necessary connection between those two statements. The first has reference to the existing state of affairs, that it will take, according to Colonel Keane 19 years before the present junior Lieutenant is promoted—we think that he would be promoted in 17 years. The second has reference to the additional steps which would be required in order to promote Lieutenants after 13 years' service, in a normal condition. We agree with Colonel Keane that in a normal condition 9 extra promotions per annum would secure that Lieutenants should only serve as such 13 years.

1085. You mean that Colonel Keane's first point was considering the corps in its abnormal state, whereas the second was considering the corps in its normal state?—Yes.

1086. *Colonel Egerton.* In calculating the per centage for retirement in the Artillery you have allowed for all the other sources of retirement, have you not,—such as deaths, resignations, and half-pay?—Yes.

1087. And retirement at 60?—That applies in all cases except in the existing system.

1088. Referring to (Q) 1029, the very large proportion of Field Officers to other officers is very striking?—A smaller number of Field Officers would not give the standard periods of promotion which are referred to in that question.

1089. How do you account for there being such a very large proportion of Field Officers to other officers. There are 27 Field Officers to only 32 Captains and only 41 Lieutenants?—Because, by the standard periods, officers would have to be 15 years as Field Officers against 25 years as Captains and Subalterns, which would involve the numbers referred to.

(Adjourned.)

Wednesday, 22nd June, 1870.

Present:

Captain the Honourable J. C. W. Vivian, M.P., *in the Chair.*

Colonel Egerton. | Mr. Milton.

Major-General Gloucester Gambier, R.A., C.B., further examined.

90. The first question which I would ask you is, whether you will kindly explain to the Committee in detail the present organization of the *Maj.-Gen. Gambier, R.A., C.B.* 22 June, 1870.

Maj.-Gen. Gambier, R.A., C.B.

22 June, 1870.

Royal Artillery?—The present organization is, that the Royal Artillery is divided into brigades, each brigade containing eight batteries

1091. How many brigades are there in the Royal Artillery?—There are seventeen brigades in the old Royal Artillery, and twenty-five brigades including the old Indian Artillery.

1092. How many of those brigades are Horse Artillery?—Two of the old Royal Artillery, and four of the old Indian Artillery.

1093. (*Mr. Milton.*) Are those in addition to the twenty-five brigades which you have mentioned?—They are in addition to the twenty-five brigades of Field and Garrison Artillery; but of the Indian Brigades, it is proposed to reduce the twenty-fourth and twenty-fifth, on account of the reduction of Artillery in India, which has already taken place, together with that now proposed. It is proposed that the brigades shall be reorganized, so as to make the remaining brigades up to eight batteries each.

1094. Are the Indian brigades much weaker than our brigades?—Much weaker, on account of reductions of artillery in India of late years.

1095. Do you propose to bring them up to a strength equal to that of the English brigades, so that two brigades shall be knocked into one?—No, it is not sanctioned yet, but something must be done. All action is held back now, until it has been decided what reductions there shall be in India; then the whole of the Indian Brigade will have to be reorganized, there being some which have only five batteries in consequence of the reduction, and there are some with six batteries.

1096. How many batteries are there in each brigade of the English Artillery?—Eight both in the Field and Garrison Artillery, and five in the Horse Artillery.

1097. What is the difference between the constitution of a brigade of Field Artillery and the constitution of a brigade of Horse Artillery?—There are two Colonels, four Lieutenant-Colonels, eight Captains, eight Second Captains, and twenty-four Lieutenants in a Field Artillery Brigade. The only difference between a Garrison Artillery Brigade and a Field Artillery Brigade is that there is a reduction of one subaltern per battery in a Garrison Brigade. The Horse Artillery batteries are composed of a Captain, a Second Captain, and three Lieutenants; and each brigade has two Colonels and three Lieutenant-Colonels.

1098. There are six guns in each battery are there not?—There are six guns in each battery.

1099. (*Mr. Milton.*) Is that the case throughout the whole of the brigades?—Throughout all of them.

(*Chairman.* Does that apply to the Horse Artillery as well?—That applies to the Horse Artillery also.

1100. Are there the same number of men in the brigades of the Horse Artillery as in the brigades of the Field Artillery?—No, in consequence of the detachments being rapidly moved, the Horse Artillery have a greater number of horses, and they have a few more men.

1101. Is the proportion of officers to men in all the brigades the same?—Yes.

1102. How long has the brigade system existed in the Royal Artillery?—Since the year 1859.

1103. It was instituted by Colonel Bingham, was it not?—It was instituted by H.R.H. the Duke of Cambridge and Colonel Bingham.

1104. What was the constitution of the Royal Artillery before that time?—The constitution of the Royal Artillery before that time was its division into what were called battalions, which battalions were very much the same as the present brigades, except that the head-quarters of each battalion was at Woolwich, from whence emanated all orders concerning the regiment at large, and all recruits and drafts required for the companies away from head-quarters were also sent from there.

1105. How many battalions were there?—In 1846, there were ten, but they were afterwards increase from time to time.

1106. (*Mr. Milton.*) The number would be abo nineteen I think?—I do not think there were many, but I could not speak as to the exact numb without reference. The Adjutant and the staff we all at Woolwich, as were also the Senior Officers each battalion.

1107. (*Chairman.*) In the old days promotion we through the Royal Artillery regularly, did it not, ju as it does now?—Exactly.

1108. When you created the brigade system d you alter the system of promotion at all?—Not the least.

1109. Before the brigade system existed was t constitution of the batteries the same as it is now?—No, the Companies, as they were then called, were n organized into Field and Garrison Artillery as present. It was the custom under the battalio organization to attach a Company to the field batteri for one or two years, after which it resumed i garrison duties, and was replaced in the field batteri by another Company which went through the sam course. Now the Field Artillery is permanent.

1110. Were there six guns in each battery?—There were four guns at one time. When I was the Horse Artillery there were only two. The pea establishment after the war in 1815 was reduced most inefficient limits. In the Horse Artillery had only two guns with a full establishment of officer They decreased the number of men, leaving the nu ber of officers the same.

1111. Then they brought them up to four gu did they not?—Yes, and they brought them up six guns eventually.

1112. But they were at four guns for some tim were they not?—They were.

1113. Was not the cause of the organization the batteries with six guns in order that the should be some guns of one character and some another character?—Yes, there were two Howitze to each battery, until the rifled system came in operation, when they were discontinued the rifl guns being all shell guns, and now the batteries a composed entirely of rifled guns of the same calib making the number up to six, which His Royal Hig ness considers, and which we consider, to be the b formation of a battery. The French, I think, ha eight guns to each battery; the Prussians, four; have six guns; the Russians, I think, have eight gu so that it is a mere matter of opinion as to what nu ber is thought best.

1114. Under the present constitution of a batte it is commanded by a Captain, with a Second C tain and three subalterns, is it not?—Yes.

1115. In the field are not two batteries sometim put together, so that you have twelve guns un a Lieutenant-Colonel?—A Lieutenant-Colonel the charge of two batteries both in field and in g rison artillery.

1116. Therefore a Lieutenant-Colonel's comma consists of twelve guns, two first Captains, two seco Captains, and six Subalterns, does it not?—T is so.

1117. Looking at it, as I have said, from a pur military point of view, does it occur to you that t efficiency of the corps would be at all affected by a modification or alteration of the present system, s as, for example, bringing down the batteries to fo guns instead of six guns?—I have considered t point, and I have endeavoured to do what your n indicated as far as I could see, and I find that y cannot alter the proportion of officers; that is to s I understood you to mean that the higher ranks sho be increased while the lower ranks are decreas Now, the only way in which you can reduce the lo ranks is to reduce the Second Captain; then if y make the batteries of four guns each, you would o have one Captain and two Subalterns; and the e ciency of the regiment would, in my opinion, greatly impaired. There are, at all times, a vari

of classes composed of officers of the regiment, under instruction, mostly drawn from the grades of Second Captain and Lieutenant; for instance, the School of Gunnery course, which extends over fifteen months. Then there is the advanced class, at which they stay two years, and the Firemaster's course, which lasts for nine months. There are also short course classes of three months' duration both at Woolwich and Shoeburyness, to all of which officers come from various stations. All these classes are necessary to enable artillery officers to learn their profession; and there is also the Staff College, and one or two more classes. Most of these classes would have to be given up if you reduced the Subalterns or Second Captains in the field batteries and Horse Artillery. Therefore I do not see how it is possible to make an alteration in the ranks as has been suggested, as it would in that case most certainly interfere with the efficiency of the Artillery. It will be easily seen that in the case of a battery composed of one Captain and two Subalterns not one of those three officers could be spared for such classes.

1118. (*Mr. Milton.*) Supposing that you had one Captain, one Second Captain, and two Subalterns, for four guns, would that interfere with the efficiency of the battery?—No, certainly not; but still a Subaltern could not be spared.

1119. Why should you want to take him away?—For those classes of Artillery instruction which I have mentioned. As it is, 85 Lieutenants have been recently reduced from the Garrison Artillery, and it will be necessary to fill up their places with the Second Captains.

1120. But in action should you say that a battery of four guns with four officers—one First Captain, one Second Captain, and two Subalterns—was a more efficient or a less efficient organization than the present one of six guns?—They would be equally efficient.

1121. Why so?—Because you have in each case one Subaltern to two guns, and the other officers remain the same.

1122. Would you think that in action it was a better organization to have a battery of four guns with one Captain, one Second Captain, and two Subalterns, rather than a battery of six guns with one Captain, one Second Captain, and three Subalterns?—It is only a mere matter of opinion. I do not think it is a matter which signifies in the least. One would be equally efficient as the other. For myself, I should prefer the battery of six guns, but I dare say the next man you met would prefer a battery of four guns.

1123. *Colonel Egerton.* You mean, I presume, that the number of guns at present is not diminished?—The number of guns would not be diminished; but I was asked whether the efficiency was greater with two Captains and two Subalterns to four guns in action, or with two Captains and three Subalterns with six guns. Both of them are perfectly efficient.

1124. (*Chairman.*) It has been suggested that you should have two batteries of eight guns under a Field Officer, and that there should be under him in those batteries two Captains, two second Captains, and four Subalterns, so that if of those eight guns you detached four guns, there would be with them a Captain, a second Captain, and two Subalterns; what would be your opinion as to such an arrangement?—That is simply making your battery of four instead of six guns; which is nothing more than the same organization as exists at present.

1125. In one sense it would make an alteration; but that is a sense which, so far as your evidence of to-day goes, we do not want to go into, because we want to make any scheme of retirement subservient to efficiency. No scheme of retirement would be good if it was not based upon the efficiency of the regiment, and if we at all affect the efficiency of the Artillery in any scheme which we suggest, we should do mischief instead of good. Therefore we only ask you from a military point of view whether such a modification as has been suggested would increase or decrease the efficiency of the artillery?—The efficiency, I consider, would be reduced in this way: that I think a battery with two Subalterns only, is not sufficient. Therefore I approve of the six guns, because there are three Subalterns. If there are only two Subalterns to the battery, and one is sick, or if one goes to one of the classes to which I have referred, there is only one Subaltern in the one case left to do the whole duty; and supposing he is sick, which often happens, the battery is left without a Subaltern. An officer comes from a battery to this class; he is a year and a half before he gets back to his battery; and during that time all the duties connected with the battery, all the horses and equipments, and also the stable duties, are left to one Subaltern. So in action, if you lose a Subaltern, which may very probably be the case, or if he is absent from sickness, the whole battery is left with one only. If it is decided to make smaller batteries of four guns you could do so and it would be very efficient; but I maintain that the efficiency of the Artillery service would be greater by having six guns and three Subalterns.

1126. I suppose there is no doubt that in future operations, whether you keep your batteries at six guns, or whether you reduce them to four guns, they would be under a field officer?—Yes; the two batteries would be under a field officer as they are at present.

1127. (*Mr. Milton.*) Then in one case the field officer's command would be 12 guns, and in the other case it would be 8 guns?—Yes. I do not think that signifies in the least. It is with regard to the Subalterns that my objection arises.

1128. You are afraid of bringing the unit down so small that it will be difficult to provide against contingencies of sickness and absence, and that therefore the efficiency of the battery will be reduced?—Yes.

1129. (*Chairman.*) But, with that exception, you would see no objection to the reduction?—No, I see no objection beyond that.

1130. (*Mr. Milton.*) You said that the case of twelve guns includes an additional First Captain and an additional Second Captain. Do you consider that addition would carry an adequate increase of efficiency to the Royal Artillery?—It does not alter the efficiency of the Artillery in the least degree.

1131. You do not think that it will increase the efficiency adequately in proportion to the increased expense?—No. I maintain that you lose that efficiency, to a certain extent, by losing a subaltern from a battery.

1132. (*Chairman.*) But if with your present constitution you detached a portion of your six guns, you could not detach a Captain with it always?—With a Captain and a Second Captain you could do so.

1133. But if for eight guns there were two Captains and two Second Captains, although you would have reduced the number of Subalterns, you would still have an increased number of Captains, and you would have the advantage of being always able to send your four guns away with a Captain and a Second Captain, would you not?—Yes.

1134. Would not that rather contribute to efficiency?—Its efficiency would be the same as before.

1135. But now, if you detached three guns from your six guns, you could only send one Captain and a Subaltern with them?—Yes.

1136. Then you would have the advantage with four guns of being able to send away two Captains and two Subalterns, would you not?—Yes.

1137. Would not that be a more efficient organization?—I do not think so, on the grounds which I have stated. I think that whenever you detach three guns now from a battery it is generally for a temporary purpose, and the Captain and the Subaltern are sufficient for that purpose.

1138. (*Mr. Milton.*) Do you know what is the

Maj.-Gen. Gambier, R.A., C.B.

22 June, 1870.

opinion of his Royal Highness regarding the proposal for a battery to consist of four guns only?—I do not think that his Royal Highness would object to it, except upon the grounds which I have stated as to the classes, if the Second Captains' rank is not reduced.

1139. (*Chairman.*) Does anything occur to you which you could suggest to the Committee as regards readjustment or modification or alteration in the ranks of the Royal Artillery?—I have in accordance with the wish which was expressed to me, considered that subject, and I have tried it, but I find that you cannot do it without increasing the ranks higher up and decreasing them lower down; and, as I have already said, decreasing the number of Subalterns would destroy the efficiency of the Artillery, because then they could not learn their Artillery work at the classes to which I have before referred. Then if you increased the Colonels and Lieutenant-Colonels, there would be a large number of Colonels unemployed. Out of the number of Colonels that we have now, there are a few who are not employed, but the number is very small. If the number is increased there would be no employments for them. According to the plan which is proposed of making small batteries, the number of Lieutenant-Colonels would be increased by about nineteen. Those would all have employment, but you would have the number of Lieutenant-Colonels and Field Officers to a brigade of Artillery, greater to a very great extent than in proportion to a regiment of the line. There are now more Lieutenant-Colonels in proportion in a brigade of Artillery than there are in a regiment of the line, and if increased it might cause some dissatisfaction.

1140. That is another question apart from this question; but do you see any objection to increasing the number of Lieutenant-Colonels, or putting them to the sort of duty which is suggested by a reduction of the batteries?—No, except on those grounds which I have named, because the Lieutenant-Colonels are employed; but I am aware that His Royal Highness's view, on the part of the Army is, that they would certainly object, and they would ask for the same advantage.

1141. (*Mr. Milton.*) Then a brigade of the ordinary strength of eight batteries, or forty-eight guns, would have six field-officers if each Captain commanded batteries of four guns each?—Yes.

1142. Already you have more Colonels than Colonels' work, as I understand?—We have now about four or five Colonels who are not employed. Before the brigade system was adopted all the Colonels were unemployed, except a few of them who were in the position of Inspectors General, Deputy Adjutant-General of Artillery, &c.

1143. (*Chairman.*) Therefore your objection to increasing the number of Colonels is not a regimental objection so far as the efficiency of the Artillery goes, but it is an objection on the ground that you would have a quantity of officers without employment?—There would be no regimental objection.

1144. With regard to the Lieutenant-Colonels, the only objection, as I understand, is that it would create jealousy upon the part of the line?—Yes.

1145. (*Mr. Milton.*) Do you think that some plan could be adopted for making the Senior Captains Brevet-Majors, and, as such, Field Officers in charge of batteries?—Then they must take the place of the Lieutenant-Colonels, and the battery would be left with a Captain and two Subalterns.

1146. You may have a junior First Captain?—Then you must make a rank of Major, you must have a Major to a battery, and a Captain and a Second Captain and two Subalterns.

1147. Might you not have a Brevet-Major for two batteries?—Then he takes the place of a Lieutenant-Colonel.

1148. But could you not by adopting such a system as I suggest of making First Captains into Majors in the Royal Artillery, avoid an increase in the number of Lieutenant-Colonels, and work the batteries under a Brevet-Major or Major in charge of two batteries?—Then what is to become of the Lieutenant-Colonels?

1149. The number might be the same as it is at present?—By the proposal of breaking the batteries into four guns each, you have an increase of nineteen Lieutenant-Colonels.

1150. (*Chairman.*) But what objection would there be, supposing that you kept your Lieutenant-Colonel in the same position as he is in now, in command of the eight guns, and that instead of having two First Captains, you had two Brevet Majors, two Captains, and two Subalterns, and the Lieutenant-Colonel at the head of the eight guns, having the same number of officers as you have now, but replacing the two First Captains by two Brevet Majors?—We should not have the least objection. The First Captains would no doubt be delighted to be Majors instead of Captains, but that would make the affair worse, as far as field officers are concerned, because it would increase the number of field officers still further.

The Witness withdrew.

Colonel the Honorable H. F. Keane, R.E., C.B., further examined.

Col. the Hon. H. E. Keane, R.F., C.B.

22 June, 1870.

1151. (*Chairman.*) The evidence which the Committee wish to obtain from you, they wish you to be good enough to give from a purely military point of view, quite dismissing from your mind any scheme of retirement. We simply want evidence from you as to the present organisation of the Royal Engineers, if you will be kind enough to tell the Committee in detail what that organisation is?—It would be a repetition merely of the battalion formation.

1152. The corps of Royal Engineers is divided into battalions, is it not?—Yes.

1153. Into how many battalions is it to be divided? Into eight battalions. We have fifteen battalions altogether, eight for English service, and seven for India, and we take them all into consideration as regards this question. Each battalion is composed of one Colonel-Commandant, two Colonels, five Lieutenant-Colonels, sixteen Captains, and twenty-four Subalterns, making a total of forty-eight.

1154. How many First Captains, and how many Second Captains are there to a battalion?—Eight First Captains, and eight Second Captains.

1155. (*Mr. Milton.*) Each battalion has five companies, has it not?—The battalions have no company formation whatever. Those are battalions of officers; the Companies are perfectly distinct. The unit is a company; we have no larger unit.

1156. What is the head of that unit?—The head of it is a second Captain.

1157. You stated, did you not, that the Captains have no connection with the Company?—No; but the second Captains have; that is the respect in which we differ from the Artillery. In the Artillery the First Captain commands a battery, and there is a Second Captain under him. In the Engineers the Second Captain commands a Company, and the First Captain is supposed to have passed beyond the regimental control, except in the unit. Afterwards when they are brigaded together, the First Captain sometimes has the command of two Companies.

1158. (*Chairman.*) How many men are there in a Company?—At the present moment the number is 94, but the numbers are always changing. If the Secretary of State thinks it wise to knock 100 or or 200 men off the corps, we have to divide them equally among the 40 Companies; and by such an

operation the number of men in each Company is now reduced to 94. What we call a Company is 100 men, and for war service 120 men.

1159. Are there eight companies in a battalion?—We have no battalion formation at all.

1160. (*Mr. Milton.*) You have forty Lieutenant-Colonels—that has no connection with having forty companies, I suppose?—Not the least.

1161. (*Chairman.*) Then you have no battalion formation, as regards men, but only as regards officers?—Quite so.

1162. (*Mr. Milton.*) What is the object of that battalion formation?—Merely to coincide with the the Artillery. A formation was required for a large body of men like the Engineers, and the two corps having been always brought up together, the same formation was given to us as was given to them. The formation was given on those grounds.

1163. Then so far as the military efficiency of the corps of Royal Engineers is concerned, it would not be affected at all by any re-adjustment of the ranks?—No.

1164. *Mr. Milton.* As regards your regimental staff, such as Quartermasters and Paymasters, have they any connection with the battalions?—None whatever. The Paymaster is a creature of late formation with us; it is only since the Crimean War that we have had Paymasters. Cox and Co. were always our Paymasters.

1165. Have you a Colonel-Commandant for each battalion?—Yes.

1166. And two Colonels for each battalion?—Yes.

1167. Are they considered as belonging to the battalion?—No, they have nothing whatever to do with it.

1168. (*Chairman.*) How are your battalions distinguished?—We have no distinctions, they do not exist.

1169. Therefore the whole of your regimental system consists in companies commanded by Second Captains?—Entirely. When a man is particularly good, and it would cost the country the expense of bringing him home when abroad, we allow him to remain in command as First Captain, until an opportunity offers of bringing home.

1170. Then in a purely military point of view you see no reason why there should not be any re-adjustment of ranks, such as has been suggested?—None whatever.

1171. Do you happen to know what His Royal Highness's view of that is?—No, I do not.

1172. *Mr. Milton.* What would be your opinion of any system of promotion throughout the corps by length of service, and not by the numbers in the different ranks, so as to have a gradation of officers wholly dependent upon the service of officers, like the Indian Staff Corps?—I have made a calculation upon that from which it appears that the formation of a battalion to consist of one Commandant, three full Colonels, ten Lieutenant-Colonels, sixteen Captains, and eighteen Lieutenants, would, with our present retiring fund, ensure the Lieutenants getting their Captain's commissions after twelve years' service; and I find that it corresponds in a very curious way in the American Engineers The numbers there are seventeen Field Officers to my thirteen, thirteen Captains to my sixteen, and seventeen Lieutenants to my eighteen.

1173. (*Chairman.*) The Actuary's calculation here is, that in order to ensure promotion at what has been called before this Committee the "standard periods," you should have in the Engineers 10 per cent. of Colonels, 18 per cent. of Lieutenant-Colonels, 16 per cent. of Captains, 16 per cent. of Second Captains, and 40 per cent. of Subalterns?—That goes very near my numbers, because the number of officers in the battalion being forty-eight, you may take it as very nearly one-half of the hundred.

1174. (*Mr. Milton.*) Do you see any objection, in a military point of view, to a system which would give the promotions solely by lapse of time, so that a certain number of years should qualify for a certain rank; you would not be afraid of their all being senior officers?—No, because we have so very large a margin. Out of our 392 officers, I think 180 are all the officers whom I require for purely military duties; that leaves more than 200 for departmental work.

1175. (*Colonel Egerton.*) But in time of war would eighteen Lieutenants be a proper proportion to sixteen Captains to carry on the duties?—The duties of the officers are not all with the men. In the Crimea we had seven companies, or at the most only eight companies, and we had seventy-four officers. We have many more officers in time of war doing duty than those who are with the men.

1176. But are there not certain staff duties which you give to subalterns, such as plan drawing and the superintendence of working parties in the trenches? That is departmental work for which I have a surplus of 200 officers in the corps, apart altogether from the 180 who are required to be actually attached to the sappers—but those 180 officers who are attached to the companies still do a great deal of the departmental duty in the time when they are not employed in the regimental duties.

1177. (*Mr. Milton.*) I think your evidence is that those duties are such as to justify the expense to the public of the employment of the officers engaged in the departmental work; do you think that the departmental duties should be done by departmental subalterns?—Then you lose what I fancy is your object in making this inquiry, which is the promotion.

1178. (*Colonel Egerton.*) We are putting that out of the question altogether, and we are now dealing entirely with the question of military efficiency, with due regard to economy?—There are five companies to a battalion and only two subalterns to a company. There is still a margin there, for I have eighteen subalterns to each battalion, and I only want ten. That leaves eight subalterns for the departmental duties to which I have referred, and only five of these officers would be so employed; so that the relative proportion between the one and the other has no bearing on the question; or, at least, there is so large a margin that it would not be fair to compare them.

The Witness withdrew.

(Adjourned.)

* From this date the Retired Full-Pay Vote ceases to exist, and Compulsory Retirement at 60 Years of Age remains the only means of exit, in addition to the Ordinary Casualties; commencing with Officers who have now completed 25 Years' Service.

(F.)

Memorandum.

THE officers at the bottom of the List of Colonels have not completed thirty years' service, and are therefore ineligible to retire, even if desirous of doing so.

This also applies to the Lieutenant-Colonels who must, under existing regulations, have completed thirty years service to be eligible for retirement on 400*l.* a-year; and, as the senior has now only twenty-eight years' service, it follows that as regards this rank the present system is and will be for some years practically a dead letter.

By the end of the year 1870 only five Regimental Colonels, in addition to those who have already declined retirement, will have completed thirty years' service, and by that time the deaths in the present Retired Full Pay List, with the amount now in hand, will cause at least seven vacancies for retirement on 600*l.* a-year, for which there will not be sufficient candidates.

In the meantime the junior ranks are losing the advantage of the full amount of promotion which the present augmented Retired Full Pay Vote was intended to afford; and as it is most desirable that this state of things should be remedied, the Deputy Adjutant-General, Royal Artillery would suggest (as a temporary measure, until the state of the regiment no longer requires it), that the present qualifying periods for retirement should be reduced, so as to bring them within the reach of those officers who might be willing, but are now unable, to avail themselves of the option of retiring.

The reduced periods to be as follows:—

For Regimental Colonels to retire on 600*l.* a-year, from 30 to 28 years' service.

For Lieutenant-Colonels to retire upon 400*l.* a-year, from 30 to 25 years service. This, it is believed, would enable the whole amount of the vote to be appropriated, and secure promotion at the point where the Actuaries report it is most desirable, viz., from the Lieutenant-Colonels upwards.

The Deputy Adjutant-General Royal Artillery concurs in the recommendation contained in paragraph 36 of the Actuary's Report, but would suggest the following plan of applying the 8,873*l.* to be voted annually for the next 11 years, instead of that laid down in the new proposal.

As the compulsory retirement of Colonels at 60 years of age will have no effect in the Artillery for some years (as no officer will attain that age whilst holding that rank), it is proposed that all officers (including General-officers on the fixed establishment) should, on completing 38 years' service, be placed upon a seconded or supernumerary list, and promotion made in the regiment in their stead.

These officers to retain their present rates of pay, and their right to succeed to the rank of Colonel Commandant in their turn; or, relinquishing such right, to retire absolutely on 650*l.* a-year.

This would give 14 steps of promotion at once, and would not interfere with the working of the Retired Full-pay Fund under the modified periods for retirements proposed above.

The number of steps and cost per annum up to 1880 would be as under:—

Year	Number of Steps.	Cost.
		£
1869	14	6,636
1870	6	2,844
1871	1	474
1872	5	2,370
1873	3	1,422
1874	4	1,896

Total	67	31,758

This is taking the officers as they now stand, but there would, of course, be some alteration year by year.

The difference between the cost each year and 8,873*l.* to be applied to retirements on the augmented half-pay, or purchasing out, under the "new proposal," as laid down in the Actuaries' Report.

This would, to a certain extent, be carrying out the statement of the Actuaries, "that the best mode of causing promotion is by increasing the upper ranks."

G. GAMBIER,
Deputy Adjutanl-General.

Horse Guards, 8th November, 1869.

(G.)

Memorandum.

Horse Guards, S.W., 14th January, 1870.

IN the Royal Artillery, during the last five years, the number of casualties have been at the rate of 17 per annum.

At the rate with the present Establishment of Lieutenants, viz., 408, it would take 24 years to promote the junior of that grade to the rank of Second Captain.

To provide a remedy for this there should be at least 34 steps per annum.*

The present casualties by deaths, &c,, produce 17 per annum, and the alterations in the conditions of retirement of the 42,000*l.*, as proposed in my last scheme will, it is calculated, produce 7 steps, therefore there remain 10 steps required per annum.

To produce these 10 steps, I propose the measure which is embodied in the accompanying Table.

The operation of this scheme is shortly as follows:—

In the year 1870, 6 Captains to be promoted to the rank of Lieutenant-Colonel, and the 8 Senior Lieutenants to the rank of Second Captain, the places of the latter being filled up by the Lieutenants it has been proposed to reduce this year, and cadets from the Royal Military Academy, and no promotions will be made in the room of the 6 Captains raised to the rank of Lieutenant-Colonel; the cost of this will be 1,788*l.*, in addition to 2,000*l.* required to buy out officers whose services range from 7 to 25 years, making a total amount to be charged in the Estimates for that year of 3,788*l.*

In the year 1871, 4 Second Captains will be promoted to the rank of Captain, and the 8 Senior Lieutenants to the rank of Second Captain, the places of the latter being filled as before, by Lieutenants reduced upon the present establishment and cadets from the Royal Military Academy.

The cost of this will be 1,356*l.*, which, added to the 1,788*l.* taken in the previous year, with the 2,000*l.* required to buy out, will make the 5,144*l.* to be voted for 1871.

In the year 1872, the 2 Senior Captains will be promoted to the rank of Lieutenant-Colonel, and the 8 Senior Lieutenants to the rank of Second Captain, the places of the latter being filled by any of the reduced Lieutenants remaining to be absorbed and cadets from the Academy, and no promotions made in the room of the Captains raised to the rank of Lieutenant-Colonel as before explained.

The cost this year will be 1,448*l.*, which, added to the cost of the two preceding years, together with the 2,000*l.* required for this year, to buy out, will make the 6,592*l.* to be voted.

From 1873, the plan of alternately promoting 2 Second Captains to the rank of Captain, and the 8 Senior Lieutenants to the rank of Second Captain in that year, and of promoting in the next year 2 Captains to Lieutenant-Colonels, and the 8 Senior Lieutenants to the rank of Second Captain, is followed, the places of the Lieutenants promoted being filled up as before.

From the year 1878 to 1880, 2 Captains are promoted in each of those years to the rank of Lieutenant-Colonel, 3 Second Captains to the rank of Captain, and 6 Lieutenants to the rank of Second Captain, the places of the latter being filled by cadets as before.

The effect of this scheme is to give the 10 steps shown to be required in order to promote the Lieutenants within twelve years' service to the rank of Second Captain. It also further tends to the increase, by a gradual process, of the higher ranks, in such a proportion to the lower, as is shown by the actuaries to be necessary for a non-purchase corps, towards creating its own promotion.

At the end of the period embraced in the accompanying Return, the promotions under this scheme will give an increase of 18 Lieutenant-Colonels, 1 Captain, and 63 Second Captains to the present establishment, as shown therein.

Indian Establishment.

As the amounts proposed to be voted for the carrying out of this scheme are only sufficient to insure the promotion of the Lieutenants with 12 years' service on the Imperial astablishment, it is submitted that the Indian Government should be requested to carry out a similar measure, so as to insure a proportionately equal share of promotion to the Lieutenants on that establishment.

G. GAMBIER,
Deputy Adjutant-General.

H. FANE KEANE, *Colonel,*
Deputy Adjutant-General, Royal Engineers.

(I.)

Memorandum.

The period from 1863 to 1869 inclusive has been taken in the accompanying statements of promotions and casualties that have occurred amongst the officers of Royal Engineers, as the present Establishment of officers has existed since 1863 :—

		Number.
Statement	(*a.*) Promotion of Lieutenant-Colonels to Colonels ..	26
,,	(*b.*) Captains to Lieutenant-Colonels	38
,,	(*c.*) 2nd Captains to Captains	53
,,	(*d.*) Lieutenants to 2nd Captains	62*
,,	(*e.*) Casualties on the List of Lieutenants.. ..	24
,,	(*f.*) Promotions on the Indian Lists of Lieutenants ..	41*
	Casualties on ditto	9

* Total, 103 promotions of Lieutenants to 2nd Captains in 7 years, or 14 a-year.

From these statements, in seven years hence (1877), the ages and services of the undermentioned officers will be as follows :—

		Age.	Service.
Colonels.	Senior	$60\frac{4}{12}$	$42\frac{7}{12}$
	Junior	$50\frac{11}{12}$	$33\frac{7}{12}$
Lieutenant-Colonels.	Senior	$52\frac{4}{12}$	$33\frac{7}{12}$
	Junior	44	$24\frac{7}{12}$
Captains.	Senior	42	$24\frac{7}{12}$
	Junior	$36\frac{7}{12}$	$19\frac{3}{12}$
2nd Captains.	Senior	$36\frac{1}{12}$	$19\frac{3}{12}$
	Junior	35	$16\frac{1}{12}$
Lieutenants.	Senior	$34\frac{2}{12}$	$16\frac{1}{12}$
	*..	$27\frac{4}{12}$	7 yrs.

* This officer is now the junior subaltern of the corps, and, in seven years hence, will stand 230 from the top; and, taking 14 as the average number of Lieutenants likely to be promoted in each year, from the Imperial and Indian Lists combined, according to the average during the last seven years, viz., 101, and allowing a proportion of three casualties a-year to occur amongst the Lieutenants above 230, this officer is not likely to obtain his promotion to the rank of 2nd Captain until he has about nineteen years' service, and at the age of 39.

7 years going 130 steps

H. FANE KEANE, *Colonel,*
Deputy Adjutant-General, R.E.

(N.)

Promotion and Retirement of Officers of Royal Engineers.

FROM the statements laid before the Committee on the 22nd instant, covering the returns marked from A to F, it will be seen, that the present Junior Lieutenant (360th) of Royal Engineers, according to the average number of Promotions and Casualties that have occurred on the Imperial and Indian Cadres combined, during the last seven years (19 a-year), will obtain about 130 steps, viz. : —

Promotions from Lieutenants to 2nd Captains from 1863 to 1869 inclusive.	On Imperial Cadre	60
	Indian Cadres	41
Casualties amongst the 360 Lieutenants during the same period.	On Imperial Cadre	23
	Indian Cadres	9
Total Promotions and Casualties in 7 years		133

133÷7 years gives 19 Promotions and Casualties a year.

360÷19 Promotions and Casualties gives 19, the number of years the junior subaltern will be in the rank of Lieutenant.

360÷13 years gives 28 Promotions and Casualties a year, which shows that, to insure the promotion of the Junior Lieutenant (360th) in 13 years, 9 additional steps will be required in each year beyond the present 19.

These 9 additional steps, however, will not in some years be sufficient to insure the promotion to 2nd Captain of all Lieutenants, with 13 years' service, in consequence of the fluctuating number of Cadets appointed to the corps in the several years, as will be seen from the following statements :—

10 Lieutenants will complete 13 years' service during the year 1870.	The Promotion of Lieutenants to 2nd Captains on the Imperial List is about 8 a year, but it is very improbable that this number will take place during the present year (1870), as no less than 4 officers have to be absorbed into the establishment of the corps from the Seconded and Supernumerary Lists, therefore, only 4 of these 10 Lieutenants are likely to be promoted.—6 additional steps will be required to insure the promotion of the whole of this batch after 13 years' service.
24 ditto in 1871.	Say 8 of these officers will be promoted by ordinary casualties, and that one becomes non-effective, total 9—so to insure the promotion of the whole of this batch, after 13 years' service, about 15 additional steps will be required.
28 ditto in 1872.	8 Promotions by ordinary casualties, 2 non-effective, total 10—about 18 additional steps will be required to insure the promotion of the whole of this batch after 13 years' service.
19 ditto in 1873.	8 Promotions by Ordinary Casualties, 2 Non-effectives, total 10, on the Imperial Cadre, and add 6 promotions from the Madras and Bombay Cadres, as in this year (1873), promotions by Casualties on these Cadres will fall to Subalterns on the Imperial Cadre.—3 additional steps will be required to insure the promotion of the whole of this batch after 13 years' service.
26 ditto in 1874.	14 Promotions by Ordinary Casualties on the Imperial, Madras, and Bombay Cadres, 2 Non-effectives, total 16.—10 additional steps will be required to insure the promotion of the whole of this batch.
36 ditto in 1875.	14 Promotions by Ordinary Casualties, 3 Non-effectives, total 17.—19 additional steps will be required to insure the promotion of the whole of this batch.
11 ditto in 1876.	14 Promotions by Ordinary Casualties, and 1 Non-effective, total 15.—The whole of this batch will be promoted *without any additional steps*.
39 ditto in 1877.	14 Promotions by Ordinary Casualties, 3 Non-effectives, total 17.—22 additional steps will be required to insure the promotion of the whole of this batch after 13 years' service.
23 ditto in 1878.	In this year, Promotions by Casualties, on the Bengal Cadre, will be given to Subalterns on the Imperial Cadre, and the total promotions to Second Captains may be put down at about 19, and 21 of the Subalterns per margin may become Non-effective, total 21, leaving 3 additional steps necessary to insure the promotion of the whole of this batch after 13 years' service.
16 ditto in 1879.	No additional steps will be required in this year.
15 ditto in 1880.	No additional steps will be required in this year.

31 ditto in 1881.	19 Promotions to Second Captains by Ordinary Casualties, 2 Non-effectives, total 21.—10 additional steps required to insure the promotion of the whole of this batch after 13 years' service.
40 Lieutenants will complete 13 years' service during the year 1882.	19 Promotions by Ordinary Casualtics, and say 4 of the Subalterns, per margin, become Non-effective, total 23, leaving 17 additional steps necessary to insure the promotion of the whole of this batch after 13 years' service.

Recapitulation of the foregoing statements, showing the additional number of steps required in each year, to promote Lieutenants of Royal Engineers to Second Captains, *after* 13 *years' service.*

H. FANE KEANE,
Colonel Deputy-Adjutant-General, R.E.

Horse Guards, 25th February, 1870.

(O.)

Promotion and Retirement n the Royal Engineers.

(Proposal of Lt.-Colonel Leahy, R E.)

Principles:—

1. The flow of promotion to be such as will keep the several ranks in an efficient state, and enable officers to attain the several grades above that of Lieutenant at ages, which, on an average, shall be fair in reference to other arms and branches of the Military Service with which Engineer officers have to act.

2. Promotion to be by seniority and length of service, years of effective service in the several grades being the qualification for promotion to the higher grades.

3. In addition to the compulsory removal of regimental officers from the list of Colonels at 60 years, the Secretary of State to retain power to compel inefficient or redundant officers in the several grades to retire on a scale of pay to be prepared with that object.

4. When compulsory retirement (below the age of 60) is resorted to, such retirement to be by selection.

5. The present grant for full-pay retirement, 18,285*l.*, to be maintained for voluntary retirements, and for compulsory retirement for inefficiency.

6. A news cale of pay for voluntary retirement to be drawn up, and the amount of the retirement to which an officer shall be entitled to be governed by the number of years of effective full-pay service.

7. Existing interests in the present fund to be retained by those officers who shall elect before a given date to retire under present Warrants, and who can show that they will not derive substantial advantage from such scheme of promotion as may be approved with the objects stated in paragraph 1.

Details:—

Explanatory Memorandum.

The substitution of "promotion by length of service" for that of the present "fixed proportion of ranks" would, supposing there were no disturbing elements, eventually resolve itself into *a new proportion of grades*, but owing to the present abnormal condition of the lists, this new proportion would not, *if the present effective military establishments were maintained*, be attained until after the year 1893.

The following Table shows the proportion of grades for the present unit of organization, viz., a battalion of forty-seven regimental officers—as compared with the American, Austrian and French Engineer (Staff) Corps, and a normal condition of the lists under the periods of service proposed.

	Present.	America.	Austrian Engineer (Staff).	French Engineer (Staff)	Proposed		Remarks.
					Numbers without Present Retirement Fund.	Numbers if Present Retirement Fund be retained.	
General Officers ..	2	1	2·5	Not stated	2	2	
Regimental Officers—							
Field Officers ..	7	40	18	17	15	12	* Attached on probation.
Captains	16	30	26	16	15	15	† Promoted to Captains after 11 years' service.
Lieutenants.. ..	24	39†	4*	13	17	20	
Total Regimental Officers	47	109	48	46	47	47	

The total number of regimental officers actually on the lists at the present time is 769, being 64 in excess of the establishment of 15 battalions; the additional officers are supernumeraries or seconded.

The present grades of the officers, as compared with the grades of a corresponding number promoted by length of services at the periods proposed, are as follows:—

	Colonels.	Lieutenant-Colonels.	Lieutenant-Colonels (Major's Pay.)	Captains.	2nd Captains.	Lieutenants.	Junior Lieutenants.	Total.
British Establishment and Supernumeraries ..	17	43	8	76	68	128	60	400

		76	15	146	131	250	120	
Present Total Numbers including Supernumeraries and Seconded Officers	31	91		277		370		769
Proposed revised proportion of grades ..	30	174		245		320		769

Employment of the Revised Proportion of Grades.

There are eighteen Captains on the British establishment who now fill appointments such as field officers might properly hold. On the present Indian establishment there are twenty-eight Captains holding appointments as "Superintending Engineers" being a grade in the Public Works Department usually assigned to Lieutenant-Colonels. Thirty Captains hold the appointment of Executive Engineer, 1st class, 1st grade, an appointment corresponding with that which some Lieutenant-Colonels at home and in the Colonies now hold.

It follows that suitable employment could, at the present time, be found for seventy-six additional field officers.

In like manner there are sixty-three Subalterns now employed in India in appointments such as could properly be held by Captains.

It is probable that, consequent on the reduction of the forces in the Colonies, and the completion of works of fortification at Home, the proportion of officers on the British Military Establishment may be reduced, and a number of those officers set free for employment in India.

Looking to the probability that a large proportion of the officers, who will attain the grade of field officer after 1880, will have the Indian experience requisite for the higher grades in the Indian Public Works Department, it may reasonably be expected that there will be no difficulty in finding suitable employment for all the officers now serving, and who, being effective and qualified for promotion, will be on the active list of field officers after 1880.

In the meanwhile the admissions should be regulated so that there shall be no excess in the total numbers for whom suitable employment can eventually be found.

Expense of Effective Establishment.

Under the present system of promotion:—

(A.) The proportion of grades of officers of Engineers corresponds with the regimental organization of the Royal Artillery.

(B.) Voluntary retirement is limited to the amount of the annual grant of 18,285*l.* for the eight battalions on the British Establishment, equal to 2,285*l.* per battalion.

(C.) The principle of compulsory retirement from the Regimental Lists at 60 years of age has been approved.

Officers of Royal Engineers are not paid under the regulations applicable to a regimental corps, and the expense of the Establishment would not, therefore, vary in proportion to the numbers or the several regimental grades.

When employed on ordinary Engineer duties at Home, they receive the regimental pay of their grades and "extra pay," which latter includes the value of the allowances for lodgings, fuel, and light, and travelling within five miles, to which other military and departmental officers are entitled.

These rates are as follows:—

For Officers employed on ordinary Engineer duties at home.

Rank.	Regimental Pay.	Extra Pay.	Deduct Money Value of Allowances for Lodging, Fuel, and Light, 1870.		Net Extra Pay issued to Officers Royal Engineers, 1870 (including travelling within 5 miles).		Remarks.
			Staff and Departmental Rates.	Regimental Rates.	If Employed on Staff or Departmental Duty.	If Members of a Regimental Mess.	
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
Colonel	26 0	12 11	5 6	...	7 5	...	* The Regimental Pay of a 1st Captain Royal Engineers is 1s. a-day less than that of a 1st Captain Royal Artillery; and the pay of a 2nd Captain Royal Engineers 6d. a-day less than that of a Captain in the Line.
Lieut.-Colonel (& Brevet Colonel)	17 11	9 0	5 6	4 0	3 6	5 0	
Ditto			4 6	4 0	4 6	5 0	
Ditto (Majors' pay)	15 11	8 0	4 6	3 0	3 6	5 0	
Captains	11 0	5 6	3 0	2 3	2 6	3 3	
					Average 1 9	Average 2 6	
2nd Captains	11 0	4 0	3 0	2 3	1 0	1 9	The real net Extra Pay of the grade is 1s. 3d. for Captains employed on Staff or Departmental duties, and 2s. for Captains who are members of a Regimental Mess.
Lieutenants (over 7 years) ...	7 10	3 11	2 3	2 0	1 8	1 11	
Ditto	6 10	3 5	2 3	2 0	1 2	1 5	
Ditto (Junior)	5 7	2 9	2 3	2 0	0 6	0 9	

Officers employed on ordinary Engineer duties Abroad receive the regimental pay of their grades, and double the home rates of extra pay. As the lodging allowances at Foreign Stations, excepting China, Mauritius, &c., where special allowances are given, do not vary considerably from the Home rates, the net extra pay of officers serving Abroad is higher than at Home.

The numbers and grades of officers detailed for service Abroad need not be affected by a change in the system of promotion, and there would be no difficulty in drawing up regulations under which the Engineer duties Abroad could be provided for under the new system of promotion at the same total cost as under existing arrangements.

Officers of Royal Engineers serving in India do not draw pay, &c., under the Royal Engineer Warrant, but receive local rates of pay, staff pay, and allowances, corresponding, as a rule, with their grade in the Public Works Department.

A number of officers are now employed in appointments for which consolidated rates of pay, or of extra pay, which do not vary with the military rank of the officer, have been assigned.

It follows that, in calculating the relative cost of the two systems of promotion, it is only necessary to take into consideration the officers who are, or may be, entitled to draw regimental pay and Home rates of extra pay; because the other officers (about three-fourths of the total establishment) draw, as the consequence of their employment in India, at Foreign Stations, or on special duties, pay in excess of those rates, and an increase of rank would not necessarily involve an increase of pay.

The following Table shows the relative numbers of the several grades of officers under the present and proposed normal proportions of ranks and the cost, in Regimental pay, and in Home extra pay and allowances, of one battalion of officers (viz., forty-seven) being the present unit of organization.

Present Establishment.							Regimental Ranks and Pay of Ranks.	Normal Numbers under Proposed System.

219 0	809 1 8	1,606	120	56	64	8	Captains ... 200 15 0	15	120	105	225	3,011	1,300 6 3	410 12 6
219 0	584 0 0	1,606	120	56	64	8	2nd Captains . 200 15 0							
657 0	285 18 4	2,068	60	28	32	(say) 4	Lieutenants... 149 19 2	5	24	21	45	715	357 7 11	547 10 0
	748 5 0		180	84	96	12	Do. ... 124 14 2	10	80	70	150	1,247	623 10 0	
	401 10 0	815	120	56	64	8	Do. ... 101 17 11	5	32	28	60	510	250 18 9	
1,478 5	4,110 1 0½	8,641	705	329	376	47	... ...	47	352	308	660	9,629	4,620 5 0	1,615 2 6
14,219													15,864	

From the foregoing Table it will be seen that, in a normal condition of the lists, the standing pay and allowances of forty-seven officers employed on ordinary duties at Home would be 15,864*l.* under the system proposed, as compared with 14,219*l.* under the existing proportion of grades.

The difference (1,645*l.*) represents the extra annual cost (irrespective of retirement funds) of keeping the several grades of a battalion in an efficient state as regards promotion.

It is suggested that the extra expense involved in the arrangements proposed for keeping the several ranks in an efficient statemight be met by a revision of the British Effective Establishment.

This revision to be effected—

1. By employing a larger proportion of officers in India.
2. By voluntary retirements.
3. By a modification of the regulations for employment.

It is probable that, under revised regulations as to employment, about 300 officers would provide for the future requirements of the British Military Service, exclusive of India and of the Reserve Forces, and that 186 of those officers would be in receipt of Home rates of extra pay.

This Establishment might be composed and suitably employed as follows:—

Colonels.	Lieutenant-Colonels.	Captains.	Lieutenants.	Total.
16	64	95	125	300

Any immediate increase to the Indian Establishment can best be made from among the officers who joined the corps since 1855, (1) because the Indian Government do not require additional officers of higher grades than Captain to be detailed for service in India, until officers of Indian experience can be selected from the Field Officers, and (2) because the British Establishment would thus be relieved of the excessive numbers who joined since 1856, and whose appointment to the corps has caused the present abnormal condition of the list.

The following Table shows—

(1.) The numbers and grades of Officers on the British Establishment 1870, and the numbers that might be transferred to India and retired, in order that the suggested normal establishment of 300 may be attained, by, say, 1872.

(2.) The cost in Regimental Pay of the Officers on the British Establishment in 1870, and the estimated corresponding charges on the army estimates 1871-2-3; 1875-8; 1882-7; and under the proposed normal establishment, which could be attained by about 1890.

The present charges in respect of 376 officers, of whom 223 are employed on Home rates of extra pay, are—

	£
Regimental Pay of 376 Officers	69,832
Extra Pay and Servants' Allowance of 223 Officers	17,476
	6,734
Total	94,042

The normal charges in respect of 300 officers, if the number in receipt of Home extra pay was 223, would be—

	£
Regimental Pay of 300 Officers	55,722
Extra Pay and Servants' Allowance of 223 Officers	20,279
	6,734
Total	82,735

Or, if the number in receipt of Home extra pay be reduced to 186, it would be—

	£
Regimental Pay of 300 Officers	55,722
Extra Pay and Servants' Allowance of 186 Officers	16,081
	6,104
Total	77,907

Expense of Retirement.

As regards voluntary retirement, no charge is proposed which affects expenditure, but the present fund for voluntary retirement should be distributed under regulations framed with the object of keeping the several grades in an efficient state, and if this principle be kept in view, the voluntary retirement of officers below the age of 60 will not only materially reduce the annual charge for standing pay, but the eventual cost of compulsory retirement at 60.

There will be no necessity for providing additional funds for retirement at 60 before the year 1887. Prior to that date, several of the officers on the amalgamated list (viz., those commissioned since 1860) will become field officers, and the Indian Government will be liable to contribute a share of the cost of their retirement.

For purposes of calculation, it has been assumed that if the present annual grant for voluntary retirement were free for appropriation, it could be applied to procure the following retirements:—

	Average Age.	Average Pension.	Probable Commutation Value of Pension.
		£	£
1 Colonel	56	600	6,000
2 Lieut.-Colonels	49	800	9,000
1 Senior Captain to be retired as Major ..	43	230	3,000
			18,000
	Contingencies		285
	Total		18,285

The present fund would, during the eighteen years ending 1887-8, produce a total sum of $18 \times 18{,}285l. = 329{,}130l.$

If applied solely to meet existing engagements and to procure the retirement of officers of 60 years of age who would not succeed to the effective list of Generals before that age, the operation of the fund during the next eighteen years would be to procure the retirement of twenty-nine officers of 60 years of age, and the total expenditure would be 273,824*l.*, leaving 55,306*l.* available for voluntary retirement below 60 years of age.

Under the revised regulations proposed, and by applying a larger proportion of the fund to retire officers below 60 years of age, the same amount would procure a much larger number of retirements.

Interest of Individual Officers in Retirements.

The following statement shows the cost to the public per officer, the average annual income of one officer (employed at Home), and the present value of the prospects of the junior officers under the regulations for promotion and retirement proposed.

	Age of Officer during Service and on retirement, supposing Service to commence at 19. (1)	Average Rate of Pay during Service, and of Pension on Retirement. The cost of the fixed establishment of General Officers is not included in A, B, C, or D.
The rates B, C, and E represent existing retirements, A and D represent the new rates proposed.

From this statement it will be evident that the rates of retirement proposed for officers of 60 years of age are not more favourable than those now in force, and that if suitable employment can be found for the higher grades, it would be as economical to employ an officer till 60 as to retire him at 48 or 55.

If from any reason an officer cannot be suitably employed as a field officer, or if for private reasons an officer desires to retire when he attains that grade, it will be economical to the public to give him a fair rate of retirement after 24 years' service.

If regulations for promotion and retirement were adopted by which officers could be retained in the corps as Captains till they were 48 years of age, and be retired at 60 on 600*l.* a-year, the average annual income of the officers would be reduced from 429*l.* to 339*l.*, the annual cost to the public from 528*l.* to 457*l.*, thus irrespective of consideration of efficiency, entailing a serious loss on those officers who entered the corps in the expectation that their prospects of promotion and retirement were secured by the existing regulations.

The following statement gives the approximate present value of vested interests in existing retirement funds to officers who, under the regulations for promotion now in force, have prospects of retirement at the ages of 50 and 55 :—

VALUE OF RETIREMENTS UNDER EXISTING REGULATIONS.

To an Officer aged—	£600 a-year, to commence at 55.		£400 a-year, to commence at 50.	
	Treasury Scale.	Post Office Scale. (Money returnable.)	Treasury Scale.	Post Office Scale. (Money returnable.)
	£	£	£	£
55..	6,182	7,230	..	..
50..	..	5,704	4,581	5,400
45..	..	5,252	..	4,365
40..	..	4,475	..	3,965
30..	..	3,250	..	2,880
20..	..	2,363	..	2,092

The present value of a retirement of 600*l.* to commence at 60 would be—

To an Officer aged—	Treasury Scale.	Post Office Scale.
	£	£
60	4,610	6,335
55	..	5,890
50	..	4,600
45	..	3,923
40	..	3,353
30	..	2,423
20	..	1,763

The adoption, without any compensating advantage, of regulations for retirements which would substitute the last Table for the Tables now in force would entail loss on *all* officers now serving who have prospects of retirement on the present scale. In the case of an officer of 40 years of age, who has a prospect of retirement at 55, the loss would exceed 1,000*l.*

(Signed) A. LEAHY,
Brevet Lieut.-Colonel, R.E.

(P.)

Regulations suggested in 1868 *for the Retirement of Officers of the Royal Artillery and Royal Engineers.*

---

1. The present annual grants for Full-pay Retirements, of 42,400*l.* for the Royal Artillery and 18,285*l.* for the Royal Engineers, shall be maintained in their integrity.

2. That by a Warrant, to have experimental operation until the year 1880, direct encouragement shall be held out to officers of less than 30 years' service to retire on the following terms:—

(*a*) Over 7 and under 12 years' service, 50*l.* for each year's service at home, and 100*l.* for each year's service abroad, up to a maximum of 700*l.*

(*b*) Over 12 and under 21 years' service, 100*l.* for each year's service at home or abroad, up to a maximum of 1,800*l.*

(*c*) Of 21 and under 30 years' service, Augmented Half-pay, according to the following scale, or the capitalized equivalent according to the age of the officer:—

	Half-pay per Annum.			Capitalized Equivalent.
	£	*s.*	*d.*	
21 years' service	182	10	0	
22 „ „	200	15	0	As the capitalized equivalent will depend on the age of the officer retiring, it must be specially assigned in each case.
23 „ „	219	0	0	
24 „ „	237	5	0	
25 „ „	255	10	0	
26 „ „	273	15	0	
27 „ „	292	0	0	
28 „ „	310	5	0	
29 „ „	330	0	0	

3. The following provision, which shall also be experimental, shall be applicable to officers over 30 years' service, and shall be independent of the full-pay retirement referred to in paragraph 1:—

		Retired Pay per Annum. £
(*a*) Regimental Lieutenant-Colonels	Without superior Army Rank	365
	With superior Army Rank..	400
(*b*) Regimental Colonels ..	Under 5 years' service in the Rank (Without a step of Honorary Rank.) ..	500
	Over 5 years' service in the Rank, and under 60 years of age	600
	(With a step of Honorary Rank.) Over 60 years of age (retirement compulsory)	650
(*c*) General Officers.. ..	On the Fixed Establishment	650

Regimental Colonels retiring under the compulsory provision shall retain their prospect of becoming General Officers on the fixed Establishment; but, on such promotion occurring, they will relinquish their retired pay, and be placed on the established pay of a Major-General.

4. Retirements under the provisions of paragraphs 2 and 3 shall be suspended, except in the case of compulsory retirement of Colonels of 60 years of age, at the discretion of the Secretary of State for War, so long as the maximum service in any rank is within the following limit, viz.:—

Lieutenant	12 years.
Second Captain	18 „
First Captain	25 „
Lieutenant-Colonel	34 „

When there are in any rank officers who have attained these limits, the retirements shall be open to the ranks above them.

5. To admit of provision being made in the Annual Estimates for Retirements under paragraphs 2 and 3, officers desirous of availing themselves of the new Warrant will be required to send in their names to the Deputy Adjutant-Generals of Artillery and Engineers by the 31st October in each year.

6. The regulations under which Officers of Artillery and Engineers are now entitled, under the Warrants of 14th October, 1858, and 28th March, 1861, to retire on permanent half-pay, after 25 years' service, shall be discontinued during the experimental operation of this scheme.

7. Officers whom it may be necessary to place on Temporary Half-pay on account of temporary ill health, wounds, &c., contracted in and by the Service, as certified by the Report of a Medical Board, shall receive the rates of half-pay prescribed by the Royal Warrant of 14th October, 1858.

DIAGRAM SHOWING THE COMPLETED SERVICE OF THE SENIOR OFFICER IN EACH RANK FROM 1850.

The BLACK Line represents the course of promotion under the existing system.

The BLUE Line has reference to retirement at 60 years of age, and at no other age.

The RED Line has reference to Mr. Childers' proposal for compulsory retirement at 60, 54, and 48 years (and at no other periods); being his proposal at its least cost.

1877–78	17,284	5,960	2,000	25,244
1878–79	18,073	6,672	2,000	26,745
1879–80	18,864	7,384	2,000	28,248
Total	153,113	43,200	20,000	216,313
Annual Average	15,311	4,320	2,000	21,631

(W.)

Lieutenant-Colonel Leahy's Proposal.

Statement, handed in by the Actuaries, showing the Numbers in the several Ranks between the given Periods of Service for the following Years:—

Year.	Lieutenants between 0 and 12 Years' Service.	Captains between 12 and 24 Years' Service.	Lieut.-Colonels (on Major's Pay) between 24 and 26 Years' Service.	Lieut.-Colonels, &c., over 26 Years' Service.	Colonels limited to 16.	Total Additional Charge.
						£
1870	180	153	15	36	16	2,217
1875	143	164	7	70	16	5,019
1878	131	178	7	68	16	4,439
1882	123	130	40	91	16	12,525
1887	143	105	30	106	16	19,028
1893	143	106	19	116	16	23,837
Normal:—Entries at age 20, assuming the 18,285*l.* in full operation	166	128	16	74	16	48,431
Normal:—Entries at age 18, the 18,285*l.* not being in operation	147	130	16	97	16	38,720

Note.—These numbers and amounts are subject to slight variation consequent upon Lieutenant-Colonel Leahy's mode of replacing seconded Officers, and the operation of the selected retirement.

(X.)

Lieutenant-Colonel Leahy's Alternative Proposal.

Statement, handed in by the Actuaries, showing the Numbers in the several Ranks between the given Periods of Service for the following Years, on the assumption that Cadets enter at the Age of 20.

Year.	Lieutenants between 0 and 10 Years' Service.	Captains between 10 and 19 Years' Service.	Majors between 19 and 24 Years' Service.	Lieut.-Colonels of 24 Years' Service and above.	Colonels limited to 16.	Total.	Total Additional Charge.

(I I.)

STATEMENT showing the promotions and casualties amongst the officers of the Royal Engineers during the last seven years (1863 to 1869), during which time the Establishment has been the same as at present; also the age and service of the Senior of each rank at the present time, and for the next 15 years, viz., till 1884, under the present system of promotion, and the annual grant of 18,285*l.* for Retirement.

10	Colonels promoted General Officers,
16	Casualties on the list of Colonels,
26	Total promotions from Lieutenant-Colonel to Colonel in 7 years.
	In 15 years the promotions and casualties would amount to 55.* The Senior Colonel would then have 41 years' service, and be then 59 years of age.
26	Lieutenant-Colonels promoted Colonels,
12	Casualties on the list of Lieutenant-Colonels,
38	Total promotions from Captain to Lieutenant-Colonel in 7 years.
	In 15 years the promotions and casualties would amount to 81.† The Senior Lieutenant-Colonel would then have 37 years' service, and would be 56 years of age.
38	Captains promoted Lieutenant-Colonels,
15	Casualties on the list of Captains,
53	Total promotions from 2nd Captain to Captain in 7 years.
	In 15 years the promotions and casualties would amount to 113.‡ The Senior Captain would then have 29 years' service, and be 48 years of age.
53	2nd Captains promoted Captains,
7	Casualties on the list of 2nd Captains,
60	Total promotions from 2nd Captain to Captain.
15	To this number (60) must be added 15 promotions likely to occur on the Indian Cadre, by which that number of Subalterns of the Imperial Cadre will receive promotion to 2nd Captain,
75	General total of promotions to 2nd Captain in 7 years.
	In 15 years the promotions and casualties would amount to 161.§ The Senior 2nd Captain would then have 24 years' service, and be 43 years of age.
75	Lieutenants promoted 2nd Captains,
32	Casualties on the list of Lieutenants,
107	Total removals from Lieutenants' list in 7 years (Imperials and Indians combined).
	In 15 years the removals from the list of Lieutenants would amount to 229.‖ The Senior Lieutenant would then have 19 years' service, and be 40 years of age.

EIGHTH REPORT

OF THE

ROYAL COMMISSIONERS OF THE PATRIOTIC FUND

TO

HER MAJESTY THE QUEEN.

Being the First Report of the Commissioners appointed under the Supplementary Commission dated the 26th of March, 1868.

24th July, 1869.

1. We, your Majesty's Commissioners for the administration of the Patriotic Fund appointed under the Supplementary Commission, dated the 26th of March, 1868), have the honour humbly to present to your Majesty our First Report.

2. At our First Meeting on the 27th of April, 1868, and in pursuance of the authority vested in us by the said Supplementary Commission, we appointed William Henry Mugford, Esq., a Paymaster in your Majesty's Navy, who had been Assistant-Secretary to the original Commission, and Clerk to the Executive and Finance Committee, to be our Secretary, and the Secretary of the Executive Committee. Appointment of Secretary.

3. We also appointed the following gentlemen Members of the Executive Committee :— Executive Committee.

Adair, Sir Alexander Shafto, Bart., A.D.C.
Armstrong, Dr. Alexander, R.N., *Director-General of the Medical Department of the Navy.*
Camoys, the Right Honourable Lord.
Codrington, Admiral Sir Henry J., K.C.B.
Craufurd, Lieutenant-General J. R.
Dacres, General Sir Richard J., G.C.B.
Gibbs, F. W., Esq., C.B.
Hamilton, Admiral W. A. Baillie.
Lawrence, Major-General Sir Arthur J., K.C.B.
Lefroy, Major-General J. H.
Lindsay, Major-General the Honourable James, *Inspector-General of Reserve Forces.*
Pakington, the Right Honourable Sir John, Bart., G.C.B., M.P.
Power, Sir Wm. Tyrone, K.C.B., *Commissary-General-in-Chief.*
Tufnell, E. Carleton, Esq., *one of H.M. Inspectors of Schools.*
Woolley, Rev. J., LL.D., *Director-General of Naval Education.*

At their first meeting, Major-General the Honourable James Lindsay was unanimously elected Chairman of the Executive Committee. Chairman.

In consequence of the absence from England of General Sir Richard Dacres, and the retirement of Sir W. T. Power, from inability to attend, we have recently added General the Honourable Thomas Ashburnham, C.B., Lieutenant-General Sir Anthony Stransham, K.C.B., R.M., and Colonel Charles L. B. Maitland, to the Executive Committee.

Establishment of Office.

4. At our request the Executive Committee prepared a scheme for the Establishment of a Secretary and Clerks, for the purposes of the Commission, which will be found in Appendix A, with a comparative statement showing the staff of the Office to the end of the year 1867, when Captain Fishbourne, R.N., retired. We adopted the scheme recommended, and having had the honour of submitting it to your Majesty, your Majesty was graciously pleased to signify your approval thereof. On Captain Fishbourne's retirement, Office Establishment.

your Majesty sanctioned, at the recommendation of the former Commissioners, his being granted from this Fund a retiring allowance of £300 per annum, during your Majesty's pleasure.

Transfer of Securities.

Transfer of Securities to Official Trustees.

5. The various Debentures, &c., forming the securities of the Capital Account, and the balance of cash, have been duly transferred to the Official Trustees specified in the Supplementary Commission, viz., the First Lord of the Admiralty, the Secretary of State for War, and the Paymaster-General.

Revised Statement of Liabilities.

Assets and Liabilities.

6. With the view of affording us the most accurate information, the Committee caused revised statements to be prepared of the ages of the Widows and remarried Women, and of the Children, remaining on the books on the 31st of December, 1867.

This information having been given to Mr. Finlaison, the Actuary, that gentleman furnished a very full Report for the year 1868, which will be found in Appendix B, and by a subsequent Report for the year 1869 (Appendix C), it will be seen that his estimate of the Assets and Liabilities of the Fund is even more favourable than that of the former year, as he anticipates an available surplus of £108,300, after setting aside one-tenth of the liabilities as a reserve to meet contingencies.

Infirm Allowances to Orphans and Widows of Advanced Age.

7. In Paragraph 12 of their Seventh Report the former Commissioners reported to your Majesty that their attention had been directed to the question as to whether or not assistance should be continued to Orphans who have attained the age at which the allowances ordinarily cease, but who are physically or mentally incapacitated from earning their own maintenance. We have given the most careful attention to this subject, and to the further question which has arisen in the administration of the Fund, as to the propriety of fixing an age at and after which an addition might be made to the ordinary allowance to Widows of advanced age; and we have approved of the following increased allowances under these two heads.

Orphans.

Infirm allowances to Orphans.

(*a.*) That henceforth an allowance, to be designated an "Infirm Allowance," may be continued to Orphans of both classes (Officers and Men) year by year, at the discretion of the Committee, upon sufficient proof being produced that such Orphans are physically or mentally incapacitated from earning their own maintenance.

(*b.*) That in the cases of Orphans of Officers, the "Infirm Allowance" shall be the amount of ordinary allowance, as per scale, according to the rank of their fathers.

(*c.*) That the "Infirm Allowance" to Orphans of Non-Commissioned Officers and Privates shall not exceed 3*s.* 6*d.* per week.

(*d.*) That the "Infirm Allowance" to Orphans who have lost both parents shall be the same in amount as that which they received before attaining the age for its cessation under ordinary circumstances.

(*e.*) That the Committee be at liberty to consider any special case of extreme affliction.

Widows of Advanced Age.

Increase of allowances to Widows of advanced age.

(*a.*) That the Committee be empowered, if they shall think fit, to grant to the Widows of Non-Commissioned Officers and Privates, of sixty years of age and upwards, an addition of 2*s.* per week, irrespective of the exact rank of the deceased Husband.

(*b.*) That the Committee be empowered, if they shall think fit, to grant to Widows of Officers, of sixty-five years of age and upwards, an addition equal to 25 per cent. of their allowance from the Patriotic Fund.

(*c.*) That the foregoing additions to the allowances on account of age be not granted to Women who are remarried.

(*d.*) That when Widows have been granted the additional allowance for advanced age, it is not to be further supplemented by sick allowance.

Grants to other Institutions.

Grants of money to other Institutions.

8. With respect to the applications for grants of money to other Institutions, which was another subject reserved for our consideration by the former Commissioners, we have decided that no application for a grant of money from the Patriotic Fund to any other Institution can be entertained at present.

Appropriation of any Surplus to Orphans of other Wars.

9. The question as to the manner in which the Orphans of Wars, other than the Russian, should be dealt with under the Clauses in the Supplementary Commission has received our careful consideration, and whilst it is our opinion that the Second Clause of Section 5 of the Act of Parliament provides that any available portion of the Fund may be appropriated to the relief of Orphans of any war, or Military or Naval operation, we directed, before any application of money be made to such a purpose, that the Executive and Finance Committee should report to us the amount, if any, which they think may be applied to the Orphans of other wars. Inquiries have consequently been made of the Admiralty and War Office, for certain information upon which to form an opinion. The reply from the Admiralty stated that whilst a portion of the information required could with much labour and research be furnished, a second portion could only be given imperfectly, and the remaining portion could not be obtained; that, under these circumstances, and considering the labour and expense, with the imperfect nature of the information which could be furnished in some instances, the Returns had not been ordered to be prepared, it being doubtful whether they would, when obtained, answer the purpose required by the Commissioners of the Patriotic Fund. However, from the Annual Statistical Reports of the Navy, which are printed, the Actuary thinks he may be able to give a rough estimate of the amount which would be required for that service. Appropriation of Surplus.

With respect to the Army, which from the increased numbers would be the most important service to consider, the Secretary of State for War directed Returns to be called for. These Returns have not yet been received from the War Office.

. . . . . .

RELIEF.

10. In their final Report, the former Commissioners submitted to your Majesty the statistical information down to the 30th of June, 1867.

In the following Tables are shown the changes which have taken place during the last six months of, and completing, the year 1867, and also those which occurred in the course of the year 1868, in the numbers of Widows and Orphans receiving relief.

(*a.*) WIDOWS AND ORPHANS OF OFFICERS.—To 31st December, 1867.

—	Placed on Books during the Half-year ending 31st December, 1867.	In Receipt of Allowances on the 31st December, 1867.	Deaths.			Allowances Discontinued from Age, &c.

11. The total sum expended in Relief to the 31st of December, 1868, was £993,725.

12. In connection with this part of our duty there are several points which we wish to bring under the notice of your Majesty, as the present management in respect to them differs somewhat from the previous practice. These points are :—

(*a.*) Sick Allowances.

Sick Allowances.

13. The question of Sick Allowances engaged the attention of the late Executive Committee in 1867; and in that year a Sub-Committee inquired into the system under which these allowances had been granted. They found that the number of Medical Certificates had materially increased, and was increasing; and that extra allowances were in some instances granted for trivial ailments. The Committee gave the subject much consideration, and decided on paying annual subscriptions to Local Dispensaries or Hospitals, to which the Staff-Officers could refer Widows and Orphans for the treatment of temporary ailments. They also requested the co-operation of Naval and Military Medical Officers to aid them by examining and reporting on exceptional cases. The views of the Committee were embodied in two Circular Letters, which are given in the Appendix (D and E).

Such Medical Certificates as have since been sent in have, from time to time, been carefully considered by a Sub-Committee.

In carrying the Regulations, with respect to Sick and Infirm Allowance, into effect, cases have come to the notice of the Committee in which certain Orphans and Widows were found to be receiving large allowances, upon the authority of the former Executive Officer, Captain Fishbourne. The Committee, after due inquiry into the circumstances, and on careful consideration of each case, have, with scarcely an exception, deemed it their duty to reduce these allowances to the rates authorised by us.

14. We have approved of the course adopted by the Committee in this respect; and have directed that the sick and other allowances be shown separately for the future in the half-yearly statement of accounts prepared for the Auditor.

(*b.*) Premiums for Apprenticeship.

Premiums for Apprenticeship.

15. The expenditure on this head, to which our attention was called by the Committee, was by no means satisfactory. There were many instances of failure in the object sought to be attained, and the premiums were in consequence partly, or wholly lost. This loss was found to be due in some cases to the misconduct, or absconding, of the Apprentice; in other cases to disagreement between the Master and the Apprentice; and in others to the bankruptcy, or other inability of the Master to fulfil his engagement. The Committee therefore recommended the abolition of premiums.

We desired that further information should be obtained and submitted to us, and, after full consideration, adopted the recommendation of the Committee that premiums should be discontinued. The substance of the valuable information upon which we based our decision will be found in Appendix F. Instead of giving premiums to Masters, we have decided on continuing the Ordinary Allowance to the Mother or Guardian, for one year beyond the time at which it would otherwise cease, with the view of giving assistance during the time when the Boy's earnings might be expected to be smaller than at a later period; and continued to grant the usual outfit.

Payments by Staff-Officers.

Uniform mode of payment by Staff-Officers.

16. For many years past nearly all the payments in Great Britain and Ireland have been made by the Staff-Officers of Pensioners. There were, however, a few Districts in which the Staff-Officers had declined to pay the allowances from the Patriotic Fund. Under these circumstances, the Committee were glad to avail themselves of the services of Clergymen and other gentlemen, who acted as Agents, and who were furnished with money in advance, to enable them to make the payments, and in many cases it was necessary to transmit Post-Office Orders from the Office.

The Committee feeling strongly the great advantages, and the diminution of labour which would result from a uniform mode of payment, made special representations to the Staff-Officers of the exceptional districts, who acceded to their wish, and in future all the payments will be made by them. In notifying the change to the gentlemen who had hitherto so kindly rendered such valuable assistance, and to whom they were so much indebted, the Committee assured them that it was solely on public grounds that the arrangement had been altered. We have expressed our approval of this arrangement.

Defalcation by a Clerk in the Office.

17. Your Commissioners regret to have to report that in the spring of last year it as discovered that Mr. J. S. Harvey, a Clerk in the Office, had embezzled money entrusted o him for the payment of allowances under the following circumstances :— Defalcation by a Clerk.

In the cases of Widows who have remarried, and who have accompanied their usbands abroad, it has been requisite to send their allowances from time to time by ost-Office orders, or to pay them to the Army Agents for transmission. It was Mr. Harvey's duty on receiving the money to give vouchers for the amounts, and to obtain nd send the Post-Office orders. Instead of obtaining the orders and forwarding them e appropriated the money to his own use, and abstracted from the Office any letters of nquiry which arrived from the Widows. This created difficulty and delay in ascertaining he amount embezzled when the dishonesty was discovered; inasmuch as it was only at a ater period, when subsequent letters were received asking for the allowances, that it was ossible to find out whether or not he had transmitted the money. Mr. Harvey was rthwith dismissed; he had been 12½ years in the Office. The ascertained extent of the efalcation is £247. His father stated his utter inability to make good the money. n compliance with our instructions, proceedings were taken for the prosecution of Ir. Harvey, the Clerk in question; and a Warrant for his apprehension was issued by the Iagistrate at the Bow Street Police Court. Subsequently, Mr. Harvey's father addressed a Iemorial to His Royal Highness the President, praying, for reasons alleged, that his son ight not be prosecuted. The Committee reported that this Memorial contained many is-statements, and we have desired the prosecution to be continued.

All payments for Widows residing abroad are now made through the Paymaster-eneral.

Case of William McGregor.

18. A request having been made in the House of Commons for the correspondence onnected with the case of a Boy named William McGregor, every detail has been rnished by our Committee to the Secretary of State for War.

Special Cases.

19. Under this designation, as explained to your Majesty in the Seventh Report of ie original Commissioners, are classified certain Orphans of men who served in the Russian Var, but who by the Rules are not entitled to Allowances from the Fund, although ducation and Outfits have been authorised for them at the discretion of the Committee. Special Cases of Orphans.

On the 31st of December, 1868, 538 of the Orphans of Non-Commissioned and Petty fficers, Seamen, and Soldiers, had been registered on the Books, and 170 of them had een placed in Asylums. 119 Orphans of Officers had been placed on the Books, and o 40 of them Educational Allowances had been granted.

In consequence of the discussion which took place at our Meeting of the 15th July, 868, and our desire to extend, when practicable, the benefits of the Fund to the Orphans f men who served in other Wars, the Committee, on the 25th July, 1868, passed a Reso-ution suspending further admission to Class 4; which admitted those cases who had no aim but that of the simple service of the Father in the Russian War. We have approved f that decision as being in accordance with the Act of Parliament, and the Supplementary ommission.

Application of Fund.

20. There appears to be a widely prevalent opinion that all Widows and Orphans f Men who served in the Russian War are entitled to allowances from the Patriotic und, irrespective of other conditions, such as the date of marriage; service subsequent o the War; whether or not the husband was wounded, or suffered serious injury whilst ngaged on active service; or the date and cause of his death. And, further, an opinion ppears to exist that persons who are entitled to allowances do not receive them in conse-uence of a rigid and unnecessary adherence on the part of the Committee to the principle hat the capital must be preserved, and the interest only applied in relief. Application of Fund.

21. Not only are the foregoing opinions held as respects those whose Husbands or athers served in the Russian War, but, though to a less extent, a belief prevails that he Widows of any other War, or that even the Widows of any Men who may have died n the service of the Crown, have a claim on the Fund.

22. In the hope of removing these erroneous impressions, we humbly request our Majesty's attention to the following extracts from the original Commission, de-ning the persons for whom the Fund was intended.

Application of Fund.

"Whereas amidst the glorious successes which, through the power of Almighty "God, have attended Our Arms during the present war, many soldiers, sailors, and marines, "serving in Our Armies and Fleets, have gallantly fallen in battle, or by other casualties "during the War; and many who shall hereafter be engaged in conflict, or in the further "prosecution of hostilities, may also nobly sacrifice their lives in Our Service while pro- "tecting the invaded liberties of Our Ally, and repressing the lawless ambition of Our "enemies."

"And whereas it hath been represented to Us, that many of Our loving subjects "throughout Our Kingdom and Dominions, actuated by a just sense of the sacred rights "of those who fall in their Country's service and in support of Our just cause of War, are "anxiously desirous of testifying their loyalty and love to Us, and to Our Throne, by a "just and generous benevolence towards the Widows and Orphans of those of our soldiers, "sailors, and marines who have been so killed, or may hereafter die amidst the ravages "and casualties of War, and also by their gifts and subscriptions to contribute a portion of "those means with which Our nation has been blessed, towards the succouring, educating, "and relieving those who, by the loss of their husbands and parents in battle, or by "death on active service in the present War, are unable to maintain or to support them- "selves."

23. There can be no doubt that these passages apply only to those who became Widows or Orphans by the loss of their Husbands or Fathers in service during the Russian War; and did not contemplate those Women who might after the termination of that War marry Soldiers or Sailors who had been engaged therein. Nor did the clauses under consideration refer in any way to the Widows and Orphans of men who might die subsequent to their service in the war, but limited it to the Widows and Orphans of those "who had fallen in battle or by other casualties," "or who might afterwards die amidst the ravages and casualties" of the then "present War."

24. In order, however, that the benefits of the Fund might be extended as widely as possible, the powers entrusted to the Commissioners have been interpreted liberally. Relief has been granted to Widows and Orphans not only of Men who were married at the time of the War, and whose deaths did not occur until long after it had ceased; but also in some cases to the Widows and Orphans of Men who did not marry until after the War had ended; and, for several years, the only condition requisite to establish a claim for an allowance was, that the death of the Husband or Father was connected with his previous service in the War.

25. On the 18th of March, 1865, however, after the lapse of 9 years, and after much consideration, the Committee deemed it necessary to establish a regulation as to the date of marriage; and a rule was made that no Widow could be recognised as a Widow of the War unless married prior to the 1st of January, 1858. This regulation was approved of by the former Commissioners, as reported in their Sixth Report to your Majesty. But even now, though 13 years have elapsed since the termination of the Russian War, allowances are given to the Widows and Orphans of Men whose deaths can be traced to their service in that War, if not excluded by the above rule as to the date of marriage. And further, assistance is given in the education of, and in providing outfits for, Orphans of Men who served in that War, but who are, by the existing rules, excluded from the ordinary allowances.

26. The Commissioners think it their duty to explain that on the receipt of an application for assistance, every inquiry is made of Medical Officers and others, including the Medical Departments of both Army and Navy, to elicit the facts of the case. And with the view of ascertaining how far the death of the soldier or sailor has been connected with his service in the Russian War, all the papers, accompanied by a summary, are examined by three members of the Committee, at their own homes (one of those members being the present Director-General of the Medical Department of the Navy), and their opinions severally recorded on the papers before the applications are considered by the Executive Committee. The Committee, therefore, confidently assert not only that no just claim is refused, but that every consideration is shown to applicants, and frequently information obtained, to help them in establishing their claims.

Present State of the Fund.

Present State of the Fund.

27. An exaggerated opinion prevails as to the present amount of the Fund. As already remarked, many persons believe that the capital of the Fund remains intact, and that the interest only is being expended. A brief statement of the condition of the Fund may therefore be useful.

28. During the year 1868, the sum of £516 4*s.* 9*d.** was received as a contribution, making the total amount to the 31st of December, 1868, £1,460,718 6*s.* 2*d.* Total Amount of Contributions.

29. In the years 1855 and 1856, when, notwithstanding the magnitude of the Fund, it was apparent, from the great and increasing number of applicants, that it would be necessary to secure for a given number of years such an income as would suffice for the scale of allowances for Widows and Orphans, and when it was also necessary to provide for the education of the Children, it was deemed most judicious to purchase Annuities, which would expire concurrently with the cessation of claims for the maintenance and education of the Children.

The following Annuities were purchased out of a portion of the Capital, at a cost of £668,071.

£11,800	per annum,	terminating	5th July, 1865
5,817	„	„	5th January, 1866
2,033	„	„	10th October, 1867
4,787	„	„	10th October, 1870
1,289	„	„	5th January, 1871
3,405	„	„	5th January, 1876
6,097	„	„	5th April, 1876
16,900	„	„	5th April, 1885

30. At the termination of the War, with a view of conferring permanent benefits on the two services, the following sums were further appropriated to the purchase of certain rights of presentations, viz.: — Rights of Nomination to Institutions.

To the Wellington College, for the nomination of 18 Sons of Officers of the Army	£25,000
To the Royal Naval School at New Cross, for 7 Sons of Naval Officers	8,000
To the Royal Naval Female School, for 5 Daughters of Naval Officers	5,000
To the Cambridge Asylum, for 5 Widows of Soldiers .	3,000
To the Naval and Military Schools at Portsmouth and Devonport, for the Sons of Non-commissioned and Petty Officers	5,000
Total	£46,000

31. To provide for the maintenance and education of 300 orphan Daughters of Soldiers and Sailors of the Army and Navy, and as a lasting memorial of the national benevolence, the Royal Victoria Patriotic Asylum was established. For the purchase of Land, Building, Endowment, &c., £218,073 have been appropriated for this object. Sum granted for Royal Victoria Patriotic Asylum.

A sum of £25,000 was set aside to accumulate for the purpose of a Boys' School. Boys' School.

32. There has thus been expended—

In the purchase of Annuities	£668,071
In the purchase of Rights of Nomination . .	46,000
For the Royal Victoria Patriotic Asylum . .	218,073
For the Boys' School	25,000
Total . .	£957,144

The foregoing appropriation of Capital having been approved by the Commissioners, was sanctioned by your Majesty, and subsequently by an Act of Parliament.

* Balance from Cambridge.

Capital remaining, and Income derivable therefrom.

33. The Capital remaining is as follows:—

	Per Cent.	£	s.	d.	Giving an Annual Income at present of £
Turkish Government Bonds . .	4	111,700	0	0	4,468
East India Debentures . . .	5	87,000	0	0	4,350
East India Stock Certificates . .	4	6,000	0	0	240
Railway Bonds.					
East India Peninsular . . .	4½	8,000	0	0	360
London and North Western . .	4	80,000	0	0	3,200
Great Western	4½	80,000	0	0	3,600
North Eastern	4	60,000	0	0	2,400
East India Railway Stock Certificates	5	72,140	0	0	3,605
		£504,840	0	0	
Consols . . £4,949 3 5 = say (A bequest from Mrs. Balhetchet)		4,500	0	0	147
		£509,340	0	0	£22,370

To the income derivable from the Capital, as explained above, the following Annuities (see page 9), expiring at the dates mentioned, must be added—

10th October, 1870, per annum .	£4,787	
5th January, 1871, a further sum of	1,289	
5th January, 1876 „ „	3,405	
5th April, 1876 „ „	6,097	
5th April, 1885 „ „	16,900	
		32,478
Present Income .		£54,848

34. The present expenditure for allowances to Widows, and for the maintenance and education of Orphans, is in excess of the income, and will be so for two or three years, as is shown by the Actuary's table in Appendix C. By this it will be apparent that there is a fluctuating difference between the expenditure and income in certain periods of years, some showing an excess, others a deficiency; but supposing no further liabilities than those already known are incurred, there would ultimately remain a surplus of probably not less than £110,000, nor more than £170,000. The application of this surplus towards the relief of orphans of other wars must be reserved for consideration when the necessary data shall have been received; and the present financial condition of the Fund renders it impossible to extend relief to the Orphans whose fathers have lost their lives in the ordinary service of the Crown. — (See Clause 3 of Section 5 of Act 30 and 31 Vict., cap. 98.)

Audit of Accounts.

Audit.

35. The Audit of the Accounts is at present in arrear, having been last made to 31 December, 1866. The delay in the preparation of the Accounts for the year 1867 arose from a series of exceptional circumstances, which are not likely again to occur. The Accounts for the years 1867 and 1868 are now awaiting Audit, an application for which was made to the Treasury on the 15th of April, Clause 17 of the Act of Vict. 30 and 31, Cap. 98, stipulating that the Audit of the Accounts shall be made by such persons and in such manner as the Commissioners of Her Majesty's Treasury from time to time direct. Renewed applications for the Audit were made to the Treasury on the 15th of June, and on the 21st of July, but no Auditor has yet been appointed. We therefore regret that we are unable to append to this Report the Balance Sheets for the years 1867 and 1868.

Boarding Institutions.

36. A list of the Schools in which Children of both sexes are maintained and educated is given in Appendix G; and the Reports of the Inspectors will be found in Appendix H. The number of Children in those Schools, when last reported (June, 1867), was 555. On the 31st of December, 1868, it was reduced to 494, exclusive of those in the Royal Victoria Patriotic Asylum. As far as was practicable the Children have been removed from those Schools in which they were paid for as Boarders to the Asylums at Wandsworth. Children in Boarding Institutions.

The diminution in the number of Schools in which Children were placed has enabled the Committee to effect a reduction in the cost of inspection.

Royal Victoria Patriotic Asylum.

37. There were 261 Girls in the Asylum on the 30th of June, 1869, and fresh admissions are taking place so as to bring the number up to the 300, for which it was designed. Royal Victoria Patriotic Asylum.

We would refer to the Seventh Report of the former Commissioners to your Majesty, in which the financial condition of the Royal Victoria Patriotic Asylum was fully detailed and explained.

The former Commissioners during the financial difficulty of the Asylum authorised payment to be made for Children admitted to that establishment who would elsewhere be a charge on the General Fund. But we considered that such periodical payments from the General Fund might be dispensed with, and as it appeared probable that if relieved of its debt the Asylum would, by careful management, be able to maintain the Children out of its own income, we authorised the transfer of a sum of £2,000 for this purpose, which may be regarded as payment in advance, for the maintenance and education of the Children, as authorised by the late Commissioners.

38. In their Report to us, dated the 4th of July, 1868, the Committee expressed the hope that when the Asylum was relieved of its debt, they might be able to maintain and educate the Children out of the income arising from the endowment.

Many reductions have already been made, and though from the size of the Building and its peculiar construction and arrangements, it is a most expensive one to manage and keep in repair, and though the rates and taxes, not exacted previously to 1867, amount to £600 per annum, yet the Committee have expressed the confident hope that the income will in future years fully meet the expenditure.

39. At the latter part of last year the Lady Superintendent mentioned her intention of resigning; but wished to continue in her office until July or August of this year. In February a deficiency was discovered in her Cash balance, and a Sub-Committee was appointed to inquire into the matter. There was a sum of about £120, which she was unable to account for, and for which she admitted her entire responsibility. She has since made good the amount. On the 25th of March one of the servants of the Asylum made in writing a series of statements reflecting upon the Lady Superintendent. The Committee investigated the whole of the circumstances, and agreed unanimously that the Lady Superintendent had been in the habit of disregarding the Rules and Instructions of the Committee for the management of the Asylum;—and further, that maladministration of the Establishment, and general irregularity on her part in the conduct of its affairs, having become manifest, she was, in their opinion, disqualified from holding the post of Lady Superintendent, and that she should be in consequence superseded, as soon as a successor, either temporary or permanent, could be provided. They however agreed that certain charges of dishonesty and cruelty which had been brought against her had not been substantiated.

40. We have given the most serious attention to the question of the future government of the Asylum, and decided that another Lady Superintendent should be appointed.

After carefully weighing the qualifications of several candidates, the Committee have appointed Mrs. Lucy Carr to be the Lady Superintendent, on probation for six months. Mrs. Carr is the widow of a Clergyman. She has been four years Lady Superintendent of a House of Charity at Stafford, and subsequently, for a short period, of a Reformatory School for Girls at Coventry. They also decided to give the Lady Superintendent the assistance of a person who shall combine the offices of Housekeeper and Industrial Mistress, and of this we have approved.

Farm and Grounds.

41. A farm and garden, consisting of about 50 acres, is attached to the Asylum, on which a Bailiff is employed with a certain staff of Labourers. In accordance with our desire that a particular inquiry should be made into the present condition of the ground and the farming operations, the Committee requested Mr. James Sanderson, Land Agent, to inspect it. That gentleman's Report is given in Appendix I.

The receipts on the Farm Account during the last year—the produce being valued at the wholesale prices in Covent Garden Market—show as against the expenditure a loss of £190, but from this must be deducted the expenditure necessary for the care of the Grounds belonging to the Asylum as apart from the farming operations. Estimating this at £40 per annum, the deficiency would be £150.

The Staff on the Farm is now reduced to the Bailiff and 3 men.

Considered in conjunction with the satisfactory condition of the ground as reported by Mr. Sanderson, and the prospect of still further reductions in the cost of labour for the future, the Committee anticipate that in the next year's account a favourable result will be shown.

Boys' School Account.

42. The Fund which has been set aside to accumulate for the endowment of a Boys' School consisted on the 31st December, 1868, of

	£
East India Debenture Loan	32,000
New 3 per Cents, £11,256 12*s.* 7*d.* = say . .	10,350
	£42,350

Boys' Temporary Home, Wandsworth.

Boys' Temporary Home.

43. The Committee are glad to report that this establishment continues to be most satisfactorily conducted by Mr. Hullah.

Boys' School at Barnet.

Closing of School at Barnet.

44. The number of Boys had diminished so materially, that the cost of superintendence and management was becoming totally disproportionate to any advantage that could be obtained by continuing the School, particularly as a considerable proportion of the Boys had attained the age for leaving. It is therefore closed, and notices have been given for delivering up possession of the Infirmary, the Cottages, &c., to the owners. The Boys remaining at the end of last year were transferred to the Boys' Temporary Home at Wandsworth.

Silesia House will then be the only one remaining in our possession at Barnet; of this we hold a lease, which does not expire until Michaelmas, 1877. It has been duly advertised to let, and the Committee hope to sell the iron buildings which were erected to increase the accommodation.

An important reduction in the expenditure has thus been effected.

Rodriguez Fund.

Rodriguez Fund.

45. The Rodriguez Fund is invested in Consols, and now amounts to £8,032 9*s.* 10*d.*

We have directed that a separate account be kept of this Fund, and have approved of a scheme for the disposal of the Income arising therefrom; which scheme will be found in Appendix J.

Vacancies in the Commission.

Vacancies in Commission.

46. We regret to have to announce to your Majesty that three of the Commissioners, the Right Honourable the Earl of Shrewsbury, Field-Marshal Sir Hew Dalrymple Ross, and Admiral Sir Peter Richards, have died since the issue of the Supplemental Commission. The Right Honourable the Earl of Shaftesbury has resigned his office as one of your Majesty's Commissioners for the Patriotic Fund; and it appears that he had notified his

ntention to do so prior to the issue of the new Commission. We have informed the Secretary of State for War of his Lordship's resignation.

APPENDIX A.

SCHEME for the ESTABLISHMENT of a SECRETARY and CLERKS for the ROYAL COMMISSION of the PATRIOTIC FUND.

The salaries named in the first column dating from the 1st of January, 1868, viz.:—

No.	Names.	Position.	Present Salary to date from Jan., 1868.	Annual increase.	Maximum Salary.	Annual Cost	
						At Present.	When Maximum Attained.
			£	£	£	£	£
1	Wm. H. Mugford .	Secretary	600	25	700	600	700
1	A. N. Edwards .	Chief Clerk and Accountant .	250	20	350	250	350
3	J. G. Ross . . .	Senior Clerk	250	15	300		
	J. Harris . . .	,,	250	15	300		
	P. Box . . .	,,	250	15	300	750	900
1	D. Walker . .	Junior Clerk	180	10	220	180	220
2	Temporary Clerks on Weekly Pay, as at present, at an Annual cost of					151	151
8					£	1,931	2,321
	Office-Keeper and Wife, with Allowances, as at present . . .					85	85
	A Boy Messenger and a Woman to assist the Office-Keeper and his Wife					25	25
					£	2,041	2,431

STATEMENT showing the STAFF of the OFFICE to end of YEAR 1867, the period of CAPTAIN FISHBOURNE'S retirement.

Number in each Class.	Date of Joining.	Length of Service.	Names.	Position.	When attained Maximum of Salary.	Salary.	Total.
						£	£
2	Oct. 1854.	13¼	Captain E. G. Fishbourne, R.N. .	Honorary Secretary and paid member of Executive Committee . .	. .	600	
	Nov. 1854.	13¾ nearly	Wm. H. Mugford .	Assistant Secretary, Accountant, and Clerk to Executive and Finance Committee . .	Would have Dec. 1868	490 (max. 500)	1,090
4	Oct. 1854.	13¾	A. N. Edwards .	Clerk	Dec. 1866	200	
	Nov. 1854.	13¾ nearly	J. G. Ross . . .	,,	,,	200	
	Dec. 1854.	13½	J. Harris . . .	,,	,,	200	
	June 1855.	13	P. Box . . .	,,	,,	200	800
2	July 1855.	..	J. S. Harvey . .	Junior Clerk	,,	150	
	Nov. 1859.	8½	D. J. Walker . .	,,	,,	150	300
2	Temporary Clerks, on weekly pay, at an annual cost of						151
10						£	2,341
	Oct. 1854.	13¾	Thomas Thompson (and wife)	Office-Keeper and Messenger	With Fuel and Candles		75
	A Boy Messenger, and a Woman to assist the Office-Keeper and his wife, at a cost of .						25
					Total . . .	£	2,441

By this scheme it will be seen that there is a diminution of two in the number of the Clerical Staff, that in the year 1868, a saving of £400 was effected, and that four years hence, when all will have attained the maximum, the annual cost of the Office Staff will not exceed what it was at the termination of 1867.

APPENDIX B.

National Debt Office,
1st June, 1868.

R,

In compliance with your request I have prepared the customary annual valuation of the liabilis and assets of the Patriotic Fund for the 31st December, 1867.

On the present occasion the process has taken place under conditions highly favourable to a per- t estimate of the financial position of the Institution. For the information indispensable for this rpose has recently, by laborious and careful investigation in your department, been very much aug- ented in precision and extent with respect to the ages of the various recipients of allowances. The ults of the computations which have been framed with the benefit of this improved knowledge are bodied in the Report which I have now the honour to submit for consideration.

Before proceeding, however, to the usual statement of details, it will be useful to premise, even at risk of tediousness in the repetition, that the charges on the Fund are comprised under three neral heads. They consist of, first, the Pensions granted to Widows; second, a temporary annual ovision for Children; and third, a temporary yearly disbursement in the shape of gratuities for mis- llaneous purposes, combined with the more permanent but indispensable charges for management. meet these various demands, the Fund is in possession of ample resources, consisting of annuities tain, terminating at various periods, and also of annuities in perpetuity, arising from the dividends sundry descriptions of public and other securities.

In respect of the charges, it appears that the number of Widows of Non-commissioned and Petty Officers, Private Soldiers, and Seamen, which has been placed on the books from the commencement is			3,709
Of these persons there have died		425	
And have been removed from the list	335		
Less those who have been re-admitted	89		
	—	246	
Died and removed		—	671
There consequently remain upon the list			3,038
Of this number there have remarried, and been placed on a Moiety of the Pension		1,974	
But out of this remarried portion there have been replaced on the Full Pension, Widows whose second husbands have died	222		
Which number was subsequently reduced by Widows who remarried for the third time	80		
The number replaced on the Full Pension is therefore	—	142	
And the number on the Half Pension List is		—	1,832
The remainder of the whole list being the number of Widows who are now drawing the Full Pension, viz.			1,206

On previous occasions it has been necessary to be content with a statement or estimate of the erage or mean age of the whole body of Widows enrolled on the Full Pension List, and with similar formation in respect of the mean age of the remarried Women on the Half Pension List. Last year e mean age, on the 31st December, 1866, of the Widows was taken at 41 years, and that of the narried at 40 years. For the purpose of the present valuation, however, more precise examination s supplied the knowledge that among 1,000 Widows of the Men who have died in both Services, the nsioned females are to be grouped in the following proportions, at the ages undermentioned:—

Ages 25 to 29, both inclusive,	5	Widows.	
30 „ 34 „	80	„	
35 „ 39 „	260	„	
40 „ 44 „	270	„	
45 „ 49 „	180	„	
50 „ 54 „	110	„	
Ages 55 to 59, both inclusive,	60	Widows.	
60 „ 64 „	20	„	
65 „ 69 „	10	„	
70 and above „	5	„	
	1,000	Widows.	

In respect of the remarried Women, it is ascertained that they fall into the groups under- ntioned:—

Ages 25 to 29, both inclusive,	10		
30 „ 34 „	120		
35 „ 39 „	410		
40 „ 44 „	280		
45 „ 49 „	120		
50 „ 54 „	40		
Ages 55 to 59, both inclusive,	10		
60 and above „	10		
	1,000	remarried.	

nd from the valuation of the Pensions, which was made in still closer detail as to age, it further ults that for the whole body of Widowed Females, their mean age on the 31st December, 1867, was ½ years, and that the mean age of the remarried females was at the same date 40½ years. There- e, in the valuation made a twelvemonth since, the age of the Widows was underrated by more than years, while as regards the age of the remarried Women there was no very material inaccuracy.

The Full Pension drawn by each of the Widows being £14 per annum, and the Half Pension drawn by the remarried Women being £7 per annum—

The yearly charge for the 1,206 Widows will be	£16,884
And for the 1,832 remarried	12,824
And the whole yearly charge	£29,708

The rate of remarriage from the List of Widows may, as formerly, be taken at four per cent. over the whole duration of Widowhood.

Attention has been drawn to the expediency of taking heed that some provision should be made for the probable reversion to full allowance of a considerable number of Women now remarried, and upon Half Allowance. There is some necessity, no doubt, for circumspection on this point. But on looking at the extraordinary rate of remarriage which seems to prevail among the bereaved Matrons of the principal Pension List, remarriage for the third time being by no means of infrequent occurrence, there does not seem much ground for apprehension on this particular account. During the last six or seven years the prospect has been in favour of a decrease of the Full Pension List, and of an increase of the Half Pensions, a tendency the opposite of that which is held in contemplation. For instance, in the last six years out of the whole number on the Pension List, which has remained nearly stationary, the remarried have increased at the following rate:—

	On the List.	Remarried.		On the List.	Remarried.
Year ending 31st Dec. 1862	3056	1373	Year ending 31st Dec. 1865	3123	1734
„ „ 1863	3119	1396	„ „ 1866	3090	1815
„ „ 1864	3131	1485	„ „ 1867	3038	1832

From which it results that out of 100 Women on the Pension List there were in the year—

	Of Remarried.	Of Widows.		Of Remarried.	Of Widows.
1862	45	55	1865	56	44
1863	45	55	1866	59	41
1864	47	53	1867	60	40

Whatever may be the cause, it is clear that the current of events in respect of the General Pension List seems to set towards matrimony rather than widowhood, and therefore towards a decrease and not an augmentation of the Full Pension List, as compared with the Half Pension List.

But it is certainly not impossible that a season may ultimately arrive when a certain proportion of the present remarried Women will be Widowed for the last time, and will settle down upon the Full Pension. The present experience of the proportion of claims, as between the two lists of Full or Half Pension, may then be reversed. But it is very difficult to decide whether or not the future annual increment of Widows reclaiming the Full Pension will more than equal the yearly departures through death of those other Widows who may happen to be on the Full Pension List at the termination of the probable average duration of the wedlock of the present remarried Females. For these reasons, whatever may be the increase of future charge which possibly will be caused by a reversion of a portion of the remarried to the Full Pension, it appears to me that there is no other course than to leave it for the present as a charge of uncertain amount on the general surplus assets of the Fund, until further experience supplies the means of valuing this limited contingent risk with proper precision.

The number of Officers' Widows placed on the Pension List from the commencement has been		200
There have died	17	
And there are no longer in receipt of Pension	9	
There have remarried	29	
But of these there are drawing Half Pension only	23	
The balance being no longer on the Pension List	—	6
The total withdrawn is therefore	—	32
Accordingly there are in receipt of Allowances		168
Of whom are on a Moiety of the Pension		23
The remainder being on the Full Pension		145

From the details obtained in respect of the ages of these Ladies, and the more accurate valuation of the Pension consequent thereupon, it appears that the mean age of the Officers' Widows is in reality 47 years, and that the mean age of the remarried Ladies is 40 years. A twelvemonth ago the mean age of the 168 Ladies on the Pension Lists, both Widows and remarried, having been classed together, was taken at 46 years. So that, except as regards the 20 remarried Ladies, there was in the last valuation no inaccuracy as to the supposed mean age of these gentlewomen.

The annual charge for the Full Pensions of £38 10s. each drawn by the 145 Ladies is	£5,582 10
And for the Half Pensions drawn by the 23 remarried Ladies	442 15
The whole annual charge being	£6,025 5

With the above item, the first of the three branches of charge is for the present disposed of, and the second branch of expenditure, namely, that caused by the provision for Orphan Children, has now to be brought under consideration.

Up to the 31st December, 1867, the Orphan Children which have been placed on the books were in number		4,975
There have died	571	
And Allowances have been discontinued to	2,484	
There have consequently ceased to be chargeable		3,055
And Allowances continue to be granted to		1,920
Of these there are in Boarding Institutions	480	
And in the Royal Victoria Asylum	200	
Total		680
The remainder are chargeable to the Fund, at the rate of £5 16s. per annum each		1,240

The 480 Children which are in the Boarding Institutions are chargeable after the rate of £17 10s. ach.

Accordingly, the yearly charge for the 1,240 Children will be	£7,192
And the yearly charge for the 480 Children in Boarding Institutions	8,400
The yearly charge for the 1,720 Children being	£15,592

There is a further yearly charge for 246 Children of Officers, the average annual provision for ach Child being at the rate of £19. The annual charge of £400 for Outfits, &c., which on previous ccasions has been brought into account in combination with the foregoing item, will, it is now con- dered, be more appropriately placed, and at the same time be sufficiently provided for in the general utlay of £5,000 per annum set apart for Apprentice Fees, Outfits, &c., an outgoing which presently ill be more particularly adverted to.

The annual charge for the Officers' Children is therefore	£4,674
And adding the previous charge for the other Children, viz.	15,592
The annual charge for the 1,966 Children will be	£20,266

But there is an additional and special class of cases which has to be also brought into account. hese cases are composed, first, of a group of 120 Children, for each of whom provision has been made the rate of £17 10s. per annum; and second, of another group of 30 Children of Officers, for each whom provision has been made at the rate of £25 per annum.

The first-mentioned class, therefore, creates a yearly charge of	£2,100
And the second class a yearly charge of	750
The whole annual charge for these special cases being	2,850
To which being added the annual charge for the 1,966 Children	20,266
The yearly charge for the grand total of 2,116 Children provided for is	£23,116

The 1.240 Children at the ordinary annual allowance of £5 16s. each, and the 480 Children in oarding Institutions, are found to group themselves, in respect of age, as follows, in each 1,000 esent:—

Aged under 5 years	24 Children.	Aged 11 years	48 Children.
Aged 5 years	19 „	„ 12 „	85 „
„ 6 „	20 „	„ 13 „	262 „
„ 7 „	27 „	„ 14 „	237 „
„ 8 „	35 „	„ 15 „	154 „
„ 9 „	39 „		
„ 10 „	50 „		1,000 Children.

The 120 special cases above alluded to yield at each age, out of 100 present, the following per ntages:—

Under 6 years of age	Nil.	At 12 years	2 per cent.
At 6 years	4 per cent.	13 „	5 „
7 „	14 „	14 „	2 „
8 „	21 „	Above 14 „	Nil.
9 „	18 „		
10 „	26 „		100 present.
11 „	8 „		

The Officers' Children, of either sex respectively, at present at each age in the following pro- rtions:—

	Boys.	Girls.		Boys.	Girls.
Under 6 years of age	3	3	At 14 years of age	16	11
At 6 years of age	4	—	15 „	10	10
7 „	1	5	16 „	8	16
8 „	2	1	17 „	9	11
9 „	4	2	18 „	4	7
10 „	9	5	19 „	—	8
11 „	3	4	20 „	—	3
12 „	10	6	Present 100 Boys.		100 Girls.
13 „	17	8			

Here it should be mentioned that, out of the whole number of Children provided for, there are fifty who are confirmed invalids, afflicted mostly with incurable and dangerous complaints. Eight of the number are Children of Officers. The yearly charge on account of these fifty afflicted persons is £2,588 per annum. It is included in the gross annual charge of £23,116 above mentioned. Weighing all the circumstances, it has been thought sufficient, in the absence of any medical opinion, or other means of forming a judgment of the extent of injury or damage suffered by the constitutions of these unfortunate young people, to place the probable duration of the future pressure of the charge at a period of ten years.

The outlay already alluded to in respect of Apprentice Fees, Outfits, Sickness, and other allowances, has been estimated at £5,000 per annum: one half of this charge will probably have a duration of eleven years; the other moiety, which chiefly concerns the Children, will decrease with the diminution of the charge entailed by this branch of the expenditure.

There is likewise the yearly charge for management, which is placed at £2,560.
This, in the course of time, will probably be also subject to decrease.
For the present, the combined charges form a total annual charge of £7,560.
At this point it may be useful to recapitulate, that the yearly charge on account of the

Widows and remarried Females is placed at a sum of	£35,445
2nd. The yearly charge on account of Children, at	23,116
Widows and Children	£58,561
and 3rd. The yearly charge for Extras, Management, &c., at	7,560
The whole annual charge in the three branches of expenditure being . . .	£66,121

The following are the resources of which the Fund is in possession to defray this charge. It holds £34,509 of Terminable Annuities, expiring at various periods, the last in 1885, and £20,478 is of Perpetual Annuities. Certain portions of this last-mentioned class of securities return for a season a yearly rate of dividend equal to 4½ per cent., and in some cases to 5 per cent.; but the excess of dividend above 4 per cent. is in all cases treated as a Terminable Annuity, expiring at the date to which the guarantee of the higher rate of interest is limited. The investments of the Fund fall into three classes, namely, Government Annuities for terms of years, to which is added a small parcel of Consols; East Indian and other securities guaranteed by the State; and Railway Stock and Debentures.

With the exception of the unimportant investment in 3 per Cent. Consols, which has been valued at £90 money for each £100 stock, the whole of the above-mentioned Securities are valued upon the basis that the rate of interest which will permanently govern the financial operations of the Institution will continue at the rate of 4 per cent. per annum. Accordingly, those Securities which return 4 per cent. per annum, and no more, are valued at par. On this footing, likewise, the future liabilities have been discounted, and thrown into the shape of present value in capital,

Here an explanation of the somewhat technical term "*present value*" may perhaps be useful. "*Present value*" signifies the sum which, laid down now in ready money, will, if put by and improved at the rate of interest assumed to be permanently obtainable, be exactly equal to, and sufficient for the discharge of, a future obligation, or a set of future obligations, when such solitary obligation becomes payable, or such divers obligations fall due. If the proper sum in present value be now set apart under fitting conditions, it is manifest that all further care in respect of the future liability may be dismissed. If one has to make a payment of £104 a twelvemonth hence, interest being at the rate of 4 per cent., one has but to set apart, and invest at that rate, as the present value of that obligation, one hundred pounds. The certainty exists that at the end of the year the present value assigned will have grown at 4 per cent. to the £104 wanted. The further combination therewith of the probabilities of life, that the person to receive that £104 will be alive at the end of the year to take the money, does not vitiate the principle of making provision now for the contingency, or, in other words, assigning a present value at once to the future obligation, and thereby liberating at this moment any surplus funds which may happen at present to be in one's possession.

On this principle, therefore, and adopting in the process of computation those laws of mortality which have entered into the preparation of former valuations, the present values of the Liabilities for Pensions, Allowances, and other expenses, have been set forth in contrast with the present value of the various securities, terminable and perpetual.

A balance has then been struck, showing the surplus which, subject to a proper reserve for the purpose of security, remains at disposal for ulterior contingencies.

The result of this operation for the 31st December, 1867, is to the following effect:—

Assets of the Fund, consisting of various Securities, valued as worth in ready money .	£822,658
Liabilities of the Fund, the present value of which, also in ready money, is . .	670,752
Balance	£151,906

According to the rule laid down on previous occasions of a similar nature, it has been thought expedient to fix the amount of Reserve to be set aside for the purpose of safety at not less than 10 per cent. of the amount of liability. An adhesion to this principle therefore requires that a sum of £67,100 should be kept in hand, solely for the object of a proper and sufficient reserve. Consequently, the net surplus disposable for further purposes will not exceed a sum of £84,806.

The customary tabular statement of the future probable annual balances between income and expenditure, up to the year 1900, has been duly prepared, but with a greater amount of precision than

formerly was at command. A more accurate knowledge of the ages of the Children has modified and extended in duration the probable future progress of the charge on their account. Again, a due advertence to a point to which my attention was directed to be called, in the instructions transmitted for my guidance in the preparation of the present Report, has caused provision to be made in the construction of the table for a statement not only of the income lost from time to time by deficiencies of revenue as compared with charge, but also of the recovery of that income in subsequent years, through the restored preponderance of resources over the expenditure, and the concomitant presence of surplus balances.

In respect of the tabular account in question, it will be borne in remembrance that it is nothing more than a general estimate of the probable gradual diminution of the future annual charges through the decrement from mortality and other causes of the number of persons in receipt of Pensions and Allowances. The decrease from time to time, on the other hand, of the yearly income takes place through the expiration of the terms of the annuities certain. A further element of fluctuation in the balances of deficiency or surplus, as the case may be, is now introduced by proper note being taken, as already mentioned, of the corresponding loss or gain of income from this cause.

Perfect accuracy as to the effect in each particular consecutive year is not professed. But the estimate is, on the whole, to be relied on as a rough general chart of the probable future course of the engagements and resources of the Fund.

I have the honour to be,
Sir,
Your very faithful Servant,
ALEXANDER GLEN FINLAISON,
Actuary of the National Debt.

W. H. Mugford, Esq.,
&c., &c., &c.

ALEXANDER GLEN FINLAISON,
Actuary of the National Debt.

APPENDIX C.

National Debt Office,
23rd April, 1869.

Sir,

In compliance with your request I have proceeded to make the customary yearly valuation of the liabilities and assets of the Patriotic Fund as they existed on the 31st December, 1868.

It will be convenient to bear in remembrance in reference to the subject, that the charges on the Fund class themselves under three general heads. There are first, the Pensions to Widows, secondly, the temporary annual provision for Children, and thirdly, a temporary annual outgoing for miscellaneous purposes, with which is combined the more permanent charge for expense of management. It is, perhaps, unnecessary to remark, that these demands are more than balanced by various resources placed in different securities, which are enumerated in detail in an abstract of the charges and income of the Fund, appended to the present report.

Concerning the charges on the Fund, the provision granted for the benefit of the Widows, including such of them as happen to have remarried, claims priority of consideration.

It appears that the number of Widows of Non-commissioned and Petty Officers, Private Soldiers, and Seamen, which has been placed on the books from the commencement is		3,720
Of these persons there have died	483	
And have been removed from the list	346	
Less those who have been re-admitted, viz.	94	
Total	252	
And the dead and removed being		735
There remain upon the list as annuitants		2,985
Of this number there have remarried, and been placed upon a Moiety of the Pension	2,014	
But out of this remarried portion there have been replaced on the Full Pension, Widows whose second husbands have died	244	
Which number was subsequently reduced by Widows who remarried for the third time	91	
The number replaced on the Full Pension being	153	
And the number on the Half Pension List		1,861
The remainder of the whole List being the number of Widows now drawing the full Pension		1,124

In preparing, at the corresponding period of last year, the usual statement of the liabilities of the Fund, the advantage of a knowledge more precise than formerly prevailed, of the age of the Widows and remarried Women, was brought to bear on the question of the present value of the Pensions. The practical result of the information obtained on this point was, the establishment of the fact that, one with another, on the 31st December, 1867, the Widows were of the age of 44½ years, and that the remarried Women were, on the average, of the age of 40½ years. As only 11 Widows have been admitted to the Pension List during the past year, and as not more than 29 Widows have remarried during the same period, it is tolerably clear that the general age of the females on either list may be safely assumed to have advanced by precisely one year only; and that the average age of the Widows may now be taken at 45½ years, and the average age of the remarried at 41½ years.

The yearly charge for the Widows at £14 each will be	£15,736
And for the remarried at £7 each	13,027
And the whole yearly charge	£28,763

The rate of remarriage from the list of Widows may, as formerly, be taken at 4 per cent. over the whole duration of Widowhood.

The number of Officers' Widows placed on the Pension List from the commencement has been		202
There have died	21	
And there are no longer in receipt of the Pension	9	
There have remarried	28	
But of these draw Half Pensions only	22	
The balance being no longer on the Pension List	6	
The total withdrawn is therefore		36
Accordingly there are in receipt of Allowances		166
Of whom are on a Moiety of the Pension		22
The remaining number being on Full Pension, viz.		144

From the information obtained previous to the valuation made in the course of last spring for the 31st of December, 1867, it was ascertained that the mean age of the Officers' Widows was 47 years; and that the mean age of the remarried Ladies was 40 years. The additions to the Pension List during

last year have been so very limited, and the departures so few, that it is obvious in this case also t the mean age of either class cannot have been affected further than by the addition of the lvemonth which has elapsed since the last statement. For the purpose of the present investigation, refore, the average age of the Widows has been taken at 48, and the average of the remarried dies at 41.

The annual charge for the Full Pensions of £38 10s. each drawn by the 144 Ladies is		£5,544 0
And for the Half Pensions drawn by the 22 remarried Ladies is		379 10
The whole annual charge being		£5,923 10
When to this charge of		£5,923 10
There is added the annual charge for the other Widows and remarried females, viz.		28,763 0
The annual provision required for the first of the three principal branches of expenditure, that is, to meet the charge for the Widows, is		£34,686 10

The charge for the orphans next falls to be considered.

The Children which have been placed on the books up to the 31st December, 1868, were in number		4,992
There have died	585	
And Allowances have been discontinued to	2,806	
There have consequently ceased to be chargeable		3,391
And allowances continue to be granted to		1,601
Of these there are in Boarding Institutions	300	
And in the Royal Victoria Asylum	183	
Total		483
The remainder are chargeable on the Fund, at the rate of £5 16s. per annum each, viz.		1,118

The 300 Children placed in the Boarding Institutions are chargeable after the rate of £17 10s. h.

The yearly charge for the 1,118 Children, at £5 16s. each, will be	£6,484
And the yearly charge for the 300 Children at £17 10s. each	5,250
The yearly charge for the 1,418 Children being	£11,734

A further yearly provision for 237 Children of Officers, at the average rate of £19 per annum for h Child, forms the next item of the account.

The annual charge for Outfits, which was formerly combined with this particular outgoing, is now rged, and sufficiently provided for in the general outlay of £5,000 per annum set apart for general poses.

The annual charge for Officers' Children is limited, therefore, to the sum of	£4,503
And, adding the previous charge for the other Children, namely	11,734
The annual charge for the 1,655 Children is	£16,237

But there is besides a special class of cases which must not be left out of account. These cases sist, in the first place, of a group of 170 Children, 94 of whom are provided for by an allowance of 10s. per annum each; while the remainder of the number, namely, 76, have found a home in the toria Asylum.

In the second place, provision has also to be made at the rate of £25 for each Child, for a further up of 40 Officers' Children.

In respect of the 94 Children first mentioned, there is created a yearly charge of	£1,615
And in respect of the second group of 40 Children of Officers, a yearly charge of	1,000
The whole yearly charge for the 134 special cases being	£2,645
To which, adding the annual charge for the 1,655 Children, viz.	16,237
The annual charge for the grand total of 1,789 Children, exclusive of the 76 received into the Victoria Asylum, is	£18,882

As 336 Children have taken their departure from the lists during the past year, 14 of whom only e removed by death, and as not more than 17 Children have been added to the General Pension t, it is probable that the age of the Children now on the books is advanced by one year, and no re. The groups which at each age last year combined to form the whole body of Children, will ply, in the present case, have moved on to the age next older by one twelvemonth. Accordingly, distribution at each age of the Children now on the ordinary annual allowance, and of the Children the Boarding Institutions, has been a process carried out without much difficulty. Similar con- erations have entered into the computations made in reference to the ages of the Children provided as special cases, and the ages of the Children of Officers.

It may, perhaps, be remembered that out of the whole body of Orphans for whom provision has to be made, a certain small number are confirmed invalids; some of them are Children of Officers. The yearly charge on account of these afflicted persons is included in the total charge of £18,882 above mentioned. The view that was last year taken of the probable future duration of the pressure on this account will be adhered to on the present occasion.

With the last-mentioned details, the various considerations have been disposed of which affect the second great branch of charge.

The outgoing occasioned by gratuities for Outfits, for relief in sickness, and for allowances on other grounds, and for miscellaneous purposes, has been estimated, as formerly, at £5,000 per annum. One-half of this charge will probably have a duration of ten years; the other moiety, which is chiefly attendant on the provision for the Children, will decrease with the diminution of the charge placed on the Fund by the branch of the expenditure alluded to.

The yearly charge for management—taken for the present at 2,560—is also to be kept in view. In due course of time this charge will likewise be subject to decrease. The combined charges for general purposes and management form a total yearly outgoing of £7,560.

The amounts of the three great branches of expenditure, without making the usual deduction for the contingency of remarriage of a certain portion of the Widows, may be summarised as follows:—

1st. The charge on account of the Widows and remarried Females	£34,686
2nd. The charge on account of the Orphan Children	18,882
Widows and Children	53,568
3rd. On account of Extras and Management	7,560
Total annual charge	£61,128

To meet these important demands, however, the Patriotic Fund is in possession of the following resources. It is the holder of Terminable Annuities to the amount of £32,478 per annum. It is also in receipt of £2,031 of other terminable dividends, expiring at various periods. And it is further in possession of £20,312 per annum of Perpetual Annuities. Its income Terminable and Perpetual is at present £54,821. The investments in question may be grouped in three classes, namely, Government securities; East Indian and other securities guaranteed by the State; and Railway Stock and Debentures.

The whole of these Securities, with the exception of a small investment in Consols, are valued upon the principle that the rate of interest which will permanently govern the financial transactions of the Fund will always remain at 4 per cent. per annum. Those securities which return but 4 per cent. per annum in the way of interest are valued at par, therefore. The excess of interest beyond 4 per cent. is looked upon as a terminable annuity, of which the duration is limited to the extent of the guarantee of any higher rate.

To arrive at a knowledge of the side on which the balance between the assets and liabilities may incline, it is necessary to place on either side of the valuation-sheet, in their proper situation, the values in capital of the different charges, and of the securities at hand to meet their pressure. It is satisfactory to be enabled to state that on the present, as on all previous occasions, the result disclosed is a surplus of considerable amount.

On the 31st December, 1868, the assets of the Fund, consisting of the Securities, valued in ready money, are found to be worth	£794,470
The liabilities of the Fund have been computed to be worth, also in ready money, a sum of	623,793
The balance in favour of the Fund, therefore, is	£170,677

The amount of Reserve Capital to be set aside for purposes of security, according to the rule adopted in former instances, should not fall below 10 per cent. of the amount of liability. Accordingly, in agreement with this principle, the fit and proper reserve to be retained on the valuation for 31st December, 1868, is a sum of £62,377; leaving disposable for other purposes a net surplus of £108,300.

The usual tabular statement of the future probable yearly balances between income and expenditure has been prepared in the usual form; and reference has been had in its construction to the more accurate information which was obtained for the investigation of the position of affairs last year.

The tabular statement in question, however, does not profess to be more than a general estimate of the probable future course of the yearly charges, when subjected to the effect produced by mortality and other causes, on the number of persons now in receipt of the Allowances and Pensions. On the other hand, the diminution from time to time of the yearly income, by reason of the expiration of the Terminable Annuities, as they happen to run out, is in like manner duly set forth.

Without laying claim to absolute accuracy in each consecutive year, the estimate, on the whole, may perhaps be accepted as presenting sufficiently a general representation of the probable future progress of the engagements and resources of the Fund.

I have the honour to be, Sir,
Your very faithful Servant,
ALEXANDER GLEN FINLAISON,
Actuary of the National Debt.

W. H. Mugford, Esq.,
Secretary to the Royal Commission of the Patriotic Fund,
&c., &c., &c.

MEMORANDUM of PARTICULARS on which the STATEMENT of the probable future CHARGE and INCOME is founded.

ALEXANDER GLEN FINLAISON,
Actuary of the National Debt.

APPENDIX D.

19, *New Street, Spring Gardens,*
London, S.W.
28*th January*, 1868.

SIR,

THE Executive and Finance Committee have carefully reviewed cases in which Sick or Special Allowances have been granted from the Patriotic Fund; and having regard to the circumstances under which the Fund was raised, and the numerous applications which are now made, they think it right to point out to the Staff-Officers, and others, in communication with the Committee, that, whilst the object of the Fund was to provide that the Widows and Orphans of those who lost their lives through service in the Russian War should not be left destitute, yet, that it was not intended that extra allowances should be granted in every case of casual illness or disability, or that the Widows and Orphans should rely entirely on the Patriotic Fund.

Further, in the marginal note in the Form of Medical Certificate, the application thereof is stated to be restricted to "urgent cases," and I am therefore directed by the Committee to inform you of their decisions, viz.:—

1. That remarried Women should only be granted Sick Allowances in very exceptional cases.
2. That Widows or Children are not to be granted Sick Allowances for slight or temporary ailments, but cases of acute or serious illness will be considered.

To enable the Committee to carry out their views, they rely on the co-operation of the Staff-Officers, who must possess a personal knowledge of the recipients; and the Staff-Officers are hereby earnestly requested, in sending any Medical Certificate to this Office, to record thereon their opinion of the urgency of the case, the occupation, respectability, industry, or otherwise of the applicant, and in the exceptional instances of remarried Women, the position and weekly earnings of the Husband.

As a further means of rendering Medical Certificates unnecessary under circumstances of slight indisposition, the Committee propose that the Staff-Officers should ascertain, from the several Dispensaries in their Districts, the terms of Subscription which would provide for the relief of Casualties, in the case of sickness or accident, of those who are in receipt of relief from the Fund.

Will you, therefore, be pleased to furnish me with a list of one or more of the Institutions in your district, in the neighbourhood of which the recipients mostly reside, and to which an Annual Subscription would prove an advantage?

I have the honour to be,
Sir,
Your obedient Servant,
WM. H. MUGFORD.

THE STAFF-OFFICER OF PENSIONERS,
_____ *District.*

APPENDIX E.

19, *New Street, Spring Gardens,*
London, S.W.
1*st February*, 1868.

SIR,

REFERRING to the Circular Letter on the subject of Sick Allowances, which, by direction of the Executive and Finance Committee, I had the honour to address to you on the 28th of January, 1868, I am further instructed to request your attention to the following course which the Committee wish to adopt in the cases of applications for the continuance of allowances to Children who have reached the age at which the allowance ordinarily ceases, on the ground of their inability to earn a livelihood; or from Widows who appear to be totally incapacitated from contributing to their support: namely, to apply to one of the principal Naval or Military Medical Officers on the spot, requesting that he will examine, and favour the Committee with his opinion of the state of health of the applicant for extra assistance, and the extent of disqualification for exertion.

In thus seeking more frequently the services of Naval and Military Medical Officers, which already, in special instances, have been found so valuable, it is far from the wish of the Executive and Finance Committee to question the value of the opinion which may have been expressed by any Medical Man; but in managing a Fund of such importance and magnitude, the Committee feel it incumbent upon them to avail themselves as much as possible of the assistance of Medical Officers in the Public Service; a practice authorized by Her Majesty in the Royal Commission by which the Fund was constituted.

When, therefore, in your judgment, it becomes advisable to consult an Official Medical Officer, the Committee would beg you, whilst requesting his co-operation in aiding them in the proper administration of this great National Fund, to explain to him the interests involved, the responsibility

t by the Committee respecting the proper expenditure of the Fund, and the assistance which he ll render to them by a careful examination of the applicant.

You are also requested to call his attention to the fact that Widows are already in the receipt of e ordinary weekly allowance.

I have the honour to be,
Sir,
Your obedient Servant,
WM. H. MUGFORD.

IE STAFF-OFFICER OF PENSIONERS,
District.

APPENDIX F.

SUMMARY of INFORMATION obtained from several INSTITUTIONS respecting PREMIUMS for APPRENTICESHIPS.

Royal Hospital Schools, Greenwich.—Although originally intended to train boys for the sea, the ajority do not go to sea. They are absorbed in the general industry of the country, and no premium outfit, or any assistance is given, except in the case of those who go to sea, to whom £1 12*s.* is ven as outfit.

Royal Military Asylum, Chelsea.—At 14 years of age, if the boys do not join the Army, their ends must remove them; and no outfit or assistance is given. Only the few boys (about 5 a year), o are unfit for the Army, and who have no friends to receive them, are placed as *in-door* appren- es with Shoemakers and Tailors. £10 premium is given, and clothes to the value of £1. The aster is made responsible for the boy; and at the end of the term he is compelled to give the boy thes to the value of £5. About 1 apprenticeship in 5 is the subject of complaint, on the part of her the master or the boy.

Royal Hibernian Military School, Dublin.—If the boys do not enter the Army their friends must ovide for them, and no assistance is given. In a few exceptional instances, where boys are dically unfit for the Army, and the friends are very poor, clothes to the value of £1 7*s.* 6*d.* are ven. In some rare cases friendless boys have been apprenticed without fee, but gratuities of £5 ve been authorized by Secretary of State for War to persons removing such boys from being rdens to the Institution. About 1 a year is apprenticed.

London Orphan Asylum.—The boys generally get situations in mercantile houses, where they are ovided with board and lodging by their employers. Outfits of £5 are given; but no premium. e managers of this Institution attach little value to apprenticeship premiums and indentures, as ey seldom answer the purpose. They consider premiums to be only good with dull boys and with ll-principled masters. Their experience is against the success of apprenticeships where premiums e paid.

King Edward's Schools, London.—The boys generally enter the Army or the Navy; but some e apprenticed as in-door apprentices to Shoemakers and Tailors, and some join the Merchant rvice. No premiums are paid. Apprenticeship has been found so unsatisfactory, that it is only opted in the cases of boys physically unfit for the Army or the Navy; and premiums are considered expedient. Boys are trained to Tailoring and Shoemaking in the Schools, and are therefore valuable masters without premiums. The Chaplain and Superintendent adds—

"You will see that my opinion of the apprenticeship system is altogether unfavourable, and I especially believe that when a premium is given masters will generally seek an apprentice not so much for his services as for the sake of the money, perhaps to ward off some pecuniary embarrass- ment; and that once obtained the boy is regarded as an encumbrance."

Haverstock Hill Working School.—About 60 boys leave in a year. Their parents or friends ovide for them; the children receive the clothes in wear, and one suit of £2: at the end of one ar, if their conduct has been good, they receive £3 extra.

No child has been apprenticed from the School for 8 years. £5 premium was formerly given, but e authorities of the School were not satisfied with the masters who applied. Experience proved that e masters found fault with boys in order to get rid of them.

Foundling Hospital.—The practice of this Institution has always been the same, and is based upon e fact that Foundling Children have no friends. About 21 boys a year are apprenticed to various ades as in-door apprentices. A premium of £10 is given with each, and clothes to the value of £8. e masters afterwards provide everything. About 1 apprenticeship in 7 fails.

Philanthropic Society's Farm School.—All the boys here have been convicted. When discharged, me are sent to their friends, others to employment at home or to go to the Colonies. A few are prenticed as in-door apprentices; generally to Shoemakers and to Tailors. Sometimes £3 or £5 are id as premium.

EXTRACT from a REPORT made by Mr. HARE, one of the INSPECTORS under the CHARITY COMMISSION, on the subject of APPRENTICESHIP.

Tamworth Charities.

Samuel Port, by Will, dated 24th July, 1705, gave £400 to purchase lands, and to apply the rents (after a small deduction) for apprenticing in London two poor boys born in Tamworth.

In 1854 there was an accumulation of money, and application was made to the Court of Chancery for a new scheme for the appropriation of the Charity.

The scheme was as follows:—

That the rents, interest, dividends, and annual proceeds or income thereof, or of a competent part thereof (except as hereinafter mentioned), to be paid and applied in binding out, as apprentices to respectable masters, carrying on trade, calling, or business in the City of London, or within the distance of three miles from the General Post Office there, two or more poor boys in every year who shall have been born within the borough or parish of Tamworth, or whose parents shall be entitled, under the laws for the time being in force for the relief of the poor, to a settlement in such borough or parish. That in the event of proper masters or objects of the Charity not being found in any year, such annual proceeds or income may be applied for or towards the like purpose at any time within the two following years, at the end of which, if not so applied, it shall be added to, and form part of, the principal of the said Charity estate. That in the event of the annual proceeds or income being insufficient for the purpose of placing out, as apprentices, two boys every year, then a competent part thereof may be applied for the purpose of placing out one boy only, and the residue may be applied for or towards the like purpose at any time within the two following years, at the end of which, if not so applied, it shall be added to, and form part of, the principal of the said Charity estate.

Subsequently, Mr. Hare, one of the Inspectors under the Charity Commission, after due inquiry, reported on the 9th January, 1863, that

The apprentices in the last five years have been—

	APPRENTICE.	MASTER.
1859 .	One. William Palmer, an orphan, having lost father and mother.	John Raine, 29, Wilmington Square, Clerkenwell, Painter and Grainer.
1861 .	Two. John Richardson, son of a gardener. Richard Ison, son of a haberdasher and pattern-maker.	— Mansfield, 2, Freeman's Court, Cheapside, Printer. Mr. Aldridge, Provost Street, Clockmaker.
1857 .	One. Jas. Richard Turner, son of Sergeant-Major Turner, Staffordshire Yeomanry.	George Freeman, Blenheim Street, Great Marlborough Street, Pewterer.

None were apprenticed between June 1854 and 1857.

In the case of Turner, who was apprenticed to Freeman, £25 was paid, and after a year or two he returned, and the other £25 was not paid. Freeman was only the foreman of the concern. It is the habit of the Trustees to obtain, if possible, some Certificate of Clergymen or others of the character of the proposed master, or inquiry is made through the agent of the Solicitor of the Trustees.

At present it is said that the three other boys above named appear to be doing well.

The sum of £50 as premium is limited by the Trustees as the utmost sum to be paid. The boys are bound from the time of the Indenture to the age of twenty-one. The master, it is usually stipulated, shall find board, lodging, and washing, and other necessaries, and the parents the clothing. It has been thought that persons in London make it their business to apply for and take apprentices, and had agents in Tamworth to supply them. The Trustees consider that the administration of this Charity is at present very inefficient, even with the best exertions and care that can be taken, the system of apprenticeship having, in the case of respectable tradesmen, been so generally abandoned. The success of the apprenticeships in London has generally depended on the connection of the parents with some family or relation in the metropolis, amongst whom the boy is not an entire stranger. The liberation of the Trustees from the restriction as to London would seem very desirable, London now affording much smaller opportunities of finding good masters for the purpose than the neighbourhood of Tamworth and other parts of Staffordshire.

In a subsequent Report, dated 31st May, 1864, Mr. Hare says—

I beg to refer to my Report on this among the rest of the Tamworth Charities, dated the 9th January, 1863.

By that Report it will be seen that Samuel Port, in 1705, left a sum of money (which was laid out in land) to apprentice in London two poor boys born in Tamworth.

For one hundred and thirty years the word "London" was construed as strictly as if the word related to a question of property between private individuals, and apprenticeship beyond the city

walls was considered inadmissible; and large accumulations of the income of the estate took place from masters not being found to which the boys could be apprenticed. In 1834, application was made to the Court of Chancery, and a new scheme was established, by which the word "London" received the rather singular and arbitrary enlargement to a boundary within three miles of the General Post Office, a definition which does not appear to be either popular or accurate, by which, moreover, the class of boys from which the apprentices were to be taken was extended from those "born in Tamworth," to which the testator has restricted it, to boys "whose parents shall be entitled under the laws, for the time being in force, for the relief of the poor to a settlement in the borough or parish of Tamworth," an extension pointing rather to the illegal purpose of relieving the ratepayers than to a generous extension of the testator's bounty. If pure extension of the benefit had been the object, the reasonable method would have been to have opened it to any one born in the Union, or still further, if they had thought proper; nor are these the only remarkable incongruities of the scheme, which, being obtained on petition under Sir Samuel Romilly's Act, probably passed through the Master's Office, and received the sanction of the Vice-Chancellor of England, without argument or explanation.

The cessation of the old habit of the better order of tradesmen to receive apprentices in their houses, and the changes in trade and society, render the useful and beneficial apprenticeship of a country boy to a London tradesman dependent greatly on accident, on the occasional acquaintance of some Tamworth parents with friends in London, on inquiries, which are often made with difficulty, and on vigilance in avoiding the apprenticeship of boys to unsuitable masters, and other casual circumstances, which render the endowment of little benefit to the poorer inhabitants generally. In my former Report I mentioned some cases of apprenticeship, and the course taken in the administration of the Charity, which show the truth of these observations.

In order to advance boys in business and in life in the modern condition of trade and manufacture, there is needed an education of a higher order than that which can be obtained by boys of the poorer classes, who are unable to continue at School beyond nine or ten years old, and higher than can be generally obtained in the National Schools, or other Schools for the poor; and for such a superior education there is no public School in Tamworth accessible to the class of children indicated by the testator; nor, if there were such a School, could it be expected that the parents or guardians of children of that class would be able to keep them long enough at School to profit by it. Happily the present condition of Port's Charity affords the means of providing for both of these wants and difficulties.

In my former Report it appears that there has been accumulations of rents from the absence of apprenticeships, amounting to a sum of £3,221 2*s*. 6*d*., £3 per cent. Consols.

Extract from Report by Mr. E. Carleton Tufnell, one of Her Majesty's Inspectors of Schools, to the Committee of Council on Education, 1860–61.

The subject of apprenticeship of pauper children has often engaged public attention, and I am satisfied that the experience now gained has enabled us clearly to decide what ought to be our policy on this question. It is shortly this: except in some peculiar cases, pauper boys ought never to be apprenticed at all, and most certainly never with a premium. The giant abuses that arose under the old system of Poor Laws from apprenticeship have in great measure ceased, and the present Poor Law regulations place as great a check on the practice as any central authority could venture to enforce; but it is difficult to eradicate a system that has become habitual with a certain class of employers; and hence I think it may be useful to state the radical evil of apprenticing with premiums this class of children, and how it may be met. Page 476

Now the above is what I have often had occasion to remark. At present, the system infallibly attracts the worst masters in any trade. The evil is sometimes attempted to be met by lowering the premiums, by giving part in clothes, by keeping back half the premium, for one or two years, and above all, as in some district schools, by making it the duty of the Chaplain to visit every boy got out to service and to report on his treatment. Yet these are but inadequate palliatives, and oppose only a very partial remedy to the evil. If the premium is not all paid till after the lapse of a certain interval, I have known the result to be, that the boy will be well treated till that interval has passed, and then, the remainder of the premium being received, the master begins his ill-treatment, and the boy to think of absconding. Besides, how is a clergyman or other officer to find out, in a visit, whether a boy is properly taught boot-closing, or type-founding, or any other mechanical art, which his master is bound to teach him? How is he, or any casual visitor, to be sure the boy does not tell of unjust treatment owing to terror of his master? Page 477

The remedy is simply this: to teach boys trades effectually, and then let employers come to engage them, because their services are valuable and worth having. In that case a higher description of master is attracted; and if the boy is harshly or unjustly treated, he soon changes his bad master for a good one; and the remedy is thus self-acting. Some years ago the Stepney Union used, as now, to get boys into the sea service, but instead of preparing them for it by special training, they offered premiums of £10 to any masters of vessels who would take boys.

The result was to induce the worst masters of the lowest description of fishing-smacks to apply for the boys, who were often so ill-treated that they tried to abscond, and thus either became criminals or again dependent on the parish. After this plan had been continued some years, the Guardians wisely determined to erect a full-sized ship in the school-yard, to engage a seaman to drill and train the boys on it, so as to make them thoroughly acquainted with all parts of a ship, to mount aloft, to set and furl the sails, &c.; in short, to make them, as is found possible, three parts seamen without leaving dry land.

The effect of this training was to get far superior places for the boys. Instead of going to the fishing-smacks, the lowest description of sea service, they are now engaged in long sea trading vessels, by Captains who voluntarily come to engage them, and in numbers beyond what can be supplied. Their wages have also been increased, as now for five years' service they receive £42, besides board, lodging, washing, and medical attendance. Many of them enter the Queen's service, which, it is worth stating, they are led to prefer, owing to the drilling they are made to undergo in the School; or, to use one boy's expression, he "likes the Queen's service because everything is so neat, clean, and orderly," such as they are accustomed to at School.

This School has now for a series of years furnished between 30 and 40 boys yearly to the sea service; and instead of the £10 premium formerly given, nothing is paid. Consequently, though the mast and sails cost upwards of £100, the outlay, as is always the case with well-considered expenditure, is vastly economical. It is also worthy of remark that these boys, though usually only 14 when thus engaged, having undergone the naval drill, are preferred to boys of 16 undrilled. They are useful, as a Captain who had had several of them declared, as soon as they stepped on board, seemed to be quite at home, ran aloft without fear, and were generally prompt in obeying orders, while the undrilled boys had everything to learn, were not supple in limb, and could not make themselves for some time useful.

Now, as in the above instance of the sea service, so I maintain it may be with every other species of industry for which these boys are fitted. It is not possible altogether to dispense with apprenticeship, but it is possible by good industrial training to dispense with premiums, and thus the saving of parochial expenditure, though not a little, is the least part of the advantage from the discontinuance of premiums. It is possible, as I have innumerable proofs before me, to train Carpenters, Engineers, Bakers, Painters, Musicians, intelligent Shop-boys, so as to make it quite worth the while of respectable masters to engage them without any bribe in the shape of a premium.

EXTRACTS from the REPORT of SIR J. KAY SHUTTLEWORTH, alluded to in the foregoing REPORT from Mr. E. CARLETON TUFNELL.

Page 116. The industrial training of the children has already had the effect of reducing the age at which they are received into service, and of rendering premiums and apprenticeship unnecessary; not, however, in consequence of their skill in a particular handicraft, but because the children have acquired industrious habits. Such habits ensure their going to service at thirteen years of age, with no other outfit or premium than a suit of clothes; whereas formerly boys often remained in the School until fourteen or fifteen, though great exertions were made to apprentice them, and though the temptation of a premium of £10 was commonly offered with them.

Page 132. Suggestion that they (the Poor Law Commissioners) should require that children, whose natural guardians are totally incapacitated from making provision for their maintenance and instruction, be put to some useful occupation by the mode of hiring and service without premium.

Examination of Mr. C. A. Christy, Relieving Officer of Bethnal Green.

Page 135. Therefore if the parishes are permitted to give premiums for the apprenticeship of pauper children in Spitalfields, that must tend to increase the superabundance of labour in the hand-loom weaving trade; to increase the distress of the Spitalfields weavers; to burden the parish of Bethnal Green with paupers, and to occasion the misery and consequent misconduct of the children so apprenticed?—Certainly.

What is the inducement on the part of the weavers to take the children?—The premium. I have known them to go for miles to obtain the largest premium. The largest I ever heard was a child bound from Ipswich with £20 premium to a weaver, a middling working man, a man of character as a working man. I have known many a weaver to go to Richmond for £10 premium with an apprentice, and generally it is the custom of the weavers to go abroad to procure premiums with apprentices. One source of the maintenance of the Spitalfields weavers is the premiums they acquire with apprentices from other parishes.

Have the children so apprenticed generally worked out their time?—I should hardly say one-half.

What has become of them?—Generally the master becomes poor and not able to maintain them; then they are discharged and taken into the workhouse; then they are probably not able to get their living, though they have served three or four years, and in consequence they either go vagabondizing about, or go to work at what they call journey-work.

Are girls ever so apprenticed?—Many.

What becomes of the girls?—I am sorry to say many of them turn out loose characters upon the streets. I have known some good and virtuous housewives.

If there were no premiums given by the parishes, would the weavers be eager to obtain apprentices?—I am quite certain they would not take any; instead of going abroad to seek them, they would not take them if they were offered.

I understand you to mean that the weavers, pressed by want, or for some debt, incurred either from the depression of trade and consequent want of employment, or from their own improvidence and misconduct, and having no prospect of being able to liquidate this debt by their own regular exertions, have been accustomed to seek relief for their necessities by taking children with whom they received a premium?—I have known many instances, and one remarkable example is contained in the paper which I hold in my hand.

Examination of Mr. Henry Green, Schoolmaster of the West London Union.

What class of situations do they procure?—For the most part they are still journeyman mechanics, Page 148.
ailors, and shoemakers, who are still in many cases attracted by the premiums which the guardians
ave not ceased to give.

Do they retain their situations?— Ultimately we settle them all. Now and then we have a child
rying two or three situations before he gets settled.

Supposing that you were no longer to hold out an inducement to low tradesmen to come for the
hildren, by continuing to give the premium, and that the Officers of the Union were directed to
iffuse more generally a knowledge of the improvements that have been effected in the training
nd in the moral character and habits of the pauper children of the Union,—are you of opinion that
ou would have much difficulty in procuring for them situations in more respectable service, as the
haracter of the children for good conduct and for industry became established in the minds of the
arishioners?—I have no data to proceed upon, but my conviction is that we should at once get rid of
hat class of applicants, who do great injustice to the children and to our reputation, by taking children
hey do not need as servants, merely for the sake of the small premium given by the guardians; and
think it likely that we should have a better class of applicants in their place with whom the children
ould be more likely to succeed in maintaining their independence, and preserving their character
ee from contamination. I am convinced that children, on account of the premium, still get into the
ands of masters and mistresses who seek the means of getting rid of them.

Evidence of Mr. John Sutton, Schoolmaster of the Greenwich Union Workhouse.

——the improvements in the training of the pauper children, therefore, have not yet become a Page 155.
atter of considerable public notoriety. But I have no doubt that, as soon as they are generally
nown, we shall be very successful in procuring for the children much superior situations to those we
ave hitherto obtained, and that they will by their own character, and by the treatment which they
ill receive from their employers to whom they are sent, be enabled to retain their situations with great
rtainty. I long to see every inducement removed (as respects premiums) to persons not having real
eed of the services of the children to make application for them; because I am sure that the methods
at are now adopted for rendering the children fit for service will make them more desirable servants
persons wanting assistance than they can procure by any other means.

Evidence of Mr. John Claydon, Master of the Limehouse School of Industry.

I do not know how to express my opinion sufficiently strongly respecting the pernicious effects of Page 170.
prenticeships of pauper children with premiums, and without previous training. The children
re almost invariably taken by persons who had no need of their services, but to whom the premium
s a temptation, and they were frequently driven into the streets and compelled to follow vicious
urses. Frequently persons come to apply for children at the Limehouse Training School; I imme-
ately tell them we give no premium; that readily disposes of scores of applications, and those who
rsist in the application are respectable individuals who have real need of the services of a well-
ained and well-conducted child.

Evidence of Mr. F. G. Aubin, Master of the Establishment at Norwood.

I feel confident that the improvement in the training of the children which has occurred since the Page 178.
or Law Commissioners' interference, will enable the guardians to settle the children in future
hout giving premiums for their apprenticeship. If the commissioners were to prohibit by an
ter the granting of any premiums with pauper children (excepting those disabled in some way),
guardians would have no difficulty in finding places for the children at as early an age as at
sent. The East London Union has already given up granting any premiums. I do not know the
ctice of the other Unions.

The premiums always brought to us a great number of the lowest workmen. The higher the
mium the greater were their numbers, and the lower the character of some of them. At this very
e a woman, who is slightly deranged, has been spreading a report in London that one of the City
mpanies is disposed to give a premium of £20 for the apprenticeship of her son. In consequence of
s report, we have had more than a hundred people here in search of the premium. She frequently
nes with them herself, and sometimes in a state of intoxication. Many of the applicants are
kmen of the lowest class, and with nearly all, the object of the application plainly is, to secure the
mium without any real need of the services of the boy.

This case affords the best illustration of the effects of offering premiums in the apprenticeship
pauper children. A class of tradesmen are encouraged who derive a considerable part of their
ome from premiums with children whom they take as apprentices, but whom they almost always
llect, and frequently ill-use, and drive from service as soon as they can do so on any plausible
text.

If the premiums were altogether given up, those tradesmen only would take the children who had
lly need of their services. And the children are now so well prepared to do their duty to their
sters, that the guardians would have no difficulty in finding places for them without any premiums.

Extract from Mr. Cumin's Report on Educational Charities, 1860.

Pages 318—320.

Amongst the public charities there is a very large number dedicated to the purpose of apprenticing the children of the poor. According to the printed Digest of the Reports of the late Commissioners, which has been examined on purpose, it appears that the annual sums exclusively applicable to apprenticeship amount to £31,670; besides which, the sum of £69,200 a year is applicable partly to apprenticeship, and partly to other purposes. These estimates, it must be observed, rest upon information collected more than twenty and in some cases more than forty years ago. During that period the endowments have greatly increased in value. I agree, therefore, in thinking that at the present time the sum of money devoted to apprenticeship cannot be less than £50,000 a year.

The amount of the fee varies greatly, ranging from £5 to £25 for each child. Some of the Charities are administered by existing corporate bodies; some by the municipal Trustees of corporate towns, who have succeeded the old corporations; some by the Minister and Churchwardens and other parochial authorities. A large number of Trustees are appointed from time to time, and have not of necessity any public capacity.

Most of these endowments are of an ancient date, but the circumstances in which an apprentice is now placed are very different from what they were at the date of the foundation. In former times the apprentice was taken into the master's house, and became a member of his family. This system is still practically pursued in the case of boys taken from the Workhouse, and I have myself seen such apprentices at work with their masters; but, generally, this custom has ceased, and the boy lives with his parents or friends. So far, therefore, as the constant superintendence of the master is concerned, the change in the state of society has, in great measure, put an end to the utility of this sort of endowment.

It is difficult to lay down any general proposition with respect to the mode in which this sort of Charity is administered. According to Mr. Hare's account: "In the best example of such administra-
" tion the apprenticeship fees are applied in the apprenticeship of the children of old servants or
" labourers of the Trustees or their friends, of small tradesmen who are in some way connected with
" the municipal or corporate bodies, or the children of persons in more or less straitened circumstances
" who happen to be known to the Trustees."

According to the evidence, however, of all the Charity Inspectors whose opinion I have had an opportunity of ascertaining, in many cases the apprenticeship fee is believed to be, by an underhand arrangement, divided between the parent and the master to whom the boy is apprenticed. In the rural parishes the range of trades is very limited. A very large proportion of the boys are apprenticed to the trades of tailors and shoemakers; but, unfortunately, the masters are very poor, and not unfrequently bad workmen. The small sum of £5 or £10 is to them a great object. The consequence is that they very frequently neglect their pupils, employ them as mere errand boys, or, being inferior workmen, are unable to instruct them properly. It is no uncommon thing for the master to abandon the trade, the master and apprentice separate, or the boy runs away, and no attempt is made to bring him back, so that the apprenticeship fee is practically lost. In the towns, on the other hand, the fee is useless. Respectable well-to-do masters do not care about the £5 or £10. If a boy is well-connected and well-educated, such masters gladly take boys and have them instructed. In the more important trades this is the universal practice, and at Bath I was informed by a leading tradesman that he was in the habit of presenting the boy with his apprenticeship fee to purchase tools, or as a reward for good conduct. But apprenticeship fees are not only useless; there is reason to fear that they are positively detrimental to the prospects of boys. In confirmation of this, it is to be observed that in those Poor Law Unions which are best administered the guardians pay nothing by way of premium to masters who take the boys from the Workhouse, whilst in those Unions where the management is defective, and the boys are badly educated, the guardians are obliged to bribe masters to take them out of the house. In reading the Reports of the Charity Inspectors I have constantly met with cases in which the fund for apprenticeship fees had accumulated because no application had been made for years. Thus, in St. Dunstan's-in-the-West, only three applications for apprenticeship fees had been made in six years. And at St. Antholin's in the City of London there is an apprenticeship fund called "Coventry's Charity." For many years, however, there has been no apprentice, and the fund has accumulated in the hands of the Merchant Taylors' Company, so that a scheme is now wanted for its application. In Ravenstone, Bucks, there is Chapman's Charity, for clothing and apprenticing, consisting of £5,546 5*s.* 10½*d.* It seems that there is no demand for apprenticeship fees. In Ravenstone, between 1849 and 1856, there were only eleven applications, and in Little Woolston, during the same period, only one application.

It is a very common opinion that the money devoted to apprenticeship should be applied to education, and if it be true that the educated boy will be gladly taken by any respectable master without fee, there seems good ground for the opinion. The object of these fees originally was, to enable a boy to learn a trade, and now it seems that the best mode of attaining this object is by having a boy well instructed. Without education it is practically impossible for a boy to profit by the instruction. Accordingly, in Little Woolston, where there is nothing but a second-rate school, the Inspector reports that the boys, even when they are apprenticed, are "in many cases anything but fit to enter upon service." The desire, therefore, on the part of some of the principal persons in the parish for the establishment of a good school seems extremely natural. In this case, as in others mentioned by Mr. Martin, the Trustees would willingly convert the apprenticeship endowment into one for education.

APPENDIX G.

LIST OF SCHOOLS IN WHICH CHILDREN ARE BOARDED.

31*st December*, 1868.

Rate per Head per Annum.	SCHOOLS.	Boys.	Girls.	Total.
£				
21	Edinburgh Orphan Asylum	3	1	4
19	Soldiers' Daughters' Home, Hampstead	..	7	7
19	Asylum at Alresford	..	45	45
18	Royal British Female Orphan Asylum, Devonport	..	17	17
17	Sailors' Orphan Girls' Home, Hampstead	..	5	5
17	Seamen and Marines' Orphan Home at Portsmouth	..	14	14
17	Bethesda Orphan Asylum, Dublin	..	13	13
17	St. Vincent de Paul Orphanage, Dublin	23	..	23
16	St. Mary's Orphanage, North Hyde, Hounslow	20	..	20
15	Convent Orphanage, at Norwood	..	21	21

APPENDIX H.

REPORTS OF INSPECTORS OF SCHOOLS.

REV. A. R. GRANT.

BOYS' TEMPORARY HOME (WANDSWORTH).

Visited November 24th and 25th, 1868.

I am again able to report with unqualified satisfaction on the state of this Institution. The health of the boys is good. Mr. Knowles is a very efficient Assistant Master, and Mr. Jones works zealously. The Pupil-teachers are efficient. The School does not make the same show in examination as in the spring, since 60 boys have left, and 70 new ones have been admitted; consequently, the Upper Classes are almost entirely changed. However, the skill and diligence of the Teachers will doubtless bring up the School to the former standard.

ROYAL VICTORIA PATRIOTIC ASYLUM.

November 26th and 27th.

I am sorry to find that there has been a good deal of illness since my last visit.

The general state of the Institution is satisfactory, and the discipline good. It would be very desirable, I think, to ascertain by actual inquiry among the employers of the girls, how well qualified they are for service on leaving, especially by comparison with other girls of the same age. Thus the actual work of the Institution might be tested.

Senior School.—This School is in very good order, and well worked. I have not given an individual examination at this visit, but I am satisfied with the teaching and the attainments. I am glad to find that a great deal of Needlework has been done, and that this important branch is in a really satisfactory state. This is due in great part to Miss Evenden.

Junior School.—Miss Searle conducts this School very satisfactorily, and I think it is making as good progress as could be expected, considering the large number of new children that have been admitted. The Pupil-teachers are fairly efficient.

ROYAL CALEDONIAN ASYLUM.

December 8th, 1868.

Only one boy—Thomas Cook, and one girl—Isabella Mackay, remain here to be visited. Cook is thoroughly well taught, as all the boys are here. Mr. Robertson deserves great credit for his work in the School. Isabella Mackay has been out of School some time, at work in the house, and has lost ground in her School work. Her attainments are very moderate.

BOYS' SCHOOL (BARNET).

December 10th.

The number of boys is very much diminished, and those who are here are to be transferred to Wandsworth immediately. I consider that Mr. Wood has conducted the Institution, ever since his appointment, with the most conscientious diligence and untiring zeal. Mr. Rigby is a sound, and thoroughly trustworthy Master. He will hand over the boys to Mr. Hullah in a creditable state, both as to discipline and attainment.

SOLDIERS' DAUGHTERS' HOME (HAMPSTEAD).

December 11th.

The School had been regularly examined throughout on the day before my visit, and had received a favourable report, which I can quite endorse from my examination of the eight girls who still remain under the Patriotic Fund. Two of them, indeed, are very backward, but this is not the fault of the School.

SAILORS' ORPHAN GIRLS' SCHOOL (HAMPSTEAD).

December 11th.

Only three girls remain here to be visited. They are very fairly taught, and under a good influence.

A. R. GRANT.

December 16th, 1868.

MR. MORELL'S REPORT.

REPORT on the Roman Catholic Orphanages connected with the Patriotic Fund at Norwood and North Hyde.

NORWOOD ORPHANAGE.

I visited this Orphanage April 15th, 1868, and found the Institution and Children in a very satisfactory state.

Building.

1. The School-room was the same as on former occasions, and is very good and appropriate, being provided with all the fixtures required, and of the best description.
2. The Dormitories are spacious and well ventilated, and, as on my former visits, kept as clean and comfortable as it is possible to desire.
3. The Refectory and Kitchen are proper and sufficient.
4. A new Wash-house has been built, and is a great advantage, as affording the girls the means to become practically acquainted with this very useful and necessary branch of industry. The system seems good, and is worked by a small steam-engine, very useful in wringing, rolling, and other processes.

Playground.

The younger children have an excellent covered Playground, in case of bad weather.

Discipline.

This appears good and successful, without much administration of penalties.

Teaching.

Many of the elder girls have left since my last visit; accordingly some points were not quite so advanced, but the teaching is quite as good as before.

1. *Needlework.*—This has always been good and appropriate. Plain sewing is made the essential point.
2. The *Reading* of the Upper Class was not so good, because the children were younger; indeed, several new comers appeared under the head of Special Cases.
3. The Writing was appropriate and good, as before.

4. *Arithmetic* is more forward than some years ago, and the Teacher deserves high credit for the pains she takes with this branch. Mental Arithmetic, in particular, is very successfully cultivated.

RESULTS.

These are very satisfactory and creditable. The girls are generally good, tidy, and healthy, and give satisfaction in the places they occupy after leaving. They also show a grateful remembrance of their teachers.

NORTH HYDE ORPHANAGE.

This has always been a pleasing Institution, and has, if possible, improved.

Building.—This has been enlarged, and certain advantageous alterations have been made in the Workshops, etc. The boys have also a good room for practising music, and the addition of a band has been very acceptable. The boys have made some progress already, and will soon be fair musicians.

Discipline.—This has always been good and yet cheerful.

School.—The instruction is as good as usual. Several of the elder boys have left, and the Reading of the First Class has consequently suffered, but the Dictation and Arithmetic keep up to the mark.

The numbers are much the same as on former occasions; and I am glad to perceive that the attendance in the Workshops has increased since my first visit.

I retain a pleasing impression from all that I saw at this Institution.

J. R. MORELL.

MR. VICARS' REPORTS—DECEMBER, 1868.

BETHESDA FEMALE ORPHAN ASYLUM, DUBLIN.

Number of Children, 13.—*December,* 1868.

General arrangements . I have no special changes to report. One of the girls has been to Lincoln to compete for admission into the Training Institution there, and has a good prospect of success.

Health . . . . . The children generally have enjoyed excellent health. Their annual visit to the country is no doubt of great benefit to them.

The majority of these children are intelligent, and all have made creditable progress.

ST. CLARE'S ORPHANAGE, HAROLD'S CROSS, DUBLIN.

Number of Children, 15.—*December,* 1868.

General arrangements . The only changes I have to report are an additional Window to one of the large Dormitories, which has improved the light and ventilation, and an enlargement of the Playground.

Health . . . . . Two girls, A. Game and N. Collins, are absent from ill-health in the country, and another has recently returned to the Orphanage convalescent. Three new girls have been admitted.

These children are making a little progress, but they are not as a body intelligent or quick.

ST. VINCENT DE PAUL MALE ORPHANAGE, GLASNEVIN, DUBLIN.

Number of Children, 16.—*December,* 1868.

General arrangements . They continue the same since my last inspection.

Health . . . . . All the boys appear to be in good health, and cheerful and happy.

These boys are all making good progress, and some of them are unusually quick and intelligent. The Band is very creditable.

EDWARD A. VICARS.

December, 1868.

APPENDIX I.

NOTES on the RECENT IMPROVEMENTS which have been carried out, the PRESENT MODE OF FARMING, and the MOST PROFITABLE SYSTEM TO MANAGE IN FUTURE, the LAND attached to the ROYAL VICTORIA PATRIOTIC ASYLUM.

The land in many respects has been greatly improved since I inspected it in March, 1866. The grass area especially has been much improved in value; this has been accomplished partly by grubbing the young gorse, partly by sowing grass seeds and clovers, and thereafter harrowing and rolling in the same, on portions of the land too thinly planted with the natural grasses, but chiefly by giving it a surface dressing with soil. No 10 on plan especially has been greatly increased in value, by having been levelled and having got a heavy surface dressing of soil. This portion is naturally extremely poor, but from the system under which it has recently been managed, it is now in good artificial condition. It has recently been sown down as permanent pasture, and has this year yielded an excellent crop of hay. No. 6 on plan, too, has also been recently converted into permanent pasture: here also the seeds have taken remarkably well, and as this portion of the farm is naturally good land, it will doubtless continue to yield luxuriant grasses. This portion of the grass land is bounded by arable land on either side, and, so far as appearance goes, would have been better under tillage; however, it is more profitable under grass, as the cows have now an uninterrupted range from the homestead to the pastures. The arable area generally has also been considerably improved. It is in high manurial condition, has now most promising crops, and altogether is under good management. It has been reduced to about nine acres, four of which are under potatoes, three under mangold, and the remainder under cabbages and garden produce.

Of the stock upon the farm, there are four brood sows, one boar, and twenty-seven pigs, eight milch cows, and three heifers, and one pony.

As the produce most required is milk and butter, so the primary object in farming the land is to keep a sufficient number of cows to meet the milk requirements of the Asylum, and to raise upon the farm natural food sufficient to maintain *them*. I have been informed by the Bailiff that the milk produce is sufficient, and judging from the appearance of the cows *this* ought to be true, as the area of grass land by the recent conversion of Nos. 10 and 6 on plan has been increased five acres; the food-producing area for the cows is now large, and indeed exceeds that absolutely required. The pastures have doubtless a twofold want to meet, viz., summer food and hay for part of winter food.

At present there is evidently an excess of pasture and too little hay. To meet the former I would therefore recommend that the full number of eight milch cows shall be kept, that no young cattle shall be reared on the farm, and that fifteen sheep shall be regularly bought and fattened for the use of the Asylum.

Young cattle are not profitable to rear, when milk is the chief produce required; while sheep would not only improve the pastures, but otherwise prove profitable. With respect to hay, I regret that what I recommended in my former Report, namely, to cut hay to be consumed by the cows in the houses in the early part of summer, has not been carried out. If that recommendation had been adopted, and intermediate crops, viz., rye, winter barley, or Italian rye-grass had been sown for a similar use, a sufficient quantity of hay would have been produced, and likewise a great saving effected in extraneous foods. As it is, I strongly recommend the cutting of a larger area of hay; a surplus quantity in one season is no loss, as it meets the deficiencies of another, whereas, in the absence of any old supply in an adverse season, enormous prices must be given for food, and thus what under well-regulated management would prove a gain is converted into a loss. As with hay, so with roots, a sufficient quantity ought to be raised for winter food. The area at present under mangold I consider too small, while that under potatoes is too large; the latter being a most precarious crop, ought to be restricted to that absolutely required for home consumption—indeed, it would be advisable to have no excess of produce, whether pigs, poultry, or any description of garden produce.

Judging from the crops, a considerable quantity of rhubarb, cauliflower, lettuce, &c., must now be sold. (What check is there on these sales?)

The application of the liquid manure is not judiciously carried out (see my former Report).

The lessening of the tillage area warrants a reduced outlay for labour; the Bailiff, three men, and a boy, are all the labourers required.

Considering that all the farm produce is, or ought to be, consumed on the premises, and is, or ought to be, charged to the Asylum at wholesale prices, the land ought to be a most profitable adjunct to the Asylum, and after putting a fair rental value upon it, ought to leave to the Royal Patriotic Society a considerable margin.

JAMES SANDERSON.

11 *Pall Mall East*, 26 *June*, 1869.

APPENDIX J.

RODRIGUEZ FUND.

EXTRACTS FROM WILL DATED 30TH MARCH, 1857.

To be applied "to the succour of the families of English subjects wounded or dying in the Wars; and if any individual who shall be considered entitled to this succour shall have no family, then it shall be paid to his nearest relation."

"My Executors will take care that no one shall profit by this succour but such as are really indigent and necessitous."

The Committee consider that the condition "really indigent and necessitous" excludes—

a. Persons in the receipt of Pensions from Government;

b. Allowances from the Patriotic, or any other Fund; or

c. Of any income from other sources.

And wounded men themselves are evidently not contemplated. Therefore the Widows and Orphans of men wounded (? dying from wounds) or dying in the Wars, are the primary objects. Parents or other dependent relatives have a secondary claim.

Gratuities are given from Lloyd's Patriotic Fund to wounded men, and to the Widows and Orphans, or Fathers, Mothers, or other dependent relatives of men killed in other actions than those of the Russian War, or in India. The Indian Mutiny Fund provided for the Families of men who lost their lives during the Mutiny. And the Government give a gratuity of a year's pay to the families of men killed in action.

The cases which would not come under the regulations of Lloyd's Patriotic Fund, the Indian Mutiny Fund, or the Government scale of gratuities, would be the most desirable to be first relieved from the Rodriguez Fund, viz.:—

1. Widows and Orphans of men dying (not killed) during Wars, priority being given to families according to the number of children.

2. After them other dependent relatives of such men.

The small amount to be periodically distributed precludes any retrospective action: indeed there is nothing in the Will to indicate that the testator contemplated past Wars; and, with a view of diffusing the benefits of the Fund as widely as possible, the Committee propose that no family shall have a second gratuity whilst there are any new claimants who are entitled and have not been assisted. Nor shall any second gratuity be given under any circumstances to a family in the same year.

The families of men who died whilst engaged in the War in China, or in New Zealand, will be eligible, as also those hereafter bereaved by any War in India, or other part of the world, for whom no special assistance has been provided.

The Committee therefore propose in February and August of each year to make the following advertisement:

RODRIGUEZ FUND.

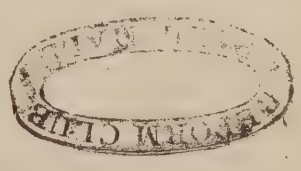
The Commissioners of the Patriotic Fund give notice that the interest of a sum of money, bequeathed by Don Francisco Rodriguez, a native of Manilla, is available for the relief of Widows, Orphans, and other near relations of Soldiers, Sailors, or Marines of Her Majesty's service who have fallen in actual warfare since the conclusion of the War with Russia, excluding the Indian Mutiny, a special fund having been raised in connection with that event. The conditions of relief are extreme destitution, and satisfactory proof that the applicant depended wholly or in part for support on the deceased.

The sum in question being very small, none but those whose claims are exceptionally strong can participate.

Every application must set forth full particulars, and be authenticated by the signatures of at least three persons, one of them a Clergyman or minister of religion.

Apply to the Secretary of the Patriotic Fund, 19, New Street, Spring Gardens, London. S.W.

No application will be attended to unless sent in on or before the



FIRST COMMISSION.

7th October, 1854.

PATRIOTIC FUND.

ROYAL COMMISSION.

VICTORIA R.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith. To Our most dearly-beloved Consort, His Royal Highness Francis Albert Augustus Charles Emmanuel, Duke of Saxony, Prince of Saxe Coburg and Gotha, Knight of Our Most Noble Order of the Garter, and Field-Marshal of our Forces. To Our right trusty and right entirely-beloved Cousin and Councillor, Henry Pelham, Duke of Newcastle, one of Our Principal Secretaries of State; Our right trusty and right entirely-beloved Cousin and Councillor, Arthur, Duke of Wellington, Major-General of Our Forces; Our right trusty and well-beloved Councillor, Edward Adolphus Somerset, commonly called Lord Seymour; Our right trusty and right well-beloved Cousin and Councillor, Edward Geoffrey, Earl of Derby; Our right trusty and right well-beloved Cousin and Councillor, George Hamilton, Earl of Aberdeen, Knight of the Most Ancient and Most Noble Order of the Thistle; Our right trusty and right well-beloved Cousin, Anthony, Earl of Shaftesbury; Our right trusty and right well-beloved Cousin and Councillor, Charles Philip, Earl of Hardwicke, Rear-Admiral on the Reserved Half-Pay of Our Navy; Our right trusty and right well-beloved Cousin, Henry Thomas, Earl of Chichester; Our right trusty and right well-beloved Cousin, Horatio, Earl Nelson; Our right trusty and right well-beloved Cousin and Councillor, Henry, Earl Grey; Our right trusty and well-beloved Cousin and Councillor, Henry John, Viscount Palmerston, Knight Grand Cross of the Most Honourable Order of the Bath, and one of Our Principal Secretaries of State; Our right trusty and well-beloved Cousin and Councillor, Stapylton, Viscount Combermere, Knight Grand Cross of the Most Honourable Order of the Bath, and General of Our Forces; Our right trusty and well-beloved Cousin and Councillor, Henry, Viscount Hardinge, Knight Grand Cross of the Most Honourable Order of the Bath, and General Commanding-in-chief of Our Army; Our right trusty and well-beloved Henry Robinson, Baron Rokeby, Major General of Our Forces; Our right trusty and well-beloved Councillor, Charles, Baron Colchester, Rear-Admiral on the Reserved Half-Pay of Our Navy; Our right trusty and well-beloved Councillor, Fox, Baron Panmure, Knight of the Most Ancient and Most Noble Order of the Thistle; Our right trusty and well-beloved John, Baron Seaton, Knight Grand Cross of the Most Honourable Order of the Bath, and General of Our Forces; Our right trusty and well-beloved Councillor, Edward Burtenshaw, Baron Saint Leonards; Our right trusty and well-beloved Councillor, Fitz Roy James Henry, Baron Raglan, Knight Grand Cross of the Most Honourable Order of the Bath, General in Our Army, Master-General of Our Ordnance, and Commander of Our Forces employed on a particular service; Our right trusty and well-beloved Councillor, Sidney Herbert, Our Secretary-at-War; Our trusty and well-beloved James Lindsay, commonly called the Honourable James Lindsay, Colonel of Our Forces; Our right trusty and well-beloved Councillor, Sir James Robert George Graham, Baronet, Knight Grand Cross of the Most Honourable Order of the Bath, and one of the Commissioners for executing the office of Lord High Admiral; Our right trusty and well-beloved Councillor, Henry Thomas Lowry Corry; Our right trusty and well beloved Councillor, Edward Ellice; Our right trusty and well-beloved Councillor, Robert Vernon Smith; Our right

trusty and well-beloved Councillor, Sir John Somerset Pakington, Baronet; Our trusty and well-beloved Sir Robert Throckmorton, Baronet; Our trusty and well-beloved Sir William Parker, Baronet, Knight Grand Cross of the Most Honourable Order of the Bath, and Admiral of the White Squadron of Our Fleet; Our trusty and well-beloved Sir John Fox Burgoyne, Knight Grand Cross of the Most Honourable Order of the Bath, Lieutenant-General of Our Army, and Inspector-General of Fortifications; Our trusty and well-beloved Sir Hew Dalrymple Ross, Knight Commander of the Most Honourable Order of the Bath, and Lieutenant-General of Our Forces, and Lieutenant-General of Our Ordnance; Our right trusty and well-beloved Councillor the Lord Mayor of Our City of London for the time being; Our trusty and well-beloved Thomas Baring, Esquire; Our trusty and well-beloved John Gellibrand Hubbard, Esquire; Our trusty and well-beloved John Wilson Patten, Esquire; Our trusty and well-beloved Samuel Morton Peto, Esquire; Our trusty and well-beloved Edmund Burke Roche, Esquire; and Our trusty and well-beloved John Ball, Esquire. Greeting:

WHEREAS, amidst the glorious successes which, through the power of Almighty God, have attended Our arms during the present war, many soldiers, sailors, and marines, serving in Our armies and fleets, have gallantly fallen in battle, or by other casualties during the war; and many who shall hereafter be engaged in conflict, or in the further prosecution of hostilities, may also nobly sacrifice their lives in Our service, while protecting the invaded liberties of Our Ally, and repressing the lawless ambition of Our enemies:

AND WHEREAS it hath been represented to Us, that many of Our loving subjects throughout Our Kingdom and Dominions, actuated by a just sense of the sacred rights of those who fall in their country's service and in support of Our just cause of war, are anxiously desirous of testifying their loyalty and love to Us, and to Our Throne, by a just and generous benevolence towards the widows and orphans of those of Our soldiers, sailors, and marines who have been so killed, or who may hereafter die amidst the ravages and casualties of war, and also by their gifts and subscriptions to contribute a portion of those means with which Our nation has been blessed towards the succouring, educating, and relieving those, who, by the loss of their husbands and parents in battle, or by death on active service in the present war, are unable to maintain or to support themselves:

AND WHEREAS it is expedient that public measures should be taken, and that preparation should be made for the safe keeping and beneficial application of the several sums of money which may henceforth, and from time to time hereafter, during the continuance of this Our Royal Commission, be given, subscribed, or collected, for all or any of the several purposes aforesaid: And also for the purpose of securing such prompt and authentic information as may be required, to aid the just and faithful distribution of the said several sums of money, when so received: And it hath also appeared to Us, that by issuing this Our Royal Commission, greater efficacy, power, and support may be given to the benevolent desires of Our loving subjects: And also that the respective claims, merits, and necessities of individual claimants will be duly inquired into: And that by permitting assistance to be rendered by the officers of Our civil, military, and naval services we may prevent the wrong application, by misrepresentation or otherwise, of those contributions which Our loving subjects may hereafter, during the continuance of this Our Royal Commission, for the several purposes aforesaid, generously and benevolently supply:

Recites that it is expedient to take measures for safe custody and application of funds.

NOW KNOW YE, that We, having taken into Our consideration the premises, and being earnestly desirous, in lasting memory of those who have faithfully fallen in Our service, to encourage the loyal and hearty benevolence of Our loving subjects, which may hereafter be directed towards the widows and orphans of the soldiers, sailors, and marines of Our forces who may now or hereafter be serving abroad in Our armies and fleets, or in services connected with Our present hostilities, and for other the several purposes hereinbefore recited or mentioned, and reposing great trust and confidence in your fidelity, discretion and integrity, HAVE authorized and appointed, and DO by these presents authorize and appoint you, the said Prince Albert, the said Duke of Newcastle, the said Duke of Wellington, the said Lord Seymour, the said Earl of Derby, the said Earl of Aberdeen, the said Earl of Shaftesbury, the said Earl of Hardwicke, the said Earl of Chichester, the said Earl Nelson, the said Earl Grey, the said Viscount Palmerston, the said Viscount Combermere, the said Viscount Hardinge, the said Baron Rokeby, the said Baron Colchester, the said Baron Panmure, the said Baron Seaton, the said Baron St. Leonards, the said Baron Raglan, the said Sidney Herbert, the said James Lindsay, the said Sir James Robert

Constituting Commission and naming Commissioners.

Names of Commissioners.

George Graham, the said Henry Thomas Lowry Corry, the said Edward Ellice, the said Robert Vernon Smith, the said Sir John Somerset Pakington, the said Sir Robert Throckmorton, the said Sir William Parker, the said Sir Thomas Byam Martin, the said Sir John Fox Burgoyne, the said Sir Hew Dalrymple Ross, the said Lord Mayor of Our City of London, the said Joseph Hume, the said Thomas Baring, the said John Gellibrand Hubbard, the said John Wilson Patten, the said Samuel Morton Peto, the said Edmund Burke Roche, the said John Ball, to make full and diligent inquiry into the best mode of aiding the loyalty and benevolence of Our loving subjects, and of ascertaining the best means by which the gifts, subscriptions, and contributions of Our loving subjects can be best applied, according to the generous intentions of the donors thereof, and from time to time to apply the same as you, Our Commissioners, or any three or more of you, shall think fit to direct, either for the immediate relief of such special objects of destitution as may come within the meaning and purpose of such benevolence; or, for any of the purposes aforesaid, to increase, extend, or make additions to any of Our Royal or other charitable institutions already founded for similar purposes within Our United Kingdom. And further, to apply, or to order and direct the application of, all such moneys in such manner as to you Our Commissioners, or to any three or more of you, shall seem fit in the premises; so that you do in all things secure the most impartial and beneficent distribution of all such sums as may hereafter and from time to time be received under or by virtue of this our Royal Commission.

Power to Commissioners to call persons before them.

AND KNOW YE that We do by these presents further give and grant to you, and to any three or more of you, full power and authority to call before you, or any three or more of you, all such persons in connection with Our civil, military, and naval service, as you shall judge necessary, by whom you may be the better informed of all matters and things most desirable to be done and performed, and to inquire into the premises and every part thereof by all other lawful ways and means whatsoever.

Appointment of Secretaries.

And Our further will and pleasure is, That for the purpose of aiding you in the execution of these premises, We do hereby appoint Our trusty and well-beloved Edmund Gardiner Fishbourne, Esquire, Captain in Our Navy, and Our trusty and well-beloved John Henry Lefroy, Esquire, Captain in Our Royal Regiment of Artillery, to be joint Honorary Secretaries to this Our Royal Commission.

And We do command you Our said Commissioners, upon the occurrence of any vacancy in the office of either or both of them the said Secretaries to this Our Royal Commission, that you do from time to time, and as often as the same may occur, proceed according to your discretion to fill up the same by virtue of this our Royal Commission.

Constituting Commissioners in Aid to organise Local Committees.

And for the further, better, and more perfectly enabling all Our loving subjects, according to their desire and ability, and from time to time and at all times during the existence of this Our Royal Commission, according to their several means and wishes, to contribute to the benevolent and praiseworthy objects aforesaid, and that *Local Committees* may the more readily and speedily be formed throughout Our Kingdom and Dominions, of all Our magistrates, justices of the peace, the clergy, and other of Our loving subjects within all cities, parishes, boroughs, and places in Our Kingdom and Dominions, and in Our Colonies, possessions, and territories abroad, It is Our Royal will and pleasure, and WE do for such purpose constitute and appoint the Lords Lieutenant, Sheriffs, and Custodes Rotulorum for the time being of the several counties within Our Kingdom; the Aldermen and Recorder for the time being of Our City of London; the Lord Provost of Edinburgh for the time being; the Lord Mayor of Dublin for the time being; the Lord Mayor of York for the time being; and all other the Mayors, Provosts, Bailiffs, and Bailies for the time being of Our cities, boroughs, and corporate towns; and also all Our Governors-General, Governors, Lieutenant-Governors, and officers administering the Governments for the time being of Our territories and Colonial possessions, to be within their several counties, cities, boroughs, governments, and jurisdictions respectively, COMMISSIONERS IN AID of the several duties and services to be performed by you, and for the purposes hereinbefore mentioned, to encourage, aid, and assist the establishment of all such *Local Committees* as may be useful or necessary in every town, parish, or place within the jurisdictions aforesaid, for the several purposes of collecting from time to time all or any gifts, subscriptions, and voluntary contributions as aforesaid, and transmitting the same when so collected to Our Paymaster-General, as is hereinafter mentioned: Provided always, that each and every such Local Committee shall keep a correct account of the moneys collected by them respectively; and each of the said Local Committees shall only be answerable and accountable for the due and speedy transmission to Our said

Paymaster-General of all such sum and sums of money as may from time to time be voluntarily subscribed or collected through its own special means and agency.

And We do authorize and empower the said COMMISSIONERS IN AID, under the rules and regulations of you Our said Commissioners, or of any three or more of you, in all other matters to perform and do such acts as may best promote the objects of this Our Royal Commission, during the continuance thereof, and to encourage and aid a due and faithful fulfilment of the benevolent desires of Our loving subjects in this behalf, within the several counties, governments, and jurisdictions aforesaid.

Appointing Paymaster-General to act as Treasurer.

And for the safe custody of all moneys which may hereafter be received for the purposes herein set forth, and of all sums of money already subscribed or given for any such purpose as aforesaid, which may be duly handed over for the purpose of being applied under this Our Royal Commission, Our Royal will and pleasure further is, and We do hereby direct and command Our right trusty and well-beloved Councillor, Edward John, Baron Stanley of Alderley, Our Paymaster-General, or Our Paymaster-General for the time being, to receive and safely keep all and every sum and sums of money which by virtue of this Our Royal Commission may at any time or times, and from time to time hereafter during the continuance of this Our Royal Commission, be received and paid, but subject nevertheless to the orders and directions of you Our said Commissioners, or of any three or more of you, and also to such drafts of the Executive and Finance Committee as are hereinafter mentioned, and which may be in accordance with the rules and regulations of you Our said Commissioners.

Paymaster-General to open account at Bank of England a Patriotic Fund.

And to this end We do command Our said Paymaster-General to open and keep a separate account at the Bank of England, and that he do pay to the credit of such account, which shall be called and known by the name of "THE PATRIOTIC FUND," all and every sum and sums of money which he may at any time hereafter receive, under or by virtue of this Our Royal Commission; and that Our said Paymaster-General do cause payments to be made therefrom by virtue of such drafts or orders as may be addressed to him by or on behalf of you Our said Commissioners, and, subject to your direction and authority, by your said Secretaries or either of them, or by the said Executive and Finance Committee, or by any two or more of such Committee for the time being.

Appointment of Executive and Finance Committe

And in order to facilitate the imprest to Our said Paymaster-General of any and all subscriptions, donations, and collections of moneys now or hereafter to be made, or which from time to time during the continuance of this Our Royal Commission may be received, for any of the several purposes aforesaid, and also for the purpose of carrying into effect what you Our said Commissioners, or any three or more of you, shall hereafter direct to be done in respect to the said subscriptions, donations, and collections so expected to be made as aforesaid, We hereby authorize you Our said Commissioners, or any three or more of you, to nominate and appoint any three or more persons whomsoever, as to you shall seem meet, to be an Executive Committee in the premises; and Our pleasure is that such Executive Committee shall also be a Finance Committee, with power to select their own Chairman, and having the direction and control, under such orders and regulations as may hereafter from time to time be made by you, or by any three or more of you, over the receipts and expenditure of the said several sums of money which from time to time during the continuance of this Our Royal Commission may be collected, as aforesaid; and, subject to such your orders and regulations, the said Executive and Finance Committee, or any two or more of them, shall and may order and direct the payment and disbursement of any sum or sums so to be received by Our said Paymaster-General to the account of the said "Patriotic Fund."

Royal Commissione to fill up Vacancies in Executive and Finance Committe

And it is Our further will and pleasure that you, or any three or more of you, do from time to time, according to your discretion, fill up any such vacancies as may occur in such Executive and Finance Committee, as occasion shall require, and that the said Executive and Finance Committee, or any three or more of them, do from time to time appoint their own clerk, who shall also duly record their proceedings, and which said proceedings shall be duly preserved and kept, and the said Executive and Finance Committee, or any three of them, inclusive of their Chairman for the time being if he shall be then present, shall from time to time, and at all times, report to you as and when you may desire, all matters and things that they shall or may have done in the premises, and shall render accounts of all disbursements and payments which may be made, or ordered to be made, by them in manner aforesaid under the orders and regulations so to be received from you, or any three or more of you, as aforesaid. And further that you do, as soon as conveniently may be after the

Commissioner to Audit Accounts of Executive and Finance Committee. Not to Overdraw or Anticipate Balances.

receipt of such accounts, proceed to audit, by one or more of your number, all such accounts, disbursements, and payments, so that there be no expenditure of any sum or sums of money by anticipation or in advance of any balance already in hand of Our said Paymaster-General to the account of the said "Patriotic Fund."

Commissioners to Report to Queen from time to time.

And Our further will and pleasure is, that you or any three or more of you, when and so often as need or occasion shall require, so long as this Our Commission shall continue in force, do report to Us in writing, under your hands and seals respectively, all and every of the several proceedings of yourselves had by virtue of these presents, together with such other matters, if any, as may be deserving of Our Royal consideration touching or concerning the premises.

Commissioners to meet notwithstanding no adjournment.

And lastly, We do by these presents ordain that this Our Commission shall continue in full force and virtue, and that you Our said Commissioners, or any three or more of you, shall and may from time to time, and at any place or places, proceed in the execution thereof, and of every other matter and thing therein contained, although the same be not continued from time to time by adjournment.

Given at Our Court at Balmoral, this seventh day of October, in the year of Our Lord One thousand eight hundred and fifty-four, and in the eighteenth year of Our Reign.

By Her Majesty's command.

(Signed) NEWCASTLE.

ANNO TRICESIMO & TRICESIMO PRIMO.

VICTORIÆ REGINÆ.

CAP. XCVIII.

An Act to make better Provision for the Administration of the Patriotic Fund.

[12th *August* 1867.]

WHEREAS the Fund called the Patriotic Fund is administered under a Commission issued by Her Majesty the Queen under Her Royal Sign Manual, dated the Seventh Day of *October* One thousand eight hundred and fifty-four (in this Act referred to as the original Commission):

And whereas the Executive Committee of the Commissioners thereby appointed have appropriated Part of the Fund for the Erection and Endowment of a Girls' School known as the Royal *Victoria* Patriotic Asylum, and have appropriated other Part of the Fund for the Endowment of a Boys' School, and have appropriated other Parts of the Fund for the purposes described in the Schedule to this Act, and the Appropriations aforesaid have been adopted by the Commissioners, and have been from Time to Time approved by Her Majesty, or been specified in the Reports of the Commissioners made to Her Majesty, and laid before the Houses of Parliament; and it is expedient that the Appropriations aforesaid be now confirmed by Parliament:

And whereas it is estimated that the Fund will be more than sufficient for the Objects designated in the original Commission, and it is expedient that Her Majesty, Her Heirs and Successors, be empowered to give from Time to Time further Directions respecting the Application of the Fund, subject to the Appropriations aforesaid, and respecting the Constitution and Powers of the Body of Commissioners, and the Conduct of the Business

relating to the Fund, and that Provision be made respecting the vesting and Transmission of Property held in Trust for the Purposes of the Fund:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the Advice and Consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the Authority of the same, as follows:

1. This Act may be cited as the Patriotic Fund Act, 1867. Short Title.

2. The Patriotic Fund Act, 1866, is hereby repealed. 29 & 30 Vict. c. 120. repealed.

3. In this Act the Term "the First Lord of the Admiralty" means such one of the Commissioners for executing the Office of Lord High Admiral of the United Kingdom as is for the time being first named in their Commission; and the Provisions of this Act relative to the First Lord of the Admiralty extend and apply to the Lord High Admiral of the United Kingdom for the time being in case at any time Her Majesty, Her Heirs or Successors, is or are pleased to constitute a Lord High Admiral. Interpretation of Terms.

In this Act the Term "the Secretary of State for War" means such one of Her Majesty's Principal Secretaries of State as for the time being Her Majesty is pleased to intrust with the Seals of the War Department.

In this Act the Term "the Paymaster-General" means Her Majesty's Paymaster-General for the time being.

4. Such of the Acts of the Commissioners from time to time acting under the Original Commission as relate to the Application and Appropriation of the Patriotic Fund, and as have from time to time been approved by Her Majesty, or been specified in their Reports made to Her Majesty and laid before the Houses of Parliament, shall be and be deemed to have been valid and binding, and are hereby respectively confirmed. Confirmation of existing Appropriations and other Acts of Commissioners.

5. It shall be lawful for Her Majesty, Her Heirs and Successors, from time to time, by Supplementary Commission under the Royal Sign Manual, directed to such Persons as to Her Majesty, Her Heirs or Successors, seem fit, to authorize and direct the Commissioners thereby constituted to apply the Patriotic Fund and the Income and Accumulations thereof, or any Part or Parts thereof, subject to the Appropriations aforesaid (in such Manner as any such Commission from time to time directs, or, in the Absence of such Direction, or as far as such Direction, if any, does not extend, as the Commissioners think fit), to the Purposes and in the Order following: Application of Patriotic Fund subject to existing Appropriations.

First, in Relief of Widows, and Maintenance, Education, Training, and Advancement of Children of Soldiers, Seamen, and Marines of Her Majesty's Army and Navy who lost their Lives in Battle in the late War with *Russia*, or in consequence of Wounds received in or by or in consequence of other Casualties sustained in or Disease contracted in that War:

Secondly, in Maintenance, Education, Training, and Advancement of Children of Soldiers, Seamen, and Marines of Her Majesty's Army and Navy who have lost or hereafter lose their Lives in Battle in any other War, or in consequence of Wounds received in or by or in consequence of other Casualties sustained in or Disease contracted in any other War:

Thirdly, in Maintenance, Education, Training, and Advancement of Children of other Soldiers, Seamen, and Marines of Her Majesty's Army and Navy who have lost or hereafter lose their Lives in the Service of the Crown, or by or in consequence of Casualties sustained or Disease contracted in the Service of the Crown.

6. Any Supplementary Commission may authorize the Commissioners acting thereunder, for the better Accomplishment of any Purpose of the Commission, to increase, extend, or make Additions to any Royal or other Charitable Institutions founded within the United Kingdom for any of the Purposes for or towards which under the preceding Section the Commissioners have Power to apply the Patriotic Fund or the Accumulations thereof or of any part thereof. Contribution to Royal, &c. Institutions.

Saving for existing Arrangements.

7. Nothing in this Act shall be deemed to authorize the Insertion in any Supplementary Commission of any Authority or Direction that would prejudicially affect the Claim of any Person under any Grant or Arrangement made before the passing of this Act, or before the issuing of such Supplementary Commission, by the Commissioners acting under the original or any other Commission.

Official Trustees of Fund.

8. Any Supplementary Commission may direct that the First Lord of the Admiralty and the Secretary of State for War and the Paymaster-General shall be the Trustees of the Patriotic Fund, in trust to support the Appropriations in such Commission specified, and subject thereto in trust for any Purposes therein specified in conformity with the Provisions of this Act.

Vesting of Property in Trustees for Time being.

9. If by any Supplementary Commission the First Lord of the Admiralty and the Secretary of State for War and the Paymaster-General are constituted the Trustees of the Patriotic Fund, then any Real or Personal Property conveyed to or acquired by them (who are in this Act referred to as the Official Trustees of the Patriotic Fund) in the Capacity of Trustees of the Patriotic Fund shall vest in them as such, and the same shall go to and be held by their Successors in Office for the time being, without any Conveyance or Assignment.

Accounts in Official Titles.

10. The Governor and Company of the Bank of *England* shall, when required by the Official Trustees of the Patriotic Fund, open and keep all Accounts of Annuities, Stocks, Funds, and Securities belonging to the Patriotic Fund, and standing in the Books of the said Governor and Company, as the Accounts of the First Lord of the Admiralty and the Secretary of State for War and the Paymaster-General for the time being (by their official Titles) *ex parte* the Patriotic Fund; and all Interest and Dividends accruing on such Annuities, Stocks, Funds, and Securities shall, from time to time without any further Authority or Direction than this Act, be received by the said Governor and Company, and shall be carried by them to the Cash Account of the Paymaster-General in their Books.

Transfer of present Securities to Account of Official Trustees.

11. The Production to the Governor and Company of the Bank of *England*, or to any other Body, or to any Person, of this Act, and of the First Supplementary Commission thereunder, constituting the First Lord of the Admiralty and the Secretary of State for War and the Paymaster-General the Trustees of the Patriotic Fund, and of a Direction of the Commissioners of the Patriotic Fund in Writing, signed by their Secretary, shall be sufficient Authority to such Governor and Company, Body or Person, for the Transfer forthwith after the issuing of such Commission to the Account of the First Lord of the Admiralty and the Secretary of State for War and the Paymaster-General for the time being, *ex parte* the Patriotic Fund, of all Annuities, Stocks, Funds, or Securities belonging to the Patriotic Fund at the issuing of such Commission, and specified in such Direction: and the said Governor and Company and every such Body or Person are and is hereby indemnified in respect of the Transfer made in accordance with such Direction.

Deposit of Securities in Bank of England.

12. All Securities from time to time belonging to the Patriotic Fund, and not standing in the Books of the Governor and Company of the Bank of *England*, shall be deposited in the Bank of *England* for the Credit and at the Disposal of the Official Trustees of the Patriotic Fund; and all Interest and Dividends accruing on such Securities shall from time to time, under the Authority and Direction of the Official Trustees of the Patriotic Fund, be received by the said Governor and Company, and shall be carried by them to the Cash Account of the Paymaster-General in their Books.

Proceeds of Sales to be carried to Account of Paymaster-General.

13. On Sale at any time, under the Authority and Direction of the Official Trustees of the Patriotic Fund, of any Annuities, Stocks, Funds, or Securities for the time being standing to the Account of the Official Trustees of the Patriotic Fund in the Books of the Governor and Company of the Bank of *England*, and on Sale at any time, under the like Authority and Direction, of any Securities belonging to the Patriotic Fund deposited in the Bank of *England*, the Proceeds of Sale shall be received by the said Governor and Company, and shall be carried by them to the Cash Account of the Paymaster-General in their Books.

Separate Cash Account by Paymaster-General.

14. Any Cash for the time being in the Hands of the Paymaster-General belonging to the Patriotic Fund shall be carried to a separate Account in his Books.

Actions, &c., by and against Official Trustees.

15. The Official Trustees of the Patriotic Fund may institute or defend any Action or Suit relative to any Lands contracted to be purchased or taken for the Purposes of the Patriotic Fund, and may institute any Action of Ejectment or other Action or any Suit for recovering Possession of any Lands vested in them or purchased for the Patriotic Fund, and may distrain or sue for any Arrears of Rent due in respect thereof, and may institute any Action or Suit in respect of any Trespass or Encroachment committed thereon or Damage done thereto, or any other Action or Suit in respect thereof, and may defend any Action or Suit in respect thereof, and may institute and prosecute any Action, Suit, or Proceeding, Civil or Criminal, concerning Property belonging to the Patriotic Fund; and in every such Action, Suit, or Proceeding they may be styled The Official Trustees of the Patriotic Fund, without more; and any such Action, Suit, or Proceeding shall not be affected by any Change in the Persons for the time being holding the Offices of First Lord of the Admiralty and Secretary of State for War and Paymaster-General, or either of them.

Style of Official Trustees in Deeds, &c.

16. In Deeds, Powers of Attorney, and other Instruments the Official Trustees of the Patriotic Fund may be so styled without the Names or Name of them or either of them being expressed.

Audit of Accounts.

17. The Accounts of the Receipts and Expenditure of the Patriotic Fund shall be audited by such Persons and in such Manner as the Commissioners of Her Majesty's Treasury from time to time direct.

Secretary and Clerks, &c.

18. Any Supplementary Commission may authorize the Commissioners acting thereunder to employ a Secretary and Clerks at Salaries, the same, with other proper Expenses, to be paid out of the Patriotic Fund.

Pensions and Retiring Allowances.

19. It shall be lawful for Her Majesty, Her Heirs and Successors, from time to time, by Warrant under the Royal Sign Manual, on the submission of the Commissioners of the Patriotic Fund, to award to any Person who has been employed by the Commissioners of the Patriotic Fund, acting under the Original or any Supplementary Commission, such Pension or retiring Allowance as to Her Majesty, Her Heirs or Successors, seems fit, to be paid out of the Patriotic Fund.

Exercise of Rights of Nomination to Schools, &c.

20. All Rights of Nomination to Schools or Institutions possessed by the Commissioners acting under the Original Commission, or by the Executive Committee of those Commissioners and for the time being exercisable, and all Powers relative thereto, may be exercised by the Commissioners for the time being acting under any Supplementary Commission, or by the Executive Committee of those Commissioners, as any Supplementary Commission directs; and in the event of the Original and any Supplementary Commission being superseded, or of the Discontinuance of the Commissioners under any Supplementary Commission, or of a Reduction of the Number of those Commissioners below Twelve, then the same may be exercised by such Person or Persons as Her Majesty, Her Heirs or Successors, from time to time, by Warrant under the Royal Sign Manual, is or are pleased to direct.

Rodriguez Fund.

21. Any Supplementary Commission may direct that the Fund known as the *Rodriguez* Fund shall be applied for the same or the like Purposes as the Patriotic Fund, and the same shall be applied accordingly.

SCHEDULE.

Appropriations of Patriotic Fund (except for Victoria Asylum and Boys' School).

1. The Sum of Two thousand five hundred Pounds Sterling invested in the Purchase of Two thousand seven hundred and forty-seven Pounds Five Shillings and One Penny New Three Pounds per Centum in the Names of Lord Colchester and Lieutenant-Colonel James Lindsay and of William Hillyar and Harry Lord Richards, and held under the Trusts declared by a Deed Poll of the Ninth Day of February One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the Royal Commissioners, the Admission of Thirteen Boys, Sons of Soldiers, Sailors, or Marines of Her Majesty's Service, into the Royal Naval and Military Free School at Devonport.

2. The Sum of Two thousand five hundred Pounds Sterling invested in the Purchase of Two thousand seven hundred and forty-seven Pounds Five Shillings and One Penny New Three Pounds per Centum in the Names of the said Lord Colchester and Lieutenant-Colonel James Lindsay and the Reverend Joshua Woolley, LL.D., and Captain Andrew Rogers Savage, Royal Marine Artillery, and held under the Trusts declared by a Deed Poll of the Eighteenth Day of February One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the Royal Commissioners, the Admission of Eleven Boys, the Sons of Soldiers, Sailors, or Marines of Her Majesty's Service, into the Royal Seamen and Marines' Orphan School, Portsea.

3. The Sum of Twenty-five thousand Pounds paid to the Governors of Wellington College, upon an agreement confirmed by a Bye-law of the said Governors of the Twenty-seventh Day of February One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the said Royal Commissioners, the Admission of Eighteen Boys, Children of deceased Commissioned Officers in Her Majesty's Army, into the said College.

4. The Sum of One thousand Pounds paid to the Treasurer of the Cambridge Asylum at Kingston-on-Thames towards building, and Two thousand Pounds Sterling invested in the Purchase of Two thousand one hundred and sixteen Pounds Eight Shillings and One Penny New Three Pounds per Centum in the Names of the said Lord Colchester and Lieutenant-Colonel James Lindsay and James Liddell and George Tempest Rowland, and held under the Trusts declared by a Deed Poll of the Third Day of September One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the said Royal Commissioners, the Admission of Five Women, Widows of Soldiers, into the Cambridge Asylum.

5. The Sum of Five thousand Pounds Sterling paid to the Treasurer of the Royal Naval Female School at St. Margaret's, Isleworth, for the general purposes of the Institution, and held under an Indenture or Deed of Covenant of the Sixteenth Day of April One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the said Royal Commissioners, the Admission of Five Pupils into the said Royal Naval Female School upon the Terms and Conditions mentioned in the said Indenture.

6. The Sum of Eight thousand Pounds Sterling paid to the Royal Naval School, New Cross, for the general purposes of the Institution, under the Sanction of Parliament, to secure the Admission in perpetuity, on the Nomination of the said Royal Commissioners, of Seven Pupils, Sons of Naval or Marine Officers, upon the Terms and Conditions specified in the Twenty-third and Twenty-fourth Victoria, Chapter One hundred and four (Local and Personal).

SUPPLEMENTARY COMMISSION.

26th March, 1868.

PATRIOTIC FUND.

ROYAL COMMISSION.

VICTORIA R.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith. TO Our dearly-beloved Cousin and Councillor, His Royal Highness George William Frederick Charles, Duke of Cambridge, Knight of Our Most Noble Order of the Garter, and Field Marshal Commanding in Chief of our Army; Our right trusty and right entirely-beloved Cousin and Councillor, Edward Adolphus, Duke of Somerset, Knight of Our Most Noble Order of the Garter; Our right trusty and right entirely-beloved Cousin and Councillor, Lieutenant-General Arthur Richard, Duke of Wellington, Knight of Our Most Noble Order of the Garter; Our right trusty and right well-beloved Cousin and Councillor, Henry John, Earl of Shrewsbury and Talbot, Companion of Our Most Honourable Order of the Bath, Admiral on the Reserved Half-Pay of Our Fleet; Our right trusty and right well-beloved Cousin, Anthony, Earl of Shaftesbury, Knight of Our Most Noble Order of the Garter; Our right trusty and right well-beloved Cousin, Thomas, Earl of Lauderdale, Knight Commander of Our Most Honourable Order of the Bath, Vice-Admiral of Our Fleet; Our right trusty and right well-beloved Cousin and Councillor, Fox, Earl of Dalhousie, Knight of our Most Ancient and Most Noble Order of the Thistle, and Knight Grand Cross of Our Most Honourable Order of the Bath; Our right trusty and right well-beloved Cousin and Councillor, Charles Philip, Earl of Hardwicke, Admiral on the Reserved Half Pay of our Fleet; Our right trusty and right well-beloved Cousin, Henry Thomas, Earl of Chichester; Our right trusty and right well-beloved Cousin, Horatio, Earl Nelson; Our right trusty and right well-beloved Cousin and Councillor, Henry, Earl Grey, Knight of Our Most Noble Order of the Garter; Our right trusty and right well-beloved Cousin and Councillor, George Frederic Samuel, Earl de Grey and Ripon; Our right trusty and well-beloved William Bernard, Baron Petre; Our right trusty and well-beloved Henry, Baron Rokeby, Knight Commander of Our Most Honourable Order of the Bath, Lieutenant-General of Our Forces; Our right trusty and well-beloved Councillor, Edward Burtenshaw, Baron St. Leonards; Our right trusty and well-beloved Edmund Burke, Baron Fermoy; Our right trusty and well-beloved Councillor Frederic, Baron Chelmsford; Our right trusty and well-beloved Councillor, Robert Vernon, Baron Lyveden; Our right trusty and well-beloved Councillor, Sir John Somerset Pakington, Baronet, Knight Grand Cross of Our most Honourable Order of the Bath, and one of Our Principal Secretaries of State; Our trusty and well-beloved James Lindsay, Esquire, commonly called the Honourable James Lindsay, Major-General of Our Forces; Our right trusty and well-beloved Councillor, Henry Thomas Lowry Corry, one of Our Commissioners for executing the Office of Lord High Admiral; Our right trusty and well-beloved Councillor William Ewart Gladstone; Our right trusty and well-beloved Councillor, Benjamin Disraeli, one of Our Commissioners for executing the Offices of Treasurer of the Exchequer of Great Britain, and Lord High Treasurer of Ireland; Our right trusty and well-beloved Councillor, Lieutenant-General Jonathan Peel; Our right trusty and well-beloved Councillor, John Wilson Patten, Colonel of OurThird Royal Regiment of Lancashire Militia, Chancellor of the Duchy of Lancaster; Our right trusty and well-beloved William Ferneley Allen, Lord Mayor of Our City of London, or the Lord Mayor of

Our said City for the time being; Our trusty and well-beloved Sir James Yorke Scarlett, commonly called the Honourable Sir James Yorke Scarlett, Lieutenant-General of Our Forces, Knight Commander of Our most Honourable Order of the Bath; Our trusty and well-beloved Sir John Emerich Edward Dalberg Acton, Baronet; Our trusty and well-beloved Sir John Fox Burgoyne, Baronet, Knight Grand Cross of Our Most Honourable Order of the Bath, Field Marshal in Our Army, Constable of Our Tower of London; Our trusty and well-beloved Sir Hew Dalrymple Ross, Knight Grand Cross of Our Most Honourable Order of the Bath, Field Marshal in Our Army; Our trusty and well-beloved Sir Edward Lugard, Knight Grand Cross of Our Most Honourable Order of the Bath, Lieutenant-General of Our Forces and Under Secretary of State for War; Our trusty and well-beloved Sir Richard James Dacres, Knight Commander of Our Most Honourable Order of the Bath, Lieutenant-General of Our Forces; Our trusty and well-beloved Sir John William Gordon, Knight Commander of Our Most Honourable Order of the Bath, Major-General of Our Forces; Our trusty and well-beloved Sir Peter Richards, Knight Commander of Our Most Honourable Order of the Bath, Admiral on the Reserved Half-Pay of Our Fleet; Our trusty and well-beloved Sir Anthony Blaxland Stransham, Knight Commander of Our Most Honourable Order of the Bath, Lieutenant-General of Our Royal Marine Forces; Our trusty and well-beloved William Alexander Baillie Hamilton, Admiral on the Reserved Half-Pay of Our Fleet; Our trusty and well-beloved Henry Eyre, Esquire, Lieutenant-General of Our Forces; Our trusty and well-beloved John Henry Lefroy, Esquire, Colonel in Our Army; Our trusty and well-beloved Robert Alexander Shafto Adair, Esquire, Colonel of Our Suffolk Artillery Militia; Our trusty and well-beloved Thomas Baring, Esquire; Our trusty and well-beloved John Abel Smith, Esquire; Our trusty and well-beloved John Gellibrand Hubbard, Esquire; and our trusty and well-beloved John Ball, Esquire. Greeting:

WHEREAS We were pleased to issue a Warrant or Commission under Our Royal Sign Manual, dated the Seventh day of October, 1854, directed to certain Commissioners therein named and constituting the Royal Commission of the Patriotic Fund (hereinafter referred to as Our Original Commission):

AND WHEREAS Our Original Commission recited that amidst the glorious Successes which, through the Power of Almighty God, had attended Our Arms during the then present War, many Soldiers, Sailors, and Marines serving in Our Armies and Fleets had gallantly fallen in battle, or by other casualties, during the War; and many who should thereafter be engaged in conflict or in the further prosecution of hostilities might also nobly sacrifice their lives in Our Service while protecting the invaded liberties of Our Ally and repressing the lawless ambition of Our enemies:

AND WHEREAS Our Original Commission also recited that it had been represented to Us, that many of Our loving Subjects throughout Our Kingdom and Dominions, actuated by a just sense of the sacred rights of those who fall in their country's service, and in support of Our just cause of War, were anxiously desirous of testifying their loyalty and love to Us and to Our Throne, by a just and generous benevolence towards the Widows and Orphans of those of Our Soldiers, Sailors, and Marines who had been so killed, or who might thereafter die amidst the ravages and casualties of War, and also by their gifts and subscriptions to contribute a portion of those means with which Our Nation had been blessed, towards the succouring, educating, and relieving those who, by the loss of their husbands and parents in battle, or by death on active service in the then present War, were unable to maintain or to support themselves:

AND WHEREAS Our Original Commission further recited that it was expedient that public measures should be taken, and that preparation should be made for the safe keeping and beneficial application of the several sums of money which might thenceforth and from time to time thereafter, during the continuance of that Our Royal Commission, be given, subscribed, or collected for all or any of the several purposes aforesaid: And also for the purpose of securing such prompt and authentic information as might be required to aid the just and faithful distribution of the said several sums of money when so received: And that it had also appeared to Us that, by issuing that Our Royal Commission, greater efficacy, power, and support might be given to the benevolent desires of Our loving Subjects: And also that the respective claims, merits, and necessities of individual claimants would be duly inquired into: And that by permitting assistance to be rendered by the Officers of Our Civil, Military, and Naval Services, We might prevent the wrong application, by misrepresentation or otherwise, of those contributions which Our loving

Subjects might thereafter, during the continuance of that Our Royal Commission, for the several purposes aforesaid, generously and benevolently supply:

AND WHEREAS, by Our Original Commission, We did make known to Our Commissioners therein named, that We, having taken into Our consideration the premises, and being earnestly desirous, in lasting memory of those who had faithfully fallen in Our Service, to encourage the loyal and hearty benevolence of Our loving Subjects, which might thereafter be directed towards the Widows and Orphans of the Soldiers, Sailors, and Marines of Our Forces who might then or thereafter be serving abroad in Our Armies and Fleets, or in services connected with Our then present hostilities, and for other the several purposes thereinbefore recited or mentioned, and reposing great trust and confidence in the fidelity, discretion, and integrity of Our Commissioners therein named, had authorized and appointed, and did by that Our Original Commission authorize and appoint, you the said Duke of Somerset, the said Duke of Wellington, the said Earl of Shaftesbury, the said Earl of Dalhousie, the said Earl of Hardwicke, the said Earl of Chichester, the said Earl Nelson, the said Earl Grey, the said Baron Fermoy, the said Baron Saint Leonards, the said Baron Lyveden, the said Baron Rokeby, the said James Lindsay, the said Sir John Somerset Pakington, the said Henry Thomas Lowry Corry, the said Sir John Fox Burgoyne, the said Sir Hew Dalrymple Ross, the said Lord Mayor of Our City of London, the said Thomas Baring, the said John Gellibrand Hubbard, and the said John Ball, together with certain other persons therein named, to make full and diligent inquiry into the best mode of aiding the loyalty and benevolence of Our loving Subjects, and of ascertaining the best means by which the gifts, subscriptions, and contributions of Our loving Subjects could be best applied according to the generous intentions of the donors thereof, and from time to time to apply the same as Our said Commissioners, or any three or more of them, should think fit, or direct, either for the immediate relief of such special objects of destitution as might come within the meaning and purpose of such benevolence, or for any of the purposes aforesaid, to increase, extend, or make additions to any of Our Royal or other Charitable Institutions already founded for similar purposes within Our United Kingdom. And further to apply or to order and direct the application of all such moneys in such manner as to Our said Commissioners, or to any three or more of them, should seem fit in the premises, so that they should in all things secure the most impartial and beneficial distribution of all such sums as might thereafter, and from time to time, be received under or by virtue of that Our Royal Commission:

AND WHEREAS, by Our Original Commission, We did further give and grant to Our said Commissioners divers powers and authorities therein described, and did give divers directions for the better execution of the duties of Our said Commissioners:

AND WHEREAS, by Our Original Commission, We did command Our Paymaster-General for the time being to open and keep a separate account at the Bank of England, and to pay to the credit of such account, which (We did thereby direct) should be called and known by the name of "THE PATRIOTIC FUND," all and every sum and sums of money which he might at any time thereafter receive under or by virtue of that Our Commission:

AND WHEREAS, by Our Original Commission, for the purpose (among others) of carrying into effect what Our said Commissioners, or any three or more of them, should thereafter direct to be done in respect to the said Subscriptions, Donations, and Collections, We did authorize Our said Commissioners, or any three or more of them, to nominate and appoint any three or more persons whomsoever, as to them should seem meet, to be an Executive Committee in the premises; and We thereby declared Our Pleasure to be that such Executive Committee should also be a Finance Committee, with power to select their own Chairman, and having the direction and control of such Orders and Regulations as might thereafter from time to time be made by Our said Commissioners, or any three or more of them, over the receipts and expenditure of the said several sums of money which from time to time, during the continuance of such Our Commission, might be collected; and that, subject to such Orders and Regulations, the said Executive and Finance Committee, or any two or more of them, should and might order and direct the payment and disbursement of any sum or sums so to be received by Our Paymaster-General to the account of The Patriotic Fund; and We thereby declared it to be Our further Will and Pleasure that Our said Commissioners, or any three or more of them, should from time to time, according to their discretion, fill up any such vacancies as might occur in such Executive and Finance Committee as occasion should require, and that the said Executive and

Finance Committee, or any three of them, inclusive of their Chairman for the time being, if he should be then present, should from time to time and at all times report to them, the said Commissioners, as and when they might desire, all matters and things which they should or might have done in the premises:

AND WHEREAS, by Our Original Commission, We declared Our further Will and Pleasure to be that Our said Commissioners, or any three or more of them, when and so often as need or occasion should require, so long as Our Original Commission should continue in force, should report to Us in writing under their Hands and Seals respectively, all and every of the several proceedings of Our said Commissioners, had by virtue of Our Original Commission, together with such other matters, if any, as might be deserving of Our Royal Consideration touching or concerning the premises:

AND WHEREAS Our said Commissioners proceeded to execute the powers and to discharge the duties conferred and imposed on them by Our Original Commission:

AND WHEREAS an Act of Parliament has been passed called "The Patriotic Fund Act, 1867":

AND WHEREAS by that Act it is recited to the effect (among other things) that the Executive Committee of Our said Commissioners had appropriated part of The Patriotic Fund for the Erection and Endowment of a Girls' School, known as "The Royal Victoria Patriotic Asylum," and had appropriated other part of the Fund for the Endowment of a Boys' School, and had appropriated other parts of the Fund for the purposes described in the Schedule to that Act, and that the appropriations aforesaid had been adopted by Our said Commissioners, and had been from time to time approved by Us, or been specified in the Reports of Our said Commissioners made to Us, and laid before the Houses of Parliament:

AND WHEREAS the said Schedule to the said Act is in the words following (that is to say):

Appropriations of Patriotic Fund (except for Victoria Asylum and Boys' School).

1. The Sum of two thousand five hundred Pounds Sterling invested in the Purchase of Two thousand seven hundred and forty-seven Pounds Five Shillings and one penny New Three Pounds per Centum in the Names of Lord Colchester and Lieutenant-Colonel James Lindsay and of William Hillyar and Harry Lord Richards, and held under the Trusts declared by a Deed Poll of the Ninth Day of February, One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the Royal Commissioners, the admission of Thirteen Boys, Sons of Soldiers, Sailors, or Marines of Her Majesty's Service, into the Royal Naval and Military Free School at Devonport.

2. The Sum of Two thousand five hundred Pounds Sterling invested in the Purchase of Two thousand seven hundred and forty-seven Pounds Five Shillings and One Penny New Three Pounds per Centum in the names of the said Lord Colchester and Lieutenant-Colonel James Lindsay and the Reverend Joshua Woolley, LL.D., and Captain Andrew Rogers Savage, Royal Marine Artillery, and held under the trusts declared by a Deed Poll of the Eighteenth Day of February, One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the Royal Commissioners, the admission of Eleven Boys, the Sons of Soldiers, Sailors, or Marines of Her Majesty's Service, into the Royal Seamen and Marines' Orphan School, Portsea.

3. The Sum of Twenty-five thousand Pounds paid to the Governors of Wellington College, upon an agreement confirmed by a Bye-law of the said Governors of the Twenty-seventh Day of February, One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the said Royal Commissioners, the admission of Eighteen Boys, Children of deceased Commissioned Officers in Her Majesty's Army, into the said College.

4. The Sum of One thousand Pounds paid to the Treasurer of the Cambridge Asylum at Kingston-on-Thames towards building, and Two thousand Pounds Sterling invested in the Purchase of Two thousand one hundred and sixteen Pounds Eight

shillings and One Penny New Three Pounds per Centum in the names of the said Lord Colchester and Lieutenant-Colonel James Lindsay and James Liddell and George Tempest Rowland, and held under the Trusts declared by a Deed Poll of the Third Day of September, One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the said Royal Commissioners, the admission of Five Women, Widows of Soldiers, into the Cambridge Asylum.

5. The Sum of Five thousand Pounds Sterling paid to the Treasurer of the Royal Naval Female School at St. Margaret's, Isleworth, for the general purposes of the Institution, and held under an Indenture or Deed of Covenant of the Sixteenth Day of April, One thousand eight hundred and fifty-seven, to secure in perpetuity, on the Nomination of the said Royal Commissioners, the Admission of Five Pupils into the said Royal Naval Female School upon the Terms and Conditions mentioned in the said Indenture.

6. The Sum of Eight thousand Pounds Sterling paid to the Royal Naval School, New Cross, for the general purposes of the Institution, under the Sanction of Parliament, to secure the Admission in perpetuity, on the Nomination of the said Royal Commissioners, of Seven Pupils, Sons of Naval or Marine Officers, upon the terms and conditions specified in the Twenty-third and Twenty-fourth Victoria, Chapter One hundred and four (Local and Personal).

AND WHEREAS, by the said Act, it was further recited that The Patriotic Fund would be more than sufficient for the objects described in Our Original Commission, and that it was expedient that We, Our Heirs and Successors, should be empowered to give from time to time further directions respecting the application of The Patriotic Fund, subject to the appropriations aforesaid, and respecting the constitution and powers of the Body of Commissioners, and the conduct of the business relating to the Fund, and that provision should be made respecting the vesting and transmission of property held in trust for the purposes of the Fund:

AND WHEREAS, by the said Act, it was enacted among other things (in Section Five thereof) that it should be lawful for Us, Our Heirs, and Successors, from time to time, by Supplementary Commission under the Royal Sign Manual, directed to such persons as to Us, Our Heirs or Successors, should seem fit, to authorize and direct the Commissioners thereby constituted, to apply The Patriotic Fund and the income and accumulations thereof, or any part or parts thereof, subject to the appropriations aforesaid (in such manner as any such Commission should from time to time direct, or, in the absence of such direction, or as far as such direction, if any, should not extend, as the Commissioners should think fit), to the purposes and in the order following:

First, in Relief of Widows, and Maintenance, Education, Training, and Advancement of Children of Soldiers, Seamen, and Marines of Our Army and Navy who lost their Lives in Battle in the late War with Russia, or in consequence of Wounds received in or by or in consequence of other Casualties sustained in or Disease contracted in that War.

Secondly, in Maintenance, Education, Training, and Advancement of Children of Soldiers, Seamen, and Marines, of Our Army and Navy who had lost or should thereafter lose their Lives in Battle in any other War, or in consequence of Wounds received in or by or in consequence of other Casualties sustained in or Disease contracted in any other War.

Thirdly, in Maintenance, Education, Training, and Advancement of Children of other Soldiers, Seamen, and Marines of Our Army and Navy who had lost or should hereafter lose their Lives in the Service of the Crown, or by or in consequence of Casualties sustained or Disease contracted in the Service of the Crown.

AND WHEREAS, by the said Act, it was further enacted among other things (in Section Six thereof) that any Supplementary Commission might authorize the Commissioners acting thereunder, for the better accomplishment of any purpose of the Commission, to increase, extend, or make additions to any Royal or other Charitable Institutions founded within the United Kingdom for any of the purposes for or towards which under the preceding section of the same Act (meaning the said Section Five thereof) the Commissioners had power to apply The Patriotic Fund, or the accumulations thereof, or of any part thereof:

AND WHEREAS, by the said Act, it was further enacted among other things (in Section Eight thereof) that any Supplementary Commission might direct that the First Lord of the Admiralty, and the Secretary of State for War, and the Paymaster-General (respectively therein described) should be the Trustees of The Patriotic Fund, in trust to support the appropriations in such Commission specified, and subject thereto in trust for any purposes therein specified in conformity with the provisions of that Act:

AND WHEREAS, by the said Act, it was further enacted among other things (in Section Eighteen thereof) that any Supplementary Commission might authorize the Commissioners acting thereunder to employ a Secretary and Clerks at salaries, the same with other proper expenses to be paid out of The Patriotic Fund:

AND WHEREAS, by the said Act, it was further enacted among other things (in Section Twenty thereof) that all rights of nomination to Schools or Institutions possessed by the Commissioners acting under Our Original Commission, or by the Executive Committee of those Commissioners, and for the time being exercisable, and all Powers relative thereto, might be exercised by the Commissioners for the time being acting under any Supplementary Commission, or by the Executive Committee of those Commissioners, as any Supplementary Commission should direct:

AND WHEREAS, by the said Act, it was further enacted, among other things (in Section Twenty-one thereof) that any Supplementary Commission might direct that the Fund known as "The Rodriguez Fund" should be applied for the same or the like purposes as The Patriotic Fund, and the same should be applied accordingly:

AND WHEREAS We are minded to exercise the Powers vested in Us by the said Act:

AND WHEREAS some of the Commissioners appointed by Our Original Commission are dead:

NOW KNOW YE that, having taken into Our Royal consideration the premises' and reposing great trust and confidence in your zeal, ability, and discretion, We, by virtue and in exercise of the powers in Us by "The Patriotic Fund Act, 1867," vested, and of every other power in anywise enabling Us in this behalf, have authorized and appointed, and do by this our Commission under Our Royal Sign Manual authorize and appoint you, the said George William Frederick Charles, Duke of Cambridge; Edward Adolphus, Duke of Somerset; Arthur Richard, Duke of Wellington; Henry John, Earl of Shrewsbury and Talbot; Anthony, Earl of Shaftesbury; Thomas, Earl of Lauderdale; Fox, Earl of Dalhousie; Charles Philip, Earl of Hardwicke; Henry Thomas, Earl of Chichester; Horatio, Earl Nelson; Henry, Earl Grey; George Frederick Samuel, Earl de Grey and Ripon; William Bernard, Baron Petre; Henry, Baron Rokeby; Edward Burtenshaw, Baron Saint Leonards; Edmund Burke, Baron Fermoy; Frederic, Baron Chelmsford; Robert Vernon, Baron Lyveden; Sir John Somerset Pakington; James Lindsay; Henry Thomas Lowry Corry; William Ewart Gladstone; Benjamin Disraeli; Jonathan Peel; John Wilson Patten; William Ferneley Allen, Lord Mayor of Our City of London, or the Lord Mayor of our said City for the time being; Sir James Yorke Scarlett; Sir John Emerich Edward Dalberg Acton; Sir John Fox Burgoyne; Sir Hew Dalrymple Ross; Sir Edward Lugard; Sir Richard James Dacres; Sir John William Gordon; Sir Peter Richards; Sir Anthony Blaxland Stransham; William Alexander Baillie Hamilton; Henry Eyre; John Henry Lefroy; Robert Alexander Shafto Adair; Thomas Baring; John Abel Smith; John Gellibrand Hubbard; and John Ball; to be our Commissioners of The Patriotic Fund.

AND WE DO HEREBY declare and direct that this Our Commission is Supplementary to Our Original Commission, and shall be deemed to be a Supplementary Commission within the meaning of the said Act accordingly.

AND WE DO HEREBY authorize and direct you, Our Commissioners, from time to time as occasion requires, to exercise (subject to the provisions of this Our Supplementary Commission) all such of the powers and authorities by Our Original Commission conferred on our Commissioners thereby appointed as for the time being remain fit to be and capable of being exercised, and to discharge (subject to the provisions of this Our Supplementary

Commission) such of the duties by Our Original Commission imposed on Our said Commissioners as for the time being remain fit to be and capable of being discharged.

AND WE DO HEREBY further authorize and direct you Our Commissioners to apply The Patriotic Fund, and the income and accumulations thereof, or any part or parts thereof (subject to the appropriations described in the Preamble of the said Act and in the Schedule to the same hereinbefore set forth), in such manner as you, or any three or more of you, from time to time think fit, to the purposes and in the order following:

First, in Relief of Widows, and Maintenance, Education, Training, and Advancement of Children of Soldiers, Seamen, and Marines of Our Army and Navy who lost their Lives in Battle in the late War with Russia, or in consequence of Wounds received in or by or in consequence of other Casualties sustained in or Disease contracted in that War.

Secondly, in Maintenance, Education, Training, and Advancement of Children of Soldiers, Seamen, and Marines of Our Army and Navy who have lost or hereafter lose their Lives in Battle in any other War, or in consequence of Wounds received in or by or in consequence of other Casualties sustained in or Disease contracted in any other War.

Thirdly, in Maintenance, Education, Training, and Advancement of Children of other Soldiers, Seamen, and Marines of Our Army and Navy who have lost or hereafter lose their Lives in the Service of the Crown, or by or in consequence of Casualties sustained or Disease contracted in the Service of the Crown.

AND WE DO HEREBY further authorize you, Our Commissioners, for the better accomplishment of any purpose of this Our Commission, to increase, extend, or make additions to any Royal or other Charitable Institutions founded within Our United Kingdom for any of the purposes for or towards which you have, by virtue of this Our Commission, power to apply the Patriotic Fund, or the accumulations thereof, or any part thereof.

AND WE DO HEREBY declare that nothing in this Our Commission shall prejudicially affect the claims of any person under any grant or arrangement heretofore made by the Commissioners acting under Our Original Commission.

AND WE DO HEREBY direct that the First Lord of Our Admiralty (according to the definition in the said Act given, and subject and according to the provisions of the same Act), and Our Secretary of State for War (according to the definition in the same Act given), and our Paymaster-General for the time being, shall be the Trustees of The Patriotic Fund, in trust to support the appropriations described in the Preamble of the same Act and in the Schedule to the same hereinbefore set forth, and, subject thereto, in trust for the purposes of Our Original Commission and of this Our Commission.

AND WE DO HEREBY further authorize you Our Commissioners to employ a Secretary and Clerks, at salaries, and do direct that the same, with other proper expenses, shall be paid out of the Patriotic Fund; and We do hereby require you, as soon as may be after the issuing of this Our Commission, and afterwards from time to time, as occasion may require, to prepare and submit for our approval a Scheme for the establishment of a Secretary and Clerks for the purposes of this Our Commission with the salaries proposed for such Secretary and Clerks; and We do hereby declare and direct that such Scheme, when approved by Us by Warrant under Our Royal Sign Manual, shall be and constitute the establishment for the purposes of this Our Commission; and We do hereby direct that such part of the annual income of The Patriotic Fund as is from time to time necessary for the charges of such establishment shall be applied by you Our Commissioners accordingly.

AND WE DO HEREBY further direct that all rights of nomination to Schools or Institutions possessed by Our Commissioners acting under Our Original Commission, or by the Executive Committee of those Commissioners, and for the time being exercisable, and all powers relative thereto, may be exercised by the Executive Committee of you Our Commissioners.

AND WE DO HEREBY further direct that the Fund known as "The Rodriguez Fund" shall be applied for the like Purposes as The Patriotic Fund.

AND WE DO HEREBY declare that We have revoked and determined, and do by this Our Commission revoke and determine, the following parts of Our Original Commission (that is to say) :

First. So much thereof as relates to the appointment of Secretaries, and to the filling-up of vacancies in the Offices of those Secretaries.

Secondly. That part thereof whereby we did command Our Paymaster-General for the time being to open and keep a separate Account at the Bank of England, and did give directions concerning the Payments to be made to or from that Account.

And Thirdly. So much thereof as relates to the Audit of Accounts, Disbursements, and Payments.

AND WE DO HEREBY in all other respects confirm Our Original Commission, and do hereby declare that the same is and shall remain in full force (subject to the provisions of this Our Supplementary Commission), and do hereby direct that the same shall be read and have effect with this Commission as one Commission; and that you Our Commissioners, and all Our Civil, Military, and Naval Servants, and all Our Subjects, do govern yourselves and themselves accordingly.

Given at Our Court at Windsor, this twenty-sixth day of March, in the year of Our Lord One thousand eight hundred and sixty-eight, and in the thirty-first year of Our Reign.

By Her Majesty's Command.

(Signed) JOHN S. PAKINGTON.

5. The number of Children in Boarding Institutions at the end of the year was 670, inclusive of those in the Royal Victoria Patriotic Asylum. Children in Boarding Institutions.

A List of the Schools in which Children of both sexes are maintained and educated is given in Appendix A, and the Reports of the Inspectors in Appendix B.

6. The total sum expended in relief to the 31st December, 1869, was £1,059,236. Amount expended in relief.

7. The usual Estimate of the Assets and Liabilities has been prepared by Mr. Finlaison (Appendix C), by which it appears that he estimates the available surplus at £105,205, after setting aside one-tenth of the Liabilities as a reserve to meet contingencies. Assets and Liabilities.

Appropriation of any Surplus to Orphans of other Wars than the Russian.

8. In paragraph 9, page 3 of the Eighth Report, dated 24th July, 1869, we reported to Your Majesty that at our request the Secretary of State for War had called for certain returns, with a view of ascertaining what number of Orphans might be expected from the Wars which have taken place since the Russian War, except as regards the Indian Mutiny, for which a Special Fund was raised. Relief to Orphans of other Wars.

Those Returns when furnished from the War Department contained accounts of the losses of the Officers and Men sustained in the several Wars; but for the purposes of the Patriotic Fund it was necessary to know as nearly as possible the number of Children who had been deprived of their fathers; a reference was therefore made to the several regiments, and the information thus obtained having been placed in the hands of Mr. Finlaison, the Actuary, his Report is appended (Appendix D). Although the information thus procured was not very complete, Mr. Finlaison has been enabled to form an estimate of the capital sum which will be required for the relief of those Orphans, and which, in his opinion, will not exceed £8000. Under these circumstances the Executive Committee recommended that the Children in question should be granted the allowances of the Patriotic Fund.

This recommendation we have approved, and we have empowered the Executive Committee to grant allowances to the Orphans of other Wars, and to deal with them in other respects in the same manner as the Orphans of the Russian War; subject to the following limitations, viz.:—

(*a*). That such Orphans only should be considered whose parents were in the married state at the time of the service of the Father in the War under which the claim is made; and

(*b*). That in considering the claims of such Orphans the following classification be observed—

(1st). Those whose Fathers lost their lives in Battle.

(2nd). Those whose Fathers lost their lives within six months from wounds or casualties or, during the War, from disease.

(3rd). Those whose Fathers lost their lives within twelve months of the termination of the War, from disease contracted during service therein.

pening of Class 4 pecial Cases of sian War.

9. As the charge for the Orphans of other Wars will be so much less than might reasonably have been expected, the Executive Committee further recommended the re-opening of Class 4 of Special Cases (that is, of Orphans who have no other claims but that of the service of their Father in the Russian War), admission to which was suspended by the Committee on the 25th July, 1868, in deference to the opinion which had been expressed by us. This recommendation we have also adopted. The Executive Committee will thus be empowered to assist in the education of many Children, on whose behalf applications have been made, but whose claims were of necessity postponed whilst the Committee remained in doubt as to the liabilities they might incur by providing for the Orphans of other Wars.

Audit of Accounts.

it of Accounts.

10. As stated to your Majesty in July last, renewed applications had been made to the Treasury for the Audit of the Accounts. Finding that no steps had been taken by the Treasury, the Committee recently decided on having the Accounts audited. They, therefore, appointed Wm. Andoe, Esq., a Retired Inspector of the Audit Office, to examine the Accounts, which he has done, and the Accounts are now audited to the 31st of December, 1869. The Accounts of the Receipts and Expenditure for the years 1867, 1868, and 1869 (in half-yearly periods), together with Mr. Andoe's Report thereon, are attached (Appendix E).

The Lords Commissioners of the Treasury have sanctioned the Audit by Mr. Andoe to the end of last year; and have directed the Controller and Auditor-General to undertake the Audit from and after that period.

The Police have not succeeded in apprehending Mr. Harvey, the defaulting Clerk referred to in our Report of last year.

Special Cases.

ial Cases.

11. Under this description, 594 Orphans of Non-Commissioned and Petty Officers, Soldiers, and Seamen, had been placed on the Books to the 31st of December, 1869, and 305 of them had been admitted to Schools.

103 Orphans of Officers had in like manner been placed on the Books, and to 42 of them educational allowances had been granted.

Boys' School Account.

ount of endowt for a Boys' ool.

12. The Securities of the Fund which are accumulating for an endowment of a Boys' School consisted on the 31st of December, 1869, of

East India Debenture Loan		£32,000
New 3 per Cent., £13,526 13*s.* 9*d.*	=say	12,377
		£44,377

Rodriguez Fund.

13. Notice has been given in the public papers of the nature of this Fund, and of the asses for whom it is intended. The applications will receive the consideration and ecision of the Executive Committee. Rodriguez Fund.

Boys' School at Wandsworth.

14. At the end of last year, there were 193 Boys in this School, the management which merits the continued approval of the Committee. Boys' Temporary Home

---

Royal Victoria Patriotic Asylum.

15. The following is a Statement of the Securities of the Endowment Fund of the sylum: Royal Victoria Patriotic Asylum.

	Per Cent.	£	Annual Income. £
Canada Government Debentures	6	30,000	1,800
New Brunswick Government Debentures	6	5,000	300
Victoria Government Debentures (Victoria Water Works)	6	10,000	600
South Australian Government Debentures (Adelaide and Gawler Town Railway)	6	10,000	600
New South Wales Government Debentures	5	26,100	1,305
London and Greenwich Railway Debentures	4	50,000	2,000
New River Company	4	7,000	280
		£138,100	6,885

16. The late Dowager Lady Truro bequeathed a portion of her personal property certain Charitable Institutions, and amongst them was mentioned the Orphan Asylum Wandsworth. As the Royal Victoria Patriotic Asylum was the only one in that neighurhood, steps were taken for claiming the quota to which it was entitled. But the im was disputed by the Infant Orphan Asylum at Wanstead, on the ground that *Wanad* was meant, and not *Wandsworth*. We are glad to report to your Majesty that the cision was in favour of the Royal Victoria Patriotic Asylum, and a sum of £3837 10*s*. 1*d*. Consols has been transferred to it.

In the hope that it will not be necessary to appropriate the dividends of the above n towards the payment of the ordinary expenditure of the Asylum, the Executive Comttee resolved that, after paying the legal charges incurred, the dividends should be from ne to time invested so as to form a reserve fund for any contingency, or to meet any ficiency in the income which may hereafter arise in the reinvestment of the Endowment nd.

A considerable though not oft-recurring expenditure has, however, to be met this year ough the necessity of replacing the Boilers for heating the Asylum and supplying the ths; the old boilers being completely worn out. A large sum will also be required for ternal painting.

17. Statements of the receipts and expenditure for the twelve months ending the th of June, 1869, and for the half-year ending the 31st of December, 1869, are attached ppendix F).

18. There were 285 Girls in the Asylum on the 31st December, 1869. The demand Girls, in suitable places of service, is greater than can be met by the number old ough to leave the Asylum.

19. The period of probation—six months—for which Mrs. Carr, the Lady Superendent, had been appointed having expired, and the Executive Committee having ery reason to be satisfied with the manner in which she had managed the Institution, and h the order and discipline of the Girls, confirmed Mrs. Carr in the appointment.

Amongst the changes which have been made, are the appointment of Ward Women, e for each School. The Ward Women are responsible for the Girls when in the Dortories, and at all times when not in school. They are further charged with the care and

Royal Victoria Patriotic Asylum.

repair of the clothes. The Schoolmistresses being thus relieved of the care of the Girls when out of school, are enabled to impart instruction in the afternoon, as well as in the forenoon, which they used not to do.

This plan, by which the services of Assistant-Mistresses have been dispensed with, and the number of Pupil-teachers reduced, was proposed by Mrs. Carr, and submitted to the Rev. A. R. Grant, the Inspector of Schools, who strongly recommended its adoption.

The Executive Committee fully expect that these changes will conduce both to improved management of the Asylum and to diminished expenditure.

Farm and Grounds.

20. A Gardener, at a guinea a week, has been engaged instead of a Bailiff, whose salary was £100 per annum; and other changes have been made in the outdoor establishment, all tending to a diminished expenditure.

Death of a Commissioner.

Vacancy in Commission.

21. We regret to have to record the death of Major-General Sir John William Gordon, one of the Commissioners, which event has taken place since our last Report to your Majesty.

APPENDIX B.

REV. A. R. GRANT'S AUTUMN INSPECTIONS, 1869.

ALRESFORD ORPHANAGE.

October 14th.

The Institution continues to be conducted with the same efficiency as heretofore. The School is a very satisfactory state, both as to discipline and attainment.

ROYAL BRITISH FEMALE ORPHAN ASYLUM (STOKE, DEVONPORT).

October 19th.

A new teacher, Miss Oliver, has taken charge of the School since my last visit. The discipline d methods are good; and I can trace improvement in attainment. I am glad to find that the little rl, Beard, who was supposed to be hopelessly ill of consumption, is decidedly better, and it is even contemplation to let her return to School for an hour a day.

SEAMEN AND MARINES' ORPHAN SCHOOLS (PORTSMOUTH).

October 22nd.

I arrived unfortunately on the day following the anniversary meeting of the Institution, and found at the Children were all absent for a holiday. I was sorry to learn that Miss Bond, who was very at my last visit, is since dead. Her successor, Miss Stokes, has not yet been permanently appointed, iit is doubtful how far her health will permit her to retain the situation.

MR. VICARS' REPORTS.—DECEMBER, 1869.

BETHESDA FEMALE ORPHAN ASYLUM, DUBLIN.

Visited December 6th, 1869.

General arrangements	The general arrangements continue as in my last Report, and are quite satisfactory.
Health	The health of the Children appears to have been good.
New admissions . .	There have been none since my last visit.

Classes.	1	2
Numbers	8	3
Scripture	*v.g.*	*v.g.*
Catechism	*v.g.*	*v.g.*
Reading	*v.g.*	*v.g.*
Writing	*v.g.*	*v.f.*
Spelling	*v.g.*	*g.*
Dictation	*v.g.*	*f.*
Arithmetic	*m.*	*m.*
Needlework	*g.*	*g.*
Discipline	*v.g.*	*v.g.*
Geography	*f.*	*f.*

The results of my Examination are satisfactory on the whole. Arithmetic appears to be the weak point in the instruction, and to that I have directed especial attention.

ST. CLARE'S ORPHANAGE, HAROLD'S CROSS, DUBLIN.

Visited December 7th and 9th, 1869.

General arrangements	They remain as heretofore, and are in the main satisfactory.
Health	Two sisters, Johanna and Lizzie Keating, are ill in the country. The health of the others appears good.
New admissions . .	There have been five Girls admitted since my last Report.

Classes.	1	2	3	4
Numbers	4	2	7	5
Reading	*f.*	*m.*	*m.*	Only beginning.
Dictation	*f.*	*m.*	..	..
Writing	*v.f.*	*f.*	*m.*	..
Spelling	*f.*	*f.*	*m.*	..
Geography	Not at all good.			..
Arithmetic	Poor.			..
Discipline	*g.*	*g.*	*g.*	..

These Children, with two or three exceptions, are very dull and slow. They seem to have no energy or quickness in any of their work. I have recommended their being taught orally to a greater extent than hitherto, with a view to sharpening their perceptive powers.

ST. VINCENT DE PAUL'S MALE ORPHANAGE, GLASNEVIN, DUBLIN.

Visited December 15th, 1869.

I found upon visiting this Establishment that the Children have been suffering to a large extent from rather a bad type of Scarlatina, which has already proved fatal in four cases, and it is feared will do so in one or two more. Mr. Hoope, the Principal of the Institution, assured me that everything was being done which art and skill could suggest to mitigate the epidemic, and so far the Boys connected with the Patriotic Fund have all rallied from the malady.

Under the circumstances I did not, of course, attempt any Examination.

EDWARD A. VICARS.

Rugby, December 22nd, 1869.

REPORT on the ROMAN CATHOLIC CHILDREN of the PATRIOTIC FUND at NORTH HYDE and NORWOOD ORPHANAGES.

NORTH HYDE.

August, 1869.

Premises.—These remain in *statu quo*, but it is probable that a large and an important addition will soon be made. In fact, the foundations of a new wing were laid at the time of my visit. This wing will correspond to the west wing already existing, and which has been so important an addition to the old building. I have already expatiated in previous Reports on the substantial and airy character of this Orphanage, and on the useful nature of its arrangements. As matters remain in the same state, I have nothing further to remark in these respects.

Orphans.—The numbers have rather decreased, and the average age is decidedly less than on former occasions. They appear, as I have always found them, cheerful, in good health, well nourished, and properly clad.

Sanitary Condition.—Nothing can be more satisfactory than the sanitary state of the Boys; not a single case was to be found in the Infirmary. Indeed, I have observed that this is the rule at North Hyde, and I attribute it not only to the healthy position of the Institution, to its airy Dormitories, and the good fare of the Boys, but also and especially to the cheerful influence prevailing, and to the healthy runs into the country given weekly to the Boys.

School Premises.—These have derived considerable advantage from the recent exertions, as the Boys are less crowded than formerly.

Discipline.—This is firm yet kind, and answers its purpose well, without the employment of undue severity.

Instruction.—The Reading is not quite so good as on former occasions, especially in the Upper Class; but this falling off results chiefly from the departure of many of the older Boys, and the lower age of the majority of them now forming it. Writing is fairly good throughout. Arithmetic in the First Class is quite efficient, and embraces most useful points, which are well worked, including Book-keeping, and other practical applications. As a general remark, I would add that the First Class of this School appears always more than proportionally advanced.

Conclusion.—The general impression produced by the inspection of this School is entirely in its favour. I have already noticed the addition of a band of wind instruments, which is thoroughly well conducted, and answers admirably as a cheering influence to the School, and as a preparation in the case of many Boys for a means of maintenance in after life.

NORWOOD.

August, 1869.

Premises.—These remain as before. The wash-house, which has been added within the last few years, is an important addition, and offers to the Girls a good preparatory School in household work, though the appliances are considerably above what is found in most private establishments, to which the Girls are attached as servants on issuing from the Orphanage.

Orphans.—The numbers are much the same, but the average age is reduced. A large portion of the Junior Class consists of new arrivals, many of them Special Cases, and nice gentle Children, of more civilized appearance than the older material. One of the Children in an intermediate class is quite deficient, and having arrived in a very neglected state, has given much trouble to the Teachers.

Discipline.—This appears as before. On the whole, the Patriotic Fund Orphans appear to be fairly intelligent and amenable to discipline. I should like to see a little more life and animation at the Norwood School.

Sanitary Condition.—This appears to be very fair, yet not so remarkable as in the case of the Boys at North Hyde; a result that may perhaps be attributed to the position of the two Orphanages.

School.—Needlework, as usual, good, and specially commendable, because the Girls are carefully taught the most essential and useful branches, such as repairing.

Reading.—This is very fair, but not so good as it was, owing to the lower age of the Children.

Writing.—This is decidedly good, even in the case of the younger Children.

Arithmetic.—This is one of the best branches of instruction, having received much attention from the accomplished Teacher, who has now directed the School for some years, and deserves high commendation, as I have found her invariably painstaking and efficient, and always disposed to carry out my suggestions to the fullest extent. The Mental Arithmetic is particularly good.

Conclusion.—I was very favourably impressed on this my last visit to Norwood with the general efficiency of the School and learning of the Children. I may add that both Roman Catholic Institutions are in a flourishing state, and in some respects more satisfactory than I have ever known them.

J. R. MORELL.

ROYAL VICTORIA PATRIOTIC ASYLUM.

November 23rd and 24th, 1869.

The number of Girls has now been made up to 281; 65 being in the Industrial Class, 93 in the Senior School, and 123 in the Junior School.

I am very glad to find that the health of the Girls has much improved, and is now very good, only two being in the Infirmary. There has been a slight outbreak of Scarlet Fever, but it has almost passed off.

The general condition of the Institution is, I hope, promising under Mrs. Carr's management, but a good deal has to be done yet in arranging for the proper training of the Industrial Class, and in the Schools, owing to the large number of Children lately introduced. Miss Ingram's departure has thrown the charge of both Schools temporarily on Miss Searle, and she deserves great credit for the state in which they are, notwithstanding that both have undergone great changes. The Junior School contains a number of new Children, who are necessarily backward; nevertheless, I find great improvement in the reading. Neither School is, at present, at the standard of attainment which it ought to reach, and which I hope it will reach now that the numbers are being completed, so as not to have large admissions of new Children, and also that the constitution and arrangements of the house are fixed.

BOYS' TEMPORARY HOME (WANDSWORTH).

November 25th and 26th.

The numbers in the house are 194. The general state of the Institution is much the same as at my former visits; that is, in every respect satisfactory. The School has sustained a loss in Mr. Knowles, who was an able and assiduous teacher. Mr. Turner, however, who occupies the place *pro tempore*, seems to me thoroughly acquainted with School duties, and his teaching is very sensible, and well calculated to interest the Boys and exercise their minds. Mr. Search, recently appointed Second Assistant Master, is a useful and efficient teacher of the Junior Boys.

A. R. GRANT.

APPENDIX C.

SIR, *National Debt Office, 3rd March*, 1870.

AGREEABLY to your request, I have prepared the customary annual valuation of the Liabilities and Assets of the Patriotic Fund at the close of the past year, 1869.

In commencing to deal with this subject, it has been usual, with a view to a clear comprehension of the burthens sustained by the Fund, to bring to recollection the circumstance that the charges on the Institution fall under three principal heads. There are, first, Pensions to Widows; secondly, a temporary yearly provision for Children; and thirdly, a temporary annual outlay for miscellaneous purposes, combined with certain charges for management. These outgoings constitute respectively the three main branches of expenditure.

The charge laid on the Fund by the Pensions granted to Widows grows out of the following elements:

The number of Widows of Non-commissioned and Petty Officers, Private Soldiers, and Seamen which has been placed on the books from the commencement is			3,730
Of these persons there have died		524	
And have been removed from the list	351		
Less three who have been readmitted	98		
Leaving a balance of		253	
So that the dead and removed form a total of			777
Leaving upon the List as annuitants			2,953
Of this number there have remarried, and been placed upon a moiety of the Pension		2,038	
But out of this remarried portion there have been replaced on the Full Pension, Widows whose second husbands have died	267		
Which number was subsequently reduced by Widows who remarried for the third time	97		
The number replaced on the Full Pension being		170	
And the number on the Half Pension List			1,868
The remainder of the whole List being the number of Widows now drawing the Full Pension, viz.			1,085
The yearly charge for the 1085 Widows, at £14 each, will be			£15,190
The yearly charge for the 1868 remarried, at £7 each			13,076
	2,953		
And the whole yearly charge for 2953 Widows			£28,266

It was established in the Report for last year, from computations grounded on information of a precise character, that the probable mean age of the Widows on the Full Pension List might fairly be taken at 45½ years, and the average age of the remarried at 41½ years. As not more than 10 Widows have been placed on the list during the past twelvemonths, and as only 24 Widows have remarried, the effect of these immaterial alterations will be inappreciable on the general question. The medium age of the females on either list may therefore be safely assumed to have advanced merely one year; and the average age of the Widows may be now placed at 46½ years, and the mean age of the remarried at 42½ years.

The rate of remarriage from the the list of Widows may, as previously, be estimated at four per cent. over the whole duration of Widowhood.

The number of Officers' Widows placed, from the commencement, on the Pension List has been			202
There have died (of whom two were remarried Ladies)		23	
And there are no longer in receipt of the Pension		9	
There have remarried	28		
Of whom, as above mentioned, there have died	2		
There remain therefore of remarried	26		
But of these draw Half Pensions only	20		
The balance being no longer on the Pension List	—	6	
The total withdrawn therefore is		—	38
And there are in receipt of Allowances			164
Of whom are on a Moiety of the Pension			20
The remaining number being on the Full Pension, viz.			144

From the information available for the purposes of last year's valuation, it was deduced that the probable mean age of the Officers' Widows on 31st of December, 1868, was 48 years, and that the average age of the remarried Ladies was 41 years. As there have been no additions to the Pension List during the past twelvemonths, and as the removals have been limited to two deaths, it is hardly possible that the mean age of the widowed Ladies can have been affected otherwise than by the increase of one twelvemonth; neither is it probable that the average age of the remarried Ladies requires alteration further than an addition to the same extent. In the present investigation, therefore, the average age of the Widows will be taken at 49 years, and the probable mean age of the remarried Ladies at 42.

The annual charge for the Full Pensions of £38 10s. each drawn by the 144 Officers' Widows accordingly is	£5,544
And for the Half Pensions drawn by the 20 remarried	385
The whole annual charge for 164 Officers' Widows	£5,929
To this charge per annum of	£5,929
There falls to be added the annual charge for the 2,953 other Widows and remarried females, viz.	28,266
And the total shows the whole yearly charge in respect of 3,117 Widows, which forms the first of the three principal heads of Expenditure	£34,195

The annual charge sustained by the Fund on account of the Orphan Children next offers itself for consideration.

The number of Children which have been placed on the books up to the 31st December, 1869, is			5,007
There have died	595		
And allowances have been discontinued to	3,100		
There have consequently ceased to be chargeable		—	3,695
And allowances continue to be granted to			1,312
Of these there are in Boarding Institutions	219		
And in the Royal Victoria Asylum	151		
Total		—	370
The remainder are chargeable on the Fund, at the rate of £5 16s. per annum each			942

The 219 Children placed in the Boarding Institutions are chargeable at the rate of £17 10s. each.

The yearly charge for the 942 Children, at £5 16s. each, will be	£5,463
And the yearly charge for the 219 Children, at £17 10s. each, is	3,832
The yearly charge for the 1,161 Children in this branch of the Fund being	£9,295
But, in addition to these, there are 300 Children provided for as Special Cases, at £17 10s. each, causing an annual charge of	5,250
The whole yearly charge for 1,461 Children, Orphans of Non-commissioned Officers, Petty Officers, Soldiers, and Seamen, being	£14,545

A further provision for 222 Children of Officers, at the average rate of £19 per annum for each Child, comes next into account, and to this must be added a provision at the rate of £25 for each Child, for 42 Officers' Children considered as Special Cases.

The annual charge for the 222 Officers' Children is	£4,218
And the further charge for the 42 Special Cases	1,050
The annual charge for the 264 Officers' Children is	5,268
When with this is combined the yearly charge for the 1,461 Children as above mentioned, namely	14,545
The annual charge for the grand total of 1,725 Children, exclusive of the 151 sheltered in the Royal Victoria Asylum, is	£19,813

During the past year 304 Children have been removed from the lists. As 10 only of these were taken off by death, and as not more than 15 have been put on the General Pension List, the age of the Children now on the books has probably advanced by one year and no more. The distribution at each age of the Children now on the ordinary annual allowance, and of the Children in the Boarding Institutions, has accordingly been assumed to be in conformity with the grouping adopted as prevailing in the valuation for the previous year. And reference has been had to similar considerations in respect of the provision made for the Children of Officers. The large influx of Orphans taken on as Special Cases during the last year has, however, rendered an estimate of the probable mean age of this particular class a matter of less certainty. But the nearest approximation with regard to this point of which circumstances will allow has been attempted.

The adoption of some such course has been indispensable to the completion of the valuations connected with this, the second principal branch of charge.

The third channel of expenditure consists in great part of a temporary outlay for outfits, relief in sickness, and of allowances on other grounds, for miscellaneous purposes. This charge, as on previous occasions, is estimated as forming altgether an outgoing of £5,000 per annum. One half of this annual outlay will probably have a duration of nine years; the other moiety, which more particularly concerns the provision for the Children, will speedily diminish with the decrease of the burthens entailed by this branch of liability. In addition to this disbursement there is the yearly expense of management, which is placed at present at £2,560. In progress of time this also will undoubtedly be subject to decrease; but, for the present, the combined outgoing for general purposes and management are assumed to entail an annual charge of £7,560.

The three branches of charge when brought together are found to be as follows:—

1st. The charge on account of Widows and remarried Females	£34,195
2nd. The charge on account of the Orphan Children	19,813
Widows and Children	54,008
3rd. The charge for miscellaneous purposes and management	7,560
The total annual charge being	£61,568

The resources of which the Patriotic Fund is in possession to support the above-mentioned burthen call at this stage of the investigation for enumeration. Terminable Annuities to the amount of £32,478 per annum, together with £2,031 of Terminable Dividends expiring at various periods, form one principal Asset of the Institution. The remaining Assets consist of Annuities, bringing in £20,282 per annum in perpetuities. The aggregate income, Terminable and Perpetual, is £54,791 per annum. The investments possessed by the Commissioners may be classed as follows, namely, Government securities, securities guaranteed by the State, and Railway Stock and Debentures.

With the exception of a small amount of 3 per Cent. Consols, which has been valued at a price of £90 money for each £100 stock, the whole of the securities above mentioned are valued upon the ground that the rate of interest which will control permanently the financial operations of this Fund will always continue to be 4 per cent. Accordingly, those securities which return exactly 4 per cent. per annum, and no more, are valued at par. The excess of interest beyond 4 per cent. is viewed as a terminable annuity, of which the duration will not exceed the guarantee of any higher rate. On this basis of interest, also, the future liabilities have been valued, and thrown into the shape of their present worth in capital.

Adhering to these principles, and to the laws of mortality which have been made use of on former occasions of the same nature, the present values of the liabilities for Pensions, allowances, and other expenses, have been placed in the balance against the present worth in capital of the various terminable and perpetual securities of which the Fund is in possession.

The result of this process discloses the surplus, which, subject to a proper reserve, remains at disposal for further purposes.

On the 31st December, 1869, the assets of the Fund were found to consist of securities worth in money	£773,512
And the liabilities of the Fund at the same date were found to be worth a sum of	607,552
The balance therefore presents a surplus of	£165,960

The proper reserve of capital for a safeguard being fixed on the principle which has heretofore been recommended at 10 per cent. of the amount of the liability, the fund which appears to be necessary for security is equal to a sum of £60,755.

There will, accordingly, be available for ulterior general purposes a net surplus of £105,205.

The account which shows the probable balances between income and expenditure in each future year, up to the year 1900, is appended to the present Report. It has already been mentioned on more than one occasion that this table should be viewed merely as a general estimate of the probable gradual decrease of the future annual charge, under the influence of the mortality of the persons in receipt of the Pensions and allowances.

The decrease of the yearly income, through the expiration from time to time of portions of the terminable annuities, is also set forth. Perfect accuracy in respect of the surplus or deficiency in each particular year is not professed.

The estimate, indeed, is presented as nothing more than a general sketch of the probable progress of the engagements and resources of the Fund.

I have the honour to be,
Sir,
Your very faithful Servant,

W. H. Mugford, Esq.,
Secretary to the Royal Commission Patriotic Fund.

ALEXANDER GLEN FINLAISON,
Actuary of the National Debt.

1st January, 1870.

MEMORANDUM of PARTICULARS on which the STATEMENT of the probable future CHARGE and INCOME is founded.

CHARGE.

Temporary Charge for	1,085 Widows, at £14 per annum each		£15,190	
Abate for Remarriage	commencing with 4 per cent.		608	
			£14,582

APPENDIX D.

SIR, *National Debt Office, 21st February*, 1870.

I HAVE the honour to acknowledge the receipt of your letter of the 20th ultimo, containing a request that I should acquaint you, for the information of the Executive and Finance Committee of the Royal Commission of the Patriotic Fund, with the annual sums, and the capital amount which would probably be required to provide for the Orphans of the Officers and Men who have fallen in action in other wars than the late Russian War; such provision being made on the principles which hitherto have usually controlled the grant of allowances. And, in order to assist in the formation of satisfactory deductions on the subject, certain returns obtained from the War Office, in respect of the losses incurred in the military operations above alluded to, together with other documents relating to the mortality of the Naval Force, have been placed at my disposal, as a basis for the desired estimates.

These papers, accordingly, have been taken into careful consideration, and have led to the conclusions which I have now the honour to submit on the matter in question.

From the returns of the men killed in action, or who died of their wounds, in the Bengal, China, and New Zealand Military Commands, it appears that the amount of the loss was 315 men. It has further transpired, from communications received from the various regiments in which the casualties in question took place, that particulars relating to 281 of the 315 men were obtainable; and that, as far as was officially known to the authorities in command of those regiments, not more than 24 of the 281 soldiers who had fallen in battle were married men. Again, as regards the families left by these 24 married soldiers, the most careful inquiry has failed to ascertain that they consisted altogether of more than 23 Children, and it was found that of these Orphans eight had passed beyond the age for the receipt of allowances.

The qualified Children of the 281 men killed in action in the military service, during the wars to which the inquiry is confined, resolve themselves therefore into 15 Orphans merely, of whom nine are Boys, and six are Girls.

But it should be observed that these facts result from the information supplied in respect of 281 men only, out of the 315 included in the War Office returns. Assuming that similar proportions would attach to the results derivable from the whole body of 315 men, to those disclosed by the facts given for the 281 men, it follows that, in respect of the whole loss, there will be found 288 unmarried men, and 27 married, with 10 Orphan Boys and seven Orphan Girls, qualified for the receipt of the usual allowances.

The limits of the claims on the bounty of the Patriotic Fund, which are likely to arise on behalf of the Orphan Children left by the married soldiers of the above-mentioned body of 315 men, are however by no means restricted to the foregoing results. It is possible—and indeed more than probable—that the information derived from the references to the head-quarters of the various regiments concerned in the inquiry is supplied merely in respect of those cases in which the marriage of the soldier was assented to by the Officer in command, and was therefore officially recognised by the regimental authorities. Marriages which are *not* within the official cognisance of the Commanding Officer are known however to frequently subsist, although it is difficult to say in what proportion. The proportion may vary perhaps with the composition of the Corps, and with the nature of the quarter in which the regiment may have been stationed. The means of forming an estimate are therefore somewhat vague, although not perhaps utterly wanting.

For instance, on throwing the proportion found in the returns, of the unmarried to the married, into the form of a percentage, it will be discovered that among each 100 men who fell, there were 91 single and nine recognised as married. If then it were to be assumed that the *non*-recognised marriages in a regiment about equalled the officially admitted unions, the percentage of the married of both classes would be 18 in every 100 men serving. This amount, which is nearly one-fifth, does not seem to be small, even granting the improvidence commonly attributed to the class of persons from which such unions would spring. The deterrent circumstances attendant, at the best, on the life of a soldier's wife in a marching regiment are, when fully summed up, very considerable. Nor, on the other hand, does it follow that in placing the marriages at the above amount, every legitimate claim arising therefrom would be preferred, without exception. Everything considered, therefore, it does appear to me that the maximum of claims, as regards the Orphans of the Military who were killed in the wars at present referred to, will be provided for, if it be assumed that the Orphans of the unrecognised marriages are taken to equal in number those which are known to have sprung from the officially sanctioned unions in wedlock. This proposition will not entail, at the outside, the necessity of a provision for more than 34 Children of the Military.

The claims likely to be preferred on behalf of the Orphans of those sailors who fell in action during the wars already mentioned now also require attention in their turn. But the means of forming an accurate judgment on this point are extremely scanty. The Statistical Abstracts of the Health of the Navy afford valuable information on the general Sanitary condition of the Naval force employed afloat during the last 12 or 13 years, and particularly in reference to the deaths caused by violence. And it certainly is distressing to see the very large proportion of deaths brought about by casualties proper only to the seafaring life. Drowning and falls from aloft account for nearly sixty per cent. of the deaths from injury. It is possible that any such casualties in the course of service in the presence of the enemy might be reckoned in with deaths from wounds received by stroke of sword or artillery. But, in respect of the deaths in action, the loss of the Naval Force stated in the only return available for reference is absolutely trivial. Out of 5080 men employed on the China Station, from Midsummer 1864 to Midsummer 1865, 24 only fell by the hands of the enemy. This is at the rate of 47 per 10,000 men, and not one half per cent. In the four years ending with Midsummer

1868, the whole number which fell in action was 35; and if the percentage of married men out of those slain were similar to that found in the Army for both classes of marriages, there would be about six or seven only of the 35 men who could be counted as married, and as leaving perhaps four qualified Orphans. Some addition might possibly be made to this Estimate, as the sailor, from a variety of circumstances, is a married man in probably a greater number of instances than the soldier. But, looking at the much smaller number of casualties in war which absolutely fell to the share of the Naval Service, from the fact of their having had but few opportunities of being brought into the presence of the enemy, it will be a very full estimate which will place the number of the Orphans of the sailors killed in action at a moiety of those which were left by the Military; namely, at 17, all told.

Under these circumstances, it is not probable that claims on behalf of the Children of the men who, in either service, fell in action will be preferred in favour of more than 51 Orphans, at the outside.

It has been computed above, that a charge in respect of 17 Orphan Children of the recognised marriages among the 315 Non-Commissioned Officers and Men who were killed in action would probably be established on positive information. On reference to last year's Report, for 1869, on the condition of the Patriotic Fund, it will also be seen that 1418 Children of the Non-Commissioned Officers, Petty Officers, Soldiers and Seamen, entailed on the Fund an annual charge of £11,734. The charge for each Child was therefore at the rate of £8 5*s.* 6*d.* per annum, and the yearly charge for 17 Children would consequently amount to £140 13*s.* 6*d.*

When this yearly charge—which is only temporary—until the Children respectively attain the age of 16 years—is valued as far as it affects the above-mentioned 17 Children, its worth in Capital is found to be £665 8*s.* But it has been already estimated that there are 17 other Children who will be chargeable in respect of the unrecognised marriages; and, again, 17 more Children besides, in regard of the Naval Service; all of whom are situated in precisely the same circumstances. The whole charge for the 51 Children will therefore be equal to a sum of £422 0*s.* 6*d.* per annum; and the worth in Capital of this aggregate liability will amount to a sum of £1,996 4*s.*

The Estimate for the probable charge on account of the Orphan Children of Officers will rest on much more precise information. From the returns supplied it appears that in the Wars now in question there was sustained a loss of 15 Officers, of whom one only was unmarried. The Orphan families of these gentlemen consisted of 39 Children altogether, that is to say, of 17 Boys and 22 Girls. But two of these young ladies had passed beyond the age qualifying for the receipt of allowances; so that a charge for 17 Boys, and 20 Girls only, is to be anticipated. This charge is likely to continue in the case of the Boys until the age of 18; and in respect of the Girls until the age of 21.

In the valuation of the pecuniary state of the Fund last year, viz., as at 1st January, 1869, the yearly charge for 237 Children of Officers was placed at	£4,503
And for 40 other Children of Officers at	1,000
And for the 277 Children altogether, per annum, at	£5,503

The medium charge for each Child was consequently about £19 17*s.* 4*d.* per annum. The yearly charge for 17 Boys would therefore amount to a sum of £337 14*s.* 8*d.*; and the annual charge for the 20 Girls to £397 6*s.* 8*d.* The whole charge on this account being £735 1*s.* 4*d.* per annum.

	£	*s.*
Valued in Capital, at the present ages of the Children, the rate of interest, as hitherto has been customary, being taken at 4 per cent. per annum, the present value of the temporary charge for them until the age of 18 is	2239	7
And the present value of the same for the Girls until they are 21 years of age is .	3505	5
The total present value in Capital	£5,744	12

The aggregate annual charge, and its value in Capital, on account of the Orphans of both Officers and Men, killed in action in Wars other than the late Russian War, will therefore be as follows:

	£	*s.*	*d.*		£	*s.*	*d.*
Annual charge for Orphans of Officers	735	1	4	Value in Capital . .	5,744	12	0
Of Non-Commissioned Officers, Petty Officers, and Men . .	422	0	6	,,	1,996	4	0
Total annual Charge . . .	£1,157	1	10	Total present value . .	£7,740	16	0

Or, in round numbers, a yearly charge of £1,157—which is valued at £7,741—in Capital.

I remain,
Sir,
Your very faithful Servant,
ALEXANDER G. FINLAISON,
Actuary of the National Debt.

W. H. Mugford, Esq.,
&c. &c. &c.

APPENDIX E.—*continued.*

London, 14th March, 1870.

SIR,

THE Committee of the Patriotic Fund having been pleased to request, through their Secretary, that I should undertake the examination and audit of the Accounts of the Royal Commission for the six monthly periods of the years 1867, 1868, and 1869, I beg leave, on the completion of that duty, to submit the following Report:—

The Committee are aware that by far the greater portion of the expenditure consists of payments by Staff-Officers, at home and abroad, for Pensions and Allowances of various descriptions to or for Widows and Orphans, under general regulations, and frequently under the special sanction of your Committee, to whom the Staff-Officers render quarterly accounts, which undergo a rigid examination before being finally admitted; and the monies for these payments are provided to the War Office through issues from the Paymaster-General of large sums derived from the funds of the Patriotic Commission in the custody of that Officer.

And in many instances of no Staff-Officers being available, the service has hitherto been conducted by Clergymen and other Agents, whose payments are similarly regulated and checked, such Agents being provided with funds by means of Orders on the Paymaster-General, and made accountable for any balances remaining in their hands at the close of each quarter.

With regard, however, to this class of accounts, it has lately been found practicable to dispense for the future, in most cases, with the assistance of Agents, by inducing the Staff-Officers of the nearest localities to undertake the duties hitherto devolving on those Agents, the funds for which would then, of course, be provided also through the War Office.

The efficiency of the check established in the Office of the Patriotic Commission as a guard against any undue claim or possible over-payment to any of the countless number of recipients of Pensions or Allowances appears to be amply secured by the separate and distinct entries in a "Relief Book," against the names of all claimants, by means of which any wrong payment is readily detected; and the work thus carried on in the Office may be deemed a complete and effectual examination and audit of the several quarterly accounts of the Staff-Officers and other Agents; and it is to be borne in mind that no one in the Office of the Commission can have the slightest connection with these cash transactions.

It seems, therefore, obvious to me that, as regards the services I have described, my duty was chiefly limited to verifying the correctness of the amounts as introduced in the abstracts of expenditure accompanying the general accounts.

Independently, however, of the payments through Staff-Officers and Agents, it was found necessary, in many instances, to make small payments at the Office of the Commission, which was done in the following manner:—

The Clerk whose duty it was to make the payments, delivered to the Cashier a slip of paper containing the name of the recipient, and the sum required. But it was found in some cases that Mr. Harvey, one of the Clerks, after obtaining the money from the Cashier, did not transmit it to the claimant, but appropriated the money to his own use. These misapplications amount in the aggregate to £107 14*s.* for the period from January, 1867, the first account which came under my examination, to February, 1868, when the defalcations were detected.

6 mo. to June 1867:	£22 0 0
6 mo. to Dec. 1867:	£46 14 0
3 mo. to March 1868:	£39 0 0
	£107 14 0

This deficiency was duly reported by your Secretary to the Committee as soon as it was discovered, and having satisfied myself that every means were resorted to, however ineffectually, to recover the defrauded amount, and that the recurrence of such frauds is now obviated by the discontinuance of all such payments at the Office of the Commission, they being now effected by orders on the Paymaster-General in favour of the person representing the claimant, and that the sums obtained and withheld by Mr. Harvey are proved by the production to me of his slips to the Cashier in acknowledgment of the monies which thus came to his hands, I have ventured to admit the deficiency in question to the credit of the accounts, subject to your approbation.

With the exception above adverted to, I deem it incumbent upon me, in concluding this Report, to bear testimony to the correctness of the accounts referred for my examination, having had opportunities of testing them by consulting the "Relief Book," and all other records in the Office of the

Commission, which have been readily placed at my disposal. I must also bear witness to the thoroughly practical knowledge which your Secretary possesses of every branch of the Service, and which has enabled him on every occasion to satisfy the frequent inquiries I have had to make in the course of my investigation.

I have the honour to be,
Sir,
Your very obedient Servant,
WM. ANDOE.

P.S.—I have been further requested to examine into the defalcations for the period anterior to 1867; and this shall be attended to as soon as possible.

The Chairman of the
Committee of the Patriotic Fund.

APPENDIX	39

REPORT.

The Committee appointed by the Admiralty and the Board of Trade to hold an inquiry into the working of the Royal Naval Reserve Regulations have the honour to report as follows :

We find that, from the date of its establishment in 1860, the obtaining candidates for enrolment, the duties relating to enrolling, and re-enrolling the men, keeping the records of all their services, the payment of retainers and their travelling expenses to drill are undertaken by the Board of Trade, while the duties relating to the examination of candidates for entry in the Reserve, their drill, and the payment of drill pay, and their travelling expenses from drill are undertaken by the Admiralty. Division of duties.

As an arrangement for creating a Reserve from the Mercantile Marine, this method was probably the best that could have been adopted, but notwithstanding the evidence we have collected on the subject, we are unable to decide whether it is desirable to continue the present arrangement, or whether it might not be undertaken by one department. We therefore submit the evidence upon this point for the consideration and decision of the Admiralty and the Board of Trade. Evidence submitted.

With regard to the existing regulations for the Reserve, the conclusions at which the Committee have arrived are:—

Recommendations.

Qualifications for the Reserve.

We recommend that the standard height should be definitely fixed at 5 feet 5 inches : and that the latter part of Art. 3. of the regulations should be omitted, as it has been found to lead to the admission of inferior men into the Force. Height to be 5 ft. 5 in.

We also recommend that no man although a British subject shall be admitted into the service who cannot speak and understand the English language. Must speak English.

Art. 5. should be altered so as to make a candidate who has not been serving at sea within the last six months ineligible for entry in the service.

It has been discovered that in some cases a continuous service man instead of re-entering the navy, at the expiration of his first ten years' engagement, has obtained his discharge with the object of entering the Reserve, when he would take 28 days drill and receive his drill pay of 4*l.* 4*s.* and three months retainer of 1*l.* 10*s.* He will then re-enter the Navy within six weeks of his discharge, which will entitle him to the back time and pay from the Navy and his discharge from the Reserve. If Seamen from the Navy enter for one month, and then rejoin the Navy.

To prevent this in future it appears to the Committee that if a man re-enter the Navy under such circumstances, he should be required to re-fund the pay and retainer obtained from the Reserve. Should refund pay and retainer received from Reserve.

Enrolment.

According to present regulations a man may be enrolled after examination by a chief boatman in charge of a station and a civil medical practitioner. We recommend that all such examinations should in future be considered as provisional only, entitling the applicant to have his expenses paid to, and from, the nearest drill or district ship, or other suitable place, for the purpose of being examined by an officer not under the rank of Commander and a Naval Surgeon. It is hoped that this will have the effect of preventing improper entries of men. Candidates. Should be examined by a Naval Commander and a Naval Surgeon.

Special arrangements would however have to be made to meet the cases of men residing at distant ports, such as Lerwick in the Shetland Isles. Exceptions.

Employment and whereabouts.

A Naval Reserve man is required to obtain special leave before proceeding on a foreign voyage which is likely to exceed six months duration. This leave is given when drill has been performed for the current year, and where all the ports at which the ship is to touch are specified in the agreement, or where, if they are not specified, the voyage is limited to one year. Leave of absence. When given.

Proposed not to exceed one year.

It has been found that the agreements of ships have been so worded as practically to evade this restriction; and we therefore recommend that paragraph 46 (*b.*) should be omitted, and that leave should be granted, subject to the condition that the necessary drill is performed and that the leave is given for a period not exceeding 12 months duration, in the ship, and for the voyage named.

Reports.

Art. 66 directs all the Registrars to send daily reports to the Registrar General. Returns are also sent daily from all the drill and district ships to the Registrar General, who prepares and transmits returns daily to the Admiralty, and Board of Trade, and the Coast Guard. Other returns are also sent monthly and quarterly to the Admiralty, the Accountant General of the Navy, and the Coast Guard Department. We are informed that the daily returns made to the Registrar General are necessary; but we believe that monthly returns to the Admiralty and the other departments would meet the requirements of the service.

Training.

Drill to precede retainer.

Art. 71 provides that no drill will be required during the broken period of the first quarter's enrolment, so that a man becomes entitled to five quarterly retainers on account of four quarters' drill. We do not see any necessity for this, and we recommend that if a retainer for the broken quarter be paid, drill for that quarter should be performed.

Proportions of quarter only to be paid.

But the annual retainer is at the rate of 10*s.* a month; and if a man be entered during the second or third months of the quarter, we consider he should only be paid one or two months retainer, as is directed to be done by Art. 138 *f.* when Reserve men enter the Royal Navy.

Wages during sickness, when not to be paid.

It has been found in some cases, that Art. 79. authorizing payment of drill pay during the time a Reserve man may be absent, on account of sickness caused by drill, has led to abuses; and we recommend that payment to a man when absent from drill should be limited to cases arising from accident or hurt, during drill.

Objection to seven days' drill.

All the evidence we have taken on the subject tends to show that the permission given for men to take the 28 days' drill, required annually, in periods of seven days at a time, not only leads to unnecessary expense, but prevents those men who take advantage of the permission from ever advancing in their drills.

Arrangements proposed.

We therefore beg leave to suggest that all future enrolments should be made subject to the regulation that the first year's drill should be taken in twenty-eight consecutive days, and subsequently for periods of not less than fourteen days.

As an encouragement to men to take twenty-eight days consecutive drill, authority might be given to pay the retainer for the current quarter on completion of the drill, instead of waiting until the end of the quarter.

Some of the best men of the Reserve are those who are employed in the India, China, and other foreign trades. The rule which requires the month's drill to be performed within the year it is due frequently presses hard upon these men, as should their ship be ready for sea before they have taken their drill, they either lose their employment by staying at home to perform their drill, or if they go in their ship the drill is neglected.

To meet such cases we think special permission might be granted to such men to commence their drill in the month previous to the year for which it is due.

Batteries.

Some batteries might be closed.

It is desirable that the batteries at which only a few men are drilled should be closed, and the men be sent to the nearest drill ship for their exercise.

This would be a measure of economy, and at the same time tend to make the men more efficient in their drills.

Trained Men.

Badge for trained men might be given to them.

It appears that the men do not value the privilege of being allowed to wear in their caps an anchor in scarlet cloth, as a distinctive mark of their showing superior qualifications in drill; and, inasmuch, as in order to wear it they have to purchase it themselves, it is, in fact, rarely worn. The Committee are of opinion that this mark of distinction (the cost of which is trifling) might be given gratuitously to the men on their becoming trained men.

Prizes.

The Committee had hoped to be able to recommmend for consideration a scheme for awarding annually small money prizes to a limited number of Naval Reserve men, who during their course of 28 days' drill on board one of Her Majesty's sea-going ships had shown the most marked proficiency in their drills. There are, however, difficulties at present in the way which will prevent such a plan being successfully carried with effect. (See Appendix No. 2.)

Uniform.

The only uniform directed to be worn by men of the Reserve is the cap (Art. 102.), and they are to be "persuaded if possible" to appear in dark blue clothing.

Wearing uniform should not be optional,

It is generally admitted that the wearing of uniform is conducive to discipline; but it is found that when officers endeavour to persuade men to wear it, and they decline to comply, the effect is rather subversive of discipline, so that it becomes a question, so long as the men are to have a voice in the matter, whether it is desirable for officers to interfere as directed in the article above quoted.

but compulsory.

We would, however, suggest that the order to appear for drill, or service, in the uniform cap and a suit of blue clothing should be compulsory, and that arrangements should be made for their being supplied with it, when they require it, at the Government Contract price.

Discipline while on drill.

Part of Art. 108 to be omitted.

The feeling is general among officers who have had much experience of the Reserve, that it is desirable to omit that part of Art. 108 which directs officers to act in such a way as may best conciliate the feelings of Merchant seamen.

It appears to be the opinion of officers that however desirable such directions might be in the form of a circular order for their guidance, that advantage is taken by men who read the instructions and observe that their feelings are to be conciliated; so that they are careless of acquiring discipline or man-of-war habits.

We beg to recommend this opinion for favourable consideration.

Punishment for misconduct while at drill.

The punishments laid down in Art. 109 for absence without leave, while at drill, are more severe, and less summary than could be desired.

In all cases of absence without leave we recommend forfeiture of the time and pay due for such part of the week's drill as may have been performed.

This will be sufficient in most instances, without having recourse to those punishments which will remain applicable to cases of grave misconduct.

Retirement and Discharge from the Reserve.

Art. 169 requires amendment.

By Art. 169 the Government is pledged never to discharge a man, without his own consent, except for misconduct or physical inability to serve.

The Committee cannot see any good grounds for this being continued, and they think it desirable for the Admiralty to reserve the power of declining to re-enter men at the expiration of each 5 years' engagement, as the men themselves are free to re-engage or not as they see fit.

Examination prior to re-enrolment.

Art. 176 should be altered so as to make an examination in gunnery requisite, and an examination before a Naval Surgeon; power being reserved to decline to re-engage men who have made no advancement in their drills.

Future qualification for Coast Guard.

By Art. 194, after 10 years' service in the Reserve (or 7 years in the Reserve and 2 years in the Navy when called out by Proclamation), men are eligible for the Coast Guard. If service in the Reserve is to render a seaman eligible for the Coast Guard, it appears desirable that he should have to serve at least as long as he would have to in the Royal Navy, which is 12 years, 9 of which must be continuous service.

The fact of service in the Reserve being, by the above Regulation, estimated at the higher value, appears to the Committee to give some ground for expressions of discontent among seamen in the Royal Navy.

At present only trained men are received into the Coast Guard from the Royal Navy, and we are of opinion that only trained men of the Reserve should be considered eligible.

Greenwich Hospital.

The Committee are of opinion that Art. 196, which enacts that men who have been in the Reserve 10 years will be eligible for the benefits of Greenwich Hospital, should be reconsidered, as recent legislation has altogether altered the constitution of Greenwich Hospital, and the conditions under which men are admitted to its benefits. It appears therefore to the Committee that under the circumstances of the case the benefits of Greenwich Hospital should not be extended to men who may in future enrol in the Reserve.

2d class Reserve.

Qualifications for.

As with the modern armament more skill, time, and attention are required than was the case when the Force was created, and as it is desirable to train the Reserve men in stricter habits of discipline, we are of opinion that it would be desirable to establish a 2d class Reserve, consisting of young seafaring men not above 20 years of age at the

time of entry, who should take 28 days consecutive drill, live on board a district ship while being drilled, wear an established uniform, and be rated and paid as ordinary seamen, with a retainer of 3*l.*, and a suit of uniform the first year, and 4*l.*, per annum afterwards, but providing their own uniform; and to be eligible for the 1st class Reserve when able seamen, provided they were not at the time above 25 years of age, and provided they could pass a suitable examination in gunnery.

Enrolment under existing regulations to cease.

Should this proposal meet with approval, enrolment under the existing regulations might cease, except with regard to men who have continuous service of ten years in the Royal Navy, and whose conduct on quitting it has been good.

Concluding paragraph.

Object of Naval Reserve.

The special object of the Naval Reserve, as laid down in Art. 68, is to obtain the services of a picked body of able seamen trained to the use of arms, but we are sorry to have to state our conviction that there are some inferior men who were enrolled in the earlier days of the Reserve who never should have been admitted; and we are of opinion that every order which can be given with a view to removing such men, and preventing the entry of others like them, will have the effect of improving the efficiency of the Force.

Admiralty, 6th January 1870.

GEORGE O. WILLES,
Captain Royal Navy.

JOHN J. MAYO,
Registrar General of Seamen.

GEORGE P. MARTIN,
Secretary.

MINUTES OF EVIDENCE

TAKEN BEFORE

OFFICERS APPOINTED BY THE BOARD OF TRADE

TO INQUIRE INTO THE

REGULATIONS FOR THE MAINTENANCE OF THE ROYAL NAVAL RESERVE,

AT THE ADMIRALTY, WHITEHALL.

Tuesday, 9th November 1869.

MR. ALFRED WHITEHOUSE called in.

1. (*Captain Willes, R.N.*) You are a Paymaster in the Royal Navy?—Yes.

2. Have you been for some time employed at the Admiralty and in the late Coast Guard office on service connected with the Royal Naval Reserve?—Yes; about six years.

3. After that experience are you prepared to point out any defects in the organization?—Yes. I think it might materially assist you in your inquiry if I stated what occurs to me as the weak points in the regulations. If you will refer to clause 2, page 1: with regard to this clause the Reserve may be enrolled by officers of the coastguard; it has been the custom to enter them all round the coast at a distance from the ships, and in some cases by officers as low as chief boatmen. Many men practically have been admitted into the force who, I think, if examined on board a district ship would have been rejected. Therefore, I would suggest that men should be entered in the following manner: If a man presents himself before a coastguard officer, such officer should, if he considers the candidate desirable, authorize his proceeding to a district ship. If the man is accepted he should be expected to take at least 14 days drill, commencing from the date of enrolment.

4. (*Mr. Mayo.*) The examination of these men in seamanship is conducted by a naval officer?—Yes, as I have stated, it may be of the rank of chief boatman.

5. But their examination in seamanship is a matter entirely under the control of the Admiralty?—Quite, I imagine.

6. And these men who have been admitted, and who prove to be incompetent, have, nevertheless been admitted after an examination by an officer, or a person in the employ of the navy?—Yes.

7. You propose that if one of these subordinate officers considers a candidate efficient or desirable for the naval reserve, he should then send him to the nearest district ship for examination?—Yes.

8. How are the expenses to be paid?—By Government; I think it would be worth while to pay the man's expenses rather than enter an undesirable man and pay him 10*l.* a year for five years.

9. How many district ships are there round the coast?—Nine, at present.

10. (*Captain Willes.*) You may count the drill ships as well.

(*The Witness.*) That would make 17; nine district ships and eight drill ships.

11. (*Mr. Mayo.*) Would it not entail a great deal of delay and inconvenience, unless some other arrangement was made for examining these men?—No, I think not. I think that the advantages given to the reserve men are so great that they should be expected to go to some little trouble if they want to enter the reserve.

12. (*Captain Willes.*) By Article 176 a Naval Reserve man once entered can be re-enrolled for his second and third five years without any examination except by a medical officer?—Exactly so.

13. So that, by Clause 2, which you have spoken of; practically a man who had been entered by a chief boatman of the Coastguard may be thrown on the country for three periods of five years, with a chance of a pension beyond that?—Yes; that examination, as far as seamanship is concerned, is final.

14. Will you tell me what the form in the navy is before a boy can be entered, so as to claim his time and pension, what course is gone through?—He has to be examined before two captains or commanders, and enter into an engagement to serve for ten years from the age of 18 years. It must be observed that in the early years of the Reserve there was an object in getting up the numbers to induce others to join, and most probably men were not so closely examined as they were in future years. Doubts do exist as to the kind of material the Reserve is composed of, and it occurs to me that it would be satisfactory to the Admiralty and to the country if the men are now examined on board a district ship before being re-enrolled.

15. In much the same way as the boys?—Yes. It would, I imagine, be better to grant a small gratuity to any undesirable man, rather than retain him on the register. This seems to me a most important question, and should be considered at once, as the re-enrolment will commence in January next, and instructions should be given to the officers.

16. Do you think it would be advisable to issue an order at once to stop the entry for the third period of five years until this inquiry is finished?—No; but I would issue instructions that no man should be re-enrolled unless he proceeds to a district ship.

17. (*Mr. Mayo.*) Is not the examination of boys for the Navy somewhat different to examining men for entry into the Reserve? You are aware that men for the Reserve must have been five years at sea, one year as an able seaman?—Yes.

18. The boys for the Royal Navy are not even ordinary seamen, they are wanting in the experience which the Naval Reserve men are supposed to possess by the nature of their service at sea, are not the cases somewhat different?—So far that a boy is examined as to what he is likely to make, physically and men-

Mr. A. Whitehouse.

9 Nov. 1869.

tally, whether he is likely to make a good sailor, and Reserve men are examined as to their proficiency in seamanship.

19. (*Captain Willes.*) Is not the reason why we are so particular with our men that the country should not be saddled with broken down and used-up men; are not sickly men on board ship very undesirable?—Yes. The next point is in Clause 3. By that clause men are allowed to be medically examined by surgeons and agents, and in some cases by private practitioners. I do not propose to stop this examination, as the fee is only 2*s.*, and a provisional examination will in many cases prevent men who are unfit being sent to the ship for enrolment, and the Government will be saved the expense for their travelling expenses. But as the medical examination of men is now very important, every candidate should be subject to a medical examination by the surgeon of one of Her Majesty's ships.

20. (*Mr. Mayo.*) Do you consider this medical examination at the time of re-enrolment a matter of great importance?—I think on the occasion of the next re-enrolment it would be of very great importance.

21. You are aware that when a man presents himself for drill, if he is found unfit, physically, for the service he can be dismissed?—In many cases they are not examined, it is only when the officer has any doubt, that they are medically examined.

22. By the Regulations (par. 95.) you will find, "If the medical officer considers a Naval Reserve "man unfit for duty, he will immediately make a "report to the naval officer, who will, if he considers "the incapacity temporary, sanction the Reserve man "returning to his home for the time; if he considers "the incapacity permanent, he will report the "circumstances to the Controller General, who will, "if he thinks it necessary, give directions for the "discharge of the man from the Naval Reserve." So that if a man is enrolled, and he conceals a defect that is found out afterwards, at any successive period when he is examined, he will be dismissed then; so that I do not attach much importance to the medical examination at the time of enrolment?—I attach great importance to the first examination, because when the man afterwards appears for drill he is only examined when the officer has any doubt, and there may be many defects that are not seen except by a medical officer.

23. (*Captain Willes.*) It is a strong measure to reject a man after the medical man has passed him?—

(*The Witness.*) The next will be Article 2. By that article men who have served in the Navy previously are accepted in the Reserve up to the age of 35. It has been remarked that seamen after the age of 40 soon become inactive, and I think it is for consideration whether the age should not be restricted to 30 years. Take a man at the age of 35, allow him to be 15 years in the Reserve, he is then at the age of 50; after 35, possibly 5 years after, he is unfit for work.

24. (*Captain Willes.*) When can a man leave the Navy—he commences at 19?—Yes.

25. Therefore when he has served his 10 years he is 29?—Yes.

26. So that 30 would catch him at 10 years. Therefore when a man serves his 10 years he is under 30. The question is, whether we should suggest that as the age?—I would leave a little margin, say 31.

I think the next will be Article 5. Five years service at sea within the last 10 years, and one year as able seaman. By this Regulation a man might now be enrolled who has not been at sea for the last four or five years.

27. (*Captain Willes.*) Just repeat that?—By this Regulation a man might now be enrolled who has not been at sea for the last four or five years. It is a little flaw in the instructions I think, I do not think that it is so in reality.

28. (*Mr. Mayo.*) That is a point that must be looked into in making any fresh regulations?—(*The Witness.*) I think every candidate should have been at sea within six months previous to enrolment, and the applicant at the time of his entry should be required to state that he intends to follow the sea as his avocation, and if it should appear during any subsequent services in the Reserve that he has not been at sea for a period of two years, he should be conidered ineligible to be retained in the force. The Reserve has been nearly 10 years in existence, and I think it is believed, that is from inquiries I have made, that most of the British seamen of the Mercantile Marine who are qualified by the Regulations have entered the Reserve?—

29. (*Mr. Mayo.*) Yes, that is so.

(*The Witness.*) And we have also a considerable number of men of war's men, so that the force may be considered to be fully established. The object, then, to be desired, is more the efficiency of its present members than to add to the numbers. We shall have occasion to remark on the drill hereafter; but in order to ensure that all future entries in the Reserve are duly qualified seamen, I suggest that candidates should be entered provisionally for one year or longer as a second-class reserve, and be advanced to the first class on passing an examination on board one of the district ships.

30. (*Mr. Mayo.*) In what?—As to his proficiency as a seaman.

31. (*Captain Willes.*) At what age would you take him?—We are coming to that directly. The candidates for the second class should be able seamen or ordinary seamen, from the age of 18 to 25, and have three years service at sea instead of five. They should be required to take 28 days drill at a time on board one of the district ships, and should live on board and perform the ordinary duties of a man of war while in the second class. By this means the force would undergo a process of weeding and clearing out, and none but good men would be retained.

32. (*Mr. Mayo.*) How many of those do you propose having?—That is a question I have not gone into.

33. (*Captain Willes.*) You would stop the present entry?—Yes; every man should enter in the second-class reserve.

(*Mr. Mayo.*) If you require them to serve 28 days on board a man-of-war you would take them away altogether from the mercantile marine for that time?

(*Captain Willes.*) Yes; but if the country pays these men all this a year, we ought to get something out of them.

(*Mr. Mayo.*) But I think you are bound to consider the interests of shipowners.

(*The Witness.*) There should be a smaller retainer, say 2*l.* instead of 6*l.*, and ordinary seamen's pay, instead of able seamen's, instead of 1*s.* 4*d.* a day, 1*s.* a day.

34. (*Captain Willes.*) What about the clothing?—We have not come to that yet. I take up the points as they occur to me in going through the regulations.

The next is Article 69. A number of the Reserve drill entirely at the shore batteries; they see nothing of the routine of a man-of-war, in fact they may never have seen the inside of a war ship, and under such circumstances they cannot be considered efficient in the Naval Reserve; they are not familiar with the routine of a ship. To make the force efficient it is necessary that it should be drilled at the modern guns; but considering that the men have ever since the Reserve has been in existence, been allowed to drill in most cases near their homes it might be considered a hardship to be obliged to leave their families to take their drill. As a medium course I think they might be required to attend 14 days only out of their 28, on board a district ship or drill ship, to be exercised at great guns and naval duties generally; the

other 14 days to be taken at the shore batteries as at present, if preferred, for rifle, pistol, and cutlass exercise.

35. (*Captain Willes.*) Since the establishment of the Naval Reserve, has not the naval gunnery gone through an entire change ?—Yes, I imagine it has.

36. Were you present on board the "Agincourt" during the reserve cruise ?—I was.

37. That ship was armed with the modern guns ?—Yes.

38. Did it not strike you that men entering the Naval Reserve after they had reached mature age, could not possibly learn how to handle those modern guns, with their mechanism, in the time allowed for their present drill ?—I think the men, of course, are not so apt at falling in their places as men who have been regularly trained, and probably the short and broken period which they attend may account for that.

39. The men entered in 1860, with the guns of those days, might they not have learnt in their 28 days' drill, sufficient to be passable gunners ?—Well, that is a question I can hardly answer, any more than I think the 28 days ought to be enough to keep a man up in his drill; and there is no doubt that drilling at the old fashioned guns gave a man a good insight into the exercise; drilling at any gun must do a man good, because he can soon adapt himself to the new.

40. So that the introduction of modern guns has entirely changed the system of drill ?—Yes.

41. (*Mr. Mayo.*) I have no doubt you recollect that application has been made to the Admiralty for modern guns ?—Yes, but there has been a difficulty in providing them, the expense was too great; the expense will be too great to place them round the coast, and the numbers of men who drill at the different batteries are not sufficient to warrant that expense.

42. (*Captain Willes.*) Could you give us in evidence the numbers forming the ship's company of the "Duke of Wellington" ten years ago, and the complement of our largest iron-clad at the present time ?—I think between 1,100 and 1,200 in the old fashioned 1st rate ships, and the "Agincourt" about 700.

43. Therefore we may safely consider that not nearly so many seamen are required for the Reserve now as when it was established ?—I imagine not; it is more efficiency than numbers that I advocate.

44. Are we likely to have vessels of larger complement than 700 in commission ?—I suppose not; on the contrary, more likely to decrease in numbers.

45. (*Mr. Mayo.*) You mean to imply that although the naval defences of the country may be increased, we shall not require so large a number of men in the Reserve in consequence of the improvement of the armament, and also of the building of ships ?—The ships will not require them at present in the proportion of 7 to 11, and the ships of the future are likely to require still less.

The next point is Article 74. This regulation allows men to take their annual drill in periods of seven days. This has been much complained of by the instructors, and I think, as I have before stated, that men should, if possible, take their 28 days' drill at one time; but in no case should a man be allowed to take less than 14 days, until he has qualified as a trained man. Officers when reported efficient are allowed to take seven days' test drill, the same might be extended to trained men. I imagine the men do not attach so much importance to their drill pay as to their retainers, and many men would gladly be excused taking more than seven days' drill; this would effect a very considerable saving in the expenses. The rule for attendance at drill would then stand—

Men in the first year of enrolment	28 days at a time on board a district ship.
After the first year's service, or while in a second-class reserve	Not less than 14 days.
Trained men or first-class-reserve	Seven days' test drill, if they prefer it.

46. (*Mr. Mayo.*) Bearing in mind what you have previously given in evidence, as to the necessity of these men taking more than seven days' drill at a time, do you think that the seven days test drill in the year would be sufficient to secure their efficiency? —That remains for the drilling officer to decide. If pronounced efficient he could be dismissed, and not required to attend any more; if not he would be required to go on for the remainder of his 28 days' drill, or until he was pronounced efficient.

47. That would only extend to trained men, to first-class trained men ?—Yes.

48. Then, in point of fact, his test drill would only be for gunnery, because his seamanship he would pass in when he entered the Reserve ?—Well, probably it would not.

49. Do you propose that the seven days' test drill should be actually seven days, or seven days as interpreted by the 75th clause ?—By the present regulations.

50. That is to say, five entire days and one half day ?—Exactly so.

The next point will be Article 99. Many of the drilling officers whom I have consulted recommend that trained men in the Reserve should be paid 1*d.* a day, as in the Navy. I think that other advantages can be offered as an inducement to qualify, without giving any extra pay. Those men who are qualified as trained men might be promised the rating of leading seamen, or even higher rating in the event of the Reserve being called out.

51. (*Mr. Mayo.*) Do you think it would be wise for the Admiralty to make such a condition with the men as to how they should be employed in the future ?—Yes, I think for a certain number it might be; we should require a certain number of petty officers.

The next is Clause 102. This regulation requires that men should appear for drill in a decent suit of clothing. The cap is the only part of the dress recognized as uniform. Some of the naval officers of the drill ships suggest giving the men a suit of uniform. This, if granted, would come to a very considerable amount, upwards of 30,000*l.*, and I see no reason to recommend it.

52. (*Mr. Mayo.*) I think you are wrong about the amount, it would be about 1*l.* a man.

(*Captain Willes.*) I think it would be about 16,000*l.*

(*The Witness.*) It would come to about 2*l.* a man; you could not get him a decent suit of clothes for less. I would suggest that a uniform dress should be recognized, and left optional with the men to adopt it or not.

53. (*Mr. Mago.*) Is not that the case at present?—No, no recognized uniform.

54. (*Mr. Mayo.*) There is a circular in which it is stated that a uniform has been approved by the Admiralty, but the men are not compelled to wear it.

(*The Witness.*) I do not remember it.

55. (*Mr. Mayo.*) I will get it and let you have a copy.

(*The Witness.*) The next will be 106. The wording of 106 requires some alteration. The meaning of the regulation is, that men who receive an injury, or hurt, caused by the drill, shall receive pay and allowances until cured.

56. (*Mr. Mayo.*) Does it not mean something more than that?—I think not,—we shall come to that presently. The word "allowances" being inserted admit of a wrong interpretation, and many men have in consequence received pay and allowances irregularly; instances of such have come before me which have been paid for lengthened periods, beyond even what is granted in the Navy; we discharge a man off the books after 30 days.

57. This is a matter, of course, for the naval officers?—Well, it is for the naval surgeon.

58. But the naval officer pays?—Yes.

Mr. A. Whitehouse.

9 Nov. 1869.

59. And he pays by the surgeon's certificate, and the surgeon is appointed, or recognized by the Admiralty ?—Yes, that is so, but the surgeon may only be a private practitioner.

60. Under some regulations subsequent to these, each case has to be reported to the Admiralty ?—Yes, the abuses that were discovered led to that regulation.

61. And the Admiralty decide now when a man shall be paid ?—Yes, that is so.

The next will be 119. The men's retainers and travelling expenses in proceeding to drill are paid by the registrars of the Reserve ; whilst the drill pay and travelling expenses of men returning home after drill are paid by naval officers. Payments of this kind being made by officers of two departments must cause additional clerical labour and keeping of accounts. This may be considerably reduced if all the payments for the Reserve could be made by the officers of one department, either of the Board of Trade or the Admiralty. As the payment of retainers is contingent upon the performance of drill, I imagine they should be paid by the naval officers at the same time as the drill pay ; the whole expenses, then, of the Reserve would be incorporated in the paymaster's accounts, and the cost of the Reserve could be easily ascertained.

62. (*Mr. Mayo.*) Are you not aware that the payment of the retainer is dependent upon other circumstances than that of the man taking his drill ? —Yes, but I see no reason why that should not be changed.

63. Changed ?—Yes, that it should be contingent on taking his drill only.

64. Then, in the event of a man committing a breach of the regulations, by proceeding to sea without leave, by deserting, or being discharged abroad, offences for which we stop his retainer, you think that we should not in future—— ?—Oh, no ! That would be an offence for which he would be liable to have it stopped.

65. How could you or the naval officer find out that the man had deserted abroad, or had shipped without leave, without reference to the records in the office of the Registrar General of Seamen ?—Well, his services should be posted up in his R.V.[2].

66. In the case of a man who deserts abroad, there is no record of the services entered in the R.V [2]. ?—Could it not be inserted by the registrar when the man appears before him ?

67. No, because the man deserts. In the case of a man employed by the week, in colliers, and in Home Trade ships, no entries of their services are made in their R.V.[2], because they are not engaged or discharged before a Superintendent of Mercantile Marine ?—Well, I would propose that the Naval Reserve man should report himself every six months to a registrar, and that the registrar should see that he complied with the regulations and note the fact in his book.

68. In what way would you get evidence of a man breaking the Regulations ?—I propose that the registrar should note on a man's Certificate RV[2], that he had complied with the Regulations every six months.

69. The payments are made every three months ?—I propose to pay them differently.

70. How would you meet this case. A man residing in Sunderland is discharged from his ship in London, and he proceeds immediately to Sunderland. The superintendent in London cannot make an entry in the book to the effect that he has performed all the obligations of the Reserve ?—No more can they now.

71. But at the office of the Registrar-General of Seamen that information can be given, and it is only there that it can be obtained ?—The Registrar of Reserve should apply to the office of the Registrar-General of Seamen for it, as he does now in such cases.

72. Then a man should go to some naval officer to get his retainer ?—No, the man should get his retainer when he takes his drill.

73. Do you think that that would save trouble ?—Very considerable trouble, I think, it would be keeping one account instead of two.

74. In what way ? How are two accounts kept now ?—Your registrars keep an account of the retainers paid, and our paymasters keep an account of the monies paid by them.

75. You are aware that these payments are for different purposes ?—Exactly so.

76. Payments made by the registrars are retainers; and the payments made by the drill officers are for the drill pay ?—Quite so.

77. (*Captain Willes.*) Can you explain to me why, when once a Naval Reserve man is properly enrolled in the force, and gets his book, which I think is called RV[2], why he should not afterwards be paid both his retainer and his drill pay by the paymaster of the reserve ship ?—I see no reason against it.

(*Mr. Mayo.*) How many reserve ships are there ?

Captain Willes stated that although the men were virtually paid by the paymasters, they were really paid at 70 places round the coast of the United Kingdom ; at 50 batteries, and about 28 other places.

78. (*Mr. Mayo to the Witness.*) Are you aware of the number of places at which men now receive their retainers ?—I imagine at every port.

79. At every port and at most of the sub-ports ? —Upwards of 200 places round the coast.

80. (*Captain Willes.*) If the Naval Reserve men have 200 places at which they can be paid their retainers, have they not equally the same number of places to be paid their drill pay ?—No, they only pay their drill pay at the batteries. When they take their drill, they are paid their drill-pay, but they should at the same time be paid their retainers.

81. But do you not think, considering the high pay and the great advantages granted to the Reserve man, that we have a right to say to him, you must go a certain distance for your money and take your drill ? —No. I think you are under the impression that the expenses would be very considerable ; but from the number of drill stations the expense would be very trifling compared with the advantages that will be gained.

82. (*Mr. Mayo.*) I think you have recommended that Naval Reserve men should be required to take 28 days' consecutive drill in the year ?—The first year of their engagement only.

83. And in subsequent years they should be urged to take the 28 days' drill ?—No, they should not take under any circumstances less than 14 days, and if possible they should proceed to take the whole of their 28 days.

84. After they had taken their 28 days, would you pay them their 6*l.* for the retainer for the year ?—Yes. It is so practically now with men who return from long voyages ; they receive the whole of their retainers on completing their drill.

85. You would pay the whole of the retainer ?—Yes, if in the second half year, or 3*l.* if in the first half year.

86. Besides their drill pay ?—Yes.

87. In point of fact you would pay them 10*l.* 4*s.* ? —Yes, exactly.

88. Suppose a man entered on the 1st of January he performed his 28 days' drill in January he would be receiving his guinea a week, and at the end of January you would pay him 6*l.* ?—Yes, I see no reason why you should not, or at any rate half his retainer.

89. The object in view in paying the retainer quarterly was to insure a knowledge of the man's whereabouts, and if you make the whole of the payment at the same time that you make a payment for the drill, you would lose all knowledge of the whereabouts of that man for the remaining eleven months ? —He has to report himself.

90. Supposing he does not ? You have paid him, where is your hold upon him ? Virtually you would be paying this man 6*l.* retainer and four guineas for 28 days' drill, 10*l.* 4*s.* for 28 days; about 2*l.* a week?

—Yes; but it makes very little difference whether it is paid in one month or in another.

91. (*Captain Willes.*) Can you explain to me what advantage there is in knowing the whereabouts of a man, as long as you get him to drill a month in the year?—In these days of railroads I think it makes very little difference; if a man wants to avoid service he has only to jump into a train, and he is off.

92. (*Mr. Mayo.*) But can a man avoid service?—If he is called out,—if he wants to avoid you,—the mere fact of your having his address will be no guarantee that you will get him; to some extent you must trust the man.

93. (*Captain Willes.*) Is it not a melancholy thing to think that after paying these enormous retainers and drill pay, we have to speculate on knowing how to catch the men when emergency arises.

94. (*Mr. Mayo.*) Is it more melancholy than that after you have trained and educated boys for the navy, you have still a long list of deserters?—(*The Witness.*) If the Reserve men held back in time of war I think the feeling of the country would be so great that the men could not exist in England; they would be obliged to come out.

95. (*Mr. Mayo.*) Under the present regulations a man forfeits his retainers for neglect or omission to attend drill, for neglect or omission to make a regular appearance before some registrar, for producing a false certificate of character at time of enrolment, and for various other causes described in paragraph 173, how would you find out those cases?—As now, the Naval Reserve man should present himself before the registrar once in six months, and you would have the same opportunity as now of judging whether he had complied with the conditions.

96. The Registrar has first of all to refer cases to us?—Well, he would have to do so then.

97. Then we should tell him it is all right, and that he might give a certificate, would that be shorter work than paying 30*s.* down?—No, let the Registrar note in the man's book that he has or has not complied with the regulations. I think that would be shorter, it would simplify the accounts.

98. In what way?—Having one account, instead of two. I look upon it as part of the registrar's duty to perform those particular services; he would have to do that in any case.

99. Then all you would propose is this; that he is to do everything but pay the man the 30*s.*?—Yes, but I do not think we are to keep a sort of detective force over these men; we must trust them as decent and respectable men, and treat them as such.

100. Then you would place more reliance in the men than we do at present, and trust to the chapter of accidents that the payments made are correct?—I do not exactly understand you.

101. You would trust to the statements the men made?—No, but your registrar would satisfy himself as he does now.

102. Here is one case; a man loses his retainer for a conviction in a court of law?—How is it done now.

103. We hear of it, in every case of conviction, and we note it in the account?—Well, there is no reason why you should not inform the registrar, as you do now.

104. Then it comes practically to this, that the only change you propose is that the naval officers shall pay the retainers instead of the registrar?—No, I think there is less supervision required in looking after the men than at present.

105. So much supervision is unnecessary?—Exactly so; all doubts as to the men coming forward if called out are vanished from my mind.

106. Therefore the statement of the men can be relied upon?—I think so.

107. Are you aware that when a man has left his ship abroad, the statements he makes with regard to the cause of leaving the ship, are in nine cases out of ten untrue?—Yes, but that would be ascertained as it is now.

108. Then, in point of fact, before any payment of retainers is made, reference would have to be made to the Records in the Office of the Registrar General of Seamen?—Precisely so, that is if there was any doubt when your registrars made the entry in the man's book, that I propose they would refer to you as they would now.

109. Well then, it virtually does come to what I say, that it would be merely a change of paymaster?—Except that I should not require that constant looking after. I think that it is all time and money thrown away in keeping up a knowledge of the men's whereabouts.

My next point is paragraph 85. The reports of the men's drill are now sent to the Registrar General of Seamen. Admiral Key in his Report drew attention to this, and recommended that a register of drill should be kept at the Admiralty, to show the progress made from year to year. This information would be most useful at the Admiralty, as well as satisfactory, and naval officers knowing that a complete record of the drills was kept, would be more particular in making out the reports.

110. (*Mr. Mayo.*) Is there not a complete record kept now?—Yes; but the Admiralty are in perfect darkness on the subject; if they want any information they have to apply to the Registrar General of Seamen for it.

111. Quite so?—I propose to recommend a system to show the progressive efficiency of every man in his own drill, that we may see at a glance his history in the Reserve.

112. Under the existing regulations the retainers are paid provided certain drill is performed, it is dependent upon taking the drill?—Yes.

113. Are you not aware that these drill returns are sent to the office of the Registrar General of Seamen to enable him to have a check over the payment of retainers?—Yes; but the retainers cannot be paid until the drill is performed, and so it would be if the change recommended takes place.

114. Would it not be necessary, supposing this change to take place, for the Registrar General of Seamen to keep a record of the drill performed, as he does at present, in order to exercise the same check?—No, we should note whether the man performs his drill.

115. Then it would be necessary to refer to the Admiralty, as well as to the office of the Registrar General of Seamen, before the retainer could be paid?—No, the man's drill book would show it.

116. You said just now that if a man lost his book a new one could be supplied to him on application to the Registrar General of Seamen?—Yes.

117. But we should not be able to furnish him with a new book without reference to the Admiralty, if the drill returns were furnished to the Admiralty and not to the office of the Registrar General of Seamen?—But we should have to give the information.

118. Then it would involve two references before he could get a copy of his book?—You could certify if the man had complied with the regulations in every other respect except drill.

119. And for that we should have to refer to the Admiralty?—Exactly so.

120. (*Captain Willes.*) Am I to understand that our naval officers send their reports of drill to other departments than their own?—They make the report of drill to the Registrar General of Seamen, and we get at the Admiralty a quarterly report, in the shape of an abstract, showing the number of men that have drilled, and the officer's opinion generally of the efficiency of the force.

121. Is not that an anomaly in our service?—I think it is.

122. (*Mr. Mayo.*) Is it not in accordance with the regulations?—Yes, so it is, but I think it is a part of the executive work which belongs more to the Admiralty than to the Board of Trade.

123. (*Captain Willes.*) Do the officers at the drill batteries along the coast send their reports in the same manner?—Yes, precisely.

Mr. A. Whitehouse.

9 Nov. 1869.

124. So that we have some 70 or 80 officers and sub ordinate officers corresponding with the Board of Trade?—Yes, including the batteries.

125. Do you see any reason why, when once a man is enrolled in the naval reserve, he should be treated in any other way than the seamen of the navy or the coastguard men?—No; I think that as soon as he has joined the reserve he should be considered a part of the navy; he is subject to the Naval Discipline Act while under drill.

126. (*Mr. Mayo.*) But only for one month out of twelve?—Yes, while drilling.

127. And he is under the Board of Trade for the remaining 11 months?—Yes, that is so.

128. (*Captain Willes.*) Then do you think this 5,000*l.*, in page 22 of the Naval Estimates, as Fees to Deputy Registrars, and so on, is a necessary payment?—To some extent I do.

129. Then how is it that it was 2,000*l.* a few years ago, when the reserve stood at 16,000 also?—It was not, I believe, until some considerable time after the reserve was established that any remuneration was paid to the registrars. It commenced with a grant of 1,000*l.*, I think, and was year by year increased to the present amount, on the representations of the Board of Trade; it has been a payment that has been left entirely to that Board.

130. (*Mr. Mayo.*) Is any extra pay given to naval officers for drilling the reserve men?—Yes, there was a vote taken for 600*l.* the last three or four years for superintending the drill and keeping the accounts; it is a very small sum.

131. Of course these naval officers are not exclusively employed for naval reserve work?—No, it is an addition to their coast guard work.

132. Naval officers who are employed upon other duties receive this extra pay for the additional duty?—Yes.

133. Do you know what service the registrars of reserve perform for this remuneration?—Yes; they pay the retainers; they either give passes, or pay the men's travelling expenses, and they keep a kind of watch over the men's movements, as to their residence and so on, which latter service I consider to a great extent unnecessary. The men are pledged to come forward, I think we must trust them more. They also enrol and re-enrol the men, and ascertain as to their qualifications, and length of service.

134. (*Captain Willes.*) It seems very desirable that such cruises as we had in the spring of this year should take place occasionally, say every 4th or 5th year, can you suggest a means of paying the Reserve for the future by which you could insist upon the men who are in England at the time turning out?—No, I think any regulation of that kind could be evaded by the men; they would make answers that they were engaged for ships, and so forth; and you would be taking the man away from his living by compelling him to go; besides your cruises take place during the summer, when the greater portion of the men are on long voyages.

135. Could not the conditions for the future be that a man is to serve every 4th or 5th year?—I think that if he served one month on board a district ship it would be almost equivalent to his going to sea, the officer would be able to judge of the man as a seaman, and I imagine that what is wanted is not so much the fact of his going to sea as to prove that he is worth what we are paying for him.

136. Do we not want, in the event of a contingency, skilled gunners as much as skilled seamen?—Yes, quite as much.

137. Then you think that these young men by serving one month on board a coastguard ship would be made tolerably efficient as gunners?—I should think one month ought to be enough for a man to keep up his knowledge of that art—one month's constant drill. It is the opinion of gunnery officers that 28 days in the year is sufficient.

138. (*Mr. Mayo.*) As the Navy will require skilled gunners quite as much as skilled seamen, do you consider it to be of so much importance to re-examine the men on their re-enrolment?—I think it of the greatest importance.

139. (*Captain Willes.*) Cnn you suggest any means of getting the men clothed for the future?—I had intended, under the article on clothing, to suggest that the men should be allowed to take up from the ship's stores clothing to the amount of their drill pay, if they desire to do so.

140. (*Mr. Mayo.*) Was there not such a regulation in the old rules?—I think there was, but I do not see it in the present.

141. Why did it fall through?—I cannot say.

Mr. Mayo stated that the Admiralty had objected to this arrangement because of the trouble it entailed on their paymaster.

142. (*Captain Willes.*) Describe what is the difference between a Naval Coast Volunteer and a Royal Naval Reserve Man; describe the difference in their pay and in their clothing, as I understand the Naval Coast Volunteers are clothed?—A Naval Reserve man must be a merchant sailor, the Naval Coast Volunteer Force is composed mostly of fishermen. The Coast Volunteers live on board during their 28 days' drill, receive able-seamen's pay and rations, and are lent clothing during the time they are up for drill, and they receive, I think it is, one guinea retainer, 6*l.* in five years.

143. Any pensions afterwards for the coast volunteers?—No.

144. Then why has this fallen through, because it appears to me to be a better system than the Reserve?—You could not get the class of men, you could not get the quality; they know little of the duties of a seaman on deck, many of them, you could scarcely get them to go aloft at all. The entry has been stopped; they were not a desirable race of men. A small body in Scotland were considered of a more hardy race, and they are to be continued.

145. Are there any other expenses connected with the Naval Reserve which you think might be done away with. Here, under M. page 22, "Subsistence Monies for Officers of the Royal Naval Reserve while under drill"?—No, I think not any more than the reduction I have mentioned.

146. Officers I said?—No, I think the sum is very trifling that is paid to them.

147. Travelling expenses of officers in going to and from drill, and enrolling men; for that it would appear they are paid something?—Yes, the men are, not the officers.

148. Can you state under what circumstances officers are enrolled in the Naval Reserve?—On the recommendation, I imagine, in the first place, of the Registrar General of Seamen to the Board of Trade, and from the Board of Trade to the Admiralty.

149. For what period do they get their appointments?—They receive a commission, which I suppose will remain in force during their lives, unless it is forfeited by some irregularity.

150. Have you anything to suggest with regard to the officers?—No, I think that the officers should be required to support the Reserve by entering the men (which they do now) in their employ.

The witness withdrew.

Adjourned to to-morrow at twelve o'clock.

Wednesday, 10th November 1869.

10 Nov. 1869.

Mr. Mayo handed in a circular, dated 1st February 1865, having reference to paragraph 102 of the regulations, and issued by the Board of Trade after correspondence with the Admiralty, with reference to the approval of a uniform for the Naval Reserve, and drew attention to the following paragraph :

"The Admiralty have approved of a cap and blue frock and badge, which is not compulsory, but which *may* be worn by Naval Reserve men, if the men wish to wear them, and if they purchase them at their own expense. They have also approved of a distinguishing badge for the cap, to be worn by such of the Reserve men as may distinguish themselves by superior intelligence, &c., whilst on drill. If a registrar is applied to for the uniform he may sell it to the Reserve man. For this purpose he can obtain it from the paymaster of the drill or district ship, and should account for the proceeds of sale as directed in paragraph 104 of the regulations in the case of the caps now supplied."

Commander C. G. Nelson called in.

Commander C. G. Nelson.

151. (*Captain Willes.*) How long have you been officially connected with the Royal Naval Reserve ?—Between two and three years.

152. At what ports ?—The Tyne, in command of the "Castor;" and the Thames, in command of the "President."

153. (*Mr. Mayo.*) Had you any experience of Merchant seamen previous to entering the Naval Reserve ?—Yes ; I served over three years in the Merchant service previous to entering the Navy.

154. (*Captain Willes.*) After that experience of the Naval Reserve, can you tell us of any defects in the present system, whether as regards the enrolling of men, or their drills, or anything else ?—With regard to the present arrangements for enrolment, I do not think I could propose any changes that would be advantageous. In the qualifications for the Reserve referred to in Article I., clause II., men from the Royal Navy are allowed to enter up to 35 years of age ; 35 years seems to me an advanced age to begin the service, and I think I should confine them to 30 years.

155. (*Mr. Mayo.*) You are aware that these men are men who have perhaps been educated in the Navy, and served in the Navy ; it is exclusively for men who have served in the Navy. Service in the Naval Reserve may be regarded as a continuance in the Navy ?—Yes, I am aware of that. I have also often thought that 30 years is too great a limit for the age of entering into the Reserve for men out of the Merchant service, I think it might be advantageously fixed at something less ; I mean by that to give an idea that the men generally enter too old.

156. Do you think if the limit of age were reduced we should secure for the Reserve the description of men referred to in paragraph 8 of the regulations. You must bear in mind that they are expected to possess certain qualifications in seamanship, which can only be obtained by service at sea ; that of those men, the men who are to be preferred are those who have regular employment in the coasting trade, or in vessels that return at short intervals to port. Do you think that you could secure a sufficient number of men answering that description of less than 30 years of age to form a Reserve ?—I think, with regard to the capabilities of the men as able seamen that at 25 they would be perfectly good able seamen, if they were ever likely to become so, considering the age at which they generally begin a sea life. With regard to men having fixed residences, and regular employment in the coasting trade, or on board steamers, I know that those things can only be obtained by service long enough to establish character as well as ability. Perhaps, taking these things into consideration, there would be some difficulty in obtaining a sufficient number of men at an earlier age.

157. You mean reliable men, I suppose ?—Yes. I mean the men answering this description ; because the men with fixed residences and those who have constant employment are the best men. There is one thing I wish to say about drills. I have no difficulty with regard to the drills or discipline, but I find that many men absent themselves from drill for from one to two days at a time. In Clause 117 it is said that for this offence they are liable to a penalty not exceeding 20*l.*, in addition to forfeiture of all claims to retainer or pension. This is a very serious penalty, and one that to my knowledge has never been applied. I should like added to that clause a distinct understanding that men who absent themselves from drill without satisfactory cause, should forfeit, in addition to any fine which may be inflicted, any portion of the seven days drill which they may have previously performed. What I mean is, that if they stay away at any time they must begin their drill again. If a man knows that by stopping away he will forfeit the portion of drill that he has done, he will think twice before he absents himself.

158. (*Captain Willes.*) They are under the Discipline Act when they come for drill ?—Yes.

159. Then why do not you punish them ?—I do.

160. Supposing a man comes on Monday and stops away for Tuesday, what do you do to him ?—I fine him.

161. How much ?—Anything under 10*s.*

162. (*Mr. Mayo.*) Will you be good enough to refer to Paragraph 109 ; does not that paragraph meet the case referred to. It runs thus :—"In case of "any misconduct or absence without leave, during "time of drill, the naval officer may direct that the "Naval Reserve man's name be checked on the "ship's books, and the man will then incur forfeiture "of pay and allowances according to the offence. In "cases of grave misconduct the naval officer may "direct that the annual retainer be suspended for "such period not exceeding one year as he may "think fit." Is not that sufficient ?—What I mean to say is this : A man comes up for seven days drill ; if by his own neglect he stops away one day during the seven you fine him, and he takes the three days that he may have been on drill, and goes on to do four days more, losing the day which he is absent ; but I should like that a man should understand that whenever he has done a portion of his seven days drill, and it is clearly proved that he has stopped away from his own neglect or default, that he should lose the whole of his former drill ; make him begin afresh his seven days drill.

163. (*Captain Willes.*) Cannot you do that now ?—No.

164. Is not your power absolute ?—We are not justified in doing that. In cases of grave misconduct you direct that the "retainer" may be suspended for one year—suspended means forfeited, if you suspend a retainer a man never gets it—that also, I think, is too great a punishment for a slight offence. The punishment that I suggest I know to be the most effective one that can be devised.

165. Why do not you lock him up ?—We have no place to lock him up in. Beginning his drill over again has the best effect, I tried it on a small scale A man who had drilled for one day absented himself for two days ; when he presented himself again I said, "I cannot recognize your day's drill, you have been "absent for two days, you must begin again." It almost stopped leave breaking. It had a very good effect.

166. But are we to understand that this highly paid Naval Reserve Force, getting their annual "retainer" of 6*l.*, and so much per diem for their drill pay, that they ever misconduct themselves at all ?—They do misconduct themselves, but their mis-

Commander C. G. Nelson.

10 Nov. 1869.

conduct is of a very slight character, as the returns of punishment for the Reserve will show. My argument is, that the penalties are so much out of proportion to the slight crime, there is no alternative but to fine a man 20*l.* for a slight case of misconduct.

167. (*Mr. Mayo.*) These cases of breaking leave are exceptional, not general?—Exceptional.

168. (*Captain Willes.*) Strictly speaking, the Naval Reserve men are supposed to drill for twenty-eight days in the year?—Yes.

169. They come to you and take their drill a week at a time, and during that time they break their leave. Can that fairly be considered a light crime?—I do not consider leave-breaking a light crime, but men who have grown up without any habit of discipline from their youth, do not look upon it in the same light; and therefore, I suggested what I considered a more effectual punishment of the crime, and one that is more easily applied. It would be a serious thing to inflict a penalty of 20*l.*

170. (*Captain Willes.*) You said that you had nothing to suggest with regard to the drill of the Reserve. Are you acquainted with the modern guns which are rifled and mounted on iron slides and carriages, with all kinds of mechanical arrangements for working them?—Yes.

171. Do you think it is possible from Monday morning till Saturday noon, to give a man, a merchant seaman of thirty years of age, any knowledge whatever of the working of those guns, with a certain amount of drill at the rifle and cutlass at the same time; they come for the week now, and take their drill, you say?—Yes, many men come for a week at a time; and I do not think it possible in seven days to give a man any appreciable amount of knowledge of the working of the modern guns, in addition to the rifle practice and sword exercise.

172. Then what would you suggest?—I would suggest the sticking to our present plan, drilling with smooth-bore guns. I think they are good enough for the general drill. If we had one modern gun to show the working of that gun to those men who have a good knowledge of sponging, loading, and the working of the smooth bore guns.

173. You evidently have not read the Admiralty Minutes; we are going to give them the modern guns. Imagine the "President" with nothing else than modern guns?—I said in seven days. What I mean to say is this: a man comes to day to join the Reserve; he comes for seven days drill; he has never seen a gun, cutlass, or rifle in his life, and in that seven days if you put him to a rifle gun, in addition to his cutlass and rifle drill, I do not think he can learn it.

174. Then why did you say that you had nothing to suggest, why not suggest twenty-eight days at a time. What would you suggest?—I certainly would suggest that, if practicable, men should do their twenty-eight days' drill consecutively; but I know that very many of the best men in the Reserve would not be able to leave their employment for twenty-eight days consecutively. I am now alluding to men employed in the Trinity Yachts and others in the home trade in the Thames and other places. They come into harbour for seven days, but not for more; and most of the coasting trade is conducted in the same way.

175. (*Mr. Mayo.*) There is no modern armament on board the "President" at this present time?—No.

176. (*Captain Willes.*) Would you continue the present system of teaching men drills which are perfectly useless, because it might not suit the convenience of these men, who are actually getting paid retainers of 6*l.* per annum to come for the twenty-eight days at one time?—I do not look on it as a question of convenience; but rather as one of retaining a large number of men, who are employed in the Coasting and Home Trade in the Reserve. These would be the first men available in the event of the Reserve being called out for actual service. Of course, I should prefer teaching the drill at the modern guns if possible.

177. Are there to your knowledge any foreigners in the Naval Reserve?—I do not know of any foreigners in the Reserve; but there are several coloured men who are all British subjects.

178. (*Mr. Mayo.*) When men are enrolled in the Reserve they are examined as to their knowledge in seamanship by a naval officer, are they not?—Yes.

179. If they are considered incompetent as able seaman in the Navy it would be the duty of the naval officer who examined them to decline to pass them?—They are invariably rejected.

180. From your knowledge of merchant seamen, do you consider it would be desirable to place the management more immediately under the Admiralty than it is at present, bearing in mind that the Naval Reserve bears some affinity to the Royal Navy, and also bearing in mind the feelings of merchant sailors?—I should think that it would be a great thing for the Admiralty to have it in their power to arrive at any information with regard to the Reserve that might be required at once, and without reference to another department; but from what I know of the information that is necessary with regard to the Naval Reserve force, I think there would be great difficulty in the Admiralty arriving at that information without a great knowledge of the individuals of which that force is composed. I mean to say that it is very difficult unless you have the history of every man before you to know what he is like.

181. That knowledge can be obtained at the Office of the Registrar General of Seamen?—I believe so; I have always found it to be so. With regard to the latter part of the question. The ill-feeling of merchant sailors towards service in the Royal Navy was very great sometime ago, but I believe it has been done away with to a very great extent, through the working of the Naval Reserve.

182. You took some interest in the Whitsuntide Review, and assisted the officers materially at the time in procuring men for the cruise?—Yes.

183. You were somewhat popular amongst the seamen in the north; but with all that do you think you could, as a naval officer, have induced the men to volunteer for that cruise, without the active aid and co-operation of the Board of Trade officers?—I am afraid not.

The witness then withdrew.

Captain G. H. Gardner was then called in.

Captain G. H. Gardner.

184. (*Captain Willes.*) How long have you been connected with the Naval Reserve?—From its commencement, from January 1860 to January 1869, more or less, off and on.

185. Were you an inspector of the Naval Reserve any part of that time?—For five years, from January 1864 to January 1869.

186. Did you read Admiral Key's report of the Reserve Cruise, and the Admiralty's Minutes upon it?—I did.

187. Did you observe that Admiral Key pointed out what he thought were defects, and suggested some amendments?—Yes; there was one amendment particularly struck me, but I have not got the report here.

188. Shall I get it for you?—I should be glad to refresh my memory on the subject (*the report being brought in and handed to witness, he then said*)—In article 40 there is this one point: "I recommend that in "all matters of discipline, of attendance at drill, and

" especially upon any doubtful point connected with " the entry of men, the Royal Naval Reserve should " be more immediately under the Admiralty; this " can be best done by keeping a correct record of its " condition at the Admiralty, so that its efficiency, " both as to its numbers and the quality of the " seamen composing it, can be ascertained at any " moment. This information can only now be " obtained by reference to the Registrar General of " Seamen." That is one thing that puzzled me at the time.

189. What observation have you to make about that?—I think that as the whole of the Naval Reserve seamen are virtually merchant seamen, I do not see how you can remove a great deal of the work that is being done by the Board of Trade to the Admiralty, unless you have another Registrar General of Seamen, and an office exactly coinciding with his at this office; and if you have another Registrar General of Seamen here you may do it, but I do not see how you can do it without.

190. (*Mr. Mayo.*) Is not the information respecting the Reserve men obtained from the agreements and lists of crews which are at present with the Registrar General of Seamen, in conformity with the Merchant Shipping Act of 1854?—Yes, I believe so.

191. If such an officer as you propose were appointed at the Admiralty, and the whole of the records of the Naval Reserve were kept at the Admiralty, it would necessitate the whole of these lists and returns being forwarded to the Admiralty for reference?—Yes, I think so.

192. These lists and agreements are made between masters and their crews, and relate to the voyages of the ships?—Yes, I believe so.

193. And the information that we get from them relating to Naval Reserve men is incidental?—Yes, you are dependent upon those papers for the information frequently.

194. (*Captain Willes.*) There are 16,000 men in the Reserve; of that number how many do you think are in England on the 1st of December and the 1st of June?—On the 1st of December there are a great number of East Indian, Australian, and China ships returned, therefore, you have all the Naval Reserve men of those ships at home at that time; in addition to that you have all the coasting trade.

195. (*Captain Willes.*) How many thousand?—Averaging about from seven to nine thousand. I should think from my own recollection, and from the numbers of men drilling at the drill ships at that time, I am nearer the mark by saying 9,000; in June, perhaps the lesser number, 7,000.

196. (*Mr. Mayo.*) There are two trades that you have omitted, they are the Baltic and North American?—They take the men away for the summer, those men are at home at Christmas.

197. Were not returns furnished to you when you were at the coastguard office, periodically showing the number of men that would be available at any particular time?—Yes, every quarter.

198. Furnished from the records of the Registrar General of Seamen?—Yes, they came from there.

199. (*Captain Willes.*) By Clause 2 on the first page of the regulations of the Naval Reserve, a Naval officer means the officer appointed by the Admiralty, to superintend the drill of the Naval Reserve in the United Kingdom. As these so called Naval officers may sometimes be as low as a chief boatman of the coastguard, do you think it right that the entry of the Naval Reserve men should be left to a person of that rank?—Certainly not. I have always combated against it; but it was the exception and not the rule while I was inspector. There was always great difficulty in appointing or providing properly qualified officers for the duty from the coastguard.

200. Do you not think that as there are eight drill ships, and nine Coastguard ships, besides the depôt ships at our naval ports, it would not be too much to enforce that if a man wishes to enter the Naval Reserve he should go to one of those ships?—There would be no hardship in it provided you secure the candidate from loss of time and, of course, money, by which I mean that if you were to send a man for any distance, you must pay his travelling expenses.

Captain G. H. Gardner.

10 Nov. 1869.

201. Why should we? We do not want him, he wants us?—You advertise for him to join and you are bound to make it as convenient to him as you can, and to put him to as little expense as possible. I have known men come sometimes, and remain for days waiting for a naval officer to examine them, and there was no naval officer to be got at.

202. That would not be so if they went to Portsmouth or Plymouth?—How are they to get there?

203. If a man wishes to enter the Royal Navy, has he not to find his way to one of the naval ports?—Formerly he did that, that is a question I can scarcely answer now.

204. When you were at the Coastguard office, was that the case?—No. They could enter through the Coastguard along the coast. Formerly men could go to the inspecting commander and he would put them in the way.

205. We wanted him then; but when we do not want him?—Oh, that is putting it the other way.

206. Then why should there be more consideration shown to the Naval Reserve man who is to get an annual "retainer" of 6*l.* and a prospective pension, than to a seaman in the Royal Navy?—But there is this difference; I do not think the two volunteers are exactly in the same position. The man going to join the Navy is going to look for work and to be taken on at once, the other man may be leaving his work for a time, and at a loss, and with the uncertainty of being accepted; therefore, to prevent loss of time to him, every convenience should be given for his enrolment.

207. But if he succeeds in getting enrolled does he not get very well paid for that service?—Not at the time, certainly, it is all prospective.

208. When once he is enrolled he gets it—he gets 6*l.* for nothing?—You cannot call it for nothing. You get his goodwill, and the goodwill of a merchant seaman is something.

209. Do you think that men ought to be entered in the Reserve without having been properly passed by officers?—Certainly not, and I have always been of opinion and recommended that all entries in the Naval Reserve should be made by naval officers, and especially naval medical officers, and not by what are called naval medical agents.

210. How shall we do that for the future?—Hitherto, in consequence of the Naval Reserve being comparatively an experiment, and the proper machinery not having been provided, it was necessary to make use of all the available means at our disposal to remedy the evils connected with the former system of enrolment. I would suggest that naval medical officers attached to the Coastguard ships, drill ships, and depôt ships, should be the officers for medically examining candidates as to their physical capabilities. As the Naval Reserve has now become an established institution of the country, and merchant seamen have had sufficient opportunity of judging of its advantages to the country, there will not be the same difficulty in the enrolment as formerly; but it must never be lost sight of that enrolments must be made as easy and convenient to the men as possible.

211. (*Mr. Mayo.*) Where the men have to proceed some distance to undergo this examination, are their expenses and loss of time to be paid by the Government?—That is rather difficult to answer.

212. Would you propose that their expenses should be paid by Government?—No. I think not, unless you make the depôts so far away from the men that they lose considerable time, and are put to considerable expense; if you expect volunteers you must make it easy for them to come to be examined.

213. (*Captain Willes.*) Are you aware that a Naval Reserve man is paid his retainer by a Board of Trade officer, while a paymaster of the drill ship or battery pays the drill pay and his travelling ex-

Captain G. H. Gardner.

10 Nov. 1869.

penses from drill, and that the former duty involves a charge in the naval estimates of five or six thousand pounds a year?—I am aware of it.

214. Does not that appear an anomaly?—No.

215. (*Mr. Mayo.*) Is the six thousand pounds a year paid only for the services of the registrar in paying retainers and sending the men to drill?—No, the six thousand pounds a year is paid by way of remuneration for all the additional clerical duties accruing to the Mercantile Marine Office, in consequence of the institution of the Naval Reserve, which involves a great amount of clerical labour in all our large ports, and this remuneration is paid according to a scale laid down by the Board of Trade for work performed at each office.

216. (*Captain Willes.*) Are you aware that a few years since, when the Reserve force was at the same figure as at present (16,000) this charge was only two thousand pounds?—I am not aware of the exact sum that was paid, but it was found that as the age of the Reserve increased, the clerical duties increased in a considerably higher ratio, and it was in consequence of the constant complaints of the various Board of Trade officers as to the smallness of the remuneration they received for their increased and increasing clerical duties that a higher scale of remuneration was accorded. It was all done, and with the cognizance of the Admiralty.

217. Can you explain how it is that with the same number of men the work has so much increased?—Because, up to 16,000 the work was all entering; now it is entry and re-entry, and discharging the men, and so on. We have all the same work for re-entry that we had for entry, and much additional work.

218. Do you see any reason why, when once a man is enrolled in the Naval Reserve he should be sought after, and his whereabouts questioned?—For this reason, that if you do not wish to lose sight of him altogether, it is necessary to keep him reminded of his engagements; he has the peculiarity of all sailors, especially of merchant seamen, who may be said to be cosmopolitan; you would do the same with your own men.

219. But to get his retainers he must go to a drill ship or battery at regular periods for drill. Is not that enough looking up?—No, because you have not the same hold of merchant seamen that you have of men-of-war's men. We naval officers are so conversant with everything connected with the men-of-war's men, that we lose sight of the peculiar position of merchant seamen.

220–22. When the Naval Reserve was first introduced, what was the complement of our largest ships of war?—About 1,100.

223. Have you any thing to suggest with regard to the officers of the Naval Reserve?—I think it too difficult a question to give an answer to, without mature consideration.

224. (*Mr. Mayo.*) Bearing in mind the relations that exist between the officers of merchant ships and their seamen, some of whom may belong to the Naval Reserve, do you not consider it desirable that these officers should in the same way be connected with the Naval Reserve, as there is no doubt they exercise some influence over the men under them?—I do. I consider that for the maintenance of the force a considerable proportion of the officers of the Mercantile Marine should be attached to it in order to maintain their good will in the promotion of the well-being of the force.

225. You are aware that at present there are only two ranks for officers on the active list—that of lieutenant and sub-lieutenant. Do you consider it desirable to create a junior rank for the purpose of attaching to the Reserve the younger officers of the Mercantile Marine?—Yes, to this extent, namely, a rank equivalent to a midshipman in the Navy.

226. What class of junior officers in the merchant service would you propose to admit into the Reserve as officers?—What is called the fourth rate—the junior—the man who has served his apprenticeship and become an officer of the marine service.

227. (*Captain Willes.*) By article 176, the Naval Reserve man once entered, can be re-enrolled for his second or third five years, without any examination except by a medical officer. Do you not think that rule wants some modification?—Yes, one alteration. I would suggest this, that he should have an examination in gunnery; and another suggestion is that he should not have been out of employment, as a sailor more than two years during his last five. I think we are not sufficiently stringent in enforcing a keeping to the sea service.

228. You are aware that Naval Reserve men are allowed to take their drill a week at a time, which after cutting out Sunday, and Saturday afternoon, gives only five and a half days drill. Do you not think that for the future we should insist upon a greater amount of consecutive drill?—For the benefit of a better acquisition of gunnery, I do; but there are difficulties which appear to me to be insurmountable, because I have been trying to get it done for five years past, and it was impossible.

229. Is not the efficiency of the force the very first consideration?—Certainly.

230. Is it possible to make Naval Reserve men who now enter, efficient in any way at the new guns with five and a half days' drill at a time?—Comparatively efficient. I can only answer that question comparatively. It amounts to this, when you call out these men, instead of getting raw birds, you will get men who have some knowledge of the gun—they know the gun. When I first began the organization of the Naval Reserve, the men were apparently afraid of the guns. If you get these men to fire the gun once and to work it even for a week, they come to you a much more valuable set of men than men who have never seen a gun before.

231–32. If an order were given at once that men enrolled for the future should not take less than 14 days' drill at a time, what do you think would be the result?—It would considerably reduce the number of entries, and create a large list of defaulters, especially among seamen in the coasting trade, since it would disturb too much their proper avocations.

233. (*Captain Willes.*) Do you not think that half the number of really efficient gunners would be more valuable?—Yes; if going into action at once.

234. Commander Nelson has said that although men are called up for a weeks' drill at a time, they would frequently even break their leave in that week. Article 117 lays down, he considers, so severe a punishment that it is practically a dead letter; and he suggests that when a man so misconducts himself he should be made to recommence his seven days drill?—Yes, that was partially carried out during the time I was inspector. A man would come to take his seven days drill; after he had done three or four days drill, a demand would be made for men and he would come and say, "I want my book." It was then said, "Very well there is your book;" but all his drill was forfeited. He ought to be told when he comes on board, "You come for a week's drill, if you "break it you will lose your drill; you must take it "all over again."

235. (*Mr. Mayo.*) Is it not the fact that the Admiralty authorized the Barking fishermen to take drill in periods of less than a week at a time?—I have some recollection that there was a kind of byelaw for them.

The witness withdrew.

Adjourned to Monday next at 12 o'clock.

Monday, 15th November 1869.

Captain G. H. GARDNER recalled.

Captain G. H. Gardner.

15 Nov. 1869.

236. (*Mr. Mayo.*) During your service as inspector of the Royal Naval Reserve did your duties bring you much in communication with the registrars of Naval Reserve ?—Yes.

237. May I ask what your instructions were when you held the position of inspector ?—This (*handing in a paper*) is what I left (supposing that I was to be succeeded by another inspector) for the information of my expected successor :

238. You said, in your former evidence, that you considered it necessary that the men of the Reserve should be constantly looked up to keep them mindful of their engagements, do you recollect that ?—Yes.

239. Do you consider that any advantage would be obtained by paying the men their retainers in one payment annually when they have completed their 28 days' drill ?—Certainly not.

240. Why ?—There are several reasons ; one is, that the wives and families of the men would find fault, they would get very little of it ; and, in the next place, the men would probably be tempted to stay abroad, having no retainers in arrears. Here (*producing a paper*) is a modification of what was intended to be brought forward, and was discussed over and over again ; it was proposed about two years ago, and is to this effect : To offer an inducement to the men of the Naval Reserve to qualify in, and retain their knowledge of gunnery, they should be allowed to take a test drill, which would enable them to take only seven days' drill, instead of 28 ; and then they were to be considered trained men, and receive their retainers in a lump ; that is the only modification I know of. It was not approved of, because they said that 28 days' drill was too little as it was.

241. Do you think that the men of the Reserve, if they had an opportunity of taking seven days' test drill, would prefer it to their 28 days ?—I do not think they would, very few of them.

242. Why ? — Because the long voyage men, particularly during their holiday, secure themselves a month's work, and it allows them to remain with their families, who share in the advantages of the men's pay. The other men, the coasting men, take their drill by the week most of them, they cannot do otherwise.

243. Do not the inspecting commanders and other naval officers stationed round our coast communicate direct with the Board of Trade and their officers on matters respecting wreck and salvage ?—I believe they do.

244. Does it appear to you to be a greater anomaly for naval officers to correspond with Board of Trade officers on Naval Reserve matters, than on matters relating to wreck and salvage ? — Do you mean correspondence by returns ?

245. No, by communications. — Certainly not a greater anomaly ; but I am not quite sure that they do by letter. I think they only do by returns ; on what points do they correspond now with regard to Naval Reserve ?

246. Principally by returns. In your communications with Board of Trade officers have you as a naval officer ever found any difficulties in communication with these officers ?—No ; but on the contrary the service of the country has been greatly expedited ; at the same time the Admiral Controller-General was made aware of all communications relating to the service with these officers and myself.

247. Do you think any practical good would result from placing the Civil Administration of the Reserve more immediately in the hands of the Admiralty ?—Well, I can only give a general answer to that question. Simply, that I don't see how it can be done ; from my knowledge of the work of the two offices, I do not see how it can be done, without, as I have before said, transferring the Registrar General of Seamens' Office entirely to the Admiralty.

248. In paragraph 40 of Admiral Key's Report to the Admiralty, he says, " I recommend that in all " matters of discipline, of attendance at drill, and " especially upon any doubtful point connected with " the entry of the men, the Royal Naval Reserve " should be more immediately under the Admiralty ;" are not these matters at present entirely under the control of the Admiralty ?—I think so. The only thing is, how far is this question of " discipline " to extend, because, as a matter of course, the discipline must be under the Admiralty when the men are afloat ; but when the men are not afloat the question of naval discipline is at an end.

249. (*Captain Willes.*) Discipline would mean the whole economy of the Reserve, not merely the punishment. Admiral Key says, in effect :—These men go on drill for a month ; for that month they are the property of the Admiralty ; during that month, should the Board of Trade have anything to do with them ?—The Board of Trade have nothing to do with them then.

250. (*Captain Willes.*) Oh, yes ; the returns are sent there ?

(*The witness.*) This matter of " discipline " goes to a wider scope than I had any idea of. I certainly must say, I do not see how the Admiralty can do without the Board of Trade ; the Board of Trade must come in, because, in the first place, the Board of Trade hands them over to the Admiralty ; then the Admiralty hands them over to the Board of Trade ; so that they cannot be clear of each other.

251. (*Mr. Mayo.*) In point of fact, these men are entirely under the control of the Admiralty during the time they are on drill ?—Certainly.

252. At other times the Admiralty have nothing to do with them ?—Well, they have something to do with the entry and discharge of the men, becaue it is a joint approval of the Admiralty and Board of Trade.

253. Are not Returns furnished to the Admiralty from naval officers of the drill performed by Naval Reserve men under them, and do not these Returns show the degree of efficiency of the Reserve men who undergo drill at the several places from which returns are sent ?—Yes, and during the time I was in office they were furnished to the Admiral Controller-General of the Coast Guard.

Captain Willes stated that no change had been made since Captain Gardner had left office.

254. (*Mr. Mayo.*) Returns are also sent to the office of the Registrar General of Seamen ?—I believe so.

255. Can you tell us why ?—I believe they are necessary in order that the Board of Trade may know whether the men comply with the regulations, that is the reason.

256. Does not the payment of the retainer, and also the permission to go on a long voyage, depend upon their having performed drill ?—Yes.

257–9. It is therefore essential that these returns should be made to the Registrar General of Seamen ? —Yes, I think so.

260. Then, is it not the fact that the recommendations contained in the 40th paragraph of Admiral Key's Report are now carried into effect ?—I believe so, reading what is recommended here ; of course I do not know what this word " discipline " involves.

261. (*Captain Willes to the witness.*) Are you aware that there is attached to the Admiralty a Director of Naval Ordnance, who, in addition to many other duties, has the returns of the gun drill of the

Captain G. H. Gardner.

15 Nov. 1869.

Navy sent to him for examination and report?—I am aware that there is a Director of Naval Ordnance, but I do not know what his duties are.

262. Do the returns of the drill of the Naval Reserve go to that officer as the returns of the Navy do?—I don't know.

263. We have made no change since you were here?—They went to the Admiral Controller-General, then; I am sure they never went out of the office.

264. You know the returns are very different?—Our returns are very different to the Navy Returns, they always must be. (*Return forwarded by naval officers to Admiralty showing proficiency of men at drill and target practice handed to witness.*)

265. Are the returns from the Naval Reserve the same as those for the Navy?—No.

266. Do you not think Admiral Key in his paragraph 40, must have meant that the Admiralty should have the same acquaintance with the drill of the Naval Reserve, who for the time being are under the Discipline Act, as with the seamen in one of Her Majesty's ships?—Well, I cannot say what Admiral Key meant, but most certainly the Admiralty ought to have the returns.

267. What is the use of *this* (*holding up the return*) to the Admiralty?—It shows the character of the Naval Reserve men, no punishments have been inflicted.

268. (*Mr. Mayo.*) Were these returns drawn out by the Admiralty or by the Board of Trade?—By the Admiral Controller-General, under the approval of the Admiralty. If you ask me whether the returns should be altered, so as to coincide with those of the Navy, I say yes; but they never can coincide until they have the same kind of armament. (*Return handed in.*)

269. (*Captain Willes.*) There is no doubt that Admiral Key referred to these returns.

(*The witness.*) No doubt the returns ought to correspond. (*Return handed to the witness.*) If this is the return it ought to be modified so as to meet the case of the Reserve; there are several things here that are never done by the Naval Reserve.

270. (*Captain Willes to the witness.*) It must be evident to everybody that if we could have the Naval Reserve embarked in one of our men-of-war for a short period only, so that while learning their drills they could get accustomed to the discipline of a man-of-war, it would be a great advantage; can you suggest any means by which this could be carried out?—I have only one idea how it could be done, and then only as an experiment; and that is, to divide the United Kingdom into districts or divisions, and to call out the Naval Reserve men of each district or division, at suitable times, similar to those adopted in dealing with the militia, who being principally drawn from the agricultural classes, are called out in a time of the year when labour in the fields is at a stand-still; in like manner the Reserve men should be called out when there is no strain or demand for their services, or in other words, in the slack time of the year.

271. Do you think boys could be enrolled under the condition that they would take a month's drill?—Yes, I proposed some years ago, that a second division of Naval Reserve should be formed, to be partly composed of boys who should be got from the training ships of the Mercantile Marine Ports—

272. What shall we do now?—Carry out the intentions of the Manning Commission.

273. With regard to the men who are hereafter to be entered, and the men in their first five years of their enrolment, what restriction should there be in the limits of their time of drill?—Well, I consider that with the new armaments of our ships no man should come up for less than 14 days' consecutive drill; but, then, the consequence will be that you won't get the men from that branch of the Mercantile Marine which supplies the best men for the service; the long voyage men would come with all their hearts; but it is the men who remain at home that would cause the difficulty.

274. In reply to a former question, you said that it would not answer to pay the men the whole of the retainer at once, because the wives and families would suffer; of the 16,000 men enrolled in the force at least one third are absent for nearly a year; describe how these men get their retainers on their return; that is to say, if a man is away the whole of 1869, and gets home on the first day of 1870, tell me how he gets his retainer?—If he has completed his drill, and complied with his engagements, he will be paid the arrears of retainer on presenting himself at the office of a Superintendent of Mercantile Marine.

275. Does he get the whole 6*l.* then?—I think he gets some of his retainer before he goes away.

Mr. Mayo stated, that in such a case as that put by Captain Willes, if a man appears to have been absent without leave for more than six months, he has to apply for the payment of his retainers on a special form, stating the cause of his lengthened absence. This statement is inquired into by the Registrar General of Seamen, and if it is found that the Naval Reserve man has complied with the obligations of the Reserve, his retainers are paid; if not (as is frequently the case), the payment of his retainers is stopped.

276. (*Captain Willes to the witness.*) Thus it is apparent that a large number of the force do receive their whole retainer at once—why, then, should there be such an objection to the district paymasters paying it on each occasion when the men take their drill?—This body of men who receive their retainers in full do not receive the retainer *for drill only*, but for complying with all their other engagements as reserve men; therefore it is necessary that the retainers should be paid for past services instead of prospectively. Whether or not they have complied with those obligations is knowledge which can only be obtained by application to the Registrar General of Seamen, and is not in the possession of the district paymasters.

277. Do you think, in the present day, it is essential that the whereabouts of a Reserve man should be so closely watched?—Certainly.

278. Why? Would he not be required in India, China, North America, in the event of sudden hostilities; what would be the use of the information at the Registrar General of Seamen's office in such a case?—During peace time it is necessary to be conversant with the movements of every man in the Force, so that, in the event of war the Admiralty may know what number of Reserve men are at the disposal of the Commanders-in-Chief abroad.

279. It has been represented that, although a retainer of 6*l.* a year was but a fair sum when the Naval Reserve was established, it is now thought too high a figure; what is your opinion on this subject, as to the future payment of the force?—My opinion is that to reduce the retainer——

280. For the future mind?—Yes,—would amount to breaking faith with the Mercantile Marine of the country. Are the men who are in the Reserve to continue to receive the 6*l.*?

281. I put it that it was a fair sum when the Reserve was first established; but are we to go on paying 6*l.*, when we can get them for 4*l.*?—If you can get them for 4*l.* by all means do so.

282. With regard to the payment of future entries in the Force—?—My opinion is that if you can get the prime seamen of the Mercantile Marine for 4*l.* a year,——

283. I want you to give us an idea?—I have always been against the 6*l.* being paid entirely in money; but I agree with 6*l.* *in value* being paid. My own opinion is that you won't get the prime men for less than 6*l.*

284. It is rather an expensive force to keep up?—I think it is a very cheap one,—in the event of war you would find it so.

Captain G. H. Gardner.
15 Nov. 1869.

285. Have you anything to suggest as to the payment of the retainers to the men?—Yes. Instead of paying 6*l.* retainer, I would suggest that for the first year 4*l.* only be paid as a retainer, and a suit of uniform clothing, value 2*l.*, be given; afterwards obliging the men to keep it up in a proper manner.

286. The clothing?—Yes; or give them a suit of clothing every year, and 4*l.* retainer. I prefer the latter.

287. You know the Government wish to show that this force is a reality every now and then; can you suggest any means by which we can make the men go to sea every fourth or fifth year?—I have suggested that already, calling them out in districts or divisions, in the slack time of the year.

288. It is essential that the cruise should run from April to the middle of August; can you suggest any means for insisting on those men who are in England at that time joining that cruise?—No, I cannot; you must choose the right time for the men. If you confine the cruise to those months of the year, you will nearly always get the same men, since all the long and foreign voyage men are absent from the United Kingdom; you may catch perhaps a couple of hundred different men; but, practically, they will be the same men.

289. (*Mr. Mayo.*) Do you think there are any foreigners in the Reserve?—No, unless amongst the Irish-Americans, who hail from the United Kingdom when it suits their convenience.

290. (*Captain Willes.*) Are there any men in the Reserve who cannot speak English thoroughly?—No, unless the Shetlanders or the Welshmen.

The witness withdrew.

Adjourned to Wednesday next at 12 o'clock.

Wednesday, 17th November 1869.

Captain A. F. R. De Horsey called in.

Captain A. F. R. De Horsey.
17 Nov. 1869.

291. (*Captain Willes.*) You are captain of the "Hector"?—Yes.

292. Are not a considerable number of the Naval Reserve drilled either on board the "Hector," or in batteries under your orders, and if so, be good enough to state if you consider there are any defects in the present administration of the Naval Reserve, particularly as to drill?—As regards the first part of your question, there are a considerable number drilled on board the "Hector," and at the batteries. There are no defects in the drill in a district ship, but I think the drill at the batteries is of an inferior nature, being generally so old fashioned as to be comparatively useless; is that the point to which your question refers?

293. Yes, that is one point; another is as to the time they drill. What time do they drill?—They are drilled for a week, or more weeks up to four weeks, at a time, at their convenience, and I see no objection to that arrangement. I think the drill at the batteries should be entirely abolished, if it can be done, and that it should take place on board the district or drill ships, with the modern pattern gun—in sea-going ships by preference.

294. It has been represented that with a modern gun, with the mechanical arrangements of the sliding-carriage a week's drill (practically five and a-half days) at a time, to a newly entered man, is insufficient, do you concur in this?—I think that one week's drill should be sufficient to enable a man to take one of the unimportant numbers at a gun, and to learn to load and fire his rifle, but nothing more.

295. Looking to the requirements of the present day, do you think that is enough?—Decidedly not; but this small amount of training is only for the first three months, as he will after that get another week's drill.

296. (*Mr. Mayo.*) Can you give us any idea whether many newly entered men take only seven days' drill at a time?—I think they generally take one week only at first.

297. That is in your district?—In my own ship.

298. (*Captain Willes.*) By the Naval Reserve regulations, it is possible for a man to be entered in the Naval Reserve by a chief boatman in charge, the medical examination being conducted by an agent on the spot, do you think that that is a proper regulation?—No, I think they should be examined on board the district ship, by competent naval officers and the surgeon of the ship.

299. Do you think that it would be unfair on the candidates for the Naval Reserve Force to insist, if they wish to enter, that they should go to the district coastguard ships, of which there are nine, to the drill ships, of which there are eight, or to Pembroke, Queenstown, Portsmouth, Plymouth, and Sheerness, for entry; a man who enters the Navy has to go to one of those ships?—My answer would be no. I think it would be a very proper course, and that upon a man expressing his desire to enter the force to the Registrar at his port, there would be no difficulty in finding facilities for the man's transit to the ship and back; in my own case, if I had notice from the Registrar at Southampton, I would send a boat.

300. You imply by that, that the Government should pay the expenses?—I think it would be as well, if you wish to encourage the force, to grant facilities for their going to these places.

301. But a candidate for the Royal Navy, either as a man or boy, has to go to the naval port or ship, why should more consideration be shown to a man belonging to the Royal Naval Reserve?—Boys for the service are entered at present by officers of the coastguard, and forwarded free of expense, and the entry of men from other than naval ports is, I think, a rare occurrence, but I see no reason for more consideration being shown to candidates for the Naval Reserve than to men or boys who wish to enter the Navy.

302. (*Mr. Mayo.*) What is the extent of your district?—From Dover to Christchurch, including the Isle of Wight, and containing 92 coastguard stations.

303. Then if a man who resides at Dover wishes to join the Naval Reserve, he would have to go to Southampton for the purpose of being entered?—No, Sheerness would be nearer.

304. But men from Rye, Hastings, and those places, would have to go to Southampton?—Yes, but the number of men from points on the coast at a distance from the entering ports is very small.

305. In reply to a question by Captain Willes you said you thought Naval Reserve men should not be treated with more consideration as regards facilities for entering than men who enter the Royal Navy as fleet men; does it not appear to you that the cases are somewhat different? Will you be good enough to look at it in this light; a man seeking to enter the Navy is seeking for permanent employment; a man entering the Naval Reserve may be leaving permanent employment for the purpose of entering; in the

Captain A. F. R. De Horsey.

17 Nov. 1869.

one case a man depends upon the Navy for the whole of his income, and in the other for only a small part?—The cases are, I admit, different, but I think that the Naval Reserve men have now great advantages in proportion to the service expected from them.

306. (*Captain Willes.*) You commanded the "Hector" during the late cruise with the Naval Reserve; were you not impressed with the idea that a defect of the men was their utter ignorance of man-of-war habits, and discipline generally?—They were very ignorant of man-of-war habits; but I do not see any particular evil results therefrom, and their conduct as to discipline was good.

307. Can you suggest any means by which you think the Government could establish for the future a force of Naval Reserve without some of the slight defects to which I alluded just now?—Yes, I can; but my suggestion would be very lengthy, and with a view to a radical change; for I am of opinion that the Naval Reserve as at present constituted should cease to exist.

308. Do you think a second class Reserve might be entered, consisting of young men who should be made to take their month's drill actually on board a coastguard district ship, and of course to receive a smaller retainer than at present?—I hardly think it desirable to complicate the present system, which is already rather elaborate.

309. Supposing a man refuses to learn his drill?—I do not think he could help learning, the instructors are so good.

310. But supposing he is stupid, and will not do his drill?—He would then be reported to you and probably dismissed the force: but, as a rule they are most attentive to their drill.

311. (*Mr. Mayo.*) It is considered a matter of importance that the Naval Reserve men should have some proficiency in gunnery; do you think that it would be possible, by giving prizes for the best gunners, to stimulate the men to obtain proficiency?—I think the only good method would be to give additional pay if they pass as trained men; at present they only get the distinction of wearing an anchor on their caps, which they have to pay for, and do not appreciate, as it brings no advantage.

312. (*Captain Willes.*) From what ports had you the Reserve men for the "Hector" during the cruise?—22 from Southampton, 2 from Portsmouth, 8 from Newhaven, and 95 from Sunderland, the latter having been transferred from the "Duncan" to the "Hector."

313. Do you think it possible that a limited number of boys could be entered for the Navy annually, at the age of 15, for a three years' service, then to be discharged on a smaller retainer than is at present given to the Naval Reserve; of course I mean that they should become members of the Naval Reserve?—I think the same ends might be arrived at by entering a larger number of boys, and not binding a portion of them beyond the age of 18 years.

314. (*Mr. Mayo.*) Do you see any way of retaining these boys for the service of the country, in the event of a war?—I think that their training in the Navy would give them a taste for it, and induce them to serve when wanted. I am of opinion that the system of a retaining fee for service which may never be required is false in principle. I think that the services of these men or boys would be difficult to get in case of war. My own opinion is that one-half of the Naval Reserve would come, not more; and I think that the services so given would be given grudgingly, as any service must, in my opinion, be, when it has been already paid for and the money spent.

315. (*Captain Willes.*) Have you read Admiral Key's Report on the cruise of last April?—Yes, I have read it.

316. What is your opinion as to paragraph 40?—I am of opinion that all matters of discipline, drill, entry and discharge of men, should be immediately under the Admiralty; but the records of the force may, I think, be kept with advantage by the Registrar General of Seamen and his deputies.

317. Do you not send the records of drill of the Naval Reserve to the Registrar General now, and not to the Admiralty?—Yes, according to the regulations.

318. Do you not think that the Returns of the drill of the Naval Reserve should be sent to the Admiralty for the supervision of the Director of Naval Ordnance, as your returns from the "Hector" are?—Undoubtedly they should; but I think the returns are of little importance provided the drill is good.

319. (*Mr. Mayo.*) Do you not now send returns to the Admiralty?—Yes, a quarterly return of drill and punishment.

320. Will you be good enough to state the nature of the drill return you forward to the Admiralty?—It is a report of efficiency and progress of the men in each year of their engagement, under the heads of "Great Gun," "Rifle and Sword Exercise," also "Target Practice."

321. Will you also state the nature of the return you send to the Registrar General of Seamen?—It is a weekly return of the men's names, and the total number of days they drill, and is quite unconnected with the returns of progress sent to the Admiralty.

322. Can you tell what the object is in sending the drill return to the Registrar General of Seamen?—I believe to check the amount of pay due to the men, and with a view to show whether they are entitled to their retainers.

323. Are you aware of the nature of the duties performed by the Registrars of Reserve at the various ports?—I have little knowledge of their duties, beyond what is contained in the Naval Reserve Instructions, which are very ample.

324. Do you think that any of those duties could with advantage be performed by naval officers?—I think the Registrars are better qualified to do the clerical work connected with these men than the paymasters or district paymasters would be. The duties performed by naval officers are, I think, best confined to the entry, the drill, discipline, &c.

325. (*Captain Willes.*) You say that the entry would be best done by the ship, but at present it is done by the registrar?—I mean that the examination should take place on board the ship, but that the record of entry should be kept by the registrar.

326. Do you think there is any reason why a man once entered in the Naval Reserve should not be paid his retainer by the district paymaster, or paymaster of the ship, when he takes his drill?—His retainer is paid four times a year (30*s.* each time), and the drill might be all in one month, otherwise I do not see any objection, but I still think all the clerical part had better rest with the registrar.

327. Of the 16,000 men in the Reserve, how many do you fancy are in a position to take their retainers four times a year regularly?—My estimate must be very vague; perhaps I should say one quarter of them.

Mr. Mayo stated that by far the larger number took their retainers quarterly; he would have the return made out and sent to the Admiralty if desired.

Captain Willes did not think such return was required.

328. (*Mr. Mayo to the witness.*) Is not the payment of the retainer dependent, first, upon the man's having performed drill, and secondly, on his having performed other obligations of the Reserve, which can only be known to the Registrar General of Seamen?—Yes; as the constitution of the force is at present there are many points which the registrars alone can know.

329. Then if the payment of these retainers were made exclusively by Naval Officers they would frequently make payments which under the existing regulations are stopped by the Registrars of Reserve?—Yes, there is no doubt in my mind that the payments of retainers should be made by the officers who keep the records.

Captain A. F. R. De Horsey.

17 Nov. 1869.

330. (*Captain Willes.*) Do you think it necessary to be so particular as to the whereabouts of a Naval Reserve man, for if he does not show himself for drill he is not paid?—No. I do not think it necessary. I think that great circumspection should be used in the first entry; but afterwards practically the drilling and paying seems to me sufficient, and I think the forms at present in use might be simplified.

331. (*Mr. Mayo.*) If no account of the whereabouts of the Naval Reserve is kept, how could we find the men in the event of war; you see a sailor is in London to-day, and he is off to-morrow, he is not like a man-of-war's man?—I think there will be a difficulty in finding them in the event of war, and if they are abroad when the war breaks out, I do not think we shall be much the gainers by knowing the ship they sailed from England in.

332. In the event of war being probable, the Admiralty have power to prevent the Naval Reserve men going to sea, as under the existing regulations no Reserve man can enter on a voyage exceeding six months duration without leave; therefore, practically, the Reserve men would be retained for service in the navy, and would not be allowed to ship?—I suppose the Admiralty would be able to prevent most of the Naval Reserve men who are in England at the time of the war breaking out shipping in merchant vessels; but they would have little power over those who were abroad at the time.

333. Will you be good enough to look at paragraph 150 of the Regulations; there you will observe that Naval Reserve men are liable to serve if called out by Royal Proclamation; and that naval officers can, if necessary, take them out of the ships on board which they are serving?

Captain Willes. That is one of the best things in it.

334. (*Mr. Mayo.*) Yes, but the witness says there is the difficulty? (*To the Witness.*) Perhaps you were not aware of that provision.

The Witness. I was quite aware of it, but I think merchant vessels which had Naval Reserve men on board would avoid meeting a man-of-war, if possible.

The witness withdrew.

Mr. F. Brady.

Mr. F. Brady called in.

335. (*Captain Willes.*) You are district paymaster at Harwich?—I am.

336. Has your attention been called to the regulations for the government of the Naval Reserve?—Not officially, in any way, simply privately.

337. Have you much to do with the Naval Reserve?—I pay the Reserve at the batteries, but my attention has not been officially called to any particular point.

338. Can you point out anything which might be improved?—I think the manner of keeping the accounts might be much simplified by having all the payments made by one class of officers, under one department.

339. Will you describe the present system?—The present system seems to be that the retaining fees are paid four times a year, 30*s.* at a time, by the registrars under the authority of the Board of Trade; the drill money is paid when the men are drilled, by the district paymasters for batteries on shore, and paymasters for district ships to the men drilled on board the drill ships. I should propose that both retainers and drill money should be paid by the paymasters of the district and of the drill ships wherever the men are drilled. I should also fancy it might be simplified by the retaining fee being paid once or twice a year, when the men are drilled; the present pay list might be modified, so that on completion of the 28 days' drill a Reserve man might receive and sign for his last weeks' drill money and his retainer for the year. To do this, it would be necessary to make the Reserve man in appearing for his drill produce the book he now keeps (R.V. 2.) or some similar document, which would carry on the face of it proof of his being entitled to be drilled, and consequently to receive his retainer. If any irregularity is found in that, it would be requisite, before the man was drilled, that the drilling officer should be authorized to refuse to drill the man till reference had been made to head-quarters, where the general register is kept.

340. (*Mr. Mayo.*) At present the payments to Reserve men are made by naval officers for drill, and by Board of Trade officers for retainers?—Exactly.

341. The naval officer knows that the man has earned his drill pay, because he has performed his drill under his superintendence?—Exactly, he would not pay him otherwise.

342. But he does not know that he has earned his retainer?—As at present arranged he would not, but under the plan I suggest, or something similar to it, he would.

343. Under the existing regulations a man has leave granted for a voyage in a certain ship. If he does not return in that ship, he breaks his leave, and his retainers are, in consequence, forfeited; how would a naval officer arrive at a knowledge of this, without a reference; which is at present made to the records in the office of the Registrar General of Seamen?—I understand that under the present system a man has to appear before the registrar, who notes that fact in the book (R.V. 2.); if that does not appear, it would be an irregularity which would necessitate reference to head-quarters.

344. You could not tell on having the book placed before you, whether there were any entries omitted or not?—If certain entries were required, and were not there, the fact would be self apparent.

345. Do you pay many Naval Reserve men?—Four batteries.

346. How many men in round numbers?—I think it is 383 a month, every year; they complete a month in the year.

347. Have you ever made any entries in the book (R. V. 2.)?—It does not come before me at all.

348. Then you have not observed that in some of these R. V. 2. forms at Harwich that portion of the certificate which records particulars of service in merchant ships is a blank?—I have not observed that, as I have not paid the men directly myself, but only by deputy.

349. Then you have no knowledge of what entries are made in the R. V. 2.?—I have none personally. I should like to explain that in adopting any such system as I have suggested, it would be requisite to alter the R. V. 2. For instance, take a man from his first entry, after his medical and other examinations had been passed, the fact should be noted in the R. V. 2., the production of which to the drill officer would be sufficient authority for him to commence the drill. At the expiration of the 28 days he would be paid the retainer for that year.

350. You would pay him in advance?—I should consider that his having performed his drill was a sufficient proof of his being a Reserve man for that year, and liable for serving during that time. Then the next year for his drill, the Reserve man would have to show on his R. V. 2. that he had appeared the regulated number of times, once or twice, as I should suggest, and four times, as at present, before the Registrar, who would note that on the R. V. 2. The production of R. V. 2. to the drill officer would be sufficient authority for him to commence the drill, and so it would go on year by year.

351. Then the man would be required to make an appearance once every six months?—Yes, that is what I should suggest, as being less liable to interfere with his avocations, and quite sufficient proof of his existence and presence in the United Kingdom

Mr F. Brady.
17 Nov. 1869.

352. But if he is absent on a voyage to India, how is he to make his appearance every six months?—He could only go by previous leave being given, according to the present regulations, then he would be on leave, and the fact would be noted on the R. V. 2.

353. Then if he committed any of these offences referred to in paragraph 173, but had a note on his certificate that would *primâ facie* entitle him to his retainers, you would make the payment, notwithstanding these offences which he may have committed, for which he is liable to forfeiture of retainers or dismissal from the Reserve?—As I understand it, the Registrar would not make that notation if he was liable to forfeiture or discharge.

354. Do you know that at the present time the Registrars are obliged to refer to the office of the Registrar General of Seamen for this information, as they have not the means of ascertaining whether the Reserve men in all cases comply with the conditions?—I do not think that case would alter the reference in any way; if they are obliged to make it now they would be obliged to make it then, if the regulations were retained, but I think they might be simplified.

355. Then the only alteration you would propose in that respect is that the actual payment of the money should be made by a naval officer that the reference should be the same as at present; is that what you mean?—No; I propose that appearing twice before a registrar, in ordinary cases, should be sufficient, which would not necessarily involve any reference to head-quarters, the reference would be the same in cases of irregularities only.

356. I think I understood you to say that your duties had been those of a district paymaster; they have not brought you into immediate contact with the men?—That is so.

357. Then you are not practically acquainted with the working of the present regulations?—Only as far as payment goes.

358. And that through your deputies?—The papers are all sent to me; if any irregularity appears upon them I do not pay the money until that irregularity is explained.

359. (*Captain Willes.*) You produce a return of money paid by you in the Harwich District; I see by this return that officers of the Coast Guard Stations are paid for superintending the drill of the Naval Reserve; do you consider that is a fair and legitimate payment, or should they do the work for nothing?—I think it is a fair and legitimate payment for extra work; they have not merely to superintend the drills, but they have to keep all the books, make up the returns and pay lists, and they are responsible for any errors made.

Mr. Mayo stated that one officer had been called on to pay as much as 30*l.* for errors made.

360. (*Captain Willes.*) To your knowledge are there any foreigners in the Reserve?—I am not aware of any.

361. Have you any more suggestions to make?—The only thing I can suggest is, that the more you can simplify the accounts and entries in the books, the better the whole affair will be regulated, and the more easily the men will understand them.

362. (*Mr. Mayo.*) What men do you refer to?—The Reserve men.

363. Have any cases come to your notice of any difficulty arising with the men of the Reserve through their not understanding what is required of them by the forms in use?—I have no personal knowledge of any; but having been acquainted with sailors all my life I know how difficult it is to make them understand any regulations, therefore the more simple they are the better.

The witness withdrew.

Adjourned to Saturday next at 11 o'clock.

Monday, 22d November 1869.

Commander H. J. Challis.
22 Nov. 1869.

Commander H. J. Challis called in.

364. (*Captain Willes.*) You command the coastguard at Southsea?—Yes.

365. How long have you been there?—Nearly two years; and I was one year at Montrose.

366. After your experience in Scotland and at Southsea, will you be good enough to state whether there are, in your opinion, any defects in the present administration of the Royal Naval Reserve?—I think, with regard to the entry of men, that it would be better they should be passed into the service by an officer of some standing, instead of by a second class officer in the coastguard, as is always the case at Southsea. I would also refer to the question of sick pay, which under my knowledge has been applied for by a man suffering from a cold, or sore throat, which would not appear to me to be an illness arising from drill; if his illness arises from drill, I should treat that the same as an accident on drill; but I think it requires clearly defining. I would also bring under the notice of the Committee that the wearing of the badge as a trained man is generally disregarded by the men coming under my inspection; I think it would be advisable that these badges should be supplied gratuitously to the men; as it is they do not use them at all; I never see the badge, because they object to buy it themselves.

367. Have you anything to say as to the age of the men?—No; the men that have been under my review have been in all respects desirable men, fine fellows, men that have been, a good many of them, in men-of-war, and in yachts, well conducted and orderly in every respect. I think their drill is too short; I am of opinion that five and a half days, which it really amounts to, for a man newly entering the Reserve is totally inadequate to get him well grounded to begin with; I think he ought to have a fortnight, if practicable, and a month would be better, if it could be so arranged. In a week at Southsea, for instance, a man has eleven half-days drill, of which five are at great guns, four at rifle, and two at cutlass drill; they cannot learn much in that time.

368. Do you think it advisable to limit the time of drill for all newly raised men to 14 days?—As the lowest limit?

369. Yes.

370–1. At the same time you would recommend trained men, under Article 198, having a test drill, like the officers?—Yes, on his application.

372. When he comes up, while you say to the dull and stupid fellow you must drill for 14 days, you will say to the quick and able man, you can go through a test drill, and excuse him his drill?—I would not excuse him his drill, because it is always as a lesson in discipline.

373–4. (*Mr. Mayo.*) Do you consider that the men would regard it as a boon to be excused?—I think it would be a much greater boon if a trained man received some slight acknowledgment from the Government in the shape of any small gratuity in money; it would give him something to work for;

at present he has not any particular incentive to care for going creditably through his drill.

375. If the man passes his test drill for seven days, he gets his guinea ?—Yes.

376. But he only gets his pay during the seven days ; the remaining three weeks he is not required to perform his drill, and he does not get his pay ?—But he has to take his month's drill in the year.

377. No, he is not to have his month ?—He will get his month's pay without doing his month's work ?

378. No, he is not to get that ? — You mean that he is not to do the other three weeks drill, nor receive the pay for it.

379. After passing the test drill he is to be free ; he is not to be required to perform the other three weeks, and not to be get paid ?—I rather fancy they would just as soon come in order to get the pay.

380. Would they consider it to be a boon to be allowed to take no more than their test drill ?—No, they would not ; they like to get their drill.

381. (*Captain Willes.*) Does the man now who comes for seven days drill and only gets five and a half days, get paid for the seven days ?—Yes, he does.

382. How is that done ?—By Article 75 of the regulations.

383. Do a large proportion of your men in Southsea come for their week's drill, or for the longer period ?—Mostly for the week ; 240 men annually take their drill.

384. (*Mr. Mayo.*) Do you know how many of those take drill for a week at a time ?—No, I do not ; the daily average is 16.

385. (*Captain Willes.*) You are aware of the number of training ships, and what are now called coastguard ships, and guard ships, at Portsmouth, and Plymouth, and Sheerness. Do you think it would be too much to require that for the future all candidates for the Naval Reserve should pass on board those ships ?—With all their travelling expenses paid ?

386. Well, I want your opinion ; if you think they ought to have their travelling expenses you must say so ?—I would say no, if they were allowed their travelling expenses from their usual port.

387. To your knowledge are there any foreigners in the Naval Reserve ?—Not one.

388. The want of an uniform is considered a defect. Would you recommend that for the future the retainer should be reduced to 4*l.* per annum, and a suit of uniform given ?—No ; but I would insist on a decent drill uniform whilst on drill ; I would leave them the option of getting it themselves.

389. Would you have an uniform in some way or other ?—Yes, they look very slovenly now.

390. They are magnificent men, but very badly dressed ?—Yes, that is so.

391. Would you recommend a second class Reserve being established for young men, say not over 18, who should be obliged to serve their 28 days annually actually on board a district ship, and then to be passed at, say 21 years of age into the first Reserve, providing they have proved themselves worthy of that advancement ?—I think that the training on board ship is much more valuable than that to be obtained in the battery, as habits of discipline are acquired.

392. Naval Reserve men who have belonged to the service for 10 years will be eligible for the benefits of Greenwich Hospital to the same extent as the seamen in the Royal Navy ; do you think that that is right ?—It is manifestly unfair, as is also their proposed admission into the coastguard by Article 194.

393. Why is it unfair ?—Because the Royal Navy seamen has given his entire time to the service of the crown, and looks forward to these benefits as a part of his reward, and would feel it a hardship, in my opinion, to find men of the Naval Reserve who have received, in all probability, higher wages, and made the government service a secondary consideration, placed on equal footing with themselves.

394. Are you aware that great importance is attached to having a knowledge of the whereabouts of the Naval Reserve men ?—I am aware of the restrictions.

395. Do you think they are necessary ?—No, I do not with the power of examining the crews of any merchant ships, and taking the Naval Reserve men from them abroad in case of the men being called out. If the restrictions as to the whereabouts were removed the men would put in a longer period of drill.

396. Are you aware that the retainers are now paid by the registrars, whilst the drill pay is paid by the paymasters ?—Yes.

397. Do you see any reason why the paymaster should not pay the retainer and the drill pay also ?—The effect of such an order would be to cause a great deal of correspondence between the registrar and the district paymaster, which is not now called for. When the men come up for drill the drill officer forwards the list to the paymaster, but there is no record of the retainer kept, it is all done at the head office. I should think it was not important to make any alteration.

398. (*Mr. Mayo.*) What has been the nature of your duties in connexion with the Reserve ?—At Montrose it was principally the examination of candidates, who all passed before me. In Southsea it has been confined to the occasional inspection of the men at the drill battery, and the settlement of questions referred to me by the officer in charge.

399. It is stated in your evidence that the men who enter the Reserve at Southsea are passed by a naval officer of the second class ?—Yes, a coastguard officer of the second class.

400. Is there no officer of a superior class to pass the men at Southsea ?—None, with the exception of myself as the inspecting commander. This method of passing the men was in practice before my appointment to the division, and I have not interfered with it.

401. Would there be any difficulty in the men being passed by you ?—None at Southsea ; it would be impracticable at Southampton, which is also in my division.

402. (*Captain Willes.*) Why did you not bring that practice into adoption at Southsea, as I understand you entered them all in Scotland ?—The question was never brought before me ; the men were never sent to me.

403. (*Mr. Mayo.*) Could not the men be entered on board the district ship at Southampton ?—Yes, during her presence ; but she is frequently absent at Cowes and elsewhere.

404. Would not the same difficulty arise with other district ships in the case of those ships being the only places where the men could be entered ? — There would have to be an alternative in case of the absence of these ships, which I should suggest should be the inspecting officer of the division.

405. I think you stated in your evidence that it was not necessary to keep any record of the whereabouts of the men ; do you know the object of keeping these records ?—I presume it is to know how many men would be available if they were required, and where they would be found.

406. Do you consider this knowledge a matter of small importance ?—I consider it a matter of importance knowing what vessels the men have embarked in ; but I do not attach any importance to their whereabouts. I mean to say, as long as they are embarked I do not attach any importance to where their vessel may be, for the reasons stated in my previous evidence.

407. I think you saw no difficulty in the payment of retainers being made by the naval officers instead of by the Registrar ?—I would refer to my previous reply. I did make some difficulty, but I did not think it was of any great importance. I was rather averse to the alteration.

408. You are aware that under the Naval Reserve Regulations, officers of the Mercantile Marine are are granted commissions by the Admiralty as lieutenants and sub-lieutenants ?—Yes.

Commander H. J. Challis.

22 Nov. 1869.

409. Do you think it would be expedient that the Government should create a subordinate rank, say of midshipmen, to which rank junior officers in the merchant service should be appointed? — I object altogether to the principle of officers of the Mercantile Marine being employed in the Naval Reserve, as I consider there is a sufficiency of naval officers who are well fitted for the work.

410. Have you any suggestions to make with reference to the standard of height or age for entering the Reserve?—I think that under no circumstances should a man be entered under five feet four inches, for it is impossible for an officer to be able to state that a man under this height would be a positive loss to the Reserve if rejected, as he is required to do by Article 3.

The witness withdrew.

Mr. E. W. Millman.

Mr. Edward William Millman was then called.

411. (*Captain Willes.*) You are paymaster on board the "President," are you not?—Yes, I am.

412. Will you be good enough to state what are the defects in the present administration of the Naval Reserve, if in your opinion there are any?—I have never made the Reserve a subject of particular consideration since I have held my present appointment; but perhaps there may be one or two small points.

413. How long have you held that appointment?—Nearly two years.

414. And never made it your study?—Not as far as the Reserve goes.

415. Will you tell us what you *do* think?—With regard to the entry of some of the men I think a little weeding is required. I was told recently that one of the men belonging to the Naval Reserve kept a crimping shop at Shadwell. I think a man of that character ought not to be eligible for the Reserve. Another point is, I think a man should do fourteen days drill instead of seven; but in some cases, perhaps, it would not be possible; for instance, one of the water police could not get even a week's leave; to do it he would have to drill by driblets.

416. Are we to understand that there are any men who take their drills on board the "President" for a less time than a week's consecutive drill?—Yes; I remember one man belonging to the water police who takes his drill in half days and whole days at a time.

417. (*Mr. Mayo.*) Is this the only case?—That is the only case that I know of on board the "President."

418. Do you know of any similar cases elsewhere?—No, I know nothing about other places.

419. (*Captain Willes.*) Do you think that it is desirable to have such men in the Reserve, as they are supposed to be seamen?—Yes, I think such a man is very eligible for the Reserve.

420. By the regulations which are established on board the "President" is it possible for a Naval Reserve man to get off his drill, or to avoid his drill; that is to say, could he take 14 half days instead of a week's consecutive drill?—No, not without the consent of the captain.

421. Do you think that you could pay the retainers as well as the drill pay?—Yes, I think so, without any difficulty.

422. You are aware that the reason the retainers are paid by the registrars is, that the Board of Trade may have more power over the men, and know what voyages they are making, and in what part of the world they may be found when an emergency arises. Do you attach much importance to that, or do you think that a man producing his R.V. 2. when he comes for drill, would be sufficient?—If the Naval Reserve man reports himself twice a year to the registrar instead of four times, and if a notation appears in the R.V. 2. that he has so reported himself, I think that would be sufficient. I think it is not material who pays them, but you would require to know in what part of the world they are.

423. Have you ever considered how many of the 16,000 men in the Reserve are in a position to report themselves four times a year by reason of their being in the United Kingdom?—About a third, I should think.

424. (*Mr. Mayo.*) From what data have you arrived at that conclusion? — From seeing the number of men at drill on board the "President" and looking at the periodical return of men enrolled on different parts of the coast, I should think there would be about a third of the men.

425. (*Captain Willes.*) Article 106 gives the power, which is frequently used, of paying a man who falls sick during his drill. Do you consider that this should be limited to cases where the man is hurt or injured during the drill?—Yes, I think so.

426. Can you suggest any means by which an established uniform could be introduced?—No, not as a general rule; I think fresh entries might.

427. Well, we are speaking of the future?—I should think a man as a fresh entry should have a suit of clothes given him and a retainer of 4*l.*, and 6*l.* the subsequent year without a suit of clothes; I think that would do very well.

428. To your knowledge are there any foreigners in the Reserve, or naturalized British subjects, foreign born?—No, I do not know of any.

429. Do you think the men in the Naval Reserve should be entered under the same regulations as for the Navy; I mean medical examinations by naval medical officers, and naval examinations by naval officers of a certain rank?—I think it would be a great thing if these men were examined, so far as their seamanship goes, by naval officers of some rank. I think, now as the men will be coming forward for re-enrolment, it would be a very good idea to examine some of these old hands; I think a great many would be found unsuitable.

430. Do you think we might carry out this system; allowing men to enter as they do now, provisionally, and then, if they pass their provisional examination to be sent for final examination to a district or drill ship, their expenses being paid; so that every man before he is enrolled must have passed under the same regulations as a man in the Navy?—Yes, I think that would answer.

431. (*Mr. Mayo.*) Will you be good enough to state what officers examine the men for the Reserve in London?—There are the staff surgeon and the gunner of the "President."

432. (*Captain Willes.*) Does not the captain examine them?—Yes, the captain of course.

433. (*Mr. Mayo.*) Then you recommend no change so far as the entries in London are concerned?—No.

434. (*Captain Willes.*) But that that should be the general system?—Yes, I think that that system is a very good one.

435. (*Mr. Mayo.*) Will you be good enough to state what your duties are in connexion with the Reserve?—Recording the drill register which is a daily report, and keeping the daily return for the Registrar General's department, and paying the men who take their seven day's drill; of course there are various other returns for the Registrar General.

436. I think you stated that in your opinion the retainers might be paid without any difficulty by the paymaster?—Yes, if a notation were made on the R.V. 2. that they had made their appearance before the registrar, I think that would be sufficient.

437. Then before any payment could be made the men would have to go to the registrar to get this certificate?—Yes, I understand he has always to go.

Mr. E. W. Millman.

22 Nov. 1869.

438. If the amount of retainer is due, would it not be shorter to pay the 30*s.* than to make this notation, and then to go somewhere else to get the money?—No, I would only pay twice a year. As soon as a man takes his 14 days drill, I would pay him half the year's retainer.

439. Would you pay him this 3*l.* in advance if he had completed his drill?—Yes, if he had completed his drill for the half year.

440. If a man went on a voyage, and was drowned in the following week, you would have paid him 3*l.* retainer under your plan, to which, under the existing regulations, he would not be entitled?—If he had completed 14 days drill he would have been paid.

441. At present, if a man commits any breach of the regulation referred to in paragraph 173, such as desertion from a merchant ship abroad, proceeding to sea without having performed his drill, being convicted in a court of law, etc., his retainers are stopped; how are you to detect these cases?—If a man presents himself for drill, of course it is recorded in the book at once.

442. But if he deserts, or is convicted in a court of law?—I would not mind that so long as he performed his drill.

443. (*Mr. Mayo to witness.*) Then with respect to the Naval Reserve men, you think character is quite a secondary consideration?—I think they behave very well when they are on drill, very well indeed. I would not interfere with them when they are out of the ship so long as they performed their drill and behaved well on board, and I would not interfere with their retainers. I think they are a fine body of men, and very well behaved.

445. (*Mr. Mayo.*) Then your recommendations come to this: that we should not look after them as we do at present, and that the retainer should be paid in two instalments in advance, and not be dependent upon anything beyond his having performed his drill?—Yes, I think so. If he reports himself to the registrar there is the evidence that the man is still in existence; that is all we want.

446. (*Captain Willes.*) Do you think it is wrong to pay the men seven days when they only drill five and a half days?—No, I do not think it is wrong.

447. (*Mr. Mayo.*) Are you cognizant of the nature of the duties performed by the registrars of the Reserve?—No, I cannot say that I am; not at all.

448. You are aware that these officers hold their appointments for life; and therefore get to know the seamen with whom they are brought in contact; the naval officers who are appointed to perform certain duties for the Reserve, hold their appointments only for a limited time, not exceeding, I believe, three years. As soon, therefore, as they get acquainted with the men they are replaced by a new officer. Does not this latter system appear to you to possess some disadvantages?—No, I think not.

450. Do you think that the duties connected with the Naval Reserve could be entirely performed by naval officers?—No, I do not.

451. Then, with the exception of the payment of retainers, you would propose that the administration should remain as at present?—Yes.

452. That is to say, divided between the Board of Trade and the Admiralty?—Yes, I think so.

The witness withdrew.

Mr. R. Y. Yealland was called in.

Mr. R. Y. Yealland.

453. (*Captain Willes.*) You are at present in the dockyard at Portsmouth?—Yes; I am chief gunner.

454. Were you the gunner of the "Active," a Reserve drill ship, for two years, and therefore, mixed up with the entries and drill of the men in the Reserve?—Yes, I entered as gunner, and became chief gunner.

455. Will you be good enough to state what you consider the defects in the administration of the force so far as the drill and minor details are concerned?—As regards drill, I do not think there is sufficient time demanded of the men to make them efficient for general service in the fleet. There are some minor points; one is, that at that particular place (Sunderland) I do not think that the men are adapted for service in the fleet, as a great number of them are not bonâ fide seamen, or actually sea-going men. I have found mixed up with the Reserve at that port, policemen, butchers, grocers, men employed in the coal mines, and labourers in the engineering factories. I might give a case in point; the butcher, for instance: I was going with a party to Roker Bay for the purpose of gunnery practice. Passing one of the streets, I was accosted by a man standing at a butcher's shop, dressed in the garb of a butcher, with a blue apron on. He said, "Good morning, sir." I returned the compliment, and said he had the advantage of me. He seemed rather surprised, and asked me if I did not know so and so, calling himself by name, belonging to the Naval Reserve. I said, "Well, you surprise me; I little thought of seeing a "person belonging to the Naval Reserve, dressed in "such a garb as that," and I passed on; and I think to the best of my recollection, I mentioned the circumstance to Captain Hall, as I always kept the commanding officer informed of all these little incidents, because I was under the impression that the country was paying too much for the article, and that we did not get a sufficient return for it. The man in the coal mine was employed at Ryhope, a distance of about two and a-half miles from Sunderland. He was in the habit of putting in his drill a day at a time, as he could get it conveniently. Previous to Captain Hall joining, the man stated as his reason, that he could not leave his employment in order to come to his drill, unless he could come in that way. I brought this under Captain Hall's notice, and he objected to his putting in his drill in that manner, and said that he could not think of his putting in less than seven days at a time, according to the regulations of the Reserve, so that he had to get leave from time to time to put in the required time, and to the best of my recollection, this man, when his first period of five years expired, when the period for re-entering arrived, was objected to as not being a sea-going man. Many other instances of a similar character, I should think amounting to between 30 and 40, whose names were left with a remark against them, as being objectionable when they should make their appearance for re-entry. There were still names on that list outstanding when I left; I might multiply instances, but perhaps that will suffice.

456. How many years ago was that?—Three years the 8th of October last.

457. How long had the Naval Reserve been in existence then?—Between four and five years, over five years up to the time of my leaving.

458. Do you think those abuses still exist?—I cannot say.

459. Have you never heard from your successor?—No.

460. (*Mr. Mayo.*) Were these men that you referred to serving as butchers, quarrymen, etc. when they were enrolled in the Reserve?—That I cannot say. They were supposed to have been *seamen* then, otherwise they would not have been taken.

461. (*Captain Willes.*) Had they been drilling?—Yes, they had been.

462. Will you state what you consider would be proper regulations as to the drill of the Reserve, knowing, as you well do, what the present state of the naval artillery is?—I would suggest that in lieu of 28 days, as hitherto, at least 42 days per annum, and

Mr. R.Y. Yealland.

22 Nov. 1869.

that compulsory and consecutive, should be required. I have found from experience that the men in putting in their drills avoid, if possible, putting in more than a week at a time; for this reason, that they get off, or if I may so say, shirk the instructions, because, suppose they put in the first week's drill, the second week they are supposed to advance, that is, if these two weeks are put in consecutively, and so on with the third and fourth; but if they put in a week at a time, and at an interval of, say two months or more, they have then to go back over the same ground again, so that purusing that course you will never get them to the mark of perfection.

463. (*Mr. Mayo.*) The fact is they are always at their "A B C"?—Yes, just so. The instructions laid down relative to these drills were deviated from by Captain Hall in order to check that abuse. The men after putting in fourteen days drill, were placed directly to the third or manual portion of the exercise, to their surprise, as they meant to avoid that. With respect to the armament, I would suggest that armaments of the most modern descriptions should be placed on board the drill ships.

464. (*Captain Willes.*) Have you considered that in making a man take forty-two days consecutive drill, we should lose a good proportion of the Home Trade Seamen?—I think that those seamen employed in the Home Trade would avail themselves of the winter season, when there is not so much doing in the Coasting Trade; in fact, application has been made to me, in consequence of the slackness of the times, to enter into a portion of the drill for the prospective year, in order to give the men employment.

465. Then, even if we lost a good proportion of our men, the remainder would be rendered much more efficient by the six weeks consecutive drill that you would give them?—Yes. I think it would show, also, whether they are patriotic or not.

466. Do you think we should find 500 of the Reserve taken incidentally from Sunderland and put on board a ship like the "Hercules," of much use?—No, not with that armament—utterly useless.

467. Then to make the Naval Reserve efficient with the modern gun, you consider it imperative that they should be drilled all round the coast with the new pattern gun and slides?—Yes. Let the instructors take as much pains as they possibly can in endeavouring to convey an idea of the difference between the drills of the smooth-bore armament and of the rifled, they will fail in their attempts.

468. A large proportion of the Naval Reserve are drilled at batteries where it will be almost impossible to get the modern guns for some years. What would you recommend to cure that evil?—I should suggest that a ship of war be placed in the locality having an armament on board, which is used in the fleet generally, and that the men be drilled on board ship.

469. What size ship of war could go into the very harbour of Sunderland?—A ship of the "Scorpion" class would meet the requirements of the case.

470. Do you think that the officers in charge of the drills at the batteries and in the drill-ships are exposed to much temptation by men who wish either to evade their present drill or to take them in advance?—Yes, they are, if weak enough to give way to it.

471. In fact, at a detached drill battery we have to trust entirely to the honesty of our officers to ensure that the drills are properly taken?—The temptations are very great. I will give you one case in point without referring to names. I mentioned in the foregoing that there were men connected with engineering factories. One of those men was a foreman of labourers and a member of the Naval Reserve force. The time had arrived at which he ought to put in his drill,—he was fourteen days behindhand for the current year. He presented himself on board the "Active," came to my office, and said he wished to speak to me. I told him to say on—the ship's steward was present at the time—he said he wished to speak to me privately. I told him I was rather busy, but if he would just wait a while, I would speak to him outside, not knowing for what purpose he came. He said, drawing me aside from the doorway, that he had fourteen days drill yet to put in, but that he could not get leave to do so from his employers, and should lose his situation unless I helped him. I asked him how he thought I could help him in that matter. He said, "You can do it, sir." I asked him to explain how I could do it; I could not see my way clear to it. I said, if he could get his leave I should be most happy to fill in his book. He said that he could not possibly get leave, and he was afraid that if he did not put in fourteen days drill he should lose the retainers, which he was then entitled to. I repeated again, that I could not see my way clear to help him in any shape. He said, "Well, there is a way which "you can do:" I said, "No, I cannot see how I can "do it." I said, "Just tell me what I am to do." He said, "You put in 14 days drill, and you can "draw the drill money, and I will draw the re-"tainers." I had expected what was coming: so I said to him, "You tell me you are foreman of "labourers, and that you have the employment of men, "paying them at the expiration of the week; you "of course give in a statement to your employers of "the number of men you are employing, and the "quantity of work that you make up by these men; "now, suppose that instead of your employing 20 "men, you got wages for 20 men, and only employed "16 or 18, and pocketed the difference, and your "employers found it out, what do you think they "would do?" He said, "They would sack me." I said, "Suppose if I were to do what you wish me "to do, and that got to the Admiralty, what do you "think would be the consequence?" He said, "Oh, "you need not fear that." I said to him "Just wait "a little, and I will refer your case to Captain Hall; "it is not in my power to do it;" and I told him if he could accommodate him, he would do so. Captain Hall asked the man to give in a statement of what he wanted, and he would give him an answer. The man would not speak; and I just explained to the captain what it was he wanted; and the captain said if he was not very quickly over the ship's side he would put him in irons.

472. (*Mr. Mayo.*) He is not in the Reserve now?—No, I think not.

473. (*Captain Willes.*) Can you suggest any means of stopping that sort of thing?—You have to trust entirely to your officers, you cannot do otherwise.

474. I want to ask you about the rules for paying men while they are sick on drill. Do you think that should be limited to men who are hurt whilst on drill?—I think that also is abused; it should be limited to men who are hurt on drill, or who should be attacked with severe colds, or anything of that sort, while in the exercise of drill.

475. You would include colds in the number?—I think I would; because, perhaps a man gets a chill through it, and I do not think a man ought to stand the consequences of that.

476. Have you many cases of men breaking their leave during drill?—Yes.

477. The punishments laid down in the Reserve regulations are so severe that they are not practically carried out. Do you think that it would be a good plan to make a man go over his drill again for punishment?—I think it would be a good plan to make him re-commence a week's drill.

478. Did you not find the want of a uniform a great drawback to the efficiency and discipline of the Reserve force?—Yes, we had great difficulty in persuading the men to adopt the uniform of the guernsey, or even to take the badges, so that they might attach them to their own shirts, being less expensive; their aversion to uniform was so great that on dismissing from the ship, they would throw their caps off, and would be clashing with the police when they attempted to make them put them on

Mr. R. Y. Yealland.
22 Nov. 1869.

again. We had to call them back and make them fall into the rear. I should hope we have better men in the Reserve than Sunderland produces.

479. You think Sunderland is not a fair sample of the Naval Reserve?—I do not think it is, the men seem so bigoted and self-willed. I attribute that greatly to the want of discretion in selecting the men on first entry.

480. Do you think it would be advisable to cause the men who next year might enrol for their third five years to be made to pass before a naval surgeon and a commander of the Navy?—It should be in all cases a naval surgeon; it may be optional whether it might be a commander, or a lieutenant, or a——

481. No, I would not have any other than a commander?—Well, perhaps it might be better to have a naval surgeon and a commander of the Navy.

482. Now, in your position, connected as you are with the armament of the Navy, do you think that the men who have been enrolled at five feet, and five feet four inches should be weeded from the force, or do you think that we find some strong hearty men at that stature?—I do not think that should be an objection where the men are found to be thorough good seaman—far from it. With regard to the discipline, I may remark that for general service in the fleet, I do not think any man who has been trained in the merchant service from childhood up, can bear the yoke of naval discipline easily.

483. For that reason, do you think it would be a good plan to enter as a second class Reserve, with retainers perhaps of 2*l.* a year, young lads, not over 18, who should take an annual drill of 28 days actually on board our coastguard ships?—I would recommend that; but in preference to it, we should have an unlimited entry of boys in our own service, so as to feed the Navy—you will find that none turn out better men-of-war's men.

484. Do you think it would answer to enter a limited number of boys in the Navy, who, after a three years service should get a free discharge, with the view of joining the merchant service, remaining, of course, in the Reserve?—You would not open that to their re-entry into the Navy?

485. No, we do not want them in the Navy?—Well, I think it would answer.

486. Tell me one thing more. The embarkation of a certain number of the Reserve last spring, although the cruise was short, must have done the Reserve men who went a great deal of good; but they were invited to go, and really gained very little by going; can you suggest any means of paying the Reserve for the future, by which we could compel the men to go to sea as they did last spring?—My idea is, that there should be a periodical compulsory service afloat.

487. Have you any idea how that could be managed?—I think we should have district ships, which should be set apart for the cruise of the Naval Reserve.

488. I mean, how could we put that pressure upon them?—I do not see any means in your power, except by an Act of Parliament.

489. No money means?—I do not see any; without it is by a kit; give them a Naval Reserve kit. The men seem to have had an idea that the Government should give them their first outfit, and then they would supply themselves afterwards; they do not like to go shabbily dressed.

490. (*Mr. Mayo.*) Did you not say that they had an objection to the uniform?—That portion of the Reserve; but we did not take them as a whole; they might look at it in another way if it was given to them. Where they have to buy it, is the difficulty.

491. With regard to Sunderland men, you say they were not considered the men best adapted for the naval service; during the old wars Sunderland and the north eastern ports were looked upon as the nurseries for seamen for the Royal Navy; do you think the men have deteriorated?—Yes, I think they have.

492. Do you attribute the deterioration to the increased number of steam vessels?—Probably so; they are not thorough going seamen. Would you allow me to make a suggestion?

493. (*Captain Willes.*) Certainly, we shall be glad to hear anything you have to say.

(*The witness.*) I would suggest that at all batteries where the men are drilled they should be drilled by naval gunners, and that a qualified gunnery officer should attend the controller on his inspection. With respect to those officers who are now in charge of the batteries, with all respect to them, their knowledge is superficial, they cannot have the knowledge which naval gunners have who have been trained to it; they are not so ready to adapt any circumstances apart from the usual routine of drill, in the event of emergency, as those who are really gunners. It must be all A B C, or they cannot do it.

494. (*Mr. Mayo.*) Are there any foreigners in the Naval Reserve?—None have come under my notice.

The witness withdrew.

W. Hall.

William Hall called in.

495. (*Captain Willes.*) You are a chief boatman of the coastguard?—Yes.

496. Are you also a gunner?—Gunnery instructor for drilling the Royal Naval Reserve at Southsea.

497. How long have you been there?—Two years and six months.

498. What is the average number of men at drill during the winter months?—They average about 17 a week.

499. All the year round?—The Southampton men have been sent to Southsea, and sometimes I have had as many as 60 on a week for about four or five weeks.

500. Do you pay the men their drill pay?—No.

501. Who does?—The chief officer of the coastguard station.

502. How does he go about it?—He makes out a requisition, and sends it to the paymaster at Southampton.

503. Now, will you be good enough to mention any defects which you may consider to exist, more particularly as regards drill?—I think this seven days period of drill is one thing; I think it is a great disadvantage to the service; I think it is impossible to get an efficient man coming for one period of seven days, and then going away.

504. What would you suggest for the future?—I would suggest that they should put in their whole period of 28 days consecutively for the first five years, and 14 days afterwards, that is, with great gun, rifle, and sword drill; the discipline on board ship I do not include, that is simply for getting them up in their drills.

505. Are the men who come to your battery really efficient men, or are they inferior men?—The majority of them at Southsea are efficient; there is one thing in favour of Southsea battery, we have a good many men-of-wars men join the Naval Reserve.

506. Men who have served their 10 years?—Yes.

507. What sort of employ are they in?—I have found the majority of the men, after they have put in their month's drill, and drawn their retainer, join the service again.

508. What?—Join the Navy again; there are instances of this within the last month.

509. Then they get their discharge from the Naval Reserve when they go back to the Navy?—Yes.

W. Hall.

22 Nov. 1869.

510. After getting their discharge from the Navy, they take a month's drill?—Yes.

511. What retainer do they get?—30*s.*

512. And their month's pay?—Yes.

513. And then they leave the Reserve and go back to the Navy again?—Yes; I gleaned that information from the Reserve, and I know that there are three lately that have joined a man-of-war again after putting in their drill.

514. (*Mr. Mayo.*) But they must have belonged to the Reserve for three months before they are entitled to their retainer?—It all depends; if it is the last of the quarter, they are entitled to it at once.

515. (*Captain Willes.*) Have you known a man-of-war's man do this twice, or can he only do it once?—Only once.

516. When he returns to the Navy, he need not necessarily tell the officer who enters him that he has been in the Reserve, need he?—Yes.

517. Why?—He produces his book.

518. He would not produce it to a captain in the Navy, suppose he went to the "Duke of Wellington"?—Yes, he does.

519. Do we understand that a man getting his discharge from the Navy, say on the 1st of December, could enter the Reserve, get a retainer, take a month's drill, and go back to the Navy in the early part of January, getting the pay and time from the Navy?—Yes, that is so.

[Mr. Whitehouse stated that this could only occur in a limited number of places.]

520. (*Captain Willes to the witness.*) Do you think there is much abuse about the pay of Reserve men when sick?—I think he should only be paid when he receives a hurt or injury whilst on drill.

521. Supposing a man gets a severe cold whilst on drill, would he then be paid?—They have been receiving it, but if I was in charge, I would not give it, I think we should have a great many sick if that was the case.

522. Have you ever been offered a bribe?—No, never.

523. Have you ever heard that instructors have been tempted by Naval Reserve men to let them off their drill?—No, I have never heard of it.

524. The men who come to drill for a week only, have 11 half-days of drill, but they are paid for 14 half-days?—Yes.

525. Do you think that is right?—Yes, I think it is.

526. At Southsea do you find men flocking in to take their drills as the royal birthdays come round?—Yes, I think, generally, we have more then.

527. Are there any abuses connected with the drill of the Naval Reserve that you know of, if so, tell us?—As regards this seven days system; we have men who come from Sussex, and various other parts, who get passes to come down to drill when the retainer is due, then draw their retainer and put in seven days, and get a pass to go back; they then wait, and put in another seven days, getting a pass again, and so on; and the consequence is that these men will cost 12*s.* more than a man who puts in his 28 days at once, and then are not so well up in their drill.

528. So that, if they took their 28 days drill at a time they would only get paid for one journey?—Yes, just so.

529. Are there no drill batteries on the coast of Suesex?—They have done away with them, and the men are sent down to Southsea.

530. Then, on the other hand, we get rid of the expenses of the battery there?—Yes.

531. When they come down to Portsmouth who pays them?—They get travelling expenses, and they put in seven days drill.

532. Who pays them?—The collector at Portsmouth.

533. Have you anything else to tell us?—I do not know; any more than I think we should have a better body of men, if we had men with certificates at the batteries, who went through their proper examinations; we have got men in the Reserve now who are no seamen, and the way some of them take their drill you will never make them gunners; some of them I do not believe ever went to sea at all. I do not know where they have been enrolled, but they do not seem to me to be seamen, and I think it would be a job to make seamen of some of them. And, on the other hand, we have some very intelligent men at the batteries. The seven days men enter a class by themselves, and scarcely ever get any further.

534. You think it would be a good thing to increase it to fourteen days?—Yes; if you could only have the first enrolment 28 days, and than a fortnight afterwards.

535. The first five years they should take their month's drill, and after that you would ease them down to a fortnight?—Yes, I think so.

The witness withdrew.

Adjourned to Wednesday at 12 o'clock.

Wednesday, 24th November 1869.

Captain H. W. Comber, R.N.

24 Nov. 1869.

Captain H. W. Comber, R.N., called in.

536. (*Captain Willes.*) How long have you been in command of a drill ship, or in a position which gave you knowledge of the working of the Naval Reserve?—I have been five years in connection with the Reserve, but with an interval of several years between. I was employed, the first two years after the force was organized, in enrolling men, as inspecting commander of a division of the coast-guard, and three years in command of the "President."

537. After that experience will you be good enough to state what you think requires correcting so far as the administration of the Reserve is concerned?—I have found the system work fairly in most respects; I think a few minor alterations in the regulations might be made with advantage. A subject which particularly led to little difficulties in carrying out what I had conceived to be the objects of the service was the difficulty about the short terms of drill that are admitted; seven days, I think, was too short a time, except under very exceptional circumstances. Seven days being too short a time to give a man any real useful knowledge, or to put him through a course of drill, he forgot what he had learnt, and was always commencing again. At present the naval officer has no power to prevent any man coming, whatever reason he may give, if he chooses to say it is not convenient to come for more than seven days drill; the naval officer has no power to oblige him to come for a longer period. A certain number of men take advantage of that, and make a point of coming for seven days, when many of them might come for a longer period.

538. If that is the case with the old smooth-bore armament, will it not be more necessary still that the

men should have a longer consecutive drill now that the rifled gun has become general in the navy?—Certainly, I think so.

539. Are you of opinion that all men enrolled in the Reserve force for the future should have a consecutive drill of not less than a fortnight, or do you think a month is necessary?—I think a month is most desirable, but it would be attended with difficulties in some cases. I would not allow less than 14 days except in the case of trained men. Trained men should have some tangible advantage also; they have none at present.

540. Then do you think that all new entries should take a drill for 28 days, but that a man who is a trained man might take a limited period of 14 days?—I would say that a man in his first year might be made to take his drill right off, and, then, if he has made fair progress, 14 days the second year, and if then qualified for a trained man, seven days drill, otherwise never less than 14 days.

541. (*Mr. Mayo.*) Do you recollect whether the men who are newly entered, as a rule, take their 28 days drill, or take a less period at a time?—I think that the system of taking seven days became rather more prevalent during the latter part of the time I was in the "President," but I think that not more than a third of the men ever were in the habit of taking seven days at a time, the others all take not less than a fortnight. There are two classes of men who take seven days; there are some very good men and some indifferent men. The very good men are those who have some good reasons, such as men who are employed in the Government department of the Trinity. They are all good men, and useful men, and I should be sorry to see them rejected because they could not take more than seven days at a time.

542. (*Captain Willes.*) Yes, but I only put it for those men who are to be entered in the future?—If we can make an arrangement with the Trinity to give their men a fortnight's leave instead of a week, those men would be very well worth keeping.

543. Those men you speak of would not amount to more than 200 or 300. Would you make a special rule for them?—No; but it might be made a discretionary power. As a body, the Reserve men who have come under my notice are very well conducted, and I have a very high opinion of them.

544. The London force is, as compared with others, of a high standard. Do you find among them any men who have been improperly entered?—I found a certain number of men who had been of the original entries that I should have been glad to have seen weeded from the force. I am aware, having been myself employed in the first enrolment of men, that many men were taken to swell the numbers that now the force is well established might with advantage be cleared away.

545. (*Mr. Mayo.*) Have you not observed that the force has been undergoing a weeding within the last few years?—The men that have come to me in the last three years for their first entry have been decidedly of a superior stamp to those that were in the force on its being first established; we have not got rid of any men, but the same men are not taken now that would have been taken originally.

546. And some of those men who were taken have been rejected?—I am not in a position to say that, because those cases do not come to me.

547. (*Captain Willes.*) You are aware that by the present regulations a man may be passed into the Naval Reserve after examination by a second class chief officer, or even a boatman in charge, and a medical agent. Do you think it should be now ordered that all men before they can enter the force shall be examined by an officer of not less rank than a commander, and by a naval surgeon?—I think, Yes.

548. There are eight drill ships, nine district coastguard ships, and four flag ships at the home ports in Great Britain and Ireland. Do you think it would be too much to insist that all volunteers for the Reserve should go to those ships to be passed into the service?—I think that might be managed, provided some preliminary examination were made, in the first place, so that a number of men might not be sent at Government expense, and then be sent back again as unfit.

Captain H. W. Comber, R.N.

24 Nov. 1869.

549. As we have drill ships or district ships in all the chief ports, would it cost the Government much to carry out such a regulation?—I have no knowledge of the average number of men that have entered, say, in the course of a year, but the expense would be more than counterbalanced by the increased efficiency of the force; the examining officers would have no inducement to swell the force which they have at present; they do not like to reject men if they can possibly avoid it.

550. Are there, to your knowledge, any foreigners in the force, that is to say, naturalized British subjects foreign born?—I have had men who spoke with a slight Dutch accent, but I do not think there are any foreigners in the force; I have no knowledge of any, and I do not think there are any.

551. As the Reserve force consists almost entirely of merchant seamen, no doubt it would be a drawback, in the event of an emergency, that the men are so unaccustomed to men-of-war habits. Do you therefore think that a second-class Reserve might be established, consisting of young men not over 18 years at the time of their entry, who should take one month's consecutive drill actually on board the district coastguard ship; they would, of course, receive a smaller retainer, and when at a suitable age would be enrolled in the first-class Reserve if they could pass the necessary examination?—I think such a system would be advantageous. These men when duly enrolled in the Reserve of the first-class would no longer be unaccustomed to the manners and customs of a man-of-war as they now are. With reference to one of the clauses, in which it is specified about the naval officers being directed to bear in mind the difference between merchant seamen and a man-of-war's men, and to treat them with special consideration, I think it is rather too strong on that point; the men seem to consider there is to be such a great difference between them and the ordinary man-of-war's men.

552. (*Mr. Mayo.*) It is only in the Regulations, it is not in their RV 2?—(*The Witness.*) The men would willingly conform more than they do to the manners and customs of a man-of-war, but they know that it is not expected of them.

553. (*Captain Willes.*) You allude to clause 108, and I suppose consider that as the men during the time of their drill are under the Naval Discipline Act, the reading of the clause seems inconsistent, and that it might be altered with advantage to the Force?—I think yes.

554. Have you, during your experience, been treated yourself, or have the officers under you been treated, with disrespect by the Reserve men, or are they generally civil and obedient?—With very few exceptions they are civil and well-conducted and obedient; their manner might be mistaken by strangers for want of respect, but knowing that it was not intentional, I have never taken it to be so, knowing that they were unaccustomed to the service.

555. It is now a drawback to the Force that there is not an established uniform, do you not think so?—It is a drawback.

556. Can you suggest a remedy for the future?—I believe if a uniform were compulsory that the men would fall into the custom and wear it; if they do not wear it, it is because they are not obliged to do so.

557. Without extra pay?—I think they would, all the men worth keeping; many men have given me that reply, especially if they were allowed to take the material or dress at contract price.

558. Do you think that the government might at once order that all men who enter the Force after the

Captain H. W. Comber, R.N.

24 Nov. 1869.

first of January should be made to wear a uniform suit of blue, with their cap, the dress being issued to them at contract price from a drill ship?—Yes; with the understanding that they might provide themselves if they wished.

559. Will you turn to clause 106? Do you think that the men should be paid their wages in sickness, except when such sickness is brought about by injury whilst on board?—I think not, unless the injury or sickness was caused or arose from the drill; as in clause "b," it would in many cases be difficult to decide how the sickness was caused, and I think, therefore, that the word "illness" in the clause might advantageously be removed.

560. You are aware that by the present regulations the registrar pays the retainer, whilst the paymaster pays the drill. Do you consider that both payments should be made by the paymaster when the man comes up for his drill?—I think that might be done provided the paymaster was assured of a man's having complied with the regulations.

561. (*Mr. Mayo.*) How could the paymaster be assured of it?—A man on presenting himself for drill after a voyage should produce a certificate from the registrar that he had so complied with the regulations, an entry being made in his RV 2, by which the paymaster would know that this was the case.

562. Do you think that such a change as the one proposed would be a saving in any way?—I do not know what are the expenses attending it at all; the paymaster would receive no extra pay for paying the retainer. I do not know how it would affect the finance question.

563. Would it be a saving of time or trouble?—Yes, one payment would suffice for both, and the man would not have to go and take his RV 2 with a certificate from the captain to the registrar and go back again to the ship. The men are in the habit of asking leave to go and get their retainers, and their books have to be given them with a certificate that they have completed their drill; all this would be unnecessary if the change proposed were adopted.

564. Then you assume that none of these applications for payment to the registrar are made before they are due?—I can only answer with reference to the men having completed their period of drill to entitle them; if the certificate which I have previously alluded to were given before the man presented himself for drill it would rest with the naval officer to assure himself.

565. Then you would require every Naval Reserve man to go to a registrar for such a certificate before he went to perform his drill?—If the present regulations remain in force, yes.

566. Do they do so now?—Yes, as a rule.

567. Before they come on to the ship to drill?—They must present themselves after a voyage.

568. But as to those in the coasting trade? You will find that if you have 200 men on drill I should say at least 60 of those men have not been near a registrar, nor would have had occasion to go to a registrar?—I do not see how men in the coasing trade would be affected. I do not see how they would break the regulations, which mainly refer to being absent without leave, and these men would not come under them.

569. Will you be good enough to refer to paragraph 173, and tell me how the naval officer can deal with the offences referred to under d, e, f, h, i, k, l, m, o?—All these might be ascertained by examining the man's RV. 2. if he had presented himself, which should be certified by the registrar before he should be accepted for drill.

570. (*Captain Willes.*) Hitherto, great importance has been attached to those different clauses in paragraph 173. Do you not think that when special regulations have been made as to the entry of men in the Reserve force they might be nearly all omitted, and that a man taking his drill properly, and being paid his retainer at that time, would be quite sufficient?—Am I to understand that you would not carry but the dismissal or punishment for the breaking of these clauses?

571. I am assuming that paragraph 173 is wiped out?—Some of these clauses might be omitted, not all.

572. State which?—I hardly know how to answer; I should not wish to see an indemnity made for these offences; but I think that the offence might be detected by the man's presenting himself before a registrar before his drill, and those offences pertaining to the drill, by the naval officer, as at present.

573. The real value of the Reserve force can only be tested in the case of a war; would not, then, every man who knew anything of gun drill or seamanship become a necessity; could one of these Reserve men be rejected for any one of the clauses from "a" to "o"?—I would accept any man on such an emergency, with the exception of "o"; it would require consideration what the offence would be.

574. Was not the Government obliged to take men even under clause "o" during the Crimean War, and again in 1859?—My opinion is, that it is too wide a hole for a man to creep through; it should be, that there are certain offences for which a man might be convicted and suffer a certain amount of imprisonment which would not disqualify him, but for grave offences I should certainly keep him out of the force. I should prefer not seeing that clause cancelled, or you would have a difficulty in getting rid of a man who might be objectionable.

575. The men at present, who take their week's drill, really only drill five and a half days; should they, in our opinion, be paid the whole seven days?—Strictly speaking, the men may be employed for the whole six days; the afternoon of the sixth day is merely set apart for cleaning up, and so on; it is true, they are not drilled, but they are employed, and they may be kept on board ship for the whole six days. I think you could hardly make it otherwise, because in the Navy and Army the men are paid by the month, and the Sundays are included.

576. By the present regulations, which we have referred to before, great importance is attached to the whereabouts of the men, the voyages they are on, and, in fact, there is a great supervision over the men in the Reserve. For instance, a man who breaks his engagements in a merchant ship forfeits his retainer, or if he deserts. Do you think that is advisable, or would you leave the man freer?—I do not attach much importance to the necessity of a man being obliged to give notice of his whereabouts otherwise than it is an advantage that Government should from time to time have an idea how many men they could put their hands upon at any particular moment.

577. (*Mr. Mayo.*) And without such an account is kept this would be impossible?—Certainly it would.

The witness withdrew.

Mr. J. Petts.

Mr. John Petts called in.

578. (*Captain Willes.*) Are you a civilian?—I belonged to the civil service before I was entered in the Coast Guard service.

579. Have you had charge of a Reserve drill battery for a number of years?—Yes, the whole period during which the Reserve force has been in existence.

580. On an average, what number of men drill at your battery in a year?—About 250.

581. Are there any men who drill there who are, in your opinion, unfit for the service they are enrolled in?—There are.

582. Do you mean that they are physically unfit,

or not of the seaman class?—First, not of the seaman class; and, if you would allow me to say, secondly, for stupidity, not fit for their training.

583. If these men before re-enrolment had to pass a test examination, would their chance of remaining in the force be small?—Yes, it would.

584. By the present regulations the men can take a week's drill at a time. Do you think that is too short a period?—Yes.

585. What would you recommend for the future?—I should recommend not less than 14 days, for this reason, the man first comes for seven days drill, and then leaves his drill for three months, and on his return to drill he has then lost most of that which he has been taught previously.

586. Have you heard that the present naval artillery consists of rifled guns with iron slides, and carriages with complicated arrangements for working them?—I have.

587. Then do you not think it necessary that the men who enter the force now should be made to take even their 28 days drill consecutively at first?—Yes.

588. Would it not be encouragement to those who wished to learn, that directly they pass a certain test examination they might be allowed to take a week or fortnight's drill at a time?—I think that it would be encouraging.

589. You are aware of the nature of the employment your 250 men are engaged in; could they carry out at once a fortnight's drill at a time?—I should imagine they could.

590. Have you any butchers or artisans in your Yarmouth force?—I have not.

591. You only object to some of them for being stupid and, perhaps, physically unfit?—Yes.

592. Have you a large number of short men in the force?—No, my men have been considered very fine men.

593. If an order were given that no man could be enrolled or re-enrolled in the force without passing on board the Harwich district coastguard ship, do you think it could be carried out without much expense to the Government?—The great difficulty would be that the people who would enrol at Yarmouth would not feel desirous of going to Harwich.

594. Would they refuse to re-enrol rather than go?—I should think that the man who had passed his five years, and had an inclination to re-enrol, would go to the ship.

595. You have an inspecting commander and a naval medical officer in the infirmary at Yarmouth?—Yes.

596. Have you any modification to suggest in the present Naval Reserve Regulations: what do you think ought to be altered?—I think when a man is injured while training at his gun he ought to have medical attendance and his pay, but if he gets a severe cold, or from any natural cause leaves his drill, I say, he should have medical attendance, but not have any pay.

597. Do you find abuses in that way?—I would not allow it if I knew it, but I have seen it attempted. With regard to clothing, I think there ought to be a uniform established, and it should be made compulsory to wear it.

598. Have you any cases of men absenting themselves from their drill?—Very rarely.

599. In such cases would you recommend that they should, as a punishment, go over their drill again?—I should certainly say so.

600. Have you ever known men-of-war's men, after claiming their discharge, go into the Reserve, take one retainer and a month's drill, and then go back to the man-of-war gain, and get there six weeks' time and pay?—Such a case has never come under my notice.

601. Do you think Government might introduce a second-class Reserve, consisting of young lads not more than 18, who should take 28 days consecutive drill yearly on board one of Her Majesty's ships, to be passed into the first-class Reserve at 21?—Yes, I think it would be a very good plan.

602. How many of your 250 men went on the cruise last Whitsuntide?—From 15 to 20.

603. Did you hear them express any opinion of the ships and their duties on their return?—Yes.

604. State what?—That they were very pleased with their trip, and they were treated well.

605. If the same thing happened next year, how many should we get do you think?—I think you would get more next year if proper means were taken than you did last year.

606. Tell us what proper means?—That is, for the shipping masters to do all they could, especially the officers who command drill batteries, to induce the men to join, and to advise them, and so forth.

607. (*Mr. Mayo.*) You were saying there were some inefficient men in the Reserve?—Yes.

608. Do you know at what ports they were entered?—I do not know.

609. Were they entered at Yarmouth?—No, I have entered all the men at Yarmouth myself.

610. Who examined them in seamanship?—I did.

611. You said you were formerly in the civil department?—Yes.

612. Then have you a practical knowledge of seamanship?—I have.

613. What has been the nature of your service afloat?—I served in a square-rigged ship before I entered the Naval Reserve, and I have had charge of cruisers.

614. Then you were a practical seaman before you entered the service?—Yes, I was. I put the men through the following test,—when a man makes an appearance to join the Naval Reserve, he brings to me a certificate from the registrar, and I have then to find out his qualifications as to seamanship. I first inquire whether he knows his compass, and his lead; I ascertain whether he can steer by the wheel, whether he can reef a topsail, turn a "dead eye," rattle a gang of rigging down, strop a block, &c.

615. (*Captain Willes.*) How do you find that out?—I have the things there.

616. (*Mr. Mayo.*) If the man who is under examination does not satisfactorily pass the test that you put him through, what happens then?—In the certificate I say that he is not a fit person for the Naval Reserve.

617. He is rejected?—He is rejected.

618. So that the naval officer has power to reject inefficient men?—Decidedly so.

The witness withdrew.

Adjourned till Tuesday, 12 o'clock.

Tuesday, 30th November 1869.

Captain C. Fellowes.

30 Nov. 1869.

Captain C. FELLOWES called in.

619. (*Captain Willes.*) Did you command the "Duncan" for some considerable time at Leith, and if so, did that give you an opportunity of observing the working of the present regulations for the Royal Naval Reserve?—I commanded the "Duncan" for a period of nearly two years, and took every opportunity of making myself conversant with the rules of the Royal Naval Reserve.

620. Did you command her during the late cruise?—I did.

621. Will you be good enough to state if you consider there are any points in the present regulations which it would be advisable to amend?—There are very many, in my opinion.

622. Will you be kind enough to state them?—I think that some mistake has been made with regard to the entry of the men for the Royal Naval Reserve Force; it will be seen in the Preliminary Instructions, article 5, page 1, "Naval Reserve man" means "any seaman or other person." This appears to have led to the entry of people who are not seamen. I would here beg to call attention to a series of cases where men are serving in the capacity of railway porters, dock labourers, grog shop keepers, and such like. Some of these men may originally have been seamen, but have now given up the sea as a profession. John Silvil, No. 20,150, has upwards of eight years' service in the Reserve, he has not been to sea for years, his employment being the management of the gymnasium in Edinburgh. Angus Nicholson, No. 23,354, has upwards of eight years' service in the Reserve; this man reported himself on the 1st of January 1867 to Captain Thomson at Leith as a railway porter at St. Margaret's station, North British Railway, also at Granton, 27th June 1868, 31st October 1868, and 10th July 1869, to Mr. John Graham, serving in the same capacity as railway porter at the station, where he is now; William Weir, No. 17,852, whose term of five years has now expired, but who I understood was about to re-enrol, kept a public house at Peebles, and never goes to sea, but serves also as town crier and lamplighter at the same place. Andrew Lowrie, No. 30,521; William Dick, No. 24,552; Alexander Anderson, No. 21,006, and many others holding the position of porters, commissionaires, and such like. After the late cruise I collected the names and numbers of a considerable body of men who had given up the sea life, but were still in the Royal Naval Reserve; I regret this paper has been mislaid, and from the fact of the R V 2 being kept by the men themselves, I am unable now to make a similar report.

I would also beg to call your attention to the way in which the registry of these men is filled up. The description in the R V 2 gives year when born, colour of eyes, height, complexion, and personal marks, leaving out the most important part in connection with the Royal Naval Reserve, his place of birth, and his place of residence. Thus, in time of war, should these men change their name, and put the R V 2 in the fire, what means have you of finding them out?

Further, the Royal Naval Reserve man, by Regulations, page 30, Article 183, "If the Reserve man has "been called out for active service, his time in such "active service counts as twice the actual period," that is to say, if a man has belonged to the force for 12 years, three years of which time has been actual service afloat on a man-of-war, his time will count for 15 years. The minimum pension to a Royal Naval Reserve man is 12*l.* per annum; after receiving which he is liable to be called on to serve, "but subject to "this liability, they will be allowed to follow what-"ever occupation they please."

623. (*Captain Willes.*) What part is that?—That is Article 187, page 30. Then it goes on to say, "If they do serve in the Navy they will continue to "receive their pensions as Naval Reserve men, in "addition to their pay and allowances as seamen of "the fleet, or petty officers as the case may be." On my asking a man of the Reserve to explain his ideas on this clause, he said he should ship as captain, then, nothing lower. If a Royal Naval Reserve man has obtained permission to proceed on a voyage which will occupy him more than six months (*see* page 11, Article 58) "the registrar will, in addition to the "letters R. N. R. and the number of his certificate, "write opposite his name the words 'with leave, "with liability to serve.' The registrar will also "enter and sign particulars of the engagement in his "certificate R V 2, and will, if the Royal Naval "Reserve man has obtained permission to be absent "more than six months, note the fact on his certificate "R V 2, stating that leave is granted with liability to "serve abroad." This requires explanation; the men do not understand it themselves, and I am sure I don't. And I would here call attention to the case of a man belonging to the Leith district, being absent in China for some years, and returning home, working up is back drill, and getting pay in a few months amounting to more than 50*l.*, as reported by my letter to the Controller General of the Coast Guard, I think in 1867.

Mr. Mayo stated that he remembered the case, and that in consequence of its occurrence a special order was issued by the Admiralty that no man was to take more than four weeks' drill at one time.

(*The Witness.*) "The special object of the Royal "Naval Reserve" (page 12, Article 68) "being to "obtain the services of a picked body of able seamen "trained to the use of arms, it is essential to the "scheme that every Naval Reserve man shall be "drilled so as to obtain a thorough practical know-"ledge of the mode of using great guns and small "arms." This object is not attained, inasmuch as the Royal Naval Reserve are not a picked body of men; sufficient care is not taken as to character or age, George Russell, No. 29,481, able seaman, now a prisoner in Linlithgow jail for theft, having been previously dismissed Her Majesty's Navy for a similar offence, and several old men-of-war's men in the ships of the Reserve Squadron had been bad characters. My former statement as to the occupations of the men is what I would refer to as proving want of sufficient care being taken, for in Leith, Granton, and other ports, whose men come up for drill on board the "Duncan," there are numerous cases where these men are not seamen. With regard to age, there is a difficulty in Scotland, as, to within a very short time, there was no Register of Births.

I would now refer to Art. 70, page 12:—"The time "which each Naval Reserve man can be required to "drill in any one year is 28 days; time occupied in "travelling to and from drill will be allowed to the "extent mentioned below." The time for drill is in my opinion badly arranged, particularly when the men are allowed to divide the 20 entire days and four half days into four separate drills; a man is paid for 28 days, and only drills 22; and when this time is added up in hours, it amounts to, at the most, 24 hours in each week, or 96 hours in the whole year. Is it posible to imagine any man can be made either a gunner, a small arm-man, swords-man, seaman, or disciplinarian in this very short time. We know it takes 12 months to get a ship into smart gunnery order, and often more, when all our seamen are brought up in the service from boyhood. With regard to the division of the drill, "only two "journeys for each period of drill, namely, one

" journey at the commencement of the 7, 14, 21, or " 28 days drill, and one journey after the completion " of the period of drill, will be allowed." (Article 89, page 15.) "Expenses of travelling daily to and " from drill are not to be paid." This is an indulgence which should be discontinued, for so many men take advantage of the weekly drill system, and live just 24 miles miles away, so as to get the additional travelling allowance; and yet we know they very often do not go more than a few miles from the place for a couple of days, and then come back for the second week. This might be difficult to bring against a man, but I know it has been often done, and to a much greater extent when men put in for 14 days' drill, coming from a considerable distance. I did all in my power to discourage the short drill periods to endeavour to save expense, but it was evident the idea did not take with the men. The men often go away at the end of the week's drill not knowing more of the drill than when they came on board. Reserve men ought to live on board during their period of drill and work with the rest of the ship's company, taking in some knowledge of the routine of a man-of-war; they should also be victualled on board in the same manner as the crew. It will be seen, by reference to page 12, Article 69, that the duties the men have to discharge will comprise great gun, rifle, pistol, and cutlass exercise, and naval duties generally. I was most careful, when in command of the "Duncan," that no unnecessary interference with the Reserve men should take place during the hours of drill; but on one occasion the Royal Naval Reserve men were asked by me to pump the water out of the launch that she might be prepared as soon as possible to take these men on shore; the whole of the ship's company were employed in bending sails, and preparing the ship for sea. The Reserve men grumbled and growled about the decks, and were disrespectful in their manner towards the officers; and, in conclusion, some of them wrote a letter of complaint against myself and others to the Registrar General of Seamen, for making them do a duty they had no right to do. The Leith and Granton men are proverbially most discontented and troublesome characters, only one of whom came forward at the time of the Royal Naval Reserve cruise, because it did not suit their convenience to give up their land occupations at the time, but gave an excuse that the reason they would not come forward was because they were obliged to go off to the ship and back again to the shore in a boat loaded with iron tanks. I would strongly recommend that a most careful selection be made from this division of the force. With regard to the present pay and allowances of the Royal Naval Reserve man, I do not think the country gets sufficient return for the enormous outlay on their behalf. Article 100, page 17, says:—"Naval Reserve men, whatever " their ratings in the Reserve, will, when on drill, be " paid at the same rate of wages as able seamen of the " Royal Navy, and will receive the same allowances." Article 101, "Naval Reserve men will be victualled " during drill according to the same scale as seamen " of the Royal Navy, if they are living on board one " of Her Majesty's ships; if they are living on shore " they will receive 1*s.* 4*d.* a day in lieu of victuals, and " 4*d.* a day in lieu of lodging." I will endeavour with the means at my disposal to point out the annual cost of a Reserve man. First of all,—Items for 28 days' pay, or 22 days' drill, one retainer 6*l.* Daily pay as non-continuous service able seaman, 1*l.* 17*s.* 4*d.*; in lieu of provisions, 1*l.* 17*s.* 4*d.*; lodging on shore, 9*s.* 4*d.*; cost of ammunition fired away, 15*s.* 1¼*d.*; average travelling expenses, 1*l.*; annual pension fund, 1*l.* 15*s.*; total, 13*l.* 14*s.* 1¼*d.*

624. (*Mr. Mayo.*) Where do you get that 1*l.* 15*s.* a year for pension?—From the Instructions, page 32, Article 164, Reserve Regulations for 1864.

625. These Regulations were repealed by the Regulations issued and dated 1865?—These Regulations were in force until the new ones were issued in 1866.

626. (*Mr. Mayo.*) The new book was issued in 1865; I have it here (*producing it*). There appears to be some mistake in the dates.

Captain C. Fellowes.

30 Nov. 1869.

(*The Witness*). The cost of ammunition fired away has been obtained from authority; shells, empty, 8-inch, two in number, 7*s.* 4¾*d.*; powder, large grain, 10 lbs., 6*s.* 8*d.*; cartridges, Schneider rifle, 10 in number, 8¼*d.*; cartridges, Colt's pistol, 10 in number, 4¼*d.*; total 15*s* 1¼*d.* Average travelling expenses are taken from the very liberal allowances under that head, page 15, Article 89. A man may travel four times from his home to the ship, and from the ship to his home, in one year, provided the distance does not exceed 25 miles; and twice to and from the ship to his home to any distance over 25 miles. Another item is the medical fee of 2*s*, as also medical officer's travelling expenses.

627. (*Mr. Mayo.*) I think you stated that the cost of sending men to and from drill, amounted to about 1*l.* a head; if that is the case, as there are 16,000 men belonging to the Reserve, the cost will be in round numbers 16,000*l.* a year; on referring to the Estimates for the years 1867–68, 1868–69, I find that the medical fees for examination of men, targets, repair of arms, stationery, travelling expenses of officers enrolling men, and of the men to and from drill, and miscellaneous expenses, were estimated to cost no more than 3,000*l* a year; can you explain the discrepancy which appears to exist between the estimated cost of travelling and the statement you have just made?—My calculations refer more particularly to the men of the Leith District, who came up for drill on board the "Duncan" during the period of my command. I would here include the expense of keeping up 10 district ships, 8 drill ships, 10 gun boats, and several batteries on shore; I do not know the number of batteries, but there is one at Lerwick I would strongly advise should be closed, for on visiting that place, accompanied by Commanders Skipwith, of Montrose Division, and Creasey, of Banff Division, I was told by Mr. Gatherer, the Collector of Customs, that there were about 300 Royal Naval Reserve men enrolled there, and on my asking him how many of these men he supposed would come forward to fight in the event of war, he said he thought not one, as the Shetlanders were not a fighting race; and he believed if they were ordered south to drill on board a man-of-war, not one of them would go.

628. Can you give us in evidence how long it would take a man at this season of the year to go from Lerwick to Aberdeen?—There is a weekly steamer, which calls at Wick, making the passage in about 30 hours, but she is often detained off the bar of Aberdeen for several days during this season of the year; she often comes on to the Firth of Forth without being able to communicate with Aberdeen.

629. Do you think that the establishment of the Naval Reserve has been the means of overcoming the prejudice of merchant seamen against the Royal Navy, and of promoting cordiality between the two services?—It is impossible to conceive the ill-feeling that exists between the Royal Navy seamen and the seamen of the Naval Reserve, principally on account of the objection the Royal Naval Reserve man raises to do any work whatever, even cleaning up the dirt he makes during the hours of drill on board the district ships.

630. This is the case at Leith?—At Leith, on board the "Duncan."

631. You have told us that persons have been admitted into the Naval Reserve who are not seamen; is it not the fact that these men have been examined as to their knowledge of seamenship, and as to their physical condition by officers appointed by the Admiralty?—I am not aware, but I presume they must have been so.

632. You are aware that it is required by the Regulations?—Oh yes.

633. And that if inefficient men have been admitted, they must have been passed by these officers?—I conclude they will have been entered under Article 5 of Preliminary Instructions, under the head of "other persons," for the Reserve men belonging

Captain C. Fellowes.

30 Nov. 1869.

to the steamers trading between London, Leith, and Granton have generally ratings of able seamen, their only duties being to sling and unsling a cargo, and steadying it in going up and down the hatchways when being hoisted by steam winches; they are in fact labouring seafaring men, with the rating of able seamen.

634. Then these men must have been improperly passed by the officers appointed by the Admiralty to examine them?—Not so, as I consider by Article 5 they are allowed to enter "other persons" not seamen.

635. Who examines the candidates at Leith?—I do not know; there is no resident Naval officer, either coastguard or otherwise.

636. Could they not be examined on board the "Duncan"?—Certainly, and ought to be.

637. Can you tell us whether there are any other ports besides Leith where inefficient men have been entered?—When I say Leith, I would mean the Leith district generally, extending from St. Abbs Head south to the Shetland Isles.

638. Did you find many of these men inefficient on board the "Duncan" during the Whitsuntide cruise?—The men from Aberdeen and Dundee who formed the principal part of the "Duncan's" crew during that cruise were not examined in seamanship, but their qualifications generally were as follows: gunnery, good; small-arms, fair; cutlass, indifferent; obedient to command; slovenly in their practices; dirty in their persons. The orders respecting the dress they were supposed to bring with them from their homes were not generally complied with; some men did comply with them. The work they were called upon to do aloft was very slowly executed.

639. You have told us that there are in the Reserve men who are now railway porters, grog-shop keepers, &c.; did these men follow these avocations when they were enrolled, or have they, subsequent to their enrolment, left the sea service, and taken to these employments on shore?—I must refer you to the R V 2 for the information you ask upon the subject, but with regard to Angus Nicholson, whose book was in my hand about a week ago, the only previous service to the present term of enrolment was "five years in the Naval Reserve."

640. As this man was enrolled the second period of five years, the book that you had in your possession related entirely to the present period?—Yes.

641. And therefore could not show what his sea services were previous to his enrolment, or during the first five years?—It would not show that.

642. (*Captain Willes.*) Your account of the Leith district men is certainly not favourable. From correspondence and conversation with your brother officers, do you think that your district was an exception; if so, to what degree?—I do not intend my account of the Leith district men should be favourable, and from communication with some of my brother officers, I do not think the Leith district can be considered as an exception. I would here wish to mention the names of Captain Turnour, of the "Resistance," and Captain Gordon, of the "Black Prince."

643. You have stated that the R V 2 is wanting in two very essential particulars, namely, the address and birth-place; are you aware that there are registrars appointed at all the ports for the very purpose of watching the whereabouts of the Reserve men, with a view of our being able to put our hands upon them in the event of an emergency?—I am aware that such is the duty of the registrars, but I do not consider it would decrease the efficiency of the R V 2, if the book contained this most important information.

644. (*Mr. Mayo.*) The R V 2 is a document in the possession of the seaman, and a merchant seaman is constantly changing his address; in what way do you think it would be useful to have these addresses recorded in the book which is always in the man's possession?—The sea-going portion of the Royal Naval Reserve men might give their place of residence, as serving the firm of Messrs. So-and-so, whoever it may be, which would always give their whereabouts.

645. Are you not aware that in the R V 2 the sea-going Naval Reserve men have the names of the ships on board which they are serving recorded?—Yes, but not the owners.

646. We have a record of all the owners of vessels, and a book is published containing that information?—Yes, you have it, but we know nothing of it.

647. (*Captain Willes.*) Article 68 states that the object of the Naval Reserve is to obtain the services of a picked body of able seamen trained to the use of arms. Do you consider that our Naval Reserve, as at present organized, fulfils that condition?—Certainly not; our Naval Reserve men are drilled in most cases at obsolete guns, whereas our ships of war are carrying guns of heavy calibre, with a somewhat different exercise.

648. You are aware that by the present Regulations it is possible for a man to be enrolled in the Reserve after passing before a second-class chief officer, or a chief boatman in charge, and a medical agent; do you think this should still exist?—I am aware of it, and I think the sooner it is put a stop to, the better.

649. We have nine coast guard ships, eight drill ships, four flag ships at home ports—Deal and Yarmouth,—where we could insure the men being examined by a naval officer not under the rank of commander, and a naval surgeon; do you think it would be too much for the Government at once to insist that men should be examined at those places, and by those officers only?—It might be done as you suggest; but before the re-enrolment takes place, commencing on the 1st of January next, I would recommend that one careful officer, with a medical officer attached, knowing the wishes of their lordships, should be selected to proceed from port to port, to carry out this object.

650. (*Mr. Mayo.*) What you would propose is that these officers only should re-enrol the men?—For this special time of re-enrolment.

651. (*Captain Willes.*) What, in your opinion, should be the limit of sea-service for a candidate for the future Reserve, I mean as to his sea-service. Be good enough to read Article 5?—I am so much averse to the present system of Royal Naval Reserve that I would recommend an entire change; if you tie yourselves down to the entry of merchant seamen alone, the country may find itself thrown into difficulties, when the greater part of the few thousand enrolled men are afloat serving in distant climates. The Naval Reserve should, in my opinion, be a body of men on whom you could place your hands in 24 hours.

652. You have shown by your evidence that you are fully impressed with the importance of having our Reserve well skilled at the modern artillery. It is quite impossible to expect that our drill ships and batteries can be supplied for some years to come with the modern gun. Would you recommend a second-class Reserve, consisting of lads, not more than 18 years of age, to be drilled, and live for one month each year on board our district ships; to wear a uniform, to be paid a smaller retainer than at present, to be passed into the first-class Reserve at 21, or when able seamen, provided they could pass a suitable examination in gunnery?—Your question requires much consideration. There is so much to be said as to doing away with the existing Reserve, that I cannot make up my mind to provide for another.

653. It is, no doubt, a drawback to the present Reserve Regulations that there is not a uniform. Do you recommend that from henceforth a uniform should be insisted upon, by reducing the retainer, and issuing the articles required, or by allowing the men to buy them from the ship at the contract price?—I think by putting this idea in force with the present Reserve you would have no difficulty in getting rid of the men, for I do not think it would take with them at all.

654. (*Mr. Mayo.*) Do you think they would all go?—I do.

655. (*Captain Willes.*) Then in your opinion one of the objects of the Naval Reserve, which is supposed to be the amalgamation of the Royal Navy and Mercantile Marine, is a failure?—I do think it is a total failure.

656. Do you recommend that all men henceforth should be made to take their 28 days' drill consecutively until they have passed a test drill, when the period should be reduced to 14 days, but never less?—I do not think the period of 28 days' drill in one year is sufficient to attain the object we have in view.

657. Be good enough to turn to Article 106. We have it in evidence that there is much abuse in the payment of Reserve men during periods of sickness, have you any experience to show that that evidence is correct?—I cannot mention any case.

658. At present the registrars pay the retainers, while the paymasters pay the men their drill and subsistence money; thus there are two separate accounts; do you think that the paymaster might pay all?—I have not sufficient acquaintance with the duties of the registrar to be able to give you a satisfactory answer.

659. Do you see any reason why a man once enrolled in the Reserve should not be entirely in the hands of the Admiralty and its officers, being paid his retainers when he takes his drill, particularly when you say that the R V 2 would not in any way ensure your catching the man when an emergency arose?—There is every reason why the Reserve man should be wholly connected with the service, for by the present system the officers commanding Her Majesty's ships know nothing of the whereabouts of any of these people; and if, when in command of the "Duncan," I had been called upon to collect a certain number of men, I must have trusted entirely to the energy and zeal of the registrars of Naval Reserve at the different ports at which the men are enrolled.

660. (*Mr. Mayo.*) Then you think that the Naval Reserve should not be a Reserve of merchant seamen?—I do think it should not be a Reserve of merchant seamen, but one on which the country could depend at a moment's notice in an emergency.

661. (*Captain Willes.*) Be good enough to turn to Article 173. Clause e. says that a Reserve man is liable to be dismissed, or punished for aggravated desertion from merchant ships. Knowing, as we do, the treatment the men sometimes receive on board merchant ships, do you think a man should be liable to such a punishment?—I conclude these laws were made to give power in cases where benefit might be derived from the discharge of a bad man, leaving a great deal to the discretion of the officer who grants the discharge, or causes the discharge.

662. (*Mr. Mayo.*) You have stated in the evidence which you have given that there was already not sufficient care taken as to the character of the men who are enrolled in the Reserve; do you think it would be expedient to relax the rules by doing away with the punishment for any of the offences referred to in this paragraph?—If more care were taken in the entry of these men there would be less necessity for the rules of punishment.

Captain C. Fellowes.
30 Nov. 1869.

663. (*Captain Willes.*) The returns of the Reserve drill are sent to the Registrar General of Seamen, and not to the Admiralty; do you not think these returns should be sent to the Admiralty only?—I do not know for what purpose they are sent to the Registrar General, there may be some good reason unknown to me.

664. You have stated that instances occurred on board the "Duncan" in which the men grumbled at duties being imposed upon them which were not strictly those of gun drill; are not the men when at drill under the Naval Discipline Act, and could not good conduct be enforced?—I beg to refer you to page 18, Article 108, where you will see it is "the duty "of naval officers to bear in mind the difference be-"tween the ordinary rules and practices of the Royal "Navy and those of the Merchant Service, and to "endeavour, whilst enforcing order and regularity, to "do so in such a way as may best conciliate the feelings "of merchant seamen;" from which I conclude that these men are more to be *invited* to perform their duties than ordered.

665. However advisable Article 108 might have been when the Reserve was first established, do you not think that it should now cease, and that a little wholesome man-of-war discipline during the time the men are on drill would do a great deal of good, and better fit them for man-of-war life when embarked under the Royal Proclamation?—Yes, I do most fully concur in your remarks. I consider that a more wholesome discipline is much needed; it could be applied without severity, and would be perfectly understood by the good men of the merchant navy.

666. It has been stated that there are a considerable number of foreigners enrolled in the Reserve Force. By "foreigners," I also wish to imply men who cannot speak our language thoroughly, for such men, as you know, would be worse than useless on an emergency; is it your opinion that there are such men in the Force?—I have every reason to believe from the peculiar accent of the Americans that there were several on board the "Duncan" during the Reserve cruise; there were other foreigners on board the "Duncan" also.

667. It has been implied that at the batteries particularly, and even at the drill ships, bribes are frequently offered in order that men may escape their proper drills; are you of opinion that there may be truth in such reports?—I am of opinion that there is so much room for corrupt practices, both on board and on shore, that I have no doubt such practices are carried out.

The witness withdrew.

Adjourned to Thursday next, at 12 o'clock.

Thursday, 2nd December 1869.

Mr. E. H. Coleman called in.

Mr. E. H. Coleman.
2 Dec. 1869.

668. (*Mr. Mayo.*) You are the Chief Clerk in the Office of the Registrar General of Seamen, and part of your duties is to superintend the work in the office relating to the Naval Reserve?—Yes; it has been ever since the Reserve was established.

669. (*Captain Willes.*) Is a daily report sent to the Admiralty from your office of the number of men enrolled and re-enrolled in the Reserve?—Yes; and another to the Coast Guard Branch.

670. How do you obtain the numbers?—From the daily reports of the Superintendents at the outports of the issue of Certificates R V 2 to the applicants.

671. Does not this entail an immense expense in postage?—They all come through the official post.

672. How many registrars are there altogether in the United Kingdom?—There are about 153 places at which men are enrolled.

673. How is this money charged?—In the Estimates.

674. Is it shown as a charge in the Naval Estimates?—No, it is not.

675. Have you any idea what it amounts to in the course of a year?—No. I could not separate it from

Mr. E. H. Coleman.

2 Dec. 1869.

the rest of the office work; it is mixed up with the general business of the office.

676. Have you any idea what the general charge for postage is against your office?—No, I have not.

677. Would not a weekly or fortnightly return be sufficient, or do you have daily correspondence with all your registrars on other subjects?—A weekly or fortnightly return from the registrars of the applicants who have taken up their certificates would not be sufficient; many men are accepted at the outports, whom the commanding officers of both drill ships and batteries accept for drill, subject to their being enrolled.

678. You know by the Regulations, as they stand now, men may be passed into the Reserve by very subordinate officers of the Navy and by medical agents, do you not think it advisable to have the examinations conducted by officers of higher rank, so that if improper men are entered there would be a direct responsibility?—I have only been present on one examination of an applicant for enrolment in the Reserve, and that was by a Lieutenant in the navy at one of the outports. He asked the man two questions; one was whether he could box the compass. The man went through the points of the compass from north to east; he was not asked the value of any of the points, nor was he asked to repeat them backwards. The other question put to him was with reference to the marks of the lead line. The man was under 5 feet 5 inches; and as this occurred in February last, it was then necessary that the naval officer should give a special report prior to the enrolment of the applicant. That part of the form passed without his observation, and a clerk in the Custom House gave him a nudge and said, "You have to report specially." On my return to the office, I found the special qualification consisted in his being "a seaman-like looking man."

679. Therefore you do consider that the examinations have been lax?—At some of the ports. I may add to this, that when those applications have come into my hands, on looking through them (which I invariably do) and ascertaining that they are in accordance with the Regulations, and that the man has only served in small class vessels, we have refused them on the grounds that they have not served in a square-rigged vessel, and are therefore not able seamen under the Admiralty Regulations.

680. Thus it happens that men passed by naval officers are obliged to be rejected afterwards by the Registrar General of Seamen?—Oh, yes! on that account, and on others.

681. Therefore you agree that it would be better to have the examination stricter?—Yes; I think so.

682. Now the force is established are there any returns and documents which you think might safely be done away with?—Those daily returns. I cannot see the object in their being made out so frequently. I think monthly would be sufficient.

683. What is the strength of your establishment at Adelaide Place?—Do you mean the whole establishment?

684. Yes.—About 80, I think, altogether.

685. How many for the Naval Reserve?—Seven, sometimes more, sometimes less, according to the period of the year.

686. What is the total number of British seamen in the Mercantile Marine?—I do not know exactly; I only keep a register of the masters, mates, and Naval Reserve men.

687. If that is the case how can you tell a man's character when he first becomes a candidate for the Reserve?—By reference to the lists of crews received from the vessels in which the applicant has served.

688. Then do you keep an account of the character of every seaman or boy who sails from any port in the United Kingdom, and can you tell six months afterwards his character if he has left the vessel?—We can since 1834.

689. But if he is a foreigner can you also tell that?—Yes; he must sign the ship's articles.

690. And the ship's articles are sent to your office?—Yes, at the end of the voyage, with the report of the conduct and ability during the voyage; a copy of this report is also given to the seaman upon his being discharged (*copy of a discharge handed in*).

691. A number of seamen who are discharged from the Navy for misconduct find employment in the Merchant Service, how can that be if the returns are kept as strictly as you say?—Masters and owners are too indifferent about the character of the men they employ, and seldom apply to us for any reference for character.

692. Then what value can your returns be?—All applicants for examination for masters' and mates' certificates, or for licences for the Trinity House, from the Trinity Boards, or Pilot Boards, the Trinity Almshouses, applications from seamen for admission into the Fire Brigades, Greenwich Hospital, and many other institutions, are referred to us for our report prior to such applications being entertained.

693. It has been represented that it is actually necessary for the registrars to enrol and pay the Reserve men, because they alone can be in the possession of the information which is clearly pointed out in Article 173. If masters and owners are so indifferent as to character, how can the registrars be in possession of that information?—I referred to the character at the time of the engagement, more particularly when men are scarce, or are not to be found at the port.

694. To my own knowledge there were in the ships forming the Reserve cruise last spring, men who had been dismissed the Navy for misconduct, how can you account for their entry when you have such a large office at Adelaide Place?—We have no returns from ships belonging to the Navy; beyond the Merchant Service I have no means of ascertaining his character; if he says, "I have served in the Navy," I invariably insist upon seeing his discharge. Some applicants have stated that they have lost it; then they have either been directed to apply to the Accountant General for a copy, or in some cases we have applied ourselves direct. If the man has been in the Navy and possibly had a bad character for the period so served, he would perhaps state he had been on shore, or serving on board foreign ships.

695. As a matter of course a man who had been dismissed the Navy would deny that he had ever been in it, surely your registrars would not accept that statement, and enrol a man whose antecedents they knew nothing about?—He could only judge of the man's character from the documents produced.

696. What proportion of a crew must now be British subjects?—The whole of them might be foreigners, also master and mates, so long as they possess certificates of competency from an English board.

697. Can that foreign crew be shipped without reference to you?—We should receive information of it, but it could be entered without reference to us.

698. And, therefore, while you keep up this supervision of the men when British subjects, a ship may be going out of your port with a foreign crew of bad characters?—Yes, as in the case of the "Flowery Land."

699. Why is all this supervision, as detailed in Article 173, kept up as regards a man who enrols in the Naval Reserve?—In order that we may ascertain his character, and act upon that knowledge either at the time of the committal of an offence, or on his application for re-enrolment.

700. From your own evidence these returns must be more or less loose and incorrect, as it is well known masters and shipowners are indifferent as to character?—Most of these offences which come under this section of the regulations are committed by the men themselves against the Naval Reserve Regulations, not against the discipline of the ship; a man may have behaved well on board the vessel and yet have committed a breach of more than one half of these Regulations.

701. When the Reserve was established, if an emergency had arisen, would not every seaman who could be found have been entered on board a man of war without reference to character ?—Yes, by means of the press gang.

702. Do you see any reason why a man once enrolled in the Naval Reserve should not be placed entirely under the Admiralty, to be paid his retainers when he takes his drill ?—I see many reasons against it. In the first place, a man is out of employ, he will enter the Reserve, perform four weeks' drill, and if he immediately afterwards receives his retainers for the year, he would receive at the rate of 10*l.* 4*s.* for one month's work, and you would never afterwards hear anything more of him, on account of its being better pay than he could get elsewhere. There is another objection, you would be paying many men retainers who might be dead a few weeks afterwards ; at present that is saved.

703. Under the present system, if a man is away a year, does he not get his retainers paid when he returns, or does he lose them ?—If he is absent with leave, and returns in the ship for which he had leave, he receives his retainers.

704. Without having taken his drill ?—No. I presume the drill is done first, he is entitled to them on account of the drill performed.

705. But the Admiralty might pay a year's retainers quarterly, or half-yearly, so as to avoid paying dead men ?—If paid for the past six months, and not to include payment in advance.

706. (*Mr. Mayo.*) But in such a case the payment would have to be made irrespective of the man's employment in the merchant service, or of his having complied with the existing regulations ?—Yes, both irrespective of his employment, and also of his services ; during the preceding six months he might possibly have been in jail for the time.

707. Can you give us any idea of the number of retainers that have been stopped for breaches of the Regulations, which if the Admiralty paid the retainers would have been paid to the Reserve men instead of being forfeited ?—41 retainers have been forfeited by order of the officers of drill ships for misconduct when at drill, and 7,044 for convictions in courts of law, and various breaches of the Regulations within the last seven years, amounting in all to 10,627*l.* 10*s.* 0*d.*

708. (*Captain Willes.*) You have read Admiral Key's Report, and the Admiralty Minute on it. In the latter it was stated that it was impossible that in a Force which had been now established some 10 years but that some defects in the administration should have been discovered; will you please state what alterations or corrections in the Naval Reserve Instructions might be now made which would increase the efficiency of the Force ?—I think the men should be compelled to undergo at least 14 days' consecutive drill. I do not think it would be any hardship, as on examination of our register books I calculate that of every 2,000 weeks' drill, 118 are performed singly, 250 two weeks at a time, 186 three weeks at a time, and 1,446 four weeks at a time. There is a great object in a man's doing 28 days' drill at once, because he cannot get leave for a long voyage until it is done ; and if he goes without leave his retainer will be forfeited, and his time during the period of absence will not count. On re-enrolment I think the men, if it could be done without great inconvenience, should be examined as to their knowledge of gunnery and small arms, as I observe that the reports from the commanding officers of both drill ships and batteries, in some cases, give the ability as "*fair*" for the fifth year's drill ; this would tend to shut out those that are utterly unable to learn it. With regard to the travelling expenses, which certainly do not amount to more than 600*l.* or 800*l.* a year accounted for to the Board of Trade, I think the expenses of the return from drill should no longer be paid by the naval officers, but by the Superintendent of Mercantile Marine at the port, in the same way as the expenses of the journey to drill. It would prevent imposition, as Volunteers occasionally receive their expenses for their return journey, and engage at the port for a foreign-going ship, which would not be likely to occur if paid by the Superintendent before whom the man would subsequently engage for another vessel. In some cases railway passes are granted, which the Volunteer can dispose of : at other times the payments are made in cash. I also think that the regulation with regard to the sickness on drill requires some amendment. Sickness when on drill prevails to a great extent at certain places. I think this payment should be confined to accidents. In February 1868 an official report was sent by the Registrar-General of Seamen to the late Controller-General of the Coast Guard of the sum of 114*l.* 15*s.* 0*d.* having been paid on board one drill ship for sick pay in two months. 37 of the men had been previously sick on two or more occasions, and many of the others had been repeatedly sick for short periods. In consequence of that complaint a form was drawn out in which cases of sickness of upwards of seven days' duration were reported to the Controller-General of the Coast Guard for his sanction previous to payment. There appears to me to be another defect ; it is with reference to those Volunteers who, after enrolment, accept of permanent employment on shore. They are enrolled for five years, and we have no power to discharge them until the expiration of that period, unless they misconduct themselves. We refuse to enter, or re-enter a man who has not been to sea for two years previously, but after his re-entry we are compelled to keep him for five years.

Mr. E. H. Coleman.

2 Dec. 1869.

709. (*Mr. Mayo.*) If a man wishes to leave the Reserve, he can obtain his discharge on payment of the sum of 10*l.*, or any smaller sum he may have received in the way of retainers ; would you propose that in cases where a man leaves the service for employment on shore, he should be exempt from this payment ; or, in other words, that he should have his discharge from the Reserve free ?—He is virtually exempt now ; there is no section in the Act of Parliament under which you can recover it.

710. But men do purchase their discharge ?—Yes, by repayment of the retainer.

711. Are those cases many ?—There have been a few.

712. But, in the event of there being a prospect of the Reserve being called out, could not a designing man obtain a free discharge from the Reserve if what you propose were done ?—I should say no, for this reason, that I would not give him his discharge immediately, but say at the end of two years' employment on shore, and then not as a right. With regard to correspondence with naval officers, I think that it might be conducted with the sanction of the Admiralty, as at the present time many of the naval officers consider that we have no business to write to them on any subject connected with the Naval Reserve.

By paragraph 119 of the Regulations, one retainer was payable, and that without any drill being required. I think this should be abolished, as it only tends to lead to confusion and expense.

713. (*Mr. Mayo.*) Under the preliminary paragraph of the Regulations, article 5, a Naval Reserve man is defined as "any seaman or other person," can you explain how it was that the words "other "person" were introduced into this paragraph ?—The words in the Act of Parliament, 22 & 23 Vict. cap. 40, are, "any seaman or other person who may "be deemed suitable for the services in which such "Volunteer may be employed," and therefore it is in accordance with the Act, and gives the Board of Trade and the Admiralty power to enrol sailmakers, carpenters, engineers, and firemen, in the event of their services being required ; at present, none but able seamen have been enrolled.

714. If a second class Reserve were established, for the purpose of enrolling apprentices and ordinary seamen of 18 years of age, do you think that at this age they would be physically competent to undergo the gunnery instruction ?—I do not think they would

Mr. E. H. Coleman.

2 Dec. 1869.

be physically fit to work the heavy guns at so early an age, if the duties required much manual labour.

715. Have you any returns prepared, showing the height of the men enrolled in the reserve ?—Yes. Of the 27,159 men who have been enrolled there are 18 under 5 feet; 5,605 between 5 feet and 5 feet 5 inches; 15,088 between 5 feet 5 inches and 5 feet 8 inches; 6,380 between 5 feet 8 inches and 6 feet; and 67 above 6 feet.

716. In your opinion, should not the standard of 5 feet 5 inches be adhered to, so that men of a less height should not be admitted?—Yes; I think so.

717. Are there any foreigners in the Naval Reserve ?—Not one that I know of; particular care has been taken to prevent it. About a dozen naturalized British subjects have been entered during the last ten years, but in each case I have had the certificate of naturalization in my possession before issuing a certificate.

718. What has been the practice when applications have been made by Irish Americans, natives of St. John's, Newfoundland, and New Brunswick,—have they been admitted or declined ?—They have been declined; nor have we entered British subjects British born who have been serving long periods under foreign flags.

719. With respect to the enrolment of men in the Reserve, will you be good enough to explain what the practice is on receiving the applications in the office of the Registrar-General of Seamen ?—The applications all come into my hands; I examine them to see that the applicants are eligible on account of their age, birthplace, height, previous sea-services, and character whilst serving on board the vessels named in the form. In those cases where applicants have been previously rejected by medical officers, they are again referred to the same or a different medical officer, for further medical examination, his attention being particularly directed to the cause of the applicant's previous rejection.

720. With the checks that the Registrar-General of Seamen has, is it likely that the same man could be enrolled at two or more ports, without the attempt being detected ?—I may explain that very shortly after the work fell into my hands, I gave directions for a mark to be made against the name in the list of crew of any applicant for admission into the Reserve; should he again apply, it is immediately detected by the mark made against the name in the list. There have been attempts of this kind, but they have been discovered; one man was prosecuted for the offence.

721. Can you give us the ages at which the men are enrolled in the Reserve, and the ages of those men who now remain ?—Of those men who have been enrolled at various times, 15,947 were under 25 years of age, 8,208 from 26 to 30, 2,641 from 31 to 35, and 363 from 36 to 40. I may here mention (because this particularly affects Admiral Key's report) that from the 1st of January 1860 to the 31st of December 1860 men under 40 years of age, provided they were otherwise eligible, were accepted by the Regulations; from the 1st of January 1861 to the 31st of March 1863 men under 35 were admitted; from the 1st of April 1863 to the present date no man above 30 years of age is accepted, excepting in the case of men who had previously served in the navy as able seamen, who were accepted if they were under 35 years of age. The ages of the present members of the force are, from 20 to 25, 3,784; from 26 to 30, 6,383; from 31 to 35, 3,642; from 36 to 40, 1,624; and above 40, 676.

722. The Registrar-General of seamen receives returns of the employment and whereabouts of the men belonging to the Reserve, will you tell us the nature and object of these returns, and whether they could be dispensed with ?—From the returns we are enabled to ascertain the ship on board which the volunteer is serving, the port to which he is bound, the date of his expected return to the United Kingdom, whether during the progress of the voyage he has died, deserted, or been discharged abroad either into hospital or prison, and his ability and conduct during the time he is serving on board.

723. Have you a return of the number and causes of rejection of men for the second period of enrolment ?—Yes; 104 applications have been refused on account of the applicants having left the sea service; 277 have been rejected by the medical officers; 77 have been refused on account of their previous misconduct or bad character, and 14 from other causes, principally from the representation of the naval officers, who considered they were not fit men for the service.

724. Can you tell us the number of men who at the expiration of their five years did not, or declined to re-enrol ?—6,621.

725. (*Captain Willes.*) Then of the 16,000 men in the force at the end of the first five years, how many were there who did not re-enrol for the second period ?—7,093.

726. (*Mr. Mayo.*) Can you tell us the number of deaths recorded since the Reserve was first established ?—2,392.

727. Can you give us in evidence any idea as to the number of retainers paid one at a time, two at a time, and so on ?—Of 2,000 retainers that have been paid, 1,420 have been paid singly, 183 two at a time, 53 three at a time, 12 four at a time, 2 five at a time, and 1 six at a time.

728. Are there many reports received of volunteers absenting themselves from drill without leave ?—Not so many now as formerly; at all times it was principally in the north, Shields and Sunderland.

729. Why was it more frequent at these ports than at others ?—The men are engaged upon a "tide sail," and often in the evening after the drill ship was closed. When the books have been left on board the drill ships, they are returned to the office of the Registrar-General of Seamen. The owner of the book is invariably referred to the commanding officer of the drill ship or station before his certificate is returned to him; in some few cases the commanding officers have inflicted punishment.

730. Can you suggest any means to check these absences from drill ?—I think drill already performed should be done over again. I believe it is the case on board the majority of the ships.

731. In the case of a Reserve man breaking the regulations, and being liable to forfeiture of retainer, what is the practice pursued by the Superintendent before paying him ?—He gives the applicant a Form (R V 6), in which he states the cause of his non-compliance with the regulations. On receipt of this form the reports in the List of Crew and Log Book are examined, with a view of ascertaining how far the man's statement is correct; if the man has been discharged from the ship abroad either from sickness or wreck, or, when so discharged, has made the best of his way home again, the retainers on the first, and sometimes on the second, occasion have been allowed as soon as the arrears of drill (if any) have been brought up. Should it appear that he has been discharged into jail, or has deserted without sufficient cause, the retainers for the unauthorized period of his absence have not been allowed. For the last five years, in addition to the disallowance of the retainers due, the time for service has not been allowed, and the volunteer has not been permitted to perform his drill.

Adjourned to to-morrow, at 12 o'clock.

Friday, 3rd December 1869.

Captain E. K. Barnard, R.N., called in.

Captain E.K.Barnard.

3 Dec. 1869.

732. (*Captain Willes.*) Did you command the "Trafalgar" during the late cruise under Admiral Key?—Yes.

733. Had you on board any men of the Naval Reserve; if so, from what ship and port?—Yes, 200, sent on board from the "Agincourt" after arrival at Portland, and they were principally from the Harwich district.

734. Were there among them any men who had been discharged from the navy previously?—There were 22 seamen on board who had served in the navy, who were men-of-war's men, and out of that 22 there was one specially came under my notice, who had been a boatswain in the service, and who, I was informed, had been discharged by sentence of court-martial, while on the Australian station, I think, from the "Miranda."

735. (*Mr. Mayo.*) Do you know the man's name, or number?—I made a special report, and I think the man has since been discharged.

736. (*Captain Willes.*) Did he, or any of the other men-of-war's men misconduct themselves?—This man did misconduct himself; he was the leader of all discontent among the Naval Reserve, and was constantly appealing to the Naval Reserve officers on board to have imaginary grievances rectified. The Reserve officers complained to me frequently of this man, as tending to breed discontent among the rest of the Reserve. A second man-of-war's man, who had been a petty officer in the "Barracouta," in China, misconducted himself in abusing the police, and was found skulking on the lower deck; with those exceptions, the men behaved very well.

737. (*Mr. Mayo.*) From the report made by you to Admiral Key after the termination of the Whitsuntide cruise, it would appear that your experience of the Naval Reserve was favourable; are you still of the same opinion?—Yes; decidedly.

The witness withdrew.

Mr. Coleman recalled.

Mr. Coleman.

738. (*Mr. Mayo.*) Have you anything further to add in continuation of your evidence respecting the payment of retainers?—I think if the retainers were paid by the paymasters, reference to our office would still in many cases be required before payment could be made in the same way as hitherto has been done by the Superintendents of Mercantile Marine.

739. Would such a change in the mode of payment effect any saving of time or money?—Certainly not; it would cause a great deal of additional trouble to our office, because at the present time we are unable to correspond with the naval officers, and at least one-third of our present correspondence in reference to the Reserve arises out of the payment of the retainers.

740. Can you give us any idea of the extent of the correspondence at present with the naval officers during the year, and what the correspondence principally refers to?—The principal correspondence is with reference to inaccuracies in their returns; a man is frequently accepted for drill before it is due, and drilled for periods contrary to the regulations; also with reference to clerical errors both in the returns and in the certificates; also to errors in the pay lists received from the Accountant General's for our scrutiny; also in the lists of men drilled by naval officers at the batteries which are sent for examination prior to the payment of the remuneration to the coast guard officers.

741. Can you give us an idea as to the number of letters that are written in the year from the office of the Registrar General of Seamen to naval officers on the subject of the Naval Reserve?—Not twenty letters; the rest are printed circulars.

742. Is the sum voted in the Estimates as remuneration to the Registrars of Reserve paid to them solely for their work in connection with the payment of retainers?—No; that forms but a small portion of their duties, but a responsible part; for should they pay any retainers to a volunteer to which he is not entitled, we refuse to certify the accounts of the Registrar, and he is called upon to refund the money improperly paid.

743. It has been stated in evidence that there would be a saving of time and trouble if the retainers were paid by the paymaster at the time the drill money is paid, as it would not necessitate the men who are drilled on board the "President" obtaining their certificates from the captain for the purpose of drawing their retainers from the Registrar; is this practice general, or only peculiar to London?—As far as my knowledge goes, it is only peculiar to the "President," in London.

744. From the evidence it appears that there are men serving in the Reserve who are now employed as railway porters, dock labourers, &c.; when these men were enrolled was there any reason to believe that they had given up the sea service for employment on shore, or were they at the time of their enrolment *bonâ fide* seamen?—When enrolled, they had been recently at sea; if it appeared that they had not been at sea for some few months, say six, their applications have been returned, and the question put whether they had permanently left the sea service.

745. I gave you a memorandum a few days since of certain men in the Reserve referred to in the evidence given before this Committee by Captain Fellowes, as being men who should not be retained in the service for various reasons. It was said, "that "the volunteer, No. 20,150, has upwards of 8 years "service in the Reserve, has not been to sea for years, "his employment being the management of the "Gymnasium in Edinburgh." Does this statement agree with the records in the office of the Registrar-General of Seamen?—It does not. Silvey, No. 20,150, was enrolled in March 1860; during the first five years he was frequently at sea; he re-enrolled in March 1865; about December 1865 he was employed at the Royal Gymnasium at Edinburgh, and continued there until about August 1866.

746. (*Captain Willes.*) Where do you get this information from?—From our books. On the 1st of October 1866, Silvey joined the "Earl of Mar" as a seaman; he was discharged from her on the 12th of June 1867; on the 21st of February 1868, he joined the "William Lindsay" as a seaman, and made two voyages in her to the East Indies; he was discharged from her on the 13th of last month.

747. "Angus Nicholson, No. 23,354, is stated to "have had upwards of eight years service in the "Reserve. This man reported himself on the 1st of "January 1867 to Captain Thomson, at Leith, as a "railway porter, and also to other officers?"—He has not been at sea since May 1866; he has since been employed as a railway porter at Edinburgh.

748. "William Wear, No. 17,852, whose time of "five years has now expired, but who was about to "re-enrol, keeps a public house at Peebles, and never "goes to sea, but serves as town crier and lamp-"lighter." Is this man in the Reserve?—He applied

Mr. Coleman.

3 Dec. 1869.

to be re-entered in February 1869, but was refused on the ground that he had left the sea service.

749. "George Russell, No. 29,481, now a "prisoner in Linlithgow jail for theft, having been "previously dismissed Her Majesty's Navy for a "similar offence," what evidence has the Registrar General of Seamen of this man's services?—George Russell was first enrolled in August 1867; on the 7th October 1867, he joined the "Marlborough" on a voyage to Calcutta, and was discharged there on the 6th of March 1868; on the same day he joined the "Indian Empire," and arrived home on the 13th of August 1868. In November 1868, he joined the "Alice," and was discharged in London on the 16th of October 1869. He then went to the "Duncan" for drill, and having performed 14 days drill, was discharged on the 21st of last month, and went to Grangemouth, where he received a retainer the next day.

750. Are there any other names that I have given you where the particulars given in evidence do not agree with the records?—There were three other men whose names you gave to me. Andrew Lowrie was enrolled on the 21st of August 1862, and served at sea until December 1867, when he was re-enrolled; he may, possibly, have been employed on shore since that date. William Dick was enrolled in September 1861; he was at sea till May 1863, and when his application for re-entry was received, it was returned with the question whether he had abandoned the sea service; he said he had not, but I have no account of his having been at sea since that date. Alexander Anderson was enrolled on the 9th of September 1865, having been discharged from the Royal Navy in the previous June, and I have no account of his subsequent service at sea.

751. It has been recommended that a uniform should be established for the Naval Reserve, which they should wear when at drill; what is your opinion of this proposal?—I think it is desirable, but I see great difficulties in carrying it out.

752. In what way?—The uniform would be of no use to the man at sea, and if left on shore at a lodging-house, say, in the north of Scotland, and a man should return after a voyage to any port in the south of England, he must obtain his uniform from the port from which he originally sailed; very many of these men have no homes but live entirely at lodging-houses, where the uniform would either be stolen during the man's absence, or lent to some other volunteer in want of one. I think, if the suggestion were adopted, we should see in the slop shops in the neighbourhood of the docks notices that Naval Reserve uniforms were lent for hire.

753. But if the uniform approved by the Admiralty be such as seamen could wear when performing their ordinary duties on board ship, would these same objections hold good?—No, except in the case of colliers, where the work is such that the uniform would soon be unfit for use.

754. Have you any further suggestions to offer as amendments to the existing regulations?—Section B. of paragraph 46 of the Regulations might be expunged, and leave of absence for 12 months be granted without reference to the ports or countries to which the vessel is bound; as at the present time not more than one man out of a thousand is absent for more than from 15 to 18 months.

The witness withdrew.

Captain FELLOWES, R.N., recalled.

Captain Fellowes, R.N.

755. (*Captain Willes.*) Have you since you gave your evidence considered the practicability of establishing a Second Class Reserve, which not only would not be so expensive, but by taking the members of it at an earlier age and making them live on board the district ships for one month, we should get men more suitable for our modern guns and their elaborate machinery?—I have carefully considered this matter, and am of opinion that it would be highly beneficial to the Reserve that it should be divided into two classes, the second class being young men between the ages of 18 and 24, that they should have a much smaller retainer, should be obliged to live on board the ship during their month's drill, that they might have the benefit of becoming acquainted with the internal working and discipline of a man-of-war, that they should be permitted to pass an examination for the higher grade, when they would receive an increase of retaining fee, and the difference between the ordinary and able seaman's pay; those of the lower class I would give the ordinary seaman's pay.

756. You mean, of course, that the candidates for the second class should be seamen, or men following the profession of the sea?—Strictly so.

757. And to pass as severe a medical examination as those in the Navy?—The present regulations for examinations in the Navy, both medical and for the advancement of the men, should exist with regard to the Reserve.

758. And would you propose that the men before passing into the first class Reserve should undergo an examination in gunnery?—Oh, certainly; he should not be accepted as a first class man unless he passed as a trained man.

759. It has been suggested as a means of obtaining trained gunners in the Reserve, that a limited number of boys, say 100 per annum, should be entered into the Navy for a limited period of three years; how do you think that would work?—I am of opinion that there is sufficient good stuff in the merchant service to answer the requirements of the Reserve without the necessity of entering boys into the Navy first, to be afterwards transferred to the Reserve. I think also there might be some feeling against this class of seamen on the part of masters of merchant vessels.

760. I understood you to say the other day that you considered the travelling expenses of the Naval Reserve men in the Leith district to be at the rate of 1*l.* per man; on referring your statement to the Accountant General I find that 1*l.* a man is the expense of the Coast Guard Volunteers; do you not think you may have been mistaken in that statement?—When I made the calculation in the first instance I rather fancy that it might have had reference to both Services combined, but not at the reduced rate of these Royal Naval Coast Volunteers; at the same time I am confident that the travelling expenses of the Reserve men in the Leith district are excessive and unnecessary, inasmuch as men are allowed to divide their drill into such short periods of time.

761. Can you tell me the total number of Reserve men in the Leith district?—No, I cannot.

762. From a return from the Accountant General I find that the total amount of travelling expenses for the years 1868–69 for about 13,000 men drilled was only 1,800*l.*; do you think that is possible?—I would explain it this way. There are 300 Reserve men in the Leith district at its northern extremity exercise at the Battery of Lerwick; their travelling expenses, of course, would be almost nothing. Those in the district of Aberdeen are exercising on board the "Winchester;" and those at Dundee on board the "Brilliant." This would in some way account for the small amount of travelling expenses there. In my calculations I must have included the Naval Coast Volunteers.

763. The entry of Coast Volunteers has been stopped in England, and restricted to 2,000 in Scotland, chiefly on the recommendation of yourself and the captain of the district ship at Greenock; do you advise that they should still be retained?—The Scotch Coast Volunteers are certainly a hardy race of men, and well behaved, but they can never be sent

to perform duties aloft; they are a fishing race, but not seamen. Many of them are unable to understand the instructions that would be given them by the gunnery instructors, from the fact of their being unable to understand our language. They might be useful for services in gunboats, but I think not so much so on board a man-of-war, where the new artillery is in use.

764. Are they a fine body of men in the Leith district?—They are a very fine body of men, and generally very well behaved.

765. Have you anything more to observe on the subject of the Reserve?—I would strongly recommend that no seaman who may have been discharged from Her Majesty's Navy, either on the completion of his ten years continuous service, or from any other cause, should be permitted to enter the Royal Naval Reserve Force without the express permission of their Lordships in each case, as I consider at present there is a premium held out to men to leave the Navy in order to join the Royal Naval Reserve Force.

Captain Fellowes, R.N.
3 Dec. 1869.

The witness withdrew.

Mr. Coleman recalled.

Mr. Coleman.

766. (*Captain Willes.*) During your evidence I have been much struck with the amount of labour evidently employed at the office of the Registrar General of Seamen; are you certain that seven clerks only are employed on that duty?—I am only allowed seven, some parts of the year there may be more, and at others less.

767. By a Parliamentary Return I find that the foreign seamen from the years 1858 to 1865, increased from 11,000 to 20,000, whilst the number of apprentices remained the same; if this goes on will not your office soon become unnecessary?—It would be very many years before that took place even were only foreigners and apprentices taken into consideration.

768. Then how is the mercantile navy fed?—By youths who enter as boys and ordinary seamen.

769. Have you any record of all those young men so entered?—Yes; their names will be found in the lists of crews, with their ages, and the rate of wages paid to them.

770. Can you tell me the total number of British seamen?—I could by referring to the returns.

771. Can you say within 10,000?—No; it has never come under my notice; it is not in my department.

772. You have referred in your evidence more than once to the inconvenience experienced in corresponding with the Naval officers, and also to the incorrectness of their returns: would not this all be removed if that correspondence and those returns came to the Admiralty, as the officers then would incur the displeasure of their Lordships when any inaccuracies were discovered?—As far as regards the drill returns, the inaccuracies might then be remedied, but if the retainers were paid as proposed, the correspondence would be considerably increased, as I have already stated that one third of the correspondence connected with the Naval Reserve takes place with reference to the payment of retainers.

773. The reason given by Captain Gardner for the increase of the payments to the Registrars from 2,000*l.* to 6,000*l.* was that the work had increased immensely, whereas I find that in the first five years no less than 22,000 men were enrolled; can you explain this?—In the first place, many of the men who entered for the first five years had to be re-entered, involving fresh business and fresh applications to the Registrars; discharges had to be granted to those men who did not apply to be re-entered; the payment of retainers has for the last five or six years been the subject of much closer inspection than we were able to give during the first five years.

774. Then with regard to the 6,000 who did not re-enrol, was there a necessity to grant them a discharge, or in other words, to discharge men who had discharged themselves?—Yes, by the 2nd section of the 22nd and 23rd Vict., cap. 40, "every Volunteer "shall continue liable under the provisions of the "Act until actually discharged from the force by "some officer duly appointed to give such discharge."

775. It has been stated by Captain Gardner, and I think yourself, that if the retainers were paid by the paymasters when the men were drilled, a great deal of roguery would take place, and the Government suffer, surely it could not be to such an extent as in the first period of enrolment, when out of 23,000 men who had taken one or more retainers, 16,000 men was the actual result?—Men would still leave the Reserve at the expiration of the five years, and the same impositions would be practised on the paymasters as are now attempted upon the Registrars of Naval Reserve, but which are now detected in the office of the Registrar General of Seamen, as applications for retainers are referred there prior to payment. Reference is then made to lists of crew and log books, and instructions issued in each case. Of the retainers referred to, some would have been paid to men who had since died, and others to men who had subsequently joined the Royal Navy.

The witness withdrew.

Adjourned to Monday the 6th instant, at 12 o'clock.

Monday, 6th December 1869.

Mr. Alfred Whitehouse recalled.

Mr. A. Whitehouse.
6 Dec. 1869.

776. (*Captain Willes.*) Since your evidence, we have had several officers before us who have given their opinion on the subject of making the district paymasters pay the retainers of the reserve men as well as the drill pay, also as to the returns of drill; in other words, placing the Reserve Force more under the Admiralty than at present; have you any further observations to make on the question?—My object was to reduce the working expenses. At present several returns are made of drill, of the payment of retainers, and payment of drill pay; I think all these three returns can easily be embraced in one; this, certainly, would reduce the clerical labour, and as a consequence reduce the working expenses. If the business is conducted in one office the return of drill can be dispensed with, because the fact of a man having been paid would be evidence that he has taken his drill; I think this must be apparent to any one, and therefore I have nothing more to say on the subject. If you will allow me, I will make a remark about the enrolment. As you are aware, we have upwards of 800 coast guard stations, and I propose that whenever a seaman wishes to enrol he should apply either at the registrar's office or at one of these 800 stations. The applicant should then be given a form, simply with the ships served in, and date of entry and of his discharge; the applicant should be required to fill in this form himself, or get it filled in, and take it to the registrar or coast guard officer, who would send it to the Registrar General of Seamen for verification. This is at present done by the registrar, but I propose that the applicant should do it; it will give him a little trouble

Mr. A. Whitehouse.

6 Dec. 1869.

in joining the reserve, and he will think it something worth having. At present we send our officers, in some cases 20 or 30 miles, to examine candidates, which I think is unnecessary. With regard to the reserve men appearing before the registrar every six months, I think this may be dispensed with if the reserve were given parchment certificates similar to those given in the Navy. The only objection to this is that a man might lose his parchment certificate; but in such cases his services could be made up from the time he last attended drill, and if upon strict inquiry the man's statement appeared correct, he could be granted another certificate. The men knowing the importance of these certificates would, I think, take more care of them, as it would be the only proof of their belonging to the Reserve, and upon which their pensions would be paid; in fact it would be like a policy of insurance on their lives.

777. If what you have proposed is carried out it would be a virtual transfer of the force from the Board of Trade to the Admiralty; it has been stated in evidence that this would lead to great inconvenience, and almost to the breaking up of the force; do you concur in those opinions?—No; I think that the present working is a very expensive process, being carried on by two departments; I think it can be more economically worked if the machinery is conducted by one department, either by the Admiralty or the Board of Trade.

778. Would the change you suggest cause any reductions in the Navy Estimates?—I consider it would, because there is a part of the work done at the Admiralty, a part done by the Accountant General, another part by the Board of Trade, and another part by the Registrar General of Seamen; and I think that one small reserve office could conduct the whole, and be in a position to answer any questions that might be asked in the House of Commons, which can only now be done at great expense, and after considerable time.

779. If for the future all candidates for the Naval Reserve are made to pass on board our districts ships, or drill ships, before an officer of not less rank than a commander and by a naval surgeon, will not many of the objections to which you have referred be obviated?—No, I think not; we shall know very little more of the Reserve than we do at present, as far as the Admiralty is concerned. I think there should be a record kept at the Admiralty, showing the efficiency of every individual man. The reserve man exercising on board the ship cannot be considered like the crew of a ship who are continously under the eye of their respective officers; the Reserve men drill at one place one year, and at another place the next.

780. It has been stated that a man could easily get rid of these parchment certificates, could he not also, in the event of an emergency, destroy the R. V. 2, by which his identity would be lost?—Yes; but I think the men are so well known to all our coast guard people, and to the registrars of the mercantile marine, that in the event of their being called out they would soon be looked up.

781. Are not the Reserve men, with regard to their retainers, something in the same position as our naval pensioners,—of course pensioners getting a larger amount are more bound to us,—then say what are the regulations with regard to pensioners appearing from time to time?—A naval pensioner must of necessity be an older man, and his pension is absolutely his means of existence; the Reserve man receives his 6*l.* retainer as a guarantee that he will come forward when wanted. You must understand that there would be no half measures taken with these men in the event of their holding back; they will have received their country's pay for so many years, and I imagine a law would soon be passed to make it a criminal offence, and a man so acting would be treated as a traitor to his country.

782. Is it not the case that since the establishment of the Naval Reserve our continuous service system,—which for the first time gave us a standing navy,—has already begun to work such changes and improvements that our seamen are now being pensioned at 38 and 40 years of age, with high pensions, still young and active men, instead of being worn out and used up as before?—Yes; and I think the system could be carried out still further with advantage to the country by allowing men to be pensioned on 6*d.* a day, after 10 years' service; they would form a very good Reserve.

783. Have you any idea how many naval and marine pensioners there are at this moment?—No, I have not.

784. Is it the case that officers in the Naval Reserve can by the present regulations pass through one year's back drill, one for the current year, and one in advance, if going abroad; that is to say, three months' consecutive drill?—It was found to be very difficult for many of the officers of the Reserve to comply with the regulations with regard to their drill, some who were serving in mail boats, for example; but, in some cases, officers who feared they would lose their commissions unless they made up their arrears of drill, did so when I believe they would much rather have been excused; this led to some correspondence, and it was decided that only one year's back drill should be performed, with one in advance, before leaving England, subject to the approval of the Admiralty. This, like many of the rules and regulations, requires consideration.

785. Do the officers get drill pay or retainers?—No, they only receive subsistence allowance for the days they are actually on drill.

786. Reserve men under certain circumstances are allowed to take a year's back drill, I suppose, because they are out of the United Kingdom; do you think that the country should be put to the expense of giving the man this drill, which means pay, if the man has been out of the country?—The object of the 28 days' drill is to keep up a knowledge of the improvements and changes in the drill, and therefore I think only 28 days should be performed in any one year, or that six months should elapse from the time of performing one 28 days' drill, to taking a further period of drill.

787. Mr. Whalley, M.P. for Peterborough, has suggested that use might be made of the yachts and their crews for a Naval Reserve, for a similar cruise to that of the Flying Squadron; do you think, with the number of Reserve men and pensioners we now have, the services of these men would be required?—No; I think that the conditions of the owners of yachts, who hold honorary lieutenants' commissions, are sufficient; the fact of a squadron of yachts being assembled to visit foreign ports might show we had a number of good seamen; but I fancy yacht owners are not likely, as a body, to agree to take their yachts wherever the Government may choose to send them.

788. Is not the scantling of the yachts so slight that it would be utterly impossible to put one of the present naval rifle guns on them?—Quite so, they are only capable of carrying an ornamental brass gun, of small size.

789. (*Mr. Mayo.*) In your evidence you propose that there should be only one return for drill, drill pay, and payment of retainers; have you prepared any form to show how such a return would work?—I have not completed one yet, but I can prepare one, if you wish to see it.

790. Then you have not tried the plan to see whether it is practicable?—No, I have had no opportunity of trying it; but I am satisfied that the plan I shall prepare will work well.

791. You have stated that if such a form were adopted in lieu of the present forms it would reduce clerical labour, and also working expenses. Under the present regulations, when a man has performed his seven days' drill he is paid his drill pay; a simple return is sent to the Registrar General of Seamen, showing the number of days' drill performed by each man, and a list is sent to the Accountant General of the Navy, showing the amount paid to each man for drill pay; in what way would the form proposed by

you reduce clerical labour in these transactions, as the information at present given is reduced to the minimum?—No; I consider the return of drill sent to the Registrar General of Seamen can be dispensed with; the fact of a man having been paid is proof that he has taken his drill.

792. In another part of your evidence you suggested that a register should be kept at the Admiralty showing an account of each man's proficiency in his drill, is such an account kept of the seamen of the Royal Navy?—Yes, by the officers of the ship; but the Reserve not being always drilled by the same naval officers, it seems to me that this register should be kept at the Admiralty, as the only means of ascertaining the true condition of the force.

793. Do you think it would be necessary to have an account of the progress made by each individual Reserve man?—Yes; so that we should see at a glance the drills and state of efficiency of every Reserve man when he had completed his first five years, and then judge whether he was worth retaining.

794. Then in such cases each individual application for re-enrolment would have to be forwarded to the Admiralty?—Yes; simply to say that the candidate wished to re-enrol, when approval or otherwise would be given.

795. Have you considered how many additional clerks would be required at the Admiralty to keep this register of 16,000 Naval Reserve men in the way you propose?—To do the work in connection with the Reserve, now done at the Admiralty, at the Accountant General's Office, and at the Registrar General of Seamen's Office, as far as this register is concerned, about six clerks would be required.

796. Have you sketched out the form of the register you would propose?—Yes, I have, but not sufficiently complete to produce at present. I will produce it at a future time if you wish to see it.

797. Have you in this register made entries for the purpose of illustrating the working of your plan?—Yes.

798. You propose that certificates of parchment should be given to the Reserve men in lieu of the paper certificates in a book form, which are at present given them, as you think that the men would be more likely to take care of their parchment certificate than of their present ones; can you state why you think they would be more careful of the parchment certificate?—You seem to have misunderstood my meaning. As the man's book does not give the information that would be given in the parchment certificate I suggested the latter, but if the book could be altered in form it would answer the purpose.

799. What information is it that you propose should be added to the form of the certificate?—His ships served in, and entry and discharge.

800. This information is now given in the present certificate, R. V. 2. whenever a Naval Reserve man is shipped or discharged, in the presence of a Registrar of Naval Reserve, a consul, or colonial officer abroad?—Yes; but if that information was noted in the man's book whenever he entered or was discharged from a ship, it would answer all the purpose I require.

801. You propose that there should be no official record whatever of the entries in these parchment certificates, and that the entries in these certificates should be made by the masters of the ships on board which the Naval Reserve men served; how would you prevent or detect any false entries or forgeries in these certificates?—The record would be that when a man presented himself for drill the officer would notice that up to that time the man had been employed at sea. As to forgeries, I do not suppose they would be more common than in any other employment where men have to produce testimonials in order to obtain employment.

802. Then you admit that forgeries would be possible in the certificates that you propose?—To answer this I should go into a very large question. With regard to the register of ships, as far as the Naval Reserve is concerned, I think it can be dispensed with, but whether it can for the Mercantile Marine generally is not for me to say, any more than I cannot see why we should be at the trouble of registering seamen's services any more than those of miners, or navvies on a railway.

803. The cases are not similar; but is it not a fact, that in the certificate that you propose forgeries and false entries would be possible, as there would be no means of detecting them?—Forgery is possible in any case, not more so in this than in the case of any other person who had to produce testimonials. The penalty would be very great, and the offence of rare occurrence.

804. Are you aware that any attempt at making a false or fraudulent entry in the existing R. V. 2. is sure to be detected?—Yes; but any doubtful case, or any apparent error in the parchment certificate, would lead to inquiry from the captain or owner of the ship as to whether a man had been in his employ.

805. Suppose a man had not been to sea for some two or three years, and had made entries in his certificate, or had them made for him, to say that he had been following the profession of a seaman during the whole of the time, how would you detect this?—Such a case would almost be impossible, as the men for the future will, I presume, be drilled in district ships, and the officers would at once detect whether the man had kept up his experience as a sailor; if a man had been three years on shore he would necessarily have lost the manner and appearance of a seaman.

806. But you assume that the men are only to be drilled on board district ships. If such entries as I have referred to were made in this certificate which you propose how could they be detected?—The officer who saw the man would detect, I may say, almost by looking at him, whether he was a sailor or not. There is something in the action of a sailor that cannot pass notice, but in any doubtful case the officer would make the man bring further proof.

807. What further proof could a man bring in a case such as the following:—a man states in his discharge that he served on board a ship which, at the time he makes this statement, is on a voyage from England to China, and that three months previously he was discharged in London; he presents himself with his certificate to the Naval Officer at Liverpool to undergo his drill. Supposing the Naval Officer had a suspicion that the entry referred to above was a forgery, how could he obtain evidence when the ship, on board which the seaman said he had served, and the captain, who is reported to have signed the entry in his certificate, are both absent?—I believe that the Articles of Agreement are kept in some public record office, and reference could be made there in the doubtful cases mentioned.

808. This is supposing that the man had said he went on a foreign voyage; but suppose the entry in the certificate related only to coasting voyages from port to port in the United Kingdom, how would you then detect it?—I think the cases would be so few that it seems to me almost needless to keep up an expensive register to meet only a few isolated cases of that nature.

809. Are you aware that the registers are not kept up solely for this purpose?—Yes; we are coming back to what I previously said, that I do not know the necessity for keeping a register of seamen's services.

810. You have stated in your evidence that if a new department were created at the Admiralty it would effect a saving in the estimates, as by the present system a part of the Naval Reserve work is done at the Admiralty, a part at the Board of Trade, a part by the Accountant General, and a part by the Registrar General of Seamen. I presume you do not mean to imply that the work performed in any one of these departments is done over again in one of the

Mr. A. Whitehouse.

6 Dec. 1869.

other departments?—No; but by concentrating the work it would necessarily lessen the expenditure.

811. Can you tell us how many clerks are employed in each of the departments referred to on Naval Reserve work, and what is the nature of the duties performed by these several departments?—I do not know, but I imagine, on the whole, it must occupy the time of a great number; whereas if the work were conducted in one office, references which now have to be made from office to office would not be required.

812. Can you give us any idea of the number and nature of these references?—Yes, I can give the Committee a very good idea by stating that all the pay lists for every man that is to be paid in the Reserve have to be sent to the Accountant General to be audited in the paymaster's account. These pay lists are afterwards referred to the Registrar General of Seamen for examination, and are by him returned to the Accountant General.

813. Could this examination be dispensed with under your scheme?—It will be greatly lessened, because the same voucher for pay will show the retainer and the efficiency in drill.

814. You have stated that the Reserve men are well known to the officers and others of the Coast Guard, so that the Reserve men would be efficiently looked after by these officers; is it not the practice frequently to remove these officers and men from port to port, or do they hold their appointments for life in the same way as the Registrars of Reserve?—I said "officers and others;" by "others" I mean registrars, because I consider it the duty of every Mercantile Marine Officer to render assistance with regard to the Mercantile Marine. Coast Guard Officers and men, as regards the tenure of their appointments, are precisely similar to the registrars; they are removed only when advanced to higher positions.

815. Do you think that the naval officers would have succeeded in obtaining men for the Whitsuntide cruise without the active corporation of the Board of Trade officers?—I think that all the credit of assembling the men on that occasion is due to Mr. Mayo, and to Mr. Mayo only, and that if he had not taken the active steps he did take, and made the advantages fully known, the scheme would have fallen through.

816. But so long as a Naval Reserve is formed of merchant seamen, is it not reasonable to suppose that to ensure the success of the force it is necessary to retain the co-operation of the Board of Trade officers, with whom these men have to do eleven months out of the year?—Yes, but I think the services performed by these officers can be very materially lessened. The forms, &c. gone through by the Registrars were all very well when the force was first started. Since that time very few changes, if any, have taken place in the manner of enrolment; is it not, therefore, reasonable to suppose that the time has arrived for some re-arrangement of the work, which experience has told us can be more economically performed.

817. (*Captain Willes.*) Captain Fellowes made a statement with reference to Robert Russell having been improperly entered, can you give us any information as to the facts of the case?—It appears that this man was correctly enrolled by the existing regulations.

818. Would he have been recommended for enrolment if his certificate of service had been referred to the Admiralty?—Probably not, from the fact of his having been twice in prison, although he had subsequently served two years with very good character.

The witness withdrew.

Adjourned to Monday next the 13th instant at 12 o'clock.

APPENDIX.

Appendix No. 1.

Extract from Rear Admiral C. A. Cooper Key's Report, addressed to the Secretary of the Admiralty, dated 13th June 1869, and referred to in the Minutes of Evidence.

Par. 40. I recommend that in all matters of discipline, of attendance at drill, and especially upon any doubtful point connected with the entry of men, the Royal Naval Reserve should be more immediately under the Admiralty; this can be best done by keeping a correct record of its condition at the Admiralty; so that its efficiency, both as to its numbers and the quality of the seamen composing it, can be ascertained at any moment; this information can only now be obtained by reference to the Registrar General of Seamen.

Appendix No. 2.

Letter from Captain Hood, R.N., Director General of Ordnance, relating to Drill of Naval Reserve, and to a proposal for giving Prizes to Reserve Men for efficiency.

Sir, Admiralty, 16th December 1869.

In reply to your letter of the 16th instant, acquainting me that the Royal Naval Reserve Committee have directed you to inform me it appears by the evidence they have received that the men of the Reserve have no incentive to qualify for the rating of trained men, also that it has been suggested it might lead to good results if small prizes were held out as rewards for skill in firing with great guns and small arms, and that the committee would feel obliged for my opinion as to the practicability and desirability of carrying out this idea.

I am of opinion that no man in the Naval Reserve should receive the rating of trained man unless it can be proved that he in all respects comes up to the standard required for seamen in Her Majesty's Navy before they can receive this rating. This standard requires that a man must, when examined by a competent gunnery officer, be proved to have a good knowledge of heavy rifled gun drill, also an efficient knowledge of the manual, platoon, and cutlass exercises.

We have not yet got the requisite number of heavy rifled guns, iron carriages, and slides to complete the armament of our sea-going ships, built and building, consequently it must be a long time before guns of this nature could be supplied for the instruction of the Naval Reserve men. It is intended to place one 100-pr. smooth-bore gun, mounted on a wooden carriage and slide, on board each of the Reserve drill ships, this will probably enable such a partial knowledge of the general heavy gun drill to be acquired as would enable the men when embarked in Her Majesty's ships to perform the duties of the less important numbers at a heavy gun with tolerable efficiency. But until the annual amount of training is performed at one time, without the interim of weeks (as is now frequently the case), and a sufficient number of heavy guns can be devoted for the instruction of the Reserve men, also a larger staff of gunnery instructors and competent young officers as examiners can be provided, I certainly would not recommend any attempt to create trained men, as I feel under present circumstances it would be impossible to bring men up to the standard we require for trained men in the Navy, and unless this can be arrived at, having trained men receiving equal pay but not possessing equal qualifications with those in the Navy, would be a result which would cause dissatisfaction.

With regard to the advisability of giving prizes for firing with great guns and small arms:

The men now have only 28 days a year to keep up gun drill, rifle and cutlass exercise, with a small amount of firing from great guns, rifles, and pistols; this time is quite short enough, the one thing we wish to teach these men is to lay a gun carefully, and to fire a steady shot with rifle and pistol; the small amount of ammunition allowed is hardly sufficient for this purpose of instruction; any prize firing should be wholly distinct from that allowed for instructional purposes, would entail additional musketry instructors, and the prizes for so large a body of men would be a very large additional expense. My opinion is that the amount of pay now received by the Royal Naval Reserve men is ample for the work they have to perform during the 28 days drill, in addition to the retainer when required for service in time of war, and I do not think it necessary to establish a system of giving prizes for firing either with great guns or small arms, as in my opinion, unless carefully supervised, and more time were allowed for proper preparation before commencing prize firing, but very little increase in efficiency would be the result.

(Signed) A. W. A. Hood,
Director General of
Naval Ordnance.

Secretary to the
Committee on
Royal Naval Reserve.

Regulations as to Height.

From 1st January 1860 to 31st December 1863 there were no regulations as to height.

From 1st January 1864 to 20th October 1869 the standard height was 5 feet 5 inches, but applicants under this height were specially reported to the Admiralty, and if specially recommended by the Naval Officers were accepted.

Since 21st October 1869 men have not been accepted under 5 feet 5 inches.

Regulations as to Age.

From 1st January 1860 to 31st December 1860 men were accepted up to 40 years of age.

From 1st January 1861 to 31st March 1863 the limit of age was reduced to 35.

From 1st April 1863 the limit of age was further reduced to 30, except for men who had been discharged from the Royal Navy, who since January 1865 have been accepted up to 35 years of age.

Appendix No. 8.

Statement showing the Number who presented themselves for Drill during the year (to November) 1869.

Drilled for 28 days - - - - - - - - - -		6,810
Drilled for more than 28 days, being drill required for the current year, and arrears during the year 1868, when absent on a long voyage - - - - - -		2,512
Drilled for less than 28 days in consequence of -	Being discharged, dismissed, having died, or entered Royal Navy	96
	Absent on voyages - - - - - -	686
	Enrolled during the 2d, 3d, or 4th quarters and not required to perform 28 days drill - - - - - -	135
	Unable to complete drill through sickness - - -	2
	From unknown causes have only performed 7, 14, or 21 days' drill - - - - - - - - -	430
	Less than 28 days' drill being due:— Drilled for 7 days, 396 ; 14 days, 833 ; 21 days, 1,006	2,235
	Time being forfeited - - - - - -	51
		12,957
Number who have taken no drill during the year in consequence of—		
1. Authorized absence - - - - - - - -	1,178	
2. Unknown causes - - - - - - - - -	870	
3. Discharged abroad, deserted, &c. - - - - - -	453	
4. Time expired, dead, no drill due during the year 1869 on account of it having been performed during previous year - - - -	1,344	
		3,845
Total -		16,802

Appendix No. 9.

Extracts from the Regulations for carrying into effect the Act for the establishment of the Royal Naval Reserve.

Height.

Art. 3. The standard of height has been fixed at five feet five inches; but if in any special case it should appear to a Registrar that an applicant for inrolment, although under five feet five inches, is in every other respect eligible, and that it would be a positive loss to the Reserve if he were rejected, then his application may be received; but, instead of being made on the Form R V 1, it is to be made on the special Form R V 1[2].

Service.

5. Every applicant must prove at least five years' service at sea within the last ten years, and of these five years' service one year's service *at least* as Able Seaman. His services and rating at sea must be proved by production of Certificates of Discharge, or by reference to the Indentures of Apprenticeship or office counterparts thereof, to Agreements, or to Lists of the ships in which he has served. If he cannot prove his service as A.B., he must satisfy two Naval Officers by a special examination that he possesses sufficient knowledge for the rating of A.B.

Conditions of leave exceeding six months.

46. The rules and conditions under which leave is to be given to Naval Reserve men to proceed on voyages exceeding six months will, until further notice, be as follows:—

Leave to be given only for the Ship or Voyage named.

(*a.*) The leave is to be given by the Registrar on each engagement of the Reserve man, *and is to extend only to the ship and to the voyage for which it is given*, and the leave is to be given on the express understanding that the Naval Reserve man is bound to serve in any of Her Majesty's ships abroad, provided the Reserve has been called out by Royal Proclamation.

Voyages must be specified.

(*b.*) This leave is only to be given where all the ports or countries at which the ship is to touch are specified in the agreement, or where, if any such ports or countries are not specified, the voyage is limited to twelve months' duration at the outside.

Daily Returns to Registrar-General. R V 17. R V 18, C 19*a*. CC 21.

66. At the end of each day the Registrar will prepare, and transmit to the Registrar-General of Seamen, on Forms R V 17 and R V 18, copies of the entries made that day in his Registers R V 12 and R V 13, and copies of all entries in the Registers C 19*a*. and CC. 21, as the case may be, should be forwarded by Officers abroad to the Registrar-General of Seamen, by the first mail after the date of the entries.

Object of training.

68. The special object of the Royal Naval Reserve being to obtain the services of a picked body of able Seamen *trained to the use of Arms*, it is essential to the scheme that every Naval Reserve man shall be drilled so as to obtain a thorough practical knowledge of the mode of using great guns and small arms.

Drill not required during the first broken quarter.

71. No drill will be required during the broken period of the first quarter of the first five years for which a Naval Reserve man is inrolled. The Naval Reserve man may, however, if he wishes it, commence his drill immediately on his inrolment.

Sickness during drill.

79. The time during which a Naval Reserve man is absent from drill on account of sickness or accident caused by or received during drill does not count as part of the drill, although day-pay and allowances are granted during such time in the same manner as if the Naval Reserve man was actually at drill.

Uniform.

102. When Naval Reserve men attend for drill, they must appear in the uniform cap, and in a decent suit of clothing. They should if possible be persuaded to appear in a dark blue dress suitable for drill and for general service. The Naval Officer has no power to *compel* the men to appear in dark blue clothing, but he will no doubt by persuasion and tact be able to induce the Reserve Men to adopt this suggestion. With a view of assisting Naval Reserve men in this matter, a similar arrangement to that now in operation for selling the caps and ribbons will be made, so as to enable Reserve men to purchase blue frocks, &c. at the Government contract price.

Discipline whilst on drill.

108. Naval Reserve men, when at drill, will be subject to the same discipline as Seamen in the Royal Navy. But it will be the duty of Naval Officers to bear in mind the difference between the ordinary rules and practices of the Royal Navy and those of the Merchant Service, and to endeavour, whilst enforcing order and regularity, to do so in such a way as may best conciliate the feelings of Merchant Seamen.

Punishment for misconduct whilst on drill.

109. In cases of misconduct or absence without leave during the time of drill, the Naval Officer may direct that the Naval Reserve man's name be checked on the ship's books, or, in the case of batteries, noted in the Register R V 15, and the Naval Reserve man will then incur forfeiture of pay and allowances according to the offence. In cases of grave misconduct, the Naval Officer may direct that the annual Retainer be suspended for such period not exceeding one year as he may think fit. In this case the Naval Officer will not return the Certificate R V 2 to the Naval Reserve man, but will forward it to the Registrar-General of Seamen when he sends the Drill Return R V 22. These forfeitures should be inserted in the Drill Register R V 15, with particulars, and the facts will be reported by the Registrar-General of Seamen in his periodical lists to the Registrars.

But not obliged retire.

169. No Naval Reserve man will ever be discharged from the Reserve without his own consent, except on the grounds mentioned in par. 173, but will if he wishes to remain in the Reserve be allowed to do so by re-entering, as mentioned below.

Steps taken Regist Naval Officer Registi General re-entry

176. The Registrar will refer the Naval Reserve man to the Naval Officer, in order that he may be re-inspected, and will also forward to the Naval Officer the application for Re-entry R V 9. The Naval Officer need not re-examine the man as to his qualifications, but will cause him to be medically inspected, as in the case of original inrolment, and will inform him of the result of the inspection, and will return the application for Re-entry R V 9 to the Registrar. The Registrar will then, after noting the same in his book, forward the application to the Registrar-General of Seamen, accompanied, if approved, by the old Certificate R V 2. The Registrar-General of Seamen will, after the necessary examination and verification, and provided that the obligations of the previous five years have been fulfilled, and provided also that the conduct and character of the man have been satisfactory during the period of his service in the Reserve, and that he has not permanently relinquished the Sea Service, issue a new Certificate.

Naval R serve me eligible CoastGu

194. Naval Reserve men who have belonged to the Naval Reserve for ten years, and have not been called out for actual service by Royal Proclamation, or who have belonged to the Reserve for seven years, and have for two or more years during that time been called out for actual service, will, if fit in point of age, strength, character, and capacity, be eligible for the Coast Guard service. The age will be the same as that required in the case of Seamen selected from the Royal Navy.

Reserve men en titled to benefits Greenw Hospita

196. Naval Reserve men who have belonged to the Reserve for ten years, or who having been called out by Royal Proclamation have actually served for three years in the Navy, will be eligible for all the benefits of Greenwich Hospital, according to the Regulations for the time being in force, to the same extent and in the same manner as Seamen belonging to the Royal Navy.

SIR, Admiralty, February 7, 1870.

I AM commanded by my Lords Commissioners of the Admiralty to transmit, for he information of the Lords of the Committee of Privy Council for Trade, a copy of ıe amendments on the Committee's reports on the Royal Naval Reserve which were greed to at the Conference held at this office on the 26th January, between my Lords and the Secretary and Assistant Secretary of the Board of Trade.

2. My Lords are of opinion that with these amendments the recommendations of the Committee may be adopted, and they consider that they will have a beneficial effect in increasing the efficiency of the Reserve.

3. As the Board of Trade have hitherto undertaken the revision of the Naval Reserve Regulations, my Lords would be glad if they would cause those now in force to be revised in conformity with the recommendations of the Departmental Committee, and the several amendments already agreed to.

4. My Lords request that a proof of the new Regulations may be sent to this Department for final approval before being issued.

I am, Sir,
Your obedient servant,
VERNON LUSHINGTON.

The Secretary of the
Board of Trade.

MINUTES of a CONFERENCE between the Admiralty and Board of Trade, to consider the the Report made by the Departmental Committee recently appointed to inquire into the working of the Naval Reserve Regulations.

Training.

The proposal to pay 10*s.* a month as part retainer objected to, and is not to be inserted in the Regulations.

Discipline while at Drill.

Art. 108. Instead of inserting this article in the new Regulations, omit, and issue a confidential letter to the Drill Officers on the subject.

Retirement and Discharge.

Art. 169 is to continue in force for men enrolled under the old Regulations, but as it is proposed to enter a 2d. Class Reserve, a clause should be inserted to the effect that the obligations of *all* men hereafter enrolled will terminate at the expiration of every five years' engagement, and to be re-enrolled (should their services be required) subject to the approval of the Admiralty.

Art. 186 and 196 to be revised as follows:—A Naval Reserve man, if wounded or injured on service or on drill, will be entitled to the same pension to which any seaman in the Navy of the same rating would be entitled for a similar wound or injury, and will also be entitled to the age pension under the Greenwich Hospital Act of 1865, and the special pension or treatment in a Naval hospital or infirmary under the Greenwich Hospital Act of 1869, according to the Regulations for the time being in force.

The widows of Naval Reserve men killed, slain, or drowned, on service or on drill, will be entitled to the same gratuities out of Greenwich Hospital Funds as the widows of any other seamen of the Navy of the same rating.

2d. Class Reserve.

An article to be framed for the new Regulations, to the following effect:—

"A limited number of young men will be admitted to a 2d. Class Reserve as Ordinary Seamen receiving the first year a retainer of 3*l.* and a suit of uniform, and the second year and afterwards a retainer of 4*l.*, but they will then be required to find their own uniform, they will take 28 days' consecutive drill, live on board one of H.M.'s ships,

and wear an established uniform, and be eligible for advancement to the 1st. Class Reserve after one year's service as able seamen, and not under 25 years of age. They will be paid their retainers by the paymasters on completing their drill."

The number of the Reserve in the whole is not to exceed 16,000, of which 15,500 should be of the 1st. Class, and 500 of the 2d. Class, the latter to be entered as an experiment.

Finally, with reference to the preamble of the Committee's Report, it was determined that the rule should be for the future, that, so far as to consult the convenience of the Reserve men, they may be paid their retainers by the paymasters at the same time that they receive their drill pay, and that the Registrar General of Seamen should be directed to report at what places, in his opinion, this regulation should be carried out.
